**SPARK PLUGS:**—Auto-Lite AN-7. 14 MM. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—10° max. at 1200 RPM (distr.).

Vacuum Advance—8½° (Distr.) with 14-17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. 'IGN/DC' vibration dampener mark aligned with pointer at front of engine.

**CAUTION:**—Latch out vacuum advance when setting Ign. Timing (See IGNITION TIMING following).

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ½-1¼ turns open. Idle speed 6 MPH.

Float Level—Top of float (not soldered seam) 5/64" below top edge of bowl with valve seated.

Accelerating Pump—Center Hole normal setting.

Fuel Pump Pressure: 3½ lbs. (4 lbs. fuel & vacuum).

**VALVES:** See Valve Timing.

Tappet Clearance:—.015" all valves with engine Hot.

**NOTE:**—May be set at .018" max. for sustained high speed driving. Self-locking tappet screws used.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy No. 1116335. Connected to ignition coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792.

**Key Series:**—N-1201 to N-1449. Groove—No. 15.

**COIL:** Delco-Remy 1115028 (Domestic), 1115030 (Exp.). Mounted on engine side of dash.

Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869705.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110512. Single breaker, 6 lobe cam, full automatic advance type with separate vacuum spark control and Octane Selector adjustment.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	2	800
10	1200	20	2400

**Vacuum Spark Control No. 1116029.** Mounted on distributor mounting plate and linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

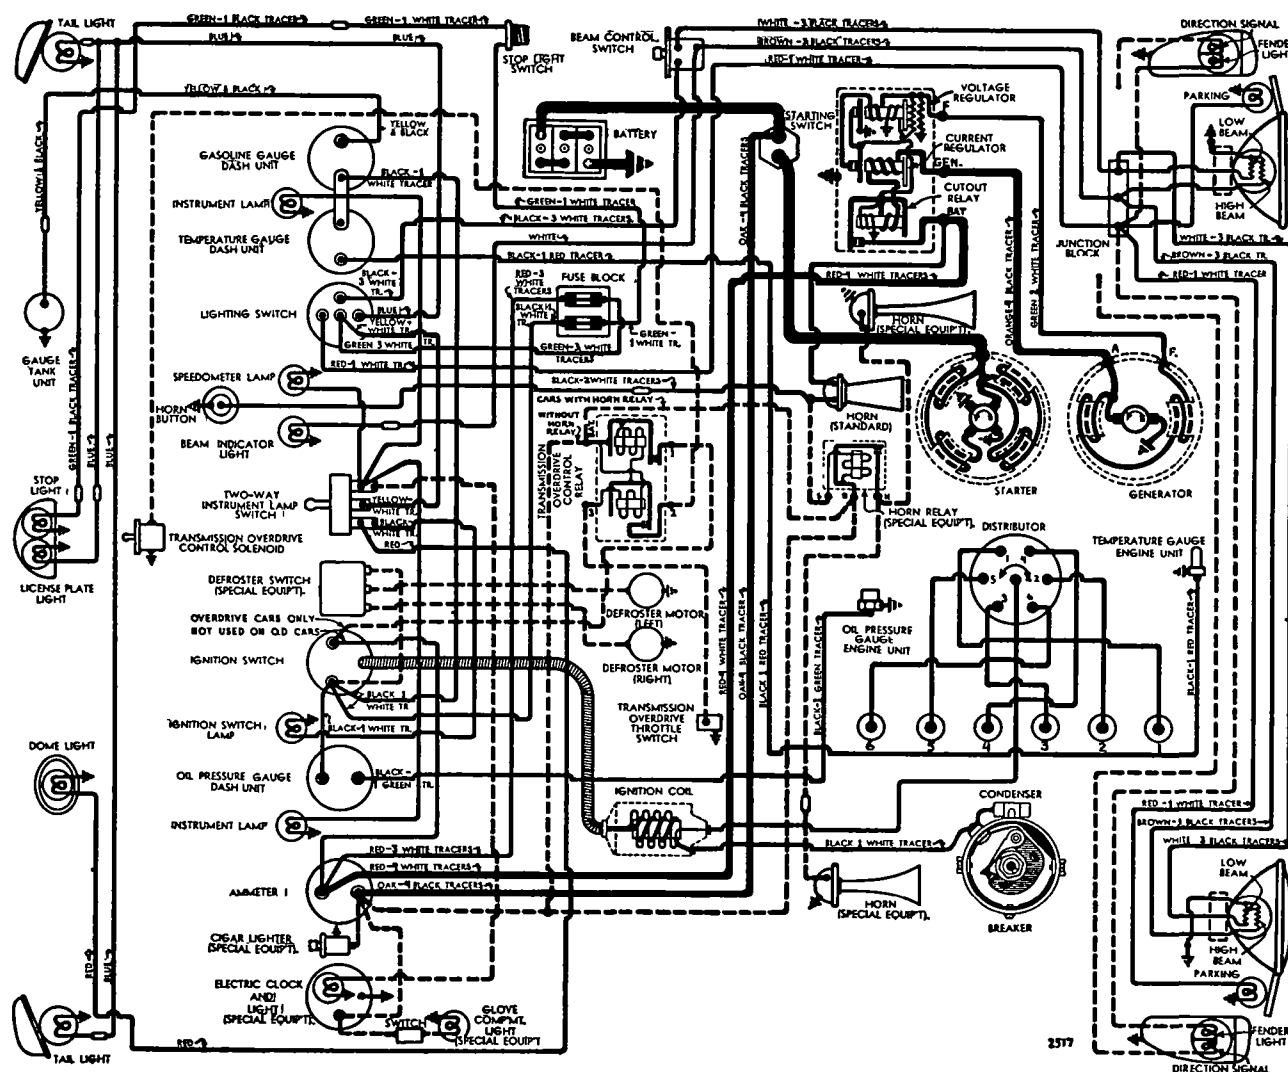

Plunger Travel—23/64" (total).

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3-5"
8½°	17°	14-17"

**Removal:**—Distributor mounted on left side of engine and driven by inclined shaft. To remove, loosen advance arm clamp bolt or disconnect vacuum line and take out hold down screw in advance arm.

**Installation Note:**—When installing distributor, crank engine to firing position for #1 cylinder (piston at TDC), see that oil pump drive gear meshed so that slot in shaft points across engine with wide half of shaft toward front (slot is offset), turn rotor to #1 segment in distributor cap, install distributor and check timing.

## IGNITION TIMING

**IGNITION TIMING:**—Flywheel Degrees Piston Position  
All Engines ..... At TDC.....000" TDC.

**Timing Note:**—Vacuum advance must be latched out by aligning holes in advance arm and hold-down plate and inserting  $\frac{1}{8}$ " pin through these holes while timing is being set.

**To Set Timing:**—Turn engine over until #1 piston reaches top dead center on compression stroke with 'IGN/DC' mark on vibration dampener in line with pointer on chain case cover. Latch out vacuum control (see note above), loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor at #1 segment in distributor cap, check Octane Selector setting.

**Octane Selector Setting:**—Should be set for slight ping when accelerating with wide open throttle at speeds between 10-15 MPH. To adjust, loosen hold-down screw, rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping noted) until correct performance secured.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter (B & B) Model 513-S,  $1\frac{1}{4}$ " downdraft type with manual choke control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm and choke valve wide open, set throttle stopscrew for 6 MPH. idle speed. Adjust idle adjusting screw for smooth idle (screw  $\frac{1}{2}$ -1 $\frac{1}{4}$  turns open from inner seated position—turn screw in for leaner mixture), recheck idle speed.

**Accelerating Pump Setting:**—Throttle lever has 3 holes for pump rod link engagement as follows: Inner (Min. stroke)—Hot Summer weather. Center (Med. stroke)—Normal temperatures. Outer (Max. stroke)—Cold Winter weather.

**Float Level:**—Top of float (not soldered seam)  $5/64$ " (plus or minus  $1/64$ " ) below top edge of bowl with valve seated.

**Metering Jets:**—Refer to Carburetor Index for Carter (B&B) Downdraft Carburetor Jet Specification Table.

**Fast Idle:**—No adjustment provided (linked to choke valve so throttle opened to fast idle position when choke valve closed).

## CARB. EQUIPMENT

**Air Cleaner:**—AC No. 1542037 oil-wetted type Std. No. 1542033 heavy duty oil-bath type optional. Use Replacement Filter Element Assembly Type #1 (for 1542037), Type #8 (for 1542033).

**Fuel Pump:**—AC Type 'W' #1537398, 1537529 (RHD) —Exch. No. 532. Diaphragm type fuel pump (Std.). AC Type 'AJ' #1537406 combination fuel-&-vacuum pump (cars with Overdrive).

*For complete data, refer to Carburetion Equip. Index.*

**Pressure:**—3 $\frac{1}{2}$  lbs. ('W'), 4 lbs. ('AJ').

**Gasoline Gauge:**—King-Seeley Electric type. K-S No. 40152 (dash unit), 40170 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Auto-Lite CTL-1-13. 6 volt, 13 plate, 90 Ampere Hour capacity (20 hour rate).

**Zero Capacity:**—300 amperes for 3.0 minutes. Five second voltage 4.10 volts.

**Grounded Terminal:**—Positive (+) terminal to body.

**Engine Ground:**—Separate strap connector to body.

**Location:**—Under left front seat.

## STARTER

**STARTER:**—Delco-Remy 1109451. Armature No. 1882547.

**Drive:**—Inboard Barrel Type Bendix No. A-2033.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24-28 ozs. each.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	6000.....	5.7.....	60
11.5 ".....	Lock.....	3.3.....	540

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—Mounted on toeboard and operated by clutch pedal. Auto-Lite No. SW-4012.

## GENERATOR

**GENERATOR:**—Delco-Remy 1102684. Armature 1882588. Two brush type with Current-Voltage control.

**Charging Rate Adjustment:**—None. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Regulator data.

**Maximum Charging Rate:**—32-34 amperes, 8 volts, hot. Actual charging rate controlled by voltage regulator and dependent on battery condition.

### Performance Data

Amperes	Volts	R.P.M.
30①.....	8.0.....	1750

①—Not maximum output. See Current Regulator.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—25 ozs. each.

**Field Current:**—1.75-1.9 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive (water pump driven by extension of generator shaft). To remove, disconnect water pump, loosen fan belt, remove generator clamp band, lift generator out.

**Belt Adjustment:**—Adjust whenever belt deflection exceeds  $1\frac{1}{2}$ " (light pressure midway between fan and generator pulley). To adjust, loosen fan mounting bracket capscrews, raise fan (pivots on one screw, other screw hole slotted) until belt deflection is  $\frac{3}{4}$ ", tighten screws.

## REGULATOR

**REGULATOR:**—Delco-Remy 1118202. Single Core Type. Vibrating Current & Voltage Regulator on dash.

*For complete data, refer to Electrical Equipment Index.*

**CAUTION:**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In:**—6.2-6.7 volts hot.

**Cuts Out:**—0-4.0 ampere discharge current.

**Contact Gap:**—.020" (same for both sets).

**Air Gap:**—.020" (with contacts just closed).

## Voltage Regulator

**Setting:**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**To Check:**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150° F), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust:**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for adjustment directions for the other (second) spring.

**Air Gap:**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting:**—34-36 amperes hot (at operating temp.).

**To Check:**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150° F), current reading should agree with setting (above).

**To Adjust:**—Same as for Voltage Regulator (above).

**Air Gap:**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator:**—In center of speedometer dial. Lighted when Country (upper) beams in use.

## Switches

**Lighting:**—Douglas. Nash No. 3107032.

**Beam Selector:**—Douglas.

**Instrument:**—Douglas.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps .....	Sealed Beam	
Parking, Speedometer .....	1 $\frac{1}{2}$ .....	55
Instrument, Clock .....	1.....	51
Beam Indicator .....	1 $\frac{1}{2}$ .....	55
Stop .....	21.....	1129
Rear License, Tail .....	3.....	63
Dome .....	6.....	81

CONTINUED ON NEXT PAGE

C NTINUED FR M PRECEDIN PAGE

**MISC. ELECTRICAL**

**FUSES:**—Lighting—30 ampere. On fuse block on left hand front face of dash.

Accessory—30 ampere. On fuse block.

**HORNS:**—Delco-Remy. No. 1999917 (4245, 46, 47), No. 1999565 Low Note & 1999566 High Note Twin Horns (All Others), operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

**Horn Relay:**—Delco-Remy No. 1116775.

Contact Gap—.025". Air Gap—.015" (closed).

Contacts Close—2.75-4.0 volts.

**ENGINE**

**OIL PAN REMOVAL AND ENGINE CODE NOTE DATA (ORIGINAL BORE & BEARING SIZES):** Refer to Nash Shop Notes for complete instructions.

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type. Cylinders cast Enbloc with intake manifold cast in block (Iso-thermal fuel intake system).

Bore—3 $\frac{1}{8}$ ". Stroke—3 $\frac{3}{4}$ ".

Displacement—172.6 cubic ins. Rated HP—23.44.

Developed Horsepower—76 at 3600 RPM.

Compression Ratio—6.87-1 cast-iron head.

Compression Pressure—120 lbs. at 350 RPM.

Vacuum Reading—18-20" idling at 6 MPH.

**PISTONS:**—Tin-plated, cam-ground, lightweight type.

Removal—Pistons and rods removed from above.

Clearance—.0003-.0009". See Fitting New Pistons.

**Original Bore & Pistons Sizes:**—See Engine Code Note in Nash Shop Notes for sizes and markings.

**Replacement Pistons:**—Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Fitting New Pistons:**—Fit piston by feel. Piston should hold own weight in normal running position  $\frac{1}{3}$  down in cylinder but should be free when worked by hand (piston and bore must be clean and free from oil when checking fit).

**PISTON RINGS:**—#1 Compr. (inner edge tapered at top), #2 Compr. (outer edge tapers out at bottom with plain expander behind ring), #3 oil (slotted type with ventilated expander behind ring), all above pin. Oil ring groove drilled for oil drain holes.

Ring	Width	End Gap	Side Clearance
------	-------	---------	----------------

Compression	.093"	.010-.015"	.002-.004"
-------------	-------	------------	------------

Oil Control	.1865"	.010-.015"	.002-.004"
-------------	--------	------------	------------

**Replacement Rings:**—See Nash Shop Notes for data.

**PISTON PIN:**—Diameter—.8120". Length—2.609". Floating type, retained by locking ring at each end.

Pin Fit in Piston—Light push fit.

Pin Fit in Rod Bushing—Select fit for .0001" clearance or light push fit at normal temperature.

**Replacement Pins:**—Standard, .001", .003" oversize.

**CONNECTING ROD:**—Length—6 $\frac{3}{4}$ ". Weight—24 ozs.

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter 1.875". See Engine Code Note in Nash Shop Notes for original bearing sizes.

Lower Bearing—Removable steel-backed babbitt. Clearance—.0015-.0025". Sideplay—.004-.008".

**Bearing Adjustment:**—None (no shims). Replace bearings. See Nash Shop Notes for instructions.

**Replacement Bearings:**—Std., .002", .010" undersize.

**Installing Rods:**—Mark rods and bearing caps before removal and install in same position. Oil hole in lower end of rod must be toward right of engine.

**CRANKSHAFT:**—Four bearing, counterweighted type. See Nash Shop Notes for Vibration Damper data.

**Journal Diameters:**—2 31/64" all bearings. See Engine Code Note in Nash Shop Notes for Original bearing sizes.

**Bearings:**—Removable steel-backed babbitt type. Clearance—.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Refer to Nash Shop Notes for bearing installation and fitting, replacement main bearing caps, and rear main bearing oil seal data.

**Replacement Bearings:**—Std., .002", .010" undersize.

**End Thrust:**—Taken by No. 1 (front) bearing. See Nash Shop Notes for thrust plate and oil seal data.

Endplay—.004-.008".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. See Nash Shop Notes for Camshaft Removal data.

**Bearing Type:**—Steel-backed, babbitt bushings.

Clearance—.002".

**End Thrust:**—Thrust plate assembled on front face of engine block. Endplay—.004-.008".

**Timing Chain:**—Whitney No. 49205, Type 35D-60. Duplex type roller chain. Pitch  $\frac{3}{8}$ ". Length 60 links.

**Camshaft Setting:**—Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9 $\frac{1}{2}$  links or 19 pins between tooth marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	.3412"	4 $\frac{3}{4}$ "
Exhaust	1 9/32"	.3412"	4 $\frac{3}{4}$ "

	Seat Angle	Lift	Stem Clearance
All Valves	45°	5/16"	.002-.003"

**Valve Guides:**—Press fit in block (press in place 1" below top of block, ream for valve stem clearance).

Valve Springs:	Pressure	Length
Valve Open	83 lbs.	1 7/16"

NOTE—Install springs with closed coils at top.

**Valve Lifters:**—Mushroom type operating in reamed holes in block. Lifters must be removed from below. See Nash Shop Notes for Camshaft Removal data.

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves, engine hot and idling (.018" max. may be used for sustained high speed driving). Refer to Nash Shop Notes for Self-locking type tappet adjusting screw data.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 19° BTDC. Close 63° ALDC.

**Exhaust Valves:**—Open 59° BLDC. Close 23° ATDC.

**To Check Valve Timing:**—With .015" tappet clearance, #1 intake valve opens 19° BTDC with 'DC' mark on vibration dampener at front of engine 1 3/16" ahead of pointer on chain case cover. No. 1 exhaust valve closes 23° ATDC. with 'DC' mark 1 15/16" past the pointer.

**LUBRICATION**

**LUBRICATION:**—Pressure system. Gear type oil pump on right side of crankcase (driven by inclined shaft).

**Normal Oil Pressure:**—35 lbs. at 20 MPH.

**Oil Pressure Regulator:**—Under plug on left side of crankcase behind pump. Opens at 25 lbs. Non-adj.

**Oil Pressure Gauge:**—King-Seeley Electric. K-S Nos. 40161 (Dash Unit), No. 6125 (Engine Unit). See Miscellaneous Section for complete data.

**Crankcase Capacity:**—5 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity 14 qts. (15 with heater).

**Water Pump:**—Centrifugal, adjustable packing type. See Water Pump Section for complete data.

**Thermostat:**—Fulton or Dole. In cyl. head outlet.

**Setting:**—Starts to open at 160°F.

**Temperature Gauge:**—King-Seeley Electric. K-S Nos. 40154 (Dash Unit), No. 7000 (Engine Unit). See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 8A7. Assembly No. 959. or No. 925. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Molded metallic type, 2 required. Inside Diam. 5 $\frac{3}{8}$ ". Outside Diam. 8". Thickness  $\frac{1}{8}$ ".

**Pedal Adjustment:**— $\frac{3}{4}$ " min. pedal free travel. Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.

**CAUTION:**—Adjusting clevis on rod linking idler lever and pedal is pedal adjustment. Turn clevis so that inner idler lever is slightly ahead of perpendicular with pedal against floor board.

**Removal:**—Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

**TRANSMISSION**

**TRANSMISSION:**—Warner Model AS3-T84G (std.), AS4-T84G (with Overdrive). All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low and reverse).

See Transmission Section for complete data.

**Transmission Control:**—Mech. steering column shift. See Transmission Section for complete data.

**Removal:**—Remove Rear Axle (see below), disconnect shift rods, speedometer cable, and Overdrive control wires and cable (if used). Support engine at rear, free rear engine mounting, take out transmission mounting bolts, pull transmission straight back and remove from below.

**OVERDRIVE**

**Overdrive (Cruising Gear):**—Warner Type R7C with electrical 'kick-down' control Optl.

See Transmission Section for complete data.

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch:**—Adjust switch position on mounting bracket so that contacts close with throttle valve wide open and spring on carburetor throttle valve pulley just starting to compress.

**Control Relay:**—Delco-Remy Model 1116798.

## UNIVERSALS

**UNIVERSAL JOINT:**—Mechanics No. 1½R. Needle bearing type, 1 used (in torque tube at rear of transmission). Tapered coil spring is installed ahead of joint to properly locate joint on drive shaft. **NOTE**—Universal is slip fit on transmission end and slight press fit on propeller shaft. *See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Torque Tube Drive.

*See Rear Axle Section for complete data.*

**Ratio**—4.1-1 Std. 4.4-1 with Overdrive.

**Backlash**—.005-.007". Shim adjustment.

**Removal:**—Raise rear end of car and support car at body frame (not frame flange) or at bumper brackets. Disconnect brake cables at equalizer and remove brake tube connections. Disconnect stabilizer bar and rear spring and shock absorber mounting brackets from axle (allow springs and shock absorbers to hang from body—do not bend shock absorber rod or bayonet). Disconnect torque tube by removing nuts on forward ends of trunnion bracket mounting studs, move tube and axle back to clear studs, pry universal joint off drive shaft, pull axle assembly out from car. *Refer to Rear Axle*

*Section for "1942 Nash '600' Axle" article for data on Trunnion Bracket installation and adjustment, and shaft bearing data.*

**Axle Shaft Removal:** Remove wheel and drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. Endplay .002-.004".

**Rear Suspension:**—Coil spring type.

*See Rear Axle Section for complete data.*

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco Model 1026-N (front), 1022-BB (rear—4D Sedans), 1022-Z (rear—others). Direct acting, hydraulic types.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Enclosed type with knuckle support and coil spring on kingpin mounted on frame cross-member.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—5½° crosswise.

**Caster**—0° plus or minus ¼°. Adjustable.

**Camber**—0° to ½° Positive. Adjustable.

**Toe In**—0-1/16" measured 10" up from floor. Adjust by turning tube at outer end of each tie rod equally. **CAUTION**—Tie rod clamp bolts must be down toward ground when adjustment completed to avoid interference with body when wheel raised.

**Steering Geometry (Toe Out on Turns)**—Inner wheel turned 21° plus ½°, Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Gemmer Model 250 Worm-and-Roller.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear wheel service brakes. *See Brake Section for complete data.*

**Drums**—Cast iron. Diameter 9".

**Lining**—Molded. Width 1¾". 3/16" thick. Length 20½".

**Clearance**—.008" toe, .004" heel, for each shoe.

**Hand Brake:**—See Service brakes above.

**HOOD LOCK:**—Alligator type hood. Lock button below instrument panel on left side. To raise hood, pull out on lock button (hood will raise slightly), reach under front edge of hood and release safety catch, raise hood.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. R-384001. Stamped on plate on right frame siderail under engine hood. Service Serial Number—First number N8-76001. On Caution Plate on left front door hinge pillar post.

**ENGINE NUMBER:**—Stamped on right side of engine block at front end. First No. same as Serial No.

## TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 cast-iron head.  
Pressure—125 lbs. at 350 RPM cranking speed.

**VACUUM READING:**—Steady 18-20" idling at 7 MPH.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—AC No. 45. 14 MM. Metric type.

Gaps—.025".

NOTE—Six spark plugs only are used (not Twin Ignition type).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° Closed.

Automatic Advance—9° max. at 900 RPM (distr.).

Vacuum Advance—6° (distr.) with 15" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC. Front flywheel 'IGN' mark aligned with pointer on chain case cover.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw ½-1½ turns open. Idle speed 7 MPH.

Float Level—¾" from edge of cover casting to top of seam on free end of float (invert to check).

Accelerating Pump—Lower hole (Normal setting).

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance:—.015" for all valves with engine hot and idling (may be set .018" max. for sustained high speed driving). NOTE—Cylinder head oil plug not used on 1942 models.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Auto-Lite Lock Switch and Cable Assembly No. CE-2260BGS.

Ignition Lock—Briggs & Stratton. B & S No. 45792.

Key Series—N1201 to N1449. Groove—No. 15.

**COIL:** Auto-Lite CE-4662. Service Winding (less switch and cable) CE-3224JS. On dash.

NOTE—One coil only used (not Twin Ignition type).

Ignition Current—2.0 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671F. One used. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGS-4205. Single breaker, 6 lobe cam, full automatic advance with auxiliary vacuum spark control. NOTE—No synchronization required (not Twin Ignition system).

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and marked by number (#6) on breaker plate.

**Breaker Gap:**—Set at .020".

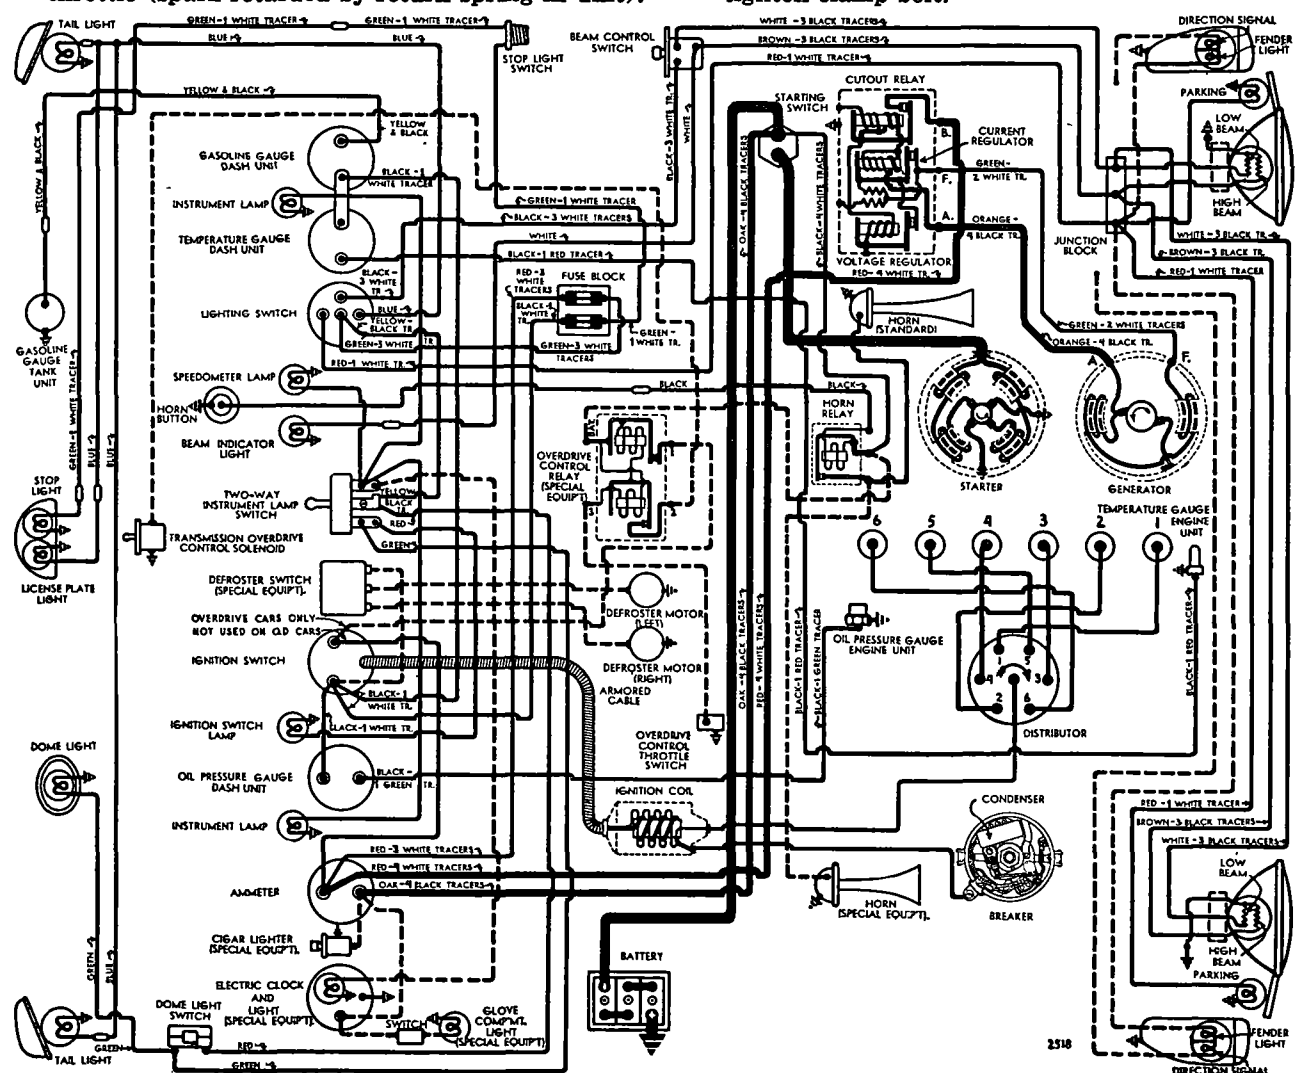

**Cam Angle or Dwell:**—38° closed, 22° open (distr. °).

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	275	0	550
2	340	4	680
4	400	8	800
6	600	12	1200
9	900	18	1800

**Vacuum Spark Control:**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

## Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (° of HG)
Start	0°	5"
1°	2°	6½"
3°	6°	10"
5°	10°	13½"
6°	12°	15"

**Removal:**—Mounted on right side of engine. To remove, disconnect vacuum line, take out mounting screw, lift distributor assembly off engine.

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

Flywheel Degrees

Piston Position

4° BTDC. 0067" BTDC.

**To Set Timing:**—With #1 piston on compression, turn engine over until piston is 4° or .0067" before top dead center, stop when 'IGN' mark on vibration dampener (front flywheel) lines up with pointer on timing chain cover. Loosen advance arm clamp bolt, rotate distributor until points just break, tighten clamp bolt.

## CARBURETOR

**CARBURETION:**—Carburetor, Carter Type WA-1, Model 464-S (#290 cast on face of flange). Single barrel, 1¼" downdraft type with Carter Climatic Control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7 MPH idle speed. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be ½-1½ turns open from inner seated position (turning screw in gives leaner mixture). Readjust idle speed.

**Accelerator Pump Setting:**—Pump arm under dust cover at top of carburetor has three holes for pump link engagement. Set as follows:

Upper Hole (maximum stroke)—Cold weather.  
Lower Hole (medium stroke)—Moderate weather.  
Inner Hole (minimum stroke)—Hot weather.

**Float Level:**—¾" from edge of cover casting to top of seam on free end of float (invert to check).

**Metering Rods & Jets:**—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

**Fast Idle:**—Integral type (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting:**—⅜" clearance between choke valve and air horn (gauge T109-85) with throttle stopscrew against (not on) first step of fast idle cam. Adjust by bending fast idle link offset (Tool T109-41).

**Automatic Choke:**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Setting:**—Coil housing centered (at index mark).

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1529112 oil-wetted type standard. #1529115 heavy duty oil-bath type optional. Use Replacement Filter Element Assembly: Type #2 (for #1529112), #1542245 (for #1529115).

**Fuel Pump:**—AC 'W' No. 1537389—Exchange No. 533 diaphragm type fuel pump standard. 'AD' #1535390 fuel-and-vacuum pump optional (std. on cars with Cruising Gear).

*For complete data, refer to Carburetion Equip. Index.*

**Pressure:**—3½ lbs. maximum (Type 'W').

**Gasoline Gauge:**—King-Seeley Electric type, K-S No. 40152 (dash unit), 40170 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Auto-Lite CTL-1-15, 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity:**—133 amperes for 20 minutes. Zero Capacity—300 amperes for 3.5 minutes. Five second voltage 4.2 volts.

**Grounded Terminal:**—Positive (+) terminal grounded to body. A separate ground strap is used from the body to the engine.

**Dimensions:**—Length 9 1/16". Height 9". Width 7 1/16".

**Location:**—On right side under front seat.

## STARTER

**STARTER:**—Auto-Lite MAB-4076. Armature MAB-2057.

**Drive:**—Inboard Bendix Type LCD11FX-10.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—160 RPM, 150-160 amps., 5.2 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.8 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—A-L #SW-4012. Mounted on body floor below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

**GENERATOR:**—Auto-Lite GDZ-4806A. Armature GDZ-2079F. 2 brush type with Current-Voltage control.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate:**—35 amperes (hot or cold), 8.0 volts, 1900 RPM (generator) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current:**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment:**—Adjust whenever belt deflection is over 1½" (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) for ¾" belt deflection, tighten screws.

## REGULATOR

**REGULATOR:**—Auto-Lite VRP-4004F-1. Current-Voltage type. Consists of Cutout Relay, vibrating Voltage Regulator, and vibrating Current Regulator in a single case mounted on left side of dash in engine compartment.

*For complete data, refer to Electrical Equipment Index.*

**NOTE:**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

### Cutout Relay

**Cuts In:**—6.4-6.6 volts.

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting:**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures. **To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap:**—.012" min. (armature against stop pin). **Air Gap:**—.048-.052" with contacts just opening.

### Current Regulator

**Setting:**—34-36 amperes (marked '35' on the cover). **To Check** (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective. **To Adjust** (with cover removed)—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap:**—Same as Voltage Regulator.

## LIGHTING

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment:**—Aim upper beam of each headlamp straight ahead with hot spot centered 3" below lamp center height.

**Beam Indicator:**—Red dot in lower portion of speedometer. Lighted whenever Country (upper) beam in use.

### Switches

**Lighting:**—Douglas.

**Beam Selector:**—Douglas.

**Instrument:**—Douglas.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking	1½	55
Instrument	1	51
Beam Indicator	1	51
Speedometer	1½	55
Stop Light	21	1129
Tail	1½	55
Rear License	3	68
Dome	6	81

CONTINUED N NEXT PA E

CONTINUED FROM PRECEDING PAGE

**MISC. ELECTRICAL**

**FUSES:**—Lighting—30 ampere. On fuse block mounted on left hand side of engine dash.  
Accessory—30 ampere. On fuse block.

**HORNS:**—Delco-Remy Klaxon. Model 1999565 (left horn—low note), Model 1999566 (right horn—high note). Vibrator type, blended tone, operated by horn relay.  
NOTE—Single horn with horn relay is standard equipment. For dual horn installation, one horn is added to assembly on car.

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

**Horn Relay:**—Delco-Remy Model 1116775.

Contact Gap—.025".

Air Gap—.015" (closed).

Contacts Open—2.75-4.0 volts.

**ENGINE**

**ENGINE CODE NOTE (ORIGINAL BORE, PISTON, & BEARING SIZES):**—See Nash Shop Notes for data.

**ENGINE SPECIFICATIONS:**—8 cylinder, valve-in-head type with Iso-thermal fuel intake system (intake manifold cast in cylinder head—water jacketed for temperature control).

Bore—3 $\frac{3}{8}$ ". Stroke—4 $\frac{3}{8}$ ".

Displacement—234.8 cubic ins. Rated HP—27.34.

Developed Horsepower—105 at 3400 RPM.

Compression Ratio—6.5-1 cast-iron head.

Compression Pressure—125 lbs. at 350 RPM.

Vacuum Reading—Steady 18-20" idling at 7 MPH.

**PISTONS:**—Tin-plated, cam-ground, lightweight type. Removal—Pistons and rods removed from above. Clearance—.0003-.0009". See Fitting New Pistons.

**Original Bore & Piston Sizes:**—See Engine Code Note in Nash Shop Notes for sizes and markings.

**Replacement Pistons:**—Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Fitting New Pistons:**—Fit piston by feel. Piston should hold own weight in normal running position  $\frac{1}{2}$  down in cylinder but should be free when worked by hand (piston and bore must be clean and free from oil when checking fit).

**Installing Pistons:**—Pin offset 1/16" toward camshaft.

**PISTON RINGS:**—#1 Compr. (inner edge tapered at top), #2 Compr. (outer edge tapers out at bottom with plain expander installed behind ring), #3 and #4 oil (slotted type with ventilated expander behind ring), all above pin. Drilled oil drain holes in oil ring grooves.

Ring	Width	End Gap	Side Clearance
Compr.	.124"	.010-.015"	.002-.004"
Oil Contr.	.155"	.010-.015"	.002-.004"

**Replacement Rings:**—See Nash Shop Notes for data.

**PISTON PIN:**—Diameter—.8745". Length—2.804".

Floating type, retained by locking ring at each end. Pin hole in piston offset toward camshaft.

Pin Fit in Piston—Light push fit.

Pin Fit in Rod Bushing—Select pin for .0001" clearance or light push fit at normal temperature.

**Replacement Pins:**—Standard, .001", .003" oversize.

**CONNECTING ROD:**—Length—8 $\frac{3}{4}$ ". Weight—36 $\frac{1}{4}$  ozs. Upper Bearing (Piston Pin Bushing)—Bronze. Crankpin Journal Diameter—2.002". See Engine Code Note in Nash Shop Notes for original bearing sizes. Lower Bearing—Removable, steel-backed babbit. Clearance—.0015-.0025". Sideplay—.008-.012".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or bearing caps. Refer to Nash Shop Notes for instructions and "Palnut" data.

**Replacement Bearings:**—Std. & .002", .010" undersize.

**Installing Rods:**—Mark rods and bearing caps before removal and install in same position. Oil hole in lower end of rod must be toward right of engine.

**CRANKSHAFT:**—7 bearing, counterweighted type. See Nash Shop Notes for Vibration Damper data.

**Journal Diameters:**—2 31/64" all bearings. See Engine Code Note in Nash Shop Notes for original bearing sizes. Bearings—Removable steel-backed, babbit type. Clearance—.002-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Refer to Nash Shop Notes for bearing installation and fitting, replacement main bearing caps, and rear main bearing oil seal data.

**Replacement Bearings:**—Std. & .002", .010" undersize.

**End Thrust:**—Taken by center bearing. Replace bearing to take up excessive endplay. Endplay .004-.006".

**CAMSHAFT:**—Non-adjustable roller chain drive.

See Nash Shop Notes for Camshaft Removal data.

**Bearing Type:**—Steel-backed, babbit bushings.

Clearance—.002".

**End Thrust:**—Taken by front bearing.

Endplay—.004-.006".

**Timing Chain:**—Whitney No. 49205, Type 35D-60.

Duplex type roller chain. Pitch  $\frac{3}{8}$ ". Length 60 links.

**Camshaft Setting:**—Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9 $\frac{1}{2}$  links or 19 pins between tooth marks.

<b>VALVES:</b>	Head Diameter	Stem Diameter	Length
Intake	1 $\frac{3}{4}$ "	.3725"	5 17/32"
Exhaust	1 19/32"	.3725"	5 17/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.002-.004"

**Valve Guides:**—Press fit in head (positioned by shoulder on guide). Ream new guides for clearance.

**Valve Springs:**—Double springs used on all valves.

Free length 1 21/32" (inner), 2" (outer spring).

	Inner Spring	Outer Spring
	Pressure	Length
Valve Closed	21 lbs.	1 3/8"
Valve Open	51 lbs.	1 1/32"

95 lbs. 1 11/32"

**Valve Lifters:**—Mushroom type. Lifter guide holes in block. Remove from below with camshaft out.

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves, engine hot and idling (may be increased to .018" max. for continuous high speed driving). NOTE—Cylinder head oil plug not used on 1942 models.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 14° BTDC. Close 60° ALDC.

**Exhaust Valves:**—Open 75° BLDC. Close 31° ATDC.

**To Check Valve Timing:**—With .015" tappet clearance, #1 intake valve opens 14° BTDC with "DC" mark on vibration dampener at front of engine  $\frac{1}{8}$ " ahead of pointer on chain case cover.

**LUBRICATION**

**LUBRICATION:**—Pressure system with gear type oil pump in crankcase (pump driven by separate gear from camshaft with oil delivery up along drive shaft to oil gallery in engine block).

**Normal Oil Pressure:**—20 lbs. at 20 MPH.

**Oil Pressure Regulator:**—On oil pump cover. Opens at 30 lbs. Not adjustable.

**Oil Pressure Gauge:**—King-Seeley Electric. K-S No. 40161 (Dash Unit), No. 6125 (Engine Unit).

See Miscellaneous Section for complete data.

**Crankcase Capacity:**—6 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity 17 qts. (18 with heater).

**Water Pump:**—Centrifugal, adjustable packing type. See Water Pump Section for complete data.

**Thermostat:**—Fulton or Dole. In cyl. head outlet. Setting—Starts to open at 160° F.

**Temperature Gauge:**—King Seeley Electric. K-S No. 40154 (Dash Unit), No. 7000 (Engine Unit). See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7. Assembly No. 950 stamped on cover. Single plate, dry disc type. See Clutch Section for complete data.

**Facings:**—Spiral-woven type, 2 used. Inside Diameter 7". Outside Diameter 10". Thickness  $\frac{1}{8}$ ".

**Pedal Adjustment:**—Pedal travel must be  $\frac{1}{2}$ ". To adjust, install Aligning Pin J-1390 in end of helper spring lever (right end of clutch release shaft), loosen helper spring lever screw on end of clutch release shaft. Loosen locknut and adjust nut on clutch release shaft end of pedal connector link for correct  $\frac{1}{2}$ " pedal free travel. Use pipe wrench or pliers to turn clutch release shaft to rear to take up all play, see that aligning pin in helper spring lever is against pivot bracket at rear of engine, tighten helper spring lever screw securely.

**CAUTION:**—Pedal adjustment must be made exactly as outlined above to insure correct pedal travel and helper spring operation.

**Removal:**—Remove transmission (see below). Disconnect clutch pedal linkage, support engine at rear and free rear engine mountings, remove clutch housing and pan. Punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), remove clutch mounting screws, take out clutch.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift. See Transmission Section for complete data.

**Transmission Control:**—Mechanical steering col. shift. See Transmission Section for complete data.

**Removal:**—Disconnect shift rods, speedometer cable, overdrive control cable & wires (if used), and front universal. Remove 2 right transmission mounting screws and install pilot studs (to support transmission during removal), remove remaining mounting screws, pull transmission straight back and remove.

**OVERDRIVE**

**Overdrive (Cruising Gear):**—Warner Model AS1-R7C, Type R7C with electrical 'kick-down' control.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch Setting:**—Adjust switch position on mounting bracket so that contacts just close with throttle wide open when spring on carburetor throttle shaft pulley begins to compress.

**Control Relay:**—Delco-Remy Model 1116798.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics Type 2CR. Roller bearing type, 2 used.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Standard, 4.4-1 with Overdrive.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear end of car, disconnect brake cables at rear clevises. Remove brake tubes. Disconnect rear universal. Remove rear spring U-bolts and withdraw axle from car.

**Axle Shaft Removal:**—Remove wheel and drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment:**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. Endplay .002-.004".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco Model 1016-E (front), 1023-BB (rear). Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4½° crosswise.

**Caster:**—0° to ½° Negative. 'C' washer adjustment.

**Camber:**—Pos. ¼° to ½°. 'C' washer adjustment.

**Toe In:**—1/32-3/32" measured 10" up from floor.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 21° plus ¾°, outer wheel exactly 20°.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type, without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast iron. Diameter 10".

**Lining:**—Moulded type. Width 2". Thickness 3/16". Length 22" per wheel.

**Clearance:**—.015" at each end of secondary (rear) shoes with primary shoes forced out against drum.

**Hand Brakes:**—See Service Brakes above.

**HOOD LOCK:**—Alligator type hood. Lock button below instrument panel on left side. To raise hood, pull out on lock button (hood will raise slightly), reach under front edge of hood and release safety catch, raise hood.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. B-114001. Stamped on plate on right frame siderail under engine hood. Service Serial Number—First number N8-21001. On Caution Plate on left front door hinge pillar post.

**ENGINE NUMBER:**—Stamped on right side of engine block at front end. First No. same as Serial No.

### TUNE-UP

**COMPRESSION:**—Ratio—6.6-1 cast-iron head.  
Pressure—125 lbs. at 350 RPM. cranking speed.

**VACUUM READING:**—Steady 18-20" idling at 7 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:**—AC No. 45. 14 MM. Metric type.

Gaps—.025".

NOTE—Eight spark plugs only are used (not Twin Ignition type).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017". Cam Angle—27° Closed.

Automatic Advance—12½" max. at 1900 RPM (distr.).

Vacuum Advance—6° (distr.) with 17½" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—7° BTDC. Vibration dampener mark 'IGN' aligned with pointer on chain case cover.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screws ¼-1¼ turns open. Idle speed 7 MPH.

Float Level—3/16" from top of float to machined surface of cover (remove gasket, invert to check).

Accelerating Pump—Lower hole (Summer), upper (Winter).

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance:—.015" for all valves with engine hot and idling (may be set .018" max. for sustained high speed driving).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Auto-Lite Lock Switch and Cable Assembly No. CE-2260BGS.

Ignition Lock—Briggs & Stratton. B & S No. 45792. Key Series—N1201 to N1449. Groove—No. 15.

**COIL:** Auto-Lite CE-4662. Service winding (less switch & cable) CE-3224JS. On engine dash.

NOTE—One coil only used (not Twin Ignition type). Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671G. One used. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGT-4202. Single breaker, 8 lobe cam, full automatic advance with auxiliary vacuum spark control. NOTE—No synchronization required (not Twin Ignition system).

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and marked by number (#6) on breaker plate.

Breaker Gap—Set at .017".

Cam Angle or Dwell—27° closed, 18° open (distr. °).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from the top.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	0.....	500
2.....	310	4.....	620
5.....	400	10.....	800
9.....	1200	18.....	2400
12.5.....	1900	25.....	2800

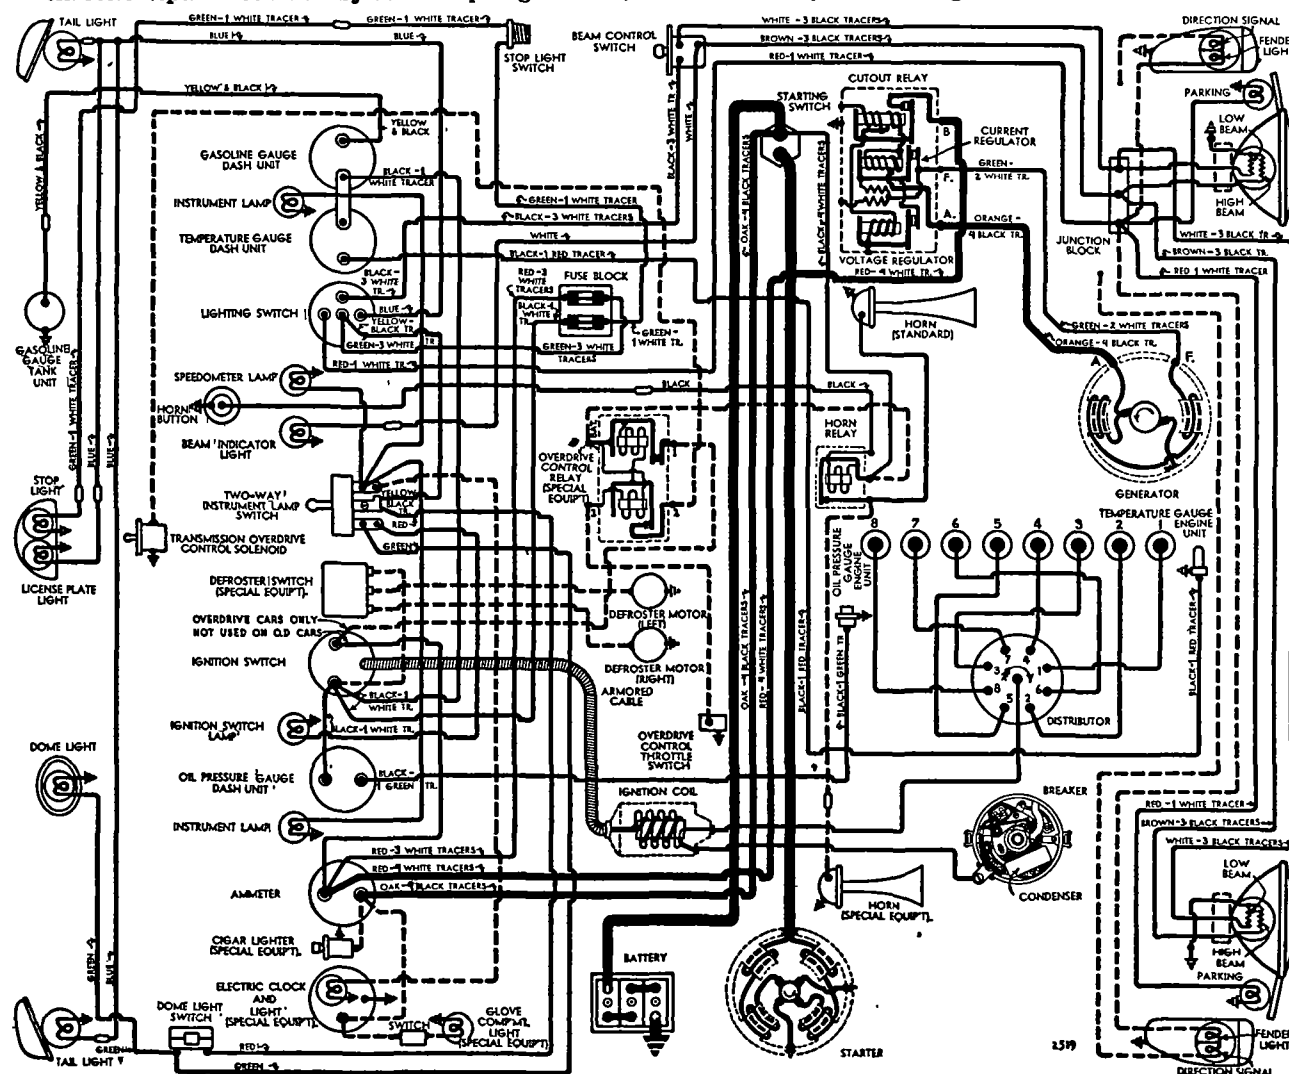

**Vacuum Spark Control:**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°.....	14"
1°.....	2°.....	14½"
3°.....	6°.....	15¾"
5°.....	10°.....	16⅞"
6°.....	12°.....	17½"

**Removal:**—Mounted on right side of engine. To remove, disconnect vacuum line, take out mounting screw, lift distributor assembly off engine.

**Installation Note:**—When installing distributor, crank engine to firing position for #1 cylinder (piston 7° BTDC—'IGN' mark on vibration dampener in line with pointer on timing chain case cover), see that oil pump and distributor drive gear meshed with camshaft gear so that oil pump drive pin (at lower end of distributor drive shaft) is crossways of the engine.

**IGNITION TIMING****IGNITION TIMING:**—Setting for all engines as follows:

<b>Flywheel Degrees</b>	<b>Piston Position</b>
7° BTDC.	.....0197" BTDC.

**To Set Timing**—With #1 piston on compression, turn engine over until piston is 7° or .0197" before top dead center, stop when 'IGN' mark on vibration dampener (front flywheel) lines up with pointer on timing chain cover. Loosen advance arm clamp bolt, rotate distributor until points just break, tighten clamp bolt.

**CARBURETOR****CARBURETION:**—Carburetor. Carter Type WDO, Model 538-S (#397 cast on face of flange). 1" dual down-draft type with Carter Climatic Control.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7 MPH idle speed. Turn each idle adjusting screw (in succession) in until engine begins to miss, then turn screws out until engine begins to roll, finally turn screws in until engine fires smoothly. Final setting for each screw should be ¼-1¼ turns open from inner seated position (turning screws in gives leaner mixture). Readjust idle speed.

**Accelerating Pump**—Pump arm under dust cover at top of carburetor has two holes for pump link engagement. Set as follows:  
Upper Hole (maximum stroke)—Cold weather.  
Lower Hole (minimum stroke)—Hot weather.

**Float Level**—3/16" from top of float to machined surface of bowl cover (remove gasket and invert cover to check).

**Metering Rods & Jets**—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

**Fast Idle:**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index.  
**Setting**—.015" throttle opening (gauge T109-44) with choke valve closed and fast idle screw turned in to contact high step of fast idle cam.

**Automatic Choke:**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

**Setting**—Coil housing centered (at index mark).**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1529113 oil-wetted type standard. #1542034 heavy duty oil-bath type optional. Use Replacement Filter Element Assembly: Type #5 (for #1529113), #1542245 (for #1542034).

**Fuel Pump:**—AC 'W' No. 1537413—Exchange No. 534 diaphragm type fuel pump standard. 'AD' #1523644 Exchange No. 500, fuel-and-vacuum pump optl. (std. on cars with Cruising Gear).

For complete data, refer to Carburetion Equip. Index.

**Pressure**—3½ lbs. maximum (Type 'W').

**Gasoline Gauge:**—King-Seeley Electric type. K-S No. 40152 (dash unit), 40170 (tank unit).

For complete data, refer to Carburetion Equip. Index.

**BATTERY****BATTERY:**—Auto-Lite CTL-2-17. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).**Starting Capacity**—152 amperes for 20 minutes.**Zero Capacity**—300 amperes for 4.5 minutes. Five second voltage 4.4 volts.

**Grounded Terminal**—Positive (+) terminal grounded to body. A separate ground strap is used from the body to the engine.

**Dimensions**—Length 10 5/16". Width 7 1/16". Height 9".

**Location**—On right side under front seat.**STARTER****STARTER:**—Auto-Lite MAB-4104. Armature MAB-2057.**Drive**—Inboard Bendix Type LCD11FX-10.**Rotation**—Counter-clockwise at commutator end.**Brush Spring Tension**—42-53 ozs. (new brushes).**Cranking Engine**—160 RPM, 150-160 amps., 5.2 v.**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—A-L #SW-4012. Mounted on body floor below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

**GENERATOR****GENERATOR:**—Auto-Lite GDZ-4803B. Armature GDZ-2079F. 2 brush type with Current-Voltage control.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate**—35 amperes (hot or cold), 8.0 volts, 1900 RPM (generator) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.**Brush Spring Tension**—53 ozs. max. (new brushes).**Field Current**—1.60-1.78 amperes at 6.0 volts.**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment:**—Adjust whenever belt deflection is over 1½" (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) for ¾" belt deflection, tighten screws.

**REGULATOR****REGULATOR:**—Auto-Lite VRP-4004F-1. Current-Voltage type. Consists of Cutout Relay, vibrating Voltage Regulator, and vibrating Current Regulator in a single case mounted on left side of dash in engine compartment.

For complete data, refer to Electrical Equipment Index.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay****Cuts In**—6.4-6.6 volts.**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stoppin).**Air Gap**—.048-.052" with contacts just opening.**Current Regulator****Setting**—34-36 amperes (marked '35' on the cover).

**To Check (without breaking seals)**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH., charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.

**To Adjust (with cover removed)**—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap**—Same as Voltage Regulator.

CONTINUED ON NEXT PAGE

C NTINUED FROM PRECEDIN PAGE

**LIGHTING**

**LIGHTING:—Headlamps**—Hall 'Sealed Beam' type.  
*For complete data, refer to Electrical Equipment Index.*  
**Headlamp Adjustment**—Aim upper beam of each headlamp straight ahead with hot spot centered 3" below lamp center height.  
**Beam Indicator**—Red dot in lower portion of speedometer. Lighted whenever Country (upper) beam in use.

**Switches**

**Lighting**—Douglas.  
**Beam Selector**—Douglas.  
**Instrument**—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking	1½	55
Instrument	1	51
Beam Indicator	1	51
Speedometer	1½	55
Stop Light	21	1129
Tail	1½	55
Rear License	3	63
Dome	6	81

**MISC. ELECTRICAL**

**FUSES:—Lighting**—30 ampere. On fuse block mounted on left hand side of engine dash.  
**Accessory**—30 ampere. On fuse block.

**HORNS:—Delco-Remy Klaxon.** Model 1999565 (left horn—low note), Model 1999566 (right horn—high note). Vibrator type, blended tone, operated by horn relay.

**NOTE**—Single horn with horn relay is standard equipment. For dual horn installation, one horn is added to assembly on car.

Type	Current (at 6 volts)	Air Gap
1999565 (Low Note)	19-21 amperes	.047-.052"
1999566 (High Note)	18-20 amperes	.039-.044"

**Horn Relay:—Delco-Remy Model 1116775.**

**Contact Gap:—**.025".

**Air Gap:—**.015" (closed).

**Contacts Open**—2.75-4.0 volts.

**ENGINE**

**ENGINE CODE NOTE (ORIGINAL BORE, PISTON, & BEARING SIZES):—***See Nash Shop Notes for data.*

**ENGINE SPECIFICATIONS:—**8 cylinder, valve-in-head type with Iso-thermal fuel intake system (intake manifold cast in cylinder head—water jacketed for temperature control).

**Bore**—3½". **Stroke**—4¼".

**Displacement**—260.8 cubic ins. **Rated HP**—31.25.

**Developed Horsepower**—115 at 3400 RPM.

**Compression Ratio**—6.6-1 cast-iron head.

**Compression Pressure**—125 lbs. at 350 RPM.

**Vacuum Reading**—Steady 18-20" idling at 7 MPH.

**PISTONS:—**Nelson Bohnalite, aluminum alloy, Invar strut, tin-plated, split skirt type.  
**Weight**—16 ozs. (stripped). **Length**—3 11/16".  
**Removal**—Pistons and rods removed from below.  
**Clearance**—Approximately .002".

**Original Bore & Piston Sizes:—***See Engine Code Note in Nash Shop Notes for sizes and markings.*

**Replacement Pistons:—**Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Fitting New Pistons:—**Use .0025" dry (not oiled) feeler between piston and wall on side opposite slot at right angles to pin hole. Pull to withdraw feeler 8-15 lbs. with piston at room temperature.

**Installing Pistons:—**Pin offset toward camshaft. Slot toward left (trademark in piston toward front).

**PISTON RINGS:—**#1 Compr. (inner edge tapered at top), #2 Compr. (outer edge tapers out at bottom with plain expander installed behind ring), #3 and #4 oil (slotted type with ventilated expander behind ring), all above pin. Drilled oil drain holes in oil ring grooves.

Ring	Width	End Gap	Side Clearance
Compr. (both)	.124"	.010-.015"	.002-.004"
Oil Cont. (Upper)	.124"	.010-.015"	.002-.004"
Oil Cont. (Lower)	.1865"	.010-.015"	.002-.004"

**Replacement Rings:—***See Nash Shop Notes for data.*

**PISTON PIN:—**Diameter—.8747". **Length**—2.574".  
 Floating type, retained by locking ring at each end.  
 Pin hole in piston offset toward camshaft.  
**Pin Fit in Piston**—Light push fit (piston at 200°F.).  
**Pin Fit in Rod Bushing**—Select pin for .0001" clearance or light push fit at normal temperature.

**Replacement Pins:—**Standard, .001", .003" oversize.

**CONNECTING ROD:—**Length—8¾". **Weight**—34 ozs.  
 Upper Bearing (Piston Pin Bushing)—Bronze.  
**Crankpin Journal Diameter**—2.002". *See Engine Code Note in Nash Shop Notes for original bearing sizes.*  
 Lower Bearing—Removable, steel-backed babbitt.  
**Clearance**—.0015-.0025". **Sideplay**—.008-.012".

**Bearing Adjustment:—**None (no shims). Replace bearings. Do not file rods or bearing caps. *Refer to Nash Shop Notes for instructions and 'Palnut' data.*

**Replacement Bearings:—**Std. & .002", .010" undersize.

**Installing Rods:—**Mark rods and bearing caps before removal and install in same position. Oil hole in lower end of rod must be toward right of engine.

**CRANKSHAFT:—**Nine bearing. No counterweights. *See Nash Shop Notes for Vibration Damper data.*  
**Journal Diameters**—2 31/64" all bearings. *See Engine Code Note in Nash Shop Notes for original bearing sizes.*  
**Bearings**—Removable steel-backed, babbitt type.  
**Clearance**—.002-.003".

**Bearing Adjustment:—**None (no shims). Replace bearings. *Refer to Nash Shop Notes for bearing installation and fitting, replacement main bearing caps, and rear main bearing oil seal data.*

**Replacement Bearings:—**Std. & .002", .010" undersize.

**End Thrust:—**Taken by center bearing. Replace bearing to take up excessive endplay. **Endplay** .004-.006".

**CAMSHAFT:—**Non-adjustable roller chain drive. *See Nash Shop Notes for Camshaft Removal data.*  
**Bearing Type**—Steel-backed, babbitt bushings.  
**Clearance**—.002".

**End Thrust:—**Taken by front bearing.

**Endplay**—.004-.006".

**Timing Chain:—**Diamond double roller type. Width 9/16". Pitch ¾". Length 23¼" or 62 links.

**Camshaft Setting:—**Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 10 links or 20 pins between tooth marks.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.3725"	5½"
Exhaust	1 15/32"	.3725"	5½"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.002-.004"

**Valve Guides:—**Press fit in head (positioned by shoulder on guide). Ream new guides for clearance.

**Valve Springs:—**Double springs used on all valves. Free length 1 21/32" (inner), 2" (outer spring).

	Inner Spring		Outer Spring	
	Pressure	Length	Pressure	Length
Valve Closed	21 lbs.	1 3/8"	38 lbs.	1 11/16"
Valve Open	51 lbs.	1 1/32"	95 lbs.	1 11/32"

**Valve Lifters:—**Mushroom type. Lifter guide holes in block. Remove from below with camshaft out.

**VALVE TIMING**

**Tappet Clearance:—**.015" all valves, engine hot and idling (may be increased to .018" max. for continuous high speed driving).

**Valve Timing:—***See Camshaft Setting above.*

**Intake Valves**—Open 10½° BTDC. Close 63½° ALDC.

**Exhaust Valves**—Open 69½° BLDC. Close 35½° ATDC.

**To Check Valve Timing:—**With .015" tappet clearance, #1 intake valve opens 10½° BTDC with 'DC' mark on vibration dampener at front of engine 7/16" ahead of pointer on chain case cover.

**LUBRICATION**

**LUBRICATION:—**Pressure system. Gear type oil pump in crankcase.

**Normal Oil Pressure:—**20 lbs. at 20 MPH.

**Oil Pressure Regulator:—**On oil pump cover. Opens at 30 lbs. Not adjustable.

**Oil Pressure Gauge:—**King-Seeley Electric. K-S No. 40161 (Dash Unit), No. 6125 (Engine Unit).

*See Miscellaneous Section for complete data.*

**Crankcase Capacity:—**7 quarts.

**COOLING**

**COOLING SYSTEM:—**Capacity 16 qts. (17 with heater).

**Water Pump:—**Centrifugal, adjustable packing type. *See Water Pump Section for complete data.*

**Thermostat:—**Fulton or Dole. In cyl. head outlet.

**Setting**—Starts to open at 160° F.

**Temperature Gauge:—**King Seeley Electric. K-S No. 40154 (Dash Unit), No. 7000 (Engine Unit).

*See Miscellaneous Section for complete data.*

**CLUTCH**

**CLUTCH:—**Borg & Beck Model 10A7. Assembly No. 950 stamped on cover. Single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:—**Spiral-woven type, 2 used. Inside Diameter 7". Outside Diameter 10". Thickness ¼".

**Pedal Adjustment:—**Pedal travel must be ½". To adjust, install Aligning Pin J-1390 in end of helper spring lever (right end of clutch release shaft), loosen helper spring lever screw on end of clutch

release shaft. Loosen locknut and adjust nut on clutch release shaft end of pedal connector link for correct  $\frac{1}{2}$ " pedal free travel. Use pipe wrench or pliers to turn clutch release shaft to rear to take up all play, see that aligning pin in helper spring lever is against pivot bracket at rear of engine, tighten helper spring lever screw securely. **CAUTION**—Pedal adjustment must be made exactly as outlined above to insure correct pedal travel and helper spring operation.

**Removal:**—Remove transmission (see below). Disconnect clutch pedal linkage, support engine at rear and free rear engine mountings, remove clutch housing and pan. Punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), remove clutch mounting screws, take out clutch.

### TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift. *See Transmission Section for complete data.*

**Transmission Control:**—Mechanical steering col. shift. *See Transmission Section for complete data.*

**Removal:**—Disconnect shift rods, speedometer cable, overdrive control cable & wires (if used), and front universal. Remove 2 right transmission mounting screws and install pilot studs (to support transmission during removal), remove remaining mounting screws, pull transmission straight back and remove.

### OVERDRIVE

**Overdrive (Cruising Gear):**—Warner Model AS1-R7C, Type R7C with electrical 'kick-down' control. *See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch Setting:**—Adjust switch position on mounting bracket so that contacts just close with throttle wide open when spring on carburetor throttle shaft pulley begins to compress.

**Control Relay:**—Delco-Remy Model 1116798.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 2CR. Roller bearing type, 2 used.

*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Standard, 4.4-1 with Overdrive.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear end of car, disconnect brake cables at rear clevises. Remove brake tubes. Disconnect rear universal. Remove rear spring U-bolts and withdraw axle from car.

**Axle Shaft Removal:**—Remove wheel and drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment:**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. Endplay .002-.004".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco Model 1016-E (front), 1023-BB (rear). Direct acting, hydraulic type. *See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**— $4\frac{1}{2}^\circ$  crosswise.

**Caster:**— $0^\circ$  to  $\frac{1}{2}^\circ$  Negative. 'C' washer adjustment.

**Camber:**—Pos.  $\frac{1}{4}^\circ$  to  $\frac{1}{2}^\circ$ . 'C' washer adjustment.

**Toe In:**— $1/32$ - $3/32$ " measured 10" up from floor.

**Steering Geometry (Toe out on turns):**—Inner wheel turned  $21^\circ$  plus  $\frac{3}{4}^\circ$ , outer wheel exactly  $20^\circ$ .

### STEERING GEAR

**Steering Gear:** Gemmer Model 335 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type, without Eccentric Adjustment. Hand lever applies rear wheel service brakes. *See Brake Section for complete data.*

**Drums:**—Cast iron. Diameter 10".

**Lining:**—Moulded type. Width 2". Thickness  $3/16$ ". Length 22" per wheel.

**Clearance:**—.015" at each end of secondary (rear) shoes with primary shoes forced out against drum.

**Hand Brakes:**—See Service Brakes above.

►1948 ELECTRICAL EQUIPMENT NOTE: Both Auto-Lite and Delco-Remy electrical units are used.

**HOOD LOCK:** Alligator hood. Release instrument panel button and safety catch under hood nose.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate on right body sill brace under engine hood.

1946 Numbers—K-77701 Up.

1947 Numbers—K-136001 Up.

1948 Numbers—K-196901 Up.

**Service Serial Number (4640 only):** N4-78001 Up. On plate on left front door hinge pillar post.

**ENGINE NUMBER:** Stamped on left side of engine block at front end.

1947 Numbers—KE-136001 Up.

1948 Numbers—KE-55001 Up.

### TUNE-UP

**COMPRESSION PRESSURE:** 120 lbs. at 350 RPM.

**VACUUM READING:** Steady 18-21" idling at 7 to 9 MPH. or 400-500 RPM.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUG GAPS:** .025".

Plug Type—Auto-Lite Type A5. 14 mm. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Limits .018-.022" (Auto-Lite), .018-.024" (Delco-Remy).

Cam Angle or Dwell—35° Closed, 25° Open (Auto-Lite & Delco-Remy).

Breaker Arm Spring Tension—17-20 ozs. (Auto-Lite), 17-21 ozs. (Delco-Remy).

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** TDC. (At top dead center).

Timing Procedure—See Ignition Timing.

Timing Mark—"IGN/DC" mark on vibration dampener in line with pointer screw on timing case cover.

Octane Selector—Set to give slight ping when accelerating with wide open throttle at 10-15 MPH.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw ('46-47) 1¼-2¼, ('48) ¾-1¼ turns open. One screw—turning screw out gives richer mixture.

Idle Speed—7-10 MPH.

Float Level—½" from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).

Accelerating Pump—('46-47) No seasonal adjus'mt. ('48) Medium stroke (lower, outer hole) Normal.

Fuel Pump Pressure—3½ lbs. maximum.

**VALVE TAPPET CLEARANCE:** .015" All Valves, Hot.

NOTE—Tappet adjusting screws self-locking type.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

#### DELCO-REMY

**IGNITION SWITCH:** Delco-Remy No. 1116460. No armored cable.

Ignition Lock—Briggs & Stratton No. 85853.

Key Series—5 digits. Groove—No. 1.

**COIL:** Delco-Remy No. 1115328. Mounted on engine.

Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.23 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1112351. Full automatic advance type with separate vacuum spark control and octane selector adjustment.

Breaker Gap—.020". Limits .018-.024".

Cam Angle—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)

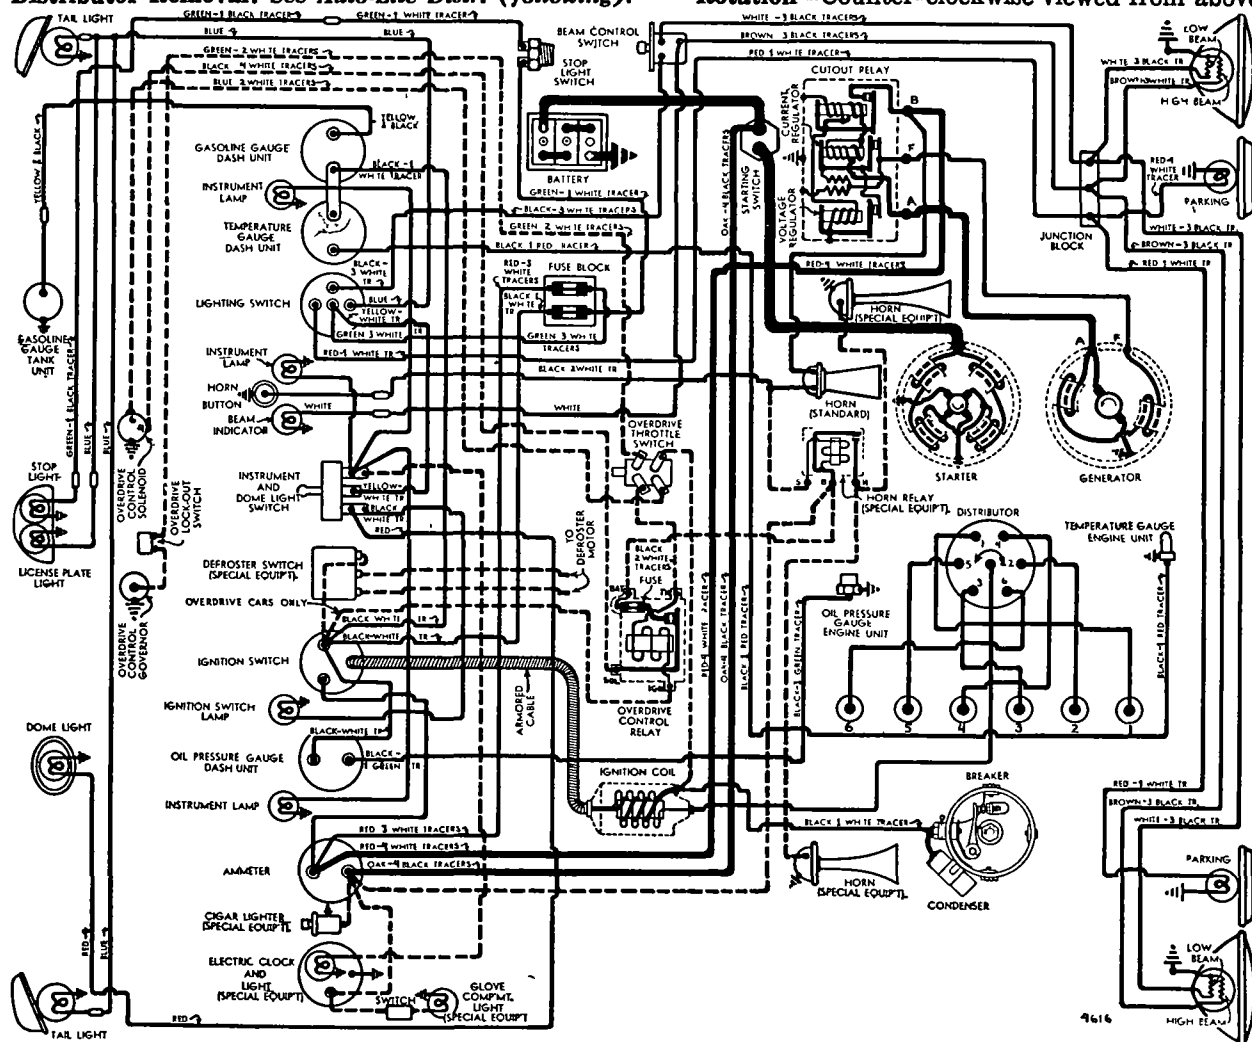

Degress	Distr.	R.P.M.	Degress	Eng.	R.P.M.
Start.....	300	2.....	600		
5½.....	400	11.....	800		
12.....	1400	24.....	2800		

**Vacuum Spark Control:** Delco-Remy No. 1116045. Separate unit mounted on hold-down plate and linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Plunger Travel 23/64".

• Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	3-5"

1946-47 NASH "600"

### IGNITION

#### AUT -LITE

**IGNITION SWITCH:** Mitchellock Type 24-B, No. E-10230. Connected to coil by armored cable.

**COIL:** 1946-47 Auto-Lite No. IG-4677. Service Coil (less switch & cable) IG-3224JS. On dash.

1948—Auto-Lite No. CE-6001. Mounted on engine.

Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite (1946-47) IGB-1025J (IGW distr.). (1948) IG-2671 (IGC distributor).

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** 1946-47 Auto-Lite IGW-4184 or 4184A, 1948 Auto-Lite IGC-4512. Full automatic advance type with vacuum spark control and octane selector adjustment.

Breaker Gap—.020". Limits .018-.022".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance (Auto-Lite IGW-4184, A)

2°.....	4°	6 1/8"
4.5°.....	9°	9"
6°.....	12°	12"
7.5°.....	15°	15"

**Distributor Removal:** On left side of engine. To remove, disconnect vacuum line, take out hold-down screw, lift distributor off.

**Installation Note**—When installing distributor, crank engine to firing position for #1 cylinder (piston at TDC), see that oil pump drive gear meshed with shaft tongue on 1946-47 in vertical or straight-across-engine position, or on 1948 two teeth forward of vertical position, and on all engines wide half of shaft should be toward rear (offset shaft), turn distributor to #1 segment in distributor cap, install distributor, check timing.

1948 NASH "600"

## IGNITION TIMING

Std. Setting ..... At TDC.

**NOTE**—Car manufacturer recommends using Synchroscope or Timing Light to set Ignition Timing.

**Timing (Using Synchroscope)**—Loosen distributor hold-down screw, center octane selector scale, tighten screw. Fill in "IGN/DC" mark on vibration dampener with chalk. Clip synchroscope to #1 spark plug, direct light on vibration dampener at timing case cover pointer. Idle engine at 400-500 RPM., loosen advance arm clamp bolt, rotate distributor until "IGN/DC" vibration dampener mark aligned with pointer, tighten clamp bolt, check Octane Selector Setting given below.

**Timing (Using Timing Light)**—Connect timing light, adjust distributor as directed above. Crank engine by placing in high gear and moving car ahead slowly.

**Octane Selector Setting**—Loosen hold-down screw in distributor, adjust scale so that slight ping secured when accelerating with wide open throttle at 10-15 MPH.

## CARBURETOR

Carter WA1, No. 611S (1946-47), 662S (Early 1948), 662SA (Late 1948). 1 1/4" Single Barrel downdraft type with Carter Climatic Control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump Setting):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in the Carburetor Section.

**Fast Idle:** Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for complete data.

**Setting**—5/8" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

**Automatic Choke:** Carter Climatic Control (Single Barrel Carburetor).

See Carburetion Equipment Section for complete data.

► **Setting—CAUTION—Two settings used.**  
(611S, 662S) 2 points Lean, (662SA) Centered.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1542037 Oil-wetted type (Std.), Filter Element AC #1. Oil-bath Cleaner Optl.

**Servicing Oil-wetted type**—Wash filter element and re-oil with heavy engine oil every 2000 miles. **Servicing (Oil-bath type)**—Wash filter element, clean out and refill oil reservoir with 1 pint SAE No. 50 engine oil (summer), No. 20 (winter) every 5000 miles.

**Fuel Pump (Std.):** AC Type W, No. 1537398.

(Optl. & Overdrive Cars)—AC Type AJ, No. 1537406 combination fuel-and-vacuum pump.

**Replacement Pumps**—AC 532 (for W), 7406 (for AJ).

► **CAUTION**—Install pumps with rocker arm ABOVE (W), or UNDER (AJ) eccentric on camshaft.

See Carburetion Equipment Section for complete data.

**Pressure**—3 1/2 lbs. max. ("W"), 4 lbs. ("AJ").

**Gasoline Gauge:** King-Seeley electric type. K-S Nos. 40152 (dash unit), 40170 (tank unit).

See Carburetion Equipment Section for complete data.

C NTINUED FR M PRECEDING PAGE

**BATTERY**

Auto-Lite Type 1H-90 (old CT-1-13). 6 volt, 13 plate, 90 Ampere Hour capacity (20 hour rate).  
 Starting Capacity—114 amperes for 20 minutes.  
 Zero Capacity—300 amperes for 3.0 minutes. Five second voltage—4.10 volts.  
 Dimensions—Lght. 9 1/16". W. 7 1/16". Hght. 9".  
 Grounded Terminal—Positive (+) to body floor to rear of battery. Engine ground from right rear side of engine flywheel housing to rear engine support.  
 Location—Left side under front seat.

**STARTER****DELCO-REMY**

Delco-Remy Model 1109451. Armature No. 1882547.  
 Drive—Barrel type Bendix Drive No. A-2033.  
 Rotation—Counter-clockwise at commutator end.  
 Brush Spring Tension—24-28 ounces.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.7	60
11.5 "	Lock	3.3	540

Starting Switch: Delco-Remy No. 1996478. Mounted on toeboard, actuated by fully depressing clutch pedal.

Removal: See Auto-Lite Starter (following).

**STARTER****AUTO-LITE**

Auto-Lite Model MZ-4103. Armature No. MZ-2154.  
 Drive—Barrel type Bendix No. A-2033.  
 Rotation—Counter-clockwise at commutator end.  
 Brush Spring Tension—42-53 ozs. (new brushes).  
 Cranking Engine—150-175 amperes, 5 volts min.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

Starting Switch: Auto-Lite No. SW-4012. Mounted on toeboard and operated by fully depressing clutch pedal.

Removal: Flange mounted on left front face of flywheel housing. To remove, disconnect cable, take out flange mounting screws.

**GENERATOR****DELCO-REMY**

Delco-Remy Model 1102702. Armature No. 1911454.  
 Two-brush with voltage and current regulation.  
 Maximum Charging Rate—30 amperes, 8.0 volts.  
 Charging Rate Adjustment—None (see Regulator).

**Performance Data**

Amperes	Volts	R.P.M.
30①	8.0	1750

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—25 ounces.

Field Current—1.75-1.9 amperes at 6.0 volts.

Removal & Belt Adjustment: See Auto-Lite Generator (following).

**GENERATOR****AUT -LITE**

Auto-Lite Model GDZ-4806A. Armature GDZ-2079F.  
 Two brush (shunt) type with voltage and current regulation. Ventilated.

Maximum Charging Rate—35 amperes, 8.0 volts, 1900 RPM.

Charging Rate Adjustment—None (see Regulator).

Cold Performance Data Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35-53 ozs. (new brushes).

Field Current—1.60-1.78 amperes at 6.0 volts.

Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Generator cradle mounted at left side of engine with fan belt drive (water pump driven by flexible coupling from generator). To remove, disconnect water pump, loosen fan belt, remove generator clamp band, lift out generator.

Belt Adjustment: Adjust whenever belt deflection exceeds 1/2" either way between the fan and generator shaft pulleys. To adjust, loosen fan mounting bracket screws (pivots on one screw, other screw hole slotted), raise fan, tighten screws. Belt misalignment can be corrected by installing shims behind fan bracket.

**REGULATOR****DELCO-REMY**

Delco-Remy Model 1118202. Single Core Type. Voltage and current regulator on left sill brace under hood.

See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

Cuts In—6.2-6.7 volts hot (operating temperature).

Cuts Out—0-4.0 amperes discharge current.

Contact Gap—.020" (same for both sets).

Air Gap—.020" (with contacts just closed).

**Voltage Regulator**

Setting—7.2-7.4 volts Hot (operating temperature).

Regulator over-compensated for temperature. Check with cover in place and at operating temp.

Checking & Adjustment—See Electrical Equipment Section.

Air Gap—.070" between center of core and armature with contacts just closing.

**Current Regulator**

Setting—34-36 amps hot (operating temperature).

Checking & Adjustment—See Electrical Equipment Section.

Air Gap—.080" between center of core and armature with contacts just closing.

**REGULATOR****AUT -LITE**

Auto-Lite Model VRP-4004-F. Vibrating type voltage and current regulators (with cutout relay) in

case on left body sill brace under hood.

See Electrical Equipment Section for complete data.

NOTE—Regulator cover sealed. Warranty void if seals broken.

**Cutout Relay**

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).

Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" minimum.

Air Gap—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

Checking (without breaking seal) & Adjustment—See Electrical Equipment Section.

Contact Gap—.012" min. (armature against stop pin).

Air Gap—.048-.052" with contacts just opening.

**Current Regulator**

Setting—34-36 amperes (marked '35' on the cover).

Checking (without breaking seal) & Adjustment—See Electrical Equipment Section.

Contact Gap—.012" min. (armature against stop pin).

Air Gap—.048-.052" with contacts just opening.

**LIGHTING**

Headlamps: Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch on toeboard.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

Beam Indicator—Red jewel above speedometer dial. Lighted when upper (country beam) in use.

**Switches**

Lighting—Douglas.

Beam Selector—Douglas.

Instrument—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking, Speedometer	1 1/2	55
Dash Instruments	1	51
Stop	21	1129
Rear License, Tail	3	63
Dome	6	81

**MISC. ELECTRICAL**

FUSES: Lighting—30 ampere. On fuse block on left body sill brace under hood.

Accessory—30 ampere. On fuse block.

Overdrive (Warner R10B)—20 amp. On overdrive relay.

HORNS: Auto-Lite. Model HT-4009 (low note), HT-4010 (high note). Twin horns.

Horn Current—14-16 amperes (each).

Horn Relay: Auto-Lite Model HRC-4001.

Contact Gap—.026".

Air Gap—.016-.020" with contacts closed but not sealed. .015-.018" air gap between armature leg and yoke with armature sealed to core.

Contacts Close—1.5-3.0 volts. Armature seals to core at 4.0 volts maximum.

Contacts Open—.5 volt minimum (open from seal).

**ENGINE**

ENGINE SPECIFICATIONS: 6 cylinder, "L" head type. Cylinders cast Enbloc with intake manifold cast in block (Iso-thermal fuel intake system).

Bore—3 1/8". Stroke—3 3/4".

## ENGINE

C NTINUED FR M PRECEDIN PA E

**Displacement**—172.6 cu. ins. Rated H.P.—23.44.  
**Developed Horsepower**—82 at 3800 RPM.  
**Compression Ratio**—7.0-1 Std. cast iron head. 7.5-1 ratio optional.  
**Compression & Vacuum Reading**—See *Tune-up data*.  
**ORIGINAL BORE & BEARING SIZES**: See "Original Bore & Pistons" and "Original Bearing Sizes" in Nash Shop Notes.

**TIGHTENING TORQUES**: See Nash Shop Notes.

**CYLINDER HEAD INSTALLATION**: See Nash Shop Notes.

**ENGINE REMOVAL (For Servicing)**: See Nash Shop Notes.

**PISTONS**: Aluminum alloy, split skirt, strut, oval, tin-plated type. Length—3 $\frac{3}{8}$ ".

**NOTE**—Cylinder out-of-round limits .003" (in service), .0005" (when reconditioned). Taper limits .009" (in service).

**Clearance**—.001-.002". See Fitting New Pistons.

**NOTE**—Piston out-of-round and taper limits .004" in service.

**Removal**—Pistons and rods removed from above.

**Fitting New Pistons**: Do not use feeler gauge. New pistons should hold own weight approximately  $\frac{1}{2}$  down from top of bore but must be free enough to work up and down by hand (bore clean and free from oil).

**Replacement Pistons**: Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Installing Pistons**: Piston slot toward left side (opposite side from oil squirt hole in rod).

**PISTON RINGS**: 2 compression, 1 oil ring per piston, all above pin. Drilled oil drain holes in oil ring groove.

Ring	Width	End Gap	Side Clearance
Compression	.0932"	.010-.015"	.002-.004"
Oil Control	.1862"	.010-.015"	.002-.004"

**Replacement Rings**: See "Piston Rings" in Nash Shop Notes.

**PISTON PIN**: Diameter .812". Length 2.632". Floating type with lock ring at each end.

**Pin Fit in Piston**—Palm push fit with piston heated (heat piston in boiling water).

**Pin Fit in Rod Bushing**—Light thumb push fit at room temperature.

**Replacement Pins**: Standard, .001", .003" oversize.

**CONNECTING ROD**: Length—6 $\frac{3}{4}$ ". Weight—24 ozs.

**NOTE**—Pin hole in rod bronze bushed.

**Crankpin Journal Diameter**—1.875". See "Original Bearing Sizes" in Nash Shop Notes.

**Lower Bearing**—Removable steel-backed, babbitt lined type. No shims.

**Clearance**—.0015-.002". Sideplay—.006-.012".

**Nash Plastigage Note**—Can be used to check bearing clearance. See Plastigage data under "Crankshaft & Main Bearings" in Nash Shop Notes.

**Bearing Adjustment**: None. Replace bearings. See "Connecting Rods & Bearings" in Nash Shop Notes.

**NOTE**—Tangs on bearing shells must engage slots in rod and cap. Palnuts used on rod bolt nuts.

**Replacement Bearings**: Std., .002", .010" Undersize.

**Installing Rods**: Oil squirt hole in lower end of rod toward right (camshaft side) of engine.

**NOTE**—Rods and bearing caps should be marked before removal and replaced in same cylinder and in same relative positions.

**CRANKSHAFT**: Four bearing, counterweighted type with vibration dampener mounted on front end.

**Vibration Dampener Servicing**—See Nash Shop Notes.

**Journal Diameters**—2 31/64". See "Original Bearing Sizes" in Nash Shop Notes.

► **Bearings**—**CAUTION**—Bearings changed, two types used as follows:

Before Serial No. K-196901, Eng. No. KE-55001. Replaceable precision, steel-backed, thin babbitt lined. No shims. Used with first type oil pump.

Beginning Serial No. K-196901, Eng. No. KE-55001. Bearings have 360° oil groove. Used with later type larger-capacity, higher-pressure oil pump.

**CAUTION**—These 360° oil groove bearings used only when new larger capacity oil pump used. See Oil Pump. Clearance—.002".

**Nash Plastigage Note**—Can be used to check bearing clearance. See Plastigage data under "Crankshaft & Main Bearings" in Nash Shop Notes.

**Bearing Adjustment**: None (no shims). Replace bearings. See "Crankshaft & Main Bearings" in Nash Shop Notes.

**Replacement Bearings**: Standard, .002", .010" undersize.

**Crankshaft Oil Seal**: See "Crankshaft & Main Bearings" in Nash Shop Notes.

**End Thrust**: Taken by front (#1) bearing (thrust plate on shaft ahead of flanged bearing).

**Endplay Adjustment**—See "Crankshaft & Main Bearings" in Nash Shop Notes.

**Endplay**—.006-.008".

**CAMSHAFT**: 4 bearing. Non-adjustable chain drive.

**Camshaft Removal**—See Nash Shop Notes.

**Bearings**—Steel-backed, babbitted bushings.

**Clearance**—.002".

**End Thrust**: Thrust plate assembled on front face of engine between #1 bearing and camshaft sprocket. Endplay controlled by position of timing chain sprocket (press fit on shaft).

**Endplay**—.004-.006".

**CAUTION**—Thrust plate has long oil groove on rear face which provides valve tappet lubrication from #1 camshaft bearing. Short groove on front face of plate lubricates timing chain and sprockets.

**Timing Chain**: Non-adjustable type. Width 9/16". Pitch  $\frac{3}{8}$ ". Length 22 $\frac{1}{2}$ " or 60 links.

**Camshaft Setting**: Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9 $\frac{1}{2}$  links or 19 pins between tooth marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.3412"	4 25/32"
Exhaust	1 9/32"	.3412"	4 25/32"
	Seat Angle	Lift	Stem Clearance
All Valves	45°	5/16"	.002-.003"

**NOTE**—Valve face angle 44°.

**Valve Guides**: Top of guides 27/32" below top face of block. Press guides in place and ream for correct stem clearance.

**Valve Springs**: Install springs with closed-coil end up against cylinder block and seated in counterbore in block. Spring free length 2 3/32".

► **CAUTION**—Excessive wear of valve stems and guides will result if springs not properly seated in counterbore.

	Spring Pressure	Length
Valve Closed	37-41 lbs.	1 3/4"
Valve Open	80-86 lbs.	1 7/16"

**Valve Lifters**: Mushroom type operating in reamed holes in block. Lifters removed from below with camshaft out of engine. See "Camshaft & Bearings" in Nash Shop Notes for Camshaft Removal.

## VALVE TIMING

**Tappet Clearance**: .015" Hot, running clearance.

Tappet adjusting screws self-locking (no locknuts). **NOTE**—Replace lifter and adjusting screw assembly if torque required to turn screw less than 50 in. lbs.

**Valve Timing**: See Camshaft Setting above.

**Intake Valves**—Open 6° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 46° BLDC. Close 10° ATDC.

**Valve Timing Check**—With tappet clearance set at .019", #1 exhaust valve should close with piston 10° after top dead center and "DC" mark on vibration dampener  $\frac{5}{8}$ " past pointer on timing chain cover. Reset tappet clearance at .015" Hot.

## LUBRICATION

**Engine Oiling System**: Pressure to main, connecting rod, and camshaft bearings, piston pins, valve tappets, and timing chain. Oil pump mounted on right side of crankcase.

**Crankcase Capacity**—5 quarts.

**Normal Oil Pressure**—30 lbs. at 20 MPH.

**Oil Pressure Regulator**—Spring-loaded release valve under plug to rear of oil pump on lower edge of crankcase. Non-adjustable. Opens at 30 lbs. (first type spring—before Eng. No. KE-18015), 50-58 lbs. (later type spring—after Eng. No. KE-18015).

► **Oil Pump**: **CAUTION**—Pump changed, two types used:

**Oil Pump (Before Serial No. K-182791, Eng. No. KE-34134)**—Gear type with gears 1 $\frac{1}{4}$ " long. Pump parts not interchangeable with later type.

**Oil Pump (Beginning Serial No. K-182791, Eng. No. KE-34134)**—Gear type with longer 1 $\frac{3}{8}$ " gears. Has increased volume and pressure. Parts not interchangeable with first type pump.

► **CAUTION**—This larger capacity pump must be used when new 360° oil groove main bearings used (see Crankshaft Bearings).

**Oil Pump Installation**—See Distributor Removal Installation Note for correct meshing of oil pump gears.

**Oil Filter**: Optional. Replace cartridge at 8000 mile intervals or more often if necessary.

**Oil Pressure Gauge**: King-Seeley Electric, K-S Nos. 40161 (dash unit), No. 40790 (engine unit). See Miscellaneous Section for complete data.

C NTINUED N NEXT PA E

C NTINUED FR M PRECEDING PAGE

**COOLING**

**Cooling System:** Pressure type with pressure valve in filler cap, and positive circulation with water pump. Capacity—14 quarts (15 with heater).

**Pressure Valve—**AC #850501 Filler Cap. Opens 4 lbs.

**Water Pump:** Centrifugal, adjustable packing type with oiler for bearing lubrication. Driven by flexible coupling from generator.

*See Water Pump Section for complete data.*

**Belt Adjustment—**See Generator Belt Adjustment.

**Pressure Valve—**AC No. 850501 (Filler Cap). Opens at 4 lbs.

**Removal—**Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove two pump mounting capscrews.

**Thermostat:** Fulton. In cylinder head water outlet.

**Setting—**Starts to open 157-162°F. and should be fully open 20° above starting point.

**Temperature Gauge:** King-Seeley Electric, K-S Nos. 40154 (dash unit), No. 41085 (engine unit).

*See Miscellaneous Section for complete data.*

**CLUTCH**

**Borg & Beck Model 8A7.** Single plate, dry disc type.

► **Clutch Assembly Change—**No. 975 through July 1947, No. 360987 starting August 1947.

► **CAUTION—**Driven members are NOT INTERCHANGEABLE.

*See Clutch Section for complete data.*

**Facings—**Woven (flywheel side). Moulded (pressure plate side). I.D. 5 $\frac{5}{8}$ ". O.D. 8". Thickness  $\frac{1}{8}$ ".

**Adjustment:** Pedal free travel  $\frac{1}{2}$ - $\frac{3}{4}$ ". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.

► **CAUTION—**Do not disturb adjustment of clutch beam lever-to-pedal rod.

► **Clutch Linkage Change—**Beam type linkage used starting 1946 Service Serial No. N4-125727. For linkage adjustment, see "Clutch Notes" in Nash Shop Notes.

**Removal:**—Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

**TRANSMISSION**

**Own Make.** Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear.

*See Transmission Section for complete data.*

► **1946-47 Transmission Shifter Shaft & Fork Change to correct Gear Disengagement—**See 1946-47 Nash "600" in Transmission Section.

**Transmission Control:** Mech. steering column shift. *See Transmission Section for complete data.*

**Removal:** Remove Rear Axle (see REAR AXLE below), disconnect transmission shift rods at levers on left side of case and speedometer cable. Support engine at rear, free rear engine mounting, take out transmission upper mounting bolts, install special guide bolts, J-1434, in these holes, remove lower mounting bolts, slide transmission back on guide bolts, remove from below.

**OVERDRIVE**

**Warner Type AS1-R10B.** Optional. New governor controlled type with electrical solenoid operation and throttle operated "kick-down" switch.

*See Transmission Section for complete data.*

**Overdrive Solenoid—**Nash No. 3123433. Warner Part No. 3AR-10B-62.

**Control Governor—**Auto-Lite Model TGE-4005.

**Control Relay—**Auto-Lite Model HRT-4101.

**Removal:** Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. *See Transmission Removal (above).*

**UNIVERSALS**

**Mechanics 1 $\frac{1}{2}$ CR.** Needle bearing, 1 used (in torque tube adapter at rear of transmission). Tapered coil spring is installed ahead of joint to properly locate joint on driveshaft. NOTE—Universal is slip fit on transmission end, slight press fit on driveshaft.

*See Universals Section for complete data.*

**Propeller Shaft:** One piece. Universal joint is light press fit on forward end, pinion coupling tight press fit on rear end.

*See Nash "600" Rear Axle data in Rear Axle Section for complete data.*

► **1946 Propeller Shaft Coupling Change to correct Coupling Failure—**See 1946 Nash "600" in Rear Axle Section.

► **CAUTION—**Coupling nut must be properly tightened to prevent coupling failure in service. Align both shafts (support propeller shaft along entire length) while tightening nut.

**REAR AXLE**

**Own Make.** Semi-floating, hypoid gear type with Torque Tube Drive.

*See Rear Axle Section for complete data.*

**Ratio (No Overdrive)—**Std. ('46-47) 4.1-1, ('48) 4.4-1. Optional ('46-47) 4.4-1, ('48) 4.9-1. (With Overdrive)—Std. ('48) 4.9-1.

**NOTE—**Tag stamped with ratio attached by cover bolt.

**Backlash—**.004-.006". Shim adjustment.

**Removal:**—Raise rear end of car and support car at body frame (not frame flange) or at bumper brackets. Disconnect brake cables at equalizer and remove brake tube connections. Disconnect stabilizer bar and rear springs and shock absorber mounting brackets from axle (allow springs and shock absorber to hang from body—do not bend shock absorber rod or bayonet). Disconnect torque tube by removing nuts on forward ends of trunnion bracket mounting studs, move tube and axle back to clear studs, pry universal joint off drive shaft, pull axle assembly out of car. *See "Nash '600" Rear Axle Article" in Rear Axle Section for Trunnion Bracket installation and adjustment, and shaft bearing data.*

**Axle Shaft Removal—**Remove wheel & drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment—**Shims located between backing plate and flanged end of housing. To ad-

just, remove wheel and backing plate (above), add or remove shims for endplay. Endplay .002-.004".

**Rear Suspension:** Coil spring type with conventional rear axle.

*See Rear Axle Section for complete data.*

**SHOCK ABSORBERS**

**Delco.** Model 1018-E (Front), 1029-CC (Rear).

Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:** New design, parallelogram type with coil springs and direct acting shock absorbers.

**NOTE—**Entire assembly mounted on box-section pressed steel cross-member attached to frame and body through 4 rubber-bushed bolts.

*See Front Suspension Section for complete data.*

**Kingpin Inclination—**7 $\frac{1}{2}$ ° crosswise.

**Caster—** $\frac{1}{4}$ ° to  $\frac{3}{4}$ °. Shims as for Camber.

**Camber—** $\frac{1}{4}$ ° to  $\frac{3}{4}$ °. Shim adjustment at upper control arm shaft mounting.

**Toe In—**1/8-3/16". Adjust tubes at inner end of each tie rod. Clamp bolts must be on front end of rod and vertical to ground when tightened.

**STEERING GEAR**

**Gemmer Model 305.** Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

1946-47 "600" 4640, 4740 SERIES

**Service Brakes:** Lockheed hydraulic, double anchor type. Hand lever applies rear wheel service brakes. *See Brake Section for complete data.*

**Drums—**Cast-iron. Diameter 9".

**Lining—**Moulded type. Width 1 $\frac{3}{4}$ ". Thickness 3/16". Length per wheel 20 $\frac{1}{2}$ ".

**Clearance—**.010" toe, .004" heel, for each shoe.

**Hand Brake:** See Service Brake data (above).

**Adjustment—**Same as for 1948 given below.

**BRAKES**

1948 "600" 4840 SERIES

**Service Brakes:** Lockheed Hydraulic "Floating Shoe" (self-centralizing) type. Hand lever applies rear wheel service brakes. NOTE—No anchor pin adjustment required.

*See Brake Section for complete data.*

**Drums—**Cast iron. Diameter 9".

► **Lining—CAUTION—**Different width and length used on each shoe in each wheel as follows:

1948 Brake Lining Specifications

Brake Shoe	Width	Length	Thickness
Forward (Primary)	2"	10"	3/16"
Rear (Secondary)	1 $\frac{3}{4}$ "	7 $\frac{1}{2}$ "	3/16"

Lining is moulded type.

**Clearance—**.010" at toe & heel of each shoe.

**Hand Brake:** See Service Brakes (above).

**Adjustment—**Pull hand lever "on" two notches. Loosen locknut at wheel cable equalizer under car, remove all slack from cables, tighten locknut. Release hand lever, check rear brakes for drag.

►1948 ELECTRICAL EQUIPMENT NOTE: Both Auto-Lite and Delco-Remy electrical units are used.  
**HOOD LOCK:** Alligator hood. To raise hood, pull out on lock button under left side of instrument panel, reach under front edge of hood and release safety catch, raise hood.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate attached to top right frame side rail to rear of front shock absorber.  
 1946 Numbers—R-393101 Up.  
 1947 Numbers—R-429201 Up.  
 1948 Numbers—R-468501 Up.  
**Service Serial Number (4660 only):** N6-86001 Up. On plate on left front door hinge pillar post.  
**ENGINE NUMBER:** Stamped on pad on right side of engine block at upper front corner.

### TUNE-UP

**COMPRESSION PRESSURE:** 125 lbs. at 350 RPM. for Std. 7.02-1 Head.

**VACUUM READING:** Steady 18-20" idling at 7 MPH.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUG GAPS:** .025".

Plug Type—AC No. 45, 14 mm. Metric type.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Limits .018-.022" (Auto-Lite), .018-.024" (Delco-Remy).

Cam Angle or Dwell (A-L)—38° Closed, 22° Open.

Cam Angle or Dwell (D-R)—35° Closed, 25° Open.

Breaker Arm Spring Tension—17-20 ozs. (Auto-Lite), 17-21 ozs. (Delco-Remy).

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** 4° BTDC ('46), TDC ('47-48).

Timing Procedure—See Ignition Timing.

Timing Mark—"IGN" ('46), "IGN/DC" ('47-48) dampener mark in line with pointer on timing chain cover.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:** Set idle adjusting screw ½-1½ turns open. Adjust for smooth idle. Idle speed 7 MPH.

**Float Level:** ⅜" from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).

**Accelerating Pump:** Inner Hole (med. stroke) Normal, Lower hole (max.) winter, Upper (min.) Summer.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**VALVE TAPPET CLEARANCE:** .015" All Valves, Hot.

Valve Timing Check—See Valve Timing.

►CAUTION—Valve timing changed during 1946 production. See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION DELCO-REMY

**IGNITION SWITCH:** Delco-Remy No. 1116460. No armored cable.

**Ignition Lock:** Briggs & Stratton No. 85853.

**Key Series:** 5 digits. Groove—No. 1.

**COIL:** Delco-Remy No. 1115380. Mounted on engine.

Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.  
Capacity—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110216. Full automatic advance type with auxiliary vacuum spark control.

**Breaker Gap:**—.020". Limits .018-.024".

**Cam Angle:**—35° Closed, 25° Open.

**Breaker Arm Spring Tension:**—17-21 ozs.

**Rotation:**—Clockwise viewed from above.

**Automatic Advance (Delco-Remy)**

### IGNITION

#### AUTO-LITE

**IGNITION SWITCH:** Mitchellock Type 24-B, No. E-10231. Connected to coil by armored cable.

**COIL:** 1946-47 Auto-Lite CE-4662. Service Coil (less switch & cable) CE-3224JS. On dash.

## CONTINUED FROM PRECEDING PAGE

1948—Auto-Lite IG-6001. Mounted on engine.  
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671F.  
Capacity—20-25 microfarad.

DISTRIBUTOR: 4660 below Service Serial No. N6-115-794 Auto-Lite IGS-4205A. 4660 starting Service Serial No. N6-115794 and 4760, 4860—Auto-Lite IGS-4502B. Full automatic advance types with auxiliary vacuum spark control.

Breaker Plate Identification—Maximum vacuum advance limited by slot. Plate marked #6.

Breaker Gap—.020" (.018-.022").

Cam Angle or Dwell—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

3°	6°	10"
5°	10°	13 3/8"
6°	12°	15"

Distributor Removal: On right side of engine. To remove, disconnect vacuum line, take out hold-down screw, lift distributor off engine.

## IGNITION TIMING

4660 ..... 4° BTDC.  
4760, 4860 ..... At TDC.  
NOTE—Car manufacturer recommends using Synchroscope or Timing Light to set Ignition Timing. Timing (Using Synchroscope)—Clip synchroscope to #1 spark plug, fill in vibration dampener "IGN" mark with white chalk, direct light on vibration dampener at timing case cover pointer. Idle engine at 400-500 RPM, loosen advance arm clamp bolt, rotate distributor until "IGN" vibration dampener mark aligned with pointer, tighten clamp bolt. Timing (Using Timing Light)—Connect timing light, adjust distributor as directed above. Crank engine by placing in high gear and moving car ahead slowly.

## CARBURETOR

Carter Type WA-1, Model 464-S. 1 1/4" Single Barrel, downdraft type with Fast Idle and Climatic Control. NOTE—Carries Casting No. 290 on face of flange. See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.  
Metering Rods & Jets—See Carter Jet Table in the Carburetor Section.

Fast Idle: Carter Single Barrel Carburetor type. See Carburetion Equipment Section for complete data.  
Setting—3/8" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

Automatic Choke: Carter Climatic Control (Single Barrel Carburetor). See Carburetion Equipment Section for complete data.  
Setting—Centered (coil housing at index).

## CARB. EQUIPMENT

Air Cleaner: AC No. 1529112 Oil-wetted type (Std.), Filter Element AC 1528179. Oil-bath Cleaner Optl. Servicing (Oil-wetted type)—Wash filter element and re-oil with heavy engine oil every 2000 miles. Servicing (Oil-bath type)—Wash filter element, clean out and refill oil reservoir with 1 pint SAE No. 50 engine oil (summer), No. 20 (winter) every 5000 miles.

Fuel Pump (Std.): AC Type W, No. 1537389. (Optl. & Overdrive Cars)—AC Type AD, No. 1539216 combination fuel-and-vacuum pump. Replacement Pump—AC No. 533 (for W), 585 (for AD). See Carburetion Equipment Section for complete data.

Pressure—3 1/2 lbs. max. ("W"), 4 lbs. (No. 8780). Gasoline Gauge: King-Seeley electric type. K-S Nos. 40152 (dash unit), No. 40170 (tank unit). See Carburetion Equipment Section for complete data.

**BATTERY**

Auto-Lite Type 1H-105 (old CT-1-15). 6 volt, 15 Plate, 105 Ampere Hour Capacity (20 hour rate). Starting Capacity—133 amperes for 20 minutes. Zero Capacity—300 amperes for 3.5 minutes. Five second voltage—4.2 volts. Dimensions—L. 9 1/16". W. 7 1/16". H. 9 1/16". Grounded Terminal—Positive (+) to body floor to rear of battery. Separate engine to frame ground. Location—Right side under front seat.

**STARTER****DELCO-REMY**

Delco-Remy No. 1107949. Armature No. 1911763. Drive—Inboard Bendix No. A-1584. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—24-28 ozs.

**Performance Data (Delco-Remy)**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
16 "	Lock	3.0	600

Starting Switch: Delco-Remy No. 1996478. Mounted on toeboard, actuated by fully depressing clutch pedal. Removal: See Auto-Lite Starter (following).

**STARTER****AUTO-LITE**

4660, 4760.....Auto-Lite MAB-4076. Arm. MAB-2057  
4860.....Auto-Lite MCL-6008. Arm. MCH-2038  
Drive—Inboard Bendix No. A-1680.  
Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—42-53 ozs. (new brushes).  
Cranking Engine—160 RPM, 150-160 amps., 5.2 v.

**Performance Data (Auto-Lite MAB-4076)**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
0.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Performance Data (Auto-Lite MCL-6008)**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
8 "	Lock	2.0	410

Removal: Flange mounted on left front face of fly-wheel housing. To remove, disconnect cable, take out flange mounting screws.

Starting Switch: Auto-Lite No. SW-4012. Mounted on toeboard and operated by fully depressing clutch pedal.

**GENERATOR****DELCO-REMY**

Delco-Remy Model 1102702. Armature No. 1911454. Two-brush with voltage and current regulation. Maximum Charging Rate—30 amperes, 8.0 volts. Charging Rate Adjustment—None (see Regulator).

**Performance Data (Delco-Remy)**

Amperes	Volts	R.P.M.
Cold	30①	8.0
		1750

①—Not maximum output. See Current Regulator. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—25 ounces. Field Current—1.75-1.9 amperes at 6.0 volts.

Removal & Belt Adjustment: See Auto-Lite Generator (following).

**GENERATOR****AUTO-LITE**

Auto-Lite Model GDZ-4806A. Armature GDZ-2079F. Two brush (shunt) type with voltage and current regulation. Ventilated.

Maximum Charging Rate—35 amperes, 8.0 volts, 1900 RPM.

Charging Rate Adjustment—None (see Regulator).

**Performance Data (Auto-Lite)**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35-53 ozs. (new brushes).

Field Current—1.60-1.78 amperes at 6.0 volts.

Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Generator cradle mounted at left side of engine with fan belt drive (water pump driven by flexible coupling from generator). To remove, disconnect water pump, loosen fan belt, remove generator clamp band, lift out generator.

Belt Adjustment: Adjust whenever belt deflection exceeds 1/2" either way between the fan and generator shaft pulleys. To adjust, loosen fan mounting bracket screws (pivots on one screw, other screw hole slotted), raise fan, tighten screws. Belt misalignment can be corrected by installing shims behind fan bracket.

**REGULATOR****DELCO-REMY**

Delco-Remy Model 1118202. Single Core Type. Voltage and current regulator on left sill brace under hood.

See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

Cuts In—6.2-6.7 volts hot (operating temperature).

Cuts Out—0-4.0 amperes discharge current.

Contact Gap—.020" (same for both sets).

Air Gap—.020" (with contacts just closed).

**Voltage Regulator**

Setting—7.2-7.4 volts Hot (operating temperature). Regulator over-compensated for temperature. Check with cover in place and at operating temp. Checking & Adjustment—See Electrical Equipment Section.

Air Gap—.070" between center of core and armature with contacts just closing.

**Current Regulator**

Setting—34-36 amps hot (operating temperature). Checking & Adjustment—See Electrical Equipment Section.

Air Gap—.080" between center of core and armature with contacts just closing.

**REGULATOR****AUTO-LITE**

Auto-Lite Model VRP-4004-F. Vibrating type voltage and current regulators (with cutout relay) in case on left body sill brace under hood.

See Electrical Equipment Section for complete data. NOTE—Regulator cover sealed. Warranty void if seals broken.

**Cutout Relay**

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).

Cuts Out—4.1-4.8 volts (approx. 4-8 amps. disch.).

Contact Gap—.015" minimum.

Air Gap—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

Checking (without breaking seal) & Adjustment—See Electrical Equipment Section.

Contact Gap—.012" min. (armature against stop pin).

Air Gap—.048-.052" with contacts just opening.

**Current Regulator**

Setting—34-36 amperes (marked '35' on the cover). Checking (without breaking seal) & Adjustment—See Electrical Equipment Section.

Contact Gap—.012" min. (armature against stop pin). Air Gap—.048-.052" with contacts just opening.

**LIGHTING**

Headlamps: Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch on toeboard.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

Beam Indicator—Red jewel above speedometer dial. Lighted when upper (country beam) in use.

**Switches**

Lighting—Douglas.

Beam Selector—Douglas.

Instrument—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking, Speedometer	1 1/2	55
Dash Instruments	1	51
Stop	21	1129
Rear License, Tail	3	63
Dome	6	81

**MISC. ELECTRICAL**

FUSES: Lighting—30 ampere. On fuse block on left body sill brace under hood.

Accessory—30 ampere. On fuse block.

Overdrive (Auto-Lite Relays only)—20 ampere.

HORNS: Auto-Lite. Model HT-4009 (low note), HT-4010 (high note). Twin horns operated by relay.

NOTE—Single horn with relay standard.

Horn Current—14-16 amperes (each).

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Horn Relay: Auto-Lite Model HRC-4001.

Contact Gap—.026".

Air Gap—.016-.020" with contacts closed but not sealed. .015-.018" air gap between armature leg and yoke with armature sealed to core.

Contacts Close—1.5-3.0 volts. Armature seals to core at 4.0 volts maximum.

Contacts Open—.5 volt minimum (open from seal).

## ENGINE

**ENGINE SPECIFICATIONS:** 6 cylinder, valve-in-head type. Cylinders cast Enbloc with intake manifold cast in block. (Iso-thermal fuel intake system).

Bore—3 $\frac{3}{8}$ ". Stroke—4 $\frac{3}{8}$ ".

Displacement—234.8 cu. ins. Rated H.P.—27.34.

Developed Horsepower—112 at 3400 RPM.

Compression Ratio—7.02-1 Std. cast-iron head, 7.52-1 ratio optional.

Compression & Vacuum Reading—See Tune-up data.

►1948 ENGINE NEW PARTS: New Cylinder Block, Crankshaft, & Rear Bearing used—not interchangeable with previous parts except as complete assembly due to new type Rear Oil Seal—See Crankshaft Oil Seals.

**ENGINE MOUNTS** (1948 Type Installation on Previous Car Models): See Nash Shop Notes.

**ORIGINAL BORE & BEARING SIZES:** See "Original Bore & Pistons" and "Original Bearing Sizes" in Nash Shop Notes.

**TIGHTENING TORQUES:** See Nash Shop Notes.

**CYLINDER HEAD INSTALLATION:** See Nash Shop Notes

**ENGINE REMOVAL** (For Servicing): See Nash Shop Notes.

**PISTONS:** Aluminum alloy, split skirt, strut, oval, tin-plated type. Length—3 $\frac{7}{8}$ ".

NOTE—Cylinder out-of-round limits .003" (in service), .0005" (when reconditioned). Taper limits .009" (in service).

Clearance—.001-.002". See Fitting New Pistons.

NOTE—Piston out-of-round and taper limits .004" in service.

Removal—Pistons and rods removed from above.

**Fitting New Pistons:** Do not use feeler gauge. New pistons should hold own weight approximately  $\frac{1}{4}$  down from top of bore but must be free enough to work up and down by hand (bore clean and free from oil).

**Replacement Pistons:** Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Installing Pistons:** Piston slot toward left side (opposite side from oil squirt hole in rod).

**PISTON RINGS:** 2 compression, 2 oil rings per piston, all above pin. Drilled oil drain holes in oil ring grooves.

Ring	Width	End Gap	Side Clearance
Compression	.0932"	.010-.015"	.002-.004"
Oil Control	.1547"	.010-.015"	.002-.004"

**Replacement Rings:** See "Piston Rings" in Nash Shop Notes.

**PISTON PIN:** Diameter—.8746". Length—2.824".

Floating type, with lock ring at each end.

NOTE—Pin hole in piston offset toward camshaft.

Pin Fit in Piston—Palm push fit with piston heated (heat piston in boiling water).

Pin Fit in Rod Bushing—Light thumb push fit at room temperature.

**Replacement Pins:** Standard, .001", .003" oversize.

**CONNECTING ROD:** Length—8 $\frac{3}{4}$ ". Weight—36 $\frac{1}{4}$  ozs.

NOTE—Pin hole in rod bronze-bushed.

**Crankpin Journal Diameter—2.00".** See "Original Bearing Sizes" in Nash Shop Notes.

**Lower Bearing—**Removable steel-backed, babbitt lined type. No shims.

Clearance—.0015-.0025". Sideplay—.006-.014".

**Nash Plastigage Note—**Can be used to check bearing clearance. See Plastigage data under "Crankshaft & Main Bearings" in Nash Shop Notes.

**Bearing Adjustment:** None. Replace bearings. See "Connecting Rods & Bearings" in Nash Shop Notes.

**Installing Rods:** Oil spray hole in lower end of rod must be toward camshaft (right) side of engine.

NOTE—Rods and bearing caps should be marked before removal and replaced in same cylinder and in same relative position.

**CRANKSHAFT:** Seven bearing, counterweighted type with vibration dampener mounted on front end.

Vibration Dampener Servicing—See Nash Shop Notes.

**Journal Diameters—2 31/64".** See "Original Bearing Sizes" in Nash Shop Notes.

►Bearings—CAUTION—Bearings changed, two types used as follows:

Before Serial No. R-459542, Eng. No. RE-022227. Replaceable precision, steel-backed, thin babbitt lined. No shims. Used with first type oil pump.

Beginning Serial No. R-459542, Eng. No. RE-022227. Bearings have 360° oil groove. Used with later type larger-capacity, higher-pressure oil pump.

►CAUTION—These 360° oil groove bearings used only when new larger capacity oil pump used. See Oil Pump.

Clearance—.0015-.0025".

**Nash Plastigage Note—**Can be used to check bearing clearance. See Plastigage data under "Crankshaft & Main Bearings" in Nash Shop Notes.

**Bearing Adjustment:** None (no shims). Replace bearings.

See "Crankshaft & Main Bearings" in Nash Shop Notes.

**Replacement Bearings:** Standard .002", .010" under-size.

**Crankshaft Oil Seal:** Rear oil seal new type steel-backed synthetic rubber seal fitted in crankcase and rear bearing cap. Bears directly on crankshaft.

►CAUTION—This type oil seal used only with 1948 Cylinder Block and Crankshaft (no oil return threads).

**Oil Seal Servicing—**See "Crankshaft & Main Bearings" in Nash Shop Notes.

**End Thrust:** Taken by Center (#4) bearing.

Endplay—.006-.008".

**CAMSHAFT:** Non-adjustable 2 sprocket chain drive.

**Camshaft Removal—**See Nash Shop Notes.

**Bearings—**Steel-backed, babbitted bushings.

Clearance—.002".

**End Thrust:** Taken by front bearing, controlled by position of timing chain sprocket (press fit on shaft).

Endplay—.004-.006".

**Timing Chain:** Non-adjustable type. Width 9/16". Pitch  $\frac{3}{8}$ ". Length 22 $\frac{1}{2}$ " or 60 links.

**Camshaft Setting:** Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is at 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9 $\frac{1}{2}$  links or 19 pins between tooth marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 3/4"	3725"	5 17/32"
Exhaust	1 15/32"	3725"	5 17/32"

	Seat Angle	Lift	Side Clearance
All Valves	45°	11/32"	.002-.004"

NOTE—Valve face angle 44°.

**Valve Guides:** Press fit in head (positioned by shoulder on guide). Tops of guides should be  $\frac{1}{8}$ " from face of cylinder head. Ream new guides for correct stem clearance.

**Valve Springs:** Free length 2 3/32". NOTE—Single spring now used (double springs formerly used).

	Spring Pressure	Length
Valve Closed	53 lbs.	1 11/16"
Valve Open	146 lbs.	1 11/32"

**Valve Lifters:** Mushroom type. Lifter guide holes in block. Remove from below with camshaft out.

## VALVE TIMING

**Tappet Clearance:** .015" All Valves, Hot.

**Valve Timing:** See Camshaft Setting above.

►CAUTION—Valve Timing changed during 1946.

**Exhaust Valve Closing Point**

Early 4660—6° ATDC.

Late 4660, 4760 & 4860—16° ATDC.

**Valve Timing Check—**With .0225" tappet clearance, #1 exhaust valve should close with piston on Early 4660 6° after top dead center, or on Late 4660 and 4760, 4860 16° after top dead center, and "DC" mark on vibration dampener 3/8" (Early 4660), 1" (Late 4660, 4760 & 4860) past pointer on timing chain cover. Reset tappet clearance at .015" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings, piston pins, valve tappets, and timing chain. Oil pump mounted on center (#4) main bearing cap in crankcase.

**Crankcase Capacity—**6 quarts.

**Normal Oil Pressure—**30 lbs. at 20 MPH.

**Oil Pressure Regulator—**On oil pump cover. Opens at 30 lbs. (first type spring—before Eng. No. 11514), 50-58 lbs. (later type spring—Beginning Eng. No. RE-11514). Not adjustable.

► **Oil Pump:** *CAUTION—Pump changed—two types used.*  
Oil Pump (Before Serial No. R-457798, Eng. No. RE-20512)—Gear type with gears 1 1/4" long. Pump parts not interchangeable with later type.

Oil Pump (Beginning Serial No. R-457798, Eng. No. RE-20512)—Gear type with longer 1 3/8" gears and undercut shaft to provide additional oil flow. Parts not interchangeable with first type pump.

► *CAUTION—This larger capacity pump must be used when new 360° oil groove main bearings used (see Crankshaft Bearings).*

Oil Pump Servicing—See Nash Shop Notes.

**Cylinder Cover Vent:** Vent located on front of cover just behind water outlet elbow to allow escape of vapors inside cover. Turn to open position at all times, especially winter, except for hot dusty driving.

**Oil Filter:** Replace cartridge at 8000 mile intervals or more often if necessary.

**Oil Pressure Gauge:** King-Seeley Electric. K-S Nos. 40161 (dash unit), No. 40790 (engine unit).

See Miscellaneous Section for complete data.

## COOLING

**Cooling System:** Pressure type with pressure valve in filler cap, and positive circulation with water pump on left side of engine with thermostat control.

Capacity—17 quarts (18 with heater).

Pressure Valve—AC 850501 (Filler Cap). Opens at 4 lbs.

**Water Pump:** Centrifugal, adjustable packing type with oiler for bearing lubrication. Driven by flexible coupling from generator.

See Water Pump Section for complete data.

**Removal:**—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting capscrews.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:** Fulton. In water outlet on cylinder head. Setting—Starts to open at 157-162°F. and should be fully open 20° above starting point.

**Temperature Gauge:** King-Seeley Electric. K-S Nos. 40154 (dash unit), No. 41085 (engine unit).

See Miscellaneous Section for complete data.

## CLUTCH

**Borg & Beck Model 10A7.** Assembly No. 950 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven type, 2 used. Inside Diameter 7". Outside Diameter 10". Thickness 1/8".

**Adjustment:** Pedal free travel setting must be 1/2". To adjust, install Aligning Pin J-1390 in end of helper spring lever (right end of clutch release shaft), loosen helper spring lever screw on end of clutch release shaft. Loosen locknut and adjust nut on clutch release shaft end of pedal connector link for correct 1/2" pedal free travel. Use pipe wrench or pliers to turn clutch release shaft to rear to take up all play, see that aligning pin in helper spring lever is against pivot bracket at rear of engine, tighten helper spring lever screw securely.

*CAUTION—Pedal adjustment must be made exactly as outlined above to insure correct pedal travel and helper spring operation.*

**Removal:**—Remove transmission (see below). Disconnect clutch pedal linkage, support engine at rear and free rear engine mounting, remove clutch housing and pan. Punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), remove clutch mounting screws, take out clutch.

## TRANSMISSION

**Own Make.** Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear.

See Transmission Section for complete data.

► 1947 Transmission Shifter Shaft & Fork Change and 1946-47 Replacement Shifter Shaft & Fork Assemblies—See 1946-47 Nash Ambassador Six in Transmission Section.

**Transmission Control:** Mechanical steering col. shift. See Transmission Section for complete data.

**Removal:**—Disconnect shift rods, speedometer cable, and front universal. Remove 2 upper transmission mounting screws and install pilot studs (to support transmission during removal), remove remaining mounting screws, pull transmission straight back and remove.

## OVERDRIVE

► 4660 TO SERVICE SERIAL NO. N6-95333  
"R7" WITH DELCO-REMY RELAY & SOLENOID

**Warner Type R7C** (Warner No. AS1-R7C) with Delco-Remy Relay and Solenoid. Centrifugal pawl type with throttle controlled "kick-down". Optl. equipment.

► Delco-Remy Solenoid has one-terminal only. See Transmission Section for complete data.

**Overdrive Solenoid:**—Delco-Remy No. 1118004.

**Overdrive Relay:**—Delco-Remy No. 1116798.

**Removal:** Same as for R10 type below.

► 4660 SERVICE SER. NO. N6-95333 TO 120026  
"R7" WITH AUTO-LITE RELAY & SOLENOID

**Warner Type R7C** (Warner No. AS1-R7C) with Auto-Lite Relay and Solenoid. Centrifugal pawl type with throttle controlled "kick-down". Optl. equip.

► Auto-Lite Solenoid has two terminals. See Transmission Section for complete data.

**Overdrive Solenoid:**—Auto-Lite No. SSB-4002.

**Overdrive Relay:**—Auto-Lite No. HRT-4001.

**Fuse:**—20 ampere. On O. D. Relay under hood.

**Removal:** Same as for R10 type below.

► STARTING 4660 SERVICE SERIAL NO. N6-120026  
"R10" GOVERNOR CONTROLLED OVERDRIVE

**Warner Type R10B** (Warner Number AS2-R10B) Governor controlled. Electric solenoid operation and throttle controlled "kick-down". Optl. equipment. See Transmission Section for complete data.

**Overdrive Solenoid:**—Nash No. 3123433, Warner Part No. 3AR10B-62.

**Control Governor:**—Auto-Lite Model TGE-4001.

**Control Relay:**—Auto-Lite Model HRT-4101.

**Throttle Kickdown Switch:**—Nash No. 3122959.

**Lockout Switch:**—Nash No. 3123432.

**Fuse:**—20 ampere. On Control Relay under hood.

**Removal:** Same as for Std. Transmission (above) except that overdrive control cable and wires must first be removed. Then remove overdrive as a unit with transmission.

## UNIVERSALS

**Mechanics Type 2CR.** Roller bearing type, 2 used. See Universals Section for complete data.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—4.1-1 Standard. 4.4-1 with Overdrive.

**Backlash:**—.004-.006". Shim adjustment.

**Removal:**—Hoist rear end of car, disconnect brake cables at rear clevises. Remove brake tubes. Disconnect rear universal. Remove rear spring U-bolts and withdraw axle from car.

**Axle Shaft Removal:**—Remove wheel & drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

**Wheel Bearing Adjustment:**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. Endplay .002-.004".

## SHOCK ABSORBERS

**Monroe Model K-11431** (Front), K-11432 (Rear). Direct acting, hydraulic type.

**NOTE:**—Shock absorbers are sealed (non-refillable). See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4 1/2°.

**Caster:**—0° to Negative 1/2°. "C" washer adjustment.

**Camber:**—Pos. 1/4° to 3/4°. "C" washer adjustment.

**Toe In:**—1/16-3/16".

## STEERING GEAR

**Gemmer Model 305.** Worm-and-roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

## BRAKES

**Service Brakes:** Bendix hydraulic, duo-servo, single anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes. See Brake Section for complete data.

**Drums:**—Cast-iron. Diameter 10".

**Lining:**—Moulded type. Width 2". Thickness 3/16". Length 22" per wheel.

**Clearance:**—.015" at each end of secondary (rear) shoes with primary shoes forced out against drum.

**Hand Brakes:** See Service Brake data above.

**Adjustment:**—With hand lever set two notches 'on', loosen two clamp bolts at wheel cable equalizer under car, remove all cable slack, tighten clamp bolts. See that wheels free of drag with lever 'off'.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right frame side member under engine hood. First Number L-23,101.

**ENGINE NUMBER:**—On plate on right side of crankcase at front of engine below valve cover plate.

## TUNE-UP

**COMPRESSION:**—Ratio 5.54-1 Std. cast-iron head, Pressure—125 lbs. at 350 RPM.

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling at 5 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** Champion Type 7. 18 mm. Metric. Gaps—.025" (.030" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° Closed.

Automatic Advance—Max. advance as follows:

Distributor	Distr. Deg.	Distr. RPM
IGB-4317	10°	1300
IGB-4317-A	5°	1050
IGB-4317-B	10°	1300

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. with vibration dampener mark "DC/IGN" aligned with pointer on chain case cover.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Screw midway between "miss" and "roll" points. Idle speed 5-7 MPH.

Float Level—1 3/8" from cover to bottom of float with gasket off and cover inverted (Marvel), Fuel level 5/8" below top edge of bowl (Stromberg).

Accelerating Pump—Normal setting 2nd or 3rd hole (Marvel), Center hole (Stromberg).

Fuel Pump Pressure: 3 1/2 lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.015" all valves—hot or cold.

**STARTING:** See Battery, Starter, and Generator.

## IGNITION

Ignition Switch: Mitchellock Model 24B, Type 6708.

Ignition Lock—Briggs & Stratton #50184, Mitchell #6760.

**COIL:** Auto-Lite Model IG-4626 or IG-4626A. Service Coil (less switch & cable) IG-3224-DS.

Ignition Current—2.5 amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGB-4317, IGB-4317-A or IGB-4317-B. Single breaker, 6 lobe cam, full automatic advance type.

Breaker Gap—Set at .020". Limits .018-.020".

Cam Angle or Dwell—Closed 38°, open 22° (distr.). Breaker Arm Spring Tension—16-20 ounces.

Automatic Advance—IGB-4317			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
2	500	4	1000
4	700	8	1400
6	900	12	1800
8	1100	16	2200
10	1300	20	2600

### Automatic Advance—IGB-4317-A.

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	0.....	600
2 .....	600	4.....	1200
4 .....	900	8.....	1800
5 .....	1050	10.....	2100

### Automatic Advance—IGB-4317-B

6	900	12	1800
8	1100	16	2200
10	1300	20	2600

**Distributor Removal:**—Mounted on right side of cylinder head. To remove, loosen locknut and take out mounting screw on side of cylinder head.

## IGNITION TIMING

**IGN. TIMING (1936):**—Flywheel Deg. Piston Position  
All engines .....at TDC.....0000" TDC

**Timing:**—With #1 piston on compression, turn engine over until "DC/IGN" mark on vibration dampener at front of engine lines up with pointer on chain case cover, loosen locknut and mounting set-screw on side of cylinder head, rotate distributor until contacts begin to open, tighten setscrew and locknut. See that rotor is opposite #1 segment in distributor cap and check spark plug connections (see diagram).

## CARBURETOR

**CARBURETION:**—Carburetors—Marvel Model B-2 10-1603 (Early cars), 1 1/4" downdraft type. Stromberg

**Model AX-2 (Later cars), downdraft type.***For complete data, refer to Carburetor Index.***NOTE**—Do not adjust carburetor until engine is thoroughly warmed up and choke valve is wide open.**Idle Adjustment**—Adjust throttle stopscrew so that idle speed is 5-7 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.**Accelerating Pump Setting**—Engage pump link in proper hole in throttle lever for seasonal requirements as follows:

- #1 Inner Hole (Min. stroke)—Extremely hot weather.
- #2 Normal summer driving.
- #3 Normal winter driving.
- #4 (Marvel only)—Extremely cold weather.

**CARB. EQUIPMENT****Air Cleaner**—AC. #1525987 oil-wetted type standard. Heavy duty oil-bath type optional.**Fuel Pump**—AC. Type W #1522152. Type R #1522133 used on RHD. cars. Diaphragm type fuel pump. *For complete data, refer to Carburetion Equip. Index.***Gasoline Gauge**: Auto-Lite (Motometer) Electric type. No. NG-7623D (Dash Unit), NG-7441T (Tank Unit). *For complete data, refer to Carburetion Equip. Index.***BATTERY****BATTERY (1936)**—U.S.L. KL-1-13. 6 volt, 13 plate, 100 A.H. capacity (20 hour rate).**Starting Capacity**—120 amperes for 20 minutes.**Zero Capacity**—300 amperes for 3.1 minutes.**Grounded Terminal**—Positive (+) terminal.**Location**—On left side under driver's seat.**STARTER****Auto-Lite MAB-4068 (first cars), MAB-4076 (later cars).** Armature MAB-2057.**Drive**—Inboard Bendix Type LCD11FX-10.**Rotation**—Counter-clockwise at commutator end.**Brush Spring Tension**—42-53 ounces (new brushes).**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	360
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out two flange mounting capscrews.**Starting Switch**—Type SW-4005. Mounted at left of engine at lower end of steering column. Operated by depressing clutch pedal.**GENERATOR****Auto-Lite Model GAR-4601-3 (first), GAR-4601-5 (later).** Armature No. GAR-2214. Air-cooled, third brush control type.**Charging Rate Adjustment**—Take off commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate. Third brush held in position by friction.**Standard Charging Rate Setting**—20 amperes (cold), 16 amperes (hot), 2300 R.P.M.**Performance Data—GAR-4601-3**

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	760	0	6.4	800

20	8.5	1660	19.2	8.4	2600
22.4	8.8	2300			

**Rotation**—Counter-clockwise at commutator end.**Field Current**—3.70-4.10 amperes (GAR-4601-3), 3.51-3.89 amperes (GAR-4601-5) at 6.0 volts.**Motoring Current**—4.65-5.15 amperes (GAR-4601-3), 5.03-5.57 amperes (GAR-4601-5) at 6.0 volts.**Brush Spring Tension**—50-60 ozs. (new brushes).**Field Fuse**—7½ amperes. Under cover on generator.**Removal**—Cradle mounted at left front of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump drive coupling, slack off belt adjustment, loosen mounting clamp band, lift generator out.**Belt Adjustment**—Adjust when belt sideplay exceeds 1½" midway between generator and fan pulleys. To adjust, loosen two capscrews on fan bracket, raise bracket up (bracket pivots on one screw) until belt sideplay is approximately 1", tighten mounting screws.**CUTOUT RELAY****Auto-Lite Model CB-4014.** Mounted on generator.*For complete data, refer to Electrical Equipment Index.***Cuts In**—6.5-7.25 volts, 750 R.P.M.**Cuts Out**—5-2.5 amperes discharge current.**Contact Gap**—.015-.045".**Air Gap**—.010-.030" with contacts closed.**LIGHTING****LIGHTING**—Headlamps—Corcoran-Brown, Pre-focused type. Upper and lower beams controlled by foot selector switch.**Switches****Lighting**—Soreng-Manegold Model 5820-A (early cars), Model A-5820-A (later cars).**Foot Selector**—H. A. Douglas.**Stop Light**—Hydraulic type.**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Parking, Instrument	3	63
Dome	6	81

**MISC. ELECTRICAL****FUSES**—Lighting—20 ampere capacity on lighting switch (early cars), on fuse block (later cars).**Generator Field**—7½ ampere on generator.**Accessory**—One or two 20 ampere fuses on fuse block on steering column brace behind instrument panel.**HORNS**—Auto-Lite Model HA-4014, Std. single horn. Dual horns optl. operated by horn relay.**Horn Relay**—R.B.M. Type 10072. Current draw .4-55 amperes at 6.0 volts. Coil resistance 11-14 ohms. Contacts must close with 4 volts across winding with relay in inverted position.**ENGINE****ENGINE SPECIFICATIONS**—Type—6 cyl., 'L' head.**Bore**—3¼". **Stroke**—4¾".**Displacement**—217.7 cubic inches.**Rated Horsepower**—25.35 (SAE).**Developed Horsepower**—80 (3510), 83 (3610) at 3200 R.P.M.**Compression Ratio and Pressure**—5.54-1 std. cast-iron head. Pressure—125 lbs. at 350 R.P.M.**Vacuum Reading**—Gauge should show steady reading of 18-20" with engine idling at 5-7 M.P.H.**PISTONS**—Nelson Bohnalite, aluminum alloy, Invar strut, split skirt type.**Length**—3¾".**Weight**—18¼ ounces.**Removal**—Pistons and rods removed from above.**Clearance**—Skirt .002". See Fitting New Pistons.**Fitting New Pistons**—Use .002" feeler stock inserted between piston and cylinder wall on side opposite slot to check clearance.**Installing Pistons**—Slot should be toward left or away from camshaft.**PISTON RINGS**—Two compression rings, two oil control rings per piston, all above pin.

**ENGINE**

CONTINUED FR M. PRECEDIN PA E

Ring	Width	End Gap
Comp. All	$\frac{1}{8}$ "	.010-.025"
Oil Cont. (#3)	$\frac{1}{8}$ "	.010-.025"
Oil Cont. (#4)	$\frac{3}{16}$ "	.010-.025"

**PISTON PIN:**—Diameter— $\frac{7}{8}$ ". Pin floats in piston and rod. Pin hole in rod is bronze bushed. Pins furnished for service standard, .001", .003", .005" oversize.  
**Pin Fit in Piston:**—Light push fit with piston heated.  
**Pin Fit in Rod Bushing:**—.0001" or light push fit with both parts at normal temperature.

**CONNECTING ROD:**—Length— $8\frac{3}{4}$ ".  
**Weight:**— $36\frac{1}{4}$  ounces.  
**Upper Bearing (Piston Pin Bushing):**—Bronze.  
**Crankpin Journal Diameter:**—2".  
**Lower Bearing:**—Interchangeable steel-backed, copper-lead lined type. Shim adjustment.  
**Clearance:**—.001-.003". Sideplay .008-.012".  
**Bearing Adjustment:**—Shims. Do not file rods or caps. Replace bearings when necessary.

**CRANKSHAFT:**—7 bearing. Integral counterweights.  
**Journal Diameters:**— $2\frac{31}{64}$ " all bearings.  
**Bearing Type:**—Interchangeable, steel-backed, copper-lead lined type. Shim adjustment.  
**Clearance:**—.002-.0025".

**Bearing Adjustment:**—Shims. Do not file caps. Replace bearings when necessary. Bearing upper halves can be removed without removing crankshaft.

**End Thrust:**—Taken by center bearing. Endplay .004-.007".

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive.  
**Bearings:**—Removable, steel-backed, babbitt-lined.

**Timing Chain:**—Diamond 'double strand' roller chain. Width  $\frac{9}{16}$ ". Pitch  $\frac{3}{8}$ ". Length  $22\frac{1}{2}$ " or 60 links.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are ad-

jacent and in line with a straightedge across the shaft centers. Remove and install chain 'endless.' Use special gear pullers and pushers, keep sprockets lined up so as to avoid sidestrain on chain or sprockets

VALVES:—	Head Diam.	Stem Diam.	Seat Width
Intake	$1\frac{21}{32}$ "	.341"	$\frac{1}{16}$ "
Exhaust	$1\frac{17}{32}$ "	.341"	$\frac{1}{16}$ "
	Seat Angle	Lift	Stem Clearance
Intake	45°	$\frac{5}{16}$ "	.002"
Exhaust	45°	$\frac{5}{16}$ "	.002"

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves—engine hot or cold.

**Valve Timing:**—See Camshaft Setting Above.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.  
**Normal Oil Pressure:**—25 lbs., 10 lbs. idling.  
**Oil Pressure Relief Valve:**—Located on oil pump. Operates at 25 lbs. Adjustable by turning screw.  
**Crankcase Capacity:**—7 quarts (full).

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 9A6. Single plate, dry disc type. No adjustment required for wear.  
**See Clutch Section for complete data.**  
**Facings:**—Moulded type, 2 required. Inside Diam.  $6\frac{1}{8}$ ". Outside Diameter  $9\frac{1}{8}$ ". Thickness  $\frac{1}{8}$ ".  
**Adjustment:**—Free movement of clutch pedal must be  $\frac{1}{2}$ -1". Adjust whenever free movement is less than  $\frac{1}{2}$ ". To adjust, loosen nut on lower end of clutch pedal. Setscrew on throwout shaft at right end of clutch housing should not contact stop on case.  
**Removal:**—Disconnect driveshaft at rear of transmission, remove transmission, drop clutch housing underpan, take out capscrews mounting clutch on

flywheel turning all screws out evenly to release spring pressure. Clutch assembly can then be removed from below without removing flywheel housing.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'T' beam front axle with Reverse-Elliott ends and semi-elliptic springs.  
**Kingpin Inclination:**—7° crosswise.

**Caster:**—2-4°. Adjust by inserting wedge shims between spring and spring pad on axle.

**Camber:**—0-1½°. No adjustment.

**Toe In:**—0-½". To adjust, loosen clamp at right end of tie rod, turn tie rod in or out of this end joint, tighten clamp.

**STEERING GEAR**

**Steering Gear:** Gemmer Worm-and-Roller type.  
**See Steering Gear Section for complete data.**

**BRAKES**

**BRAKES (3610):**—Service—Bendix hydraulic, duo-servo, single anchor type. Hand lever applies rear service brakes.

**See Brake Section for complete data.**

**Drum Diameter:**—10".

**Lining:**—Moulded type. Width 2". Thickness  $\frac{3}{16}$ ". Length  $22\frac{1}{16}$ " per wheel.

**Clearance:**—.010" between drum and lining.

**Hand Brake Adjustment:**—Should be adjusted whenever service brakes adjusted. Turn adjusting screw in wheel so that shoes are tight in drum. Loosen 2 bracket bolts, pull hand brake lever 'on' three notches, pull bracket forward removing all slack in cables and tighten bolts. Then with lever in released position readjust shoes to give .010" clearance in drums by checking with feeler gauge through slot in drum.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number H-1001 & L-50781 ('37), H-10501 & L-106281 ('38). Stamped on plate on right frame side member under engine hood.

**ENGINE NUMBER:**—1st number—('38) HE-10510 & LE-107912. Stamped on plate on right hand side of engine block.

**TUNE-UP**

**COMPRESSION:** Ratio—5.61-1 (3710), 5.83-1 (3810).  
Pressure—Approx. 100 lbs. at cranking speed.

**VACUUM READING:** 18-20" steady idling at 7 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** AC Type 85 (3710), Auto-Lite Type B-7 (3810). Both are 18 mm. Metric.  
Gaps—.025" (.030" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—Closed: 35° (IGW-4010), 40° (IGC-4276), 38° (IGC-4415).

Automatic Advance—12° max. at 1000 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC (3710), 4° ATDC (3810). Vibration dampener mark 'DC.IGN' (3710), 'IGN' (3810) aligned with pointer on chain case cover.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Set idle screw midway between "miss" and "roll" points. Idle speed 7MPH (or 9 MPH to overcome stalling complaints if Overdrive used).  
Float Level—Fuel level  $\frac{3}{4}$ " below top edge of bowl.  
Accelerating Pump—Inner hole (Summer temperatures), Outer hole (Winter temperatures).

Fuel Pump Pressure:  $3\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.015" all valves, hot or cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 301630. Ignition Switch No. 301538.

**Ignition Lock:**—Briggs & Stratton No. 80207 (Lock cylinder). Key Series—5 digits. Groove—#1.

**COIL:** Auto-Lite IG-4407 (3710), IG-4095 (3810).  
Mounted on dash.

Ignition Current—2.0 amperes idling, 5.0 stopped.

**CONDENSER:** Auto-Lite No. IGB-1025 (IGW), IG-2871 (IGC).  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4010 (for 3710), IGC-4276 (3810), IGC-4415 (3810 with oil-bath air cleaner). Single breaker, 6 lobe cam, full automatic advance type.

Breaker Gap—Set at .020".

Cam Angle: IGW-4010—35° Closed, 25° Open.

IGC-4276 40° Closed, 20° Open.

IGC-4415 38° Closed, 22° Open.

Breaker Arm Spring Tension—16-20 ounces.

Rotation—Clockwise viewed from top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	275	0.....	550
3.....	360	6.....	720
6.5.....	450	13.....	900
9.....	700	18.....	1400
11.....	900	22.....	1800
12.....	1000	24.....	2000

**Removal:**—Distributor mounted on cylinder head on right side. To remove, loosen locknut and take out setscrew on side of cylinder head opposite distributor shaft.

**IGNITION TIMING**

Model	Flywheel Degrees	Piston Position
3710.....	0° at TDC.	.....0000" TDC.
3810.....	4° ATDC.	.....0065" ATDC.

**To Set Timing:**—With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when "DC.IGN" mark (for 3710), "IGN" mark (for 3810), on the vibration dampener at front of engine is directly under pointer. Loosen locknut and back off setscrew on side of cylinder head slightly, rotate distributor until contacts begin to open, tighten setscrew and locknut. NOTE—Car manufacturer recommends use of timing light for accurate ignition setting.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model AX-2.  $1\frac{1}{4}$ " downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warm, choke valve wide open, set throttle stop screw so that engine idles at 7 MPH. (NOTE—On cars with cruising gear

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Idle may be set at high as 9 MPH. to obtain satisfactory idle). Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop-screw for correct idle speed.

**Accelerating Pump Setting**—Throttle lever has two holes for pump link engagement. Change for seasonal requirements as follows:

Inner Hole (short stroke)—Summer temperatures.  
Outer Hole (long stroke)—Winter temperatures.

## CARB. EQUIPMENT

MODEL 3710

**Air Cleaner**—Burgess oil-wetted type standard, AC #1528279 Heavy Duty Oil-bath type optional.

**Fuel Pump**—AC Type W #1523233 Diaphragm type std., Type AD #1523234 combination fuel-and-vacuum type optl.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Motometer Electric. Dash unit No. NG-8241D. Tank unit NG-8230T.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

MODEL 3810

**Air Cleaner**—AC #1528643 oil-wetted type Std., #1528679 heavy duty oil-bath type Optl.

**Fuel Pump**—AC. Type W #1523640 diaphragm type. Type AD #1523641 combination fuel-and-vacuum pump optional.

For complete data, refer to Carburetion Equip. Index.

1938 MODELS

See Electrical Equipment Section for Regulator internal wiring when two resistors used.

**Gasoline Gauge**—King-Seeley electric type. K-S No. 6730 (dash unit—first cars—ball type pointer), 7070 (dash unit—later cars—bar type pointer), No. 6732 (tank unit—all cars).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

MODEL 3710

**BATTERY**—U.S.L. Type KL-1-13. 6 volt, 13 plate, 100 ampere hour capacity (20 hour rate).

Starting Capacity—120 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.1 minutes.

Grounded Terminal—Positive (+) term. grounded to transmission cover bolt.

Location—On left side under drivers seat.

## BATTERY

MODEL 3810

**BATTERY**—U.S.L. Type HTL-1-15. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

Starting Capacity—133 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.8 minutes.

Grounded Terminal—Positive (+) terminal grounded to frame and to transmission (1 cable). Location—Under front seat on left hand side.

Dimensions—Length 9 1/16". Width 7 7/8". Height 9 1/16".

## STARTER

**Auto-Lite Model MAB-4076. Armature MAB-2057.**

Drive—Inboard Bendix Type LCD11FX-10.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—125 R.P.M., 150-160 amps., 5.2 v.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.	582
22.5 "	Lock	4.	775

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**—A-L Model SW-4005. Mounted on left side of engine below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

THIRD-BRUSH TYPES

**Auto-Lite Model GCM-4803-4, GCM-4803A-4, or GCM-4803B-4. Armature GCJ-2030. Third brush control type with Cutout Relay on generator.**

**Charging Rate Adjustment**—Make tests at generator. Remove commutator cover band, shift third brush counter-clockwise to increase, clockwise to decrease charging rate. Do not exceed maximum charging rate as given below. Third brush held in position by friction.

**NOTE**—Standard setting of third brush is 2%-2% commutator bars from nearest main brush.

**Maximum Charging Rate**—22 amperes (cold), 18 amperes (hot), 8.0 volts, 2650 R.P.M.

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0.....	6.4.....	775	0.....	6.4.....	830
4.....	6.7.....	900	4.....	6.75.....	985
8.....	7.0.....	1075	8.....	7.1.....	1190
12.....	7.3.....	1200	12.....	7.5.....	1480
16.....	7.6.....	1420	16.....	7.8.....	1970
20.....	7.85.....	1900	18.....	8.0.....	2700
22.....	8.0.....	2650			

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (new brushes).  
Field Current—3.50-3.89 at 6.0 volts.  
Motoring Current—5.75-6.25 amperes at 6.0 volts.  
Field Fuse—5 ampere capacity (under cover on generator frame).

Removal & Belt Adjustment: Same as given below.

## GENERATOR

## TWO-BRUSH TYPES

Auto-Lite Model GCO-4802, GCO-4802A or GCO-4802C. Armature No. GCO-2031F. Two brush type with Current-Voltage Regulator for radio-equipped cars.

Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Current Regulator.

Maximum Charging Rate—28 amperes, 8.0 volts, 1850 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0.....	6.4.....	825	0.....	6.4.....	900
4.....	6.6.....	940	4.....	6.6.....	1025
8.....	6.85.....	1050	8.....	6.85.....	1160
12.....	7.1.....	1175	12.....	7.1.....	1310
16.....	7.3.....	1300	16.....	7.3.....	1475
20.....	7.55.....	1450	20.....	7.55.....	1660
24.....	7.8.....	1610	24.....	7.8.....	1880
28.....	8.0.....	1850	28.....	8.0.....	2200

NOTE—Current reg. limits output to 28 amperes.  
Rotation—Counter clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (new brushes).  
Field Current—1.47-1.63 amperes at 6.0 volts.  
Motoring Current—3.94-4.36 amperes at 6.0 volts.

Removal (All Models):—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

Belt Adjustment (All Models):—Adjust whenever belt deflection is more than  $1\frac{1}{2}$ " (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) until belt deflection is approximately 1", tighten screws.

## CUTOUT RELAY

## FOR THIRD-BRUSH GENERATOR

Auto-Lite Model CB-4014 (for GCM Generators). Mounted on generator.

For complete data, refer to Electrical Equipment Index.

Cuts In—6.5-7.25 volts.

Cuts Out—5-2.5 amperes discharge.

Contact Gap—.015-.045".

Air Gap—.010-.030" with contacts closed.

## REGULATOR

## FOR TW-BRUSH GENERATOR

Auto-Lite VRB-4002D or VRB-4010A. Current-Voltage Types (used with GCO Generators). Consists of Cutout Relay, vibrating Voltage Regulator, and vibrating Current Regulator in case on dash.

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator cover is sealed. Serviced on exchange basis if seals not broken. Unit can be checked without breaking seal but cover must be removed to make adjustments.

## Cutout Relay

Cuts In—6.4-7.0 volts Cold.

Cuts Out—5-3.0 amperes discharge current.

Contact Gap—.015" minimum.

Air Gap—.034" min., .038" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

Setting—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no.

To Check (Without Breaking Seals)—Connect ammeter in charging line at 'B' terminal on regulator, connect voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. until voltage is steady. Voltage should be within limits of 7.3-7.6 volts (cold—70°F), 7.1-7.4 volts (hot—140°F). See Regulator Setting above.

To Adjust (with cover removed)—Change armature spring tension slightly by bending lower spring hanger. See Electrical Equipment Section for complete directions.

Contact Gap—.010" Min., .020" Max. with armature against stop pin.

Air Gap—.0595-.0625" with contacts just opening.

## Current Regulator

Setting—27-29 amperes (marked '28' on cover).

To Check (Without Breaking Seals)—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H. car speed, add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate and bring Current Regulator into action. Charging current should not exceed 28 amperes. If more than slight excess is noted, Regulator is defective.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section for complete directions.

Contact Gap & Air Gap—As given above for Voltage Regulator.

## LIGHTING

LIGHTING:—Headlamps—C o r o r a n - B r o w n, pre-focused type. Country driving and City beams controlled by foot dimmer switch on toeboard. City beam deflected to right (special type 2331 lamp bulb).

Headlamp Adjustment—Aim headlamps straight ahead with top of beam at lamp center height at 25 feet, (upper beams—Country driving) lighted. Vertical adjustment controlled by mounting bolts—

loosen bolts and shift lamp by hand. Horizontal adjustment controlled by screw (under hood just ahead of front mounting bolt).

Headlamp Beam Indicator—Red jewel light on instrument panel above speedometer dial. Lighted whenever Country driving (upper) beams lighted.

## Switches

Lighting—Douglas.

Foot Dimmer—Douglas.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps .....	32-32.....	2331
Park, Dash, License .....	3 .....	81
Indicator .....	1 .....	51
Stop-Tail .....	21-3 .....	1158
Dome .....	6 .....	63

## MISC. ELECTRICAL

FUSES:—Lighting—20 amp. on back of lighting switch.

Accessory—20 ampere on fuse block attached to lighting switch. Protects stop light and gasoline gauge circuits.

Generator—5 ampere (on GCM-4803B-4 generator only). Located under cover on generator field frame.

HORNS:—Sparton—Vibrator type twin horns operated by R.B.M. horn relay.

Horn Relay:—R.B.M. Model 10072. Current draw .4-.55 amperes at 6.0 volts. Coil resistance 11-14 ohms. Contacts must close with 4 volts across windings when in inverted position.

## ENGINE

ENGINE CODE NOTE:—Consists of three letters stamped on Engine Number Plate to indicate original size of Cylinder Bore (first letter), Main Bearings (second letter), Crankpin & Connecting Rod Bearings (third letter) as follows: 'A'—Standard, 'B'—.010" Undersize, 'C' .010" Oversize, 'D'—.015" Oversize, 'E'—.020" Oversize.

ENGINE SPECIFICATIONS:—Own 'Monitor Sealed' motor. Six cylinder, 'L' head. Cylinders cast enbloc. No intake manifold used, intake passage formed within head and block castings.

Bore—3 $\frac{3}{8}$ ". Stroke—4 $\frac{3}{8}$ ".

Displacement—234.8 cubic inches.

Rated Horsepower—27.34 (SAE).

Developed HP.—90 ('37), 95 ('38) @ 3400 RPM.

Compression Ratio—5.61-1 ('37). 5.83-1 ('38).

Compression Pressure—Approximately 100 lbs. at cranking speed. Cylinders equal within 10 lbs.

Vacuum Reading—Steady 18-20" idling at 7 MPH.

PISTONS:—Nash, aluminum alloy, Invar strut, split skirt type. See Engine Code Note above for original bore and piston sizes.

Removal—Pistons and rods removed from above. Clearance—.0015-.002". See Fitting New Pistons.

Replacement Pistons:—Finished pistons furnished Std. and .001", .002", .003", .005", .010", .012", .015", .020" oversize. Semi-finished pistons .050" oversize.

Fitting New Pistons:—Use .002" feeler stock inserted between piston and cylinder wall on side opposite slot to check clearance. Pull required to withdraw feeler should be 10 lbs.

CONTINUED N NEXT PAGE

**ENGINE****C CONTINUED FR M PRECEDING PAGE**

**Installing Pistons:**—Piston pin offset toward camshaft side of engine and trademark (within piston) toward front.

**PISTON RINGS:**—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap
Compression (All)	1/8"	.010"
Oil Control (#3—3710)	3/16"	.010"
Oil Control (#4—3710)	5/32"	.010"
Oil Control (All—3810)	5/32"	.010"

**Replacement Rings:** .010" and .020" oversize.

**PISTON PIN:**—Diameter— $\frac{7}{8}$ ". Pin floats in piston and rod, retained by locking rings. Pin hole in piston offset toward camshaft side of engine, pin hole in rod bronze-bushed.

**Pin Fit in Piston:**—Light push fit (piston at 200°).

**Pin Fit in Rod Bushing:**—.0001" or light push fit with piston and rod cold.

**Replacement Pins:** .001", .002", .005" oversize.

**CONNECTING ROD:**—Length— $8\frac{3}{4}$ " (center-to-center).

**Upper Bearing (Piston Pin Bushing):**—Bronze.

**Crankpin Journal Diameter:**—2".

**Lower Bearing:**—Removable, steel-backed, babbit-lined type. No shims. See Engine Code Note (above) for original bearing sizes.

**Clearance:**—.002". Sideplay—.004" max.

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:**—Furnished .010" undersize.

**CRANKSHAFT:**—7 bearing. Integral counterweights.

**Journal Diameters:**—2  $\frac{31}{64}$ " all bearings.

**Bearing Type:**—Interchangeable steel-backed, babbit-lined type. No shims.

**Clearance:**—.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be 'rotated' out without removing crankshaft by using pin installed in oil hole in shaft and rotating shaft.

**Replacement Bearings:**—Furnished .010" undersize.

**End Thrust:**—Taken by center (#4) bearing. Endplay .004". No adjustment (replace bearing).

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive.

**End Thrust:**—Taken by front bearing (shoulder formed on shaft behind bearing, and shoulder in front of bearing formed by sprocket hub when bolted on camshaft). Adjusted by replacing bearing.

**Timing Chain:**—Double-roller chain. Width  $\frac{9}{16}$ ". Pitch  $\frac{1}{4}$ ". Length (3710— $22\frac{1}{2}$ " or 60 links, 3810— $23\frac{1}{4}$ " or 62 links).

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Install chain endless with camshaft sprocket off engine.

**VALVES:**—Head Diameter Seat Angle Stem Clear.

Intake .....1  $\frac{21}{32}$ " .....45° ......003"

Exhaust .....1  $\frac{17}{32}$ " .....45° ......003"

**VALVE TIMING**

**Tappet Clearance:**—.015" all valves with engine hot or cold.

**Valve Timing:**—See Camshaft Setting above.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

**Normal Oil Pressure:**—25-35 lbs. at normal temp.

**Oil Pressure Relief Valve:**—Located on oil pump.

Operates at 30 lbs. Adjustable by turning screw.

**Crankcase Capacity:**—6 qts. (refill).

**Oil Pressure Gauge:**—King-Seeley Electric. K-S No. 6730 (dash unit, first cars—ball type pointer), 7070 (dash unit, later cars—bar type pointer), No. 6125 (motor unit). This gauge used on Model 3810 only. See Miscellaneous Section for complete data.

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal type with adjustable packing. Impeller driven through flexible coupling by extension of generator shaft. See Water Pump Section for complete data.

**Removal:**—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat:**—Dole. Located in water outlet elbow on cylinder head.

**Setting:**—Thermostat opens at 160°F.

**Temperature Gauge ('38):** King-Seeley Electric type. Dash Unit—K-S No. 6730 (with Ball type pointer), No. 7070 (with Bar type pointer).

**Engine Unit—K-S No. 5700.**

**NOTE:**—No. 5700 Engine Unit serviced by No. 7000 (new type) which must be used with new Dash Unit No. 7295. Service Kit No. 7643 contains both units. See Miscellaneous Section for complete data.

**Water Capacity:** 20 quarts.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 9A6. Model No. 906 stamped on cover. Single plate, dry disc type. See Clutch Section for complete data.

**Facings:**—Moulded-Woven type, 2 required. Inside Diam.  $5\frac{5}{8}$ ". Outside Diam.  $9\frac{1}{4}$ ". Thickness  $\frac{1}{8}$ ".

**NOTE:**—Woven facings used on Model 3710.

**Adjustment:**—Free movement of clutch pedal must be  $\frac{1}{2}$ – $1\frac{1}{2}$ ". Adjust by loosening transverse bolt in slot below clutch pedal shaft and positioning pedal in slot. Clearance between pedal and toeboard should be  $\frac{3}{4}$ ". Check 'NoRol' setting whenever clutch adjusted and adjust if necessary.

**NoRol Adjustment:**—Loosen locknut and turn adjusting nut at rear end of connecting rod (at NoRol lever) in for later brake release, out for earlier release. Brakes should release just as clutch engages.

**Removal:**—Remove transmission (see Transmission Removal below), remove clutch housing underpan, take out clutch mounting bolts evenly, remove assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, synchro-mesh, helical gear (second and high), sliding helical gear (low and reverse). See Transmission Section for complete data.

**Vacuum Gear Shift (Transmission Control):**—Evans Nash vacuum type. Optional on Model 3810.

See Transmission Section for complete data.

**Removal:**—Disconnect drive shaft. Disconnect shift linkage (on cars with Vacuum Gear Shift). Take off nuts on transmission mounting bolts, pull transmission straight back.

**OVERDRIVE**

**Cruising Gear (Overdrive):**—Warner Model AS2-R6 (3710), AS6-R6 (3810) optional.

See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics—Model 2C. Roller bearing type. 2 used.

See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own—Semi-floating, spiral bevel gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—4 1/9-1 Standard.

**Removal:**—Block up rear of car, remove wheels and axle shafts, disconnect brake lines and cables, shock absorber links, drive shaft at rear universal joint. Free axle from springs by disconnecting spring bolts, remove axle assembly from under car.

**Axle Shaft Removal:**—Remove wheels, take out mounting screws in retainer, remove retainer, oil seal, brake backing plate, bearing adjusting shims. Use puller to remove shaft and bearing assembly.

**Wheel Bearing Adjustment:**—Controlled by shims at flanged end of housing. To adjust, remove brake backing plate and add or remove shims.

**Endplay:**—.003-.006".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Nash (Delco or Gabriel design), double acting (3710), direct acting (3810).

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—7° crosswise.

**Camber:**— $\frac{1}{2}$ – $1\frac{1}{2}$ ". No adjustment.

**Caster:**— $2\frac{1}{2}$ " ('37),  $1\frac{1}{2}$ " ('38). Shim adjustment. Install shims between spring and spring pad on axle.

**Toe In:**—0– $\frac{1}{16}$ ". Adjust by loosening clamp bolt at right hand end of tie rod and turning rod in or out of end fitting.

**Steering Shock Eliminator:**—Consists of rubber bumper mounted on underside of left frame side-rail just in front of left front spring shackle. Adjust to give  $\frac{1}{16}$ " clearance between spring and bumper with normal load.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service. Bendix Duo-Servo, Single Anchor type, or Lockheed type, Hydraulic brakes. Hand lever applies rear wheel service brakes. NoRol optl See Brake Section for complete data.

**Drum Diameter:**—10" ('37), 10  $\frac{1}{16}$ " ('38).

**Lining:**—Woven (primary '38), Moulded (all '37—secondary '38). Width 2". Thickness  $\frac{3}{16}$ ". Length per wheel 22  $\frac{1}{16}$ " ('37).

**Clearance (Bendix):**—.010" at heel & toe (each shoe).

**(Lockheed):**—.005" heel, .010" toe (each shoe).

**Hand Brake:** See Service Brakes above.

**NoRol:** Optional equipment.

See Brake Section for complete data.

**NOTE:—**Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number H-19450. Stamped on plate on right frame side rail under engine hood.

**ENGINE NUMBER:**—First number HE-18950. Stamped on boss on upper left hand side of engine block above front water jacket cover plate. NOTE—Engine No. for each car is 500 less than serial number.

## TUNE-UP

**COMPRESSION:—Ratio—6.30-1 std. cast-iron head.**  
**Pressure—110 lbs. at 160 R.P.M. (cranking speed).**  
**Pressure should be equal for all cylinders within**  
**10 lbs.**

**VACUUM READING:—**Gauge should show steady reading of 18-20" with engine idling at 7-8 M.P.H.

**FIRING ORDER: 1-5-3-6-2-4.** See wiring diagram.

**SPARK PLUGS:** Auto-Lite B7 or AC G-9. 18 mm.  
Gaps—Set at .025".

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.020" Cam Angle—38° Closed.  
**Automatic Advance**—5° max. at 850 RPM. (distr.)  
**Vacuum Advance**—5½° (distr.) with 12" vacuum

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—TDC. Vibration dampener mark 'IGN DC' aligned with pointer on chain case cover.

**CARBURETTION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Screws midway between 'miss' and 'roll' points. Idle speed 7-8 MPH.  
**Float Level**—Fuel level 15/32" below edge of bowl.  
**Accelerating Pump**—Inner Hole (Summer), outer (Winter).

**Fuel Pump Pressure: 3½ lbs maximum.**

**VALVES:** See Valve Timing.  
Tappet Clearance—.015" all valves, hot or cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 302000. Ignition Switch No. 301538.  
**Ignition Lock**—Briggs & Stratton No. 80207 (Lock cylinder). Key Series—5 digets. Groove—#1.

**COIL:** Auto-Lite IG-4095. Mounted on dash.  
Ignition Current—2.0 amperes idling, 5.0 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671-F.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR: Auto-Lite IGS-4104 (Std.), IGS-4104X**  
(With Oil Bath Air Cleaner). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control. NOTE—Models IGS-4104X distributor is side-outlet type (see diagram). **Breaker Plate Identification**—Maximum vacuum advance limited by slot and marked by number (#6) stamped on plate.  
**Cam Angle or Dwell**—38° closed, 22° open (distr.).  
**Breaker Gap**—Set at .020".  
**Breaker Arm Spring Tension**—16-20 ounces.  
**Rotation**—Clockwise viewed from top.

Automatic Advance			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start ..	250	0 . . .	500
1	300	2	600
2	440	4	880
4	710	8	1420
5	850	10	1700

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for speeds above idling except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Spark Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	8"
9°	1.8°	7"
3°	6°	9-10"
65°	11°	12"

**Removal:**—Distributor mounted on cylinder head on right side. To remove, disconnect vacuum line, loosen locknut and take out setscrew on side of cylinder head opposite distributor shaft.

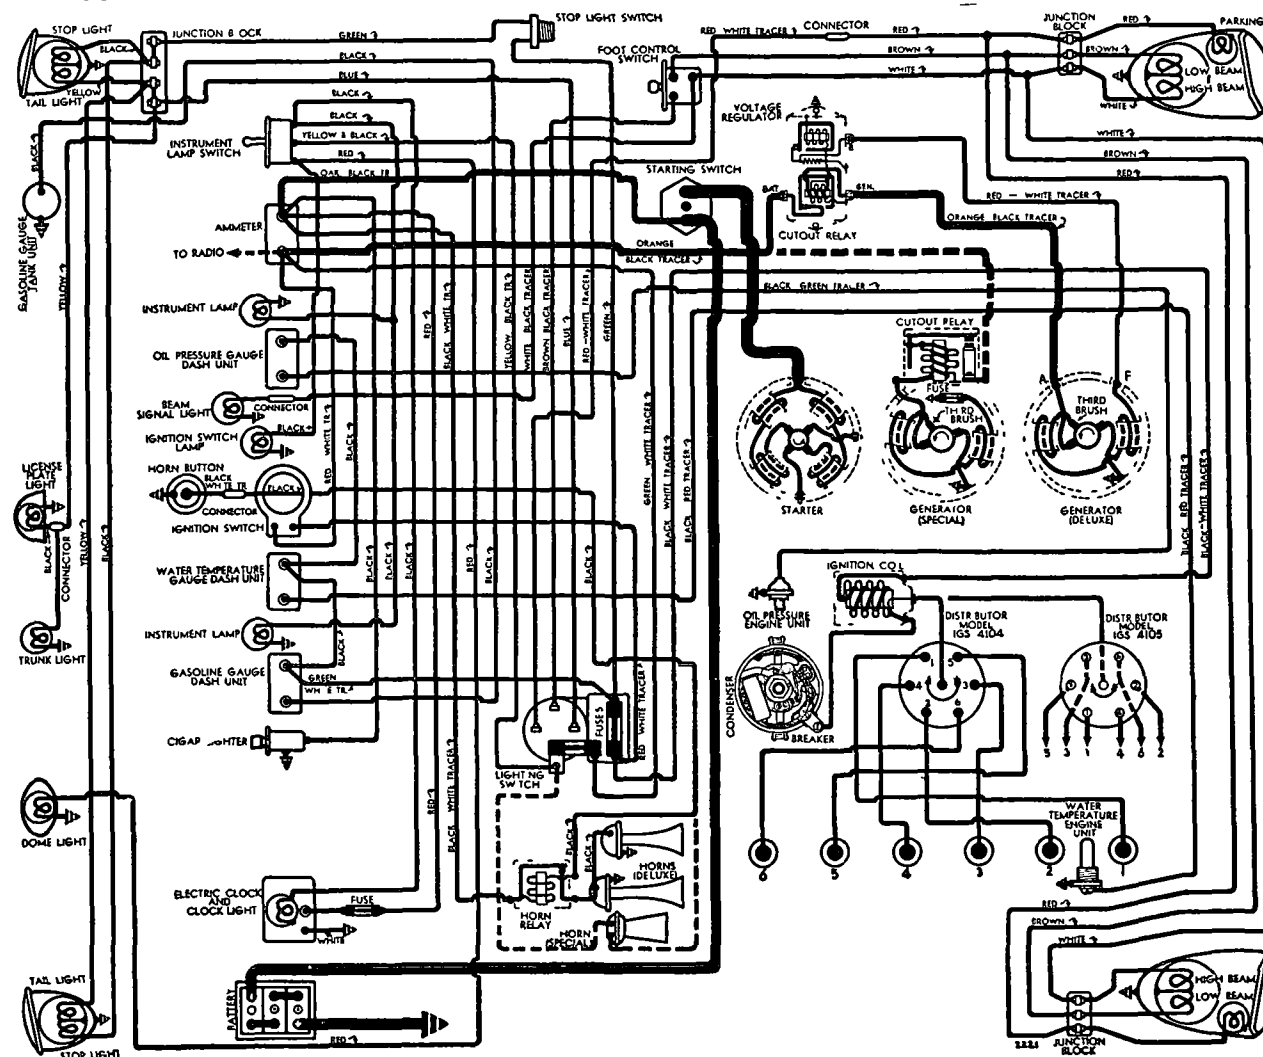

## IGNITION TIMING

**IGNITION TIMING:—**Setting for all engines as follows:

Flywheel Degrees	Piston Position
0° At TDC	.0000" TDC

**To Set Timing—**With #1 piston on compression, turn engine over until the piston reaches top dead center, stop when 'IGN' mark on vibration dampener at front of engine is directly under pointer. Loosen locknut and back off setscrew on side of cylinder head slightly, rotate distributor until contacts begin to open, tighten setscrew and locknut. **NOTE—**Car manufacturer recommends use of timing light for accurate ignition setting.

**CONTINUED ON NEXT PAGE**

## CONTINUED FROM PRECEDING PAGE

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-1. 1" dual downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warm, throttle stop-screw on slow idle and choke valve wide open, set throttle stop-screw so that engine idles at 7-8 M.P.H. Turn one idle adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat adjustment for second idle adjusting screw. Readjust throttle stop-screw for correct idle speed.

**Accelerating Pump Adjustment:**—Throttle lever has two holes for pump link engagement. Set for seasonal requirements as follows:

Inner Hole (Min. stroke)—Summer temperatures.  
Outer Hole (Max. stroke)—Winter temperatures.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1528643 (with #1529117 silencer adapter) used on early cars, #1529111 later cars, oil-wetted type standard. #1529114 heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type W #1523640 diaphragm type standard. Type AD #1523641 combination fuel-and-vacuum pump optional or used on cars with Over-drive.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—King-Seeley Electric type. Dash unit—K-S No. 7070 (Special), 7265 (Deluxe). Tank unit—K-S No. 6732 (all cars).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—U.S.L. Type BN-15. 6 volt, 15 plate, 95 Ampere Hour capacity (20 hour rate).

Starting Capacity—117 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.1 minutes.

Grounded Terminal—Positive (+) grounded to fram.

Location—Under front seat on left hand side.

Dimensions—Length 8 $\frac{1}{2}$ ". Width 7". Height 8 $\frac{3}{8}$ ".

## STARTER

**Auto-Lite Model MAB-4076.** Armature MAB-2057. Drive—Inboard Bendix Type LCD11FX-10.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—125 R.P.M., 150-160 amps., 5.2 v.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—A-L Model SW-4005. Mounted on left side of engine below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

## SPECIAL M DEL

**Auto-Lite Model GCM-4825A.** Armature GCJ-2097. Third brush control type with Cutout Relay mounted on generator.

**Charging Rate Adjustment:**—Make tests at generator. Remove commutator cover band, shift third brush counter-clockwise to increase, clockwise to decrease charging rate. Do not exceed maximum charging rate as given below. Third brush held in position by friction.

**NOTE:**—Standard setting of third brush is 2 $\frac{3}{4}$ -2 $\frac{3}{4}$  commutator bars from nearest main brush.

**Maximum Charging Rate:**—21 amperes (cold), 18 amperes (hot), 8.0 volts, 2650 R.P.M. or 24 M.P.H.

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	775	0	6.4	830
4	6.7	900	4	6.75	985
8	7.0	1075	8	7.1	1190
12	7.3	1200	12	7.5	1480
16	7.6	1420	16	7.8	1970
20	7.85	1900	18	8.0	2700
22	8.0	2650			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Amperes Field Current:**—3.50-3.89 at 6.0 volts.

**Motoring Current:**—5.75-6.25 amperes at 6.0 volts.

**Field Fuse:**—5 ampere capacity (under cover on generator frame).

**Removal and Belt Adjustment:**—Same as for Deluxe generator following.

## GENERATOR

## DELUXE MODEL

**Auto-Lite Model GDS-4802A.** Armature GDF-2097. Third brush control type with external Voltage Regulator mounted on car frame. **NOTE:**—This generator optional equipment on Special Models.

**Maximum Charging Rate:**—35 amperes (cold), 27.5 amperes (hot), at 8.0 volts, 24 M.P.H. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment:**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section (following).

**NOTE:**—Third brush setting 1 bar minus 1 mica strip (minimum), 1 bar (maximum) from insulated main brush.

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	980
4	6.6	1050	4	6.65	1120
8	6.8	1175	8	6.9	1280
12	7.0	1300	12	7.1	1430
16	7.2	1450	16	7.45	1640
20	7.4	1600	20	7.6	1900
24	7.6	1820	24	7.8	2320
28	7.8	2075	27.5	8.0	3200
33	8.0	2900			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.65-1.82 amperes at 6.0 volts.

**Motoring Current:**—5.10-5.45 amperes at 6.0 volts.

**Removal (All Models):**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment (All Models):**—Adjust whenever belt deflection is more than 1 $\frac{1}{2}$ " (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) until belt deflection is approximately 1", tighten screws.

## GENERATOR

## SPECIAL EQUIPMENT

**Auto-Lite Model GCO-4802C.** Armature GCO-2031F. Two brush type with external Current-Voltage Regulator. Optional on All Models. See preceding Nash-Lafayette 3710 & 3810 pages for complete data.

## CUTOUT RELAY

## SPECIAL MODEL

**Auto-Lite Model CB-4014** (for cars with GCM-4825A Generator):—Mounted on generator.

For complete data, refer to Electrical Equipment Index.

**Cuts In:**—6.5-7.25 volts, 9 M.P.H.

**Cuts Out:**—5-2.5 amperes discharge.

**Contact Gap:**—.015-.045".

**Air Gap:**—.010-.030" with contacts closed.

## REGULATOR

## DELUXE MODEL

**Auto-Lite Model VRD-4010A.** Voltage Type (Used with GDS-4802A generator). Consists of cutout relay and vibrating voltage regulator in a single case mounted on frame in engine compartment.

For complete data, refer to Electrical Equipment Index.

**NOTE:**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

**Cuts In:**—6.4-7.0 volts Cold, 9 M.P.H.

**Cuts Out:**—5-3.0 amperes discharge current.

**Contact Gap:**—.015" minimum.

**Air Gap:**—.034-.038" Contacts open—measure at hinge end of core.

## Voltage Regulator

**Setting:**—7.3-7.6 volts at 70°F.

**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 M.P.H., charging battery, until voltage is steady. Voltage reading should be 7.3-7.6 volts (Cold—70°F), 7.1-7.4 volts (Hot—140°F).

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete directions.

**Contact Gap:**—.010-.020" (armature against stop pin).

**Air Gap:**—.0595-.0625" with contacts just opening.

## REGULATOR

## SPECIAL EQUIPMENT

**Auto-Lite Model VRB-4010A.** Current-Voltage Type (Used with GCO-4802C Generator). See preceding 3810 page for complete data.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Country driving and City beams controlled by selector switch on toeboard. City beam deflected slightly to right (special 2331 bulb).

**Headlamp Adjustment:**—With car 25' from screen and Country Driving (upper beams) lighted, aim headlamps straight ahead with top of beam at lamp center height. Adjusting screws located under headlight door to left of lens. Upper screw controls horizontal movement, lower screw vertical movement.

**Beam Indicator:**—Red dot above speedometer dial. Lighted when Country Driving (upper beams) in use.

### Switches

**Lighting:**—Douglas.  
**Beam Selector:**—Douglas.  
**Instrument:**—Douglas.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Park, Dash, License	3	63
Indicator	1	51
Stop-Tail	21-3	1158
Dome	6	81

## MISC. ELECTRICAL

**FUSES:**—Lighting—20 amp. on back of lighting switch.

**Accessory:**—20 ampere on fuse block attached to lighting switch. Protects stop light and gasoline gauge circuits.

**Generator:**—5 ampere (on GCM-4825A) generator only). Located under cover on generator field frame.

**HORNS:**—Single—Sparton vibrator type. Standard on Special Series.

**Dual:**—Auto-Lite Model HH-4003 (low pitch), HH-4004 (high pitch). Vibrator type, blended tone operated by horn relay. Standard on Deluxe Series, optional on Special Series.

**Horn Relay:**—R.B.M. Model 4755.

**Contacts Close:**—3.5-4.5 volts.

**Current Draw:**—¾ ampere.

## ENGINE

**ENGINE CODE NOTE:**—Consists of three letters stamped on Engine Number Plate to indicate original size of Cylinder Bore (first letter), Main Bearings (second letter), Crankpin & Connecting rod bearings (third letter) as follows: 'A'—Standard, 'B'—.010" Undersize, 'C'—.010" Oversize, 'D'—.015" Oversize, 'E'—.020" Oversize.

**ENGINE SPECIFICATIONS:**—Own Make. 6 cylinder, 'L' head type. Cylinders cast en bloc. No intake manifold used, intake passage formed within head and block castings.

**Bore:**—3⅞". **Stroke:**—4⅜".

**Displacement:**—234.8 cu ins. **Rated HP.**—27.34.

**Developed Horsepower:**—99 HP. at 3400 R.P.M.

**Compression Ratio:**—6.3-1 cast-iron head.

**Compression Pressure:**—110 lbs. at cranking speed (160 R.P.M.).

**Vacuum Reading:**—18-20" steady idling at 7-8 MPH.

**PISTONS:**—Nelson-Bohnalite, aluminum alloy, Invar strut, tin plated, split skirt type. See Engine Code Note above for original bore and piston sizes.

**Weight:**—19¼ ounces. **Length:**—3⅞".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .027-.030". Skirt .001-.002".

**Replacement Pistons:**—Std. & .001", .002", .003", .005", .010", .012", .015", .020" O.S. Semi-finished .050" O.S.

**Fitting New Pistons:**—Insert .002" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10 lbs.

**Installing Pistons:**—Pin offset to camshaft side of engine. Trademark (within piston) to front.

**PISTON RINGS:**—Two compression rings, two oil control rings per piston, all above pin.

Ring	Width	End Gap	Wall Thickness
Compression	.123-.124"	.010-.020"	.150"
Oil Control	.1545-.1550"	.010-.018"	.150"

**Replacement Rings:**—Furnished .010", .020" oversize.

**PISTON PIN:**—Diameter .8745-.8748". Length 2.799-2.809". Floating type. Retained by locking rings. Pin hole in piston offset to camshaft.

**Pin Fit in Piston:**—Light push fit (piston at 200°F).

**Pin Fit in Rod Bushing:**—Select fit to .0001" or light push fit at normal temperature.

**Replacement Pins:**—Furn. .001", .002", .005" oversize.

**CONNECTING ROD:**—Length—8¾". Weight—36¼ ozs.

**Upper Bearing (Piston Pin Bushing):**—Bronze.

**Crankpin Journal Diameter:**—2.0015-2.0025".

**Lower Bearing:**—Removable steel-backed, babbitt-lined type. No shims. See Engine Code Note (above) for original bearing sizes.

**Clearance:**—.0015-.0025". Sideplay—.008-.012".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:**—Furnished .010" undersize.

**CRANKSHAFT:**—7 bearing, 4 counterweights.

**Journal Diameters:**—2 31/64" all bearings.

**Bearing Type:**—Interchangeable steel-backed, babbitt-lined. No shims. See Engine Code Note (above) for original bearing sizes. **Clearance:**—.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. Upper halves can be 'rotated' out without removing crankshaft by using pin in oil hole in shaft, turn shaft.

**Replacement Bearings:**—Furnished .010" undersize.

**End Thrust:**—At #4 bearing. Endplay—.004".

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive.

**End Thrust:**—Taken by front bearing. Replace bearing to take up excessive endplay.

**Timing Chain:**—Whitney No. 49205. Width 9/16".

**Pitch:** ⅜". Length 60 links or 22½".

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

Intake	1 21/32"	3402-3412"	5 55/64"
Exhaust	1 17/32"	3402-4312"	5 55/64"

Seat Angle Lift Stem Clearance

All Valves	45°	5/16"	.002-.004"
------------	-----	-------	------------

**Valve Guides:**—Press fit in block.

**Valve Springs:**—Free length 2½".

	Spring Pressure	Spring Length
--	-----------------	---------------

Valve Closed	65-70 lbs.	2"
--------------	------------	----

Valve Open	111-118 lbs.	1 11/16"
------------	--------------	----------

## VALVE TIMING

**Tappet Clearance:**—.015" all valves, hot or cold.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 21½° BTDC. Close 71° ALDC.

**Exhaust Valves:**—Open 71° BLDC. Close 36½° ATDC.

**Valve Timing Check:**—With regular running tappet clearance of .015", Intake valve should open with piston 21½° or .1891" BTDC., and Exhaust valve close with piston 36½° or .5118" ATDC.

## LUBRICATION

**LUBRICATION:**—Gear type pump in crankcase.

**Normal Oil Pressure:**—30 lbs. at 20 M.P.H.

**Oil Pressure Relief Valve:**—On oil pump cover. Opens at 30 lbs. Screw adjustment.

**Crankcase Capacity:**—6 qts.

**Oil Pressure Gauge:**—King-Seeley Electric. K-S No. 7270 (dash—Deluxe), 7070 (dash—Special), 6125 (engine unit—all models).

See Miscellaneous Section for complete data.

## COOLING

**COOLING SYSTEM:**—Capacity—20 quarts.

**Water Pump:**—Centrifugal, adjustable packing type. Driven by generator extension shaft.

See Water Pump Section for complete data.

**Removal:**—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat:**—Dole. In water outlet on cyl. head.

**Setting:**—Starts to open at 160°F.

**Temperature Gauge:**—King-Seeley Electric. K-S No. 7275 (dash—Deluxe), 7295 (dash—Special), 7000 (engine unit—all models).

See Miscellaneous Section for complete data.

**NOTE:**—Gauge reads '212' with ignition 'Off'.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6. #932 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven. 2 required. Inside Diam. 5⅝". Outside Diam. 9¼". Thickness .125".

**Adjustment:**—Pedal free movement ½-1¼" (loosen transverse bolt in link below pedal shaft, position pedal in slot). Pedal toeboard clearance ⅜". Check No-Rol' operation (if car so equipped.)

**Removal:**—Remove transmission (see below), clutch housing underpan, clutch cover mounting bolts (release tension evenly), lower assembly out.

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh (all speeds), synchro-mesh (second & high), all helical gear.

See Transmission Section for complete data.

**Transmission Control:**—Mechanical type steering column mounted gear shift, optional.

See Transmission Section for complete data.

**Removal:**—Disconnect driveshaft. Disconnect shift linkage (cars with steering column shift). Remove transmission mounting stud nuts and lift out.

## OVERDRIVE

**Cruising Gear (Overdrive):**—Warner design type R8 optional. In separate case at rear of transmission. See Transmission Section for complete data.

CONTINUED N NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics. Type 2C. Roller bearing type. 2 used.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive (spral bevel on Coupe).

*See Rear Axle Section for complete data.*

**Ratio**—4.1-1 Std. 4 4/9-1 Optl.

**Backlash**—.005-.007". Shim adjustment.

**Removal:**—Block up rear of car, remove wheel and drum assemblies, axle shafts, disconnect brake lines and cables, shock absorbers, drive shaft at rear universal. Free axle from springs by disconnecting spring bolts, withdraw axle.

**Axle Shaft Removal:**—Remove wheel and drum, take out retainer mounting bolt nuts, remove retainer, oil seal, brake backing plate, bearing adjusting

shims. Pull shaft and bearing out.

**Wheel Bearing Adjustment:**—Shims at flanged end of housing. To adjust, remove brake backing plate, add or remove shims. Endplay—.004-.006".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. Front 1112-N (Special), Q (Deluxe). Rear 1117-DD. Direct acting, hydraulic type, 1723-L, M, N, P (double acting) Export.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7° crosswise.

**Camber**—½-1½° and equal for both wheels.

**Caster**—1½°. Shim adjustment. Install shims (furnished in 1½° and 3° angles) between spring and spring pad on axle.

**Toe In**—0-1/16". Adjust by loosening clamp bolt at right end of tie rod and turning tie rod.

**Steering Shock Eliminator**—Consists of spring and rubber bumper bracket at rear of left front spring.

Adjust lower nut to give ⅛" clearance between upper rubber cushion and frame. Adjust spring cushion (ahead of spring rear shackle) to 1/16" clearance between cushion and spring.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305 Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums**—Cast-iron. Diameter 10 1/16".

**Lining**—Moulded. Width 2". Thickness 7/32".

**Length per wheel** 21".

**Clearance**—.010" at heel and toe of each shoe.

**Braking Power**—53% front wheels, 47% rear.

**Hand Brake:**—See Service Brakes.

**No-Rol:** Optional equipment.

*See Brake Section for complete data.*

**NOTE:**—Engine hood hinged at cowl and lifts from forward end. Hood latch handle located at lower edge of radiator grille (safety catch at top of grille).

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number H-57000. Stamped on plate on right frame side member under hood.

**SERVICE SERIAL NUMBER:**—First number LH-57000. On upper left hand side of engine above front 'Caution Plate' on left front door hinge post.

**ENGINE NUMBER:**—First number HE-56500. On boss on upper left hand side of engine above front water jacket cover plate. **NOTE:**—Engine No. is 500 less than Serial Number on same car.

### TUNE-UP

**COMPRESSION:**—Ratio—6.3-1 std. cast-iron head. Pressure—110 lbs. at cranking speed of 160 RPM.

**VACUUM READING:**—Steady 18-20" idling at 7-8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** Auto-Lite Type B-7. 18 mm. Metric. Gaps—Set at .025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° Closed.

Automatic Advance—5° max. at 850 RPM (distr.).

Vacuum Advance—5½° (distr.) with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Vibration dampener mark 'IGN-DC' aligned with pointer on chain case cover.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Screws ¼-1¼ turns open (midway between 'miss' and 'roll' points. Idle speed 7-8 MPH. Float Level—3/16" from top of float to gasket seat on cover with needle valve seated (invert to check). Accelerating Pump—Inner Hole (Summer), outer (Winter).

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance:—.015" all valves—engine warm and idling. **NOTE:**—For high speed driving .018" max. setting may be used. Remove right front fender dust shield for access to valve covers.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Oakes Steering Column and Ignition Lock No. 302072. Ignition Switch No. 301538. Ignition Lock—Briggs & Stratton. B & S No. 80207. Key Series—5 digits. Groove—No. 1.

**COIL:** Auto-Lite Model IG-4095 (up to Serial #H-60253), Model IG-4096 (after this number). On dash. Ignition Current—2½ amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671-F. Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGS-4104 or IGS-4104X (side outlet type—used with Oil Bath Air Cleaner). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control. Breaker Plate Identification—Maximum vacuum advance limited by slot and marked by number (#6) stamped on plate. Breaker Gap—Set at .020". Cam Angle or Dwell—38° closed, 22° open (distr.). Breaker Arm Spring Tension—17-20 ounces. Rotation—Clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Degrees	R.P.M.
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	0.....	500
1.....	300	2.....	600
2.....	440	4.....	880
4.....	710	8.....	1420
5.....	850	10.....	1700

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start.....	0°	6"	
1°.....	2°	7"	
3°.....	6°	9¼"	
4°.....	8°	10¾"	
5.5°.....	11°	12"	

**Removal:**—Distributor mounted on cylinder head on right side. To remove, disconnect vacuum line, loosen advance arm clamp bolt.

### IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

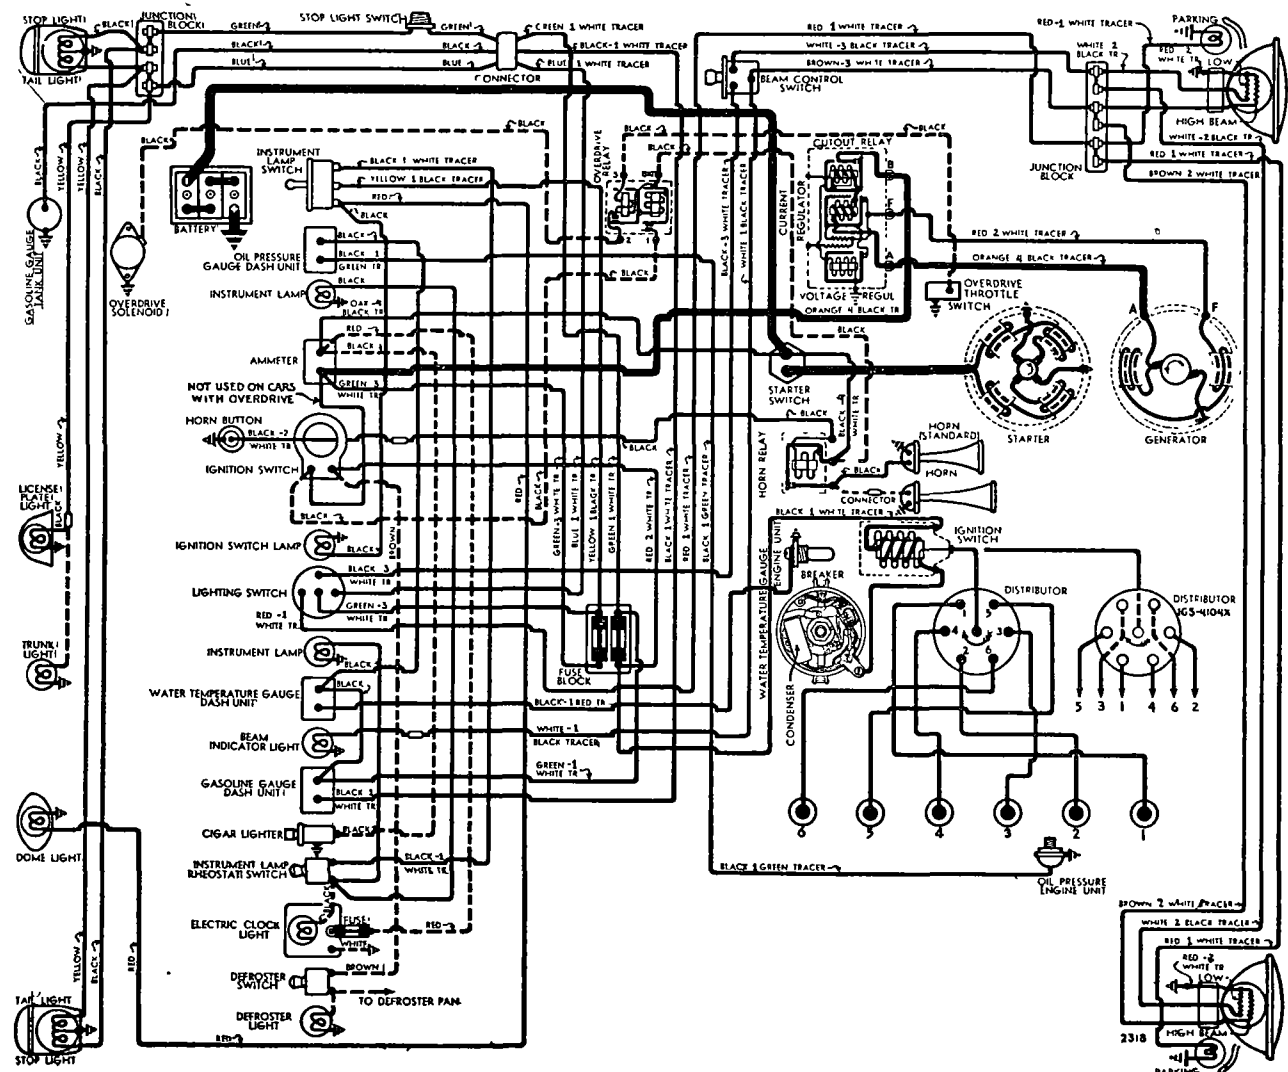

Flywheel Degrees

Piston Position

0° at TDC ..... .0000" TDC.

**To Set Timing:**—With #1 piston on compression, turn engine over until the piston reaches top dead center, stop when 'IGN-DC' mark on vibration dampener on front of engine is directly under pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. **NOTE:**—Manufacturer recommends use of timing light for accurate ignition setting.

CONTINUED N NEXT PAGE

## CONTINUED FR M PRECEDING PA E

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Type WDO, Model 458-S (#295 cast on face of flange). 1" dual downdraft type.

**NOTE:**—New Air horn, Climatic Control assembly, and Thermostatic Coil & Housing assembly should be installed on first cars to correct warming up complaints.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stop screw for 7-8 MPH idle speed. Adjust idle screw for each barrel (in succession) until engine fires smoothly ( $\frac{1}{4}$ - $\frac{1}{2}$  turns open for each screw—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting:**—Pump arm has 2 holes for pump link engagement. Set as follows:

Inner Hole (min. stroke)—Hot weather.

Outer Hole (max. stroke)—Cold weather.

**Float Level:**— $\frac{3}{16}$ " from top of float to gasket seat on cover with needle valve seated (invert to check).

**Fast Idle:**—Integral type (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting:**—Adjust fast idle screw for .026" throttle opening with choke valve closed.

**Automatic Choke:**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Choke Setting:**—1 Notch Rich (with first 170B64S Thermostatic Coil & Housing Assembly), centered (with later 170K64S Thermostatic Coil & Housing

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1529419 oil-wetted type std.

**Fuel Pump:**—AC Type W #1523640 diaphragm type Standard. Type AD #1523641 combination fuel-and-vacuum pump optional.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—King-Seeley Electric type. K-S No. 7680 (dash unit), No. 7780 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—USL Type RN-15 or Auto-Lite Type PN-15. 6 volt, 15 plate, 95 AH. capacity (20 hr. rate).

**Starting Capacity:**—117 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.1 minutes.

**Grounded Terminal:**—Positive (+) grounded to transmission. Separate ground strap from transmission to frame.

**Dimensions:**—Length  $8\frac{7}{8}$ ". Width 7". Height  $8\frac{3}{8}$ ".

**Location:**—Under front seat.

## STARTER

**Auto-Lite Model MAB-4076. Armature MAB-2057. Drive:**—Inboard Bendix Type LCD11FX-10.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—160 RPM, 150-160 amps., 5.2 v.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 " "	1910	5.5	100
3.4 " "	1100	5.0	200
6.6 " "	695	4.5	300
10.15 " "	420	4.0	400
15.8 " "	Lock	3.0	582
22.5 " "	Lock	4.0	775

**Removal:**—Starter flange mounted on left front face

of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—A-L #SW-4005. Mounted on body floor below clutch pedal. Operated by depressing clutch pedal fully. No adjustment required.

## GENERATOR

**Auto-Lite Model GDZ-4803-A. Armature No. GDZ-2079F.** Two brush type with current-voltage control. **Charging Rate Adjustment:**—None. See Regulator. **Maximum Charging Rate:**—35 amperes (hot or cold), 8.0 volts, 1900 RPM (generator) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current:**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Generator cradle mounted at left side of engine with fan belt drive. Water pump driven by generator shaft extension. To remove, disconnect water pump, loosen fan belt, remove generator clamp band and lift generator off.

**Belt Adjustment:**—Adjust whenever belt deflection is over  $\frac{1}{2}$ " (when pressed lightly midway between generator and fan pulleys). To adjust, loosen two capscrews on fan bracket, lift fan up (one screw hole slotted) for 1" belt deflection, tighten screws.

## REGULATOR

**Auto-Lite Model VRP-4004A. Current-Voltage type.** Mounted in single case on dash.

*For complete data, refer to Electrical Equipment Index.* **NOTE:**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutoff Relay

**Cuts In:**—6.4-6.6 volts.

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031" min., .034" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F.

**To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures. **To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See *Electrical Equipment Section*.

**Contact Gap:**—.012" Min. (armature against stop pin).

**Air Gap:**—.048-.052" with contacts just opening.

## Current Regulator

**Setting:**—34-36 amperes (marked '35' on cover).

**To Check (without breaking seals):**—Connect test

meters as for Voltage check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs, or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 34-36 amperes. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap:**—Same as for Voltage Regulator (above).

**Air Gap:**—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

## LIGHTING

**Headlamps:**—General Electric "Sealed Beam" type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment:**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator:**—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

## Switches

**Lighting:**—Douglas No. 5754.

**Beam Selector:**—Douglas No. 5733.

**Instrument:**—Douglas No. 5653.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Rear License	3	.63
Instrum., Beam Indic.	$1\frac{1}{2}$	.55
Stop & Tail	21-3	.1154
Dome	6	.81

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 ampere (SFE type) mounted on fuse block on back of instrument panel toward left. Accessory—30 ampere (SFE type) on fuse block.

**HORNS:**—Delco-Remy. No. 1999565 (low note), No. 1999566 (high note). Vibrator type, blended tone, operated by horn relay.

**Type** **Current (at 6 volts)** **Air Gap**  
1999565 (Low Note) .....19-21 amperes......047-.052"  
1999566 (High Note).....18-20 amperes......039-.044"

**Horn Relay:**—Delco-Remy Model 1116775.

**Contact Gap:**—.020". **Air Gap:**—.015" (closed).

**Contacts Close:**—2.75-4.0 volts.

## ENGINE

**ENGINE CODE NOTE (ORIGINAL BORE & BEARING SIZES):** See *Nash Shop Notes for complete data*.

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type. Cylinders cast Enbloc. **NOTE:**—'Iso-thermal' fuel intake system used (intake manifold cast in block water cooled for temperature control).

**Bore:**— $3\frac{3}{8}$ ". **Stroke:**— $4\frac{3}{8}$ ".

**Displacement:**—234.8 cu. ins. **Rated HP:**—27.34.

**Developed Horsepower:**—99 at 3400 RPM.

**Compression Ratio:**—6.3-1 cast-iron head.

**Compression & Vacuum Reading:**—See *Tune-up data*.

**PISTONS:**—Nelson-Bohnalite, aluminum alloy, Invar strut, tin plated, split skirt type.

**Original Bore Size:**—See *Engine Code Note in Nash Shop Notes for complete data*.

**Weight:**— $19\frac{1}{4}$  ozs. (stripped). **Length:**— $3\frac{7}{8}$ ".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .027-.030". Skirt .001-.002".

**Replacement Pistons:**—See *Nash Shop Notes for data*.

**Fitting New Pistons:**—Insert .002" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10 lbs.

**Installing Pistons:**—Pin offset toward camshaft. Slot toward left (trademark within piston toward front).

## ENGINE

C CONTINUED FR M PRECEDIN PAGE

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Oil ring grooves drilled for oil drain holes.

Ring	Width	End Gap	Side Clearance
Compr. #1	.124"	.010-.020"	.002-.0025"
Compr. #2	.124"	.010-.020"	.0015-.003"
Oil Contr. #3	.1550"	.010-.018"	.0015-.0025"
Oil Contr. #4	.1550"	.010-.018"	.001-.0025"

**Replacement Rings:**—See Nash Shop Notes for data.

**PISTON PIN:**—Diameter—.8745". Length—2.804".

Floating type. Pin retained by locking ring at each end. Pin hole in piston offset to camshaft.

**Pin Fit in Piston:**—Light push fit (piston at 200°F.).

**Pin Fit in Rod Bushing:**—Select fit to .0001" or light push fit at normal temperature.

**Replacement Pins:**—.001, .003", .005" oversize.

**CONNECTING ROD:**—Length—8¾". Weight—36¼ ozs.

**Upper Bearing (Piston Pin Bushing):**—Bronze.

**Crankpin Journal Diameter:**—2.002".

**Lower Bearing:**—Removable steel-backed, babbitt-lined type. No shims. See Engine Code Note in Nash Shop Notes for original bearing sizes.

**Clearance:**—.0015-.0025". Sideplay—.008-.012".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Tangs on bearing shells should be installed on opposite sides of rod.

**Replacement Bearings:**—.002", .010" undersize.

**Installing Rods:**—Oil split hole toward camshaft.

**CRANKSHAFT:**—7 bearings, 4 counterweights.

See Nash Shop Notes for vibration dampener data.

**Journal Diameters:**—2 31/64" all bearings.

**Bearings:**—Interchangeable steel-backed, babbitt-lined type. No shims. Clearance—.002".

See Engine Code Note in Nash Shop Notes for original main bearing sizes.

**Bearing Adjustment:**—None (no shims). See Nash Shop Notes for removing, installing and fitting bearings.

**Replacement Bearings:**—.002", .010" Undersize.

**End Thrust:**—Center (#4) bearing. Replace bearing to take up excessive endplay. Endplay—.004".

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive.

See Nash Shop Notes for camshaft removal.

**Bearings:**—Steel-backed, babbitt bushings.

**Bearing Clearance:**—.002".

**End Thrust:**—Taken by front bearing. Replace bearing to take up excessive endplay.

**Endplay:**—.003" (new), .005" Max. (worn).

**Timing Chain:**—Whitney No. 49205 or Diamond. Pitch ¾". Width 9/16". Length 60 links or 22½".

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

Intake ..... 1 21/32" ..... 3407" ..... 5 55/64"

Exhaust ..... 1 17/32" ..... 3407" ..... 5 55/64"

Seat Angle Lift Stem Clearance

All Valves ..... 45° ..... 5/16" ..... .002-.004"

**Valve Guides:**—Press fit in block. Press guides in place 1¼" (Intake), ¾" (exhaust) below top of block. Ream to correct clearance. Replacement guides furnished .002" undersize.

**Valve Springs:**—Free length 2½".

Spring Pressure Spring Length

Valve Closed ..... 70 lbs. .... 2"

Valve Open ..... 115 lbs. .... 1 11/16"

**Valve Lifters:**—Mushroom type. Lifter guide holes reamed in block. Remove from below (camshaft out).

## VALVE TIMING

**Tappet Clearance:**—.015" all valves—engine warm and idling. NOTE—For high speed driving .018" max. setting may be used. Remove right front fender shield for access to valve covers.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 21½" BTDC. Close 71° ALDC.

**Exhaust Valves:**—Open 71° BLDC. Close 36½" ATDC.

**Valve Timing Check:**—With regular tappet clearance of .015", Intake valve should open with piston 21½" or .1891" BTDC., and Exhaust valve close with piston 36½" or .5118" ATDC.

## LUBRICATION

**LUBRICATION:**—Pressure system (gear type oil pump in crankcase).

**Normal Oil Pressure:**—30 lbs. at 20 MPH.

**Oil Pressure Relief Valve:**—On oil pump cover. Opens at 30 lbs. Turn adjusting screw in to increase.

**Oil Pressure Gauge:**—King-Seeley Electric. K-S No. 7665 (dash unit), 6125 (engine unit).

See Miscellaneous Section for complete data.

**Crankcase Capacity:**—6 qts. (dry or refill).

## COOLING

**COOLING SYSTEM:**—Cap. 18 qts. (19 with heater).

**Water Pump:**—Centrifugal, adjustable packing type.

See Water Pump Section for complete data.

**Removal:**—Drain radiator, disconnect hose and drive coupling, take out mounting screws in pump flange.

**Thermostat:**—Dole. In water outlet on cyl. head.

**Setting:**—Starts to open at 160° F.

**Temperature Gauge:**—King-Seeley Electric. K-S No. 7670 (dash unit), 7000 (engine unit). NOTE—Gauge inoperative with Ignition Off (reads '121').

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6 (early), 9A7 (later).

Single plate, dry disc type.

**Production Change:**—9A6 (#932) used on first cars, 9A7 (#937 & #951 with 'Borglite' driven member) used after Dec. 15, 1939. Assembly No. stamped on cover.

See Clutch Section for complete data.

**Facings:**—Spiral wound molded woven, 2 used. Inside Diam. 5½" (932), 6" (951). Outside Diam. 9¼".

**Thickness:** .125". NOTE—Install plate with mark 'flywheel side' forward (damper toward trans).

**Pedal Adjustment:**—Free travel ½-1" (adjusting nuts on lower end of pedal connector link). Check NoRol

**Removal:**—Remove transmission (see below). Disconnect clutch pedal linkage. Support engine at rear, disconnect rear engine mountings. Remove clutch housing and pan. Punch mark flywheel, cover, and pressure plate (re-assemble to these marks). Take out mounting screws in cover flange.

## TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh (all speeds), synchro-mesh (second & high) with remote type steering column shift.

See Transmission Section for complete data.

**Transmission Control:**—Steering col. mechanical shift.

See Transmission Section for complete data.

**Removal:**—Disconnect shift rods, speedometer cable, overdrive control and wires (if used), and drive-shaft. Remove two upper mounting studs and install pilot studs (to support transmission and avoid bending clutch plate). Remove remaining mounting stud nuts, remove transmission from below. NOTE—Do not remove inspection hole cover in floor.

## OVERDRIVE

**Cruising Gear (Overdrive):**—Warner Model AS12-R6 with electrical 'kick-down' control optl.

See Transmission Section for complete data.

**Overdrive Solenoid:**—Delco-Remy Model 1118004.

**Throttle Switch:**—Adjust switch to close with throttle wide open and carburetor throttle shaft pulley spring just starting to compress.

**Control Relay:**—Delco-Remy Model 1116798.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 2C. Roller bearing type. 2 used.

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—4.1-1 Std., 4 4/9-1 Optl.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear of car, remove axle shafts (see below). Free axle from springs by disconnecting U-bolts and rear shackles and withdraw from car.

**Axle Shaft Removal:**—Remove wheel and drum. Disconnect brake line and cable. Remove backing plate mounting bolt nuts, oil seal retainer, brake backing plate, bearing adjusting shims and withdraw shaft and bearing (do not drag shaft on oil seal).

**Wheel Bearing Adjustment:**—Shims at flanged end of housing. To adjust, remove backing plate, add or remove shims (equally at both ends of axle).

**Endplay:**—.003-.006".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front—Model 1947-C, D. Rear—Model 1006-DD, 1006-EE (heavy springs), 1723-N, P (heavy springs—Export). Double acting, hydraulic. Direct acting on rear (except 1723).

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**IMPORTANT:**—Insert 2" blocks (Tool J886) between upper support arm and frame flange (at each side) to level frame when checking specifications.

**Kingpin Inclination:**—4½° crosswise.

**Caster:**—0° to Negative ½°. Adjustable.

**Camber:**—Pos. ¼° to Pos. ¾°. Adjustable.

**Toe In:**—1/32-3/32". Adjust tie rod tube for each wheel equally.

**Steering Geometry:**—Inner wheel 21½°, Outer 20°.

## STEERING GEAR

**Steering Gear:**—Gemmer Model Number 305. Worm-and-Roller type with 'push-pull' adjustment. New type steering linkage with idler arm on right frame side member. See Steering Gear Section for data.

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums:**—Cast-iron. Diameter—10".

**Lining:**—Moulded. Width 2". Thickness 3/16". Length per wheel 22".

**Clearance:**—.015" at each end of secondary shoe with primary shoe forced out against drum.

**Braking Power:**—53% front wheels, 47% rear.

**Hand Brake:**—See Service Brakes above.

**NoRol:** Optl. See Brake Section for complete data.

**HOOD ASSEMBLY****1940 MODELS**

**HOOD LOCK USED ON 1940 SIX & EIGHT CARS:** Alligator type hood with instrument panel lock. To raise hood, pull out on control knob at left of steering wheel (hood will raise  $1\frac{1}{2}$ " ), press up on safety catch tab under front edge of hood at center. When installing hood, engage front latch, adjust rear edge to secure  $\frac{1}{8}$ " uniform clearance between rear edge of hood and cowl before installing and tightening hinge bracket bolts. Adjust hinges as required for alignment and smooth operation. Hood latch pilot bolt is also adjustable. Side panels are integral with front fenders.

**1941 MODELS**

**HOOD LOCK:** Hood lock controlled by "Push-Pull" control knob to left of steering column on lower flange of instrument panel. To raise hood, pull control knob out to release hood latch (hood will raise  $1\frac{1}{2}$ " ), press up on tab of 'Safety Hook' under center of hood at front.

**1941-47 MODELS****1948 DYNAMIC MODELS**

**HOOD REMOVAL:** Hood panel can be removed as follows: Remove hood hinge-to-cowl bolts (mark hinge location on cowl to facilitate installation). Remove hood hinge brace-to-tie bar bolts, lift off hood.

**Hood Alignment—**Hood to dash clearance should be  $\frac{3}{16}$ " '41,  $\frac{1}{4}$ " '42-48. Must be even across rear edge of hood. Hood can be adjusted as follows: Hood can be adjusted for up and down and forward movement by means of enlarged holes in cowl at hood hinges. Hood fit along top of grille and fenders adjustable by moving rubber bumpers on hood at each side of aligning bolt at front end up or down. Aligning bolt can also be adjusted. Adjustable support in middle of tie bar between hood hinges should be adjusted to contact hood panel with tension, but not enough tension to move panel away from cowl. Prevents hood distortion (does not affect hood fit).

**1937 MODELS**

**HOOD SIDE PANEL REMOVAL:** Disconnect 3 headlamp wires from junction block on hood side panel bracket to rear of radiator. Remove three cap screws on top side of panel (two at rear on cowl, one at radiator harness), one nut from through bolt at rear of headlamp.

**1938 MODELS**

**RIGHT FRONT FENDER FILLER PLATE REMOVAL:** Remove headlamp wiring junction block, six (on Six), eight (on Eight) bolts along upper edge of plate, cap screws (one at rear, two at front) at ends of plate, lift off.

**1940 MODELS**

**FENDER PLATE REMOVAL:** For access to side engine compartments (for valve adjustment, etc.) remove fender plate as follows: Disconnect wires at junction block and remove from plate, remove 4 ('F' & 'G'), 6 ('L') hex head screws at top edge of plate, 2 screws at radiator tie rod bracket-to-fender and core support, 3 hex head cap screws under fender at front edge of plate, 1 ('G'), 2 ('F' & 'L') hex head self tapping screws at frame at lower rear edge. Slide plate to rear (from under fender) to clear radiator core support. Tip top of plate in until free from fender, raise over shock absorber and slide out to rear and down.

**FRONT END SHEET METAL****1937-38 MODELS**

**FRONT END DISMANTLING FOR TIMING CHAIN REMOVAL:**—1937. To dismantle front end proceed as follows: Drain cooling system, remove Hood Side Panels (see directions above), remove one bolt at each end of hood center hinge and bolt for each hood holder on rear of hood, lift hood off. Remove 4 bolts on underside of fender at rear, remove 2 bolts body-to-fender brace (in line with front of dash), remove radiator center anchor bolt nut (under car), remove front bumper. Disconnect radiator hoses. Slide entire assembly to front and remove. Then remove 2 nuts from top of front engine mounting and remove oil pan. Jack up front end of engine until timing chain cover clears frame.

1938. To dismantle front end assembly proceed as follows: Remove Front End Sheet Metal Assembly by removing hood, draining cooling system, removing 5 cap screws at rear of fender (1 to filler plate, 4 to body), disconnect wiring harness from junction block and free from 4 clips (on each filler plate), disconnect radiator hoses, remove center radiator anchor bolt nut (under car), radiator brace rods at cowl, slide entire assembly to front and remove. Then remove 2 nuts from top of front engine mounting and remove oil pan. Jack up front end of engine until chain cover clears frame member.

**1939 MODELS**

**FRONT END SHEET METAL ASSEMBLY REMOVAL:** May be removed to facilitate work on front of engine as follows: Drain radiator, disconnect radiator hose, disconnect wires at headlamp junction block, free wiring harness from clips on radiator core and along side panel. Take out cap screw in hood ledge filler plate on top of frame (each side), hood ledge filler plate-to-body cap screws (4—Sixes, 5—Eights, on each side), disconnect fender to frame brace at fender, remove nut from center radiator support, bumper, sheet metal and radiator core assembly.

**1940 MODELS**

**FRONT END SHEET METAL ASSEMBLY REMOVAL:** May be removed to facilitate work on front of engine as follows: drain radiator, disconnect radiator hose, disconnect wires at junction block on fender plate (each side), free wiring harness from clips on radiator top tank and on left fender plate. Disconnect hood latch cable at front and pull back through core support. Remove 2 screws at radiator tie rod bracket between fender and core support, fender to hood hinge hex head bolt and washers (at upper rear edge of fender), frame to fender plate hex head self tapping screws (2 on 'F' & 'L', 1 on 'G') at each side at lower rear end of plate. Disconnect rear of fender from frame brace, running board and body rocker panel ('L' only). On 'G' and 'L' remove lower body to fender cap screw from under car. Remove front bumper assembly and nut from radiator support at center of frame front cross member. On 'L', free fabric splash apron at snap-in fasteners at front cross member. Remove cowl kick pads (inside car) at each side and 3 body-to-fender cap screws. Lift front end assembly clear of center support stud and pull forward. Replace assembly in same manner.

**1941 MODELS**

**FRONT END SHEET METAL ASSEMBLY REMOVAL:** Front fender, radiator grille, and radiator core can be removed as an assembly without removing hood as follows: Drain cooling system. Disconnect radi-

ator upper and lower hoses, headlight wires and wiring harness at junction block, horn, and hood latch operating cable from latch plate at radiator grille. Remove cowl kick pads from inside car and remove 4 fender-to-cowl bolts (3 at rear edge of fender, 1 at cowl just to rear of hood hinge). Disconnect radiator brace rods at cowl. Jack up front end of car. Remove 2 fender-to-rocker panel bolts (at lower rear corner of fender) and 3 fender-to-frame bolts behind fender skirt (below front edge of engine dash). Remove bumper primary bar from secondary bar and nut and washer from radiator support-to-frame front cross-member bolt (on underside of cross-member). Free snap-in fasteners from splash guard at front cross-member. Move front end assembly forward (center bolt hole in support plate slotted) and remove from car.

**Alignment—**When assembly installed, adjust fender to door clearance as described below. Check hood fit (see Hood Alignment above).

**Front Fender Alignment—**When fender installed on car, it must be properly aligned and clearance at door must be adjusted as follows: Fender bolt holes at cowl and body are enlarged to permit fitting fender. Install fender bolts just tight enough to allow shifting fender for alignment. Fit fender to door in such a manner as to just allow door to open. Gap between rear edge of fender and door should be  $\frac{1}{8}$ " plus  $1/32$ " minus 0" and be equal for both sides of car. After fender fitted, tighten bolts.

**1942-47 MODELS****1948 DYNAMIC MODELS**

**FRONT END SHEET METAL ASSEMBLY REMOVAL:** Front fenders, radiator grille, and radiator core can be removed as an assembly without removing hood as follows: Drain cooling system. Disconnect radiator upper and lower hoses, wiring harness at junction block, unclip harness from radiator core and filler plate, hood latch cable from latch plate at grille and unclip from filler plate. On 90 model, free flexible ventilating air hose from connection at engine dash. Free snap-in fasteners from splash guard at front cross-member. On 60 & 70 models, remove lower fender molding. Remove bolts and screws from each side of car as follows: bumper bolts (one in top support bar at front, 2 in lower support bar, one at rear end of bar at frame), 3 rear baffle-to-shroud plate screws (vertically along rear end of fender), 2 rear bottom baffle-to-rocker extension panel bolts (lower rear corner of fender), fender-to-fender brace bolt (behind lower edge of skirt at center), filler plate-to-frame screw (behind skirt), radiator brace rod-to-fender bracket bolt (on 8 cyl., remove radiator tie rod-to-core support bolts at this same point). Then remove radiator core support-to-frame nut and washer from below car just behind grille, and core support-to-front frame cross-member bolt (just below radiator core). Remove side seal baffle clips at each side of core. Remove screws at upper rear corner of each fender (one screw on 90, two on others). Front end assembly can then be lifted off car.

**FRONT FENDERS****1942-47 MODELS****1948 DYNAMIC MODELS**

**FENDER CAP REMOVAL:** Fender cap on each front door can be removed as follows: Car manufacturer recommends that door be masked to prevent damag-

ing finish when cap removed. With door wide open, take out attaching screws and bolts from under cap as follows: One screw at upper front corner of cap, one bolt at lower front edge, one bolt on lower edge at rear bracket on 60, 70 models, on rear lower edge of flange on 90 model. Loosen three screws at clips along upper edge of cap, slide cap back until free of clips and lift cap off (on 70 model, springing lower edge of cap out will facilitate loosening of screws at clips).

**Front Door Fender Cap Alignment**—Adjustment of cap can be made by loosening three screws at clips along upper rear edge of cap. With these screws loosened, up and down adjustment can be made at screw at upper front corner of cap, in and out adjustment can be made at bolt at lower front corner of cap. Clearances between cap and rear edge of fender with door closed should be 3/16" at upper end, 1/8" along vertical portion of fender with 1/4" of bevel edge of door cap exposed.

**Rear Door Fender Cap Removal (Model 90 Sedans):**—With door masked to protect finish, remove 4 screws from rear door flange, slide cap to front and up freeing front of cap from 3 attaching clips, lift cap off.

## CYLINDER HEAD

### 1938-48 MODELS

**CYLINDER HEAD SERVICING:** Steel-asbestos cylinder head gasket used. This gasket cannot be reused. When installing new gasket, coat both sides with thin coat of P.O.B. Perfect Gasket Seal at room temperature (approx. 70°F.). Edges at cylinder bore holes must be wiped clean of all sealer. To prevent leakage, a plain washer is used under bolt heads.

**1941-47 Note.** Install gasket with 3/16" flange next to cyl. block (flange on upper side 3/32" wide).

**1939-41 8 cyl. Engine Note**—Install new neoprene grommet in pump by-pass hole on front of head.

**INSTALLING CYLINDER HEAD:** Use a Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature.

OLDSMOBILE 6

OLDSMOBILE 8

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## PISTON PINS

### 1936-48 MODELS

#### FOR ALUMINUM PISTONS

**PISTON PINS:**—Servicing—Standard size pins only furnished for service. Pin bosses in pistons electroplated and must not be reamed. Replacement pistons (standard and oversize) furnished with pins fitted.

**Removal:**—To remove pin, take out lockscrew, place assembly in boiling water for one minute. With Tool HM-535 push pin out through plain boss end. **NOTE**—Piston Heater and Pin Assembly Fixture No. J-849 consisting of piston and pin heater compartments and piston holder available.

**Fitting:**—Pin fit in piston .0001" loose to .0002" tight (plain boss), .0002-.0005" tight (lock screw boss). Pin fit in rod bushing .0003-.0006". If rod bushing worn, press new bushing in place (align oil hole in bushing and rod), burnish with Tool HM-587E and line ream with Reamer HM-586 to .8558-.8562".

**Installing:**—To install pin, heat piston and pin (as for Removal above), dip pin in hot light engine oil, start pin through plain boss end of piston and through rod (make sure lock screw hole in pin and boss will be aligned), then with Tool HM-535 lightly push pin in place until hole in pin and boss aligned (use punch in hole to correct slight mis-alignment).

**IMPORTANT**—Pin must not be forced (if heavy push required, indicates piston has cooled, disassemble and reheat piston and pin). After pin in place, coat lock screw with graphite and tighten to 9-11 lbs. ft. tension with a torque wrench.

### 1942 MODELS

#### FOR CAST-IRON OR ARMASTEEL PISTONS

**PISTON PINS:** Servicing—Pins furnished standard size, .001" and .003" oversize. All pins are high limit size. Select size pin required and ream pin bosses if necessary as directed below.

**Removal:**—Use Tool 535 to tap pin out of piston from split end while holding piston in the hand (prevents destroying piston out-of-round, do not support piston on bench or other rigid support when removing pin).

**Fitting:**—If pin bosses to be reamed, use Tool 536 and line-ream carefully (finish honing not required if line-reaming accurate). Clearances should be .0003-.0006" in lockscrew boss, .0000-.0002" in plain boss. Check fit as follows: pin should be 'very tight wring fit' in piston (just possible to turn pin with 8" drift in pin lockscrew hole with pin and piston bosses clean and free from oil and solid section of pin in boss with split end entirely through boss). If pin bushing in rod worn, use Remover and Replacer Tool J-1674 together with Support Block Tool J-1649 to press new bushing in place (with oil hole in bushing and rod aligned). Use HM-536 reamer and line-ream bushing for .0003-.0006" clearance on pin. Pin should be a 'suck fit' (pin should hold in rod of own weight but can be pushed through rod with slight thumb pressure).

**Installing:**—Heat piston (not pin) in boiling water, apply graphite grease to inside of pin bosses, insert split end of pin in piston and press in piston and rod by hand as far as possible, then use Tool HM-535 to lightly tap pin in place. Install piston pin lockscrew and tighten to 9-11 lbs. ft. **NOTE**—Mark 'V-S' on piston head and oil spit hole in rod must be on same side and installed in engine toward valves.

## CONNECTING ROD & BEARINGS

### 1940 MODELS

**CONNECTING ROD BOLT NUT CHANGE:** Later production cars equipped with self tightening (Marsden) type nuts (no cotter key used). May be identified by increased slot length on each face of nut (extends half way up face). These self locking nuts should be tightened to 50-55 lbs. ft. Early cars use conventional castellated nut and cotter key. Tighten conventional type nuts to 30-35 lbs. ft. with Tool J-1264.

CONTINUED N NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**CRANKSHAFT & MAIN BEARINGS****1936-48 MODELS**

**MAIN BEARING UPPER HALVES:** Removal—May be removed without removing crankshaft by removing bearing cap and inserting pin (Tool HM-J-173) in oil hole in shaft. With tang on pin engaging plain end of bearing shell, rotate shaft in usual direction and turn shell out.

**1939-40 8 Cyl. Note**—Front of engine must be raised to permit removal of upper half of front bearing.

**Installation**—Remove sharp edge from plain end of bearing, insert this end at indented side of support and rotate in place using pin in oil hole in shaft.

**1942-48 MODELS**

**MAIN BEARING CAPS (EIGHT CYL.):** New "snap-in" type on all bearings except #1 which is doweled type. 'Snap-in' caps are 1/4" heavier and have machined edges which must not be filed and must be pressed in block with slight pressure. Caps bored 1/16" offset and must be installed with notch in cap (for bearing tongue) on the same side and next to notch in block.

**1939-40 MODELS**

**CRANKSHAFT END THRUST:** Taken by front #1 bearing. A bronze r steel-backed bronze thrust washer plate (.1205-.1245" thick) is doweled to each face of bearing cap. A steel thrust collar is assembled between front thrust plate and crankshaft gear. **IMPORTANT**—If steel-backed thrust plates used (use 2 plates of same type), assemble with steel side against bearing cap face.

**1941-48 MODELS**

**CRANKSHAFT END THRUST:** Taken through front (#1) main bearing. Two bronze thrust plates doweled to bearing cap, one to front face of cap and one to rear face. A steel thrust collar is assembled between front bronze plate & crankshaft sprocket.

**Hydra-Matic Cars**—Steel thrust collar (Part No. 414229) has a more highly polished finish than that used on synchro-mesh transmission equipped cars. Can be identified by finish and part no. which is etched on collar. This collar only furnished for service (can be used to service synchro-mesh transmission equipped cars also). Front bronze thrust washer has eight grooves in face of plate and must be assembled with these grooves next to steel thrust collar. A plain bronze thrust washer is used at rear.

**1937-38-39 MODELS**

**REAR MAIN BEARING OIL SEAL:** Consists of oil slinger on crankshaft to rear of bearing with asbestos covered wiper seal held by retainer fitted in groove (forms channel for oil slinger). Wiper seal must be renewed whenever crankshaft removed.

**1939 Six**—Seal held in separate groove at rear.

**Installation**—With crankshaft out of engine and bearing cap off, crowd seal in bearing support in rear groove (F,G-39), to rear of retainer (others) by hand. Then using seal compressor tool J-955 over seal, tap tool 3 or 4 times to seat seal. With tool resting on seal, cut ends flush at each end. Repeat operation for bearing cap. Seal must entirely fill groove and be trimmed flush to prevent oil leaks.

**1940-48 MODELS**

**REAR MAIN BEARING OIL SEAL:** Consists of oil slinger on crankshaft to rear of bearing with asbestos covered wiper seal in groove in bearing support and bearing cap. Cork strips used to seal vertical joints between bearing support and cap.

**Installation**—With crankshaft out of engine and bearing cap and shells off, crowd seal in rear groove of bearing support by hand. Use seal compressor Tool J-955 over seal and tap tool 3 or 4 times to seat seal. With tool resting on seal, cut ends flush at each end. Repeat operation for bearing cap. Seal must entirely fill groove and be trimmed flush to prevent oil leaks. Install cork seals in vertical grooves when installing cap.

**CAMSHAFT & BEARINGS****1941 MODELS**

**CAMSHAFT END THRUST:** Forward thrust now taken by semi-circular flange around camshaft opening in front engine support plate. Backward thrust taken by flange ahead of front camshaft bearing journal and front face of cylinder block (same as 1940). **IMPORTANT NOTE**—Camshaft on 1941 Engines recessed at front end for spring-loaded thrust button (formerly used to take forward thrust). Spring-loaded button should not be assembled to camshaft on 1941 engines (see above). 1941 timing chain cover equipped with camshaft thrust plate so that this cover may be used in service for earlier cars. Thrust plate does not function on 1941 engines.

**OIL PUMP****1939-47 MODELS**

**OIL PUMP:** Gear type pump. Six and Eight pump identical except for gear faces which are 1/4" wider on Eight. When assembling pump gear on shaft, press shaft on gear flush with outer end of gear (Six), with gear extending 1/4" beyond end of shaft (Eight)—Use Tool J-954 which properly positions gear on shaft. Pump drive gear must be assembled with Feeler Gauge J-954-1 between inner face of gear hub and pump body to give proper end clearance for pump shaft. Use new pump body gasket.

**Installation**—Set engine in firing position for #1 cylinder with rotor opposite #1 segment in distributor cap. Note position of distributor shaft tongue for proper oil pump drive gear mesh, then raise

distributor and mesh pump drive gear with camshaft gear. Replace distributor in position and reset ignition timing.

**1939 8 Cyl. Note**—Ignition timed with #6 cylinder. Set rotor opposite #6 segment in distributor cap with #6 cylinder in firing position.

**OIL PAN REMOVAL****1939-41 MODELS**

**OIL PAN REMOVAL:** Pan can be removed as follows: Disconnect idler arm support from right frame side member, drop steering relay rod assembly. Remove pan bolts (openings provided in front frame cross member for access to front pan bolts), turn crankshaft so pan clears counterweights, remove pan.

**1939 Note**—Car manufacturer recommends that 5 capscrews at front of pan be removed from above with box socket wrench.

**1940 8 Cyl. Note**—Car manufacturer recommends that front end of engine be raised for access to extreme front end pan bolts. To raise engine, remove 2 front engine mounting capscrews, engine side filler plates, and flexible feed line at fuel pump.

**1941 Note**—For access to front oil pan bolts, unhook fasteners of splash guard between radiator lower baffle and frame cross member. On 8 cylinder engines, remove flywheel lower pan. Remove one or the other of the engine filler plates as required.

**1942-47 MODELS****1948 DYNAMIC MODELS**

**OIL PAN REMOVAL:** Oil pan can be removed as follows: Disconnect idler arm support from frame dropping steering relay rod assembly. On 8 cylinder only, remove flywheel lower pan. For access to bolts at front end of pan, unhook splash guard fasteners and work through openings in front frame cross-member. Third bolt from front on each side requires use of end wrench to clear front suspension cross-member. Remove right and left filler plates (rotate left plate out). With all pan bolts removed, turn crankshaft to place counterweights up out of the way, take off pan.

**Installation**—Use new gaskets and allow them to dry before installing so as to prevent gasket moving when pan installed on engine.

**RADIATOR****1941 MODELS**

**RADIATOR CORE REMOVAL:** Radiator core can be removed as follows: Raise hood. Disconnect hood latch operating cable at latch, pull cable back free of core support flange. Remove 4 radiator core-to-lower support bolts at each side. Core on Six cylinder engines can then be removed by rotating fan as required while lifting core out of car. On Eight cylinder engines, remove 2 upper core support (U-shaped channel behind core)-to-fender and lower

support bolts at each side. Core can then be removed by rotating upper support toward engine as required, turning fan as necessary, and lifting out.

#### 1942-48 MODELS

**RADIATOR CORE REMOVAL:** To remove radiator core, raise hood, drain cooling system, detach upper and lower radiator hoses, take out four radiator core-to-core support bolts at each side, lift out core (rotate fan as required).

### COOLING SYSTEM

#### 1946-47 EIGHT CYLINDER MODELS

**RADIATOR SHROUD #555107 FOR 1946-47 EIGHT CYLINDER:** This assembly used on 1948 Eight Cylinder Series 68 and 78 to maintain proper water temperatures for high altitude and extremely high outside temperatures. This shroud can be installed on 1946-47 Eight Cylinder Series 68, 78, and 98.

**Radiator Shroud Installation on 1946-47 Eight Cylinder Series 68, 78, and 98—**Drain radiator just enough to permit disconnecting upper end of top hose. Remove radiator baffle cover and take off hood latch as an assembly. Remove radiator baffle. Disconnect radiator support from radiator by taking out 1 bolt and 3 screws on each side. Free wiring harness from clips at upper radiator tank. Loosen upper end of top radiator hose. Pull radiator forward just enough to slide shroud in place between core and support. Re-assemble all parts and fill radiator.

### CLUTCH NOTES

#### 1939-48 MODELS

#### CLUTCH RELEASE BEARING WITH LUBRICATION

**FITTING:—**Production Change on 1940 Models—Beginning with '40 Eng. No. G-190392 (6 Cyl.), L-365742 (8 Cyl.), new type release bearing which has pressure gun fitting used so that bearing can be lubricated in service. Fitting extends down at angle toward left side and is accessible by removing lower clutch cover pan. Lubricate at 5000 mile intervals for extreme service (taxi, etc.) using petrolatum (or white or amber vaseline). **CAUTION—**Bearing wear will be increased if other than recommended lubricant used. Fill bearing using a small high pressure hand gun until petrolatum appears at small vent hole at top of bearing.

**IMPORTANT REPLACEMENT NOTE—**This new type bearing with grease fitting can be installed on early 1940 cars and 1939 models to correct complaints of dry or noisy release bearings.

#### 1939-48 MODELS

**CLUTCH HOUSING REINFORCING PLATE:** Used on all 8 cylinder cars with conventional transmission. Consists of 3/16" steel plate bolted between clutch housing and underpan (replaces conventional gasket). Plate is secured to housing by 2 screws. 12 screws used to bolt underpan (through plate) to housing. Coat both sides of plate with Permatex. **1939 Note—**Used on all 'G' and 'L' models.

**1940 Note—**Used on first 6488 'G' (six cyl.) cars with 15" rear transmission extension housing.

### PROPELLER SHAFT

#### 1937-38-39 MODELS

#### PROPELLER SHAFT CENTER BEARING: Removal—

Split both propeller shafts at front companion flanges, remove 4 bolts (at frame) freeing intermediate bearing support and remove front propeller shaft. Place shaft in vise and remove cap screw from rear of shaft. Remove companion flange from shaft with arbor press. Take off slinger, pull bearing support housing and bearing assembly from rear of shaft, slide rubber retainer from bearing support. Wash all parts (except bearing and rubber retainer) in kerosene, wipe bearing and retainer clean (shielded type bearing used).

**1939 Note—**Used only on 'G' and 'L' models with Self-Shifting transmission.

**Installation—**With rubber retainer on bearing, install bearing on shaft (lip of retainer to rear), install bearing support over retainer (coat with soap to allow support sliding in place) with flat portion of housing to front, put slinger in place with flange over lip of retainer, press companion flange on shaft with slinger clamped tight against bearing inner race, install cap screw (use both plain washer and lock washer in place under screw). Bolt intermediate bearing support to frame and attach shafts in place at front companion flanges.

**M DEL IDENTIFICATION**

**SERIAL NUMBER:**—First number—F200,001. On left hand frame side member.

**ENGINE NUMBER:**—First number—F508,001. Stamped on ledge on top of block beside head at left front corner.

**TUNE-UP**

**COMPRESSION:**—Ratio 6.0-1. Pressure 146 lbs. at 1000 R.P.M. or 106-116 lbs. at cranking speed of 100 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 17" of HG. minimum with engine idling at 350 R.P.M. or 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** AC Type G-9. 18 mm. Metric.  
Gaps—.030-.033".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—13° max. at 1450 RPM (distr.).  
Vacuum Advance—7½" (distr.) with 15½-18½" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Flywheel mark (steel ball) aligned with insp. hole cover screw (left side of housing).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw ¾-1¼ turns open.

Idle speed 350 RPM or 6 MPH.

Float Level—½" (327-S), ¾" (339-S, 342-S) from top of float to gasket seat (gasket removed).

Accelerating Pump—Outer Hole—Normal setting.

Fuel Pump Pressure: 3½ lbs. ('T'), 4½ lbs. ('AA' comb.).

**VALVES:** See Valve Timing.

Tappet Clearance—.008" Intake, .010" Exh., hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Delco-Remy Model 435-B—Switch and cable assembly connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton.

**COIL:** Delco-Remy Model 536-E. On dash.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1858571.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 647-C. Single breaker, 6 lobe cam, full automatic advance with auxiliary vacuum spark control.  
Breaker Gap—.020". Limits .018-.024".  
Cam Angle or Dwell—Closed 35° Open 25° (distr.).  
Breaker Arm Spring Tension—17-21 ozs.

**Automatic Advance**

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	250	2.0	500
3.75	400	7.5	800
13.0	1450	26.0	2900

**Vacuum Spark Control 681-A:**—On distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
7.5°	15°	15.5-18.5"

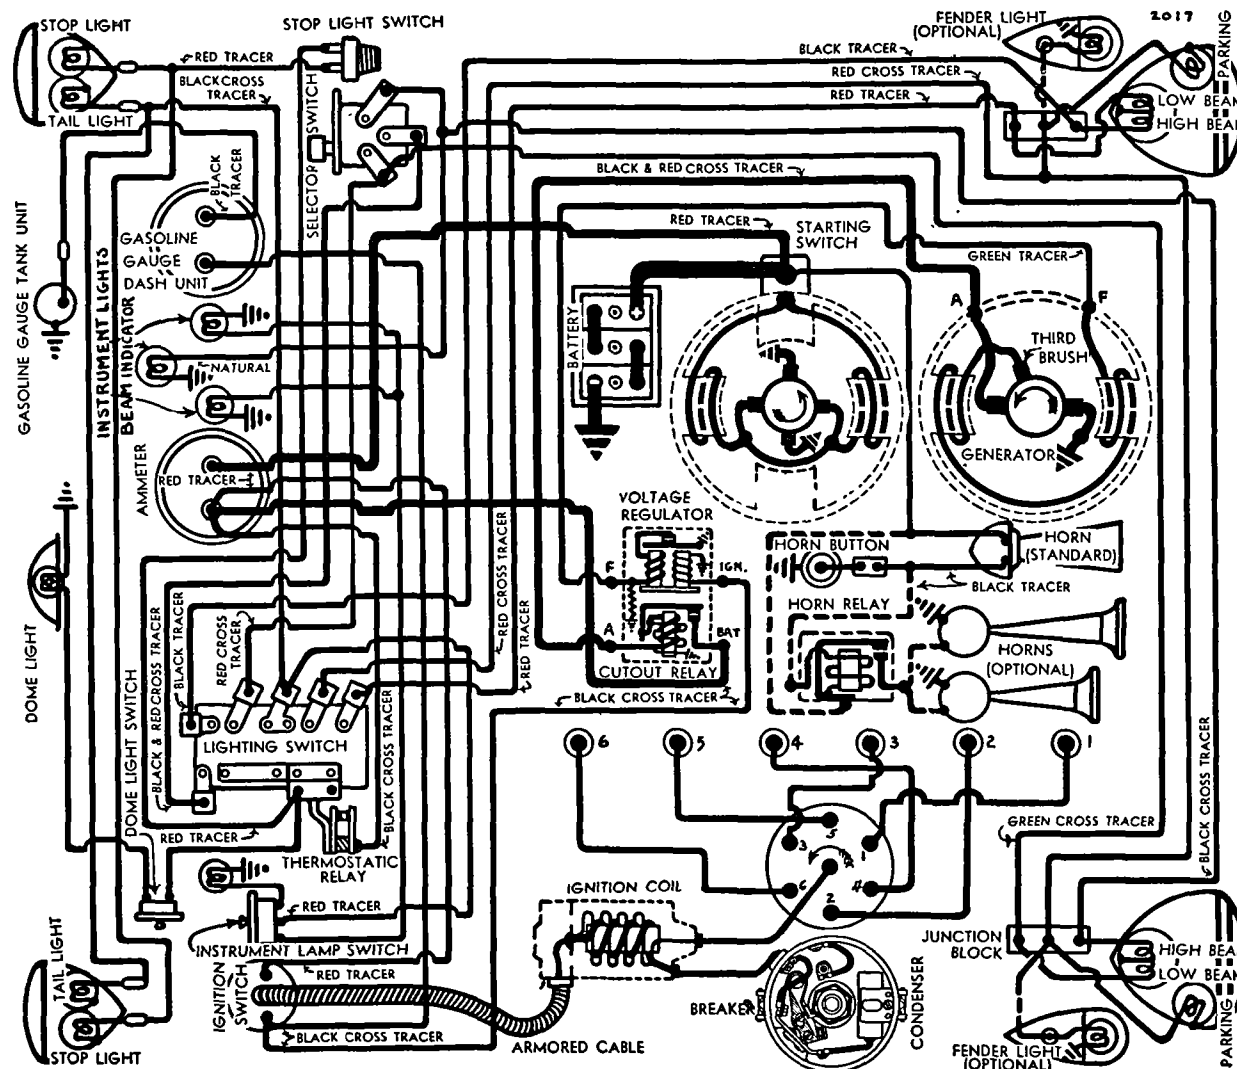

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—For all engines as follows:

Flywheel Degrees	Piston Position
0° at TDC	.....000" TDC.

**Timing (Using Synchroscope)**—This method recommended. Clip Synchroscope lead to #1 spark plug, direct light on flywheel through inspection hole in left front face of housing. Idle engine at 350 R.P.M. or 6-7 M.P.H. Loosen hold-down screw in advance arm, center pointer on scale (arrow at 'O' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until timing mark (steel ball insert) on flywheel lines up with pointed end of inspection hole cover screw, tighten clamp bolt.

**Timing (Without Synchroscope)**—Use timing light connected between distributor terminal and ground, turn on ignition to check contact opening. With #1 piston on compression, turn engine over until piston reaches top dead center, stop when steel ball insert on flywheel lines up with pointed end of inspection hole cover screw in left front face of housing. Loosen hold-down screw in advance arm, center pointer on scale (arrow at 'O' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Model 327-S (Before F-217-745), 339-S (F-217,746 to F-274,031 and F-275,111 up), 342-S (F-274-032 to F-275,110). 1¼" downdraft type. See Carburetion Section for complete adjustment, overhaul, and Jet Specifications.

*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idles at hot or slow idle speed.

**Idle Adjustment**—Adjust throttle stopscrew so that idling speed is 350 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ¾-1¼ turn open of the screw from the seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Pump lever under dust cover at top of engine has three holes for pump link engagement. Change for seasonal requirements:  
Outer Hole—Normal temperature ranges.  
Inner Hole (Min. stroke)—Extremely hot weather.  
Upper hole (Max. stroke)—Extremely cold weather.

**Fast Idle:**—Integral with carburetor. No adjustment.

*For complete data, refer to Carburetion Equip. Index.*

**Accelerator Linkage Adjustment:**—Must be maintained to provide correct 'throttle cracking' action for starting. To adjust, remove starting cable at starting switch to prevent cranking, place .090" feeler between throttle stopscrew and carburetor casting, fully depress starting pedal, loosen adjusting screw on throttle cross shaft lever and adjust cross shaft so that lever contacts pin on starter shift lever.

**Automatic Choke:**—Carter Climatic Control. See article in Carburetor Section for servicing directions.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1525989 oil-wetted type standard, #1525991 heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type T #1522189 standard. Combination fuel-and-vacuum Type AA #1522249 optional. See articles in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC. Electric. #1515313 (dash unit), #1515428 (tank unit). See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco, Type 15-T. 6 volt, 15 plate, 94 ampere hour capacity (20 hour rate).  
**Starting Capacity**—115 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 3.3 minutes.  
**Grounded Terminal**—Negative (—) terminal.  
**Location**—Left side under drivers seat.

**Police Battery**—Delco Type 17-J. 6 volt, 17 plate, 125 Ampere Hour Capacity (20 hour rate).  
**Starting Capacity**—149 amperes for 20 minutes.  
**Grounded Ter. & Location**—Same as 15-T (above).

## STARTER

**Delco-Remy Model 738-S, Armature No. 823881.**  
**Drive**—Overrunning clutch and manual pinion shift operated by starting pedal.  
**Cranking Engine**—100 R.P.M., 190 amperes at 5 volts.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-28 ozs. each.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	525

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange capscrews.

**Starting Switch:**—Part No. 820052. Mounted on starter. Operated by starting pedal.

## GENERATOR STANDARD

**Delco-Remy Model 936-T, Armature No. 1854856.**  
Fixed third brush control type with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data below and special article in Equipment Section for procedure and settings. Do not operate generator on open-circuit.

**Maximum Charging Rate**—As given in table below. Reached at car speed of 34-36 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

### Performance Data

Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0
Hot	18-23	8.2-8.7

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-28 ozs. (main), 18-20 ozs. (third brush).

**Field Current**—2.3-2.6 amperes at 6.0 volts.

**Removal:**—Generator pivot mounted on left front of engine. To remove, take out two pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen clamp bolts and pivot bolt, swing generator out until deflection of belt is ¾" midway between generator and fan pulleys when pressed lightly.

## GENERATOR SPECIAL EQUIPMENT

**Delco-Remy Model 934-F (for City Police Cars), 1102657 (State Police).** Two brush types used with Regulator Model 5599 (934-F), 5872 (1102657). Refer to 1937-38 Oldsmobile Eight pages for complete data on these Generators and Regulators.

## REGULATOR

**Delco-Remy Model 5588, 'Double Core' Voltage Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating type Voltage Regulator in single case on left side of engine dash.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.9-7.6 volts, 838 R.P.M., 9½ M.P.H.

**Cuts Out**—3 amperes max. at 6.3 volts.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

### Voltage Regulator

**Setting**—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused, cross-beam type with special non-interchangeable lenses. Headlamps aimed straight ahead with lenses removed. Special asymmetrical 'Passing' beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in driving or third position.

**Headlamp Beam Indicator**—Located at top of speedometer dial. Lighted whenever driving or upper headlamp beams are lighted.

### Switches

**Lighting**—Delco-Remy Model 479-K, 479-H Export.

**Foot Beam Selector**—D-R Model 471-T,Z (optl. Can.).

**Instrument Lamp**—Delco-Remy Model 1404.

**Stop Lamp**—Hydraulic type on brake master cylinder.

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	T-2320-L
Parking	1½	55.
Instrument, Tail	3	63.
Beam Indicator; Frt. Compt.	1	51.
Stop	15	87.
Dome	6	81.

NOTE—Headlamps are Pre-focused 'Long-Life' type.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Mounted on lighting switch (part of assembly). Non-adjustable. Operates with load of 24-27 amperes limiting current to 18 amps.

**HORNS:**—Klaxon Model K-26-L Type 1602 Std., Model K-33-D, Type 1951 (low note), 1952 (high note) blended tone twin horns operated by horn relay Optl. All horns are vibrator type.

Horn Type	Current at 6 Volts	Air Gap
K-26-L, 1602	6.5-8.5	.025-.029"
K-33-D, 1951	12-14	.045-.050"
K-33-D, 1952	11-13	.036-.040"

NOTE—Twin horns are stamped 'L' (low note—long horn), 'S' (high note—short horn), on motor shell.

**Horn Relay:**—Model 268-L. Requires .25 amperes at 2 volts minimum to close contacts. Current draw .8 amperes.

**Contact Gap:**—.015-.025". Spring Tension—6-8 ozs.

**Air Gap:**—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS:**—Type—6 cyl. 'L' Head.

Bore—3 5/16". Stroke—4 1/8".

Displacement—213.3 cubic inches.

Rated Horsepower—26.3 (SAE).

Developed Horsepower—90 at 3400 R.P.M.

Compression Ratio & Pressure—8.0-1 Std. cast-iron head. No optl. ratios. Pressure 106-116 lbs. at cranking speed of 100 R.P.M.

Vacuum Reading—Gauge should show steady reading of 17" of HG. minimum with engine idling at 350 R.P.M. or 6 M.P.H.

**PISTONS:**—Aluminum alloy, "T" slot, Cam Ground type with Electrolite (hard oxide) bearing surface. Skirt is elliptical with .007-.009" greater diameter at right angles to pin bosses. Pistons cannot be ground. Use finished replacement pistons.

Weight—15.4 ozs. (stripped). Length—3 5/16".

Removal—Pistons and rods removed from above.

Clearance—.0013-.0018" measured 3/8" up on skirt and 3/8" below lower ring groove at right angles to pin holes for new pistons. See Fitting new Pistons.

**Replacement Pistons:**—Finished pistons with pins fitted furnished in .003", .005", .010", .015" and .030" over size. Oversize pistons held to same weight as standard.

**Fitting New Pistons:**—With pin removed, check clearance by inserting .002" feeler 1/2" wide between piston and cylinder wall on pressure or camshaft side at right angles to pin hole. Piston should be inverted with slot away from camshaft. Pressure to withdraw feeler must be 4-11 lbs. with piston and block at 70° F.

**Installing Pistons:**—Mark 'V-S' on piston head must be toward valves (slot on side away from valves). Pin hole in piston offset 3/32" toward left (slotted side).

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Both oil ring grooves drilled radially with oil drain holes. Piston rings furnished in .010", .020", .030" oversizes.

Ring	Width	End Gap	Side Clearance
Comp.	1/8"	.007-.012"	.0015-.003"
Oil Cont.	3/16"	.007-.015"	.001-.0025"

NOTE—Install compression rings with groove or step downward.

**PISTON PIN:**—Diameter—.8554-.8557". Length—3 1/32". Pin is locked in piston by lock screw in one boss. Opposite end slotted to allow boss to slide freely on pin.

**Pin Fit in Piston:**—.0001" loose to .0002" tight in plain boss end, .0002-.0005" tight in lock boss end.

**Pin Fit in Rod Bushing:**—Clearance .0002"-.0005". Pins selected to give this clearance. New rod bushings are burnished and reamed to inside diameter of .8557-.8561".

NOTE—Replacement pistons furnished with pins fitted. Pin bosses in piston are Electroplated and cannot be reamed. Pins not furnished oversize.

**Fitting Pins:**—Place piston and pin in boiling water for one minute. With special tool HM-535 insert pin in plain boss end and push lightly until lock screw hole in pin and boss are aligned. Install lock screw. Skirt taper with pin installed must not exceed .0005".

**CONNECTING ROD:**—Weight—29 1/2 ozs.

Length—7 13/16".

Crankpin Journal Diameter—2".

Lower Bearing—Steel-backed, babbitt-lined, interchangeable type.

Clearance—.001-.003". Sideplay .0055-.0105".

**Bearing Adjustment:**—None (no shims). Replace bearing shells. Do not file rod or cap faces. Bearings assembled with slight projection above faces to insure contact.

**Installing Rods:**—Oil spit hole in lower bearing upper half must be toward camshaft. Grooves in rod and cap bolt boss must be on same side as part number.

NOTE—Ground bolts used for cap and rod assembly. Common bolts must not be used.

**CRANKSHAFT:**—Four bearings. Integral count'rw'ghts. Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.728-2.729".

**Bearing Type:**—Interchangeable steel-backed, babbitt-lined. Bearing halves interchangeable (upper and lower) except #4 (rear).

Clearance—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be removed without removing crankshaft by using tool HM-J-173. This is a flat headed plug which is slipped into oil hole in crankshaft. The head engages the edge of the bearing and turns it out as crankshaft is rotated. Install bearings in same manner (insert plain edge of bearing on indented side of upper bearing support).

**End Thrust:**—Taken by #1 (front) bearing. Endplay .004-.008". A bronze thrust plate .1205-.1235" thick is assembled at each end of front main bearing and

is dowelled to bearing cap. There is a steel thrust collar on the crankshaft behind the crankshaft gear.

**CAMSHAFT:**—Four bearing. Non-adjustable chain drive. Journal Diameters—#1, 1.9970-1.9975"; #2, 1.9345-1.9350"; #3, 1.8720-1.8725"; #4, 1.8095-1.8100".

**Bearing Type:**—Metal-backed, babbitt-lined.

Clearance—.002-.004".

**End Thrust:**—Taken by spring-loaded plunger in forward end of camshaft and thrust plate on chain case cover.

**Timing Chain:**—Whitney. Width—1 1/4". Pitch—.500". Length 47 links or 23 1/2".

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Use Sprocket Gauge HM-408-0.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 51/64"
Exhaust	1 27/64"	.3405-.3415"	5 51/64"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.300"	.00125-.00325"
Exhaust	45°	.300"	.00225-.00425"

**Valve Guides:**—Cast-iron. Install with turned portion below and finish ream to .34375-.34475" (inside diameter) after assembly. Guide must be 15/16" below top of block.

**Valve Springs:**—Free length 2 9/16". Install springs with three close-coils at top. No spring cages used.

	Spring Pressure	Spring Length
Valve Closed	43 lbs.	2 9/32"
Valve Open	116 lbs.	1 15/16"

NOTE—Springs are interchangeable (intake and exhaust and for either six or eight engines).

**Valve Lifters:**—Single piece cast-iron with core openings in side wall. Operate directly in reamed holes in block. Clearance .0008". Serviced by reaming out holes and installing new lifters furnished standard, .002", .005" oversize.

## VALVE TIMING

**Tappet Clearance:**—.008" Int., .010" Exh., warm.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 5° BTDC. Close 45° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**To Check Valve Timing:**—Check tappet clearance #1 intake valve. This valve should open with piston 5° or .0163" before top dead center when point on flywheel approximately 2 teeth before top dead center mark (steel ball insert) on flywheel lines up with pointed end of inspection hole cover screw in left front face of housing.

## LUBRICATION

**LUBRICATION:**—Pressure type. Gear type oil pump located on right side of crankcase.

NOTE—Use new gasket whenever oil pump taken off engine. See that holes in gasket line up with oil leads in block.

**Normal Oil Pressure:**—25-30 lbs.

**Oil Pressure Regulator:**—On oil pump cover. Operates at 27 lbs. Not adjustable.

**Crankcase Capacity:**—6 qts. refill.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions.

*See Clutch Section for complete data.*

**Facings:**—Woven type, 2 required. Inside Diam. 5 $\frac{5}{8}$ ". Outside Diam. 9". Thickness .133".

**Adjustment:**—Free movement of clutch pedal must be 1-1 $\frac{1}{2}$ ". To adjust, loosen locknut and turn adjusting screw at lower end of inner lever on clutch throwout auxiliary shaft in front of clutch pedal.

**Removal:**—Disconnect propeller shaft, remove transmission, take off clutch housing pan, take out six capscrews mounting clutch on flywheel turning all screws out evenly to release spring pressure. Clutch can be removed from below without removing flywheel housing.

**NOTE:**—A locating dowel is mounted on the flywheel and the second clutch mounting screw hole on each

side is counterbored deeper than the remaining holes. When mounting clutch, use the two screws with short thread and longer shank in these holes.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE:**—Before checking front end, check tire inflation, front wheel balance, front wheel and tire runout (not to exceed  $\frac{1}{8}$ "), bounce car up and down several times to allow frame to assume normal height.

**King Pin Inclination:**—5°51' crosswise.

**Caster:**—1 $\frac{1}{2}$ -2 $\frac{1}{4}$ °. Adjustable. Caster affected by camber adjustment but not outside limits as given.

**Camber:**— $\frac{1}{8}$ -1°. Adjustable.

**Toe In:**— $\frac{1}{8}$ -3/16". Adjustable. Both tie rods must be turned equally.

**Steering Geometry:**—Inner wheel turned 23° 10', outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller type with center steering.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Bendix Hydraulic, Duo-Servo, Single anchor type. Hand lever applies rear brakes.

*See Brake Section for complete data.*

**Brake Drum Diameter:**—11 1/16".

**Brake Lining:**—Moulded and woven type. Width 2". Thickness 3/16". Length 23.7" per wheel.

**Brake Clearance:**—.008" toe, .010" heel on each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—L100,001. On left hand frame side member.

**ENGINE NUMBER:**—First number—L202,001. Stamped on ledge on top of block beside head at left front corner.

## TUNE-UP

**COMPRESSION:**—Ratio 6.2-1. Pressure 152 lbs. at 1000 R.P.M. or 116-126 lbs. at cranking speed of 100 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 17" of HG. minimum with engine idling at 300 R.P.M. or 6 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type G-9. 18 mm. Metric. Gaps—.030-.033".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle—31° Closed.

Automatic Advance—15° max. at 1900 RPM (distr.).

Vacuum Advance—5° (distr.) with 13-16" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Flywheel mark (steel ball) aligned with insp. hole cover screw (left side of housing).

CAUTION—Time #6 cylinder on this engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle screws ¾-1¼ turns open. Idle speed 300 RPM or 6-7 MPH.

Float Level—3/16" top of float to cover with needle valve seated.

Accelerating Pump—Inner Hole (Summer), outer (Winter).

Fuel Pump Pressure: 3½ lbs. ("T"), 4½ lbs. ("AA" comb.).

**VALVES:** See Valve Timing.

Tappet Clearance—.008" Intake, .010" Exh., hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch Delco-Remy Model 435-B:**—Switch and cable assembly connected to coil by armored cable.

Ignition Lock—Briggs & Stratton.

**COIL:** Delc -Remy Model 536-E. On dash.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1837231.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 663-K. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° (closed), 14° (open).

Breaker Arm Spring Tension—19-23 ounces.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	4.5	600
4	400	8	800
15	1900	30	3800

**Vacuum Spark Control 681-B:**—On distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
5°	10°	13-16"

**Distributor Removal:**—Mounted on top of engine. To remove, take out hold-down screw in advance arm.

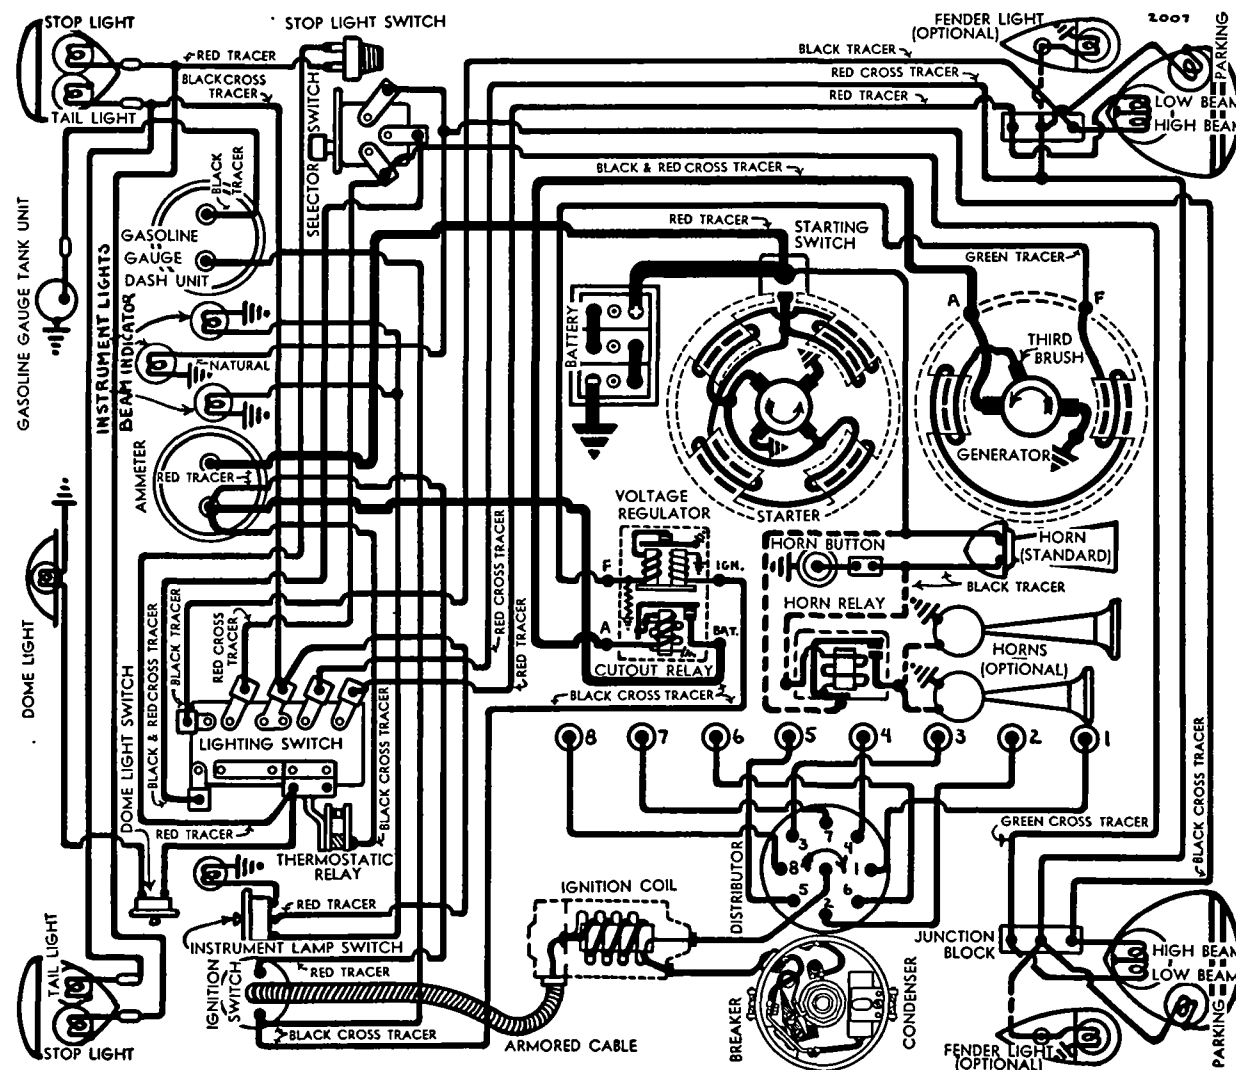

## IGNITION TIMING

**IGNITION TIMING:**—For all engines as follows:

Flywheel Degrees	Piston Position
2° BTDC.	.002" BTDC.

**Timing (Using Synchroscope)**—This method recommended. Clip Synchroscope lead to #6 spark plug, direct light on flywheel through inspection hole in left front face of housing. Idle engine at 300 R.P.M. or 6-7 M.P.H. Loosen hold-down screw in advance arm, center pointer on scale (arrow at '0' mark), tighten hold-down screw, loosen advance arm clamp bolt, rotate distributor until timing mark (steel ball) on flywheel lines up with pointed end of inspection hole cover screw, tighten clamp bolt.

**Timing (Without Synchroscope)**—Use timing light connected between distributor terminal and ground, turn on ignition to check contact opening. With #6 piston on compression, turn engine over until piston reaches 2° before top dead center, stop when steel ball on flywheel lines up with pointed end of inspection hole cover screw in left front face of housing. Loosen hold-down screw in advance arm, center pointer on scale (arrow at '0' mark), tighten hold-

down screw, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Models 328-S (before Serial No. L-127334) 341-S (after Serial No. L-127335). Dual downdraft type. See Carburetion Section for complete adjustment, overhaul, and Jet Specifications.

*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idles at hot or slow idle speed.

**Idle Adjustment**—Adjust throttle stop screw so that engine idles at 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw for each carburetor barrel (in succession) until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in until engine fires smoothly. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump Setting**—Pump lever under dust cover at top of carburetor has two holes for pump link engagement. Change for seasonal requirements: Outer Hole (Max. stroke)—Cold weather. Inner Hole (Min. stroke)—Hot weather.

**Fast Idle:**—Integral with carburetor. Adjustable.

*For complete data, refer to Carburetion Equip. Index.*

**Adjustment**—With fast idle screw resting against high lobe of fast idle cam (choke valve closed) and with correct slow idle setting (see above), adjust fast idle screw to give .030" clearance between throttle stop screw and carburetor body.

**Accelerator Linkage Adjustment:**—Must be maintained to provide correct 'throttle cracking' action for starting. To adjust, remove starting cable at starting switch to prevent cranking, place .090" feeler between throttle stop screw and carburetor casting, fully depress starting pedal, loosen adjusting screw on throttle cross shaft lever and adjust cross shaft so that lever contacts pin on starter shift lever.

**Automatic Choke:**—Carter Climatic Control. See article in Carburetion Section for servicing directions. *For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1525990 standard oil-wetted type, #1525992 heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type T #1522188 standard, Combination fuel-and-vacuum Type AA #1522250 optional. See articles in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC. Electric. #1515313 (dash unit), #1515428 (tank unit). See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco, Type 17-K. 6 volt, 17 plate, 110 ampere hour capacity (20 hour rate).

Starting Capacity—131 amperes for 20 minutes.

0° F. Capacity—300 amperes for 4.4 minutes.

Delco, Type 17-J (Special Equipment). 6 volt, 17 plate, 125 ampere hours (20 hour rate).

**Grounded Terminal**—Negative (—) terminal.

**Location**—Left side under drivers seat.

## STARTER

**Delc -Remy Model 727-Z. Armature No. 823881.**  
**Drive**—Overrunning clutch and manual pinion shift operated by starting pedal.  
**Cranking Engine**—100 R.P.M., 200 amps at 5 volts.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-28 ozs. each.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange screws.

**Starting Switch:**—Part No. 820052. Mounted on starter. Operated by starting pedal.

## GENERATOR

### STANDARD

**Delco-Remy Model 936-T. Armature No. 1854856.** Fixed third brush control type with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data below and special article in Equipment Section for procedure and settings. Do not operate generator on open-circuit.

**Maximum Charging Rate**—As given in table below. Reached at car speed of 34-38 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

Performance Data			
	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ozs. (main), 16-20 ozs. (third).

**Field Current**—2.3-2.6 amperes at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out two pivot bolts and clamp bolt.

**Belt Adjustment:**—Loosen clamp bolts and pivot bolt, swing generator out until deflection of belt is 1" midway between generator and fan pulleys when pressed lightly.

## GENERATOR

### SPECIAL EQUIPMENT

**Delco-Remy Model 934-F (for City Police Cars), 1102657 (State Police).** Two brush types used with Regulator Model 5599 (934-F), 5872 (1102657). Refer to 1937-38 Oldsmobile Eight pages for complete data on these Generators and Regulators.

## REGULATOR

**Delco-Remy Model 5588. 'Double Core' Voltage Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating type Voltage Regulator in single case on left side of engine dash.

*For complete data, refer to Electrical Equipment Index.*

## Cutout Relay

**Cuts In**—6.9-7.6 volts. 800 R.P.M., 9½ M.P.H.

**Cuts Out**—3 amperes max. at 6.3 volts.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

## Voltage Regulator

**Setting**—7.55-7.85 volts at 70° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused, cross-beam type with special non-interchangeable lenses. Headlamps aimed straight ahead with lenses removed. Special asymmetrical 'Passing' beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by foot selector switch with lighting switch in driving or third position.

**Headlamp Beam Indicator**—Located at top of speedometer dial. Lighted whenever driving or upper headlamp beams are lighted.

## Switches

**Lighting**—Delco-Remy Model 479-K, 479-H Export.

**Foot Beam Selector**—D-R Model 471-T,Z (optl.Can.).

**Instrument Lamp**—Delco-Remy Model 1404.

**Stop Lamp**—Hydraulic type on brake master cyl.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	T-2320-L
Parking, Ins't., Tail	3	63
Beam Indicator, Front Comp.	1	51
Stop	15	87
Dome	6	81

**NOTE**—Headlamps are Pre-focused 'Long-Life' type.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Mounted on lighting switch (part of assembly. Non-adjustable. Operates with load of 24-27 amperes limiting current to 18 amps.

**HORNS:**—Klaxon Model K-26-L Type 1602 Std., Model K-33-D, Type 1951 (low note), 1952 (high note) blended tone twin horns operated by horn relay Optl. All horns are vibrator type.

C N T I N U E D N N E X T P A G E

## CONTINUED FROM PRECEDING PAGE

Horn Type	Current at 6 V Its	Air Gap
K-26-L, 1602	6.5-8.5	.025-.029"
K-33-D, 1951	12-14	.045-.050"
K-33-D, 1952	11-13	.036-.040"

NOTE—Twin horns are stamped 'L' (low note—long horn), 'S' (high note—short horn), on motor shell.

Horn Relay:—Model 268-L. Requires .25 amperes at 2 volts minimum to close contacts. Current draw .8 amperes.

Contact Gap—.015-.025". Spring Tension—6-8 ozs.

Air Gap—.012-.017" with contacts closed.

## ENGINE

ENGINE SPECIFICATIONS:—Type—3 cyl., 'L' head.

Bore—3". Stroke—4¼".

Displacement—240.3 cubic inches.

Rated Horsepower—28.8 (SAE).

Developed Horsepower—100 at 3400 R.P.M.

Compression Rat. & Pressure—6.2-1 Std. cast-iron head. Pressure 116-126 lbs. at cranking speed of 100 R.P.M.

Vacuum Reading—Gauge should show steady reading of 17" f HG. minimum with engine idling at 300 R.P.M. or 6 M.P.H.

PISTONS:—Aluminum alloy, "T" slot, Cam Ground type with Electrolite (hard oxide) bearing surface. Skirt is elliptical with .006-.008" greater diameter at right angles to pin bosses. Pistons cannot be ground. Use finished replacement pistons.

Weight—12.8 ozs. (stripped). Length—3¾".

Removal—Pistons and rods removed from below. Rotate crankshaft so that counterweights are cross-wise and on opposite side from camshaft.

Clearance—.0013-.0018" measured ¾" up on skirt and ¾" below lower ring groove at right angles to pin hole for new pistons. See Fitting New Pistons.

Replacement Pistons:—Finished pistons with pins fitted furnished in .003", .005", .010", .015", .030" oversizes. Oversize pistons held to same weight as standard.

Fitting New Pistons:—With pin removed, check clearance by inserting .002" feeler ½" wide between piston and cylinder wall on pressure or camshaft side at right angles to pin hole. Piston should be inverted with slot away from camshaft. Pressure to withdraw feeler must be 4-11 lbs. with piston and block at 70° F.

Installing Pistons:—Mark 'V-S' on piston head must be toward valves (slot away from valves). Pin hole in piston offset 3/32" toward left (slotted side).

PISTON RINGS:—Two compression, two oil control rings per piston, all above the pin. Both oil ring grooves drilled radially with oil drain holes. Piston rings furnished in .010", .020", .030" oversizes.

Ring	Width	End Gap	Side Clearance
Comp.	¾"	.007-.012"	.0015-.003"
Oil Cont.	3/16"	.007-.015"	.001-.0025"

NOTE—Install compression rings with groove or step downward.

PISTON PIN:—Diameter .8554-.8557". Length 2 23/32". Pin is locked in piston by lock screw in one boss. Opposite end slotted to allow boss to slide freely on pin.

Pin Fit in Piston—.0001" loose to .0002" tight in plain boss end, .0002-.0005" tight in lock boss end.

Pin Fit in Rod Bushing—Clearance .0002-.0005". Pins selected to give this clearance. New rod bushings burnished and reamed to inside diameter of .8557-.8561".

Fitting Pins—Place piston and pin in boiling water for 1 minute. With special tool HM-535 insert pin in plain boss end and push lightly until lock screw hole in pin and boss are aligned. Install lock screw. Skirt taper with pin installed must not exceed .0005".

NOTE—Replacement pistons furnished with pins fitted. Pin bosses in piston are Electroplated and cannot be reamed. Pins not furnished oversize.

CONNECTING ROD:—Weight 33 ozs. Length 8".

Crankpin Journal Diameter—2¼".

Lower Bearing—Steel-backed, babbitt-lined, interchangeable type.

Clearance—.001-.003". Sideplay—.0055-.0105".

Bearing Adjustment:—None (no shims). Replace bearing shells. Do not file rod or cap faces. Bearings assembled with slight projection above faces to insure contact.

Installing Rods:—Oil split hole in lower bearing upper half must be toward camshaft. Grooves in rod and cap bolt boss must be on same side as part number.

NOTE—Ground bolts used for cap and rod assembly. Common bolts must not be used.

CRANKSHAFT:—Five bearing. Integral counterweights.

Journal Diameters—#1, 2.373-2.374"; #2, 2.5605-2.5615"; #3, 2.623-2.624"; #4, 2.6855-2.6865"; #5, 2.748-2.749".

Bearing Type—Interchangeable steel-backed, babbitt-lined. Upper and lower halves not interchangeable.

Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be removed without removing crankshaft by using tool HM-J-173. This is a flat headed plug which is slipped into oil hole in crankshaft. The head engages the edge of the bearing and turns it out as crankshaft is rotated. Install bearings in same manner (insert plain edge of bearing on indented side of upper bearing support).

End Thrust:—Taken by #1 (front) bearing. Endplay .004-.008". A bronze thrust plate .1205-.1235" thick is assembled at each end of front main bearing and is dowelled to bearing cap. There is a steel thrust collar on the crankshaft behind the crankshaft gear.

NOTE—In removing fan drive pulley sheet metal rim on hub must not be damaged.

CAMSHAFT:—Six bearings. Non-adjustable chain drive.

Journal Diameters—#1, 2.3095-2.3100"; #2, 2.2470-2.2475"; #3, 2.1845-2.1850"; #4, 2.1220-2.1225"; #5, 2.0595-2.0600"; #6, 1.8095-1.8100".

Bearing Type—Metal-backed, babbitt-lined.

Clearance—.002-.004".

End Thrust:—Taken by spring-loaded plunger in forward end of camshaft and thrust plate on chain case cover.

Timing Chain:—Whitney. Width 1¼". Pitch .500". Length 46 links or 23".

Camshaft Setting:—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Use Sprocket Gauge HM-408-0.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 9/32"
Exhaust	1 27/64"	.3405-.3415"	5 9/32"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.300"	.00125-.00325"
Exhaust	45°	.300"	.00225-.00425"

Valve Guides:—Cast-iron. Install with turned portion below and finish ream to .34375-.34475" (inside diameter) after assembly. Guide must be 15/16" below top of block.

Valve Springs:—Free length 2 9/16". Install springs with three close-coils at top. No spring cages used.

	Spring Pressure	Spring Length
Valve Closed	43 lbs.	2 9/32"
Valve Open	116 lbs.	1 15/16"

NOTE—Springs are interchangeable (Intake and exhaust and for either six or eight engines).

Valve Lifters:—Single piece cast-iron with core openings in sidewalls. Operate in removable guides in block. Clearance .0008". Serviced by renewing guides and installing standard lifters.

## VALVE TIMING

Tappet Clearance—.008" Int., .010" Exh., warm.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open at TDC. Close 42° ALDC.

Exhaust Valves—Open 40° BLDC. Close 10° ATDC.

To Check Valve Timing—Check tappet clearance #6 intake valve. This valve should open with piston on top dead center when flywheel mark "TDC/" lines up with pointed end of inspection hole cover screw in left front face of housing.

NOTE—Steel ball insert in flywheel does not indicate top dead center point as on the six cylinder engine.

## LUBRICATION

LUBRICATION:—Pressure. Gear type oil pump located in crankcase. Ignition timing not disturbed by removal of oil pump.

Normal Oil Pressure—25-30 lbs.

Oil Pressure Regulator—Mounted on oil pump. Operates at 27 lbs. Not adjustable.

Crankcase Capacity—7 qts. refill.

## CLUTCH

CLUTCH:—Borg & Beck Model 10A4. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions.

See Clutch Section for complete data.

**Facings**—Woven type, 2 required. Inside Diam.  $6\frac{1}{8}$ ". Outside Diam.  $9\frac{7}{8}$ ". Thickness .125".

**Adjustment**—Free movement of clutch pedal must be  $1-1\frac{1}{2}$ ". To adjust, loosen locknut and turn adjusting screw at lower end of inner lever on clutch throwout auxiliary shaft in front of clutch pedal.

**Removal**—Disconnect propeller shaft, remove transmission, take off clutch housing pan, take out six capscrews mounting clutch on flywheel turning all screws out evenly to release spring pressure. Clutch can be removed from below without removing flywheel housing.

**NOTE**—A locating dowel is mounted on the flywheel and the second clutch mounting screw hole on each side is counterbored deeper than the remaining holes. When mounting clutch, use the two screws with short thread and longer shank in these holes.

## FRONT SUSPENSION

**Front Suspension**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE**—Before checking front end, check tire inflation, front wheel balance, front wheel and tire runout (not to exceed  $\frac{1}{8}$ "), bounce car up and down several times to allow frame to assume normal height.

**King Pin Inclination**— $5^{\circ}51'$  crosswise.

**Caster**— $1\frac{1}{2}-2\frac{1}{4}$ ". Adjustable. Caster affected by camber adjustment but not outside limits as given.

**Camber**— $\frac{1}{8}-1^{\circ}$ . Adjustable.

**Toe In**— $\frac{1}{8}-3/16$ ". Adjustable. Both tie rods must be turned equally.

**Steering Geometry**—Inner wheel turned  $23^{\circ}$ , outer wheel  $20^{\circ}$ .

## STEERING GEAR

**Steering Gear**: Saginaw Worm-and-Roller type with center steering.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES**—Service—Bendix Hydraulic, Duo-Servo, Single anchor type. Hand lever applies rear wheel brakes. See article in Brake Section for complete data.

*See Brake Section for complete data.*

**Brake Drum Diameter**—12".

**Brake Lining**—Molded & woven type. Width 2". Thickness  $3/16$ ". Length 25.9" per wheel.

**Brake Clearance**—.008" toe, .010" heel, each shoe.

**Hand Brake Adjustment**—See Service Brake Adjustment.

**1938 RIGHT FRONT FENDER FILLER PLATE:**—This plate may be removed for work on valves, fuel pump, etc. To remove, proceed as follows: Remove headlamp wiring junction block, six bolts along upper edge of plate, capscrews (one at rear, two at front) at ends of plate, lift off.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left frame side member under hood. First number F-372,001 (1937) and numbers for each plant for 1938 models as follows:  
Lansing, Michigan ..... F-600,001 and up  
South Gate, California ..... CF-504,001 to CF-540,000  
Linden, New Jersey ..... LF-545,001 to LF-600,000

**ENGINE NUMBER:**—First number F-670,001 ('37), F-828,001 ('38). On boss on left side of engine behind water pump. '38 motors with Auto. Transmission carry prefix 'FA'.

### TUNE-UP

**COMPRESSION:**—Ratio—6.1-1 cast-iron head.

Pressure—146 lbs. at 1000 R.P.M. or 102-112 lbs. at cranking speed of 320 R.P.M.

**VACUUM READING:**—Steady reading of 17" minimum with engine idling at 6 MPH. or 400 R.P.M.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** AC Type K-9 ('37), 46 ('38). 14 mm. Gaps—.040".

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.020". Cam Angle—35° Closed.  
Automatic Advance—Starts at 250 RPM. Maximum 14° at 1850 RPM. (Distr. degrees & RPM).  
Vacuum Advance—10° (distr.) 15½-18½" vacuum.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—TDC. Flywheel mark (steel ball) aligned with insp. hole cover screw (left side of housing).

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Set idle screw ¾-1¼ (351-S), 1-1½ (385-S), ½-1 (388-S) turn open. Idle speed 350 RPM (6 MPH).

Float Level—¾" from top of float to gasket seat.  
Accelerating Pump—Outer Hole—Normal Setting.

Fuel Pump Pressure: 3¾ lbs. ('AH'), 4 lbs. ('AJ' Comb.)

**MANIFOLD HEAT CONTROL:**—Thermostatic Spring type. When installing thermostatic coil, wind coil up 125° (1/3 revolution approx.) at room temperature. See that valve operates freely.

**VALVES:** See Valve Timing.

Tappet Clearance—.008" Intake, .011" Exh., hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Delco-Remy 435-M (1937), 1116252 (1938), 1116258 ('38 RHD). Switch and cable assembly. Coil connection armored.

Ignition Lock—Briggs & Stratton No. 45792 (Lock cylinder). Key Series—8000 to 9499. Groove—#15.

**COIL:** Delco-Remy Model 540-P ('37), 539-P ('38). Mounted on dash.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1865972.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 647-F. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.  
Breaker Gap—.020". Limits .018-.024".  
Cam Angle or Dwell—35° (closed), 25° (open.)  
Breaker Arm Spring Tension—20 ounces.  
Rotation—Counter-clockwise viewed from the top.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Start	250	3	500
3	450	6	900
14	1850	28	3700

**Vacuum Spark Control Model 681-P**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

### Vacuum Advance

Dist. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0°	5-7"
10° Max.	20°	15.5-18.5"

**Distributor Removal:** Mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

1937 M DELS

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting as follows:

Flywheel Degrees    Piston Position

All Engines ..... 0° TDC ..... 000" TDC.

**Timing (Using Synchroscope)**—This method recommended by car manufacturer. Using Synchroscope (Tool J-696), clip lead to #1 spark plug, direct light on flywheel through inspection hole in left front face of housing. Idle engine at 6-7 MPH. or 400 R.P.M. Loosen hold-down screw in advance arm (back of distributor), center pointer on scale (arrow at '0' mark), tighten hold-down screw, loosen distributor clamp bolt, rotate distributor until timing mark (steel ball insert) on flywheel appears to be directly in line with pointer on housing, tighten clamp bolt.

**Timing (Using Timing Light)**—Use timing light

connected between distributor terminal and ground, turn on ignition to check contact opening. With #1 piston on compression, turn engine over until piston reaches top dead center, stop when flywheel mark (steel ball insert) lines up with pointer in left front face of housing. Loosen hold-down screw in advance arm (back of distributor), center pointer on scale (arrow at '0' mark), tighten hold-down screw, loosen distributor clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

## CARBURETOR

Carter Models 351-S (Early 1937), 385-S (1937 Serial No. F-459103 and up, 1938 with Standard Transmission), 388-S (1938 with Self-Shifting Transmission). 1¼" downdraft types (385-S Vacuum type) For complete data, refer to Carburetor Index.

**IMPORTANT**—Cars with Self-shifting Transmission:—Transmission throttle control lever setting must be checked whenever carburetor throttle linkage disconnected or disturbed. See *Oldsmobile Self-Shifting Transmission* data in *Transmission Section*.

**Idle Adjustment**—Engine must be warm with automatic choke and fast idle inoperative. Adjust throttle stopscrew so that idling speed is approximately 6 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting ¾-1¼ (351-S), 1-1½ (385-S), ½-1 (388-S) turns open of the screw from the seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Pump lever under dust cover at top of carburetor has three holes for pump link engagement. Set as follows:

Outer Hole—Normal temperatures or std. gas.

Inner Hole—High temperatures or hi-test gas.

Upper Hole—Low temperatures or low-test gas.

NOTE—388-S accelerating pump not adjustable.

**Fast Idle:**—Adjustable cam type.

For complete data, refer to *Carburetion Equip. Index*.

**Accelerator Linkage Adjustment:**—Must be maintained to provide correct 'throttle cracking' action for starting. To adjust, remove starting cable at starting switch (to prevent cranking), fully depress starting shift lever, loosen locknut on eccentric adjusting pin on starter shift lever, with offset screwdriver adjust pin to give .030" clearance between throttle adjusting screw and fast idle cam (with cam in fast idle position), tighten locknut.

**Automatic Choke:**—Carter Climatic Control.

For complete data, refer to *Carburetion Equip. Index*.

## CARB. EQUIPMENT

**Air Cleaner:** AC #1528162 (1937 oil-wetted type), #1528096 (1937 oil bath type Optl.), #1528559 (1938 oil bath type standard).

**Fuel Pump:**—AC. Type AH #1523228 standard. Combination fuel-and-vacuum Type AJ #1523227 optl. For complete data, refer to *Carburetion Equip. Index*.

**Gasoline Gauge:** AC Electric Type. Dash Unit: AC Nos. #1515323 (1937), 1515340 (1938-With Ivory Figures), 1515350 ('38-Brown fig.), Tank: 1515451 ('37), 1515471 ('38).

For complete data, refer to *Carburetion Equip. Index*.

## BATTERY

**Delco Type 15-T (1937), 15E-1 (1938).** 6 volt, 15 plate, 100 AH. capacity (20 hour rate).

**Starting Capacity**—115 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes. Five second voltage—4.25 volts.

**Grounded Terminal**—Negative (—) terminal. Grounded to starter on 1938 cars.

**Location**—On left, under seat ('37), hood ('38).

**Police Battery**—Delco Type 17-J ('37), 19E-1 ('38). 6 volt; 17 (17-J), 19 (19E-1) plate, 125 AH. (17-J), 130 AH. (19E-1) capacity—20 hour rate.

**Grounded Terminal & Location**—Same as above.

CONTINUED FR M PRECEDING PAGE

**STARTER****Delco-Remy Model 739-G.** Armature No. 823881.**Drive**—Overrunning clutch and manual pinion shift operated by starter pedal.**Rotation**—Counter-clockwise at commutator end.**Cranking Engine**—125-135 amps., 5 volts (summer).**Brush Spring Tension**—24-28 ounces each.**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	325

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange capscrews.**Starting Switch**—Part No. 820052. Mounted on starter. Operated by starting pedal.**GENERATOR****STANDARD****Delco-Remy 936-T (Early '37).** Armature 1854856. 1100002 (Late '37, All '38). Arm. 1866789. Fixed third brush control type with external vibrating type voltage regulation. Ventilated by fan on drive pulley. **NOTE**—Third brush is clamped in position for maximum safe output and must not be disturbed.**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data below.**NOTE**—Do not operate generator on open circuit.**Maximum Charging Rate**—As given in table below. Reached at car speed of 30-35 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.**Performance Data—936-T**

	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

**Performance Data—1100002**

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

**Rotation**—Counter-clockwise at commutator end.**Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third).**Field Current**—2.3-2.6 amperes at 6 volts.**Removal**—Generator pivot mounted on left front of engine. To remove, take out two pivot bolts and clamp bolt.**Belt Adjustment**—Loosen clamp bolt and pivot bolts, swing generator out until deflection of belt is  $\frac{3}{4}$ " midway between generator and fan pulleys when pressed lightly.**GENERATOR****SPECIAL EQUIPMENT****Delco-Remy Model 934-F (for City Police Cars), 1102657, 1105851 or 1105856 (State Police).** Refer to 1938 Oldsmobile Eight page (following) for complete data.**REGULATOR****Delco-Remy Model 5814.** "Double Core" Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in single case on on left side of engine dash.**For complete data, refer to Electrical Equipment Index.****Cutout Relay****Cuts In**—6.9-7.6 volts, 838 RPM., 9.8 MPH.**Cuts Out**—0-3.0 amperes.**Air Gap & Contact Gap**—.020".**Voltage Regulator****Setting**—7.5-7.9 volts at 70° F., 7.4-7.6 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit. **Contact Gap**—.020".**Contact Spring Tension**—2.7-3.5 ounces.**Air Gap**—.063" between armature and center of core with armature down and fiber bumper touching stop; .010" between fiber bumper and stop with armature up.**LIGHTING****LIGHTING**—Headlamps—Guide Multi-beam, pre-focused, cross-beam type with special non-changeable lenses. Special asymmetrical 'Passing' beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by dimmer switch with lighting switch in 'country' or third position.**Headlamp Adjustment**—With driving beam (lower filaments both lamps) lighted and lenses in place, aim left hand headlamp so that upper edge of hot spot is at lamp center height (or specified height below this mark if state law requires loading allowance) and left edge is at vertical line for lamp center (entire hot spot to right of this center line) at 25 feet. Aim right hand headlamp for same height but center hot spot on lamp-center vertical line (right cut-off of hot spot about 8" to right of center-line). Up and down movement controlled by adjusting screw in bottom of lamp body near front. Side movement screw under snap-on button on side of lamp body towards front.**Headlamp Beam Indicator**—Located above speedometer dial. Lighted whenever driving or upper headlamp beams lighted.**Switches—1937 Models****Lighting**—Delco-Remy Model 480-P, 479-H Export. **Foot Beam Selector**—471-T, M (Exp.).**Dash Lamp**—1416.**Stop Lamp**—Hydraulic type on brake master cyl.**Switches—1938 Models****Lighting**—D-R Model 1994503, 1995003 (Exp.).**Dimmer**—Olds Part No. 1861899. D-R Model 471-T (Can.).**Instrument**—D-R Model 1416.**Stop Light**—D-R Model 476-U.**Radio Air Switch**—D-R Model 1997704.**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320-L
Parking	1½	55
Stop-Tail	21-3	1154
Dome	6	81
Rear License	3	63
Instrument Panel, Glove Comp't	1	51
Light Sw. & Beam Indicators	1	51

**MISC. ELECTRICAL****THERMOSTATIC RELAY**: Delco-Remy 1866467. On lighting switch by 3 screws (may be serviced separately). Non-adjustable. Contacts open within 1 minute (with 38 amp. load @ 70° F.). Close at 25 amps @ 70° F.**FUSES**—Clock—2 ampere on back of clock.**Radio**—10 ampere.**HORNS**—Klaxon Model K-26-H. Type 2251 or 2253. Optional dual horns K-33-S, Type 2067 (low), 2068 (high) blended tone with horn relay.

Horn Type	Current at 6 Volts	Air Gap
K-26-H, 2251, 53	6.5-8.5	.025-.029"
K-33-S, 2067	11-13	.042-.046"
K-33-S, 2068	10-12	.032-.036"

**Horn Relay**—Delco-Remy Model 271-A.

Points close at 2.7-4.0 volts.

**Contact Gap**—.020". **Air Gap**—.015".**ENGINE****ENGINE SPECIFICATIONS**—8 cylinder, 'L' head.**Bore**—3 7/16". **Stroke**—4 1/8".**Displacement**—229.7 cu. ins. **Rated HP.**—28.4.**Developed Horsepower**—95 at 3400 R.P.M.**Compression Ratio**—8.1-1 Std. cast-iron head.**Compression Pressure**—146 lbs. at 1000 RPM. or 102-

112 lbs. at 320 RPM. (cranking speed).

**NOTE**—New steel-asbestos cyl. head gasket used. Cannot be re-used. Use new gasket.**Vacuum Reading**—17" min. @ 400 RPM. or 6 MPH.**PISTONS**—Aluminum alloy, 'T' slot, Cam Ground type with Electrolite (hard oxide) bearing surface.**Weight**—17.35 ozs. (stripped). **Length**—4 1/32".**Removal**—Pistons and rods removed from above.**Clearance**—Skirt .0013-.0018".**Replacement Pistons**—Finished pistons (with fitted pins) furnished .003", .005", .010", .015", .030" oversize.**Fitting New Pistons**—With pin removed, check clearance by inserting .002" feeler  $\frac{1}{4}$ " wide between piston and cylinder wall on camshaft side at right angles to pin hole. Invert piston with slot away from camshaft 4-11 lbs. pull required to withdraw feeler with piston and block at 70° F.**Installing Pistons**—Mark 'V-S' on head toward valves (slot away from valves). Pin hole offset 3/32" to left.**PISTON RINGS**—Two compression, two oil control rings per piston above pin. Oil ring grooves drilled with eighteen 5/32" oil drain holes. Ring oversizes—.010", .020", .030".

Ring	Width	End Gap	Side Clearance
Comp.	.1235-.1240"	.009-.014"	.002-.0035"
Oil	.1860-.1865"	.009-.014"	.0025"

**NOTE**—Install comp. rings with groove down.

**ENGINE****C CONTINUED FROM PRECEDING PAGE**

**PISTON PIN:**—Diameter—.8554-.8557". Length—3 5/32". Pin locked in piston boss by lock screw. Free end slotted to allow boss to slide freely in pin.  
**Pin Fit in Piston:**—.0001" loose to .0002" tight in plain boss end, .0002-.0005" tight in lock boss end.  
**Pin Fit in Rod Bushing:**—Clearance .0003-.0006". New rod bushings burnished and reamed to inside diameter of .8558-.8562".  
**Fitting Pins:**—See *Oldsmobile Shop Notes*.

**CONNECTING ROD:**—Weight 26.17 oz. Length 7 13/16".  
**NOTE:**—8 cylinder rods furnished in service for six. Select rod to weight within 1/4 oz. of other rods.  
**Crankpin Journal Diameter:**—2.123-2.124".  
**Lower Bearing:**—Removable steel-backed, babbitt. Clearance—.001-.003" ('37), .0005-.002" ('38).  
**Sideplay:**—.0055-.0105".

**Bearing Adjustment:**—None. Replace bearings. Do not file rods or cap faces.

**Installing Rods:**—Oil spit hole in lower bearing upper half must be toward camshaft. Grooves in rod and cap bolt boss must be on same side as part number.  
**NOTE:**—Ground bolts used for rod and cap assembly.

**CRANKSHAFT:**—4 bearing, integral counterweights.  
**Journal Diameters:**—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".  
**Bearing Type:**—Interchangeable steel-backed, babbitt-lined. Bearing halves interchangeable (upper and lower) except #1 (front).  
**Clearance:**—.001-.003" ('37), .0005-.002" ('38).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. See *Oldsmobile Shop Notes* for main bearing and oil seal data.

**End Thrust:**—Taken by #1 (front) bearing. A bronze thrust plate .1205-.1245" thick is assembled at each end of bearing and is dowelled to bearing cap. Steel thrust collar between front bronze thrust plate and crankshaft gear. Endplay—.004-.008".

**CAMSHAFT:**—4 bearing, non-adjustable chain drive.  
**Journal Diameters:**—#1, 1.9975-1.9970"; #2, 1.9350-1.9345"; #3, 1.8725-1.8720"; #4, 1.8100-1.8095".  
**Bearing Type:**—Bronze bushings.  
**Clearance:**—.002-.004".

**End Thrust:**—Spring and plunger in front end of camshaft and steel plate on chain case cover.

**Timing Chain:**—Whitney. Width 1". Pitch .500". Length 23 1/2" or 47 links.  
 See *Oldsmobile Shop Notes* for front end assembly dismantling for timing chain removal.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Use Sprocket Gauge HM-408-0.

**VALVES:**—

	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 51/64"
Exhaust	1 27/64"	.3410-.3418"	5 51/64"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.300"	.0012-.0032"
Exhaust	45°	.300"	.00245-.00425"

**Valve Guides:**—Cast-iron. Exhaust guide taper counterbored on inside diameter for 3/8" at top. Install 5/8" below top of block. Ream inside diam. to .34375-.34475" ('37), .34425-.34525" ('38). Lgth. 3 15/32".

**NOTE:**—1939 type valve guides (1/4" shorter) can be used. Use 1939 installation data if these guides used. See 1939 *Oldsmobile* 6 or 8 pages following for data.

**Valve Springs:**—Free length 2 5/8". Interchangeable for either valve and on 6 & 8. Spring dampers used inside of spring at top. Pressure & Length as follows:

	Valve Closed	Valve Open
1937	46 lbs. at 2 9/32"	94 lbs. at 1 31/32"
1938	50 1/2 lbs. at 2 1/4 "	95 1/2 lbs. at 1 15/16"

**Valve Lifters:**—Mushroom type. Length 2 1/2". Head Diam. 1 1/4". Body Diam. .6235-.6240". Clearance .0003-.0007". Furnished std., .002", .005" oversize.

**VALVE TIMING**

**Tappet Clearance:**—.008" Int., .011" Exh., warm.  
 See *Oldsmobile Shop Notes* for Hood Side Panel Removal (1937), Fender Plate Removal (1938).

**Valve Timing:** See Camshaft Setting above.  
**Intake Valves:**—Open 5° BTDC. Close 45° ALDC.  
**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.  
**To Check Valve Timing:**—Check tappet clearance #1 intake valve. This valve should open with piston 5° or .0163" before top dead center when a point on the flywheel approximately 2 teeth before top dead center mark (steel ball insert) lines up with pointer in inspection hole in left front face of housing.

**LUBRICATION**

**LUBRICATION:**—Pressure type. Gear type oil pump located on right side of crankcase.

**NOTE:**—New gasket aligned with oil holes in block must be used when oil pump assembled to engine.

**Normal Oil Pressure:**—25-30 lbs. ('37), 28-33 lbs. ('38).

**Oil Pressure Regulator:**—On oil pump cover. Operates at 27 lbs. Not adjustable.

**Crankcase Capacity:**—6 quarts, refill.

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

See *Water Pump Section* for complete data.

**Removal:**—Remove fan belt, three pump mounting capscrews, lift fan and pump assembly off.

**Thermostat:**—Harrison. In cyl. hd. water outlet.

**Setting:**—Start to open 145°F. ('37), 152°F. ('38).

**Water Capacity:**—16 qts. ('37), 17 qts. ('38).

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 9A6. Single plate, dry disc type. Model No. 895 stamped on clutch cover. See *Clutch Section* for complete data.

**Facings:**—Molded-woven, 2 required. Inside Diam. 5 5/8". Outside Diam. 9 1/4". Thickness 1/8".

**NOTE:**—Special spiral-grooved facings used with Self-Shifting Transmission (not interchangeable).  
**Pedal Adjustment:**—Free travel 3/4-1". Free adjustable link at release lever end. Loosen locknut, adjust lever length.

**Removal:**—Remove transmission (see Transmission Removal below), take off clutch underpan, take out six clutch cover mounting screws evenly, remove assembly from below.

**NOTE:**—When mounting clutch, use two screws with short thread and longer shanks in second hole on either side of locating dowel.

**TRANSMISSION**

**TRANSMISSION:**—Own—Helical gear type with Synchro Mesh on second and high gears.

See *Transmission Section* for complete data.

**Removal:**—Disconnect front propeller shaft at transmission, remove 4 bolts at bearing support, slide bearing assembly to left, take off clutch underpan, remove mounting bolts, withdraw transmission.

**SELF-SHIFTING TRANSMISSION**

**SELF-SHIFTING TRANSMISSION:**—Optl. on F-38.  
 See *Transmission Section* for complete data.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics—Model 2C, roller bearing type, three used.

See *Universals Section* for complete data.

**Propeller Shaft Center Bearing:**—See *Oldsmobile Shop Notes* for servicing data.

**REAR AXLE**

**REAR AXLE:**—Own make. Semi-floating, spiral bevel gear type with Hotchkiss drive.

See *Rear Axle Section* for complete data.

**Ratio:**—4.37-1 or 4.33-1 Std. '37, 4.37-1 Std. '38, 3.55-1 Auto. Transmission, 4.62-1 Optional (all).

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Remove wheel, drum, free backing plate (4 nuts), static collector, pull bearing retainer away from backing plate without disturbing plate, pull shaft and bearing (Tool J-942), secure plate with one nut. Disconnect rear universal joint remove ten capscrews freeing carrier from housing, lift carrier out. **NOTE:**—Left wheel nuts front and rear have left hand threads.

**Wheel Bearing Adjustment:**—None (shielded type).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. Model 1947A, B (front), 1713-E-F (rear). Double acting, piston type.

See *Shock Absorber Section* for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**NOTE:**—Level frame by inserting 2" blocks between upper support arm and frame. Check following:

**Kingpin Inclination:**—4° 51' 10" crosswise.

**Caster:**—1/4-1° pos. ('37), 0-3/4° reverse ('38).

**Camber:**—1/8-1°. Adjustable. Set Caster first.

**Toe In:**—1/8-3/16". Adjust length of tie rods.

**Steering Geometry:**—Inner w. 22 1/2-23 1/2°. Outer 20°

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Roller type with center steering.

See *Steering Gear Section* for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, Duo-Servo, single anchor type. Hand lever applies rear brakes.

See *Brake Section* for complete data.

**Drum:**—Cast-iron. Diameter—11".

**NOTE:**—Drum turn down limit .030" cut.

**Lining:**—Prim.-molded. Sec.-woven&compressed. Width 1 3/4". Thick 3/16". Length (P) 9 11/32", (S) 11 31/32".  
**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See *Service Brake* above.

**1938 RIGHT FRONT FENDER FILLER PLATE:**—This plate may be removed for work on valves, fuel pump, etc. To remove, proceed as follows: Remove headlamp wiring junction block, eight bolts along upper edge of plate, capscrews (one at rear, two at front) at ends of plate, lift off.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left frame side member under hood. First number L-146,001 (1937) and numbers for each plant for 1938 models as follows:  
Lansing, Michigan.....L-212,001 and up  
South Gate, California.....CL-187,001 to CL-195,000  
Linden, New Jersey.....LL-197,001 to LL-212,000  
**ENGINE NUMBER:**—First number L-250,001 ('37), L-296,001 ('38). On boss on left side of engine behind water pump. '38 motors built with Auto. Transmission carry prefix 'LA'.

### TUNE-UP

**COMPRESSION:**—Ratio—6.2-1 cast-iron head.  
Pressure—152 lbs. at 1000 R.P.M. or 104-114 lbs. at cranking speed of 310 R.P.M.  
**VACUUM READING:**—Steady reading of 17" minimum with engine idling at 6 MPH. or 300 R.P.M.  
**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.  
**SPARK PLUGS:** AC Type K-9 ('37), 46 ('38). 14 mm. Gaps—.030".  
**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.015". Cam Angle—31° Closed.  
Automatic Advance—15° max. at 2000 RPM (distr.).  
Vacuum Advance—7½° (distr.) with 14-17" vacuum.  
**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—2° BTDC. Flywheel mark (steel ball) aligned with insp. hole cover screw (left side of housing).  
**CAUTION:**—Time #6 cylinder on this engine.  
**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Set idle screws ¾-1¼ (exc. 389-S), ½-1¼ (389-S) turns open. Idle speed 6 MPH.  
Float Level—9/64" (exc. 389-S), ¾" (389-S), top of float to cover (needle valve seated).  
Accelerating Pump—Upper Hole (Winter), Lower Hole (Summer) on 345-S & 367-S Carbs. only.  
Fuel Pump Pressure: 3¾ lbs. ('AH'), 4 lbs. ('AJ'Comb.).  
**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Thermostatic coil assembled on forward end of heat control valve shaft (counterweight at rear).  
Setting—When installing thermostatic coil, wind up free end 170° (approximately ½ revolution) and engage end on stop pin (spring cold—70°F).  
**VALVES:** See Valve Timing.  
Tappet Clearance .008" Intake, .011" Exhaust, hot.  
**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Delco-Remy 435-M (1937), 1116252 (1938), 1116258 ('38 RHD). Switch and cable assembly. Coil connection armored.  
Ignition Lock—Briggs & Stratton No. 45792 (Lock cylinder). Key Series—8000 to 9499. Groove—#15.  
**COIL:** Delco-Remy Model 539-P. Mounted on dash.  
Ignition Current—2.0 amperes idling, 4.5 stopped.  
**CONDENSER:** Delco-Remy Part No. 1865972 (663-W), 1869704 (1110802).  
Capacity—18-.25 microfarad.  
**DISTRIBUTOR:** Delco-Remy Model 663-W (All 1937 and first 1500 Engines 1938), Model 1110802 (Later '38). Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**CAUTION:**—1110802 Distr. fits larger bore in cylinder block and distributors not interchangeable. Check first engines and make certain that correct distributor installed (first engines with smaller distributor bore must use 663-W distributor).  
Breaker Gap—Set at .015". Limits .0125-.0175".  
Cam Angle or Dwell—31° (Closed), 14° (Open).  
Breaker Arm Spring Tension—22 ounces.  
Rotation—Counter-clockwise viewed from top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	2.5	600
3.5	500	7.0	1000
15.0	2000	30.0	4000

**Vacuum Spark Control Model 681-R**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in

carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Total plunger travel 11/64".

#### Vacuum Advance

Distr Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0°	5-7"
7.5° Max.	15°	14-17"

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting as follows:

Flywheel Degrees Piston Position  
All engines.....2° BTDC.....002" BTDC.  
Timing (Using Synchroscope)—This method recommended by car manufacturer. Using Synchroscope (Tool J-696), clip lead to #6 spark plug, direct light

1937 MODELS

1938 M DELS

## CONTINUED FROM PRECEDING PAGE

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange capscrews.

**Starting Switch:**—Part No. 820052. Mounted on starter. Operated by starting pedal.

**GENERATOR**

## STANDARD

**Delco-Remy 936-T (Early '37). Armature 1854856. 1100002 (Late '37, All '38). Arm. 1866789.** Fixed third brush control type with external vibrating type voltage regulation. Ventilated by fan on drive pulley. **NOTE:**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment:**—Adjusted by changing setting of voltage regulator. See Regulator data below.

**NOTE:**—Do not operate generator on open circuit. **Maximum Charging Rate:**—As given in table below. Reached at car speed of 30-35 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

## Performance Data—936-T

	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

## Performance Data—1100002

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

**Rotation:**—Counter-clockwise at commutator end. **Brush Spring Tension:**—22-26 ounces (main), 16-20 ounces (third).

**Field Current:**—2.3-2.6 amperes at 6 volts.

**Removal:**—Generator pivot mounted on left front of engine. To remove, take out mounting bolts.

**Belt Adjustment:**—Loosen clamp bolt and pivot bolts, swing generator out until deflection of belt is  $\frac{3}{4}$ " midway between generator and fan pulleys when pressed lightly.

**GENERATOR**

## SPECIAL EQUIPMENT

**Delco-Remy Model 934-F (for City Police Cars), 1102657, 1105851 or 1105856 (State Police).** Two brush (shunt) types with voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—None. See Regulator. **Maximum Charging Rate:**—As follows:

## Performance Data—Cold

	① Amperes	Volts	R.P.M.
934-F	26	8.1-8.3	1325
1102657	30	8.0	1825
1105851, 6	40	8.0	1850

①—Current Regulator setting. See Regulator.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—25 ozs. each.

**Field Current:**—1.7-2.0 amperes (934-F), 1.67-1.82 amperes (1102657), 1.82-1.94 amperes (1105851, 6) at 6.0 volts.

**Removal & Belt Adjustment:**—See Std. Gen. above.

**REGULATOR**

## STANDARD

**Delco-Remy Model 5814. "Double Core" Voltage Regulator (With 'IGN' Terminal).** Cutout Relay and vibrating type Voltage Regulator in case on dash. **For complete data, refer to Electrical Equipment Index.**

## Cutout Relay

**Cuts In:**—6.9-7.6 volts, 838 R.P.M., 9.8 M.P.H.  
**Cuts Out:**—0-4.0 amperes discharge current.  
**Contact Gap:**—.020". **Air Gap:**—.020" (closed).

## Voltage Regulator

**Setting:**—7.5-7.9 volts at 70°F., 7.4-7.6 volts at 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment:**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end slightly.

**NOTE:**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit. **Contact Gap:**—.020". **Contact Sp. Tension:**—2.7-3.5 oz. **Air Gap:**—.063" between armature and center of core with armature down. .010" between fibre bumper and stop with armature up.

**REGULATOR**

## SPECIAL EQUIPMENT

**For Police Generator: Delco-Remy 5599 (934-F Gen.), 5872 (1102657 Gen.), 1118237 (1105851, 6 Gen.—See Note).** Double Core Type Voltage & Current Regulator (with 'IGN' Terminal). Vibrating type voltage and current regulators with Cutout Relay in case on dash.

**Model 1118237 Regulator Note:**—This model is new Single Core Type. **Refer to 1940 Oldsmobile Eight pages for all data on this model.**

## Cutout Relay &amp; Voltage Regulator

**All specifications and Checking & Adjusting directions same as for Std. Model 5814 Voltage Regulator (above) except as follows:**

**Cutout Relay Cuts In:**—6.9-7.6 volts (5599), 6.3-6.9 volts (5872).

**Voltage Regulator Setting (5599, 5872):**—7.0-7.4 volts Cold (70°F), 6.95-7.15 volts Hot (150°F).

## Current Regulator

**Setting:**—26-28 amperes (5599), 32-34 amperes (5872). **Checking & Adjusting:**—Connect ammeter in charging line at regulator 'BAT' terminal, disconnect lead at regulator 'IGN' terminal (to eliminate voltage regulator action). Operate generator at speed for maximum output and note ammeter reading (should agree with setting above). Adjust by bending spring hanger at lower end of armature spring slightly. **Contact Gap:** .020". **Contact Spring Tension:** 3.5 ozs. **Air Gap:**—.075" between armature and center of core with armature down so fibre bumper just touches the stop, .010" between the fibre bumper and stop with armature up.

**LIGHTING**

**LIGHTING:**—Headlamps & Headlamp Adjustment—Same as for Oldsmobile Six Cylinder models. **Refer to 1938 Oldsmobile Six page (preceding) for data.**

**Headlamp Beam Indicator:**—Located above speedometer dial. Lighted whenever driving or upper headlamp beams lighted.

## Switches—1937 Models

**Lighting:**—Delco-Remy Model 480-P, 479-H Export. **Foot Beam Selector:**—471-T, M (Exp.).

**Dash Lamp:**—1416.

**Stop Lamp:**—Hydraulic type on brake master cyl.

## Switches—1938 Models

**Lighting:**—D-R Model 1994503, 1995003 (Exp.).

**Dimmer:**—Olds Part No. 1861899. Delco-Remy Model 471-T (Can.).

**Instrument:**—D-R Model 1416.

**Stop Light:**—D-R Model 476-U.

**Radio Air Switch:**—D-R Model 1997704.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320-L
Parking	1½	55
Stop-Tail	21-3	1154
Dome	6	81
Rear License	3	63
Instrument Panel, Glove Comp't	1	51
Light Sw. & Beam Indicators	1	51

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:** Delco-Remy 1866467. On lighting switch by 3 screws (may be serviced separately). Non-adjustable. Contacts open within 1 minute (with 38 amp. load @ 70°F.). Close at 25 amps. @ 70°F.

**FUSES:**—Clock—2 ampere capacity on back of clock.

**Radio:**—10 ampere capacity.

**HORNS:**—Klaxon Model K-26-H, Type 2251 or 2253. Optional dual horns K-33-S, Type 2067 (low), 2068 (high) blended tone with horn relay.

Horn Type	Current at 6 Volts	Air Gap
K-26-H, 2251, 53	6.5-8.5	.025-.029"
K-33-S, 2067	11-13	.042-.046"
K-33-S, 2068	10-12	.032-.036"

**Horn Relay:**—Delco-Remy Model 271-A.

**Points Close:**—2.7-4.0 volts.

**Contact Gap:**—.020". **Air Gap:**—.015" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

**Bore:**— $3\frac{1}{4}$ ". **Stroke:**— $3\frac{3}{8}$ ".

**Displacement:**—257.1 cubic inches.

**Rated Horsepower:**—33.8 (S.A.E.)

**Developed Horsepower:**—110 HP. at 3600 RPM.

**Compression Ratio:**—6.2-1 Std. cast-iron head.

**Compression Pressure:**—152 lbs. at 1000 RPM. or 104-114 lbs. at 310 RPM. (cranking speed).

**NOTE:**—New steel-asbestos cyl. head gasket used. Cannot be re-used. Use new gasket.

**Vacuum Reading:**—17" min. at 6 MPH.

**PISTONS:**—Aluminum alloy, "T" slot, Cam Ground type with Electrolite (hard oxide) bearing surface.

**Weight:**—15.75 ozs. (stripped). **Length:**—3 15/16".

**Removal:**—Pistons and rods removed from above. **Clearance:**—.0013-.0018" at skirt.

**Replacement Pistons:**—Finished pistons (with fitted pins) furnished .003", .005", .010", .015", .030" oversize.

**Fitting New Pistons:**—With pin removed, check clearance by inserting .002" feeler  $\frac{1}{2}$ " wide between piston and cylinder wall on camshaft side at right angles to pin hole. Invert piston with slot away from camshaft. 4-11 lbs. pull required to withdraw feeler with piston and block at 70°F.

**Installing Pistons:**—Mark 'V-S' on head toward valves (slot away from valves). Pin hole offset  $\frac{3}{32}$ " to left.

**ENGINE**

C NTINUED FR M PRECEDING PA E

**PISTON RINGS:**—Two compression, two oil control rings per piston above pin. Oil ring grooves drilled with eighteen 5/32" oil drain holes. Ring oversizes—.010", .020", .030".

Ring	Width	End Gap	Side Clearance
Comp. ('37)	.1235-.1240"	.009-.014"	.002-.0035"
Comp. ('38)	.0930-.0935"	.009-.014"	.002-.0035"
Oil (all)	.1860-.1865"	.009-.014"	.001-.0025"

**NOTE**—Install '37 comp. ring with groove down. '38 comp. ring taper faced (greater diameter at bottom). Install '38 comp. ring with TOP mark up.

**PISTON PIN:**—Diameter—.8554-.8557". Lgth—2 31/32". Pin locked in piston boss by lock screw. Free end slotted to allow boss to slide freely on pin. Pin Fit in Piston—.0001" loose to .0002" tight in plain boss end, .0002-.0005" tight in lock boss end. Pin Fit in Rod Bushing—Clearance .0003-.0008". New rod bushings burnished and reamed to inside diameter of .8558-.8562".

Fitting Pins—See Oldsmobile Shop Notes.

**CONNECTING ROD:**—Weight 26.17 oz. Length 7 13/16". Crankpin Journal Diameter—2.123-2.124".

**Lower Bearing:**—Removable steel-backed, babbit. Clearance—.001-.003" ('37), .0005-.002" ('38). Sideplay—.0055-.0105".

**Bearing Adjustment:**—None. Replace bearings.

**Installing Rods:**—Oil split hole in lower bearing upper half must be toward camshaft. Grooves in rod and cap bolt boss must be on same side as part number. **NOTE**—Ground bolts used for rod & cap assembly.

**CRANKSHAFT:**—5 bearing, integral counterweights. Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.603-2.604"; #4, 2.6655-2.6665"; #5, 2.6855-2.6865".

**Bearing Type:**—Interchangeable steel-backed, babbit-lined. Bearing halves interchangeable (upper and lower). Clearance—.001-.003" ('37), .0005-.002" ('38).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. See Oldsmobile Shop Notes for main bearing and oil seal data.

**End Thrust:**—Taken by #1 (front) bearing. A bronze thrust plate .1205-.1245" thick is assembled at each end of bearing and is dowelled to bearing cap. Steel thrust collar between front bronze thrust plate and crankshaft gear. Endplay—.004-.008".

**CAMSHAFT:**—5 bearing, non-adjustable chain drive. Journal Diameters—#1, 2.0600-2.0595"; #2, 1.9975-1.9970"; #3, 1.9350-1.9345"; #4, 1.8725-1.8720"; #5, 1.8100-1.8095".

**Bearing:**—Bronze bushings. Clearance—.002-.004".

**End Thrust:**—Spring and plunger in front end of camshaft and steel plate on chain case cover.

**Timing Chain:**—Link-Belt. Width 1". Pitch .500" Length 23 1/2" or 47 links.

See Oldsmobile Shop Notes for front end assembly dismantling for timing chain removal.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers. Use Sprocket Gauge HM-408-0.

**VALVES:**—

	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 51/64"
Exhaust	1 27/64"	.3410-.3418"	5 51/64"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.300"	.0012-.0032"
Exhaust	45°	.300"	.00225-.00425"

**Valve Guides:**—Cast-iron. Exhaust guide taper counterbored on inside diameter for 3/8" at top. Install 3/8" below top of block. Ream inside diam. to .34375-.34475" ('37), .34425-.34525" ('38). Lgth. 3 15/32".

**NOTE**—1939 type valve guides (1/4" shorter) can be used. Use 1939 installation data if these guides used. See 1939 Oldsmobile 6 or 8 pages following for data.

**Valve Springs:**—Free length 2 5/8". Interchangeable for either valve and on 6 and 8. Spring dampers used inside of spring at top.

	Valve Closed	Valve Open
1937	46 lbs. at 2 9/32"	94 lbs. at 1 31/32"
1938	50 1/2 lbs. at 2 1/4 "	95 1/2 lbs. at 1 15/16"

**Valve Lifters:**—Mushroom type. Length 2 1/2". Head diam. 1 1/4". Body diam. .6235-.6240". Clearance .0003-.0007". Furnished std.. .002", .005" oversize.

**VALVE TIMING**

**Tappet Clearance:**—.008" Int., .011" Exh., warm. See Oldsmobile Shop Notes for Hood Side Panel Removal (1937), Fender Plate Removal (1938).

**Valve Timing:** See Camshaft Setting above.

**Intake Valves:**—Open TDC. Close 35° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 10° ATDC.

**To Check Timing:**—Check tappet clearance #1 intake valve. This valve should open with piston on top dead center (.000"), when flywheel mark "TDC/" (NOT steel ball insert) lines up with pointed end of the inspection hole cover screw (left side).

**LUBRICATION**

**LUBRICATION:**—Pressure type. Gear type oil pump located on right side of crankcase.

**NOTE**—New gasket aligned with oil holes in block must be used when oil pump assembled to engine.

**Normal Oil Pressure:**—25-30 lbs. ('37), 28-33 lbs. ('38).

**Oil Pressure Regulator:**—On oil pump cover. Operates at 27 lbs. Not adjustable.

**Crankcase Capacity:**—7 quarts, refill.

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

See Water Pump Section for complete data.

**Removal:**—Remove fan belt, three pump mounting capscrews, lift fan and pump assembly off.

**Thermostat:**—Harrison. In cyl. hd. water outlet.

**Setting:**—Start to open 145°F. ('37), 152°F. ('38).

**Water Capacity:**—20 qts. ('37), 21 qts. ('38).

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 10A7. Single plate, dry disc type. Model No. 897 stamped on Clutch Cover. See Clutch Section for complete data.

**Facings:**—Molded-woven, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness 1/8".

**NOTE**—Special spiral-grooved facings used with Self-Shifting Transmission (not interchangeable). Pedal Adjustment—Free travel 3/4-1". Free adjustable link at release lever end. Loosen locknut, adjust lever length.

**Removal:**—Remove transmission (see Transmission Removal below), take off clutch underpan, take out clutch cover mounting screws evenly, remove assembly from below.

**NOTE**—When mounting clutch, use two screws with short thread and longer shanks in second hole on either side of locating dowel.

**TRANSMISSION**

**TRANSMISSION:**—Own—Helical gear type with Synchro Mesh on second and high gears.

See Transmission Section for complete data.

**Removal:**—Disconnect front propeller shaft at transmission, remove 4 bolts at bearing support, slide bearing assembly to left, take off clutch underpan, remove mounting bolts, withdraw transmission.

**SELF-SHIFTING TRANSMISSION**

**SELF-SHIFTING TRANSMISSION:**—Optl. (all models). See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics—Model 2C, roller bearing type, three used.

See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—See Oldsmobile Shop Notes for servicing data.

**REAR AXLE**

**REAR AXLE:**—Own make. Semi-floating, spiral bevel gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—4.37-1 or 4.33-1 Std. '37, 4.37-1 Std. '38, 3.55-1 Auto. Transmission. 4.62-1 Optional (all).

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Remove wheel, drum, free backing plate (4 nuts), static collector, pull bearing retainer away from backing plate without disturbing plate, pull shaft and bearing (Tool J-942), secure plate with one nut. Disconnect rear universal joint, remove ten capscrews freeing carrier from housing, lift carrier out. **NOTE**—Left wheel studs have reverse threads. Wheel Bearing Adjustment—None (shielded type).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco—Model 1947-A, B (front) 1713-E, F (rear). Double acting, piston type.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**NOTE**—Level frame by inserting 2" blocks between upper support arm and frame. Check following:

**Kingpin Inclination:**—4° 51' 10" crosswise.

**Caster:**—1/4-1° pos. ('37), 0-3/4° reverse ('38).

**Camber:**—1/8-1°. Adjustable. Set Caster first.

**Toe In:**—1/8-3/16". Adjust length of tie rods.

**Steering Geometry:**—Inner w. 22 1/2-23 1/2°. Outer 20°.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Roller type with center steering.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, Duo-Servo, single anchor type. Hand lever applies rear brakes.

See Brake Section for complete data.

**Wheel Cylinders:**—Diam. Front 1 3/32", Rear 1". Drum—Cast-iron. Diameter—12".

**NOTE**—Drum turn down limit .030" cut.

**Lining:**—Prim.-molded. Sec.-woven & compressed. Width 1 3/4". Thick 3/16". Length (P) 10 3/32". (S) 12 61/64"

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

**ENGINE HOOD NOTE:**—To raise hood, turn latch handle at bottom of grille, raise hood slightly, release safety catch.

**FRONT END SHEET METAL ASSEMBLY REMOVAL:**—May be removed as a unit to facilitate work on valves as follows: Drain radiator, disconnect radiator hose, disconnect wires at headlamp junction block, free wiring harness from clips on radiator core and along side panel. Take out cap screw in hood ledge filler plate on top of frame (each side), 4 hood ledge filler plate-to-body cap screws (each side), disconnect fender to frame brace at fender, remove nut from center radiator support, remove bumper, remove sheet metal and radiator core assembly. Replace in same manner.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left hand frame side member under hood. For each model and plant as follows:

Model 'F' 60

Lansing, Mich. .... F-663001 Up  
South Gate, Calif. .... CF-511001 to CF-540000  
Linden, N. J. .... LF-551301 to LF-600000

Model 'G' 70

Lansing, Mich. .... G-300001 Up  
South Gate, Calif. .... CG-10001 to CG-100000  
Linden, N. J. .... LG-100001 to LG-300000

**ENGINE NUMBER:**—First number (F-60) F-905501, (G-70) G-10001. On boss on left side of cylinder block behind water pump.

**Self-shifting Transmission Cars:**—On these cars, engine number prefix is FA (F-60), GA (G-70) instead of F or G.

### TUNE-UP

**COMPRESSION:**—Ratio—6.2-1 (Std. F-60), 6.1-1 (Std. G-70), 5.67-1 (Optl. F-60), 5.61-1 (Optl. G-70). Pressure—151 lbs. (F-60 Std. Hd.), 146 lbs. (G-70 Std. Hd.), 120 lbs. (All—Optl. LC. Hd.) at 1000 RPM, or approximately 102-112 lbs. at cranking speed for Std. heads.

**VACUUM READING:**—Steady 17" min. at 6 MPH idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** AC Type 45. 14 mm. Metric. Gaps—.040".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—Starts at 250 RPM. Maximum 14° at 1850 RPM. (Distr. degrees & RPM).

Vacuum Advance—10° (distr.) 15½-18½" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Flywheel mark (steel ball) aligned with insp. hole pointer (left side housing).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw ½-1½ turns open. Idle speed 6 MPH (or 3rd gear with Self-Shift. Trans.). Float Level—¾" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

Accelerating Pump—Lower Hole (Normal Setting).

Fuel Pump Pressure: 3¼ lbs. ('AH'), 4 lbs. ('AJ' Comb.).

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic coil type. See that valve operates freely. When installing thermostatic coil, wind coil up 105° (approx. ½ revolution) at room temperature.

**VALVES:** See Valve Timing.

Tappet Clearance .008" Intake, .011" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy No. 1116266 (F-60), 1116267 (G-70). Switch connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792. Key Series 8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. On dash.

**Ignition Current:**—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1865972.

**Capacity:**—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 647-F. Single breaker 6 lobe cam, full automatic advance & auxiliary vac. spark control and Octane Selector adjustment.

**Breaker Gap:**—.020". Limits .018-.024".

**Cam Angle or Dwell:**—35° closed, 25° open (distr.).

**Breaker Arm Spring Tension:**—20 ounces.

**Rotation:**—Counter-clockwise viewed from the top.

### Automatic Advance

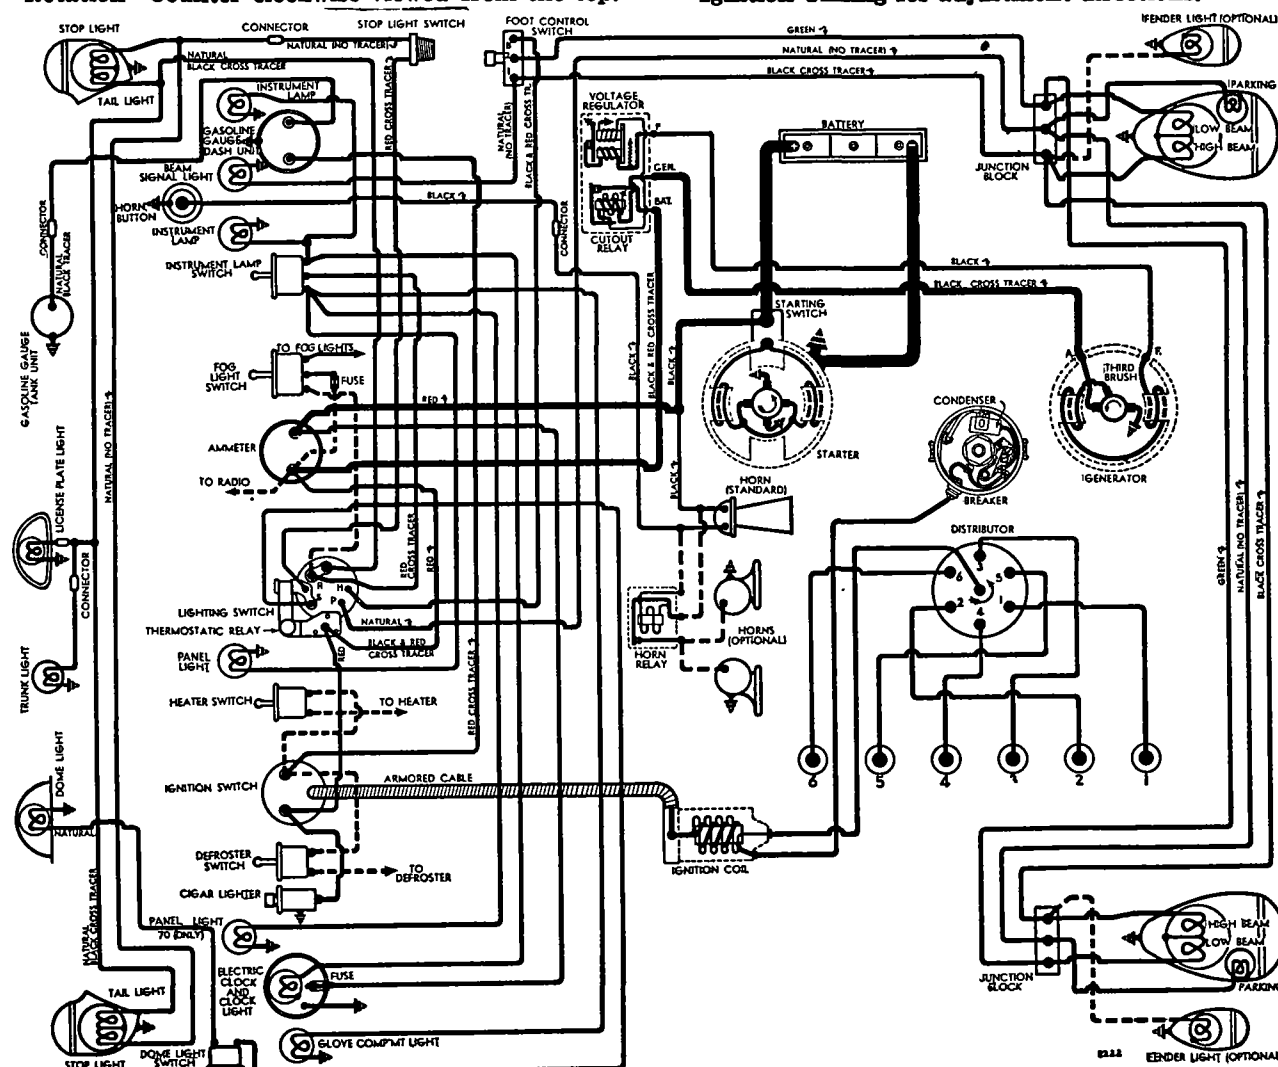

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	3.....	500
3.....	450	6.....	900
14.....	1850	28.....	3700

**Vacuum Spark Control Model 681-P:**—Integral type (mounted on distributor cup, linked to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger travel 3/16" total.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0.....	5-7"
10.....	20.....	15.5-18.5"

**Octane Selector:**—Adjustment at distributor permits 10° advance or retard from center '0' position. See Ignition Timing for adjustment directions.

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard Setting as follows. See Octane Selector for correction dependent on fuel used.

**Flywheel Degrees Piston Position**  
All Engines ..... 0° At TDC.....0000° TDC.

**Timing (Using Synchroscope)**—This method recommended by manufacturer. Clip synchroscope lead to #1 spark plug, direct light on flywheel through inspection hole in left front face of flywheel housing beside starter. Idle engine, loosen hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing mark (steel ball insert in flywheel) appears in line with pointer in inspection hole, tighten clamp bolt. Check Octane Selector setting.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston with steel ball insert in flywheel in line with pointer in inspection hole in left front face of flywheel housing. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open (use timing light connected between ignition terminal and ground and turn on ignition, light will go on as contacts open), tighten clamp bolt. Check Octane Selector setting.

**Octane Selector**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe). Check performance after making adjustment.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Model WA-1 Type 426-S (Std.), 425-S (With Self-shifting Transmission). 1¼", single barrel, downdraft type.

*For complete data, refer to Carburetor Index.*

**Important—Cars with Self-shifting Transmission**—Transmission throttle control lever setting must be checked and adjusted whenever carburetor throttle linkage disconnected or disturbed. *See Oldsmobile Self-Shifting Transmission article in the Transmission Section.*

**Idle Adjustment**—With engine warmed up so that Automatic Choke and Fast Idle inoperative, set throttle lever stopscrew for 6 M.P.H. idle speed. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ½-1½ turns of screw out from inner seated position. Readjust throttle stopscrew for correct idle speed.

**Accelerating Pump Setting**—Pump lever (under dust cover) has three holes for pump link engagement as follows:

**Inner (Min.)**—Normal temperatures and Std. fuel.  
**Outer (Med.)**—Winter temperatures.

**Upper (Max.)**—Extreme cold weather or 1 w-test fuel.

**Fast Idle:**—Integral type. Built-in carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Bend fast idle link so that choke valve opening is ⅜" with throttle valve closed and stopscrew turned in to contact lowest step of fast idle cam (cam revolved so stopscrew against but not on first step of cam).

**Accelerator Linkage Adjustment:**—Must be set for correct 'throttle-cracking' action for starting. To adjust, disconnect starter cable (to prevent cranking), fully depress starting switch pedal, loosen locknut on eccentric pin on starter shift lever, use offset screwdriver and adjust pin to give .030" clearance between throttle stopscrew and fast idle cam (cam in fast idle position), tighten locknut.

**Automatic Choke:**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Notch on thermostatic coil housing should be two notches Rich (clockwise) from reference mark on housing.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528602 oil-wetted type Std., #1528970 heavy duty oil-bath type Optl.

**Fuel Pump:**—AC Type AH #1523844 Std., Type AJ #1523825 combination fuel-and-vacuum type Optl. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC Electric type. #1515358 (dash unit), #1515492 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco Model 15E-1. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—115 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes. Five second voltage—4.25 volts.

**Grounded Terminal**—Negative (—) grounded to starter frame. When radio installed, install ground straps as follows: Transmission to frame. Engine to body at dash. Muffler to frame.

**Dimensions**—Length 19 5/16". Width 4". Height 9".

**Location**—Left side under engine hood.

**Special (Police)**—Delco Model 19E-1. 6 volt, 19 plate, 125 A.H. Capacity. (20 hr. rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.3 minutes. Five second voltage 4.55 volts.

**Grounded Ter. & Location**—Same as 15E-1 above.

## STARTER

**Delco-Remy Model 1107007.** Armature No. 1867897.

**Drive**—Manual pinion shift and overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

**Cranking Engine**—125-135 amperes, 5 volts (summer).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Removal:**—Flange mounted on left front face of flywheel housing. To remove take out flange mounting screws.

**Starting Switch:**—No. 820052. Mounted on starter. Operated by pedal-operated pinion shift lever.

## GENERATOR

### STANDARD

**Delco-Remy Model 1100009.** Armature No. 1866789. Fixed third brush control with external vibrating voltage regulator. Ventilated by fan on drive pulley. Charging Rate Adjustment—See Regulator data below.

**NOTE**—Third brush fixed in place for maximum output and should not be disturbed.

**Maximum Charging Rate**—As given in table below. To check charging rate, connect test ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground, ground 'F' terminal to eliminate regulator action.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	28-30	8.0	3400
Hot	25-28	8.0	3600

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—25 ozs. (main), 17 ozs. (third brush).

**Field Current**—2.3-2.6 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Swing generator out until belt deflection midway between generator and fan pulley is ¾" with light pressure.

## GENERATOR

### SPECIAL EQUIPMENT

**Delco-Remy Model 934-F** (for City Police Cars), 1102657 (State Police). Used with Double Core Type Voltage and Current Regulators 5599 (934-F), 5872 (1102657). *Refer to 1938 Oldsmobile Eight L-38 pages for complete data on these Generators and Regulators.*

**Other Types**—Models 1105851 or 1105856 (State Police). Used with new type Single Core Voltage & Current Regulator. *Refer to 1940 Oldsmobile Eight pages for data on these Generators and Regulators.*

## REGULATOR

**Delco-Remy Model 5858.** "Double Core" Voltage Regulator (No 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on engine side of dash.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.3-6.9 volts, 825 R.P.M. (generator).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020". **Air Gap**—.020" (closed).

**NOTE**—Relay compensated for temperature. Closing voltage same hot and cold.

### Voltage Regulator

**Setting**—7.5-7.9 volts (70°F), 7.4-7.6 volts (150°F). Regulator over-compensated for temperature and must be checked at these points.

**Adjustment**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging current to 8-10 amperes (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end of armature spring slightly for setting shown above.

**CAUTION**—Regulator cover must be in place when tests made. Do not operate generator on open circuit.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Contact Gap—.020". Contact Spring Tension—3.5 ozs.

Air Gap—.063" between armature and center of core with armature down so fibre bumper just touches stop, .010" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused type with upper and lower beams controlled by selector switch on toeboard.

Headlamp Adjustment—With upper beams lighted, aim each headlamp so that hot spot centered on horizontal line drawn 3" below lamp-center height, and on vertical line directly ahead of the lamp-center. Adjusting screw for vertical movement located at bottom of lamp body to rear of lens retainer, screw for sidewise motion under plug on side of lamp body toward engine.

Beam Indicator—At top of speedometer dial. Lighted whenever upper or driving beams in use.

## Switches

Lighting—D-R. No. 1994006.

Beam Selector—D-R. No. 1997002.

Stop Light—D-R. No. 476-U.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instrument	1½	55
Glove Comp., Indicator	1	51
License Plate	3	63
Stop & Tail	21-3	1154
Dom	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—On lighting switch (part of switch assembly). Remains closed with 25 amperes. Opens within 2 minutes with 38 amperes (70° F.).

**HORNS:**—Klaxon, Model K26-H Type 2253 Single horn Std. Model K33-H Type No. 1999503 (low note). 1999504 (high note) blended tone, twin horns Optl. Twin horns operated by relay.

Horn Type	Current (at 6 volts)	Air Gap
2253	6.5-8.5 amperes	.025-.029"
1999503 (low note)	10-12 amperes	.044-.048"
1999504 (high note)	9-12 amperes	.036-.039"

Horn Relay:—D-R. Model 271-A, 1116775.

Contact Gap—.020". Air Gap—.015" (closed).

Closing Voltage—2.3-3.5 volts.

## ENGINE

**F-39 '60' & G-39 '70' ENGINE NOTE:**—Some parts on these engines are not identical and must not be interchanged (though similar in appearance), other parts are identical for both engines as follows:

**Identical Parts:**—Following parts same for F and G engines: Cylinder Blocks, Flywheel, Main Bearings, Pistons, Timing Chain and Sprockets, Valve Springs, Valve Guides, Valve Lifters, Oil Pump, Water Pump, Water Thermostat, and Carburetor.

**Dissimilar Parts:**—Following parts are not identical and must not be interchanged:

Cylinder Head—Marked by numeral cast in head: '218'—F-39, '230'—G-39 (early G-39 heads unmarked). Heads must not be interchanged.

Crankshaft—Marked by letter cast on largest

counterweight: 'F'—F-39, 'G'—G-39. Throw greater on G-39.

Camshaft—Letter 'F' cast in shaft near GM trademark for F-39 camshaft only. G-39 shaft longer and unmarked.

Connecting Rod—Round Boss in center of rod I-beam section on F-39 rod only. G-39 connecting rod ¼" shorter and unmarked (serviced by 'L' rods).

**ENGINE HOOD NOTE:**—To raise hood, turn latch handle at bottom of grille, raise hood slightly and release safety catch.

**OIL PAN REMOVAL:** See Oldsmobile Shop Notes.

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

Bore—3 7/16". Stroke—3 7/8" (F-60), 4 1/8" (G-70).

Displacement—216 cu. ins. (F-60), 229.7 (G-70).

Rated Horsepower—28.4

Developed Horsepower—90 (F-60 Std. Hd.), 85 (F-60 LC), 95 (G-70 Std.), 90 (G-70 LC) at 3400 RPM.

Compression Ratio—8.2-1 (Std. F-60), 8.1-1 (Std. G-70), 5.67-1 (Optl. F-60), 5.61-1 (Optl. G-70).

Compression Pressure—151 lbs. (F-60 Std. Hd.), 148 lbs. (G-70 Std. Hd.), 120 lbs. (All—Optl. LC. Hd.) at 1000 RPM, or approx. 102-112 lbs. at cranking speed. See Oldsmobile Shop Notes for Cylinder Head Servicing.

Vacuum Reading—Steady 17" min. at 6 MPH.

**PISTONS:**—Aluminum alloy, "T" slot, cam ground type with hard oxide bearing surface.

Weight—17.75 ozs. (stripped). Length—4 1/32".

Removal—Pistons and rods removed from above.

Clearance—Top .028". Skirt .0013-.0018".

Replacement Pistons:—Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize (Std. Weight).

Fitting New Pistons:—Insert .002"x½" feeler between piston and cylinder wall on valve side with piston (pin out) inverted and "T" slot on opposite side from feeler. Pull to withdraw feeler must be 4-11 lbs. (at 70° F., low lbs. pull below 70°, high above 70°).

Installing Pistons:—Mark 'V-S' on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

**PISTON RINGS:**—2 compression (tapered, O.D. .001" larger at bottom), 2 oil control rings per piston, all above pin. All rings are coated.

Ring	Width	End Gap	Side Clearance
Compr.	.0925-.0935"	.007-.012"	.001-.003"
Oil	.1860-.1865"	.007-.015"	.001-.0025"

Replacement Rings:—.010", .020", .030" oversize.

**PISTON PIN:**—Diameter—.8554-.8557". Length—3 5/32". Pin locked in one piston boss by lock screw (opposite end slotted). Pin bosses are plated.

Pin Fit in Piston—.0001" loose to .0002" tight (plain boss end), .0002-.0005" tight (lock boss end).

Pin Fit in Rod Bushing—.0003-.0006" clearance.

See Oldsmobile Shop Notes for Pin Fitting directions.

**CONNECTING ROD:**—Weight—27.9 ozs. (F-60), 28.0 ozs. (G-70) complete except for bearing insert.

Length—7 15/16" (F-60), 7 13/16" (G-70).

Crankpin Journal Diameter—2.123-2.124".

Lower Bearing—Removable, steel-backed, babbitt. Clearance—.0005-.0025". Sideplay—.0055-.0105".

Bearing Adjustment:—None. Replace bearings.

Installing Rods:—Oil spit hole at lower end toward valves and grooves on rod and cap bolt bosses (part number side) matched. Special ground bolts used.

**CRANKSHAFT:**—4 bearing. 7 integral counterweights. Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".

Bearings—Removable, steel-backed, babbitt. Upper and lower halves interchangeable except #1 (front). Clearance—.0005-.002" (rear), .001-.003" (all others).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. Tighten bolts to 135-145 ft.lbs. with J-1264 torque wrench. Endplay .004-.008". See Oldsmobile Shop Notes for main bearing removal, end thrust and oil seal data.

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. Journal Diameters—#1, 1.9970-1.9975"; #2, 1.9345-1.9350"; #3, 1.8720-1.8725"; #4, 1.8095-1.8100".

Bearings—Bronze bushings. Clearance .0015-.0035".

End Thrust:—Spring-loaded steel plunger in front of camshaft bearing against steel plate on chain cover.

Timing Chain:—Whitney #4112239. Width 1". Pitch .500". Length 47 links or 23½". See Oldsmobile Shop Notes for Front End Sheet Metal Assembly Removal.

Camshaft Setting:—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (Gauge J-1248, F-60; HM-408-0, G-70).

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 51/64"
Exhaust	1 27/64"	.3410-.3418"	5 51/64"

Seat Angle Lift:	(F-60)	(G-70)	Stem Clearance
Intake	30°	286°	.303"
Exhaust	45°	298°	.313"

Valve Guides:—Length 3 7/32" (¼" shorter at top over '38. May be used on '37 and '38 models). Press guides in so top end ¼" below top of block (Tool J-1042). Ream to .34425-.34525".

Valve Springs:	Free Length	2 3/8"	Damper used in top of each spring.
Valve Closed	50½ lbs.	2 1/4"	
Valve Open	95½ lbs.	1 15/16"	

Valve Lifters:—Mushroom type. Body Diam. .6235-.6240". Serviced by installing lifters furnished .001", .0015", .002", .005", .010" O.S. Clearance .0005-.0008".

NOTE—Lifter holes have bearing-lized finish. Fit lifters without reaming holes wherever possible.

## VALVE TIMING

Tappet Clearance:—.008" Intake, .011" Exh. hot. Valve Timing:—See Camshaft Setting above.

## F-60

Intake Valves—Open 5° BTDC. Close 30° ALDC.

Exhaust Valves—Open 50° BLDC. Close 5° ATDC.

## G-70

Intake Valves—Open 5° BTDC. Close 45° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—Set tappet clearance #1 intake valve at .0124". This valve should open with piston 5° or .0074" (F-60), .0163" (G-70) before top dead center when a point on the flywheel approximately 2 teeth before TDC mark (steel ball insert) lines up with pointer (inspection hole left front face of housing). Reset tappet clearance at .008" hot.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump on right side of crankcase. See Oldsmobile Shop Notes for data.

Normal Oil Pressure—28-33 lbs. Regulator On pump cover. Opens at 27 lbs. Not adjustable.

Crankcase Capacity—5 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity—17 quarts.

**Water Pump:**—Packless, sealed bearing type.

*See Water Pump Section for complete data.*

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Starts to open at 152° F. Fully open 173° F.

**Temperature Gauge:**—AC #1510796 Std. #1510830 RHD.

*See Miscellaneous Section for complete data.*

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6 (G-39 '70' up to Eng. No. G-15957), Model 9A7 (All F-39 '60', G-39 '70' after Eng. No. G-15957). Single plate, dry disc type. Assembly No. 895 (9A6), #924 (9A7) stamped on cover. *See Clutch Section for complete data.*

*See Oldsmobile Shop Notes for data on late 1940 type Clutch Release Bearing with Lubrication Fitting.*

**Facings:**—Molded-woven, 2 required. Inside Diam. 5½" (First G-70), 6" (Later G-70, F-60 with S-S Trans.), 6¼" (F-60 Std. Trans.). Outside Diam. 9" (F-60 Std. Trans.), 9¼" (all others). Thickness .125"

**Adjustment:**—Pedal free movement 1-1½" (adjusting clevis and locknut on link at clutch fork).

**NOTE:**—Arm on auxiliary shaft has 2 holes for pedal pushrod link. Use rear hole only.

**Removal:**—Remove transmission (see data below), mark clutch and flywheel, take out six mounting screws in clutch cover flange. **NOTE:**—Install two mounting screws with long shank in second hole on each side of locating dowel when installing clutch.

## TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with new remote shift control. *See Transmission Section for complete data.*

**Transmission Control:**—Oldsmobile 'Handi-shift' type. *See Transmission Section for complete data.*

**Removal:**—Disconnect lower control rod at transmission, disconnect selector cable from cable anchor bracket, unscrew cable from shaft, remove selector shaft lever (with helper springs) and speedometer cable. Remove propeller shaft (disconnect rear U-joint, pull shaft out), remove clutch housing underpan (and reinforcing plate on G-39) for access to 2 lower transmission mounting bolts and nuts.

*See Oldsmobile Shop Notes for re-inforcing plate data.*

## SELF-SHIFTING TRANSMISSION

**SELF-SHIFTING TRANSMISSION:**—Optl. (all models).

*See Transmission Section for complete data.*

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 2C. Roller bearing type, 2 used (3 on G-70 with Optl. S-S Trans.).

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—On G-70 with Optl. S-S Trans. only. *See Oldsmobile Shop Notes.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with torque taken through 2 support arms.

*See Rear Axle Section for complete data.*

**Ratio:**—4.3-1 Std. 3.636-1 Self-Shift Tr. 4.55-1 Mt.

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, (do not disengage spline joint at transmission), remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, brake drum, backing plate mounting nuts, static collector, loosen bearing retainer (do not allow backing plate to shift to damage brake line). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace one backing plate nut.

**Wheel Bearing Adjustment:**—None (sealed type).

**Rear Suspension:**—Quadri-coil type (support arms).

*See Rear Axle Section for complete data.*

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front—Model 1947-C (right), 1947-D (left). Rear—1751-U (right), 1751-T (left). Double acting, hydraulic type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4°51'10".

**Caster:**—0-¾° reverse.

**Camber:**—⅛° to 1°. Adjustable.

**Toe In:**—⅛-3/16". Adjust each end tie rod.

**Steering Geometry (Toe out on turns):**—Inner wheel turned 23° plus or minus ½°. Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller type with steering linkage with idler arm on right frame rail.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast-iron. Diameter 11".

**Lining:**—Molded. Width 1¾". Thickness 3/16".

**Length:**—Primary Shoe 9 11/32". Secondary 11 31/32".

**Clearance:**—.015" both ends of secondary shoe.

**Hand Brake:**—See Service Brakes above.

**ENGINE HOOD NOTE:**—To raise hood, turn latch handle at bottom of grille, raise hood slightly, release safety catch.

**FRONT END SHEET METAL ASSEMBLY REMOVAL:**—May be removed as a unit to facilitate work on valves as follows: Drain radiator, disconnect radiator hose, disconnect wires at headlamp junction block, free wiring harness from clips on radiator core and along side panel. Take out capscrew in hood ledge filler plate on top of frame (each side), 4 hood ledge filler plate-to-body capscrews (each side), disconnect fender to frame brace at fender, remove nut from center radiator support, remove bumper, remove sheet metal and radiator core assembly. Replace in same manner.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—For each plant as follows: L-228201 Up (Lansing, Mich.), CL-189001 to CL-195000 (South Gate, Calif.), LL-199001 to LL-212000 (Linden, N.J.). Stamped on left hand frame side member under hood.

**ENGINE NUMBER:**—First number L-316001 (cars with Self-shifting transmission have prefix 'LA' instead of 'L'). Stamped on boss on left side of cylinder block behind water pump.

## TUNE-UP

**COMPRESSION:**—Ratio—6.2-1 Std., 5.8-1 Optl.

Pressure—152 lbs. (Std Hd.), 125 lbs. (Optl. LC. Hd.) at 1000 R.P.M. or approximately 104-114 lbs. at cranking speed for Std. head.

**VACUUM READING:**—Steady 17" min. at 6 MPH. idling speed.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type 45. 14 mm. Metric. Gaps—.030".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle—31° Closed.

Automatic Advance—15° max. at 2000 RPM (distr.).

Vacuum Advance—7½° (distr.) with 14-17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Flywheel mark (steel ball) aligned with insp. hole pointer (left side housing).

CAUTION—Time #6 cylinder on this engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle screws ½-1¼ turns open. Idle speed 6 MPH (or 3rd gear Self-Shift. Trans.).

Float Level—¾" from top of float to cover with needle valve seated.

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic coil type. See that valve operates freely. When installing thermostatic coil, wind coil up 160° or slightly less than ½ revolution at room temperature.

**VALVES:** See Valve Timing.

Tappet Clearance .008" Intake, .011" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy No. 1116267. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 45792. Key Series—3000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. On dash.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy No. 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110803. Single breaker, 8 lobe cam, full automatic advance with auxiliary vacuum spark control and Octane Selector adjustment.

Breaker Gap—.015". Limits .0125-.0175".

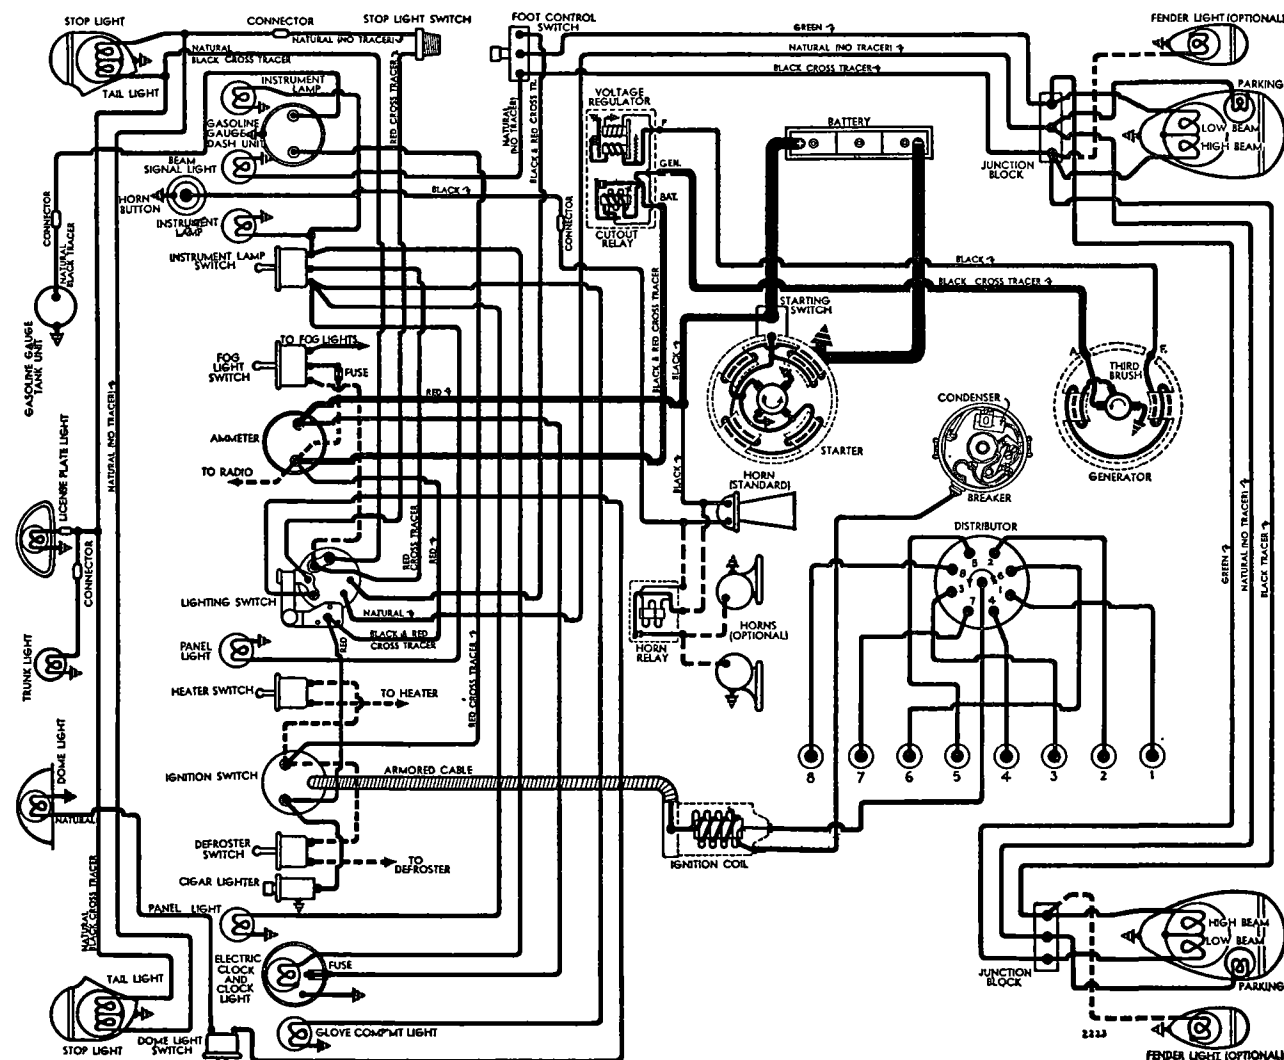

Cam Angle or Dwell—31° closed, 14° open (distr.).

Breaker Arm Spring Tension—22 ounces.

Rotation—Counter-clockwise viewed from the top.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	2.5	600
3.5	500	7	1000
15	2000	30	4000

**Vacuum Spark Control Model 681-R**—Integral type (mounted on distributor cup, linked to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger travel 11/64" total.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG).
Start	0	5-7"
7.5	15	14-17"

**Octane Selector**—Adjustment at distributor. Permits 10° advance or retard from center '0' position. See Ignition Timing for adjustment directions.

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting as follows. See Octane Selector for correction dependent on fuel used.

	<b>Flywheel Degrees</b>	<b>Piston Position</b>
All Engines	2° BTDC	.002" BTDC

**NOTE**—Flywheel timing mark (steel ball insert) is for #6 cylinder (#1 cylinder not used or marked). **Timing (Using Synchroscope)**—This method recommended by manufacturer. Clip synchroscope lead to #6 spark plug, direct light on flywheel through inspection hole in left front face of flywheel housing beside starter. Idle engine, loosen hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing mark (steel ball insert in flywheel) appears in line with pointer in inspection hole, tighten clamp bolt. Check Octane Selector setting.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #6 piston with steel ball insert in flywheel in line with pointer in inspection hole in left front face of flywheel housing. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open (using timing light connected between ignition terminal and ground and turn on ignition, light will go on as contacts open), tighten clamp bolt. Check Octane Selector setting.

**Octane Selector**—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe). Check performance after making adjustment.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter WDO Type 389-S, 1 1/4" dual, downdraft, Vacuum type. *For complete data, refer to Carburetor Index.*

**Important**—Cars with Self-shifting Transmission—Transmission throttle control lever setting must be checked and adjusted whenever carburetor throttle linkage disconnected or disturbed. See *Oldsmobile Self-Shifting Transmission* article in the *Transmission* Section.

**Idle Adjustment**—With engine warmed up so that Automatic Choke and Fast Idle inoperative, set throttle lever stopscrew for 6 MPH. Idle speed (high gear—std. transmission, 3rd. gear—self-shifting transmission). Turn idle adjusting screw for each barrel (two screws—adjust in succession) in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 1/2-1 1/4 turns of the screw out from the inner seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Not adjustable.

**Fast Idle:**—Integral type. Built-in carburetor.

*For complete data, refer to Carburetion Equip. Index.* **Setting**—Turn fast idle screw in until .030" throttle opening secured with choke valve closed and screw contacting highest step of fast idle cam (with throttle stopscrew set for 6 MPH. hot or slow idle speed, clearance between end of screw and stop on carburetor body should be .030").

**Accelerator Linkage Adjustment:**—Must be set for correct 'throttle-cracking' action for starting. To

adjust, disconnect starter cable (to prevent cranking), fully depress starting switch pedal, loosen locknut on eccentric pin on starter shift lever, use offset screwdriver and adjust pin to give .070" clearance between throttle lever stopscrew and stop on carburetor body (with fast idle screw contacting highest step of fast idle cam in fast idle position), tighten locknut.

**Automatic Choke:**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Choke Setting**—Set at center index mark.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528974 oil-wetted type Std. Heavy duty oil-bath type Optl.

**Fuel Pump:**—AC Type AJ #1523895 Combination fuel-and-vacuum pump mounted on special adapter, AC #1523903, which has additional operating linkage. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC Electric type. #1515358 (dash unit), #1515492 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Delco Model 17E-1. 6 volt, 17 plate, 115 ampere hour capacity (20 hour rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.4 volts.

**Grounded Terminal**—Negative (—) grounded to starter frame. When radio installed, install ground straps as follows: Transmission to frame. Engine to body at dash. Muffler to frame.

**Dimensions**—Length 19 5/16". Width 4". Height 9".

**Location**—Left side under engine hood.

**Police Battery**—Delco Model 19E-1. 6 volt, 19 plate, 125 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Grounded Ter. & Location**—Same as 17E-1 above.

## STARTER

**Delco-Remy Model 1107907. Armature No. 1867897.**

**Drive**—Manual pinion shift and overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

**Cranking Engine**—140-150 amperes, 5 v. (summer).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

**Removal:**—Flange mounted on left front face of flywheel housing. To remove take on flange mounting screws.

**Starting Switch:**—No. 820052. Mounted on starter. Operated by pedal-operated pinion shift lever.

## GENERATOR

### STANDARD

**Delco-Remy Model 1100009. Armature No. 1866789.** Fixed third brush control with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—See Regulator data.

**NOTE**—Third brush fixed in place for maximum output and should not be disturbed.

**Maximum Charging Rate**—As given in table below.

To check charging rate, connect test ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground, ground 'F' terminal to eliminate regulator action.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—25 oz. (main), 17 (3rd brush). **Field Current**—2.3-2.6 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Swing generator out until belt deflection midway between generator and fan pulleys is 3/4" with light pressure.

## GENERATOR

### SPECIAL EQUIPMENT

**Delco-Remy Model 934-F** (for City Police Cars), 1102657 (State Police). Used with Double Core Type Voltage and Current Regulators 5599 (934-F), 5872 (1102657). *Refer to 1938 Oldsmobile Eight L-38 pages for complete data on these Generators and Regulators.*

**Other Types**—Models 1105851 or 1105856 (State Police). Used with new type Single Core Voltage & Current Regulator. *Refer to 1940 Oldsmobile Eight pages for data on these Generators and Regulators.*

## REGULATOR

**Delco-Remy Model 5858. "Double Core" Voltage Regulator** (No 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on engine side of dash.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.3-6.9 volts, 825 R.P.M. (generator).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" **Air Gap**—.020" (closed).

**NOTE**—Relay compensated for temperature. Closing voltage same hot and cold.

### Voltage Regulator

**Setting**—7.5-7.9 volts (70°F), 7.4-7.6 volts (150°F). Regulator over-compensated for temperature and must be checked at these points.

**Adjustment**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging current to 8-10 amperes (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end of armature spring slightly for setting shown above. **CAUTION**—Regulator cover must be in place when tests made. Do not operate generator on open-circuit.

**Contact Gap**—.020". **Contact Spring Tension**—3.5 oz. **Air Gap**—.063" between armature and center of core with armature down so fibre bumper just touches stop, .010" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused type with upper and lower beams controlled by selector switch on toeboard.

C N T I N U E D O N N E X T P A E

## CONTINUED FR M PRECEDING PAGE

**Headlamp Adjustment**—With upper beams lighted, aim each headlamp so that hot spot centered on horizontal line drawn 3" below lamp-center height, and on vertical line directly ahead of the lamp-center. Adjusting screw for vertical movement located at bottom of lamp body to rear of lens retainer, screw for sidewise motion under plug on side of lamp body toward engine.

**Beam Indicator**—At top of speedometer dial. Lighted whenever upper or driving beams in use.

## Switches

**Lighting**—D-R. No. 1994006.

**Beam Selector**—D-R. No. 1997002.

**Stop Light**—D-R. No. 476-U.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instrument	1½	55
Glove Comp., Indicator	1	51
License Plate	3	63
Stop & Tail	21-3	1154
Dome	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—On lighting switch (part of switch assembly. Remains closed with current of 25 amperes but opens within 2 minutes with current of 38 amperes at 70° F. Not adjustable.

**HORNS**—Klaxon. Model K26-H Type 2253 Single horn Std., Model K33-H No. 1999503 (low note), 1999504 (high note) blended tone, twin horns Optl. Twin horns operated by relay.

Horn Type	Current (at 6 volts)	Air Gap
2253	6.5-8.5 amperes	.025-.029"
1999503 (l w note)	10-12 amperes	.044-.048"
1999504 (high note)	9-12 amperes	.035-.039"

**Horn Relay**—D-R. Model 271-A, 1116775.

**Contact Gap**—.020". **Air Gap**—.015" (closed).

**Closing Voltage**—2.3-3.5 volts.

## ENGINE

**ENGINE HOOD NOTE**—To raise hood, turn handle at bottom of grille, raise hood slightly and release safety catch.

**OIL PAN REMOVAL**: See *Oldsmobile Shop Notes*.

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head.

Bore—3¼". Stroke—3⅞".

Displacement—257.1 cu. ins. Rated HP—33.8.

Developed Horsepower—110 HP. (Std. Hd.), 105 HP. (Optl. L.C. Hd.) at 3600 R.P.M.

Compression Ratio—6.2-1 Std., 5.8-1 Optl.

Compression Pressure—152 lbs. (Std. Hd.), 125 lbs. (Optl. Hd.) at 1000 R.P.M. or approximately 104-114 lbs. at cranking speed for Std. head.

See *Oldsmobile Shop Notes* for cylinder head servicing.

Vacuum Reading—Steady 17" min. at 6 MPH.

**PISTONS**—Aluminum alloy, "T" slot, cam ground type with hard oxide bearing surface.

Weight—15.75 ozs. (stripped). Length—3 15/16".

Removal—Pistons and rods removed from above.

Clearance—Top .026". Skirt .0013-.0018".

**Replacement Pistons**—Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize. Same wt. as std.

**Fitting New Pistons**—Insert .002" x ½" x 12" feeler between piston and cylinder wall on valve side with piston (pin out) inverted and "T" slot on opposite side from feeler. Pull to withdraw feeler must be 4-11 lbs. (piston and block at 70°F.—low lbs. pull below 70°, high lbs. above 70°).

**Installing Pistons**—Mark "V-S" on head to valves (slot away from valves). Pin hole offset 3/32" to left.

**PISTON RINGS**—2 compression (tapered. O.D. .001" larger at bottom), 2 oil control rings per piston, all above pin.

NOTE—Install comp. rings with mark TOP to top.

Ring Width End Gap Side Clearance

Compr. .0925-.0935" .009-.014" .001-.003"

Oil .1860-.1865" .009-.014" .001-.0025"

**Replacement Rings**—.010", .020", .030" oversize.

**PISTON PIN**—Diameter—.8554-.8557". Length 2 31/32".

Pin locked in 1 piston boss by lock screw. Free end slotted (allows boss to slide on pin). Bosses plated.

Pin Fit in Piston—.0001" loose to .0002" tight in plain boss end, .0002-.0005" tight in lock boss end.

Pin Fit in Rod Bushing—Clearance .0003-.0008".

Fitting Pins—See *Oldsmobile Shop Notes*.

**CONNECTING ROD**—Length 7 13/16". Weight 28.0 ozs. (complete except less bearing inserts).

Crankpin Journal Diameter—2.123-2.124".

Lower Bearing—Removable steel-backed, babbitt.

Clearance—.0005-.0025". Sideplay—.0055-.0105".

Bearing Adjustment—None. Replace bearings.

**Installing Rods**—Oil spit hole in lower bearing upper half to valves. Grooves in rod and cap bolt boss on part number side must be matched. Ground bolts used (tighten to 30-35 ft. lbs. with J-1264 torque wrench).

**CRANKSHAFT**—5 bearing. 8 integral counterweights.

Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.603-2.604"; #4, 2.6655-2.6665"; #5, 2.6855-2.6865".

Bearings—Removable steel-backed, babbitt-lined.

Upper and lower halves interchangeable.

Clearance—.001-.003" (#1, 2, 3, 4), .0005-.002" (#5).

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file caps. Tighten bolts to 135-145 ft. lbs. with J-1264 torque wrench. Endplay—.004-.008". See *Oldsmobile Shop Notes* for main bearing removal, end thrust and oil seal data.

**CAMSHAFT**—5 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 2.0600-2.0595"; #2, 1.9975-1.9970"; #3, 1.9350-1.9345"; #4, 1.8725-1.8720"; #5, 1.8100-1.8095".

Bearings—Bronze bushings. Clearance .0015-.0035".

**End Thrust**—Spring-loaded steel plunger in front of camshaft bearing against steel plate on chain cover.

**Timing Chain**—Link-Belt #365. Width 1". Pitch .500".

Length 47 links or 23½". See *Oldsmobile Shop Notes* for front end sheet metal assembly removal.

**Camshaft Setting**—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Gauge HM-408-0).

**VALVES**—Head Diameter Stem Diameter Length

Intake .1 9/16" .3415-.3425" .5 51/64"

Exhaust .1 27/64" .3410-.3418" .5 51/64"

Seat Angl Lift Stem Clearance

Intake .30° .286" .00175-.00375"

Exhaust .45° .313" .00245-.00425"

**Valve Guides**—Length 3 7/32" (¼" shorter at top over '38. May be used on '37 and '38 models). Press guides in so top end ⅞" below top of block (Tool J-1042). Ream to .34425-.34525".

**Valve Springs**—Free length 2⅝". Damper used in top of each spring.

Spring Pressure Length

Valve Closed .50½ lbs. 2 1/4"

Valve Open .95½ lbs. 1 15/16"

**Valve Lifters**—Mushroom type. Body Diam. .6235-.6240". Serviced by installing lifters furnished .001", .0015", .002", .005", .010" O.S. Clearance .0003-.0007".

NOTE—Lifter holes have bearing-ized finish. Fit lifters without reaming hole wherever possible.

## VALVE TIMING

**Tappet Clearance**—.008" Intake, .011" Exh. hot.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open at TDC. Close 35° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 10° ATDC.

These figures correct with tappet clearance of .0124" Intake and .0155" Exhaust.

**Valve Timing Check**—Set tappet clearance #1 intake valve at .0124". This valve should open with piston on top dead center (.000") when flywheel mark "TDC/" (NOT steel ball insert) lines up with pointed end of the inspection hole cover screw in left front face of flywheel housing.

## LUBRICATION

**LUBRICATION**—Pressure (gear type oil pump on right of engine). See *Oldsmobile Shop Notes* for pump data.

**Normal Oil Pressure**—28-33 lbs.

**Oil Pressure Regulator**—On pump. Opens at 27 lbs. Non-adjustable type.

**Crankcase Capacity**—6 quarts.

## COOLING

**COOLING SYSTEM**—Capacity—24 quarts.

**Water Pump**—Packless, sealed bearing type.

See *Water Pump Section* for complete data.

**Thermostat**—Harrison. In cylinder head outlet.

**Setting**—Starts to open 152° F. Fully open 173° F.

**Temperature Gauge**—AC #1510796, 1510830 RHD.

See *Miscellaneous Section* for complete data.

## CLUTCH

**CLUTCH**—Borg & Beck Model 10A7. Cover Assembly No. 897 (up to Eng. No. 318499), #927 (after Eng. No. 318499). Single plate, dry disc type.

See *Clutch Section* for complete data.

See *Oldsmobile Shop Notes* for data on late 1940 type Clutch Release Bearing with Lubrication Fitting.

**Facings**—Moulded-woven, 2 required. Inside Diameter 6" (897), 7" (927), Outside Diameter 10" (all), Thickness .125" (all).

**Adjustment**—Pedal free movement 1-1½" (adjusting clevis and locknut on link at clutch fork).

NOTE—Arm on auxiliary shaft has 2 holes for pedal push rod link. Use front hole only.

**Removal**—Remove transmission (see data below) mark clutch and flywheel, take out six mounting screws in cover flange. NOTE—Install two mounting screws with long shank in second hole on each side of locating dowel when installing clutch.

## TRANSMISSION

**TRANSMISSION:**—Own make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with new remote shift control. *See Transmission Section for complete data.*

**Transmission Control:**—Oldsmobile 'Handi-shift' type. *See Transmission Section for complete data.*

**Removal:**—Disconnect lower control rod at transmission and selector cable from cable anchor bracket, unscrew cable from shaft, remove selector shaft lever (with helper springs) and speedometer cable. Remove propeller shaft (disconnect rear U-joint pull shaft out), remove clutch housing underpan & reinforcing plate for access to 2 lower transmission mounting bolts & nuts, remove 2 mtg. screws at top. *See Oldsmobile Shop Notes for re-inforcing plate data.*

## SELF-SHIFTING TRANSMISSION

**SELF-SHIFTING TRANSMISSION:**—Optional. *See Transmission Section for complete data.*

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Type 2C. Roller bearing type. 2 used (3 with Self-Shift Trans.).

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—On cars with Self-Shift trans. *See Oldsmobile Shop Notes for data.*

## REAR AXLE

**REAR AXLE:**—Own make. Semi-floating, hypoid gear type with torque taken through 2 support arms.

*See Rear Axle Section for complete data.*

**Ratio:**—4.3-1 Std. 3.636-1 Self-Shift Tr. 4.55-1 Mt.

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, (do not disengage spline joint at transmission), remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Hoist rear of car, remove wheel, brake drum and 4 nuts securing backing plate, remove static collector, and loosen bearing retainer (avoid shifting backing plate so as not to damage brake line). Pull shaft (Puller J-942).

Do not drag shaft on seal. Secure backing plate with one nut. **Wheel Bearing Adjustment:**—None.

**Rear Suspension:**—Coil springs with 2 support arms. *See Rear Axle Section for complete data.*

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front—Model 1947-C (right), 1947-D (left). Rear—1751-U (right), 1751-T (left). Double acting, hydraulic type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4°51'10".

**Caster:**—0-3/4° reverse.

**Camber:**—1/8-1°. Adjustable.

**Toe In:**—1/8-3/16". Adjust each tie rod.

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 23° plus or minus 1/2°. Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller type with steering linkage with idler arm on right frame rail. *See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums:**—Cast-iron. Diameter 12".

**NOTE:**—Drum turn down limit .030" cut.

**Lining:**—Primary—molded. Secondary—woven and compressed. Width 1 3/4". Thickness 3/16". Length—Primary 8 27/32" (front), 10 3/32" (rear); Secondary 12 61/64" (all).

**Clearance:**—.010. at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes above.

**HOOD LOCK, FRONT END SHEET METAL ASSEMBLY & OIL PAN REMOVAL:**—See Oldsmobile Shop Notes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left frame side member under hood. 1st No. as follows:

	F-40	G-40
Lansing, Mich.	F-703001	G-355001
Linden, N. J.	LF-558001	LG-108001
South Gate, Calif.	CF-515001	CG-18001

**ENGINE NUMBER:**—First number G-79001 (F & G-40), GR-3001 (RHD). On boss on left side of cylinder block behind water pump. **NOTE:**—Cars with Hydramatic drive carry prefix 'GA' instead of 'G'.

## TUNE-UP

**COMPRESSION:**—Ratio—6.1-1 Std. 5.61-1 Optl. Pressure—146 lbs. (Std. Hd.), 120 lbs. (Optl. LC. Hd.) at 1000 RPM, or approximately 102-112 lbs. at cranking speed (100 RPM Summer) for Std. head.

**VACUUM READING:**—Steady 17" min. at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC Type 45. 14 mm. Metric. Gaps—.040".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed. Automatic Advance—Starts at 250 RPM. Maximum 14° at 1850 RPM. (Distr. degrees & RPM). Vacuum Advance—10° (distr.) with 15½"-18½" vac.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Flywheel mark (steel ball) aligned with insp. hole pointer (left side housing).

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ½-1½ turns open. Idle speed 6 MPH (425 RPM Std. trans., 375 RPM Hydramatic).

Float Level—¾" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

Accelerating Pump—Lower Hole (Normal Setting).

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic coil type. See that valve operates freely. When installing thermostatic coil, wind coil up 105° (approx. 1/3 revolution) at room temperature.

**VALVES:** See Valve Timing.

Tappet Clearance—.008" Int., .011" Exh. warm.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy No. 1116290 (F-40), 1116273 (G-40), 1116289 (G-40 RHD). Switch connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton, B & S No. 85208. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. On dash.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1865972.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 647-F. Single breaker 6 lobe cam, full automatic advance with auxiliary vacuum spark control and Octane Selector.

**NOTE:**—Ground lead #1879140 now used between breaker point plate and housing.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open (distr.).

Breaker Arm Spring Tension—17-21 ounces.

Rotation—Counter-clockwise viewed from above.

## Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	3	500
3	450	6	900
14	1850	28	3700

**Vacuum Spark Control Model 681-P:**—Integral type (mounted on distributor cup, linked to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger travel 3/16" total.

## Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7"
10	20	15.5-18.5"

**Octane Selector:**—Adjustment at distributor permits 10° advance or retard from center '0' position. See Ignition Timing for adjustment directions.

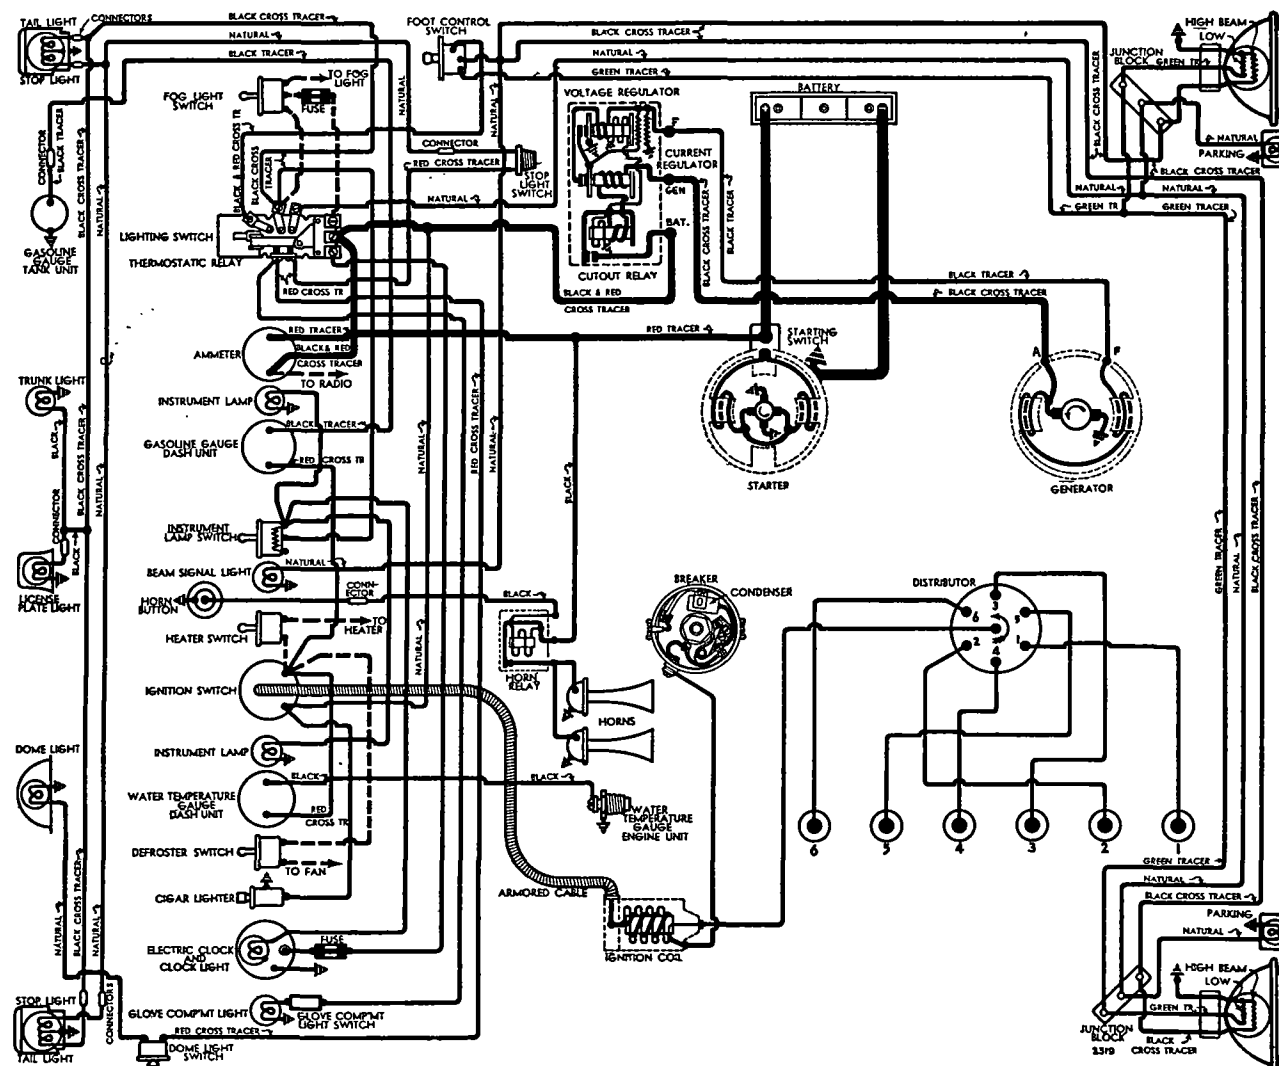

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard Setting as follows. See Octane Selector for correction dependent on fuel used.

## Flywheel Degrees Piston Position

All Engines ..... 0° At TDC ..... 0000° TDC.

**Timing (Using Synchroscope)**—This method recommended by manufacturer. Clip synchroscope lead to #1 spark plug, direct light on flywheel through inspection hole in left front face of flywheel housing beside starter. Idle engine, loosen hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing mark (steel ball insert in flywheel) appears in line with pointer in inspection hole, tighten clamp bolt. Check Octane Selector setting.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston with steel ball insert in flywheel in line with pointer in inspection hole in left front face of flywheel housing. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open (use timing light connected between ignition terminal and ground and turn on ignition, light will go on as contacts open), tighten clamp bolt. Check Octane Selector setting.

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv.' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe). Check performance after making adjustment.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Type WA-1, Models 466-S (Std.), 467-S (with Hydra-matic drive). 1¼" single barrel, downdraft type. #194 cast on face of flange.

*For complete data, refer to Carburetor Index.*

**Hydra-matic Drive Car Note**—Throttle linkage must be adjusted for correct transmission performance.

*See Hydra-Matic Transmission article in Transmission Section for Throttle Linkage Adjustment procedure.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed (high gear—Conv. Trans.), 375 Engine R.P.M. (Hydra-matic drive). Adjust idle adjusting screw until engine fires smoothly (½-1½ turns open—turn screw in for leaner mixture). Readjust idle speed.

**Accelerator Pump Setting**—Pump arm (under dust cover) has three holes for pump connector link engagement. Set as follows:

Lower (med. stroke)—Normal setting.  
Inner (short stroke)—Hot temperature or premium fuels.  
Outer (max. stroke)—Cold temperature or low-test fuels.

**Float Level**—¾" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

**Fast Idle**—Integral type (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Part of Climatic Control. Adjust by bending connecting link offset for ⅝" choke valve opening with stopscrew against (not on) first step of fast idle cam.

**Accelerator Linkage Adjustment**—Must be set for correct 'throttle cracking' action for starting. To

adjust, disconnect starter cable (to prevent cranking), fully depress starter switch pedal, loosen eccentric pin locknut, adjust pin to give .030" clearance between throttle stopscrew and high point of fast idle cam, tighten locknut.

**Automatic Choke**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Choke Setting**—Set coil housing 2 notches rich (466-S), center on index mark (467-S). Choke setting may be varied 2 notches.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1528602 oil wetted type std.

**Fuel Pump**—AC Type AJ #1537094 diaphragm type combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC Electric type. #1515372 (dash unit), #1516206 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Delco Model 15E-1 or 15E-2. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.25 volts.

**Dimensions**—Length 19 5/16". Width 4". Height 9".  
**Grounded Terminal**—Negative (—) grounded to starter motor housing.

**Location**—On left side under hood.

**Police Battery**—Delco Model 19E-1. 6 volt, 19 plate, 130 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.3 minutes. Five second voltage—4.55 volts.

All other data as given above for 15E-1.

## STARTER

Delco-Remy Model 1107007 (Std.), 1107034 (Cars with Hydra-matic Drive), 1107019 (RHD. Cars).

**NOTE**—Model 1107034 starter has provision for Hydra-matic Drive Interlock mounting. *See Oldsmobile Hydra-matic Drive article in Transmission Section for Starter Interlock Adjustment.*

**Armature Number**—1867897 (1107007 & 1107034), 810601 (1107019 RHD. starter).

*See Electrical Equipment Section for recommended correction for burning of starter commutators.*

**Drive**—Overrunning clutch (manual shift on 1107-007 & 1107034), Solenoid pinion shift (1107019).

**Rotation**—Counter-clockwise at commutator end.  
**Cranking Engine**—125-135 amperes, 5 volts at 100 RPM (summer temperatures) for 1107007.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Removal**—Mounted on left front face of flywheel housing. To remove, take out mounting screws.

**Starting Switch (1107007 & 1107034)**—No. 820052. Mounted on starter and operated by starting pedal.

**Starting Switch (1107019)**—Solenoid Switch type 1546 operated by pushbutton switch 1996008.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

Delco-Remy Model 1102664. Armature No. 1879002. (Std.), 1106403 (City Police), 1105851 or 1105856 (State Police). Two brush (shunt) type with voltage and current regulation.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. *See Regulator data following.*

**Maximum Charging Rate**—33 amperes min. (hot or cold), 8.0 volts, 2400 RPM or approx. 20 MPH and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data Cold

	*Amperes	Volts	R.P.M.
1102664	30	8.0	1750
1106403	35	8.0	1040
1105851, 6	40	8.0	1850

\*—Not maximum output—See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes (1102664), 1.77-2.0 amperes (1106403), 1.62-1.82 amperes (1105851, 6) at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out clamp and pivot bolts.

**Belt Adjustment**—Swing generator out until belt deflection midway between generator and fan pulley is ¾" with light pressure on belt.

## REGULATOR

Delco-Remy Model 1118201 (for 1102664 Generator), 1118229 (1106403 Gen.), 1118237 (1105851, 6 Gen.). Single Core Type. Vibrating type voltage and current regulators in single case with Cutout Relay.

**CAUTION**—Check generator for grounded fields before changing regulator settings.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.2-6.7 volts (hot), 600 Gen. RPM.

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sides).

**Air Gap**—.020" (with points just closed).

### Voltage Regulator

**Setting**—7.2-7.4 volts hot (1118201), 7.0-7.2 volts hot (1118229 & 1118237) at operating temperature  
**To Check**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at approx. 3000 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator hot, retard generator speed until cut-out relay points open, then increase speed to approx. 3000 RPM and check hot voltage setting (above) with cover in place.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for Heavy (or other spring) adjustment.  
**Air Gap**—.070" between center of core and armature with contacts just closed.

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## Current Regulator

Setting—34-36 amperes (1118201, 1118229), 38-40 amperes (1118237) hot (at operating temperature).

To Check—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Connect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at hot operating temperature.

To Adjust—Change regulator armature spring tension slightly by bending lower spring hanger for one spring. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for adjustment of other spring.

Air Gap—.080" (check same as Voltage Regulator).

## LIGHTING

LIGHTING:—Headlamps—Guide 'Sealed Beam' type.

For complete data, refer to Electrical Equipment Index. Headlamps Adjustment—Aim upper beam straight ahead with center of hot spot 3" below lamp center height.

Beam Indicator—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

## Switches

Lighting—Delco-Remy 1995009.

Beam Selector—Delco-Remy 1997002, 1997004 (RHD).

Stop Light—Delco-Remy 1997725.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instrument	1½	55
Glove Comp't., Beam Indic.	1	51
License Plate	3	63
Stop & Tail	21-3	1154
Dome	6	81

## MISC. ELECTRICAL

THERMOSTATIC RELAY:—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70°. Not adj.

HORNS:—Delco-Remy Model K-33-H. No. 1999561 (low note), 1999562 (high note). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999561 (Low Note)	19-21 amperes	.047-.052"
1999562 (High Note)	18-20 amperes	.039-.044"

Horn Relay:—Delco-Remy Model 1116775.

Contact Gap—.020". Air Gap—.015" (closed).

Contacts Close—2.75-4.0 volts.

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head.

Bore—3 7/16". Stroke—4 1/8".

Displacement—229.7 cu. ins. Rated HP—28.4.

Developed Horsepower—95 HP (Std. hd.), 90 HP (Optl. LC. hd.) at 3300 RPM.

Compression Ratio—6.1-1 Std., 5.61-1 Optl. LC. hd. Compression Pressure—146 lbs. (Std. hd.), 120 lbs. (Optl. LC. hd.) at 1000 RPM or approximately 102-112 lbs. at cranking speed.

Vacuum Reading—Steady 17" min. at 6 MPH.

See Oldsmobile Shop Notes for Cylinder Head Servicing.

PISTONS:—Aluminum alloy, T-slot, cam ground type with hard oxide bearing surface.

Weight—17.44 ozs. (stripped). Length—4 1/32".

Removal—Pistons and rods removed from above.

Clearance—Top .026". Skirt .0013-.0018".

Replacement Pistons:—Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize. Same wt. as std.

Fitting New Pistons:—Check piston for size with micrometer (pin removed) 90° from pin bosses 3/8" below lower ring groove and 3/8" from bottom of skirt. Insert .002" X 1/2" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler must be 4 to 11 lbs. (piston & block at 70°—low limit below 70°, high above).

Installing Pistons:—Mark 'V-S' on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

PISTON RINGS:—2 compression (tapered, O.D. .001" larger at bottom), 2 oil control rings per piston, all above pin. All rings are coated type.

NOTE—Install compr. rings with mark TOP up.

Ring Width End Gap Side Clearance

Compr. .0925-.0935" .008-.018" .001-.003"

Oil Cont. .1860-.1865" .007-.015" .001-.0025"

Replacement Rings:—.010", .020", .030" oversize.

PISTON PIN:—Diameter—.8554-.8557". Length—3 5/32".

Pin locked in one piston boss by lockscrew (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.

Pin Fit in Piston—.0001" loose to .0002" tight (plain boss end), .0002-.0005" tight (lock boss end).

Pin Fit in Rod Bushing—.0003-.0006" clearance.

See Oldsmobile Shop Notes for Pin Fitting directions.

CONNECTING ROD:—Length—7 13/16". Weight—28.0 ozs. (complete except less bearing inserts).

Crankpin Journal Diameter—2.123-2.124".

Lower Bearing—Removable steel-backed, babbitt. Clearance—.0005-.0025". Sideplay—.0055-.0105".

Bearing Adjustment:—None. Replace bearings.

Installing Rods:—Oil split hole at lower end toward valves and grooves on rod and cap bolt bosses (part number side) matched. Special ground bolts used. See Oldsmobile Shop Notes for Connecting Rod Bolt Nut change and installation data.

CRANKSHAFT:—4 bearing, 7 integral counterweights. Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".

Bearings—Removable, steel-backed, babbitt. Upper and lower halves interchangeable except #1 (front). Clearance—.0005-.002" (rear), .001-.003" (all others).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. Endplay—.004-.008".

NOTE—Undercut bearing cap bolts (#412550) used at No. 3 cap for improved holding capacity. Always install these special cap bolts at #3 bearing.

See Oldsmobile Shop Notes for Main Bearing Removal, End Thrust and Oil Seal data.

CAMSHAFT:—4 bearing. Non-adjustable chain drive.

Journal Diameters—#1, 1.9970-1.9975"; #2, 1.9345-1.9350"; #3, 1.8720-1.8725"; #4, 1.8095-1.8100".

Bearings—Bronze bushings. Clearance .0015-.0035".

End Thrust:—Spring-loaded steel plunger in front end of camshaft bears against steel plate on chain cover.

Timing Chain:—Whitney No. 411239. Width 1". Pitch 500" (1/2"). Length 47 links or 23 1/2".

Camshaft Setting:—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 51/64"
Exhaust	1 27/64"	.3410-.3418"	5 51/64"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.303"	.00175-.00375"
Exhaust	45°	.298"	.00245-.00425"

Valve Guides:—Intake and exhaust guides same. Press guides in so top end 7/8" below top of block (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (no taper).

Valve Springs:—Same spring used on both valves and on Six and Eight engines. Damper used in top of each spring.

Spring Pressure Spring Length

Valve Closed 50 1/2 lbs. 2 1/4"

Valve Open 95 1/2 lbs. 1 15/16"

Valve Lifters:—Mushroom type. Lifter holes in block. Body Diam. .6235-.6240". Furnished .001", .0015", .002", .005", .010" oversize. Clearance—.0005-.0008".

NOTE—Lifter holes have bearing-ized finish. Fit lifters without reaming holes wherever possible.

## VALVE TIMING

Tappet Clearance:—.008" Int., .011" Exh. Engine warm. NOTE—Self-locking tappet screws are used.

See Oldsmobile Shop Notes for Fender Plate removal.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 5° BTDC. Close 45° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .0124" tappet clearance, #1 intake valve should open with piston 5° (.0163") before top dead center when a point on the flywheel approximately 2 teeth before TDC mark (steel ball insert) lines up with pointer (inspection hole on left face of housing). Reset tappet clear. .008" hot.

## LUBRICATION

LUBRICATION:—Pressure (gear type pump on right of engine). See Oldsmobile Shop Notes for Oil Pump data.

Normal Oil Pressure:—28-33 lbs.

Oil Pressure Regulator:—On pump, opens at 27 lbs. Non-adjustable type.

Crankcase Capacity—5 quarts.

## COOLING

COOLING SYSTEM:—Capacity—18 quarts.

Water Pump:—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

Thermostat:—Harrison. In cylinder head outlet.

Setting—Starts to open at 152°F. Fully open 173°.

Temperature Gauge:—AC Electric #1510918 (dash), #1510772 (engine unit).

See Miscellaneous Section for complete data.

## CLUTCH

CLUTCH (STD. TRANS.):—Borg & Beck Model 9A7 with 'Borglite' driven member. Marked #924 on cover. Single plate, dry disc type. New steel and asbestos composition pressure plate baffle used.

See Clutch Section for complete data.

See Oldsmobile Shop Notes for data on late 1940 type Clutch Release Bearing with Lubrication Fitting.

G-40 Note—Steel reinforcing plate (same as 1939)

between clutch housing and underpan used on first 6488 cars. Must be removed to take out clutch. Facings—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 8". O.D. 9 $\frac{1}{4}$ ".  $\frac{1}{8}$ " thick.

**Pedal Adjustment:**—Free travel 1-1 $\frac{1}{2}$ " (adjusting clevis and locknut on link at clutch fork).

**Removal:**—Remove transmission (see data below), mark clutch and flywheel, take out six mounting screws in cover flange. **NOTE**—Install two mounting screws with long shank in second hole on each side of locating dowel when installing clutch.

## TRANSMISSION

**TRANSMISSION (STD.):**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with new remote shift. **G-40 Note**—First 6488 cars use 15" transmission extension (same as '39), later cars 11" extension.

*See Transmission Section for complete data.*

**Transmission Control:**—Oldsmobile 'Handi-shift' type. *See Transmission Section for complete data.*

**Removal:**—Disconnect shift and selector rods and speedometer cable at transmission, remove propeller shaft (disconnect rear U-joint pull shaft out), remove clutch housing underpan (and reinforcing plate if used) for access to 2 lower transmission mounting bolts & nuts, remove 2 mtg. screws at top. *See Oldsmobile Shop Notes for re-inforcing plate data.*

## HYDRA-MATIC DRIVE

**HYDRA-MATIC DRIVE (OPTL.):**—Own Make—Consists of fluid coupling & automatic transmission. *See Transmission Section for complete data.*

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics 2C. Roller bearing. *See Universals Section for complete data.*

**NOTE**—Slip joint formed at rear of transmission ahead of front U-joint (driveshaft 1 piece type).

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with torque taken through 2 support arms.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 (F40), 4.3-1 (G40), 4.55-1 (Optl). Ring gear ratio stamped on top side of carrier.

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, (do not disengage spline joint at transmission), remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Hoist rear end, remove wheel, brake drum, backing plate mounting nuts, static collector and loosen bearing retainer (do not allow backing plate to shift to damage brake line). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace one backing plate nut. **Wheel Bearing Adjustment:**—None.

**Rear Suspension:**—Quadri-coil type (support arms). *See Rear Axle Section for complete data.*

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front—Model 1947-C (right), 1947-D (left). Rear—1754-L (right), 1754-M (left). Double acting, hydraulic types.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4°51'10".

**Caster:**—0- $\frac{3}{4}$ ° negative. Adjustable.

**Camber:**—Negative  $\frac{1}{4}$ ° to Pos.  $\frac{3}{4}$ °. Adjustable.

**Toe In:**—1/16- $\frac{1}{8}$ ". Adjust each tie rod.

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 23°  $\pm$   $\frac{1}{2}$ °. Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller type with steering linkage with idler arm on right frame rail. *See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service, Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinder Bore:**—Front wheel 1  $\frac{3}{32}$ ". Rear 1".

**Drums:**—Cast-iron. Diameter—11".

**Lining:**—Molded. Width 1 $\frac{3}{4}$ ". Thickness 3/16".

**Length:**—Primary Shoe 9  $\frac{11}{32}$ ", Secondary 11  $\frac{31}{32}$ ".

**Clearance:**—.015" both ends of secondary shoe (with primary shoe forced out against drum).

**Hand Brake:**—See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Vacuum Power type. *See Miscellaneous Section for complete data.*

**HOOD LOCK, FRONT END SHEET METAL ASSEMBLY AND OIL PAN REMOVAL:**—See Oldsmobile Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left frame side member under hood near generator. First number L-242001 (Lansing), CL-190501 (Calif.), LL-202001 (Linden, N.J.).

**ENGINE NUMBER:**—On boss on left side of cylinder block behind water pump. First number L-334001, LR-1801 (RHD). NOTE—Cars with Hydramatic Drive carry prefix 'LA' instead of 'L'.

### TUNE-UP

**COMPRESSION:**—Ratio—6.2-1 Std. 5.8-1 Optl. Pressure—152 lbs. (Std. Hd.), 125 lbs. (Optl. L.C. Hd.) at 1000 RPM. or approx. 104-114 lbs. at cranking spd. of 100 R.P.M. (summer temperatures).

**VACUUM READING:**—Steady 17" min. at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type 45. 14 mm. Metric. Gaps—.030".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle—31° Closed.

Automatic Advance—15° max. at 2000 RPM (distr.).

Vacuum Advance—7½° (distr.) with 14-17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Flywheel mark (steel ball) aligned with insp. hole pointer (left side housing). CAUTION—Time #1 cylinder on this engine.

**CARBURETOR:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle screws ½-1¼ turns open. Idle speed 6 MPH (or 3rd gear Hydra-Matic Trans.). Float Level—¾" from top of float to cover with needle valve seated.

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic coil type. See that valve operates freely. When installing thermostatic coil, wind coil up 105° (approx. 1/3 revolution) at room temperature.

**VALVES:** See Valve Timing.

Tappet Clearance .008" Intake, .011" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy No. 1116273, 1116289 (RHD). Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton, B & S No. 85208.

Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. On dash.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy No. 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110802. Single breaker, 8 lobe cam, full automatic advance with auxiliary spark control and Octane Selector adjustment.

NOTE—New ground lead #1879140 used between breaker point plate and housing after first 1250 distributors. This lead cannot be used on earlier cars. For first 1250 distributors and earlier models use longer ground lead #1858574.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° closed, 14° open (distr.).

Breaker Arm Spring Tension—19-23 unces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Start	300	2.5	600
3.5	500	7	1000
15	2000	30	4000

**Vacuum Spark Control Model 681-R**—Integral type (mounted on distributor cup, linked to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger travel 11/64" total.

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7"
7.5	15	14-17"

**Octane Selector**—Adjustment at distributor. Permits 10° advance or retard from center '0' position. See Ignition Timing for adjustment directions.

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

### IGNITION TIMING

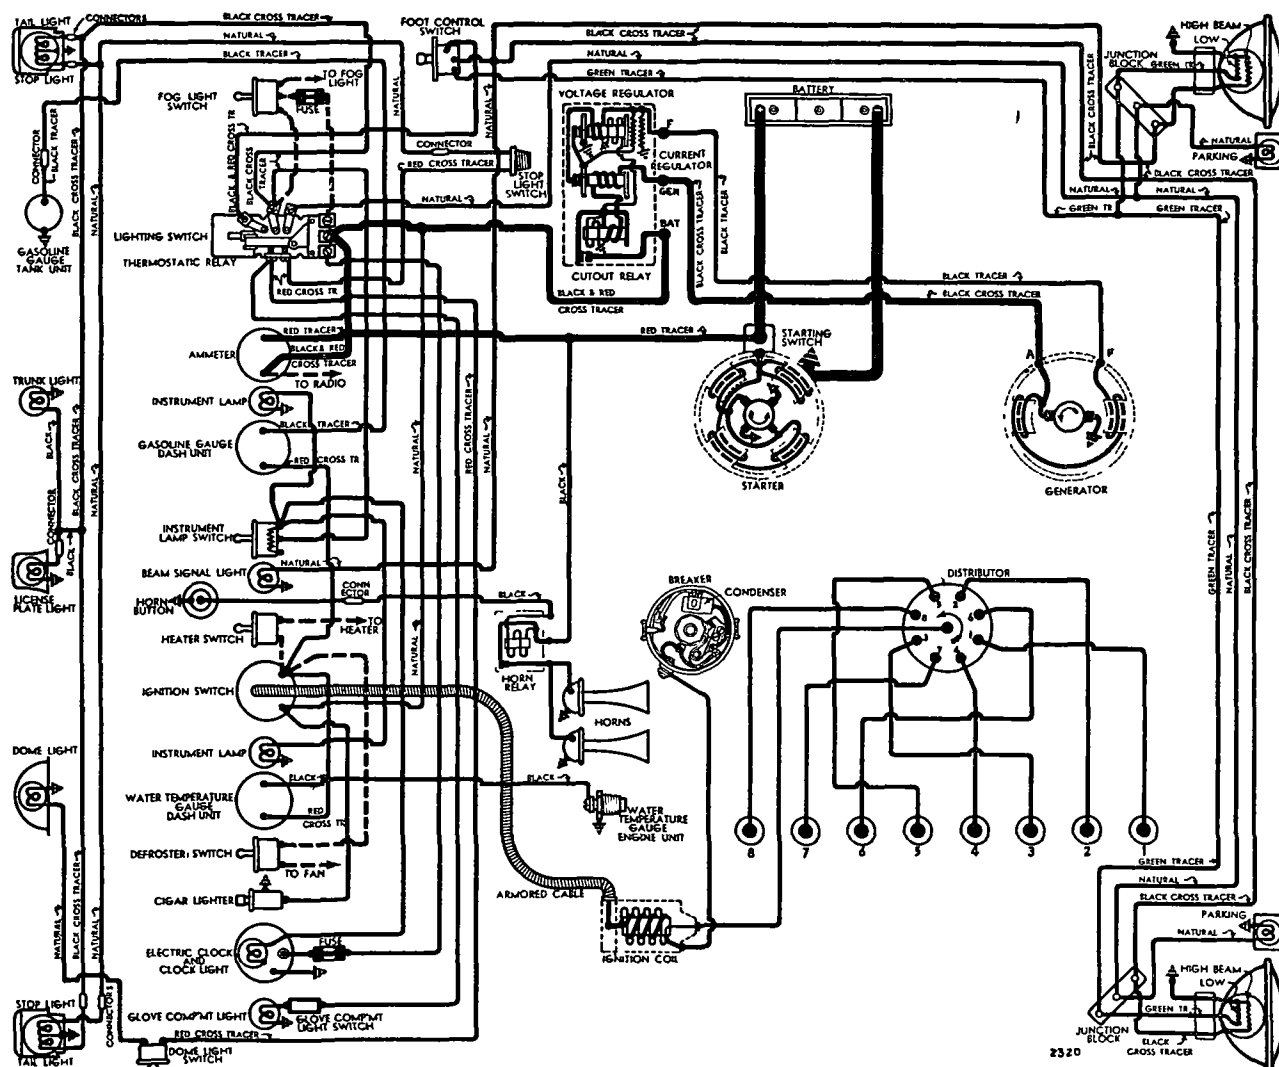

**IGNITION TIMING:**—Standard setting as follows. See Octane Selector for correction dependent on fuel used.

#### Flywheel Degrees Piston Position

All Engines .....2° BTDC.....002° BTDC.

**IMPORTANT**—Timing mark for #1 cylinder, not #6 cylinder as on previous models.

**Timing (Using Synchroscope)**—This method recommended by manufacturer. Clip synchroscope lead to #1 spark plug, direct light on flywheel through inspection hole in left front face of flywheel housing beside starter. Idle engine, loosen hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing mark (steel ball insert in flywheel) ap-

pears in line with pointer in inspection hole, tighten clamp bolt. Check Octane Selector setting.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston with steel ball insert in flywheel in line with pointer in inspection hole in left front face of flywheel housing. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open (using timing light connected between ignition terminal and ground and turn on ignition, light will go on as contacts open), tighten clamp bolt. Check Octane Selector setting.

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe). Check performance after making adjustment.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Type WDO, Model 389-S (Conventional transmission), Model 471-S (with Hydra-matic drive). 1 1/4" dual down-drift type. #192 cast on face of flange.

For complete data, refer to Carburetor Index.

**Hydra-matic Drive Car Note**—Throttle linkage must be adjusted for correct transmission performance.

See *Hydra-Matic Transmission article in Transmission Section for Throttle Linkage Adjustment procedure.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed (high gear—Conv. Trans.), 375 Engine R.P.M. Hydra-matic drive). Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly (1/2-1 1/4 turns open—turn screws in for leaner mixture). Readjust idle speed.

**Float Level**—3/8" from top of float to gasket seat on cover with needle valve seated (invert to check).

**NOTE**—This setting supersedes former setting of 9/32" (also 13/32" setting to correct hard starting).

**Accelerator Pump Setting**—Not adjustable.

**Fast Idle**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index.

**Fast Idle Setting**—Adjust fast idle screw to give .030" clearance between throttle stopscrew and stop (choke valve closed, stopscrew set for 6 MPH idle). **NOTE**—On cars with Hydra-matic drive, setting should be .025".

**Accelerator Linkage Adjustment**—Must be set for correct 'throttle cracking' action for starting. To adjust, disconnect starter cable (to prevent cranking), fully depress starter switch pedal, loosen eccentric pin locknut, adjust pin to give .070" clearance between throttle lever stopscrew and stop on carburetor body (with fast idle screw contacting highest step of fast idle cam—fast idle position), tighten lock screw.

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

**Choke Setting**—Set at center index mark.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1528974 oil wetted type std.

**Fuel Pump**—AC Type AJ #1523895 combination fuel-and-vacuum pump mounted on special adapter, AC #1523903, which has additional operating linkage. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—AC Electric type. #1515372 (dash unit), #1516206 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Delco Model 17E-1. 6 volt, 17 plate, 115 amperes hour capacity (20 hour rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes. Five second voltage—4.40 volts.

**Grounded Terminal**—Negative (—) terminal grounded to starter motor housing.

**Dimensions**—Length 19 5/16". Width 4". Height 9".

**Location**—Left side under engine hood.

**Police Battery**—Delco Model 19E-1. 6 volt, 19 plate, 130 amperes hour capacity (20 hr. rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.3 minutes. Five second voltage—4.55 volts.

All other data as given above for 17E-1.

## STARTER

**Delco-Remy Model 1107907 (Std.), 1107922 (With Hydra-matic Drive).** Armature No. 1867897 (All). See *Electrical Equipment Section for recommended correction for burning of starter commutators.*

**NOTE**—Model 1107922 has provision for Hydra-matic Drive Interlock mounting. See *Oldsmobile Hydra-matic Drive article in Transmission Section for Starter Interlock Adjustment.*

**Drive**—Overrunning clutch (manual pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—140-150 amperes, 5 volts, 100 RPM (summer temperatures).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

**Removal**—Mounted on left front face of flywheel housing. To remove, take out mounting screws.

**Starting Switch**—No. 820052. Mounted on starter. Operated by starting pedal.

## GENERATOR

**Delco-Remy Model 1102664.** Armature No. 1879002. (Std.), 1106403 (City Police), 1105851 or 1105856 (State Police). Two brush (shunt) type with voltage and current regulation.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See *Regulator data following.*

**Maximum Charging Rate**—33 amperes min. (hot or cold), 8.0 volts, 2400 RPM or approx. 20 MPH and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data Cold

	*Amperes	Volts	R.P.M.
1102664	30	8.0	1750
1106403	35	8.0	1040
1105851, 6	40	8.0	1850

\*—Not maximum output—See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes (1102664), 1.77-2.0 amperes (1106403), 1.62-1.82 amperes (1105851, 6) at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out clamp and pivot bolts.

**Belt Adjustment**—Swing generator out until belt deflection midway between generator and fan pulley is 3/4" with light pressure on belt.

## REGULATOR

**Delco-Remy Model 1118201 (for 1102664 Generator), 1118229 (1106403 Gen.), 1118237 (1105851, 6 Gen.), 'Single Core' Type.** Vibrating type voltage and current regulators in a single case.

**CAUTION**—Check generator for grounded fields before changing regulator settings.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.2-6.7 volts (hot), 600 Gen. RPM.

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sides).

**Air Gap**—.020" (with points just closed).

### Voltage Regulator

**Setting**—7.2-7.4 volts hot (1118201), 7.0-7.2 volts hot (1118229 & 1118237) at operating temperature

**To Check**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at approx. 3000 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator hot, retard generator speed until cut-out relay points open, then increase speed to approx. 3000 RPM and check hot voltage setting (above) with cover in place.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for Heavy (or other spring) adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closed.

### Current Regulator

**Setting**—34-36 amperes (1118201, 1118229), 38-40 amperes (1118237) hot (at operating temperature).

**To Check**—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Connect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at hot operating temperature.

CONTINUED ON NEXT PAGE

**CONTINUED FROM PRECEDING PAGE**

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for one spring. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for adjustment of other spring.

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**LIGHTING**:—Headlamps—Guide 'Sealed Beam' type. For complete data, refer to *Electrical Equipment Index*.

**Headlamps Adjustment**—Aim upper beam straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

**Switches**

**Lighting**—Delco-Remy 1995009.

**Beam Selector**—Delco-Remy 1997002, 1997004 (RHD).

**Stop Light**—Delco-Remy 1997725.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Instrument	1½	55
Glove Comp't., Beam Indic.	1	51
License Plate	3	63
Stop & Tail	21-3	1154
Dome	6	81

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**:—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, but open in 3 minutes with load of 42 amperes at 70°F. Not adjustable.

**HORNS**:—Delco-Remy Model K-33-H. No. 1999561 (low note), 1999562 (high note). Vibrator type, blended tone, operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999561 (Low Note)	19-21 amperes	.047-.052"
1999562 (High Note)	18-20 amperes	.039-.044"

**Horn Relay**:—Delco-Remy Model 1116775.

**Contact Gap**—.020". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS**:—8 cylinder, 'L' head.

**Bore**—3¼". **Stroke**—3⅞".

**Displacement**—257.1 cu. ins. **Rated HP**—33.8.

**Developed Horsepower**—110 HP (Std. Hd.), 105 HP (Optl. LC Hd.) at 3600 RPM.

**Compression Ratio**—6.2-1 Std., 5.8-1 Optl. LC Hd.

**Compression Pressure**—152 lbs. (Std. Hd.), 125 lbs. (Optl. LC Hd.) at 1000 RPM or approximately 104-114 lbs. at cranking speed for Std. head.

**Vacuum Reading**—Steady 17" min. at 6 MPH.

See *Oldsmobile Shop Notes for Cylinder Head servicing*.

**PISTONS**:—Aluminum alloy, T-slot, cam ground type with hard oxide bearing surface.

**Weight**—16 ozs. (stripped). **Length**—3 15/16".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .026". Skirt .0013-.0018".

**Replacement Pistons**:—Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize. Same wt. as std.

**Fitting New Pistons**:—Check piston for size with micrometer (pin removed) 90° from pin bosses ⅜" below lower ring groove and ⅜" from bottom of skirt. Insert .002" X ½" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler must be 4 to 11 lbs. (piston and block at 70°F.—low lbs. pull below 70°, high lbs. above).

**Installing Pistons**:—Mark 'V-S' on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

**PISTON RINGS**:—2 compression (tapered, O.D. .001" larger at bottom), 2 oil control rings per piston, all above pin. Both oil ring grooves drilled for oil drains. All rings are coated.

**NOTE**—Install compr. rings with mark TOP up.

Ring	Width	End Gap	Side Clearance
Compr.	.0925-.0935"	.009-.014"	.001-.003"
Oil Cont.	.1860-.1865"	.009-.014"	.001-.0025"

**Replacement Rings**:—.010", .020", .030" oversize.

**PISTON PIN**:—Diameter—.8554-.8557". **Length**2 31/32".

Pin locked in one piston boss by lock screw (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.

**Pin Fit in Piston**—.0001" loose to .0002" tight (plain boss end), .0002-.0005" tight (lock boss end).

**Pin Fit in Rod Bushing**—.0003-.0006" clearance.

See *Oldsmobile Shop Notes for Pin Fitting directions*.

**CONNECTING ROD**:—Length—7 13/16". **Weight**—28.0 ozs. (complete except less bearing inserts).

**Crankpin Journal Diameter**—2.123-2.124".

**Lower Bearing**—Removable steel-backed, babbit. Tangs on shells seat in notches on rod and cap.

**Clearance**—.0005-.0025". **Sideplay**—.0055-.0105".

**Bearing Adjustment**:—None. Replace bearings.

**Installing Rods**:—Oil spit hole at lower end toward valves and grooves on rod and cap bolt bosses (part number side) matched. Special ground bolts used.

See *Oldsmobile Shop Notes for Connecting Rod Bolt Nut change and installation data*.

**CRANKSHAFT**:—5 bearing, 8 integral counterweights.

**Journal Diameters**:—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.603-2.604"; #4, 2.6655-2.6665"; #5, 2.6855-2.6865".

**Bearings**—Removable, steel-backed, babbit. Upper and lower halves interchangeable except #1 (front).

**Clearance**—.0005-.002" (rear), .001-.003" (all others).

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file caps. **Endplay**—.004-.008".

See *Oldsmobile Shop Notes for Main Bearing Removal, End Thrust and Oil Seal data*.

**CAMSHAFT**:—5 bearing. Non-adjustable chain drive.

**Journal Diameters**:—#1, 2.0600-2.0595"; #2, 1.9975-1.9970"; #3, 1.9350-1.9345"; #4, 1.8725-1.8720"; #5, 1.8100-1.8095".

**Bearings**—Bronze bushings. **Clearance** .0015-.0035". **End Thrust**:—Spring-loaded steel plunger in front end of camshaft bears against steel plate on chain cover.

**Camshaft Setting**:—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

**Timing Chain**:—Link Belt No. 365. Width 1". Pitch .500". Length 47 links or 23½".

	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 51/64"
Exhaust	1 27/64"	.3410-.3418"	5 51/64"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.286"	.00175-.00375"
Exhaust	45°	.313"	.00245-.00425"

**Valve Guides**:—Intake and exhaust guides same. Press guides in so top end ⅞" below top of block (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (no taper).

**Valve Springs**:—Same spring used on both valves and on Six and Eight engines. Damper used in top of each spring.

Valve Closed	Spring Pressure	Spring Length
	50½ lbs.	2¼"
Valve Open	95½ lbs.	1 15/16"

**Valve Lifters**:—Mushroom type. Lifter holes in block. Body Diam. .6235-.6240". **Furnished** .001", .0015", .002", .005", .010" oversize. **Clearance**—.0003-.0007".

**NOTE**—Lifter holes have bearing-ized finish. Fit lifters without reaming holes wherever possible.

**VALVE TIMING**

**Tappet Clearance**:—.008" Int., .011" Exh. Engine warm. **NOTE**—Self-locking tappet screws are used.

See *Oldsmobile Shop Notes for Fender Plate removal*.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open at TDC. Close 35° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 10° ATDC.

**Valve Timing Check**—With .0124" tappet clearance #1 intake valve should open with piston at top dead center (.000") when flywheel mark 'TDC/' (NOT steel ball insert) lines up with pointer (inspection left face of housing). Reset tappet clear. .008" hot.

**LUBRICATION**

**LUBRICATION**:—Pressure (gear type pump on right of engine). See *Oldsmobile Shop Notes for Oil Pump data*.

**Normal Oil Pressure**:—28-33 lbs.

**Oil Pressure Regulator**:—On pump, opens at 27 lbs. Non-adjustable type.

**Crankcase Capacity**:—6 quarts.

**COOLING**

**COOLING SYSTEM**:—Capacity—21 quarts.

**Water Pump**:—Packless, sealed ball-bearing type.

See *Water Pump Section for complete data*.

**Removal**—Remove fan belt, 3 pump mounting cap screws, and lower radiator hose. Lift pump out.

**Thermostat**:—Harrison. In cylinder head outlet.

**Setting**—Starts to open at 152°F. Fully open 173°.

**Temperature Gauge**:—AC Electric #1510918 (dash), #1510772 (engine unit).

See *Miscellaneous Section for complete data*.

**CLUTCH**

**CLUTCH (STD. TRANS.)**:—Borg & Beck 10A7 with 'Borglite' driven member. Marked #927 on cover. Single plate, dry disc type with sheet metal pressure plate baffle.

See *Clutch Section for complete data*.

*See Oldsmobile Shop Notes for data on late 1940 type Clutch Release Bearing with Lubrication Fitting.*

**Facings**—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 7". O. D. 10".  $\frac{1}{8}$ " thick.

**Pedal Adjustment**—Free travel 1-1 $\frac{1}{2}$ " (adjusting clevis and locknut on link at clutch fork).

**Removal**—Remove transmission (see data below), mark clutch and flywheel, take out six mounting screws in cover flange. **NOTE**—Install two mounting screws with long shank in second hole on each side of locating dowel when installing clutch.

## TRANSMISSION

**TRANSMISSION (STD.)**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with new remote shift. *See Transmission Section for complete data.*

**Transmission Control**—Oldsmobile 'Handi-shift' type. *See Transmission Section for complete data.*

**Removal**—Disconnect shift and selector rods and speedometer cable at transmission, remove propeller shaft (disconnect rear U-joint pull shaft out), remove clutch housing underpan (and reinforcing plate if used) for access to 2 lower transmission mounting bolts & nuts, remove 2 mtg. screws at top. *See Oldsmobile Shop Notes for re-inforcing plate data.*

## HYDRA-MATIC DRIVE

**HYDRA-MATIC DRIVE (OPTL.)**—Own Make—Consists of fluid coupling & automatic transmission. *See Transmission Section for complete data.*

## UNIVERSALS

**UNIVERSAL JOINTS**—Mechanics 2C. Roller bearing. *See Universals Section for complete data.*

**NOTE**—Slip joint formed at rear of transmission ahead of front U-joint (driveshaft 1 piece type).

## REAR AXLE

**REAR AXLE**—Own Make. Semi-floating, hypoid gear type with torque taken through 2 support arms.

*See Rear Axle Section for complete data.*

**Ratio**—4.3-1 Std. 4.55-1 Optl. Ring and pinion gear ratio stamped on upper outside of carrier.

**Backlash**—.004-.008". Screw adjustment.

**Removal**—Disconnect drive shaft at rear universal, (do not disengage spline joint at transmission), remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal**—Hoist rear end, remove wheel, brake drum, backing plate mounting nuts, static collector and loosen bearing retainer (do not allow backing plate to shift to damage brake line). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace one backing plate nut. **Wheel Bearing Adjustment**—None.

**Rear Suspension**—Quadri-coil type (support arms). *See Rear Axle Section for complete data.*

## SHOCK ABSORBERS

**SHOCK ABSORBERS**—Delco. Front—Model 1947-C (right), 1947-D (left). Rear—1754-L (right), 1754-M (left). Double acting, hydraulic types. *See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4°51'10".

**Caster**—0- $\frac{3}{4}$ " negative. Adjustable.

**Camber**—Negative  $\frac{1}{4}$ " to Pos.  $\frac{3}{4}$ ". Adjustable.

**Toe In**—1/16- $\frac{1}{8}$ ". Adjust each tie rod.

**Steering Geometry (Toe-out on Turns)**—Inner wheel turned 23°  $\pm$   $\frac{1}{2}$ ". Outer wheel 20°.

## STEERING GEAR

**Steering Gear**: Saginaw Worm-and-Roller type with steering linkage with idler arm on right frame rail. *See Steering Gear Section for complete data.*

## BRAKES

**BRAKES**—Service, Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinder Bore**—Front wheel 1  $\frac{3}{32}$ ". Rear 1".

**Drums**—Cast-iron. Diameter—11".

**NOTE**—Drum turn down limit .030" cut.

**Lining**—Molded type. Width 2". Thickness  $\frac{3}{16}$ ".

**Length**—Primary Shoe 9  $\frac{11}{32}$ ", Secondary 11  $\frac{31}{32}$ ".

**Clearance**—.015" both ends of secondary shoe (with primary shoe forced out against drum).

**Braking Power**—54 $\frac{1}{2}$ % front, 45 $\frac{1}{2}$ % rear.

**Hand Brake**—See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Top**: Vacuum Power type. *See Miscellaneous Section for complete data.*

**HOOD, FRONT END SHEET METAL ASSEMBLY, FENDER CAP, & OIL PAN REMOVAL:**—Refer to Oldsmobile Shop Notes for removal procedure.

### MODEL IDENTIFICATION

Model Name	Model 1941	Model 1942	Car Series
Special Six	F-41	F-42	66
Dynamic Cruiser Six	G-41	G-42	76
Custom Cruiser Six	H-41		96

**SERIAL NUMBER:**—On plate on upper left corner of dash in engine compartment. First Nos.

#### 1941 Starting Serial Numbers

Series	Lansing	Linden, N.J.	California
66	66-1001	66L1001	66C1001
76	76-1001	76L1001	76C1001
96	96-1001	96L1001	96C1001

#### 1942 Starting Serial Numbers

Series	Lansing	Linden, N.J.	California
66	66-86001	66L12001	66C9001
76	76-75001	76L11001	76C7001

**ENGINE NUMBER:** Top left side behind water pump. First number G-225001 ('41), G-424001 ('42).  
**Hydra-Matic Cars**—Carry number prefix 'GA'.

### TUNE-UP

**COMPRESSION:** Ratio and pressure as follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
1941—6.1-1	138 lbs.	115 ± 10 lbs.
1942—6.5-1	150 ± 5 lbs.	102 ± 10 lbs.

1941 Export Head—Ratio 5.74-1.

**VACUUM READING:**—Steady 17" min. at idling speed.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—AC No. 44. 14 MM. Metric. Gaps—.040".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—Starts at 250 RPM. Maximum 14° at 1850 RPM. (647-F), 12° at 1600 RPM. (1110213). Distributor degrees and R.P.M.

Vacuum Advance—Max. advance as follows:

Distributor	Vacuum Unit	Distr. ° & Vacuum
647-F	681-P	10° at 15.5-18.5"
1110213	1116035	6° at 14-16.8"

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Flywheel mark (steel ball) aligned with housing insp. hole pointer (left side).  
**Hydra-Matic Cars**—Set distributor so contacts open with piston .001" before top dead center.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw ½-1½ turns open. Idle speed 425 RPM (Std.), 375 RPM (Hydra-matic Drive).

Float Level—(504-S, 481-S). ½" from projection on underside of bowl cover to top of seam on free end of float (invert to check).  
(523-S) 9/16" from top of float at free end to lower face of bowl cover.

Accelerating Pump—Lower Hole—Normal Setting.  
**NOTE:**—No seasonal adjustment on 1942 523-S.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that valve operates freely.

Setting—Coil wind-up should be 125° (approx. ½ turn) at room temperature. **NOTE:**—To check valve for correct position on shaft, use feeler gauge in slot on rear end of valve shaft. With valve closed,

gauge should contact stop pin (slot 6° to left or toward engine from up-and-down position) with ¼" clearance between valve tip and manifold.

**VALVES:** See Valve Timing.

Tappet Clearance .008" Intake, .011" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

Ignition Switch: Delco-Remy 1116305 (F-41, H-41), 1116311 (G-41), 1116330 (F-42), 1116331 (G-42). Connected to coil by armored cable.

Ignition Lock—Briggs & Stratton No. 45792.

Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. On dash.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.25 microfarad.

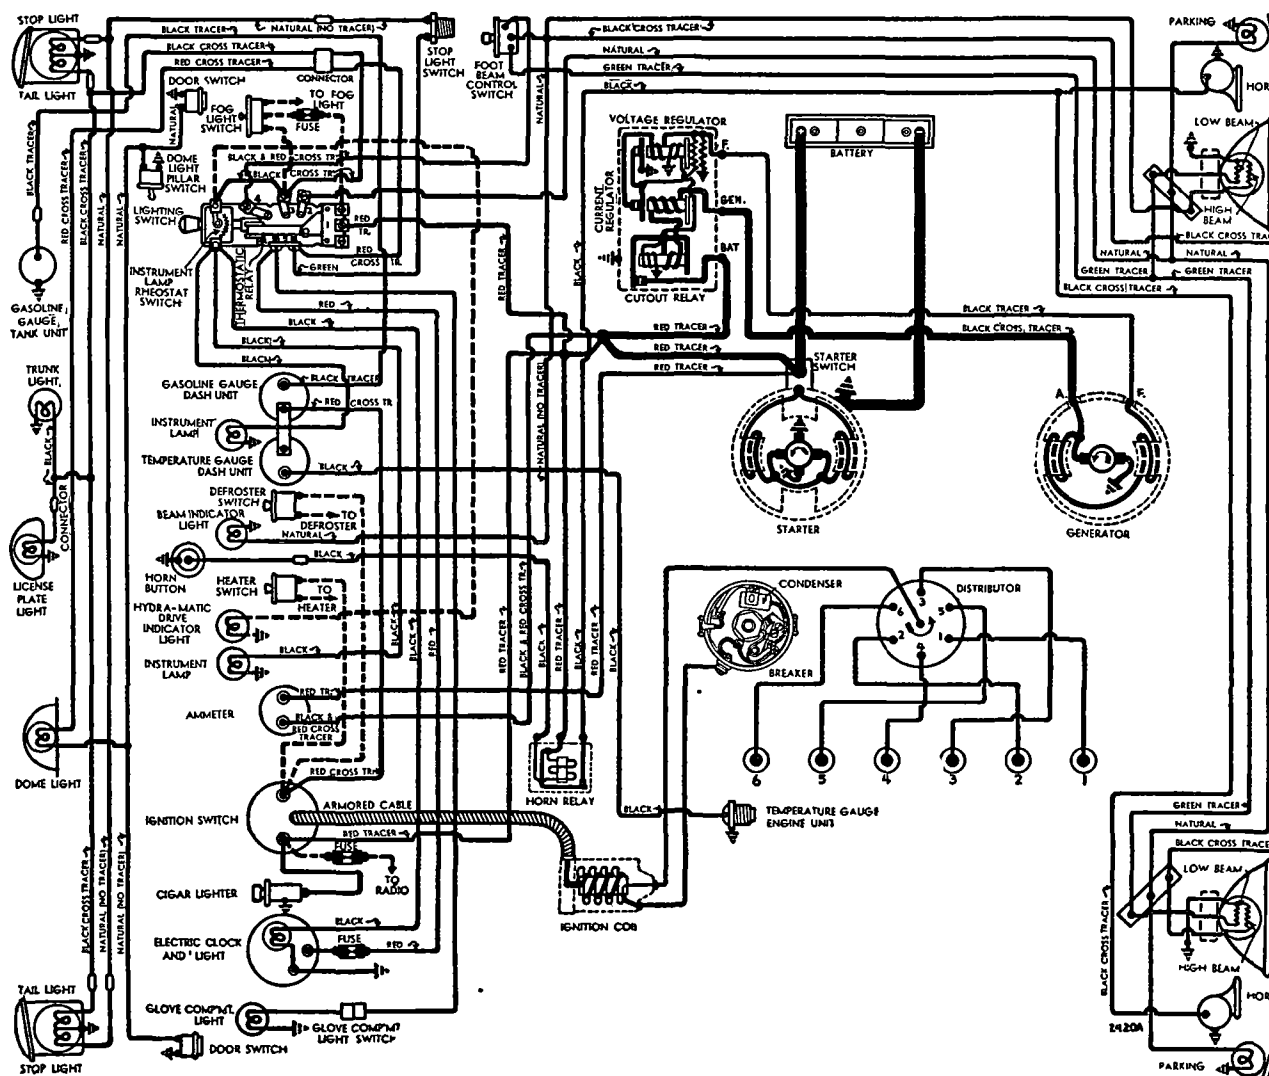

**DISTRIBUTOR:** Delco-Remy Model 647-F (for 1941 Cars), Model 1110213 (for 1942 Cars). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and Octane Selector Breaker Gap—.020". Limits .018-.024". Cam Angle or Dwell—35° closed, 25° open. Breaker Arm Spring Tension—17-21 ozs. Rotation—Counter-clockwise viewed from above.

#### Automatic Advance—647-F

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	3.....	500
3 .....	450	6.....	900
14 .....	1850	28.....	3700

#### Automatic Advance—1110213

Degrees	R.P.M.	Degrees	R.P.M.
Start	250	3	500
3	450	6	900
12	1600	24	3200

**Vacuum Spark Control Model 681-P (for 1941 Cars), Model 1116035 (for 1942 Car Models).** On distributor (integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

**Plunger Travel—**3/16" (681-P), 1/8" (1116035).

#### Vacuum Advance—681-P

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
10°	20°	15.5-18.5"

#### Vacuum Advance—1116035

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7.5-9.5"
6°	12°	14.6-16.6"①

①—At .103" travel.

**Octane Selector**—Adjustment permits 10° advance or retard from center '0' position. See Ignition Timing for adjustment directions.

**Removal:**—Distributor mounted on left side of engine.

To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

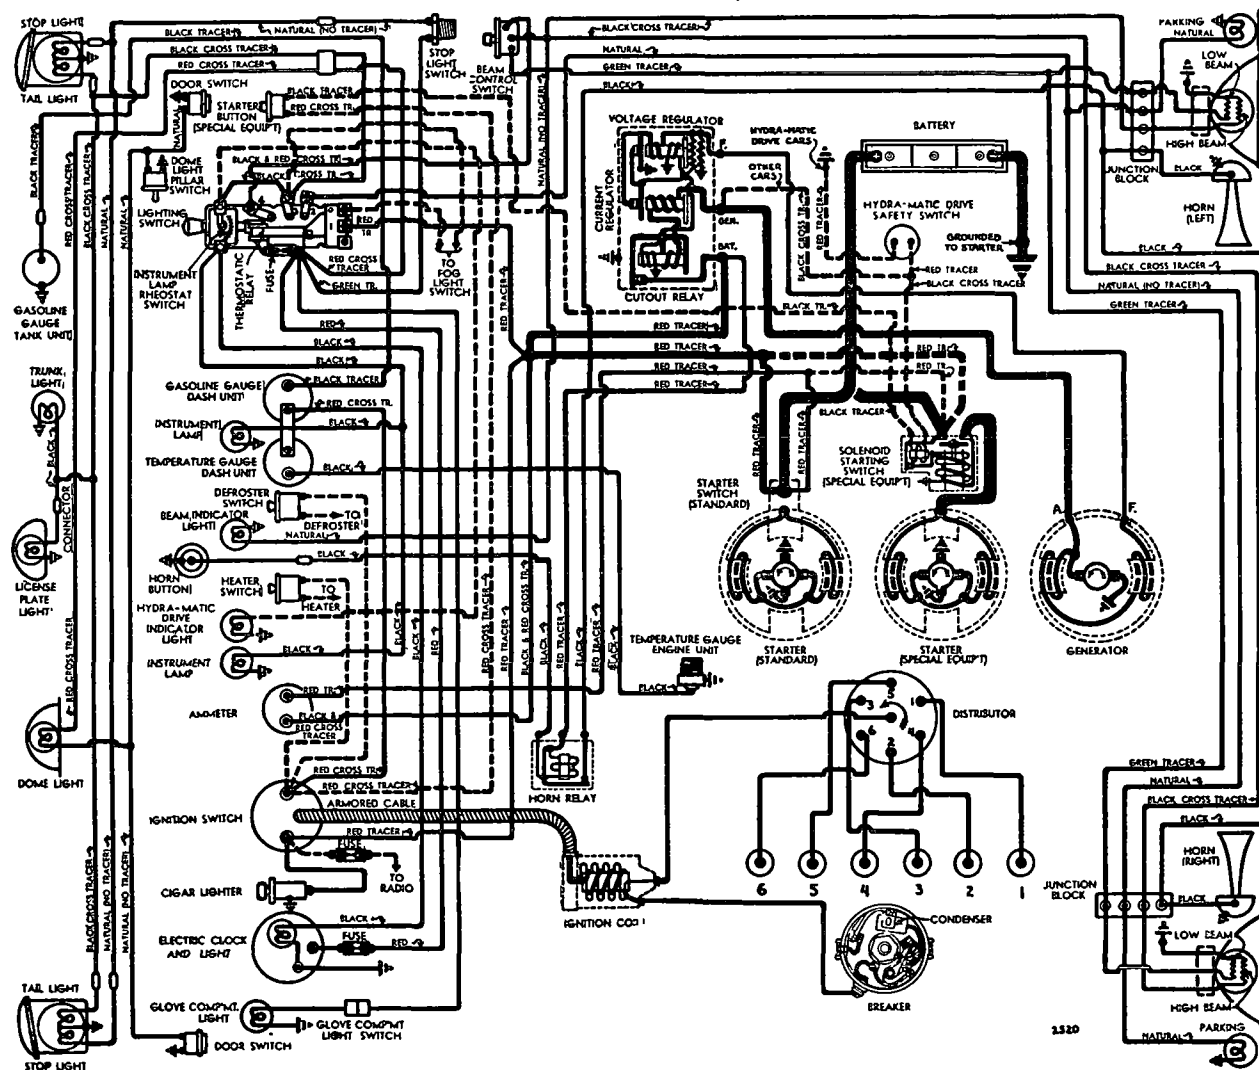

**IGNITION TIMING:**—See Octane Selector Setting for correction dependent on fuel used.

#### Flywheel Degrees Piston Position

Std. Trans. Cars.....	At TDC.....	000" TDC.
Hydra-Matic Trans.....	.....	001" BTDC.

**Timing (With Synchroscope)**—Recommended method. Loosen hold-down screw in advance arm, center Octane Selector scale ('0' at indicator line), tighten hold-down screw. Clip synchroscope lead to #1 spark plug, direct synchroscope light on flywheel through inspection hole in left front face of housing above starter. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert) on flywheel lines up with indicator on housing, tighten clamp bolt, check Octane Selector setting (below).

**NOTE**—On cars with Hydra-Matic drive, use dial

1942 MODELS

indicator and set distributor so contacts open with piston .001" before top dead center.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston with steel ball insert in flywheel at indicator in inspection hole in left front face of flywheel housing (or with piston .001" BTDC. on cars with Hydra-Matic drive). Loosen hold-down screw in advance arm, center pointer on scale ('0' mark at indicator), tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt and check Octane Selector setting.

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe) one graduation at a time until correct performance secured.

## CARBURETOR

Model	Type	Size	Car Model
504-S.....	WA-1.....	1 1/2"	1941 Conv. Trans.
481-S.....	WA-1.....	1 1/2"	'41-42 Hydra-Matic
523-S.....	W1 Cast-Iron.....	1 1/2"	1942 Conv. Trans.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm so that choke valve wide open and fast idle inoperative, set throttle stopscrew for idle speed of 425 RPM. (Std.), 375 RPM. (Hydra-Matic Drive cars). Adjust idle adjusting screw for smooth idle (screw should be 1/2-1 1/2 turns open from inner seated position—turn screw in for leaner mixture). Recheck idle speed. See Hydra-Matic Transmission article in Transmission Section for Throttle Linkage Adjustment procedure.

**Accelerating Pump Setting**—Pump arm (under dust cover) has three holes for pump connector link engagement (481-S, 504-S only). Set as follows:

Lower (Med. Stroke)—Normal all-year setting.  
Inner (Min. Stroke)—Hot weather or High Alt.  
Outer (Max. Stroke)—Cold weather, low-test fuel.  
**Float Level**—(504-S, 481-S). 1/2" from projection on underside of bowl cover to top of seam on free end of float (invert to check).  
(523-S) 9/16" from top of float at free end to lower face of bowl cover.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section for complete data.

**Throttle Cracker Adjustment:**—Must be set for correct throttle opening for starting. To adjust, disconnect starter cable at starter switch (for foot operated starters), disconnect coil lead to distributor (for solenoid operated starters), depress starter pedal or pushbutton to full down position (engine will be turning over on solenoid starter cars) to fully mesh starter pinion, loosen locknut and turn adjusting screw on accelerator bell-crank (screw contacts lug on lever linked to starter pinion shift lever) so that clearance between throttle stopscrew and highest step of fast idle cam is .0625-.0825"

**Fast Idle:**—Integral (built-in each carburetor).

For complete data, refer to Carburetion Equip. Index. Setting (523-S)—Hold choke valve wide open and allow fast idle cam to drop free. Back off throttle stop screw until throttle valve closed and screw just clears low step of fast idle cam. Hold throttle valve closed, release choke valve. Choke will move fast idle cam until stopscrew rests against second position of cam. Bend offset portion of fast idle link (do not disturb cam) so choke valve opening is 5/8".

CONTINUED ON NEXT PAGE

**C NTINUED FR M PRECEDING PAGE**

(481-S, 504-S)—With fast idle cam in slow idle position, close choke valve until throttle stopscrew is against (not on) first step of cam, bend connector rod offset so choke valve opening is  $\frac{5}{8}$ ".

**Automatic Choke:**—Carter Climatic Control.

For complete data, refer to *Carburetion Equip. Index*.

Setting—Set coil housing at index mark.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC No. 1529861 oil-wetted type. Std. 1529899 H.D. oil-bath Optl. Replacement Filter Element Type #3 (1529861), #8 (1529899).

**Fuel Pump:**—AC 'AJ' No. 1537358—Exch. No. 536. Fuel & Vacuum Type. Pressure—4 lbs. maximum.

For complete data, refer to *Carburetion Equip. Index*.

**Gasoline Gauge:** AC Electric Type. Dash Unit Nos.: 1516298 ('41), 1516410 ('42). Tank Unit: 1516285.

For complete data, refer to *Carburetion Equip. Index*.

**BATTERY**

**BATTERY:**—Delco Model 15E-2, 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).

Starting Capacity—120 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.5 minutes. Five second voltage 4.25 volts.

Grounded Terminal—Negative (—) to Starter.

Location—On left side in engine compartment.

**Police Battery Delco Model 19E-1 or 19E-3.** 6 volt, 19 plate, 130 Ampere Hour Capacity (20 hour rate).

Starting Capacity—150 amperes for 20 minutes.

Grounded Terminal and Location—Same as above.

**STARTER**

Delco-Remy Armature Model	Switch Number	Type	Used On:
---------------------------	---------------	------	----------

1107034	1867897	Manual	'41-42 LHD.
---------	---------	--------	-------------

1107050	1867897	Solenoid	'42 LHD & RHD
---------	---------	----------	---------------

1107019	810601	Solenoid	'41 RHD
---------	--------	----------	---------

NOTE—All 1107034 (foot operated) starters provided with mounting holes for Hydra-Matic Drive Interlock mounting (holes plugged when Hydra-Matic Drive not used). On 1107050 (solenoid operated) starters, a Neutral Safety Switch is used on cars with Hydra-Matic Drive (starter operative only with Selector Lever in neutral position).

See *Transmission Section for Oldsmobile Hydra-Matic Drive article for Interlock or Neutral Switch adjustments*.

**Drive—Over-running clutch with manual pinion shift (1107034), solenoid pinion shift (1107019, 50).**

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ounces each.

Cranking Engine—100 RPM., 125-135 amperes, 5 volts (Summer Temperature) for LHD, starter.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out mounting screws.

**Starting Switch (1107034):**—No. 820052. Mounted on starter. Operated by pinion shift lever.

(1107050)—Solenoid Switch 1118021. Mounted on

starter and controlled by Pushbutton Switch 1996009 on instrument panel and Neutral Safety Switch 1997761 (on cars with Hydra-Matic Drive).

(1107019)—Solenoid Switch No. 1546. Mounted on starter. Operated through relay (in switch case) by Pushbutton Switch No. 1996008 on instrument panel.

For complete data, refer to *Electrical Equipment Index*.

**GENERATOR**

**Delco-Remy Model 1102664.** Armature No. 1879002. (Std.), 1102680 (Hydra-Matic Drive Cars), 1106403 (City Police), 1105851 or 1105856 (State Police). Two brush type with Voltage and Current regulation.

**Pulley Note:**—Cars with Std. Trans. (1102664 Gen.) have regular 3 9/16" pulley. Hydra-Matic Drive cars (1102680 Gen.) have smaller 3 1/16" pulley to compensate for lower engine speed (max. output reached at approx. 110 Eng. RPM. less). NOTE—This pulley can be installed on cars with 3.9-1 Axle ratio for special service if output inadequate.

**Charging Rate Adjustment:**—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below. **Maximum Charging Rate:**—33 amperes, 8.0 volts, 2400 RPM. (hot) or 23 MPH. (66), 21 MPH. (76, 96) and above (Current Regulator setting) with load or discharged battery. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data—Cold**

	Amperes①	Volts	R.P.M.
1102664, 80	30	8.0	1750
1106403	35	8.0	1040
1105851, 6	40	8.0	1850

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—25 ozs. each.

Field Current—1.75-1.9 amperes (1102664, 80), 1.77-2.0 amperes (1106403), 1.62-1.82 amperes (1105851, 6) at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Check with straightedge across pulleys. Belt deflection should be  $\frac{3}{4}$ " inward from straightedge with light pressure at point midway between generator and fan pulleys.

**REGULATOR**

**Delco-Remy Model 1118201 or 1118242 (for 1102664 1102680 Gen.), 1118229 (1106403 Gen.), 1118237 (1105851, 6 Gen.).** Single Core Types. Voltage and Current regulators in single case with Cutout Relay.

For complete data, refer to *Electrical Equipment Index*.

**CAUTION:**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

Cuts In—6.2-6.7 volts hot.

Cuts Out—0-4.0 ampere discharge current.

Contact Gap—.020" (same for both sets).

Air Gap—.020" (with contacts just closed).

**Voltage Regulator**

**Setting:**—7.2-7.4 volts (1118201, 242), 7.0-7.2 volts (1118229, 1118237) Hot (at operating temperature).

**To Check:**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this

terminal and ground. Operate generator at 2800 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F.), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust:**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in *Electrical Equipment Section* for other (2nd.) spring adjustment.

**Air Gap:**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting:**—34-36 amperes (1118201, 1118229, 1118242), 38-40 amperes (1118237) hot (at operating temp.).

**To Check:**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F.), current reading should agree with setting (above).

**To Adjust:**—Same as for Voltage Regulator (above).

**Air Gap:**—.080" (check same as Voltage Regulator).

**LIGHTING**

**LIGHTING:**—Headlamps—Guide 'Sealed Beam' type.

For complete data, refer to *Electrical Equipment Index*.

**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator:**—Small red indicator in upper edge of speedometer. Lighted when Upper Beams in use.

**Direction Signal:**—Refer to *Electrical Equip. Index*.

**Switches**

**Lighting (1941—No Fuse):**—Delco-Remy No. 1995017 (LHD cars), 1995020 (RHD cars).

**Lighting (1942—with Fuse):**—Delco-Remy No. 1995026 (LHD cars), 1995027 (RHD cars).

NOTE—All switches have instrument light rheostat controlled by Lighting Switch handle.

**Beam Selector:**—Delco-Remy No. 1997002.

**Stop Light:**—Delco-Remy No. 1997725.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking	3	63
Instrument, Clock	1½	55
Beam Ind., Glove Compt.	1	51
Stop & Tail	21-3	1154
Rear License Plate	3	63
Dome	6	82

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—On lighting switch. Contacts remain closed with 30 ampere current, open in 3 minutes with current of 42 amperes at 70° F. Limits current to 18 amperes with dead short-circuit. Not adjustable.

**FUSES:**—Clock—2 ampere. In clock lead connector.

**Stop Light (1942):**—9 amperes. On lighting switch.

**Convertible Top:**—9 ampere. In switch feed line.

<b>HORNS: Delco-Remy Numbers</b>	<b>Current (at 6 Volts)</b>	<b>Air Gap</b>

<b>Contacts Close</b> —2.75-4.0 volts.		

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

**Bore**—3½". **Stroke**—4⅞".

**Displacement**—238.1 cu. ins. **Rated HP**—29.4.

**Developed Horsepower**—100 at 3400 RPM (Std. hd.).

**Compression Ratio and Pressure**—As follows:

**Ratio** **Pressure at 1000 RPM** **At 100 RPM**

1941—6.1-1..... 138 lbs. ....115 ± 10 lbs.

1942—6.5-1..... 150 ± 5 lbs. ....102 ± 10 lbs.

**Vacuum Reading**—Steady 17" min. at idling speed.

*See Oldsmobile Shop Notes for Cylinder Head Servicing.*

**PISTONS (1941):** Aluminum alloy, T-slot, cam ground with electro-hardened oxide bearing surface.

**Weight**—17.37 ozs. (stripped). **Length**—4 1/32".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .023-.028". Skirt .0005-.0010".

**NOTE**—Piston skirt taper inward from bottom to top should be .0015-.002". Differs from Eight.

**Replacement Pistons:**—Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize. Same wt. as std.

**Fitting New Pistons:**—Check piston for size with micrometers (pin removed) 90° from pin bosses ⅜" below lower ring groove and ⅜" from bottom of skirt. Insert .002" x ½" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler must be 4 to 11 lbs. (piston and block at 70°—low limit below 70°, high above).

**Installing pistons:**—Mark 'V-S' on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

**PISTONS (1942):** Cast-iron (before Eng. G-441345), Armasteel type (Eng. No. G-441345 and above).

**Weight**—27 ozs. (stripped). **Length**—3¾".

**Removal**—Pistons and rods removed from above. **Clearance**—Top land .023-.030". Skirt .00125-.00175".

**IMPORTANT**—Cast-iron pistons are 3 ring type with groove on skirt, Armasteel are 4 ring type. Pistons interchangeable in sets only.

**Replacement Pistons:**—Finished pistons (with fitted pins) furnished .003", .005", .010", .015", .030" oversize.

**Fitting New Pistons:**—Check piston for size with micrometers (pin removed) 90° from pin bosses ⅜" below lower ring groove and ⅜" from bottom of skirt. Insert .0015" x ½" x 12" feeler between piston (pin removed) and cylinder wall with piston inverted and

feeler 90° from pin. Pull to withdraw feeler 7-20 lbs.

**Installing Pistons:**—Mark 'V-S' on head toward valves.

**NOTE**—Pin holes in piston offset 3/32".

**PISTON RINGS (1941):** 2 coated compression (install with mark TOP up), 2 oil control, all above pin.

Ring	Width	End Gap	Side Clearance
Compr. ....	.0925-.0935"	.008-.018"	.001-.003"
Oil Contr. ....	.1860-.1865"	.007-.015"	.001-.0025"

**Replacement Rings:**—.010", .020", .030" oversize.

**PISTON RINGS (1942):** 3 rings (Cast-iron), 4 (Armasteel), per piston, all above pin. **NOTE**—Install Compression ring with side marked TOP up.

Ring	Width	End Gap	Side Clearance
Compr. ....	.0925-.0935"	.008-.018"	.001-.003"
Oil Contr. ....	.1860-.1865"	.007-.015"	.001-.0025"

**Replacement Rings:**—.010", .020", .030" oversize.

**PISTON PIN (1941):** Diam. .8554-.8557" Length 3 5/32".

Pin locked in one piston boss by lock screw (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.

**Pin Fit in Piston**—.0001" loose to .0002" tight (plain boss end), .0002-.0005" tight (lock boss end).

**Pin Fit in Rod Bushing**—.0003-.0006" clearance.

*See Oldsmobile Shop Notes for Pin Fitting directions.*

**PISTON PIN (1942):** Diam. .8554-.8557" Length 3 5/32".

Pin locked by screw in one boss. Ream piston bosses for oversize pins (.001" & .003" OS.).

**Pin Fit in Piston**—.0000-.0002" (plain boss end), .0003-.0006" (piston lock screw boss).

**Pin Fit in Rod Bushing**—.0003-.0006".

*See Oldsmobile Shop Notes for Piston Pin fitting data.*

**CONNECTING ROD (1941):** Lgth. 7 13/16" Wt. 28.0 ounces (complete except for bearing inserts).

**NOTE**—Six and Eight rods not interchangeable.

**Crankpin Journal Diameter**—2.123-2.124".

**Lower Bearing**—Removable steel-backed, babbit.

**Clearance**—.0005-.0025". **Sideplay**—.0055-.0105".

**Bearing Adjustment:**—None. Replace bearings.

**Installing Rods:**—Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used and should be tightened with torque wrench to 50-55 lbs. ft. tension.

**CONNECTING ROD (1942):** Lgth. 7 13/16" Wt. 28.4 ozs

**NOTE**—1942 eight cyl. rods can be used in 1942 six cyl. (and 1941 six cyl. engines after G-378163).

**Crankpin Journal Diameter**—2.123-2.124".

**Lower Bearing**—Removable steel-backed, Durex-babbitt overlay bearing shells.

**Clearance**—.0005-.0025". **Sideplay**—.0055-.0105".

**Bearing Adjustment:**—None. Replace bearings.

**Installing Rods:**—Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 50-55 lbs. ft.

**CRANKSHAFT:**—4 bearings, integral counterweights.

**Journal Diameters**—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".

**Bearings (1941)**—Removable, steel-backed, babbit. (1942)—New type removable steel-backed, Durex-babbitt overlay bearing shells. **CANNOT BE USED ON PREVIOUS MODELS.** All front bearings have oil groove to front for thrust plate lubrication.

**Clearance**—.0005-.002" (rear), .001-.003" (all others). **Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. **Endplay**—.004-.008".

**NOTE**—9/16" cap bolts on rear bearing, ½" others. *See Oldsmobile Shop Notes for Main Bearing Removal, Crankshaft End Thrust and Oil Seal data.*

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

**Journal Diam.** ('41)—#1, 1.9970-1.9975"; #2, 1.9345-1.9350"; #3, 1.8720-1.8725"; #4, 1.8095-1.8100".

**Journal Diam.** ('42)—#1, 1.9975-1.9980"; #2, 1.9350-1.9355"; #3, 1.8725-1.8730"; #4, 1.8100-1.8105".

**Bearings**—Bronze bushings. **Clearance** .0015-.0035".

**End Thrust:**—Forward end thrust now taken by front engine support plate. *See Oldsmobile Shop Notes.*

**Timing Chain:**—Whitney No. 411239. Width 1". Pitch .500" (½"). Length 47 links or 23½".

**Camshaft Setting:**—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

<b>VALVES:</b>	<b>Head Diameter</b>	<b>Stem Diameter</b>	<b>Length</b>

Exhaust .....	1 27/64"	.3410-.3418"	.5 51/64"

	<b>Seat Angle</b>	<b>Lift</b>	<b>Stem Clearance</b>
Intake .....	30°	.303"	.00175-.00375"
Exhaust .....	45°	.298"	.00245-.00425"

**Valve Guides:**—Intake and exhaust guides same. Press guides in so top end ⅞" below top of block. (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (not tapered).

**Valve Springs:**—Same spring used on both valves and on 6&8 engines. Damper on top of each spring. Free length 2 19/32".

	<b>Spring Pressure</b>	<b>Spring Length</b>
Valve Closed .....	50½ lbs.	2¼"
Valve Open .....	95½ lbs.	1 15/16"

**Valve Lifters:**—Mushroom type (same on 6 & 8). Holes reamed in block have bearing-ized finish (if worn, fit oversize lifter without reaming hole) **Body Diam.** .6235-.6240". **Furn.** .001", .002", .005", .010", OS. **Clearance**—.0005-.0008". **NOTE**—1⅞" diameter face lifter only should be used on 1941-42 models.

## VALVE TIMING

**Tappet Clearance:**—.008" Int., .011" Exh. Hot & idling.

**NOTE**—Self-locking tappet screws used. Remove right fender filler plate for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 45° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**Valve Timing Check**—With .0124" tappet clearance, #1 intake valve should open with piston 5° (.0163") BTDC with flywheel TDC mark (steel ball insert) approx. 2 teeth before indicator (hole on left front face of housing). Reset tappet clearance at .008" hot.

## LUBRICATION

**LUBRICATION:**—Pressure (gear type pump on right of engine). *See Oldsmobile Shop Notes for Oil Pump data.*

**Normal Oil Pressure:**—28-33 lbs.

**Oil Pressure Regulator:**—On pump, opens at 30 lbs. Non-adjustable type.

**Crankcase Capacity:**—5 quarts.

CONTINUED N NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**COOLING****COOLING SYSTEM:** Capacity 17¾ qts. ('41), 18½ ('42).  
See Oldsmobile Shop Notes for Radiator Core Removal.**Water Pump:**—Packless, sealed ball-bearing type.  
See Water Pump Section for complete data.**Thermostat:**—Harrison. In cylinder head outlet.  
Setting—Starts to open 152°F. Fully open 173°F.**Temperature Gauge:** AC Electric. Dash Unit Nos.:  
1511043 ('41), 1511209 ('42). Engine: 1510772.  
See Miscellaneous Section for complete data.**CLUTCH****CLUTCH (STD. TRANS.):**—Borg & Beck Model 9A7 with  
'Borglite' driven member. Marked #924 on cover.  
Single plate, dry disc type with steel and asbestos  
composition pressure plate oil baffle and clutch  
release bearing lubrication fitting.

See Clutch Section for complete data.

**Facings:**—Spiral wound (spirally grooved) molded  
woven, 2 used. Inside Diam. 6", O.D. 9¼". ⅛" thick.**Pedal Adjustment:**—Free travel 1-1½". Turn link at  
fork in or out of clevis on auxiliary shaft.**Removal:**—Remove transmission (see data below),  
clutch underpan and take out 6 mounting screws in  
clutch cover (when installing, use 2 long shank  
mounting screws in 2nd hole on each side of locat-  
ing dowel), lower clutch assembly out.**TRANSMISSION****TRANSMISSION (STD.):**—Own Make. All helical gear,  
constant-mesh, synchro-mesh (second & high),  
sliding gear (low & reverse) with remote shift.  
See Transmission Section for complete data.**Transmission Control:**—Oldsmobile 'Handi-shift' type.  
See Transmission Section for complete data.**Removal:**—Disconnect shift and selector rods from  
levers at transmission, speedometer cable, rear uni-versal and slide slip yoke and propeller shaft to  
rear. Remove four transmission mounting cap-  
screws, pull transmission straight back and remove.**HYDRA-MATIC DRIVE****HYDRA-MATIC DRIVE (OPTL.):**—Own Make—Cons-  
ists of fluid coupling & automatic transmission.  
See Transmission Section for complete data.**UNIVERSALS****UNIVERSAL JOINTS:**—Mechanics 2C or 2CR (new  
type). Roller bearing types. Two used.

See Universals Section for complete data.

**NOTE:**—Slip joint formed at rear of transmission  
ahead of front U-joint (driveshaft 1 piece type).**REAR AXLE****REAR AXLE:**—Own Make. Semi-floating, hypoid gear  
type with torque taken through 2 support arms.

See Rear Axle Section for complete data.

**Ratio:**—4.1-1 Std. 66. 4.3-1 Std. 76 & 96, Mountain  
ratio 66. 3.42-1 Hydra-Matic 66. 3.63-1 Hydra-Matic  
76 & 96. 4.55-1 Mountain 76 & 96. 3.9-1 Plains ratio.**NOTE:**—Ring and pinion gear ratio (41-10, etc.)  
stamped on top side of differential carrier.**Backlash:**—.004-.008". Screw adjustment.**Removal:**—Disconnect drive shaft at rear universal  
(do not disengage spline joint at transmission), re-  
move axle shafts and carrier flange capscrews.**Axle Shaft Removal:**—Hoist rear end, remove wheel,  
brake drum, backing plate mounting nuts, static  
collector and loosen bearing retainer (do not move  
backing plate or brake line may be damaged). Pull  
shaft and bearing with puller J-942 (do not allow  
shaft to drag on oil seal), replace 1 backing plate nut.**Wheel Bearing Adjustment:**—None.**Rear Suspension:**—Quadri-coil type (support arms).  
See Rear Axle Section for complete data.**SHOCK ABSORBERS****SHOCK ABSORBERS:**—Delco. **FRONT:**—Model 1947-C  
(right), D (left). **RIGHT REAR:**—2105-E (76, 96),  
G (66). **LEFT REAR:**—2105-F (76, 96), H (66). Double  
acting (parallel cylinder type rear), hydraulic.  
See Shock Absorber Section for complete data.**FRONT SUSPENSION****Front Suspension:**—Independent, linked parallelo-  
gram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4°51'10".**Caster:**—0-¾° Negative. Adjustable.**Camber:**—Negative ¼° to Positive ¾°. Adjustable.**Toe In:**—1/16-1/8". Adjust each tie rod equally.**Steering Geometry:**—Inner wh'l 23°±½°. Outer 20°.**STEERING GEAR****Steering Gear:** Saginaw Worm-and-Roller type with  
steering linkage with idler arm on right frame rail.

See Steering Gear Section for complete data.

**BRAKES****BRAKES:**—Service. Bendix hydraulic, duo-servo, single  
anchor type without eccentric adjustment. Hand  
lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinder Bore:**—Front Wheel 1 3/32" (1941),  
1 1/8" (1942). Rear Wheel 1" (1941-42).**Lining (1941):**—Molded. Width 1¾" (66), 2" (76, 96).  
Thickness 3/16". Length per shoe: 9 11/32" (Pri-  
mary), 11 31/32" (Secondary Shoe).**Lining (1942):**—Molded. Width 2" (Front Wheel),  
1¾" (Rear Wheel). Thickness 3/16". Length per  
shoe: 9 11/32" (Primary), 11 31/32" (Secondary).  
**Clearance:**—.015" at both ends of secondary shoe  
with primary shoe forced out against drum.**Hand Brake:**—See Service Brakes above.**MISC. MECHANICAL****Power Operated Conv. Top:** (1941) Vacuum Power.  
(1942)—Electric type.

See Miscellaneous Section for complete data.

**HOOD, FRONT END SHEET METAL ASSEMBLY, FENDER CAP, & OIL PAN REMOVAL:**—Refer to Oldsmobile Shop Notes for removal procedure.

### MODEL IDENTIFICATION

Model Name	1941	1942	Car Series
Special Eight	E-41	E-42	68
Dynamic Cruiser Eight	J-41	J-42	78
Custom Cruiser Eight	L-41	L-42	98

**SERIAL NUMBER:**—On plate on upper left corner of dash in engine compartment, First Nos.

**1941 Starting Serial Numbers**

Series	Lansing	Linden, N. J.	California
68	68-1001	68L1001	68C1001
78	78-1001	78L1001	78C1001
98	98-1001	98L1001	98C1001

**1942 Starting Serial Numbers**

Series	Lansing	Linden, N. J.	California
68	68-9001	68L3001	68C3001
78	78-26001	78L4001	78C4001
98	98-25001	98L6001	98C4001

**ENGINE NUMBER:** Top left side behind water pump. First number L-379001 ('41), L-450001 ('42). Hydra-Matic Cars—Carry number prefix 'LA'.

### TUNE-UP

**COMPRESSION:** Ratio and Pressure as follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
1941—6.3-1	160 lbs.	105 ± 10 lbs.
1942—6.5-1	155 ± 5 lbs.	105 ± 10 lbs.

1941 Export Head—Ratio 5.7-1

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARKS PLUGS:**—AC No. 44. 14 MM. Metric. Gaps—.030".

**VACUUM READING:**—Steady 17" min. at idling speed. **IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle—31° Closed.

Automatic Advance—Max. advance as follows:

Distributor	Distr. Deg.	Distr. RPM
1110802	15°	2000
1110808	12°	1600

Vacuum Advance—Maximum advance as follows:

Distributor	Vacuum Unit	Distr. ° & Vacuum
1110802	681-R	7½° at 14-17"
1110808	1116036	6° at 14.6-16.6"

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Flywheel mark (steel ball) aligned with insp. hole pointer (left side housing). Hydra-Matic Cars—Set distributor so contacts open with piston .001" before top dead center.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screws ½-2¼ turns open. Idle speed 425 RPM (Std.), 375 RPM (Hydra-Matic). Float Level—3/16" from top of float to machined surface of bowl cover with needle valve seated. Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that valve operates freely.

Setting—Coil wind-up should be 160° (approx. ½ turn) at room temperature. NOTE—To check valve for correct position on shaft, use feeler gauge in slot on rear end of valve shaft. With valve closed, gauge should contact stop pin (slot 6° to left or toward engine from up-and-down position) with ¼" clearance between valve tip and manifold.

**VALVES:** See Valve Timing.

Tappet Clearance .008" Intake, .011" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:** Delco-Remy 1116305 (E-41, L-41), 1116311 (J-41), 1116330 (E-42), 1116331 (J-42), 1116334 (L-42). Coil connection armored. **Ignition Lock:**—Briggs & Stratton No. 45792. **Key Series:**—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. On dash.

**Ignition Current:**—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

**Capacity:**—18-25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 1110802 (for 1941 Cars), Model 1110808 (for 1942 Cars). Single breaker 8 lobe cam, full automatic advance type with auxiliary vacuum spark control and Octane Selector **Breaker Gap:**—.015". Limits .0125-.0175".

**Cam Angle or Dwell:**—31° closed, 14° open.

**Breaker Arm Spring Tension:**—19-23 ozs.

**Rotation:**—Counter-clockwise viewed from above.

Automatic Advance—1110802

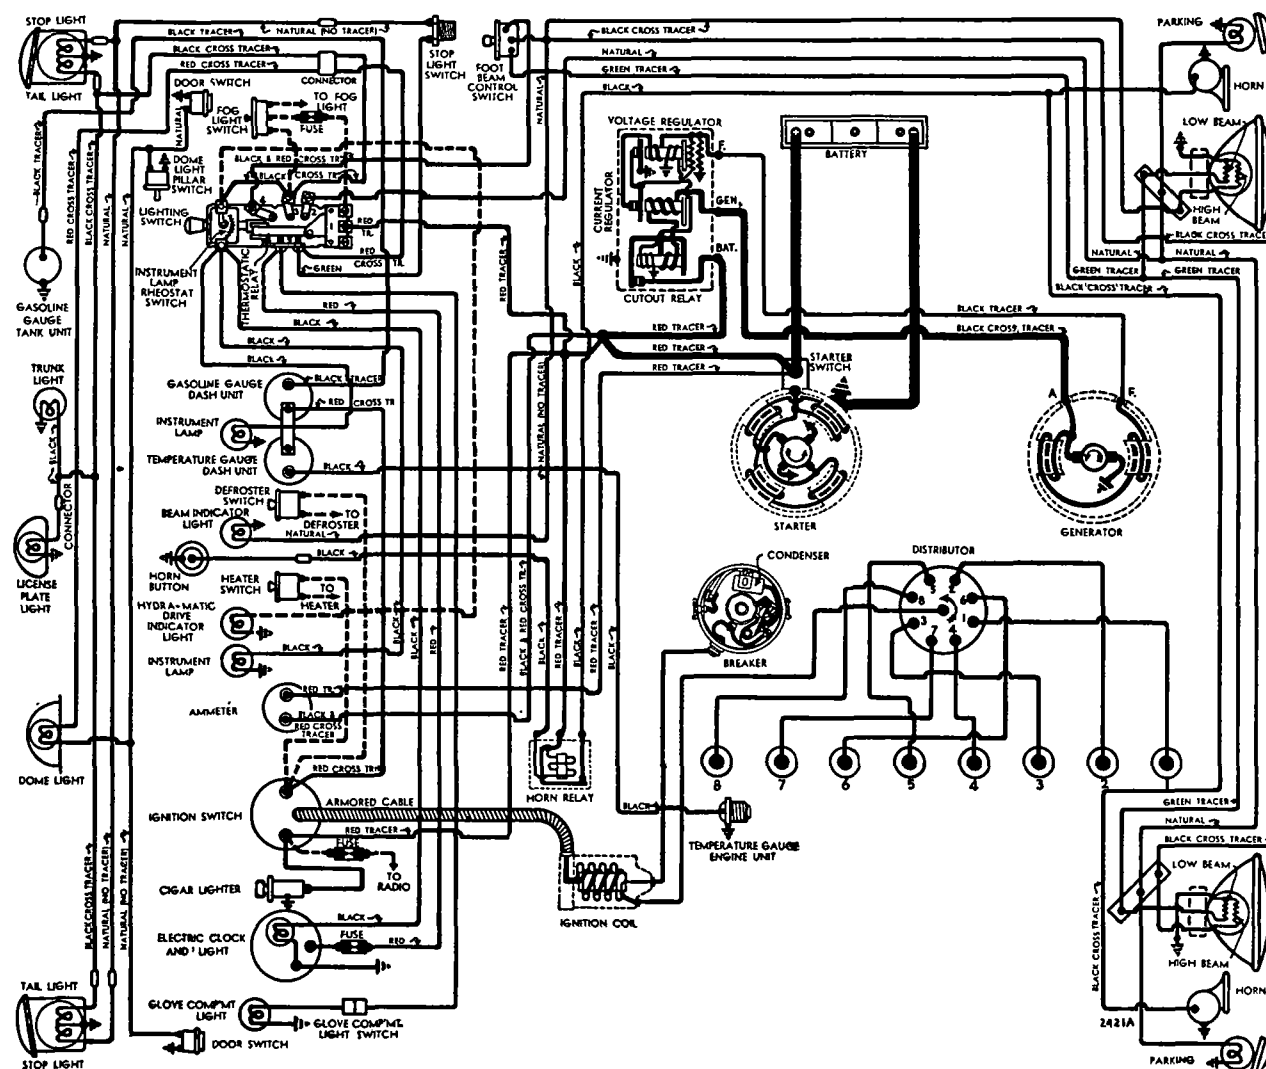

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	2.5 .....	600
3.5 .....	500	7 .....	1000
15 .....	2000	30 .....	4000

Automatic Advance—1110808

Automatic		Manual	
Start.....	250	3.....	500
3.5.....	500	7.....	1000
12.....	1600	24.....	3200

**Vacuum Spark Control 681-R** (for 1941 Cars), **Model 1116036** (for 1942 Car Models). On distributor (integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Plunger Travel—11/64" (681-R), 9/64" (1116036).

## Vacuum Advance—681-R

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
7.5°.....	15°	14-17"

## Vacuum Advance—1116036

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	6.5-8.5"
6°.....	12°	14-16.8" ①

①—At .125" travel.

**Octane Selector**—Adjustment permits 10° advance or retard from center '0' position. See Ignition Timing for adjustment directions.

**Removal:**—Distributor mounted on left side of engine.

To remove, disconnect vacuum line, take out hold-down screw in advance arm.

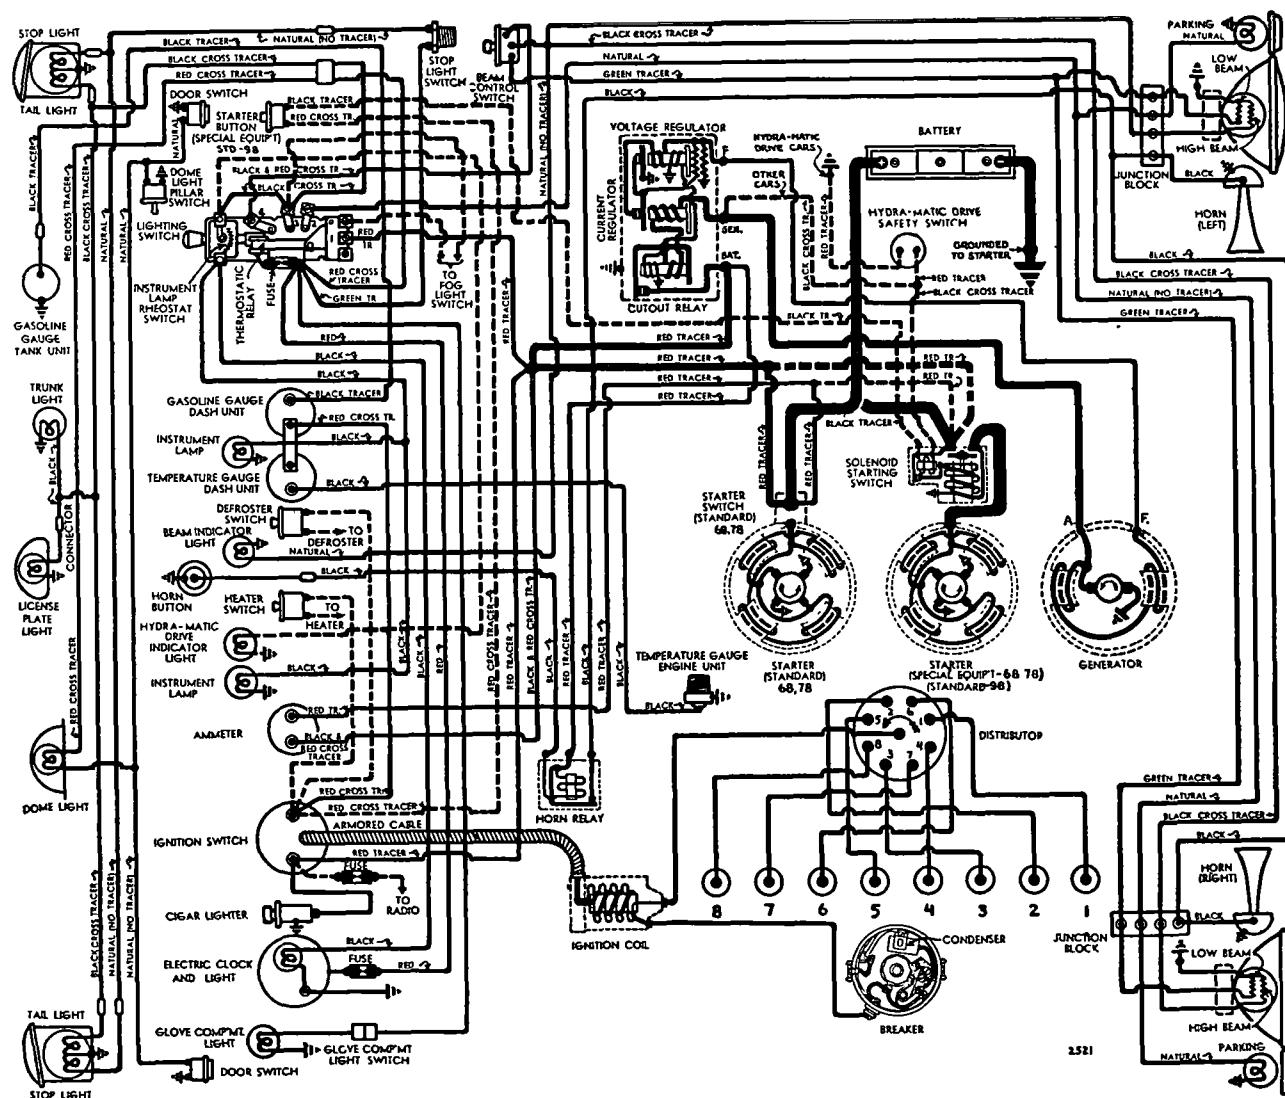

## IGNITION TIMING

**IGNITION TIMING:**—See Octane Selector Setting for correction dependent on fuel used.

## Flywheel Degrees Piston Position

Std. Trans. Cars.....	2° BTDC.....	.002" BTDC.
Hydra-Matic Trans.....	.....	.001" BTDC.

**Timing (With Synchroscope)**—Recommended method. Loosen hold-down screw in advance arm, center Octane Selector scale ('0' at indicator line), tighten hold-down screw. Clip synchroscope lead to #1 spark plug, direct synchroscope light on flywheel through inspection hole in left front face of housing above starter. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert) on flywheel lines up with

1942 MODELS

indicator on housing, tighten clamp bolt, check Octane Selector setting (below).

**NOTE**—On cars with Hydra-Matic drive, use dial indicator and set distributor so contacts open with piston .001" before top dead center.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston with steel ball insert in flywheel at indicator in inspection hole in left front face of flywheel housing (or with piston .001" BTDC. on cars with Hydra-Matic drive). Loosen hold-down screw in advance arm, center pointer on scale ('0' mark at indicator), tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt and check Octane Selector setting.

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe) one graduation at a time until correct performance secured.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter WDO Model 503-S (Std. Trans.), 480-S (Hydra-Matic Drive). 1 1/4" dual downdraft type with Climatic Control. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm so that choke valve wide open and fast idle inoperative, set throttle stopscrew for idle speed of 425 RPM. (Std.), 375 RPM. (Hydra-Matic Drive cars). Adjust both idle adjusting screws (one for each barrel, set screws alike) for smooth idle. Screws should be 1/2-2 1/4 turns open from inner seated position (turn screws in for leaner mixture). Recheck idle speed.

See Hydra-Matic Transmission article in Transmission Section for Throttle Linkage Adjustment procedure.

**Accelerating Pump Setting**—Not adjustable.

**Float Level**—3/16" from top of float to machined surface of bowl cover with valve seated (remove gasket, invert cover, use gauge T109-28 to check).

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section for complete data.

**Throttle Cracker Adjustment:**—Must be set for correct throttle opening for starting. To adjust, disconnect starter cable at starter switch (for foot operated starters), disconnect coil lead to distributor (for solenoid operated starters), depress starter pedal or pushbutton to full down position (engine will be turning over on solenoid starter cars) to fully mesh starter pinion, loosen locknut and turn adjusting screw on accelerator bell-crank (screw contacts lug on lever linked to starter pinion shift lever) so that clearance between throttle stopscrew and highest step of fast idle cam is .105-.125" (1/8").

**Fast Idle:**—Integral (built-in each carburetor).

For complete data, refer to Carburetion Equip. Index.

**Setting**—With choke valve closed, adjust fast idle screw for .015" throttle valve opening or for clearance of .030" (503-S), .025" (480-S) between throttle lever stopscrew and stop on carburetor casting with stopscrew set for correct hot or slow idle speed.

**Automatic Choke:**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

**Setting**—Mark on thermostat case centered on housing scale (503-S), 2 Notches Rich (480-S).

**CARB. EQUIPMENT**

**Air Cleaner:**—AC No. 1542252 oil-wetted type Std. #1529360 ('78, '98), #1542251 ('68), heavy duty oil bath type Optl. Use Replacement Filter Element Type #6 (for 1542252), 1542335 (for oil bath type).  
**Fuel Pump:**—AC 'AJ' No. 1537330—Exch. No. 535. Fuel & Vacuum Pump. Pressure—4 lbs. maximum.  
*For complete data, refer to Carburetion Equip. Index.*  
**Gasoline Gauge:** AC Electric Type. Dash Unit Nos.: 1516298 ('41), 1516410 ('42). Tank Unit: 1516285.  
*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:**—Delco Model 17E-2. 6 volt, 17 plate, 120 Ampere Hour Capacity (20 hour rate).  
**Starting Capacity:**—140 amperes for 20 minutes.  
**Zero Capacity:**—300 amperes for 4.5 minutes. Five second voltage 4.4 volts.  
**Grounded Terminal:**—Negative (—) to Starter.  
**Location:**—On left side in engine compartment.  
**Police Battery Delco Model 19E-1 or 19E-3.** 6 volt, 19 plate, 130 Ampere Hour Capacity (20 hour rate).  
**Starting Capacity:**—150 amperes for 20 minutes.  
**Grounded Terminal and Location:**—Same as above.

**STARTER**

**Delco-Remy Model 1107922 (All '41; '68, '78 '42), 1107930 (Std. '98, Optl. '68, '78 '42), 1107924 (RHD '41).** Armature Number—No. 1867897 (for all models).  
**NOTE:**—All 1107922 (foot operated) starters provided with mounting holes for Hydra-Matic Drive Interlock mounting (holes plugged when Hydra-Matic Drive not used). On 1107930 (solenoid operated) starters, a Neutral Safety Switch is used on cars with Hydra-Matic Drive (starter operative only with Selector Lever in neutral position).  
*See Transmission Section for Oldsmobile Hydra-Matic Drive article for Interlock or Neutral Switch adjustment.*  
**Drive:**—Over-running clutch with manual pinion shift (1107922), solenoid pinion shift (1107924, 30).  
**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—24-28 ounces each.  
**Cranking Engine:**—100 RPM., 140-150 amperes, 5 volts (Summer Temperatures) for LHD, starter.

**Performance Data—1107922**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

**Performance Data—1107924 & 1107930**

0 ft. lbs.	5500	5.0	65
15 "	Lock	3.0	600

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out mounting screws.  
**Starting Switch (1107922):**—No. 820052. Mounted on starter. Operated by pinion shift lever.  
**(1107924)—Solenoid Switch No. 1546.** Mounted on starter. Operated through relay (in switch case) by Pushbutton Switch No. 1996008 on instrument panel.  
*For complete data, refer to Electrical Equipment Index.*  
**(1107930)—Solenoid Switch No. 1118021.** Mounted on starter and controlled by Pushbutton Switch 1996009 on instrument panel and Neutral Safety Switch 1997761 (on cars with Hydra-Matic Drive).  
*For complete data, refer to Electrical Equipment Index.*

**GENERATOR**

**Delco-Remy Model 1102664.** Armature No. 1879002. (Std.), 1102680 (Hydra-Matic Drive Cars), 1106403 (City Police), 1105851 or 1105856 (State Police). Two

brush type with Voltage and Current regulation.  
**Pulley Note:**—Cars with Std. Trans. (1102664 Gen.) have regular 3 9/16" pulley. Hydra-Matic Drive cars (1102680 Gen.) have smaller 3 1/16" pulley to compensate for lower engine speed (max. output reached at approx. 110 Eng. RPM. less). **NOTE:**—This pulley can be installed on cars with 3.9-1 Axle ratio for special service if output inadequate.  
**Charging Rate Adjustment:**—None. See Regulator.  
**Maximum Charging Rate:**—33 amperes, 8.0 volts, 2400 RPM. (hot) or 23 MPH. ('68), 21 MPH. ('78, '98) and above (Current Regulator setting) with load or discharged battery. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data—Cold**

	Amperes <sup>①</sup>	Volts	R.P.M.
1102664, 80	30	8.0	1750
1106403	35	8.0	1040
1105851, 6	40	8.0	1850

<sup>①</sup>—Not maximum output. See Current Regulator.  
**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—25 ozs. each.  
**Field Current:**—1.75-1.9 amperes (1102664, 80), 1.77-2.0 amperes (1106403), 1.62-1.82 amperes (1105851, 6) at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Check with straightedge across pulleys. Belt deflection should be 3/4" inward from straightedge with light pressure at point midway between generator and fan pulleys.

**REGULATOR**

**Delco-Remy Model 1118201 or 1118242 (for 1102664 1102680 Gen.), 1118229 (1106403 Gen.), 1118237 (1105851, 6 Gen.).** Single Core Types. Voltage and Current regulators in single case with Cutout Relay.  
*For complete data, refer to Electrical Equipment Index.*  
**CAUTION:**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In:**—6.2-6.7 volts hot.  
**Cuts Out:**—0-4.0 ampere discharge current.  
**Contact Gap:**—.020" (same for both sets).  
**Air Gap:**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting:**—7.2-7.4 volts (1118201, 242), 7.0-7.2 volts (1118229, 1118237) Hot (at operating temperature).  
**To Check:**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F.), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).  
**To Adjust:**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for other (2nd.) spring adjustment.  
**Air Gap:**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting:**—34-36 amperes (1118201, 1118229, 1118242), 38-40 amperes (1118237) hot (at operating temp.).  
**To Check:**—Remove regulator cover, connect short

jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F.), current reading should agree with setting (above).  
**To Adjust:**—Same as for Voltage Regulator (above).  
**Air Gap:**—.080" (check same as Voltage Regulator).

**LIGHTING**

**LIGHTING:**—Headlamps—Guide 'Sealed Beam' type. *For complete data, refer to Electrical Equipment Index.*  
**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator:**—Small red indicator in upper edge of speedometer dial. Lighted when Country (upper) Beam in use.

**Direction Signal:**—Refer to Electrical Equip. Index.

**Switches**

**Lighting (1941—No Fuse):**—Delco-Remy No. 1995017 (LHD cars), 1995020 (RHD cars).

**Lighting (1942—with Fuse):**—Delco-Remy No. 1995026 (LHD cars), 1995027 (RHD cars).

**NOTE:**—All switches have instrument light rheostat controlled by Lighting Switch handle.

**Beam Selector:**—Delco-Remy No. 1997002.

**Stop Light:**—Delco-Remy No. 1997725.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking	3	63
Instrument, Clock	1 1/2	55
Beam Ind., Glove Compt.	1	51
Stop & Tail	21-3	1154
Rear License Plate	3	63
Dome	6	82

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—On lighting switch. Contacts remain closed with 30 ampere current, open in 3 minutes with current of 42 amperes at 70° F. Limits current to 18 amperes with dead short-circuit. Not adjustable.

**FUSES:**—Clock—2 ampere. In clock lead connector.  
**Stop Light (1942):**—9 amperes. On lighting switch.  
**Convertible Top:**—9 ampere. In switch feed line.

**HORNS:** Delco-Remy  

Numbers	Current (at 6 Volts)	Air Gap
①1999535 (low note)	19-21 amperes	.044-.049"
①1999536 (high note)	18-20 amperes	.034-.039"
①1999843 (low note)	7-11 amperes	.032-.038"
①1999844 (high note)	6-10 amperes	.021-.025"
①1999573 (low note)	19-21 amperes	.047-.052"
①1999574 (high note)	18-20 amperes	.039-.044"

①—1941 Models. Twin horns operated by relay.  
 ②—1941 Models. Penetone horns with relay, used on E-41 after Serial No. 68-7686.  
 ③—1942 Models. Twin horns operated by relay.

**Horn Relay:**—Delco-Remy No. 1116775.

**Contact Gap:**—.025". **Air Gap:**—.015" (closed).  
**Contacts Close:**—2.75-4.0 volts.

## CONTINUED FR M PRECEDING PAGE

## ENGINE

## ENGINE SPECIFICATIONS:—8 cylinder, 'L' head.

Bore—3¼". Stroke—3⅞".

Displacement—257.1 cu. ins. Rated HP—33.8.

Developed Horsepower—110 at 3600 RPM (Std. hd.).

Compression Ratio—6.3-1('41), 6.5-1('42), 5.7-1 Exp.

Compression Pressure—105 lbs. ± 10 lbs. at cranking speed of 100 RPM (Std. head).

Vacuum Reading—Steady 17" min. at idling speed.

See Oldsmobile Shop Notes for Cylinder Head Servicing.

## PISTONS (1941): Aluminum alloy, T-slot, cam ground with electro-hardened oxide bearing surface.

Weight—16 ozs. (stripped). Length—3 15/16".

Removal—Pistons and rods removed from above.

Clearance—Top .023-.028". Skirt .0013-.0018".

NOTE—Piston skirt taper inward from bottom to top should be .00025-.00075". Differs from Six.

Replacement Pistons:—Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize. Same wt. as std.

Fitting New Pistons:—Check piston for size with micrometers (pin removed) 90° from pin bosses ⅜" below lower ring groove and ⅜" from bottom of skirt. Insert .002" x ½" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler must be 4 to 11 lbs. (piston and block at 70°—low limit below 70°, high above).

Installing pistons:—Mark 'V-S' on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

## PISTONS (1942): Armasteel, tin-plated type.

Weight—24 ozs. (stripped). Length—3⅞".

Removal—Pistons and rods removed from above.

Clearance—Top .022-.029". Skirt .00125-.00175".

Replacement Pistons:—Finished pistons (with fitted pins) furnished .003", .005", .010", .015", .030" oversize.

Fitting New Pistons:—Check piston for size with micrometers (pin removed) 90° from pin bosses ⅜" below lower ring groove and ⅜" from bottom of skirt. Insert .0015"x½"x12" feeler between piston (pin removed) and cylinder wall with piston inverted and feeler 90° from pin bosses. Pull to withdraw feeler 7-20 lbs. with piston and block at room temperature.

Installing pistons:—Mark 'V-S' on head toward valves.

NOTE—Pin holes in piston offset 3/32".

## PISTON RINGS:—2 compression (coated type—install with mark TOP up), 2 oil control, all above pin.

Ring Width End Gap Side Clearance

Compr. .0925-.0935" .009-.014" .001-.0025"

Oil Cont. .1860-.1865" .009-.014" .001-.0025"

Replacement Rings:—.010", .020", .030" oversize.

## PISTON PIN (1941): Diam. .8554-.8557". Lgth. 2 31/32".

Pin locked in one piston boss by lock screw (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.

Pin Fit in Piston—.0001" loose to .0002" tight (plain boss end), .0002-.0005" tight (lock boss end).

Pin Fit in Rod Bushing—.0003-.0006" clearance.

See Oldsmobile Shop Notes for Pin Fitting directions.

## PISTON PIN (1942): Diam. .8554-.8557". Lgth. 2 31/32".

Pin locked by screw in one boss. Ream piston bosses for oversize pins (.001" &amp; .003" OS.).

Pin Fit in Piston—.0000-.0002" (plain boss end), .0003-.0006" (piston lock screw boss).

## Pin Fit in Rod Bushing—.0003-.0006".

See Oldsmobile Shop Notes for Piston Pin fitting data.

## CONNECTING ROD (1941): Lgth. 7 13/16" Wt. 28.0

ounces (complete except for bearing inserts).

NOTE—Six and Eight rods not interchangeable.

Crankpin Journal Diameter—2.123-2.124".

Lower Bearing—Removable steel-backed, babbitt.

Clearance—.0005-.0025". Sideplay—.0055-.0105".

Bearing Adjustment:—None. Replace bearings.

Installing Rods:—Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used and should be tightened with torque wrench to 50-55 lbs. ft. tension.

## CONNECTING ROD (1942): Lgth. 7 13/16" Wt. 28.4 ozs

NOTE—1942 eight cyl. rods can be used in 1942 six cyl. (and 1941 six cyl. engines after G-378163).

Crankpin Journal Diameter—2.123-2.124".

Lower Bearing—Removable steel-backed, Durex-babbitt overlay bearing shells.

Clearance—.0005-.0025". Sideplay—.0055-.0105".

Bearing Adjustment:—None. Replace bearings.

Installing Rods:—Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 50-55 lbs. ft.

## CRANKSHAFT:—5 bearing, 8 integral counterweights.

1942 NOTE—New crankshaft used with heavier cheeks and counterweights. 1942 shaft equipped with new snap-in type bearing caps (except #1).

Refer to Oldsmobile Shop Notes for complete data on these bearing caps used on 1942 Oldsmobile 8.

Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.603-2.604"; #4, 2.6655-2.6665"; #5, 2.6855-2.6865".

Bearings (1941)—Removable, steel-backed, babbitt. (1942)—New type removable steel-backed, Durex-babbitt overlay bearing shells. CANNOT BE USED

ON PREVIOUS MODELS. All front bearings have oil groove to front for thrust plate lubrication.

Clearance—.0005-.002" (rear), .001-.003" (all others).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. Endplay—.004-.008".

NOTE—9/16" cap bolts on rear bearing, ½" others.

See Oldsmobile Shop Notes for Main Bearing Removal, Crankshaft End Thrust and Oil Seal data.

## CAMSHAFT:—5 bearing. Non-adjustable chain drive.

Journal Diam. ('41)—#1, 2.0600-2.0595"; #2, 1.9975-1.9970"; #3, 1.9350-1.9345"; #4, 1.8725-1.8720"; #5, 1.8100-1.8095".

Journal Diam. ('42)—#1, 2.0600-2.0605"; #2, 1.9975-1.9980"; #3, 1.9350-1.9355"; #4, 1.8725-1.8730"; #5, 1.8100-1.8105".

Bearings—Bronze bushings. Clearance .0015-.0035".

End Thrust:—Forward end thrust now taken by front engine support plate. See Oldsmobile Shop Notes.

Timing Chain:—Link-Belt. Width 1" (up to Engine No. L-389201), 1 1/16" (after Engine No. L-389201). Pitch .500". Length 47 links or 23½".

Camshaft Setting:—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

## VALVES:—Head Diameter Stem Diameter Length

Intake ..... 1 9/16" ..... 3415-3425" ..... 5 51/64"

Exhaust ..... 1 27/64" ..... 3410-3418" ..... 5 51/64"

	Seat Angle	Lift	Stem Clearance
Intak .....	30°	.286"	.00175-.00375"
Exhaust .....	45°	.314"	.00245-.00425"

Valve Guides:—Intake and exhaust guides same. Press guides in so top end ⅞" below top of block. (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (not tapered).

Valve Springs:—Same spring used on both valves and on 6&8 engines. Damper on top of each spring. Free length 2 19/32". Spring Pressure Spring Length  
Valve Closed ..... 50½ lbs. .... 2¼"  
Valve Open ..... 95½ lbs. .... 1 15/16"

Valve Lifters:—Mushroom type (same on 6 &amp; 8). Holes reamed in block have bearing-ized finish (if worn, fit oversize lifter without reaming hole) Body Diam. .6235-.6240". Furn .001", .002", .005", .010", OS. Clearance—.0005-.0008". NOTE—1½" diameter face lifter only should be used on 1941-42 models.

## VALVE TIMING

Tappet Clearance:—.008" Int., .011" Exh. Hot &amp; idling.

NOTE—Self-locking tappet screws used. Remove right fender filler plate for access to valves.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open at TDC. Close 35° ALDC.

Exhaust Valves—Open 45° BLDC. Close 10° ATDC.

Valve Timing Check—With .0124" tappet clearance #1 intake valve should open with piston at top dead center (flywheel mark 'TDC/'—NOT STEEL BALL INSERT) aligned with pointer in left front face on flywheel hous'g. Reset tappet clear. .008" hot &amp; idl'g.

## LUBRICATION

LUBRICATION:—Pressure (gear type pump on right of engine). See Oldsmobile Shop Notes for Oil Pump data.

Normal Oil Pressure:—28-33 lbs.

Oil Pressure Regulator:—On pump, opens at 30 lbs. Non-adjustable type.

Crankcase Capacity:—6 quarts.

## COOLING

COOLING SYSTEM: Capacity 21½ qts. ('41), 20½ ('42).

See Oldsmobile Shop Notes for Radiator Core Removal.

Water Pump:—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

Thermostat:—Harrison. In cylinder head outlet.

Setting—Starts to open 152°F. Fully open 173°F.

Temperature Gauge: AC Electric. Dash Unit Nos.: 1511043 ('41), 1511209 ('42). Engine: 1510772.

See Miscellaneous Section for complete data.

## CLUTCH

CLUTCH (STD. TRANS.):—Borg &amp; Beck Model 10A7 with 'Borglite' driven member. Marked #927 on cover. Single plate, dry disc type with sheet metal pressure plate oil baffle and release bearing lubrication fitting.

See Clutch Section for complete data.

Facings—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 7". O.D. 10". ¼" thick.

Pedal Adjustment:—Free travel 1-1½". Turn link at fork in or out of clevis on auxiliary shaft.

Removal:—Remove transmission (see data below), clutch underpan and reinforcing plate. Take out

6 mounting screws in clutch cover (when installing, use 2 long shank mounting screws in 2nd hole on each side of locating dowel), remove clutch. *See Oldsmobile Shop Notes for Clutch Housing Reinforcing Plate data.*

### TRANSMISSION

**TRANSMISSION (STD.):**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift.

*See Transmission Section for complete data.*

**Transmission Control:**—Oldsmobile 'Handi-shift' type.

*See Transmission Section for complete data.*

**Removal:**—Disconnect shift and selector rods from levers at transmission, speedometer cable, rear universal and slide slip yoke and propeller shaft to rear. Remove four transmission mounting cap-screws, pull transmission straight back and remove.

### HYDRA-MATIC DRIVE

**HYDRA-MATIC DRIVE (OPTL.):**—Own Make—Consists of fluid coupling & automatic transmission.

*See Transmission Section for complete data.*

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics 2C or 2CR (new type). Roller bearing types. Two used.

*See Universals Section for complete data.*

**NOTE:**—Slip joint formed at rear of transmission ahead of front U-joint (driveshaft 1 piece type).

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with torque taken through 2 support arms.

*See Rear Axle Section for complete data.*

**Ratios—** Std. Transmission      Hydra-Matic  
Std. Mountain Plains      Std. Mount.

	1941 Models			1941

Sta. Wag.	4.3-1.....			3.9-1.....

**NOTE:**—Ring and pinion gear ratio (41-10, etc.) stamped on top side of differential carrier.

**Backlash:**—.004-.008". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal (do not disengage spline joint at transmission), remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Hoist rear end, remove wheel, brake drum, backing plate mounting nuts, static collector and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace 1 backing plate nut.

**Wheel Bearing Adjustment:**—None.

**Rear Suspension:**—Quadri-coil type (support arms).

*See Rear Axle Section for complete data.*

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. FRONT—Model 1947-C (right), D (left). RIGHT REAR—2105-E (78, 98), G (68). LEFT REAR—2105-F (78, 98), H (68). Double acting (parallel cylinder type rear), hydraulic.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4°51'10".

**Caster:**—0-¾° Negative. Adjustable.

**Camber:**—Negative ¼° to Positive ¾°. Adjustable.

**Toe In:**—1/16-½". Adjust each tie rod equally.

**Steering Geometry:**—Inner whl 23° ± ½°. Outer 20°.

### STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller type with steering linkage with idler arm on right frame rail. *See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinder Bore:**—Front Wheel 1 3/32" (1941) 1½" (1942). Rear Wheel 1" (1941-42).

**Lining (1941):**—Molded. Width 1¾" (68), 2" (78, 98). Thickness 3/16". Length per shoe: 9 11/32" (Primary), 11 31/32" (Secondary Shoe).

**Lining (1942):**—Molded. Width: Front wheel 2" (68), 2¼" (78, 98). Rear Wheel 1¾" (68), 2" (78 & 98). Thickness 3/16". Length per shoe: 9 11/32" (Primary), 11 31/32" (Secondary Shoe).

**Clearance:**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service Brakes above.

### MISC. MECHANICAL

**Power Operated Conv. Top:** (1941) Vacuum Power. (1942)—Electric type.

*See Miscellaneous Section for complete data.*

**HOOD LOCK:** Alligator type hood. To raise hood, pull out on control knob on instrument panel (hood will raise slightly), push up on 'Safety Hook' tab under front end of hood at center, lift hood up.

**FRONT SHEET METAL ASSEMBLY REMOVAL, HOOD ADJUSTMENT & REMOVAL, FENDER CAP ALIGNMENT:** See Oldsmobile Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate ('46-47) on upper left front corner of dash under hood, (1948) on left front door hinge post.

1946-47-48 Numbers—First numbers as follows:

Series	Mich.	Lansing	Linden	South Gate, Cal.	Wilmington, Del.
66 ('46)	66-112001	66L-14001	66C-12001		
66 ('47)	66-132001	66L-19001	66C-15001	66W-1001	
66 ('48)	66-165001	66L31001	66C21001	66W3001	
76 ('46)	76-92001	76L-13001	76C-9001		
76 ('47)	76-134001	76L-20001	76C-13001	76W-1001	
76 ('48)	76-164001	76L31001	76C18001	76W3001	
		Atlanta, Ga.	Framingham, Mass.	Kansas City, Kans.	
66 ('47)	66A-1001	66B-1001	66K-1001		
66 ('48)	66A2001	66B1001	66K9001		
76 ('47)	76A-1001	76B-1001	76K-1001		
76 ('48)	76A2001	76B1001	76K9001		

**ENGINE NUMBER:** Stamped on pad on front left top corner of cylinder block above generator.

1946 Numbers—6-1001 Up (LHD), 6R-1001 (RHD).

1948 Numbers—6-18801 Up (LHD), 6R7001 (RHD).

Hydra-Matic Cars—Engine Number marked with letter "H" following number: 6-1001H.

### TUNE-UP

**COMPRESSION:** Pressure—112 lbs. at cranking speed of 100 RPM.

**VACUUM READING:** Steady 17" min. at idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .040".

Plug Type—AC No. 45. 14 mm.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020".

Cam Angle or Dwell—35° Closed, 25° Open.

Breaker Arm Spring Tension—17-21 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** Synchro-Mesh Trans.—TDC. Hydra-Matic Drive Cars—.001" BTDC.

Timing Procedure—See Ignition Timing.

**Timing Mark:** Steel ball insert in flywheel lined up with pointer in inspection hole in left front face of flywheel housing beside starter.

**Octane Selector:** Set to give slight ping accelerating with wide open throttle below 15 MPH.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:** ½-1½ turns open. One screw—turn screw out for richer mixture.

**Idle Speed (Standard):**—425 RPM. or 6 MPH.

**Idle Speed (Hydra-Matic):**—375 RPM.

**Float Level:** ½" from machined projection on cover to top of soldered seam at free end (invert to check).

**Accelerating Pump:**—Lower hole Normal setting. Upper hole (max.) winter. Inner hole (min.) summer.

**Fuel Pump Pressure:** 5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type. Setting—Coil wind-up should be 125° (approx. ½ turn) at room temperature. NOTE—To check valve for correct position on shaft, use feeler gauge in

slot on rear end of valve shaft. With valve closed, gauge should contact stop pin (slot 8° to left or toward engine from up-and-down position) with ⅛" clearance between valve tip and manifold. Valve welded to shaft in this position.

**VALVE TAPPET CLEARANCE:** .008" Int., .011" Exh. Hot.

Valve Timing Check—See Valve Timing.

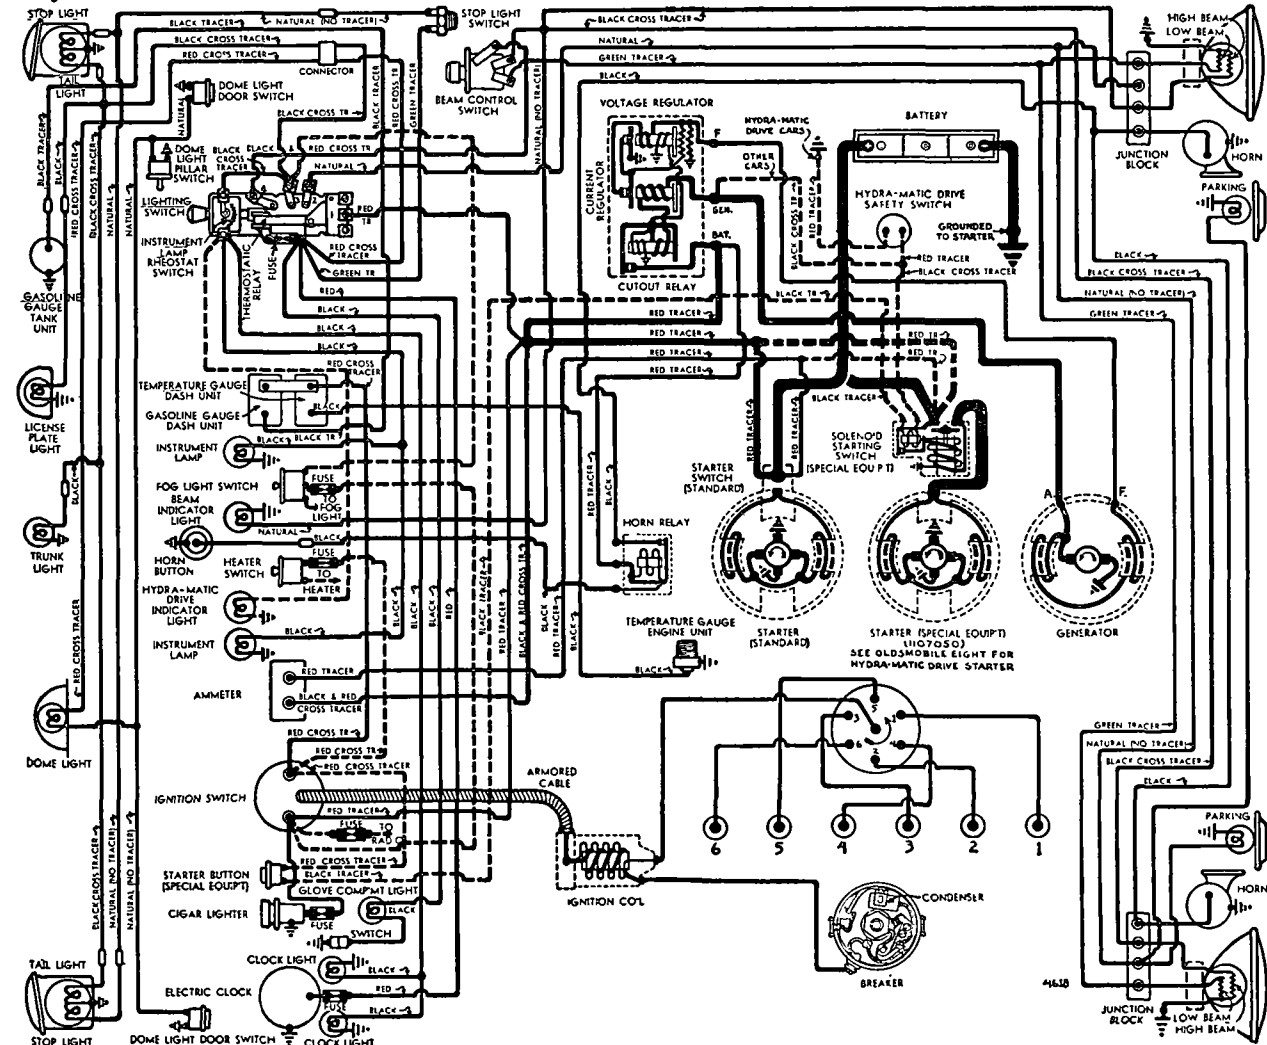

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCHES:** Delco-Remy Nos. as follows: 1946-47—1116353 (66), 1116351 (76), 1116331 (76 RHD). These are used with armored cable. 1948—1116458 (66, 76), 1116459 (76 RHD). Armored cable not used.

**Ignition Lock Cylinder:** Briggs and Stratton Numbers ('46-47) 45792, ('48) 85373.

Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy ('46-47) 1115126 or 1115129, (1948) 1115380, ('46-47) on dash, ('48) on engine.

Ignition Current—2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model No. ('46) 1110213, ('47-48) 1110214. Automatic advance with Vacuum Spark Control and Octane Selector.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110213

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	3.0.....	500
3.0.....	450	6.0.....	900
12.0.....	1600	24.0.....	3200

Automatic Advance—1110214

Start	250	3.25	500
13.0	1300	26.0	2600

**Vacuum Spark Control:** Delco-Remy No. 1116035—Integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—7/64".

Distr. Degrees	Vacuum Advance	Eng. Degrees	Vacuum (" of HG)
Start	0°	7.5-9.5"	
①	12°	14.6-16.6"	①

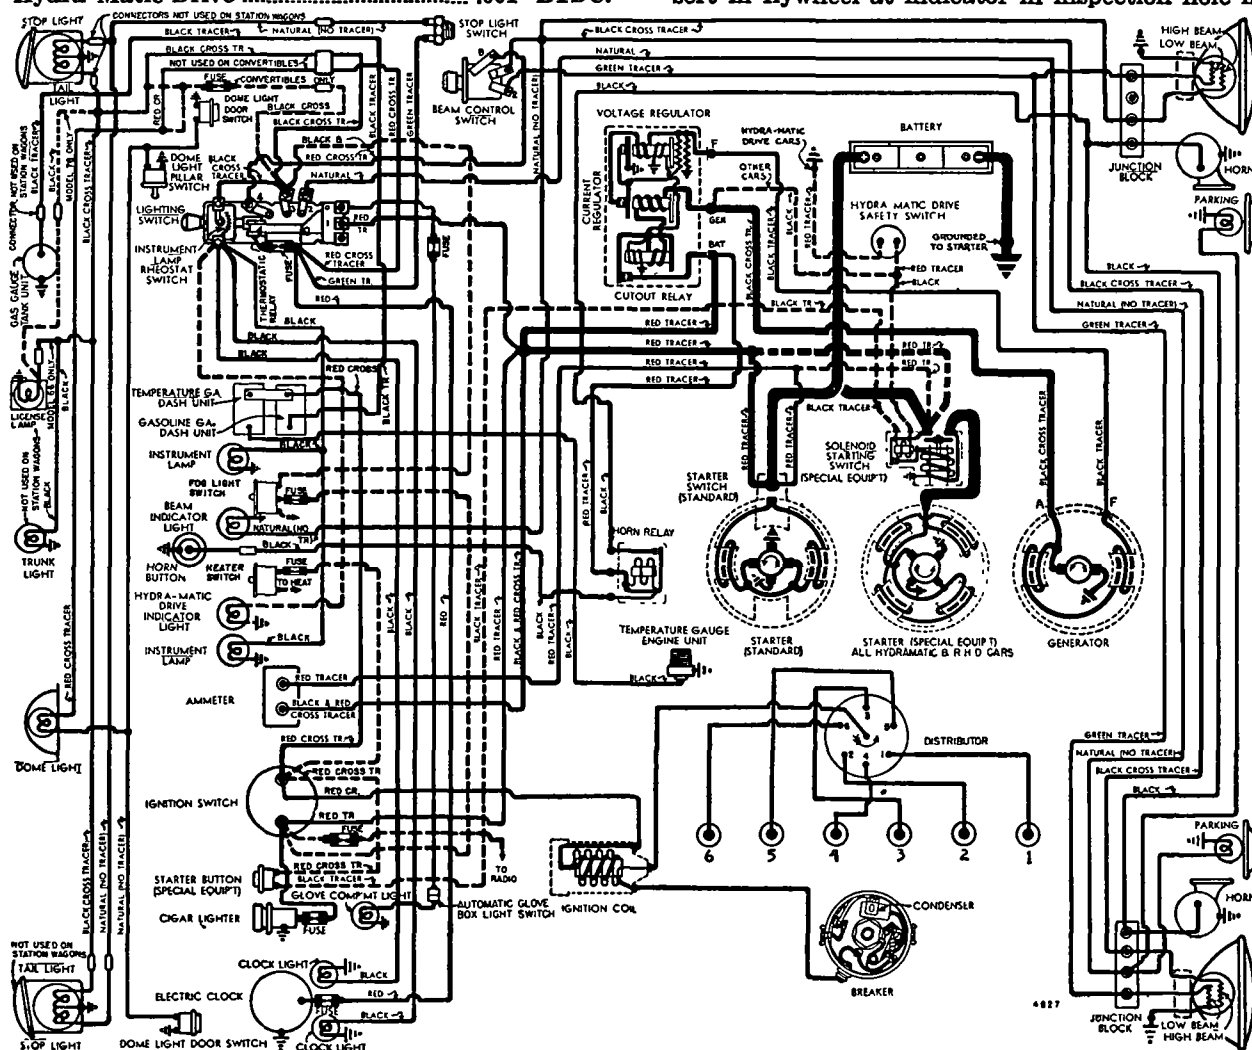

①—At .103" travel.

**Octane Selector**—Adjustment permits 10° advance or retard from center '0' position. See Ign. Timing.

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

Std. Setting	Piston Position
Synchro-Mesh Transmission	TDC.
Hydra-Matic Drive	.001" BTDC.

**NOTE**—Modify this setting for special fuel and altitude conditions. See Octane Selector Setting. **Flywheel Mark**—Steel ball on flywheel (#1 and #6 piston top dead center position). Inspection hole in left front face of flywheel housing above starter.

**Timing (With Synchroscope)**—Recommended method. Loosen hold-down screw in advance arm, center Octane Selector scale ('0' at indicator line), tighten hold-down screw. Clip synchroscope lead to #1 spark plug, direct synchroscope light on flywheel through inspection hole in left front face of housing above starter. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert) on flywheel lines up with indicator on housing, tighten clamp bolt, check Octane Selector setting (below).

**Hydra-Matic Drive Car Note**—Set distributor so contacts open with piston .001" before top dead center.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston with steel ball insert in flywheel at indicator in inspection hole in

left front face of flywheel housing (or with piston .001" BTDC. on cars with Hydra-Matic drive). Loosen hold-down screw in advance arm, center pointer on scale ('0' mark at indicator), tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt and check Octane Selector setting.

**Octane Selector Setting:** Set for a slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe) by steps until performance correct.

## CARBURETOR

1946-47-48 Synchro-Mesh Tr. Carter WA-1, No. 504S  
1946-47 Hydra-Matic ..... Carter WA-1, No. 481S  
1948 Hydra-Matic ..... Carter WA-1, No. 651S  
1½" single barrel downdraft with Carter Climatic Control.

**Casting No. on Flange**—(481S, 504S) 340, (651S) 538. See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Downdraft Jet Specification Table in Carburetor Section.

**Hydra-Matic Throttle Adjustment:** See Hydra-Matic Drive article in Transmission Section.

**Throttle Cracker Adjustment:** .0625" to .0851" (1/16") clearance between throttle stopscrew and highest step of fast idle cam with starting pedal fully depressed (starter pinion fully meshed). Adjust by loosening locknut and turning adjusting screw on accelerator bellcrank (screw contacts lug on lever linked to starter pinion shift lever).

**CAUTION**—Engine will not start properly if this adjustment not correctly made.

**Fast Idle:** Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for complete data. **Setting**—5/8" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (T109-41).

**Automatic Choke:** Carter Climatic Control (single carbs.).

See Carburetion Equipment Section for complete data. **Setting**—Centered (coil housing at index mark).

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1529861 Oil-wetted type Std.

Filter Element AC 1528064. Oil-bath Cleaner Optl.

**Servicing**—Wash and re-oil oil-wetted type every 2000 miles (500 to 1000 miles for dusty conditions). For Oil bath types, wash element and re-fill with 1 pint S.A.E. 50 oil (S.A.E. 40 for winter temperatures) every 5000 miles (2500 miles or oftener as required by local conditions in dusty areas).

**Fuel Pump:** AC Type "AJ" No. 1537358. AC Replacement Exchange No. 536. Fuel-and-vacuum type.

See Carburetion Equipment Section for complete data. **Pressure**—5 lbs. maximum.

**Gasoline Gauge:** AC Electric type.

**Dash Unit**—AC No. ('46-47) 1516809, ('48) 1517091.

**Tank Unit**—AC No. ('46-47) 1516285, ('48) 1517068.

See Carburetion Equipment Section for complete data.

C NTINUED FR M PRECEDIN PA E

**BATTERY**

**Delco Type 15E-2.** 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage 4.25 volts.

**Grounded Terminal**—Negative (—) to Starter.

**Location**—On left side in engine compartment.

**Police Battery Delco Model 19E-1.** 6 volt, 19 plate, 130 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal and Location**—Same as above.

**STARTER**

**Delco-Remy Nos.**

	Type
1107034 ('46), 1107066 ('47-48)	Foot Operated
1107930 (Hydra-Matic & RHD Cars)	Pushbutton
1107050 ('46-47 Optional)	Pushbutton

**Armature No.**—Delco-Remy No. 1867897 (all mod.).

**Drive**—Overrunning clutch type, with pinion shift, manual (1107034, 66), solenoid (1107050, 930).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—100 RPM, 125-135 amperes, 5 volts (for Summer Temperatures).

**Performance Data**—1107034, 50, 66

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Performance Data**—1107930

	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out mounting screws.

**Starting Switch** (1107034, 66): Delco-Remy No. 820052. On starter. Operated by pedal pinion shift lever. (1107050, 1107930)—Delco-Remy Solenoid Switch No. 1118021. On starter. Controlled by Pushbutton Switch No. 1996009 on instrument panel (and Neutral Safety Switch No. 1997761 on Hydra-Matic Cars).

*See Electrical Equipment Section for complete data.*

**Safety Switch Adjustment**—Place Selector Lever in "N" (neutral) position, loosen safety switch bracket locking screw, adjust switch so clearance between lever and stop is 1/16-3/32".

**GENERATOR**

**Delco-Remy 1102664 (Std.), 1102680 (Hydra-Matic).** Armature No. 1879002. Two brush (shunt) types with voltage and current regulation. Ventilated by fan.

**Pulley Note**—Cars with Std. Trans. (1102664 Gen.) have regular 3 9/16" pulley. Hydra-Matic Drive cars (1102680 Gen.) have smaller 3 1/16" pulley to compensate for lower engine speed (max. output reached at approx. 110 Eng. RPM. less). NOTE—This pulley can be installed on cars with 3.9-1 Axle ratio

**Charging Rate Adjustment**—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.

**Maximum Charging Rate**—33 amperes, 7 1/4 volts, 2400 RPM (hot operating tem.) at 21 MPH car speed and above (Current Regulator setting) with load or discharged battery. Actual charging rate controlled by Voltage Regulator (dependent on battery).

**Performance Data—Cold**

	Amperes①	Volts	R.P.M.
1102664, 80	30	8.0	1750

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Check with straightedge across pulleys. Belt deflection should be 3/4" inward.

**REGULATOR**

**Delco-Remy Model 1118242.** Single Core Type. Vibrating type Voltage and Current Regulators in a single case with Cutout Relay.

*See Electrical Equipment Section for complete data.*

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings

**Cutout Relay**

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts hot (at operating temp.). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**Checking & Adjusting**—See *Electrical Equip. Section*.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting**—34-38 amperes hot (at operating temp.).

**Checking & Adjusting**—See *Electrical Equip. Section*.

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**Headlamps:** Guide "Sealed Beam" type.

*See Electrical Equipment Section for complete data.*

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—Small red indicator in upper edge of speedometer. Lighted when Upper Beams in use.

**Direction Signal:** See *Electrical Equipment Section*.

**Switches**

**Lighting**—(1946-66, 1946-47-76) Delco-Remy Nos. 1995026 (1995027 for RHD cars).

(1947-66) Delco-Remy 1995033 (1995034 for RHD).

(1948-66) Delco-Remy 1995036 (1995037 for RHD).

(1948-76) Delco-Remy 1995038 (1995039 for RHD).

**Instrument**—Part of Lighting Switch. Rheostat operated by turning lighting switch knob.

**Beam Selector**—Delco-Remy No. 1997008.

**Stop Light**—Delco-Remy No. 1997725.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking, Rear License	3	63
Dir. Signal & Parking	21-3	1154

Trunk & Under-hood	6	81
Back-up	32	1133L

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:** On lighting switch. Contacts remain closed with 30 ampere current, open in 3 minutes with 42 amps. current @ 70°F. Limits current to 18 amps. with dead short-circuit. Not adj

**FUSES:** Dome & Stop Lights—On lighting switch. ('46-47) SFE 9 ampere. ('48) SFE 14 ampere.

**Dome & Tail** (1948 Convertible)—3AG 20 ampere. In body feed wire to tail and dome lights.

**Glove Box & Under-hood light**—1AG 5 ampere.

**Direction Signal**—SFE 9 ampere. In Flasher to Ignition Switch wire.

**Electric Clock**—1AG 2 ampere. In feed wire.

**Cigar Lighter**—1AG 30 and 3AG 30 ampere.

**Radio**—3AG 15 ampere.

**Back Up Light**—SFE 9 ampere.

**HORNS:** Delco-Remy No. Low Note: (1946-47) 1999607, (1948) 1999617, High Note: (1946-47) 1999608, (1948) 1999618. Vibrator type operated by relay.

Type	Current (at 6 volts)	Air Gap
1999607, 617 (Low)	19-21 amperes	.047-.052"
1999608, 618 (High)	18-20 amperes	.039-.044"

**Horn Relay:**—Delco-Remy No. 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS:** 6 cylinder, "L" head type.

**Bore**—3 1/2". **Stroke**—4 1/8".

**Displacement**—238.1 cubic ins. **Rated HP**—29.4.

**Developed Horsepower**—100 at 3400 RPM.

**Compression Ratio**—6.5-1 cast-iron head.

**Compression & Vacuum Reading**—See *Tune-up data*.

**OIL PAN REMOVAL:** See *Oldsmobile Shop Notes*.

**TIGHTENING TORQUES** (Torque Indicating Wrench Data)—See *Oldsmobile Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Oldsmobile Shop Notes*.

**PISTONS:** Aluminum alloy, T-slot, cam ground, electro-plated type.

**Weight**—17.37 ozs. **Length**—4 1/32".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top land .023-.028". Skirt clearance Top .0025", Bottom .00075". Fitted for .0005-.0010" clearance on thrust surface. See *Fitting New Pistons*.

**Replacement Pistons:** Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize.

**Fitting New Pistons:** Check piston for size with micrometer (pin removed) 90° from pin bosses 3/8" below lower ring groove and 3/8" from bottom of skirt. Insert .002" x 1/2" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler must be 4 to 11 lbs. (piston and block at 70°—low limit below 70°, high above).

**Installing Pistons:** Mark "V-S" on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

**PISTON RINGS:** 2 coated compression (install with mark TOP up), 2 oil control rings, all above pin.

Ring	Width	End Gap	Side Clearance
Compr.	.0925-.0935"	.008-.018"	.001-.003"
Oil Contr.	.1860-.1865"	.007-.015"	.001-.0025"

**Replacement Rings:** .010", .020", .030" oversize.

## ENGINE

## C NTINUED FR M PRECEDING PAGE

**PISTON PIN:** Diameter—.8554-.8557". Lgth.—3 5/32". Pin locked in one piston boss by lock screw (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.  
**Pin Fit in Piston**—.0001" tight to .0002" loose (plain boss end), .0003-.0006" tight (lock boss end).  
**Pin Fit in Rod Bushing**—.0003-.0006" clearance.  
**Pin Fitting, Removal, and Installation**—See "Piston Pins" in Oldsmobile Shop Notes.

**CONNECTING ROD:** Length 7 13/16". Weight 29 ozs. Crankpin Journal Diameter—2.123-2.124". Lower Bearing Diameter—2.1245-2.1255".  
**Lower Bearing**—Removable steel-backed, Durex-babbitt overlay bearing shells.  
**Clearance**—.0005-.0025". Sideplay—.0055-.0105".  
**Bearing Adjustment:** None (no shims). Replace bearings.  
**Installing Rods:** Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 45-50 ft. lbs.

**CRANKSHAFT:** 4 bearing, 7 integral counterweights. Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".  
**Bearings**—Removable steel-backed, Durex-babbitt overlay bearing shells. Front bearing has oil groove (to front) for thrust plate lubrication.  
**Clearance**—.0005-.002" (rear), .001-.003" (all others).  
**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. NOTE—9/16" cap bolts used on rear bearing, 1/2" on others (heads alike).  
**Bearing Removal**—See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.  
**End Thrust:**—At #1 bearing. Endplay—.004-.008". See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.  
**Rear Main Bearing Oil Seal Installation:** See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive. Journal Diameters—#1, 1.9975-1.9980"; #2, 1.9350-1.9355"; #3, 1.8725-1.8730"; #4, 1.8100-1.8105".  
**Reamed Bushing Diameters**—#1, 1.9995-2.001"; #2, 1.937-1.9385"; #3, 1.8745-1.876"; #4, 1.812-1.8135".  
**Bearings**—Bronze bushings. Clearance .0015-.0035".  
**End Thrust:**—Forward thrust taken by flange on front engine support plate, rear thrust by flange on shaft bearing against front of engine block.  
**Timing Chain:** Link-Belt. Width 1". Pitch .500". Length 47 links or 23 1/2". Width 1". Pitch .500". Length 47 links or 23 1/2".  
**Camshaft Setting**—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).  
**VALVES:** Head Diameter Stem Diameter Length  
 Intake ..... 1 9/16" ..... 3415-.3425" ..... 5 51/64"  
 Exhaust ..... 1 27/64" ..... 3410-.3418" ..... 5 51/64"  
 Seat Angle Lift Stem Clearance  
 Intake ..... 30° ..... 303" ..... 00175-.00375"  
 Exhaust ..... 45° ..... 298" ..... 00245-.00425"

**Valve Guides:**—Intake and exhaust guides same. Press guides in so top end 7/8" below top of block. (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (not tapered). Length—3 7/32".

**Valve Springs:**—Same spring used on both valves and on 6&8 engines. Damper on top of each spring. Free length 2 5/8".  
**Spring Pressure Spring Length**  
 Valve Closed ..... 55 lbs. .... 2 1/4"  
 Valve Open ..... 100 lbs. .... 1 15/16"

**Valve Lifters:**—Mushroom type. Diam. .6235-.6240". Lifter holes in block have bearing-ized finish (if worn, fit oversize lifter without reaming hole when possible, to preserve finish). Furn. .001", .002", .005", .010" OS. Clearance .0005-.0008". NOTE—Use only 1 1/8" diam. face lifter (to clear fuel pump eccentric).

## VALVE TIMING

**Tappet Clearance:**—.008" Int., .011" Exh. Hot & idling. NOTE—Self-locking tappet screws used.  
**Valve Timing:**—See Camshaft Setting above.  
**Intake Valves**—Open 5° BTDC. Close 45° ALDC.  
**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.  
**Valve Timing Check**—With .0124" tappet clearance, #1 intake valve should open with piston 5° (.0163") BTDC with flywheel TDC mark (steel ball insert) approx. 2 teeth before indicator (hole on left front face of housing). Reset tappet clearance at .008" hot.

## LUBRICATION

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings, piston pins, and timing chain. Oil pump mounted externally on right side of engine.  
**Crankcase Capacity**—5 quarts.  
**Normal Oil Pressure**—30 lbs.  
**Oil Pressure Regulator**—On oil pump. Opens at 30 lbs. Non-adjustable type.  
**Oil Pump:** Gear type on right side of crankcase.  
**Oil Pump Assembly & Installation**—See "Oil Pump" in Oldsmobile Shop Notes.  
**Oil Pressure Gauge:** AC No. ('46-47) 1506797, ('48) 1507034.  
**Crankcase Ventilation:** Filter element in oil filler cap (inlet breather). Outlet pipe on right side of engine. Servicing—Wash and re-oil filter element every 2000 miles or oftener as required in dusty areas.

## COOLING

**Cooling System:** Positive circulation with water pump on front of engine and water distributing tube in cylinder block. Pressure valve (relief valve) used in filler cap on 1947-48.  
**Capacity**—18 1/2 quarts.  
**Pressure Valve**—AC No. 850501. Filler Cap Opens at 4 lbs. (3 1/4-4 1/4 lbs.).  
**Radiator Core Removal:** See Oldsmobile Shop Notes.  
**Water Pump:** Packless, sealed ball-bearing shaft. See Water Pump Section for complete data.  
**Thermostat:**—Harrison. In cylinder head outlet. Setting—Starts to open 152°F. Fully open 173°F.  
**Temperature Gauge:** AC Electric type.  
 Dash Unit—('46-47) 1511652, ('48) 1512059.  
 Engine Unit—('46-47) 1510772, ('48) 1512015.  
 See Miscellaneous Section for complete data.

## CLUTCH

**Borg & Beck Model 9A7** with Borglite driven member. Single plate, dry disc type with steel and asbestos composition pressure plate oil baffle and clutch release bearing lubrication fitting. Cover No. 924. See Clutch Section for complete data.

**Facings:**—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 6", O.D. 9 1/4". 1/8" thick.  
**Pedal Adjustment:**—Free travel 1-1 1/4". Turn link at fork in or out of clevis on auxiliary shaft.  
**Removal:**—Remove transmission (see data below), clutch underpan and take out 6 mounting screws in clutch cover (when installing, use 2 long shank mounting screws in 2nd hole on each side of locating dowel), lower clutch assembly out.

## TRANSMISSION

## STANDARD

**Own Make.** All helical gear. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse).  
 See Transmission Section for complete data.  
**Transmission Control:**—Oldsmobile 'Handi-shift' type. See Transmission Section for complete data.  
**Removal:**—Disconnect shift and selector rods from levers at transmission, speedometer cable, rear universal and slide slip yoke and propeller shaft to rear. Remove four transmission mounting cap screws, pull transmission straight back and remove.

## HYDRA-MATIC DRIVE

## OPTIONAL EQUIPMENT

**Own Make.** Consists of fluid coupling and 4 speed automatic transmission.  
 See Transmission Section for complete data.  
**Lubrication:**—Check fluid level in transmission at each 1000 mile lubrication period or every 2000 miles. Drain and refill every 15000 miles. Use only Oldsmobile Hydra-Matic Drive Fluid.  
**Capacity**—11 qts. (when drained and refilled with unit in car). Approximately 12 qts. (when refilling after the unit has been removed and completely rebuilt).  
**Checking Fluid Level:**—Engine must be running at slow idle. Raise floor mat, take off cover in floor above transmission, lift out combination filler cap and dip stick. Add fluid until level is at "FULL" mark with engine idling.  
 ► **CAUTION:**—Engine must be running at slow idle speed when checking Hydra-Matic Drive Fluid Level.  
**Hydra-Matic Linkage Adjustment:**—See Hydra-Matic Drive article in Transmission Section.  
**Removal:** See Hydra-Matic Drive article in Transmission Section.

## UNIVERSALS

**Mechanics 2C or 2CR types.** Roller bearing types. See Universals Section for complete data.  
 NOTE—Slip joint formed at rear of transmission ahead of front U-joint (driveshaft 1 piece type).  
 ► **1947-48 CAUTION:**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See 1947-48 Oldsmobile in Rear Axle Section.

## REAR AXLE

**1946 Type**—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.  
 See Rear Axle Section for complete data.  
**1947-48**—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and com-

## CONTINUED FROM PRECEDING PAGE

panion flange nut controls pinion bearing "pre-load." No setscrews are used.

See *Rear Axle Section for complete data.*

## 1946-47 Rear Axle Ratios

Std.: (66) 4.1-1, (76 '46) 4.3-1, (76 '47) 4.55-1.

Hydra-Matic—(66) 3.42-1, (Std. 76, Optl. 66) 3.9-1.

Optional: 3.9-1 or 4.55-1.

## 1948 Standard Ratios

66—43:10 (4.3).

76 (& 66 Station Wagon)—41:9 (4.55).

66 Convertible (Optl. Hilly Ratio)—41:9 (4.55).

## 1948 Hydra-Matic Ratios

66—40:11 (3.64).

76 (& 66 Sta. Wag. & Convertible)—39:10 (3.9).

66 (Optional Hilly Ratio)—39:10 (3.9).

All Export (Optl. Ratio)—41:10 (4.1).

- **Rear Axle Ratio Marking**—Ring and pinion gear ratio (43:10, etc.) and date, stamped on underside of carrier casting, right horizontal rib.
- Backlash**—('46) .004-.008", ('47-48) .004-.006". Screw adjustment.

**Removal**—Disconnect drive shaft at rear universal (do not disengage spline joint at transmission), remove axle shafts and carrier flange cap screws.

- **1947-48 CAUTION**—Rear universal companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal**: Hoist rear end, remove wheel, brake drum, backing plate mounting nuts, static collector and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace 1 backing plate nut.

**Wheel Bearing Adjustment**—None.

**Rear Suspension**: Coil spring type with support arms.

See *Rear Axle Section for complete data.*

## SHOCK ABSORBERS

Delco. Two types are used. **FRONT**—Model 1947-C (right), D (left). **RIGHT REAR**—2105-E (76), G (66). **LEFT REAR**—2105-F (76), H (66). Double acting (parallel cylinder type rear), hydraulic.

See *Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data.*

**Kingpin Inclination**—4° 51' 10".

**Caster**—0-¾° Negative. Adjustable.

**Camber**—Negative ¼° to Positive ¾°. Adjustable.

**Toe In**—1/16-1/8". Adjust each tie rod equally.

**Steering Geometry**—Inner wh'l 23° ± ½°. Outer 20°.

## STEERING GEAR

**Steering Gear**—Saginaw Worm-and-Roller type.

See *Steering Gear Section for complete data.*

## BRAKES

**Service Brakes**: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data.*

**Wheel Cylinder Bore**—Front wheel 1½". Rear 1".

**Drums**—Cast-iron lined steel. Diameter 11".

**Lining**—Moulded. Width 2" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).

**Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Braking Power**—56% front wheels, 44% rear.

**Hand Brake**—See *Service Brakes* above.

## MISC. MECHANICAL

**Convertible Top Control**: Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See *Miscellaneous Section for complete data.*

**HOOD LOCK:** Alligator type hood. To raise hood, pull out on control knob on instrument panel (hood will raise slightly), push up on 'Safety Hook' tab

**FRONT SHEET METAL ASSEMBLY REMOVAL, HOOD ADJUSTMENT & REMOVAL, FENDER CAP ALIGNMENT:** See Oldsmobile Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate ('46-47) on upper left front corner of dash under hood, (1948) on left front door hinge post.

1946-47-48 Numbers—First numbers as follows:

Series	Lansing Mich.	Linden N. J.	South Gate, Cal.	Wilming- ton, Del.
68 ('47)	68-13001	68L-4001	68C-4001	68W-1001
68 ('48)	68-25001	68L8001	68C6001	68W2001
78 ('46)	78-33001	78L-5001	78C-5001	
78 ('47)	78-50001	78L-8001	78C-7001	78W-1001

98 ('48)	98A1001	98B1001	98K6001

**ENGINE NUMBER:** Stamped on pad on front left top corner of cylinder block above generator.

1946 Numbers—8-1001 Up.

1948 Numbers—Models 68 & 78, 8-127001 Up.

1948 Numbers—Model 98 First No. 9-1001 (LHD).

Hydra-Matic Cars—Engine Number marked with letter "H" following number: 8-1001H.

### TUNE-UP

**COMPRESSION:** Pressure—115 lbs. at cranking speed of 100 RPM. (All Exc. Futuramic), 182 lbs. at 1000 RPM. (Futuramic 98 1948).

**VACUUM READING:** Steady 17" min. at idling speed.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAPS:** .030".

Plug Type—AC No. 45, 14 mm.

**IGNITION—See Coil, Condenser, and Distributor.**

Breaker Gap—.015".

Cam Angle or Dwell—31° Closed, 14° Open.

Breaker Arm Spring Tension—19-23 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** Synchro-Mesh Trans.—2° BTDC

Hydra-Matic Drive Cars .....001° BTDC

Timing Procedure—See Ignition Timing.

Timing Mark—Steel ball insert (2° BTDC.) in flywheel lined up with pointer in inspection hole in left front face of flywheel housing beside starter.

Octane Selector—Set to give slight ping accelerating wide open throttle, high gear, below 15 MPH.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—(480S, SA; 503S, SA) ½-2¼, (665S)

¾-1¾, (650S, SA) ½-1½ turns open. Two screws—turning screws out gives richer mixture.

Idle Speed (Standard)—425 RPM. or 6 MPH.

Idle Speed (Hydra-Matic)—375 RPM.

Float Level (WDO Carburetors)—3/16" ("S" carburetors with 25-100S Needle & Seat Assembly), 15/64"

("SA" carburetors with later 25-164S Needle & Seat Assembly) from top of float to machined surface of cover (remove gasket and invert to check).

Float Level (WCD 665S carburetor)—3/16" from top of float to gasket seat on bowl cover (Gauge T109-162). Sides of floats should barely touch vertical uprights on gauge (to prevent floats binding on sides of bowl).

**Accelerating Pump—**Seasonal adjustment on WCD 665S only: Top hole (max.) normal, Lower hole if less charge required.

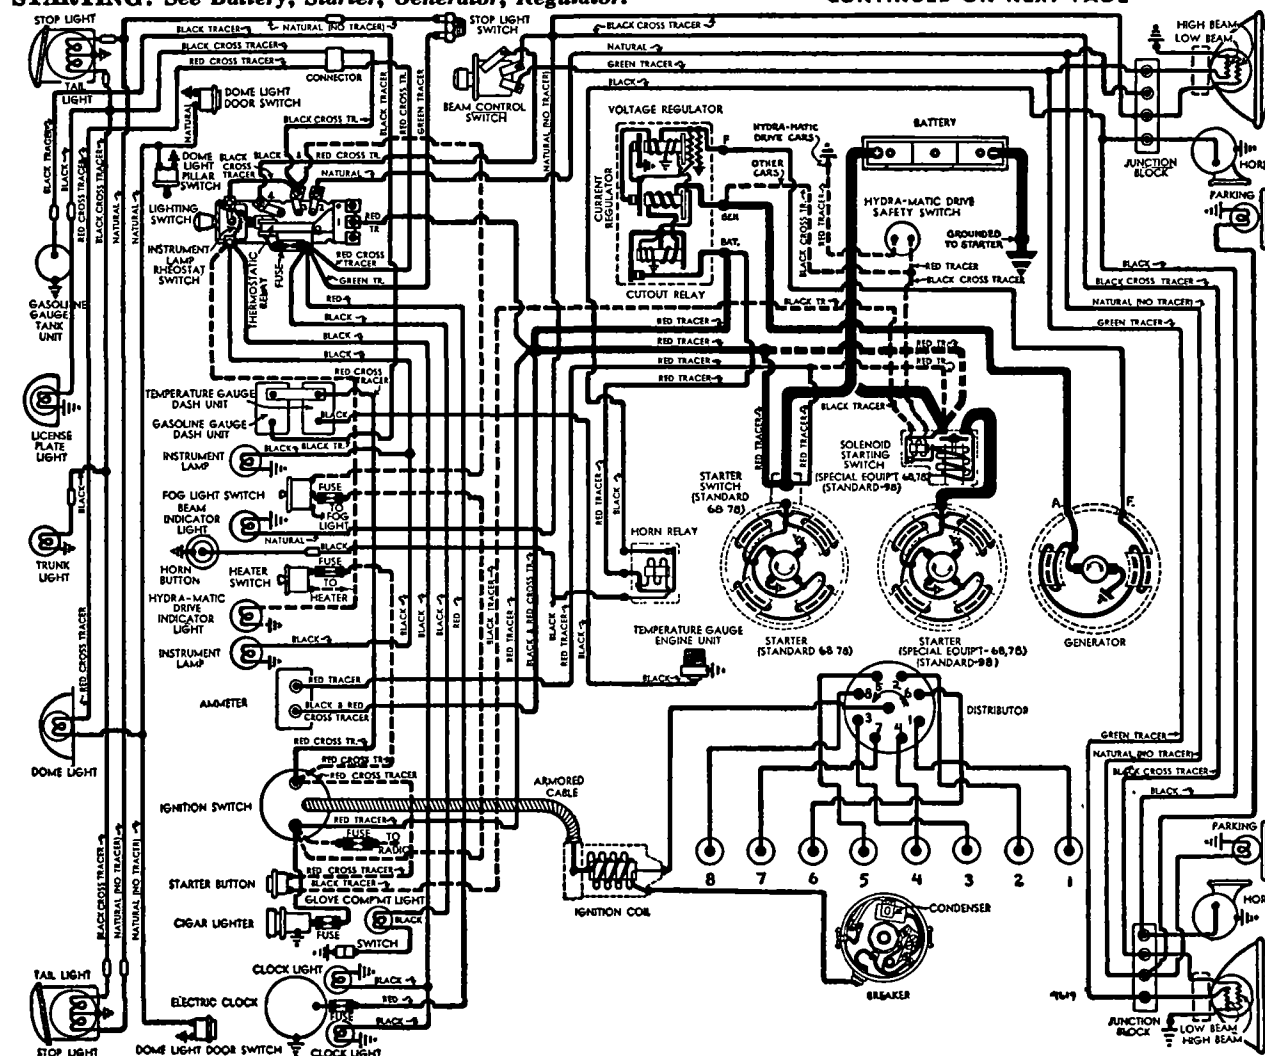

**Fuel Pump Pressure:** 5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type.

**Setting—**Coil wind-up should be 180° (approx. ½ turn) at room temperature. **NOTE—**To check valve for correct position on shaft, use feeler gauge in slot on rear end of valve shaft. With valve closed, gauge should contact stop pin (slot 6° to left or toward engine from up-and-down position) with ¼" clearance between valve tip and manifold.

**VALVE TAPPET CLEARANCE:** .008" Int., .011" Exh. hot. Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

1946-47 OLDSMOBILE EIGHT

### IGNITION

**IGNITION SWITCHES:** Delco-Remy Nos. as follows: 1946-47—1116351 (78), 1116353 (98). These are used with armored cable.

1948—1116458 (68, 78), 1116453 (98). Armored cable not used.

**Ignition Lock Cylinder:** Briggs and Stratton Numbers ('46-47) 45792, ('48) 85373.

Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy ('46-47) 1115126 or 1115129, (1948) 1115380. ('46-47) on dash, ('48) on engine.

**Ignition Current—**2.0 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy No. 1968704.

Capacity—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110808 with Vacuum Control 1116036. Single breaker, 8 lobe cam, full automatic advance type with Octane Selector.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° closed, 14° open.

Breaker Arm Spring Tension—19-23 ounces.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Rotation**—Counter-clockwise viewed from above.  
**Distr. Automatic Advance Eng.**

Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	3.0.....	500
3.5.....	500	7.0.....	1000
12.0.....	1600	24.0.....	3200

**Vacuum Spark Control:** Delco-Remy No. 1116036—Integral type linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—9/64".

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	6.5-8.5"
6°	12°	14.0-16"①

①—At .125" travel.

**Octane Selector**—Adjustment permits 10° advance or retard from center '0' position. See Ign. Timing.

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

**IGNITION TIMING**

**Std. Setting** Flywheel Degrees Piston Position  
**Std. Trans. Cars**.....2° BTDC.....002° BTDC.

**Hydra-Matic Trans.**.....001° BTDC.

**NOTE**—Modify this setting for special fuel and altitude conditions. See Octane Selector setting.

**Timing (With Synchroscope)**—Recommended method. Loosen hold-down screw in advance arm, center Octane Selector scale ('0' at indicator line), tighten hold-down screw. Clip synchroscope lead to #1 spark plug, direct synchroscope light on flywheel through inspection hole in left front face of housing above starter. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert) on flywheel lines up with indicator on housing, tighten clamp bolt, check Octane Selector setting (below).

**NOTE**—On cars with Hydra-Matic drive, use dial indicator and set distributor so contacts open with piston .001" before top dead center.

**Timing (Without Synchroscope)**—Turn engine over to firing position for #1 piston with steel ball insert in flywheel at indicator in inspection hole in left front face of flywheel housing (or with piston .001" BTDC. on cars with Hydra-Matic drive). Loosen hold-down screw in advance arm, center pointer on scale ('0' mark at indicator), tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt and check Octane Selector setting.

**Octane Selector Setting:** Set for a slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe) by steps until performance correct.

**CARBURETOR****CARTER WCD**

**Car Model**.....**Carter WCD No.**  
'46-48 Synchro-Mesh Tr.....503S, SA  
'46-Part '47 Hydra-Matic.....480S, SA  
'48 Hydra-Matic.....650S, SA  
1 1/8" Dual barrel downdraft type with Carter Climatic Control.  
**Casting No. on Flange**—(480S, SA; 503S, SA) 342, (650S, SA) 540.

See Carburetor Section for complete data.

►480S, 503S, 650S Carburetor Change to improve Warm Engine Starting—See 1946-47-48 Oldsmobile Eight (Carter WDO carburetors) in Carburetor Section. Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

**Metering Rods & Jets**—See Carter Downdraft Jet Specification Table in Carburetor Section.

**Hydra-Matic Throttle Adjustment:** See Hydra-Matic Drive article in Transmission Section.

**Throttle Cracker Adjustment:** Must be set for correct throttle opening for starting. To adjust, disconnect starter cable at starter switch (for foot operated starters), disconnect coil lead to distributor (for solenoid operated starters), depress starter pedal or pushbutton to full down position (engine will be turning over on solenoid starter cars) to fully mesh starter pinion, loosen locknut and turn adjusting screw on accelerator bell-crank (screw contacts lug on lever linked to starter pinion shift lever) so that clearance between throttle stop screw and highest step of fast idle cam is .105-.125" (1/8").

**Fast Idle:** Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for complete data. **Setting**—.015" opening between edge of throttle valve and bore of carburetor (side opposite port) with choke valve tightly closed.

**Automatic Choke:** Carter Climatic Control (Dual carbs.).

See Carburetion Equipment Section for complete data. **Setting**—Mark on thermostat case centered on housing scale (503S, SA), 2 Notches Rich (480S, SA; 650S, SA).

**CARBURETOR****CARTER WCD**

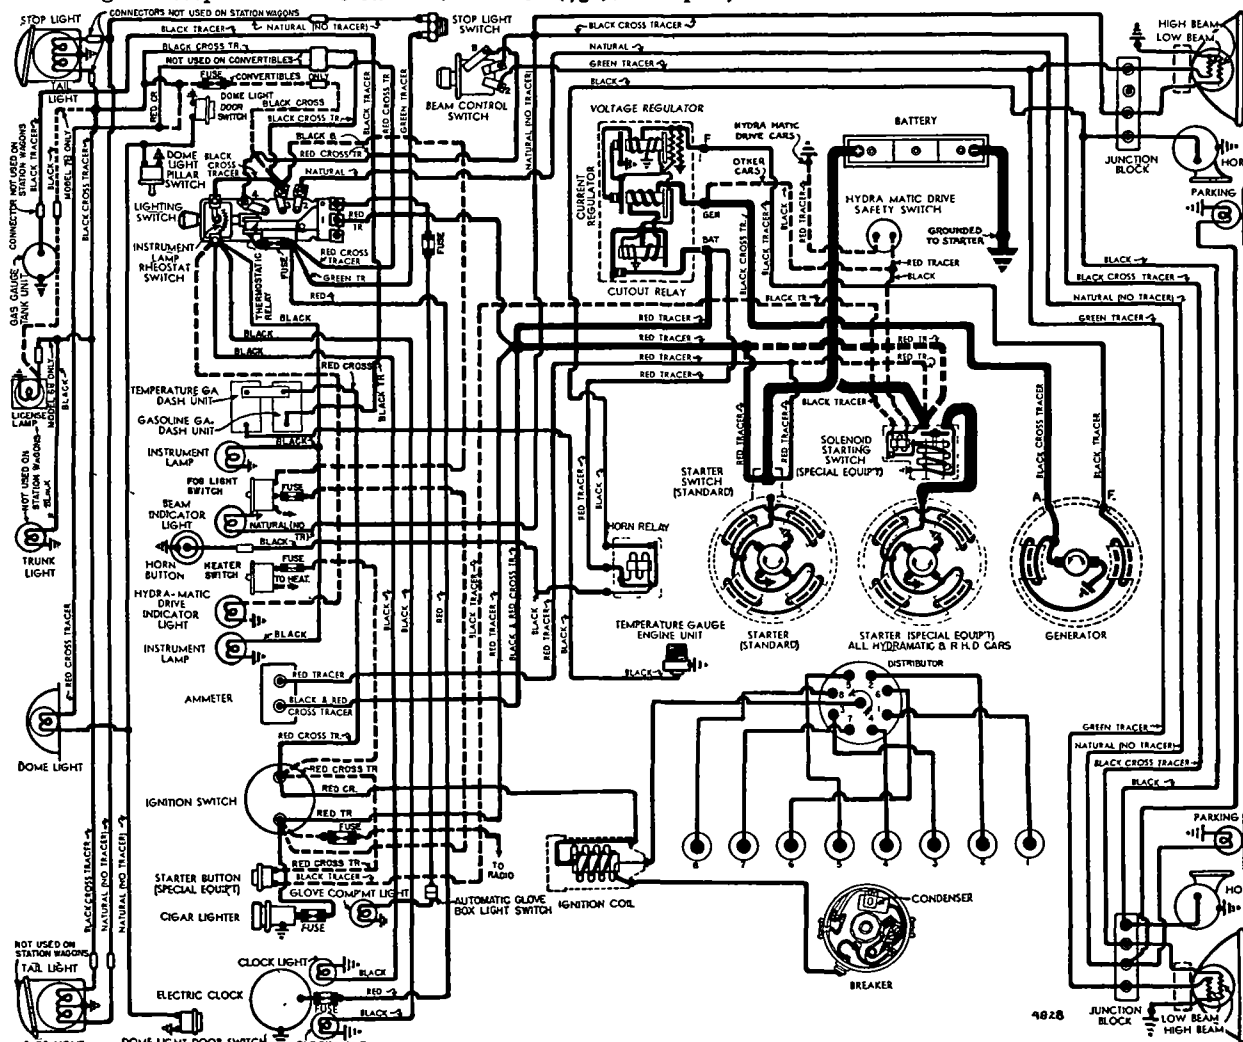

## ►PART PRODUCTION 1947 HYDRA-MATIC

Carter WCD, No. 665S. 1 1/4" dual barrel downdraft type with Carter Climatic Control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Downdraft Jet Specification Table in Carburetor Section.

## CONTINUED FROM PRECEDING PAGE

## Voltage Regulator

**Setting**—7.2-7.4 volts hot (at operating temp.). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**Checking & Adjustment**—See *Electrical Equipment Section*.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting**—34-36 amperes hot (at operating temp.).

**Checking & Adjustment**—See *Electrical Equipment Section*.

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**Headlamps:** Guide "Sealed Beam" type.

See *Electrical Equipment Section* for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—Small red indicator in upper edge of speedometer. Lighted when Upper Beams in use.

**Direction Signal:** See *Electrical Equipment Section*.

## Switches

**Lighting**—(1946-47—68, 78) D-R No. 1995026.

(1946-47—98) Delco-Remy No. 1995025.

(1948—68, 78) Delco-Remy No. 1995036.

(1948—98) Delco-Remy No. 1995030.

**Instrument**—Part of Lighting Switch. Rheostat operated by turning Lighting Switch Knob.

**Beam Selector**—Delco-Remy No. 1997008.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking, Rear License	3	63
Dir. Signal & Parking	21-3	1154
All Indicators	1	51

Dome (Station Wagon)	6	81
Dome (Convertible)	1½	55
Trunk & Under-hood	6	81
Back-Up	32	1133L

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:** On lighting switch. Contacts remain closed with 30 ampere current, open in 3 minutes with 42 amps. current @ 70°F. Limits current to 18 amps. with dead short-circuit. Not adj.

**FUSES:** Dome & Stop Lights—On lighting switch. ('46-47) SFE 9 ampere. ('48) SFE 14 ampere.

Dome & Tail (1948 Convertible)—3AG 20 ampere. In body feed wire to tail and dome lights.

Glove Box & Under-hood Light—1AG 5 ampere.

Direction Signal—SFE 9 ampere. In Flasher to Ignition Switch wire.

Electric Clock—1AG 2 ampere. In feed wire.

Cigar Lighter—1AG 30 and 3AG 30 ampere.

**HORNS:** Delco-Remy No. Low Note: (1946-47) 1999607, (1948) 1999617, High Note: (1946-47) 1999608, (1948) 1999618. Vibrator type operated by relay.

Type	Current (at 6 volts)	Air Gap
1999607, 617 (Low)	19-21 amperes	.047-.052"
1999608, 618 (High)	18-20 amperes	.039-.044"

**Horn Relay:**—Delco-Remy No. 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:** 8 cylinder, "L" head type.

**Bore**—3¼". **Stroke**—3¾".

**Displacement**—257.1 cubic ins. **Rated HP**—33.8.

**Developed Horsepower**—(Dynamic) 110 at 3600 RPM.

(Futuramic)—115 at 3600 RPM.

**Compression Ratio**—(Dynamic) 6.5-1, (Futuramic) 7.0-1. Std. Cast iron heads.

**Compression & Vacuum Reading**—See *Tune-up data*.

**OIL PAN REMOVAL:** See *Oldsmobile Shop Notes*.

**TIGHTENING TORQUES:** See *Oldsmobile Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Oldsmobile Shop Notes*.

**PISTONS:** Aluminum alloy, T-slot, cam ground, electro-plated type.

**Weight**—16 ozs. (stripped). **Length**—3 15/16".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top land .023-.028". Skirt clearance

Top .00205", Bottom .00155". Fitted for .0013-.0018" clearance on thrust surface. See *Fitting New Pistons*.

**Replacement Pistons:** Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize.

**Fitting New Pistons:** Check piston for size with micrometer (pin removed) 90° from pin bosses ¾" below lower ring groove and ¾" from bottom of skirt. Insert .002" x ½" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler must be 4 to 11 lbs. (piston and block at 70°—low limit below 70°, high above).

**Installing Pistons:** Mark "V-S" on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

**PISTON RINGS:** 2 compression (coated type—install with mark TOP up), 2 oil control, all above pin.

Ring	Width	End Gap	Side Clearance
------	-------	---------	----------------

Compr.	.0925-.0935"	.009-.014"	.001-.0025"
--------	--------------	------------	-------------

Oil Contr.	.1860-.1865"	.009-.014"	.001-.0025"
------------	--------------	------------	-------------

**Replacement Rings:**—.010", .020", .030" oversize.

**PISTON PIN:** Diameter—.8554-.8557" Lgth.—2 31/32".

Pin locked in one piston boss by lock screw (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.

**Pin Fit in Piston**—.0001" tight to .0002" loose (plain boss end), .0003-.0006" tight (lock boss end).

**Pin Fit in Rod Bushing**—.0003-.0006" clearance.

**Pin Fitting, Removal and Installation**—See "Piston Pins" in *Oldsmobile Shop Notes*.

**CONNECTING ROD:** Length 7 13/16". Weight 28 ozs.

**Crankpin Journal Diameter**—2.123-2.124".

**Lower Bearing Diameter**—2.1245-2.1255".

**Lower Bearing**—Removable steel-backed, Durex-babbitt overlay bearing shells.

**Clearance**—.0005-.0025". **Sideplay**—.0055-.0105".

**Bearing Adjustment:** None (no shims). Replace bearings.

**Installing Rods:** Oil split hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 45-50 ft. lbs.

**CRANKSHAFT:** 5 bearing, 8 integral counterweights.

**Journal Diameters**—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.603-2.604"; #4, 2.6655-2.6665"; #5, 2.6855-2.6865".

**Bearings**—Removable steel-backed, Durex-babbitt overlay bearing shells. Front bearing has oil groove (to front) for thrust plate lubrication.

**Clearance**—.0005-.002" (rear), .001-.003" (all others).

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. NOTE—9/16" cap bolts used on rear bearing, ½" on others (heads alike).

**Bearing Removal**—See "Crankshaft & Main Bearings" in *Oldsmobile Shop Notes*.

**End Thrust:**—At #1 bearing. **Endplay**—.004-.008". See "Crankshaft & Main Bearings" in *Oldsmobile Shop Notes*.

**Rear Main Bearing Oil Seal Installation:** See "Crankshaft & Main Bearings" in *Oldsmobile Shop Notes*.

**CAMSHAFT:** 5 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2.0600-2.0605"; #2, 1.9975-1.9980"; #3, 1.9350-1.9355"; #4, 1.8725-1.8730"; #5, 1.8100-1.8105".

**Reamed Bushing Diameters**—#1, 2.0620-2.0635"; #2, 1.9995-2.001"; #3, 1.9370-1.9385"; #4, 1.8745-1.876"; #5, 1.812-1.8135".

**Bearings**—Bronze bushings. **Clearance** .0015-.0035".

**End Thrust:**—Forward thrust taken by flange on front engine support plate, rear thrust by flange on shaft bearing against front of engine block.

**Timing Chain:**—Link-Belt. Width 11/16". Pitch 500". Length 47 links or 23½".

**Camshaft Setting**—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

VALVES:	Head Diameter	Stem Diameter	Length
---------	---------------	---------------	--------

Intake	1 9/16"	.3415-.3425"	5 51/64"
--------	---------	--------------	----------

Exhaust	1 27/64"	.3410-.3418"	5 51/64"
---------	----------	--------------	----------

	Seat Angle	Lift	Stem Clearance
--	------------	------	----------------

Intake	30°	.286"	.00175-.00375"
--------	-----	-------	----------------

Exhaust	45°	.314"	.00245-.00425"
---------	-----	-------	----------------

**Valve Guides:**—Intake and exhaust guides same. Press guides in so top end ½" below top of block. (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (not tapered).

**Valve Springs:**—Same spring used on both valves and on 6&8 engines. Damper on top of each spring. Free length 2⅝".

Valve Closed	Spring Pressure	Spring Length
--------------	-----------------	---------------

55 lbs.	2¼"	
---------	-----	--

Valve Open	100 lbs.	1 15/16"
------------	----------	----------

**Valve Lifters:**—Mushroom type. Diam. .6235-.6240". Lifter holes in block have bearing-ized finish (if worn, fit oversize lifter without reaming hole when possible, to preserve finish). Furn. .001", .002", .005", .010" OS. **Clearance** .0005-.0008". NOTE—Use only 1½" diam. face lifter (to clear fuel pump eccentric).

**VALVE TIMING**

**Tappet Clearance:**—.008" Int., .011" Exh. Hot & idling.  
**NOTE**—Self-locking tappet screws used.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at TDC. Close 35° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 10° ATDC.

**Valve Timing Check:**—With .0124" tappet clearance #1 intake valve should open with piston at top dead center (flywheel mark "TDC"/—NOT STEEL BALL INSERT) aligned with pointer in housing above starter. Reset tappet cl. at .008" hot & idling.

**LUBRICATION**

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings, piston pins, and timing chain. Oil pump mounted externally on right side.  
**Crankcase Capacity:**—6 quarts.

**Normal Oil Pressure:**—30 lbs.

**Oil Pressure Regulator:**—On oil pump. Opens at 30 lbs. Non-adjustable type.

**Oil Pump:** Gear type on right side of crankcase.

**Oil Pump Assembly & Installation:**—See "Oil Pump" in *Oldsmobile Shop Notes*.

**Oil Pressure Gauge:** (1946-47) AC No. 1506797.

(1948)—AC No. 1507304 (68, 78), 1507124 (98).

**Crankcase Ventilation:** Filter element in oil filler cap (inlet breather). Outlet pipe on right side of engine.

**COOLING**

**Cooling System:** Positive circulation with water pump on front of engine and water distributing tube in cylinder block and ('47-48) pressure valve in filler cap.

► **1948 Radiator Shroud:**—Used on all Eight cylinder models to maintain proper water temperature for high altitude and extreme hot weather driving.

► **Radiator Shroud #555107 for Installation on the 1946-47 Eights:**—This 1948 68 & 78 type shroud can be installed. See "Cooling System" in *Oldsmobile Shop Notes*.

**Capacity:**—20½ quarts.

**Pressure Valve:**—AC No. 850501. Radiator filler cap. Opens at 4 lbs. (3¼-4¼ lbs.).

**Radiator Core Removal:** See *Oldsmobile Shop Notes*.

**Water Pump:** Packless, sealed ball-bearing shaft.

See *Water Pump Section for complete data*.

**Futuramic Note:**—Water pump on these engines has been lowered.

**Thermostat:**—Harrison. In cylinder head outlet.  
**Setting:**—Starts to open 152°F. Fully open 173°F.

**Temperature Gauge:** AC Electric type.

**Dash Unit:**—(1946-47) AC No. 1511652.

(1948) AC No. 1512059 (68, 78), 1511943 (98).

**Engine Unit:**—AC ('46-47) 1510772, ('48) 1512015.

See *Miscellaneous Section for complete data*.

**CLUTCH**

**Borg & Beck Model 10A7 with Borglite driven member.** Cover marked #927. Single plate, dry disc type  
See *Clutch Section for complete data*.

**Facings:**—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 7". O.D. 10". ⅝" thick.

**P dal Adjustment:**—Free travel 1-1¼". Turn link at fork in or out of clevis on auxiliary shaft.

**Removal:**—Remove transmission (see below), clutch underpan and reinforcing plate. Take out 6 mounting screws in clutch cover (when installing, use 2 long shank mounting screws in 2nd hole on each side of locating dowel), remove clutch. For *Clutch Housing Re-inforcing Plate data refer Olds Shop Notes*.

**TRANSMISSION****STANDARD**

**Own Make.** All helical gear. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See *Transmission Section for complete data*.

**Transmission Control:**—Oldsmobile 'Handi-shift' type.  
See *Transmission Section for complete data*.

**Removal:** Disconnect shift and selector rods from levers at transmission, speedometer cable, rear universal and slide slip yoke and propeller shaft to rear. Remove four transmission mounting cap-screws, pull transmission straight back and remove.

**HYDRA-MATIC DRIVE****OPTIONAL EQUIPMENT**

**Own Make.** Consists of fluid coupling and 4 speed automatic transmission.

See *Transmission Section for complete data*.

**Lubrication:**—Check fluid level in transmission at each 1000 mile lubrication period or every 2000 miles. Drain and refill every 15000 miles. Use only Oldsmobile Hydra-Matic Drive Fluid.

**Capacity:**—11qts. (when drained and refilled with unit in car). Approximately 12 qts. (when refilling after unit removed and completely rebuilt).

**Checking Fluid Level:**—Engine must be running at slow idle. Raise floor mat, take off cover in floor above transmission, lift out combination filler cap & stick, fill to "FULL" mark (engine idling).

► **CAUTION:**—Engine must be running at slow idle speed when checking Hydra-Matic Drive Fluid Level.

**Hydra-Matic Linkage Adjustment:**—See *Hydra-Matic Drive article in Transmission Section*.

**Removal:** See *Hydra-Matic Drive article in Transmission Section*.

**UNIVERSALS**

**Mechanics 2C or 2CR types.** Roller bearing types.

See *Universals Section for complete data*.

**NOTE:**—Slip joint formed at rear of transmission ahead of front U-joint (driveshaft 1 piece type).

► **1947-48 CAUTION:**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See *1947-48 Oldsmobile in Rear Axle Section*.

**REAR AXLE**

**1946 Type:**—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.

See *Rear Axle Section for complete data*.

**1947-48:**—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and companion flange nut controls pinion bearing "pre-load." No setscrews are used.

See *Rear Axle Section for complete data*.

**1946-47 Rear Axle Ratios**

**Ratio—Std.:** 4.55-1 (98), 4.3-1 (for 68 and 78).

**Hydra-Matic:** 3.42-1 (68), 3.63-1 (78), 3.9-1 (98).

**Optional:** 3.9-1 or 4.55-1.

**1948 Rear Axle Ratios**

**Ratios (Std. Trans.)**—(68, 78, 98) 43:10 (4.3-1), (68 Sta. Wgn & Optl. on 68 Conv.) 41:9 (4.55-1).

**Ratios (With Hydra-Matic Drive)**—(68, 78) 40:11 (3.64-1), (98) 39:10 (3.9-1), (68 Sta. Wgn & Conv. & Optl. on 68, 78) 39:10 (3.9-1).

► **Rear Axle Ratio Marking:**—Ratio (43:10 etc.) and date stamped on right lower side of carrier.

**Backlash:**—('46) .004-.008", ('47-48) .004-.006". Screw adjustment.

**Removal:** Disconnect drive shaft at rear universal (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews.

► **1947-48 CAUTION:**—Rear universal companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal:** Holst rear end, remove wheel, brake drum, backing plate mounting nuts, static collector and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace 1 backing plate nut.  
**Wheel Bearing Adjustment:**—None.

**Rear Suspension:** Coil spring type with support arms.  
See *Rear Axle Section for complete data*.

**SHOCK ABSORBERS**

**Delco.** Two types are used, **FRONT**—Model 1947-C (right), D (left). **RIGHT REAR**—2105-E (78, 98), G (68). **LEFT REAR**—2105-F (78, 98), H (68). Double acting (parallel cylinder type rear), hydraulic.  
See *Shock Absorber Section for complete data*.

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data*.

**Kingpin Inclination:**—4° 51' 10".

**Caster:**—0-¾° Negative. Adjustable.

**Camber:**—Negative ¼° to Positive ¾°. Adjustable.

**Toe In:**—1/16-½". Adjust each tie rod equally.

**Steering Geometry:**—Inner wh'l 23° ± ½°. Outer 20°.

**STEERING GEAR**

**Steering Gear:**—Saginaw Worm-and-Roller type.

See *Steering Gear Section for complete data*.

**BRAKES**

**Service Brakes:** Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data*.

**Wheel Cylinder Bore:**—Front wheel 1½". Rear 1".

**Drums:**—Cast-iron lined steel. Diameter 11".

**Lining:**—Molded. Width: Front wheel 2" (68), 2¼" (78, 98). Rear 1¾" (68), 2" (78, 98). Thick. 3/16".

Length 9 11/32" (primary), 11 31/32" (secondary).

**Clearance:**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Hand Brake:**—See *Service Brakes* above.

**MISC. MECHANICAL**

**Power Operated Convertible Tops, Windows, & Front Seat:** Hydro-Lectric type (motor driven pump).

**Futuramic Note:**—Power operated windows and front seat adjustment optional on 2-Door & 4-Door  
See *Miscellaneous Section for complete data*.

## HOOD ASSEMBLY

## 1942 MODELS

**HOOD LOCK: Clipper.** One piece, side hinge type hood with remote control levers at each side of front compartment under instrument panel. To raise hood, push remote control down to unlocked position on side to be raised, raise hood about 1", release safety catch (push in on small rod approx. 2 feet ahead of rear edge of hood), lift hood up. Hood can be held in open position by prop which is pivoted on front of dash.

**Other Models—Conventional center hinge hood.** Hood lock release incorporated in trim strip on side panel and can be released by inserting finger in notch and pulling lever out toward the front.

## FRONT END SHEET METAL

## 1937-42 MODELS

**FRONT END REMOVAL:** To work on front of engine, remove radiator and fender assembly as a unit as follows: drain cooling system, remove fender-to-body bolts, fender-to-running board bolts, fender to brace bolts, disconnect radiator hoses, free radiator tie rods, free radiator anchor bolt on frame remove running board molding from fender and lift entire assembly off. **NOTE—**Above data applies to all cars except Clipper models.

## CYLINDER HEAD

## 1938-41 MODELS

**CYLINDER HEADS (EXCEPT TWELVE CYLINDER):**—Aluminum heads used on 1938 Eight and Super 8, and Six (High Compression head only). Cast iron heads used on all other models. Each head carries a part number on the front end (as listed in table below). High compression heads carry additional marking 'HC'.

Car	Standard	High Compression
Six (1600 '38).....	324285	335664
Six (1700 '39).....	324285	317725
Six (1800 '40).....	354122	354675
Six (1900 '41).....	354122	354675
Eight (1601,1A,2 '38).....	327564	317737
Eight (1701,1A,2 '39).....	330812	341344
Eight (1801,1A,2 '40).....	348200	351243
Eight (1901,1A,2 '41).....	348200	351243
Clipper Eight (1951 '41).....	351243	
Super 8 (1603,4,5 '38).....		

① Super 8 (1703,3A,5 '39).....	221400 or 237994	239001
Super 8 (1803-8 '40).....	242511	335618
Super 8 (1903-8 '41).....	341586	351254
①—Low compression cast iron head marked 338960.	341586	351254

**Replacement Note—**Cast iron heads only available for replacement. Car manufacturer recommends copper ferruled cylinder head gaskets be used with cast iron heads, terne ferruled gaskets with aluminum heads.

## 1937-38-39 MODELS

**CYLINDER HEADS (12 CYL.):** Heads are aluminum Standard compression head unmarked, Low Compression head marked 'L.C.', High Compression head marked 'H.C.' on top of head at rear end.

## 1942-47 MODELS

**CYLINDER HEADS (ALL MODELS):** Cast Iron heads are used on all models. Heads are marked by Part Number on front end as follows:

Model	Part Number
Six Cylinder Models .....	367634
Eight Cylinder Models .....	367636
Super Eight Models .....	351254

## 1938-47 MODELS

**CYLINDER HEAD GASKETS:** Car manufacturer recommends that a new gasket be used whenever the cylinder head is removed. Packard service gaskets are furnished with a special coating (transparent sealing compound) and no gasket compound or sealer is required. Check water passage openings in gasket to make certain that they are not closed by the sealing coating.

**NOTE—**If these coated gaskets not used, both sides of the head gasket should be coated with a good grade of gasket paste.

## 1948 &amp; EARLIER MODELS

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Procedure for tightening Cast Iron and Aluminum heads is as follows:

**Cast Iron Heads—**With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts (additional tightening may be necessary for correct tension).

**Aluminum Heads—**With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.

## ENGINE NUMBER CODE

## 1948 MODELS

**ENGINE NUMBER CODE:** Code marks following engine number indicate changes or differences over unmarked engines as follows:

## 22nd SERIES—EIGHT &amp; SUPER EIGHT

★—Engine bore .020" Oversize.  
 "A"—Oversize Valve Guides used.  
 "C"—Late type Pistons and Rings used.  
 "CD"—Same as "C" and "D".  
 "CE"—Same as "C" and "E".  
 "D"—7 Quart Oil Pan (6 quart on unmarked engines). See 7 Quart Oil Pan (following) for parts changes required with this change.  
 "E"—Late type Camshaft (see Camshaft Change data following) and 7 Quart Oil Pan used.

## 22nd SERIES—CUSTOM EIGHT

★—Engine bore .020" Oversize.  
 "C"—Late type Pistons and Rings used.

## ENGINE REMOVAL

## 1937-38-39 MODELS

**CYLINDER BLOCK REMOVAL (SUPER EIGHT: Re-**move head, remove valves 1, 8, 9, 16 (for access to crankcase stud nuts), remove nuts on all crankcase studs. **NOTE—**Block may be re-installed with pistons and rods installed in cylinder bores by pulling pistons up until pins exposed and passing a length of rod or wire through all pins.

## ORIGINAL BORE & PISTONS

### 1938-48 MODELS

**ORIGINAL BORE & PISTON SIZES:** Piston size indicated by mark stamped on head of each piston. Cylinder bore size indicated by mark stamped on the top left face of the cylinder block at Cylinder #4 (Six), #8 (Eight & '48 Super 8), #1 (Super 8 before '48 & '48 Custom 8), #1 of Right Hand Bank (Twelve).

NOTE—Marks should correspond (AA piston in AA bore, etc.) as shown below:

### ALUMINUM PISTONS

6 CYL. (1937-47), SUPER 8 (1940-47)

#### ALL ENGINES (1948)

Mark	Piston Size	Cylinder Size
AA	3.49825-3.49850"	3.49950-3.49975"
A	3.49850-3.49875"	3.49975-3.50000"
BB	3.49875-3.49900"	3.50000-3.50025"
B	3.49900-3.49925"	3.50025-3.50050"

## PISTONS

### 1937-48 MODELS

**REPLACEMENT ALUMINUM ALLOY & CAST IRON PISTONS:**—Finished aluminum alloy or cast-iron replacement pistons are stamped on head with decimal figure (.005, .010, etc.) indicating nominal oversize and one or two letters (AA, A, BB, B, CC, C, DD, D) which indicates the actual size variation (in .00025" steps) of the piston from indicated nominal oversize. See oversizes listed below and size variations for each letter (in table).

NOTE—This system of marking makes it possible to order a finished piston (using number and letter) for any particular bore size within these limits. Piston Oversizes (Figures Stamped on Piston Head) Furnished for all engines as follows:

**Super Eight (1937-38-39)**—Standard size and .003", .005", .010", .015", .020", .025", .030", .035", and .045" oversize. NOTE—Factory reground cylinder blocks with Pistons, Pins, and Rings fitted available for replacement service.

**Twelve**—Standard size and .003", .005", .010", .015", .020", .030", and .045" oversize.

**All Other Engines**—Standard size and .005", .020", .030", .040" oversize.

### PISTON MARKING (FOR SIZE VARIATION)

(Letters Stamped on Piston Head)

For All Models and Piston Oversizes

AA	.00025" Under marked size.
A	Same as marked size.
BB	.00025" Over marked size.
B	.0005" Over marked size.
CC	.00075" Over marked size.
C	.001" Over marked size.
DD	.00125" Over marked size.
D	.0015" Over marked size.

## PISTON RINGS

### 1937-38-39 MODELS

**SPECIAL RING INSTALLATION:** To correct piston slap and excessive oil consumption on engines with some service, manufacturer recommends that special Perfect Circle piston ring combination be installed as follows (piston ring grooves numbered from head toward skirt):

#### Six & Eight

- #1—P.C. #200 (when piston expanders used) or #1—P.C. #70 (when piston expanders not used).
- #2—P.C. #X-90 Compression Ring.
- #3—P.C. #X-90 Oil Ring.

NOTE—#200 ring must be installed with groove on inner edge toward top of piston.

#### Super Eight

- #1—P.C. #70.
- #2—P.C. #X-90 Compression Ring.
- #3 & 4—P.C. #X-90 Oil Rings.

### 1940-48 MODELS

**TRIPLE ACTION PISTON RING SETS:** Service Sets. —These rings furnished in packaged sets for all models and should be installed on aluminum pistons only as directed below. CAUTION—Do not use these rings with Cast Iron pistons.

**Oil Ring**—Spring expander type oil ring used consisting of top and bottom rails with a spring assembled between two rails. Two tabs in each rail engage a loop in spring expander when assembly installed in ring groove. Install ring on piston as follows: Place lower rail with locking tabs up (45° to right of thrust face or left side of piston) on piston slightly below lower ring groove. Insert spring expander in oil ring groove with end gap centered on thrust or left side of piston. Install upper rail in ring groove with locking tabs down so as to engage first loop in spring to left of spring end gap. Move lower rail up into ring groove with tabs in rail engaging first loop in spring expander to right of spring end gap. Press upper and lower rails down firmly on spring so that rails are properly seated on spring and are free in groove.

**#2 Compression Ring**—Assemble ring in #2 ring groove with groove on outer edge down.

**Top Compression Ring**—Assemble ring in top ring groove with groove on inner edge up.

## PISTON PINS

### SIX & EIGHT CYLINDER (1937-48)

### SUPER & CUSTOM EIGHT (1940-48)

**PISTON PIN BUSHING:** Split type pin bushing is used in connecting rod. Each half of bushing installed on opposite side of rod with an opening formed between inner ends which opens into rifle-drilled oil passage in rod. Bushing must be expanded to tight fit in rod with a burnishing tool and then reamed to size for correct fit (see car page for fitting data). Car manufacturer recommends use of ST-5008 burnisher and ST-5008 reamer tools. CAUTION—Bushing halves must be installed in rod so that oil hole for pin lubrication opens into oil groove formed between bushings (bushing must not extend over oil passage in rod or piston pin will not be properly lubricated).

NOTE—Check diameter of pilot end of Burnisher & Reamer Tool ST-5008 (should be .861" for 1939 & later type bushings—if necessary, grind pilot end to this specification).

## CRANKSHAFT & MAIN BEARINGS

### ALL MODELS

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Consists of plastic rod material supplied in envelope marked with scale which gives bearing clearance in thousandths of an inch when used to measure flattened plastigage in bearing cap. Use Plastigage as follows:

**Bearing Clearance Check**—Remove bearing cap, wipe oil from bearing insert and journal (CAUTION—When checking main bearings, keep all other bearing caps tight so that crankshaft weight will not cause incorrect reading). Place piece of Plastigage rod across full width of bearing insert in cap, re-install bearing cap and tighten bolts to recommended torque (see Tightening Specifications). Re-

## CONTINUED FROM PRECEDING PAGE

move cap, match widest width of flattened Plastigage with correct graduation of scale on envelope (marking of this graduation is bearing clearance).

## CONNECTING ROD &amp; BEARINGS

## 1939-47 "110" 6 &amp; "120" 8 MODELS

**CONNECTING ROD PALNUTS:** Special patented self-locking locknuts used on connecting rod bolt nuts in place of cotter pins. To install, turn regular connecting rod bolt nut and tighten to desired tension (refer to the Tightening Specifications—Torque Wrench data—on preceding page). Turn 'palnut' on bolt with smooth face toward regular nut until it contacts nut, then tighten 'palnut'  $\frac{1}{4}$ - $\frac{1}{3}$  additional turn to lock it in place.

## CAMSHAFT &amp; BEARINGS

## 1938 MODELS

**CAMSHAFT & OIL PUMP GEAR CHANGE (SIX & '120' 8):**—Late cars with suffix letter 'B' following engine number have forged steel camshaft (first cars with suffix letter 'A' had cast alloy iron type camshaft same as 1937 cars). Oil pump drive gear must be same material as Camshaft. Both type gears furnished for service. Note engine suffix letter when replacing oil pump drive gear.

## 1948 EIGHT &amp; SUPER EIGHT

**CAMSHAFT CHANGE (PART NO. 412581):** This late type camshaft used on engines marked with letters "E" or "CE" following engine number. Only change over earlier shaft is in cam lobe contour resulting in reduced tappet noise.

► **CAUTION**—Tappet clearance for this camshaft is .007" Intake, .010" Exhaust, Hot.

## TAPPET CLEARANCE

## 1948 EIGHT &amp; SUPER EIGHT

**TAPPET CLEARANCE (FOR EARLY CAMSHAFT):** .006" Intake, .008" Exhaust, Hot. For engines WITH-OUT code letters "CE" or "E" following Engine Number. This setting reduced from production setting of .007" Intake and .010" Exhaust to reduce tappet noise. This setting does not affect operating performance of engine.

**TAPPET CLEARANCE (FOR LATE CAMSHAFT PART NO. 412581):** .007" Intake, .010" Exhaust, Hot. For engines WITH code letters "CE" or "E" following engine Number. This camshaft has redesigned cam contours which hold tappet noise to a minimum and

do not require reduced clearances recommended for early type camshaft.

## VALVE SYSTEM

## 1938 MODELS

**EXHAUST VALVE GUIDE CHANGE TO PREVENT STICKING (SIX & '120' 8):**—Late 1938 cars have shorter exhaust valve guide (top of guide  $31/32$ " below top of valve seat with top of guide counter-bored  $\frac{1}{4}$ " deep to diameter of  $\frac{3}{8}$ "). All cars with longer first type guide (top of guide  $23/32$ " below valve seat) should be re-worked with special Counterbore-and-Cutoff Tool SE-5123 to the same dimensions as the later type guide. If this tool not available, counterbore exhaust valve guides adjacent to dash to depth of  $\frac{1}{4}$ " without cutting off top of guide.

## 1938 MODELS

**VALVE LIFTERS (SIX & "120" 8):** First cars with suffix letter 'A' following engine number have cast alloy iron camshaft and use steel valve lifters. Late cars with suffix letter 'B' have forged steel camshaft and chilled iron lifters. Never use steel lifters with steel camshaft. Either type lifter can be used on cast alloy iron camshafts. Note engine suffix letter when replacing valve lifters.

## 1940-47 SUPER 8 MODELS

## 1948 CUSTOM EIGHT

**VALVE LIFTER CHECK:** Clearance check after Grinding Valves. Hydraulic valve lifters should be checked for proper clearance (take-up reserve) as part of valve grinding operation. Check clearance as follows: Empty oil out of hydraulic unit and tappet body, bottom plunger using a screwdriver or valve gauge Tool ST-2031, clearance between end of valve stem and end of hydraulic plunger with valve seated should be .030-.070" (Go-No-Go gauge Tool ST-2032 may be used to check clearance). If clearance less than .030", grind off end of valve stem until proper clearance is secured. Refer to the Wilcox-Rich "Zero-Lash" Hydraulic Valve Lifter article in the Miscellaneous Section for Valve Lifter Servicing.

## OIL PAN

## 1948 EIGHT &amp; SUPER EIGHT

**7 QUART OIL PAN:** Engines with this pan marked "CD", "CE", "D", or "E" following Engine Number. This pan has 1 quart greater capacity (6 quart pan used on unmarked engines). This pan is deeper and required following different parts:

412640—Oil Pan Assembly.  
412643—Oil Strainer Bearing and Bracket Assembly.  
412642—Oil Strainer Bracket.  
412641—Oil Strainer Suction Tube.  
412644—Oil Level Indicator Assembly (has "7 Qt." mark on dip stick).

## OIL PUMP

## SIX &amp; EIGHT CYLINDER (1937-48)

## SUPER &amp; CUSTOM EIGHT (1940-48)

**OIL PUMP INSTALLATION:** Install pump so driving slot as near parallel as possible to center-line of camshaft with distributor rotor in line with #1 segment in cap. Punch mark on pump gear should be at the bottom ('110' Six), at the top ('120' Eight, and for '160' and '180' Super Eight Models). Check ignition timing after pump installed on car.

## RADIATOR

## CLIPPER MODELS

**RADIATOR CORE REMOVAL:** The radiator core can be removed without removal of Front End Assembly as follows: Remove pan from between Radiator Core and Radiator Grille, loosen radiator core mounting bolts, lift core out of car. **CAUTION**—Do not damage fan blades when lifting core out of car.

## CLUTCH NOTES

## 1939-40 MODELS

**CLUTCH LINKAGE SERVICING (MODELS 1700, 1; 1800,1):**—Clutch pedal linkage on these models allows pedal to move downward as wear develops and clearance at ends of rods increases. Pedal position must be checked to see that pedal travel sufficient to allow complete clutch disengagement. Note that this condition is just the reverse of pedal tending to come up due to lining wear on clutch plate.

**Clutch Linkage Replacement**—New 1941 design clutch pedal linkage can be installed on these cars. Car manufacturer recommends that 1941 design linkage be installed where linkage requires repair or replacement. Available under following part number: Clutch Relay Equipment Part No. 377473 (1700, 1800), 277494 (1701, 1801). **NOTE**—1941 design linkage installation same as for 1939 and 1940 models. A flat washer Pc. No. 24595 (included with above equipment) must be installed between face of pedal extension and shoulder on stud to prevent stud being drawn into chamfered hole. This hole in pedal extension was chamfered on 1939 and 1940 models on both sides.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).

**ENGINE NUMBER:** On upper left corner of block. First number X-27900.

**TUNE-UP**

**COMPRESSION:** Ratio—6.5-1 aluminum head. 7.0-1 head optional.

Pressure—110 lbs. at 125 RPM.

**VACUUM READING:** 18-20" steady idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type K-7, or Champ. J-8. 14 mm. Gaps—.028". Limits .028-.030".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—36° Closed.

Synchronization—Set movable contacts to open 45° after stationary contacts.

Automatic Advance—10° max. at 2200 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—7° BTDC. Flywheel mark (white mark ahead of #1UP.DC) aligned with inspection hole pointer (left side of housing). Set movable contacts to open 45° after stationary contacts.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 6 MPH.

Float Level—Fuel level 15/32" below edge of bowl.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.007" Intake, .010" Exhaust, hot. NOTE—Splasher in right front fender should be removed when valve adjustments are made.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock Model 24-B, Type 6513 (6514 for RHD). Armored cable to coil.

Ignition Lock—Briggs & Stratton Model 50184, Mitchell No. 6760.

**COIL:** Auto-Lite Model CE-4614 (CE-4615 for RHD). On left side of engine.

**CONDENSER:** Auto-Lite Part No. IGB-1025C.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model No. IGH-4026 (early), Model IGH-4026-A (late). Double breaker, 4 lobe cam, full automatic advance type with 'Fuel Compensator' or manual adjustment at distributor. Contacts open alternately at 45° intervals corresponding to 90° firing interval of engine and must be synchronized. See Ignition Timing.

Breaker Gap—Set at .020". Limits .018-.022".

Cam Angle or Dwell—Closed 36°. Open 9° (distr.). Both sets together when properly synchronized.

Breaker Arm Spring Tension—16-20 ounces.

Automatic Advance—IGH-4026

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3.....	640	6.....	1280
5.....	950	10.....	1900
8.....	1660	16.....	3320
10.....	2200	20.....	4400

Automatic Advance—IGH-4026-A

Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
2.....	660	4.....	1320
4.....	1100	8.....	2200

10.....	2200	20.....	4400

**Fuel Compensator:** Manual adjustment at distributor providing 10° maximum advance and retard from center 'O' position. See Ignition Timing for setting.

**Distributor Removal:** Mounted at left side of crankcase. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:** Standard Setting as shown. See Fuel Compensator Setting below.

Flywheel Degrees Piston Position

'36 Engines .....7° BTDC.....0202° BTDC

NOTE—On cars with Startix, wire on 'IGN' terminal must be disconnected and taped to prevent automatic starting.

**Timing (Stationary Contacts)**—Remove cover ver timing inspection hole in left front face of flywheel housing under starter. Loosen thumbnut and set Fuel Compensator at 'O'. With #1 piston on compression turn engine over (engage gears and roll car) until piston reaches firing position, stop when white mark (midpoint between third and fourth graduations to right of line marked '#1 UP D.C.') on flywheel lines up with pointer on housing. Loosen advance arm clamp bolt, rotate distributor until contacts just open, tighten clamp bolt. Then synchronize movable contacts.

**Timing (With Neon Timing Light)**—This method

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDING PAGE

recommended by manufacturer. Connect lead to #1 spark plug wire. With engine idling, adjust distributor so that timing mark (as indicated above) lines up with pointer on housing.

**Synchronizing (Movable Contacts)**—Synchronization may be checked with the Neon Timing Light. Connect lead to #6 spark plug wire, remove cover over timing inspection hole as directed above and direct light at flywheel. White mark on flywheel (to right of line '#6 UP D.C.') should line up with pointer on housing, with engine idling. Engine must be stopped to set synchronization. To adjust, place #6 piston in firing position (turn engine over by rolling car with gears engaged), loosen lock screws on movable sub-plate carrying second set of contacts, shift plate until contacts begin to open, tighten lock screws.

**Synchronization (Other Methods)**—See Equipment Section for directions on synchronization using indicator and synchronizing marks on rotor fantail. If other methods are used, firing intervals should be regular 45-45-45 distributor degrees.

**NOTE**—Manufacturer recommends use of Winn Synchrometer ST-913 to synchronize contacts.

**Fuel Compensator**—Should be set at 'O' for fuel of 68-70 octane rating and advanced or retarded for fuel of higher or lower rating to secure slight 'ping' pulling heavy load.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Mod. EE-14. 1" dual downdraft type. See Carburetion Section for adjustments, overhaul and Jet Specifications.

*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

**Idle Adjustment**—Set throttle stopscrew so that engine idles at 300 R.P.M. or 6 M.P.H. Turn inner idling adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with outer idling adjusting screw. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump**—Non-adjustable.

**Fast Idle**—Stromberg type. No adjustment required.

**Automatic Choke**—See separate article in Carburetion Section for complete data.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1525940 oil-wetted type standard, #1526714 heavy duty oil bath optional.

**Fuel Pump**: AC Type X, #1521808 fuel-&-vacuum.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC. Electric #1515200 (dash unit—early cars) #1515315 (dash unit—later cars), #1515149 (tank unit on all cars). See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Prest-O-Lite HP2-17**. 6 Volt, 17 Plate, 114 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes.

**Grounded Terminal**—Positive (+) terminal.  
**Location**—On left side under driver's seat.

## STARTER

**Auto-Lite MAX-4006**. Armature No. MAW-2006.

**Drive**—Outboard barrel type Bendix A-1729.

**Cranking Engine**—125 R.P.M., 200 amps. at 5.0 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**NOTE**—See Electrical Equipment Section for 'Field Equalizer' installation on these starters.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Flange mounted on left front face of flywheel housing. To remove, take out two flange cap screws.

**Starting Switch**—Auto-Lite Solenoid Type SS-4001. Delco-Remy Control Switch Type 1400. Solenoid switch mounted on starter and controlled by switch on instrument panel. See Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

## Solenoid Switch

Closes with terminal voltage of 4 volts or less and will remain closed until voltage drops to .75-2.0 volts. Current draw 3 amperes at 6 volts.

**NOTE**—Startix Type 'D' optional. Type 'F' must not be used on these cars. See article in Equip. Section.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite GAR-4611A-5** or **GBR-4601-5**. Armature GAR-2116. Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**NOTE**—Early 1936 cars with 'GAR' generators equipped with large pulleys. These should be checked and replaced with pulley (Part No. SP-185) which has a 2" diameter measured at bottom of belt groove or 3½" at top of groove. This pulley increases generator output at lower car speeds.

**Charging Rate Adjustment**—Use test meters to check generator output. Short out current regulator by connecting jumper wire from 'F' terminal on generator to ground. Take off commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate. Third brush held in position by friction. Remove jumper wire.

**Maximum Charging Rate**—22 amperes at 8.8 volts (GAR), 22 amps. at 8.0 volts (GBR). Do not exceed.

## Performance Data—GAR-4611A-5

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	760
4	6.8	860	4	6.8	925
8	7.25	1000	8	7.25	1125
12	7.7	1160	12	7.7	1350
16	8.1	1360	16	8.1	1680
22.4	8.8	2400	19.2	8.4	2600

## Performance Data—GBR-4601-5

Cold			Hot		
Amperes	Volts	RPM.	Amperes	Volts	RPM.
0	6.4	720	0	6.4	760
4	6.7	810	4	6.75	880
8	7.0	950	8	7.1	1030
12	7.3	1080	12	7.4	1460
16	7.6	1500	16	7.8	1660
22	8.0	2700	19.4	8.0	2800

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. max. (new brushes).

**Field Current**—(GAR) 3.51-3.89 amperes at 6 volts, (GBR) 4.18-4.62 amperes at 6.0 volts.

**Field Fuse**—5 ampere in plug on regulator case.

**Motoring Current**—(GAR) 5.03-5.57 amperes at 6.0 volts. (GBR) 5.60-6.20 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out two pivot bolts, one clamp bolt and one lock bolt.

**Belt Adjustment**—Loosen pivot bolts, clamp bolt and lock bolt on link, pull generator away from engine by spring scale looped on generator lug parallel to link until scale reading is 25 lbs.

## REGULATOR

**Auto-Lite 'Two-Charge' Regulator Model TC-4302A** or **Model No. TC-4302B**. Consists of a Cutout Relay and Current Regulator (two-rate charging control). Mounted on generator.

*For complete data, refer to Electrical Equipment Index.*

## Cutout Relay

**Cuts In**—6.5-7.25 volts.

**Cuts Out**—5-2.5 ampere discharge current.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

## Current Regulator

**Contacts Open**—8.25-8.75 volts at 70° F.

**Contacts Close**—1.2-1.4 volts below opening point.

**Contact Gap**—.005" minimum.

**Air Gap**—.045" with contacts closed.

## LIGHTING

**LIGHTING**—Headlamps—Hall, Pre-focused type with special non-interchangeable lenses. Left headlamp aimed straight ahead, right headlamp deflected slightly to right (upper beam with lenses in place).

## Switches

**Lighting**—Delco-Remy 480-Y with relay.

**Foot Selector**—Delco-Remy Model 471-T, 471-U, or R.B.M. Model 1050-A.

**Instrument Light Rheostat**—Soreng-Manegold N. I-2060-A.

**Stop Light**—Hydraulic type mounted on brake master cylinder.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330-C
Parking	1	51
Instrument, Tail	3	63
Stop	15	87
Dome	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY (1936)**: On lighting switch (part of assembly). Non-adjustable. Contacts will remain closed with current of 25 amperes but will open in one minute with current of 38 amperes at temperature of 70-80° F.

**FUSES:** Body & Stop Light—20 amperes on switch.  
**Tail Lamp** ('36)—20 amp. in connector near switch.  
**Generator Field**—5 amperes on regulator case.  
**HORNS:**—Sparton. Vibrator type. One horn standard. twin horns optl. Operated by horn relay.

**Horn Relay:** R.B.M. Model 10072.  
**Closing Voltage**—2.75-4.0 volts.  
**Contact Gap**—.015-.025".  
**Air Gap**—.010-.020".

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

**Bore**—3¼". **Stroke**—4¼".  
**Displacement**—282.04 cu. ins. **Rated HP**—33.8.  
**Developed Horsepower**—120 at 3800 RPM.  
**Compression Ratio**—6.5-1 alum. hd., 7.0-1 optl.  
**Compression Pressure**—110 lbs. at 125 RPM.  
**Vacuum Reading**—18-20" steady idling at 6 MPH.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, Invar Strut, split skirt type. Recondition cylinders to take finished replacement pistons.

**Weight**—17.5 ozs. (stripped), 23 ozs. (with rings and pin).

**Removal**—Pistons and rods removed from above.  
**Clearance**—Skirt .0015". See Fitting New Pistons.  
**Replacement Pistons**—See Packard Shop Notes.

**Fitting New Pistons:**—Use feeler gauge .0015" thick ½" wide to check clearance. Pull required to withdraw feeler from between piston and cylinder wall on side opposite slot must be within 5-7 lbs.

**Installing Pistons:**—Slot toward left or away from valves.

**PISTON RINGS:**—Two compression, one oil ring per piston above pin. Lower ring groove drilled with twelve 5/32" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (top)	¾"	.007-.012"	.002"
Comp. (2nd)	¾"	.007-.012"	.0015"
Oil (1936)	3/16"	.007-.015"	.0015"

**NOTE**—Ring tension when compressed to cylinder size with .007" minimum gap must be 6¼ lbs. (compression), 4½-7½ lbs. (oil ring).

**PISTON PIN:**—Diameter—7/8". Length—2 51/64".

Pin floats in piston and rod. Held by retaining ring at each end. Pin hole in connecting rod is bronze-bushed. Pins furnished .003", .006" oversize.

**Pin Fit in Piston**—Palm push fit with piston at 160°

**Pin Fit in Rod Bushing**—.00025" clearance or thumb push fit with both parts at room temperature (70° F.). See Connecting Rod Upper Bearing.

**NOTE**—Finish ream bushings to .87515-.87485".

**CONNECTING ROD:** Weight—32½ ounces.  
 Length—7 11/16".

**Upper Bearing (Piston Pin Bushing)**—Formed by two bushings pressed in rod from opposite sides so as to form oil groove in center. Rifle-drilled oil passage in rod must open into this groove.

See Packard Shop Notes for Bushing Installation.

**Crankpin Journal Diameter**—2 3/32".

**Lower Bearing**—Interchangeable steel-backed, babbit-lined type. No shims.

**Clearance**—.0005-.0025". Sideplay .003-.006".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

**Installing Rods:**—Identification mark on side of rod should be toward front of engine with 11 bleed hole in lower bearing toward camshaft side.

**CRANKSHAFT:**—Five bearing Integral counterweights.

**Journal Diameter**—2.746" all bearings.

**Bearing Type**—Interchangeable steel-backed, babbit-lined type. No shims.

**Clearance**—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust**—Taken by center (#3) bearing. Endplay .003-.008". Adjusted by replacing or building up bearing.

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive.

**Journal Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 7/8".

**Bearing Type**—Steel-backed, babbit-lined.

**Clearance**—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. Endplay .002-.004".

**Timing Chain:** Morse #1866 RX. Width 1". Pitch .375". Length 21¾" or 58 links.

**Camshaft Setting:**—With #1 piston on top dead center (when center line above mark '#1 UP D.C.' lines up with indicator in inspection hole in left front face of flywheel housing under starter) and #1 exhaust valve just closing, mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

**NOTE**—Radiator and front assembly must be removed as a unit when work is done on front of engine and engine must be supported at front end and front engine support removed for work on timing chain, camshaft or sprockets. To remove front assembly, take out bolts to body (3 each side), bolts to running board (3 each side), fender brace bolts (1 each side), radiator tie rod nuts, center bolt in front cross-member, and running board moulding clips (4 each side).

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	11/32"	5 5/8"
Exhaust	1 13/32"	11/32"	5 5/8"

	Seat Angle	Lift	Stem Clearance
Intake	30°	300"	.0005-.00175"
Exhaust	45°	300"	.0005-.00175"

**NOTE**—Stem clearance in guides measured at bottom.

**Valve Guides:**—Cast-iron, one piece, removable with exhaust longer than intake. New guides are finish reamed with a taper reamer after installation with .0035" greater clearance at top. Exhaust valve guides are counterbored 3/8" deep at top to provide .015" greater clearance.

**Valve Springs:**—Intake and exhaust springs are interchangeable.

	Spring Pressure	Length
Valve Closed	40 lbs.	1 1/8"
Valve Open	110 lbs.	1 5/16" approx.

**Valve Lifters:**—Single piece barrel-type with openings in side walls.

## VALVE TIMING

**Tappet Clearance:**—.007" Int., .010" Exh., hot.

**NOTE**—Splasher in right front fender should be removed when valve adjustments are made.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**To Check Valve Timing:**—Set tappet clearance #1 exhaust valve at .013". This valve should close with piston 5° or .0103" past top dead center and point on flywheel 2½ graduations past #1 UPDC. mark

(top dead center mark) lines up with pointer in inspection hole in left front face of flywheel housing under starter. Reset tappet clearance at .010" with engine warm.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump mounted on right side of crankcase.

**NOTE**—Whenever oil pump is to be removed turn engine over until distributor rotor in #1 position (#1 piston 7° BTDC.). When installing pump turn oil pump shaft so that tongue-and-groove connection to distributor shaft meshes. Recheck ignition timing.

**Normal Oil Pressure:**—35 lbs. at 1000 R.P.M.

**Oil Pressure Relief Valve:**—Located on pump cover. Not adjustable. Replace relief valve spring if defective. Tension 6 lbs. compressed to 2".

**Crankcase Capacity:**—7 qts. (full).

## CLUTCH

**Long Model 10CF-CI.** Semicentrifugal, dry disc type. See Clutch Section for complete data.

**Facings:**—Woven type, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .140".

**Adjustment:**—Clearance between clutch pedal and toeboard must be ½" with clutch engaged. Free movement of clutch pedal must be 1½". To adjust, loosen locknut and turn adjusting nut on clutch pedal-to-lever connecting rod.

**Removal:**—Remove floor boards and front seat, disconnect front universal joint, support engine at rear and remove rear engine mountings, remove transmission, remove clutch housing bottom cover, and clutch pedal linkage. Loosen capscrews mounting clutch cover on flywheel turning all screws out evenly to release springs. Remove clutch from below without removing housing.

## FRONT SUSPENSION

**Front Suspension:**—Independent 'Safe-T-Flex' type with Coil springs. All specifications below apply with car weight on wheels.

See Front Suspension Section for complete data.

**King Pin Inclination:**—1°30' crosswise.

**Camber:**—1° plus or minus ¼". Adjustable.

**Caster:**—2° plus or minus ½". Adjustable.

**Toe In:**—1/16-1/8". Adjustable by turning tie rods equally (check for equal lengths after adjustment).

**Steering Geometry:**—Inner wheel turned 23°, outer wheel turned 20°. Check tie rod ends and kingpin for looseness.

## STEERING GEAR

**Steering Gear:** Gemmer Worm-and-Roller type. See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Bendix Hydr'lic, Duo-Servo, Single anchor type. Hand lever applies rear wheel brakes. See Brake Section for complete data.

**Drum Diameter:**—12".

**Lining:**—Primary U.S. Asbestos 714, Secondary U.S. Asbestos 589. Width 1¾". Thickness 3/16". Length per wheel 28".

**Clearance:**—.010" at heel and toe of each shoe.

**Spring Pressure:**—63 lbs. on primary return spring (No. 303837-red), 70 lbs. on secondary return spring (No. 303836-yellow).

**Hand Brake:**—See Service Brakes (above).

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).

**ENGINE NUMBER:** On left side of block at front. First number 390000 (Eight), 757000 (Super 8).

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at 125 RPM.

**VACUUM READING:** Steady 18-19" at 350 RPM.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type K-7 or Champ. J-8, 14 mm. Gaps—.028-.030".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—33° Closed.

Synchronization—Set movable contacts to open 45° after stationary contacts.

Automatic Advance—10° max. at 1800 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC. (Std. hd.), 4° BTDC (HC hd.), 8° BTDC (Low Comp. hd.). Vibration dampener mark (correct degree mark ahead of 'DC/1-8') aligned with pointer at front of engine. Movable contacts should open 45° after this point.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 7 MPH. Float Level—Fuel level  $\frac{5}{8}$ " below edge of bowl. Accelerating Pump—Inner hole (Summer), outer (winter).

Fuel Pump Pressure:  $4\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.004" Int., .006" Exh. warm.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Model 430-L. Connected to coil by armored cable. Switch has two 'on' positions (key turned to right or left). On cars with Startix, right hand 'on' position is regular running position with Startix operative. Left hand 'on' position is used to secure gasoline gauge reading or to run engine with automatic starting inoperative.

**COIL:** Delco-Remy Model 539-K. On engine.

Ignition Current—2.2 amperes idling, 4.4 stopped.

**CONDENSER:** Delco-Remy No. 829092.

Capacity—20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 662-T. Double breaker, full automatic advance type with manual control. Contacts open alternately at regular 45° intervals corresponding to 90° firing interval of engine and must be synchronized. (See Ignition Timing).

Breaker Gap—Set at .020". Limits .018-.022".

Cam Angle or Dwell—Closed 33°. Open 12° (distr.). Both sets together when properly synchronized.

Breaker Arm Spring Tension—19-23 ounces.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	1	600
10	1800	20	3600

**Fuel Compensator:**—Manual adjustment at distributor providing 12° maximum advance and retard from center 'O' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left side of cylinder head. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Initial settings as shown. See Fuel Compensator Setting below.

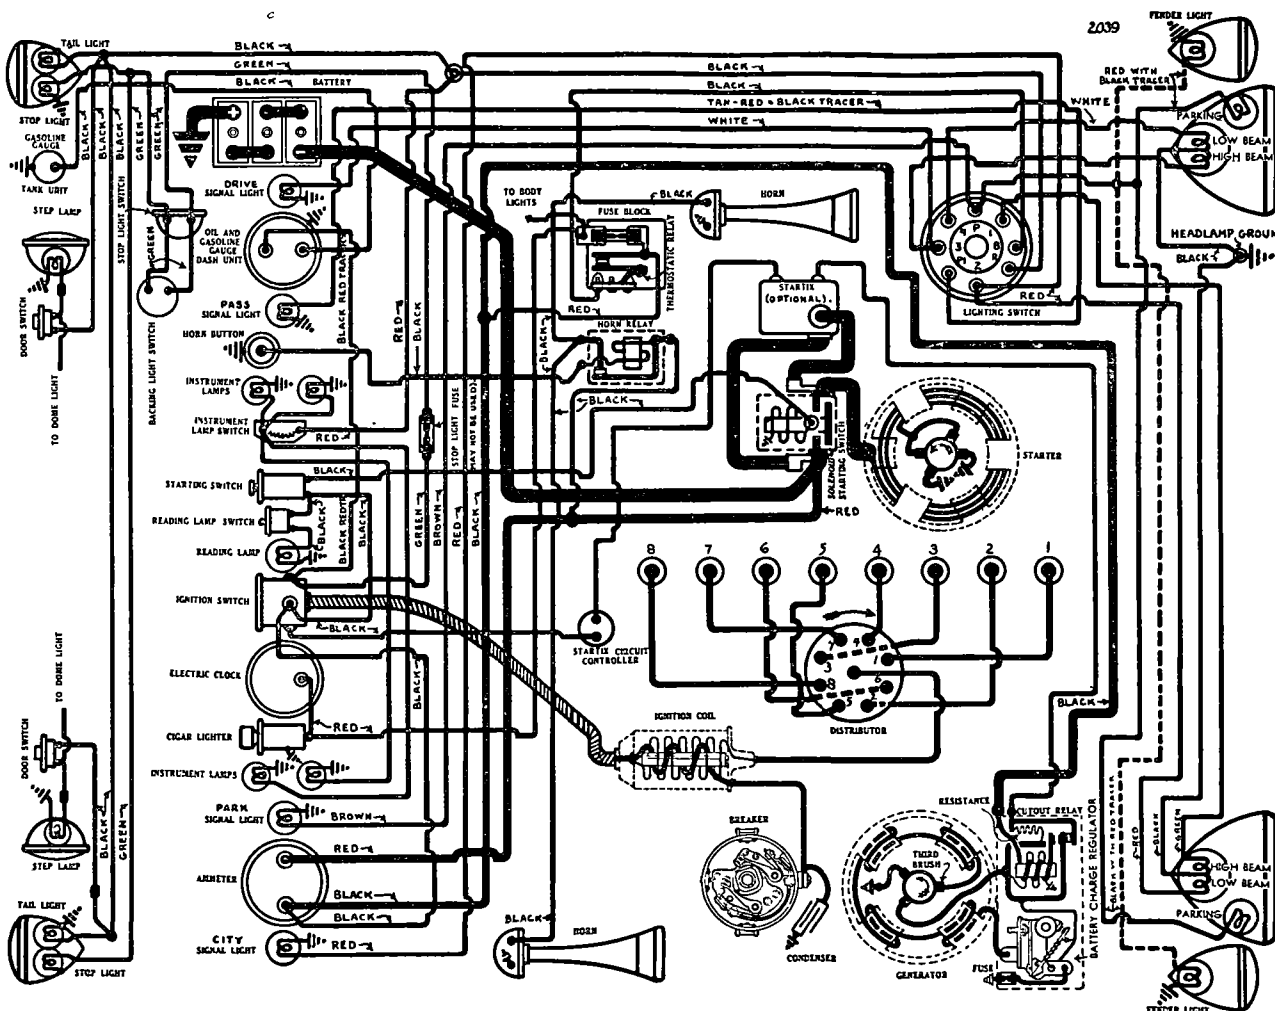

Flywheel Degrees		Piston Position
All Models (Std. Hd.)	6° BTDC	.0168° BTDC
All Models (6.0-1 Hd.)	8° BTDC	.0299° BTDC
All Models (7.0-1 Hd.)	4° BTDC	.0075° BTDC

**Timing (Stationary Contacts)**—Loosen thumbnut and set Fuel Compensator at 'O'. With #1 piston on compression, turn engine over until piston reaches firing position, stop when correct graduation on vibration dampener at front of engine lines up with pointer on chain case cover (vibration dampener has fifteen 1° graduations before the dead center mark 'DC/1-8'—see table above for setting for each type engine). Loosen advance arm clamp bolt, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt. Then synchronize movable contacts.

**Timing (With Neon Timing Light)**—This method recommended by manufacturer. Connect lead to #1 spark plug wire. With engine idling, adjust distributor so that timing mark (as indicated above) lines with pointer on chain case cover.

**Synchronization (Movable Contacts)**—Synchronization may be checked with the Neon Timing Light. Connect lead to #6 spark plug wire and direct light at pointer on chain case. With correct line before mark 'DC/2-6' marked in chalk for better visibility (see table above), idle engine. This line should line up with pointer on chain case cover. Engine must be stopped to set synchronization. To adjust, turn engine over to #6 firing position, loosen lock screws on sub-plate carrying movable contacts, turn eccentric adjusting screw until contacts begin to open, tighten lock screws.

**Synchronization (Other Methods)**—See Equipment Section for directions on synchronization using Delco-Remy synchronizing tool #1838182. If distributor synchronized by using other types of equipment, set firing intervals at regular 45-45-45 (distributor degrees).

**NOTE**—Manufacturer recommends use of Winn Synchrometer (Packard Tool #ST-913) to synchronize contacts.

**Fuel Compensator Setting**—Provides manual adjustment at distributor for octane rating of fuel used. After ignition set as above, road test car to give a slight 'ping' pulling heavy load. Adjusted by loosening thumbnut and advancing or retarding pointer on scale. Adjustment permits 12° advance or retard from center 'O' position.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model EE-23. 1¼" dual downdraft type with integral automatic choke. See Carburetion Section for adjustments, overhaul and Jet Specifications.

For complete data, refer to Carburetor Index.

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

**Idle Adjustment**—Set throttle stopscrew so that engine idles at 350 R.P.M. or 7 M.P.H. Turn inner idling adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with outer idling adjusting screw. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Adjusted by changing position of pump link rod in throttle valve lever. Inner Hole (Min. stroke)—Summer temperatures. Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle**—Integral with carburetor. For complete data see article on Stromberg Automatic Choke on EE-23 Carburetors.

For complete data, refer to Carburetion Equip. Index.

**Adjustment**—With engine cold, open and close the throttle allowing choke to close; if engine hot, choke must be held in closed position manually. With fast idle adjusting screw backed away from fast idle cam, turn screw in until it just contacts cam, then turn screw in 2½-3 turns.

**Automatic Choke**—With integral Fast Idle. See separate article (Stromberg EE-23) in Carburetion Section for complete data.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1525441 oil-wetted type standard, #1525905 heavy duty oil bath type optional.

**Fuel Pump**: AC Type F, fuel-&-vacuum pump.

Pressure—4½ lbs. max.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—AC. Electric #1515310 (dash unit), #1515400 (tank unit—except sedan), #1515401 (tank unit—sedan only).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

1936—Prest-O-Lite, Type H4-21. 6 volt, 21 plate, 150 ampere hour capacity (20 hour rate).

**Starting Capacity**—175 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side under rear compartment floor boards.

## STARTER

### EIGHT

**Auto-Lite Model MAX-4014. Armature MAW-2090.**

**Drive**—Outboard Barrel Type Bendix Model A-1729.

**Cranking Engine**—125 R.P.M., 160 amperes, 5.2 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Performance Data—Auto-Lite MAX-4014**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.85 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

All Other Data same as given for Super 8 below.

## STARTER

### SUPER EIGHT

**Owen-Dyneto Model DN-1298. Armature No. 13409.**

①—Startix Type 'F' optional on all models.

**Starter Drive**—Outboard Bendix Type RCD10FXTD.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—56-60 ozs. (new brushes).

**Cranking Engine**—125 R.P.M., 140 amperes at 5.5 volts (Eight), 125 amperes at 5.5 volts (Super 8).

**Performance Data—Owen-Dyneto DN-1298**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3000	6.0	50
2 "	1600	5.6	120
3.3 "	1200	5.45	150
6.3 "	800	5.2	210
15.0 "	400	4.65	360
35 "	Lock	3.5	650
39.0 "	Lock	3.6	810

**Removal**—Starter sleeve mounted in left front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing.

**Starting Switch**: Auto-Lite Magnetic Switch SS-4001.

For complete data, refer to Electrical Equipment Index.

**Startix (optional)**—Type 'F' automatic starting switch and Startix circuit controller (anti-backfire unit), controlled by ignition switch. See article in Electrical Equipment Section for complete data.

For complete data, refer to Electrical Equipment Index.

**NOTE**—Control Unit (Relay Regulator) has extra terminal and resistance coil which are used with Startix Type 'F'.

## GENERATOR

1936—Owen-Dyneto CO-1300. Armature 23865.

Air-cooled type. Third brush control in conjunction with Battery Charge Regulator. See Equipment Section for complete data on Regulator.

**Charging Rate Adjustment**—Third brush shifted through rack-and-pinion control by slotted adjusting screw on commutator end plate. Turn adjusting screw to right or clockwise to increase, and to left or counter-clockwise to decrease.

**Maximum Charging Rate**—30-33 amperes (cold), 24-27 amperes (hot) at 8.0 volts.

## Performance Data—CO-1300

Cold — Regulator Inoperative — Hot

Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	7.0	580	0	7.3	625
5	7.2	630	5	7.5	700
10	7.5	700	10	7.7	800
15	7.7	790	15	7.9	930
20	7.9	910	20	8.0	1100
25	8.0	1080	25	8.0	1380
30	8.0	1380	28	8.0	2000
32	8.0	1900			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—20-22 ozs. (all brushes).

**Field Current**—3.5-3.7 amperes at 6.0 volts.

**Motoring Current**—16.7-18 amperes at 6.0 volts (½ ampere more if relay and regulator in circuit).

**Field Fuse**—5 ampere capacity in knurled plug in side of regulator case.

**Removal**—Generator flange mounted on right rear face of timing chain case. To remove, take out three mounting screws, pull generator to rear to disengage drive coupling, lift out. Do not disturb intermediate flange carrying drive sprocket.

**Chain Adjustment**—Loosen generator flange mounting screw, pull generator out or away from engine until sideplay as measured at chain case is ¼", tighten mounting screws. Adjust chain whenever sideplay exceeds ½".

## REGULATOR

**Owen-Dyneto Battery Charge Regulator 40210.**

Consists of Cutout Relay (No. 40203) with auxiliary contacts and resistance coil (for use with Startix Type 'F') and Battery Charge Regulator.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

**Cuts In**—6.8-7.2 volts, 600 R.P.M.

**Cuts Out**—0-2.5 amperes discharge current.

**Contact Gap**—.030-.032".

**Air Gap**—.020-.025" with contacts closed.

**Auxiliary Contacts**—Should open when main contacts close, close when main contacts open.

**Battery Charge Regulator**

**Setting**—8.2 volts (cold), 7.8 volts (hot)—contact opening point. **Regulator Resistance**—1.85 ohms.

## LIGHTING

**LIGHTING**—Headlamps—Hall, Pre-focused Flex-beam type with special non-interchangeable lenses. Headlamps aimed straight ahead with lighting switch in 'Country Driving' (upper beam) position. 'Country Passing' beam (upper beam right hand headlamp, lower beam left hand headlamp) controlled by lighting switch.

**Headlamp Beam Indicator**—Separate beam indicator for each position of lighting switch (1—Parking, 2—City Driving, 3—Country Driving, 4—Country Passing), located on instrument panel.

**Switches**

**Lighting**—R.B.M. Model 1400.

**Instrument Lamp Rheostat**—Soreng-Manegold No. J2060A.

**Stop Light**—Auto-Lite No. 58012-B

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330

C NTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—(On Delco-Remy Model 1050-W Fuse Block). Thermostatic arm type current limit relay (no winding). Connected in lighting circuits. Contacts open with current load of 38 amperes

**FUSES:**—Body Lights—20 ampere on fuse block (see above).

Generator Field—5 amperes in knurled plug on side of regulator case.

**HORNS:**—Sparton Twin Horns. Vibrator type. Operated by horn relay.

**Horn Relay:**—R.B.M. Model 10072. Current draw 4-.55 amperes at 6.0 volts. Coil resistance 11-14 ohms. Contacts must close with relay in inverted position.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Type—8 cylinder In Line, 'L' head type.

Bore—3 3/16" (Eight), 3 1/2" (Super 8).

Stroke—5" (All Models).

Displacement—320 (Eight), 384.4 (Super 8) cu. ins.

Rated Horsepower—32.5 (Eight), 39.2 (Super 8).

Developed Horsepower—130 at 3200 RPM (Eight), 150 at 3200 RPM (Super 8).

Compression Ratio—Std. 6.5-1 (Eight), 6.3-1 (Super 8). Optl. 6.0-1 Low Comp. or 7.0-1 High Comp. (both engines).

Compression pressure—110 lbs. at cranking speed of 125 R.P.M. (std. head—both models).

Vacuum Reading—Gauge should show steady reading of 18-19" with engine idling at 350 R.P.M.

**PISTONS:**—Nelson Bohnalite, aluminaum alloy, Invar Strut, split skirt type. Recondition cylinders to take finished replacement pistons.

Weight—18.7 ozs. (Eight), 21.9 ozs. (Super 8).

Removal—Pistons removed from top, rods from bottom on Eight Engines (push the piston up until piston pin is exposed, remove locking ring and push out pin, remove piston, lower rod and remove from below. Use new locking rings when replacing pistons). Pistons and rods removed from above on Super Eight Engines.

Clearance—Skirt .0015". See Fitting New Pistons.

**Replacement Pistons:**—Finished replacement pistons furnished in standard size and .003", .005", .010", .015", .020", .025", .030", .035", .045" oversize

**Fitting New Pistons:**—Use .0015" feeler stock 1/2" wide to check clearance. Pull required to withdraw feeler from between piston and cylinder wall on side opposite slot should be 3-5 lbs.

**Installing Pistons:**—Slot should be on valve side of engine.

**PISTON RINGS:**—Three compression, one oil control ring per piston, all above pin. Lower ring groove drilled with twelve 1/8" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp (Top)	1/8"	.007-.012"	.002"
Comp (2nd)	1/8"	.007-.012"	.0015"
Oil	5/32"	.007-.015"	.0015"

**PISTON PIN:** Diameter 7/8". Length 2 47/64" (Eight), 3 3/64" (Super 8). Pin floats in piston and rod. Held by locking ring at each end. Pin hole in rod is bronze-bushed. Pins furnished for service .003", .006" oversize.

**Pin Fit in Piston:**—Palm push fit with piston heated to 160° F. Pin holes in piston finished to inside diameter of .87515-.87485".

**Pin Fit in Rod Bushing:**—.0002" clearance or thumb push fit with both parts at room temperature (70°F)

**CONNECTING ROD:** Weight—40 1/16 ounces (Eight), 47 3/4 ozs. (Super 8). Length—10 7/8".

**Crankpin Journal Diameter:**—2.1875".

**Lower Bearing:**—Removable, steel backed, babbit lined. Furnished .001", .002", .003", .015" undersize.

Clearance—.0005-.002". Sideplay .003-.008".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or bearing caps.

**Installing Rods:**—Install with oil hole toward camshaft.

**CRANKSHAFT:**—9 bearing. Integral counterweights.

**Journal Diameter:**—2.625".

**Bearing Type:**—Removable steel-backed, babbit-lined type. No shims.

Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust:**—Taken by #7 bearing. Endplay .003-.005"

**CAMSHAFT:**—8 bearing. Adjustable chain drive.

**Bearing Type:**—Steel-backed, babbit-lined.

Clearance—.001-.003".

Endplay—.001-.004".

**Timing Chain:**—Morse #1866. Width 1 1/2". Pitch .500". Length 32" or 64 links.

**Chain Adjustment:**—Loosen generator flange mounting screws, pull generator out or away from engine until sideplay as measured at chain inspection plug hole in top face of chain case is 1/4", tighten mounting screws. Adjust chain whenever sideplay exceeds 1/2".

**Camshaft Setting:**—Sprockets are marked Mesh chain with sprockets turned so that 'OO' marks are adjacent and are centered on a straightedge across the shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake (Eight)	1 21/32"	3/405"	7 13/32"
Exhaust (Eight)	1 15/32"	3/405"	7 13/32"
Intake (Super 8)	1 13/16"	3/405"	7 13/32"
Exhaust (Super 8)	1 11/16"	3/405"	7 13/32"
	Seat Angle	Lift	Stem Clear.
Intake	45°	.358"	.0025" min.
Exhaust	45°	.358"	.004" min.

**Valve Guides:**—Pressed in block. Reamed to size for correct stem clearance (see table above).

**Valve Rocker Arms:**—Consist of pivoted arms mounted on bracket on crankcase which transmit motion from cam to valve pushrod (valve lifter).

**Removal:**—Remove screws in bracket on right side of crankcase, withdraw bracket and pushrod assembly.

**Valve Springs:**—Double springs used on all valves.

Spring Pressure	Spring Length
Valve Closed	.73 lbs.
	3 1/16"

**VALVE TIMING**

**Tappet Clearance:**—.004" Int., .006" Exh., eng. warm.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 30° BTDC. Close 65° ALDC.

**Exhaust Valves:**—Open 65° BLDC. Close 30° ATDC.

**To Check Valve Timing:**—Check tappet clearance #1 intake valve. This valve should open with piston 30° or .4070" before top dead center when flywheel mark 'INT' (visible through starter mounting hole in flywheel housing with starter removed) lines up with indicator on housing within case.

**LUBRICATION**

**LUBRICATION:**—Pressure type. Gear type oil pump mounted in crankcase. Oil temperature regulator mounted on left side of engine.

**Normal Oil Pressure:**—35 lbs. at 1000 R.P.M.

**Oil Pressure Regulator:**—Located under plug on left side of crankcase. Operates at 35 lbs. Adjustable by turning adjusting screw.

**Capacity:**—8 qts. (Eight), 9 1/2 qts. (Super 8).

**CLUTCH**

**Long Model 12CB-CL.** Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Moulded type, 2 required. Inside Diam 7". Outside Diam. 12". Thickness .140".

**Adjustment:**—Clearance between pedal and toeboard should be 1/2-1". Free movement of pedal should be 1 1/2". Adjust by turning turnbuckle on connecting rod at lower end of pedal.

**Removal:**—Disconnect drive shaft at front universal, remove transmission and bell housing, take out screws mounting clutch on flywheel turning all screws out evenly to release clutch spring pressure.

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

**King Pin Inclination:**—9° crosswise.

**Camber:**—1°.

**Caster:**—2 1/2". Adjustable by installing wedge shims between spring and spring pad on axle.

**Toe In:**—1/16-1/8" at rim. Adjustable in usual manner by changing length of tie rod.

**Steering Geometry:**—Inner wheel turned 23 1/2°-23°, outer wheel turned 20°. Check tie rod ends and king pins for looseness.

**STEERING GEAR**

**Steering Gear:** Gemmer Worm-and-Roller type.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Bendix Duo-Servo, Single Anchor, mechanically operated, vacuum power brakes. Hand lever applies all four service brakes.

See Brake Section for complete data.

**Drum Diameter:**—14".

**Lining:**—Primary (Raybestos 451), Secondary (Hycov DV 1391). Width 2 1/4" (except left front which is 1 3/4"). Thickness 1/4". Length 30 1/4".

**Clearance:**—Free—at heel and toe of each shoe.

**Hand Brake Adjustment:**—With hand brake lever fully released and cross shaft against stop, remove all slack in cable by adjusting clevis position at cross shaft end of cable until clevis pin can just be inserted in cross lever. Check brakes making sure they are fully released with hand brake in off position. Adjustment for wheel equalization should be made after drum lining has been worn in.

**NOTE:**—By removing glove compartment and changing brake latch piece (#228705) operating position of hand brake lever may be moved 2" to the rear.

**Power Unit:**—Bendix plain type vacuum cylinder mounted on frame and linked to cross shaft lever. Controlled by valve built in brake pedal mechanism. See Brake Section for complete data.

## CONTINUED FROM PRECEDING PAGE

pointer on chain case. With correct line before mark '6L-UDC' (see table above) marked in chalk for better visibility, idle engine. This line should line up with pointer on chain case cover. Engine must be stopped to set synchronization. To adjust, turn engine over to #6L firing position, loosen lock-screws on movable sub-plate, shift plate by turning eccentric adjusting screw until movable contacts begin to open, tighten lock-screws.

**Synchronization (Other Methods)**—If distributor synchronized by other methods, set movable points to open  $33\frac{1}{2}^\circ$  after fixed points. Distributor firing intervals are unequal  $33\frac{1}{2}$ - $26\frac{1}{2}$ - $33\frac{1}{2}$  distributor degrees.

**NOTE**—Manufacturer recommends use of Winn Synchronometer (Packard Tool #ST-913) to synchronize contacts.

**Fuel Compensator Setting**—Should be set to provide best performance with a slight ping pulling heavy load. Adjusted by loosening thumbnut and moving pointer to left or right from center 'O' position.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model EE-3.  $1\frac{1}{2}$ " dual downdraft type with Stromberg type 'C' automatic choke.

For complete data, refer to Carburetor Index.

**Idle Note**—See article in Carburetor Section for shim installation to improve idle operation.

**Settings (Idle Setting, Float Level, and Accelerating Pump)**: See Tune-Up.

**Fast Idle**—To adjust with engine cold, open and close throttle allowing choke to close (if engine hot hold fast idle stopweight down with fast idle adjusting screw resting on ear of fast idle stopweight). Loosen locknut on adjusting screw, back off screw until it is free of stop, turn screw in until it just contacts stop, then turn screw in 2- $2\frac{1}{2}$  turns, finally tighten locknut on adjusting screw.

For complete data, refer to Carburetion Equip. Index.

**Automatic Choke**: Stromberg Type 'C'.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1525442 oil-wetted type standard, #1525902 heavy duty oil bath type optional.

**Fuel Pump**—AC. Type I. #1521778. Combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—AC. Electric #1515309 (dash unit), #1515400 (tank unit—except sedan), #1515401 (tank unit—sedan only).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

1936—Prest-O-Lite, Type H4-21. 6 volt, 21 plate, 150 ampere hour capacity (20 hour rate).

**Starting Capacity**—175 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side under rear compartment floor boards.

## STARTER

1936—Owen-Dyneto DN-1299, Armature 13409.

**Drive**—Outboard Bendix Type RCD10FXTD.

**Cranking Engine**—125 R.P.M., 130 amps. at 5.6 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—56-60 ounces each.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3000	6.0	50
2 "	1600	5.6	120
3.3 "	1200	5.45	150
6.3 "	800	5.2	210
15.0 "	400	4.65	360
35.0 "	Lock	3.5	650
39.0 "	Lock	3.6	810

**Removal**—Starter sleeve mounted on right front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing.

**Starting Switch**: Auto-Lite Magnetic Switch SS-4001.

For complete data, refer to Electrical Equipment Index.

**Startix (Optional)**—Type 'F' automatic starting switch and Startix Circuit Controller (back-fire unit), controlled by ignition switch.

For complete data, refer to Electrical Equipment Index.

**NOTE**—Control unit (Cutout Relay) has extra terminal and resistance coil which are used with Startix Type F.

## GENERATOR

1936—Owen-Dyneto CO-1304. Armature 23691.

Air cooled by air horn on generator field frame.

Third brush control in conjunction with Battery Charge Regulator (two-step charging control).

**Charging Rate Adjustment**—Third brush shifted through rack-and-pinion control by slotted screw on commutator end plate. Turn adjusting screw to right or clockwise to increase, and to left or counter-clockwise to decrease charging rate.

**Maximum Charging Rate**—30-33 amperes (cold), 24-27 amperes (hot) at 8.0 volts.

Performance Data—CO-1304					
Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	7.0	580	0	7.3	625
5	7.2	630	5	7.5	700
10	7.5	700	10	7.7	800
15	7.7	790	15	7.9	930
20	7.9	910	20	8.0	1100
25	8.0	1080	25	8.0	1380
30	8.0	1380	28	8.0	2000
32	8.0	1900			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—20-22 ozs. (all brushes).

**Field Current**—3.5-3.7 amperes at 6.0 volts.

**Motoring Current**—16.7-18 amperes at 6.0 volts ( $\frac{1}{2}$  ampere more if relay and regulator in circuit).

**Field Fuse**—5 ampere capacity in knurled plug in side of regulator case.

**Removal**—Generator mounted on special pivot bracket at left front of engine with fan belt drive. To remove, take out clamp bolt at top of generator and pivot bolt at bottom.

**Belt Adjustment**—Loosen clamp bolt above generator, swing generator away from engine until reading on scale attached to field frame is 180 lbs.

## REGULATOR

Owen-Dyneto Battery Charge Regulator 40210.

Consists of Type 40203 Cutout Relay with auxiliary contacts and resistance coil (for use with Type 'F' Startix) and Battery Charge Regulator in case on generator. See Equipment Section for data on these units.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay

**Cuts In**—6.8-7.2 volts, 600 R.P.M.

**Cuts Out**—0-2.5 amperes discharge current.

**Contact Gap**—.030-.032".

**Air Gap**—.020-.025" with contacts closed.

**Auxiliary Contacts**—Should open when main contacts close, close when main contacts open.

## Battery Charge Regulator

**Setting**—8.2 volts (cold), 7.8 volts (hot)—contact opening point.

**Regulator Resistance**—1.85 ohms.

## LIGHTING

**LIGHTING**—Headlamps—Hall, Pre-focused Flex-beam type with special non-interchangeable lenses. Head lamps aimed straight ahead with lighting switch in 'Country Driving' (upper beam) position. 'Country Passing' beam (upper beam right hand headlamp, lower beam left hand headlamp) controlled by lighting switch.

**Headlamp Beam Indicator**—Separate beam indicator for each position of lighting switch (1—Parking, 2—City Driving, 3—Country Driving, 4—Country Passing), located on instrument panel.

## Switches

**Lighting**—R.B.M. Model 1400.

**Instrument Lamp Rheostat**—Soreng-Manegold No. J2060A.

**Stop Light**—Auto-Lite No. 58012-B hydraulic type.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking or Fender	3	63
Instrument, Tail, Courtesy	3	63
Stop	15	87
Dome	6	81
Indicators	1	51

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—(On Delco-Remy Model 1050-W Fuse Block). Thermostatic arm type current limit relay (no winding). Connected in lighting circuits. Contacts open with current load of 38 amperes at 70° F.

**FUSES**—Body Lights—20 ampere on fuse block (see above).

**Generator Field**—5 amperes in knurled plug on side of regulator case.

**HORNS**—Sparton Twin Horns. Vibrator type. Operated by horn relay.

**Horn Relay**—R.B.M. Model 10072. Current draw 4-.55 amperes at 6.0 volts. Coil resistance 11-14 ohms. Contacts must close with relay in inverted position.

## ENGINE

**ENGINE SPECIFICATIONS:**—Type—12 cyl. 67° Vee, modified 'L' head. Both blocks and upper crankcase cast en bloc.

Bore—3 7/16". Stroke—4 1/4".

Displacement—473 cubic inches.

Rated Horsepower—56.7 (AMA).

Developed Horsepower—175 at 3200 R.P.M. Std. 6.4-1 head.

Compression Ratio & Pressure—6.4-1 Std. head, 6.0-1 Optl. low comp. head, 7.0-1 Optl. high comp. head. Pressure 110 lbs. at cranking speed of 125 R.P.M. Std. 6.4-1 head.

Vacuum Reading—Gauge should show steady reading of 18-19" with engine idling at 375 R.P.M. or 8 M.P.H.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, Invar Strut, split skirt type. Recondition cylinders to take finished replacement pistons.

Weight—21.7 ounces.

Removal—Pistons removed through top, rods thru bottom of engine (push pistons up until piston pin is exposed, take out locking rings, push out pin, lift out piston, lower rod and remove from below). Use new locking rings when installing pistons.

Clearance—Skirt .0015". See Fitting New Pistons.

Replacement Pistons:—Furnished in standard size and .003", .005", .010", .015", .020", .030", .045" oversize.

Fitting New Pistons:—Use .0015" feeler stock 1/2" wide to check clearance. Pull required to withdraw feeler from between piston and cylinder wall on side opposite slot should be 3-5 lbs.

Installing Pistons:—Slot should be toward camshaft on all pistons.

**PISTON RINGS:**—Three compression, one oil control ring per piston, all above pin. Lower ring groove drilled radially with twelve 1/8" oil drain holes.

Ring	Width	End Gap	Side Clear.
Comp. (Top)	1/8"	.007-.012"	.002"
Comp. (2nd)	1/8"	.007-.012"	.0015"
Oil	5/32"	.007-.015"	.0015"

NOTE—Ring tension when compressed to cylinder size with .007" minimum gap should be 6 1/2 lbs. (compression), 4 1/2-7 1/2 lbs. (oil ring).

**PISTON PIN:**—Diameter 7/8". Length 2 63/64".

Pin floats in piston and rod. Held by locking ring at each end. Pin hole in rod is bronze-bushed. Pins furnished for service .003", .006" oversize.

Pin Fit in Piston—Palm bush fit with piston heated to 160° F. Pin holes in piston finished to inside diameter of .87515-.87485".

Pin Fit in Rod Bushing—.0002" clearance or thumb push fit with both parts at room temp. (70° F.).

**CONNECTING ROD:**—Weight 40 5/8 ozs. Length 9".

Crankpin Journal Diameter—2 1/2".

Lower Bearing—Removable, steel-backed, copper-lead alloy lined (1935), babbitt-lined (1936). Furnished .001", .002", .003", .015" undersize.

Clearance—.0005-.002". Sideplay .005-.013".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rod or caps.

Installing Rods:—Install all rods with oil bleed hole in lower bearing toward right starter side of engine.

**CRANKSHAFT:** 4 bearing. Integral counterweights.

Journal Diameters—2 3/4" all bearings.

Bearing Type—Removable, steel-backed babbitt-lined. No shims.

Clearance—.001-.002".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps.

End Thrust:—Taken by #1 front bearing. Endplay .003-.005".

**CAMSHAFT:**—Four bearing. Mounted between cylinder banks directly above crankshaft. Non-adjustable chain drive.

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.001-.003".

Endplay—.002-.006".

Timing Chain:—Morse #1866. Width 1 3/4". Pitch .500". Length 28" or 56 links.

NOTE—Engine must be supported at front end and engine front casting (engine support, timing chain cover, generator and water pump mounting) removed for work on timing chain, sprockets, or camshaft.

Camshaft Setting:—Sprockets are marked. Mesh chain with sprockets turned so that '00' marks are adjacent and in line with a straightedge across the shaft centers (vertical).

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.3405"	6 35/64"
Exhaust	1 21/32"	.338"	6 35/64"
	Seat Angle	Lift	Stem Clearance
Intake	45°	5/16"	.0025"
Exhaust	45°	5/16"	.005"

**Automatic Tappet Take-up (Valve Silencer):**—Consists of eccentric take-up on rocker arm shaft. Rocker arms contact valve stem ends and cams directly and are mounted on roller bearings.

See Miscellaneous Section for complete data.

NOTE—Initial clearance of take-up mechanism must be checked when valves are installed and take-up must be bled when valves are ground.

See Miscellaneous Section for complete data.

**Valve Springs:**—Install springs with japanned end down and close-spaced first coil up.

	Spring Pressure	Length
Valve Closed	70 lbs.	2 7/32"

## VALVE TIMING

Tappet Clearance—None (automatic take up).

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open at TDC. Close 45° ALDC.

Exhaust Valves—Open 35° BLDC. Close 10° ATDC.

To Check Valve Timing—Intake valve in #1 cylinder of right hand bank (1R) should begin to open with piston No. 6R on top dead center entering power stroke when mark '1R-UDC' on vibration dampener at front of engine lines up with pointer on chain case cover.

## LUBRICATION

**LUBRICATION:**—Pressure system. Gear type oil pump located in crankcase. Oil temperature regulator mounted on right side of crankcase.

Normal Oil Pressure—35 lbs. at 1000 R.P.M.

Oil Pressure Regulator—Under plug on right hand side of crankcase. Adjustable by turning adjusting screw.

Crankcase Capacity—10 qts.

## CLUTCH

Long Model 12CB-CL. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Moulded type, 2 required. Inside Diam. 7". Outside Diam. 12". Thickness .137".

Adjustment—Clearance between pedal and toe-board should be 1/2-1". Free movement of pedal should be 1 1/2". To adjust, turn turnbuckle on connecting rod at lower end of clutch pedal.

Removal—Disconnect drive shaft at front universal, remove transmission and bell housing, take out screws mounting clutch cover on flywheel, turning all screws out evenly to release clutch spring tension.

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'I' beam section front axle with Reverse-Elliot ends and semi-elliptic springs.

King Pin Inclination—9° crosswise.

Camber—1°.

Caster—1 1/2°. Adjustable by installing wedge shims between spring and spring pad on axle.

Toe In—1/16-1/8" at rim. Adjustable in usual manner by changing length of tie rod.

Tread—60".

Steering Geometry—Inner wheel turned 22 1/2°, outer wheel turned 20°. Check tie rod ends and king pins for looseness.

## STEERING GEAR

Steering Gear: Gemmer Worm-and-Roller type.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Bendix Duo-Servo, Single anchor, mechanically operated, vacuum power brakes. Hand lever applies all four brakes. See article in Brake Section for complete adjustment procedure.

See Brake Section for complete data.

Drum Diameter—15".

Lining—Primary (Raybestos 451), Secondary (Hycos DV 1391). Width 2 1/2" (except left front which is 1 7/8"). Thickness 1/4". Length 32 1/4".

Clearance—Free—at heel and toe of each shoe.

Hand Brake Adjustment:—With hand brake lever fully released and cross shaft against stop, remove all slack in cable by adjusting clevis position at cross shaft end of cable until clevis pin can just be inserted in cross lever. Check brakes making sure they are fully released with hand brake in off position. Adjustment for wheel equalization should be made after lining has been worn in.

NOTE—By removing glove compartment and changing brake latch piece (#228705) operating position of hand brake lever may be moved 2" to the rear.

Power Unit:—Bendix plain type vacuum cylinder mounted on frame and linked to cross shaft lever. Controlled by valve in brake rod between brake pedal and cross shaft. See Brake Section for complete data.

See Brake Section for complete data.

**ELECTRICAL EQUIPMENT NOTE:** Both Auto-Lite and Delco-Remy equipment used during production.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on plate on front of dash.

**ENGINE NUMBER:**—First number T-1526. Stamped on boss on left side of engine block near distributor.

### TUNE-UP

**COMPRESSION:**—Ratio—6.3-1 Std., 6.75-1 Optl. Pressures—105 lbs. (Std. 6.3-1 cast-iron head), 115 lbs. (Optl. 6.75-1 aluminum head) at cranking speed of 125 R.P.M.

**VACUUM READING:**—18-20" steady reading with engine idling at 6-8 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** AC No. 103S or Champion Y-4. 10 mm. Gaps—.026-.030".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020".

Cam Angle—Closed 38° (Auto-Lite), 35° (Delco-Remy).

Automatic Advance—Auto-Lite: 10° at 2000 RPM (distr.). Delco-Remy: 10¾° at 2000 RPM (distr.).

Vacuum Advance—7½° (distr.) with 17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2½-4° BTDC (Std. cast-iron head), 4-6° BTDC (Optl. HC. AL. head). Flywheel mark (correct degree mark ahead of #1UP.DC) aligned with inspection hole pointer (on housing below starter).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw midway between "miss" and "roll" points. Idle speed 8 MPH.

Float Level—Fuel level 17/32" below edge of bowl.

Accelerating Pump—Center Hole—Normal Setting.

Fuel Pump Pressure: 4 lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.007" Intake, .010" Exhaust, hot.

**NOTE:**—Remove right front fender apron for access

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

#### AUTO-LITE

**Ignition Switch:**—Mitchellock Model 24-B. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184 (cylinder). Key Series—P1251-P1500.

**COIL:** Auto-Lite Model CE-4627. Service Coil Model CE-3224-ES. On left side of engine.

**Ignition Current:**—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671K.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGS-4011. Single breaker, 6 lobe cam, full automatic advance with auxiliary vacuum spark control.

See Electrical Equipment Section for special servicing directions on these distributors.

For complete data, refer to Electrical Equipment Index.

Breaker Gap—Set at .020".

Cam Angle or Dwell—38° closed, 22° open (distr.).

Breaker Arm Spring Tension—18-20 ozs. (special).

#### Automatic Advance—Auto-Lite

Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
.8	400	1.6	800
2	560	4	1120
4	880	8	1760
6	1240	12	2480
8	1620	16	3240
10	2000	20	4000

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

#### Vacuum Advance—Auto-Lite

Distr. Degrees Start	Eng. Degrees	Vacuum (" of HG)
0°	0°	6"
2½°	5°	9.5"
5°	10°	12.4"
7½°	15°	17"

**Fuel Compensator**—Manual adjustment at distributor providing 10° maximum advance or retard from center '0' position. See Ignition Timing for setting.

DELCO-REMY EQUIPMENT

See 1937 '120' Eight Diagram for Auto-Lite internal circuits

**IGNITION****DELCO-REMY**

**Ignition Switch:**—Delco-Remy Model 435-L. Switch and cable assembly. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184 (Lock cylinder). Key series—P1251-P1500.

**COIL:** Delco-Remy Model 539-N. On left side of engine.

**Ignition Current:**—½ ampere idling, 2½ stopped.

**CONDENSER:** Delco-Remy Part No. 1865972.

**Capacity:**—18-25 microfarad.

**DISTRIBUTOR:** Delco-Remy 647-E. Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**Breaker Gap:**—Set at .020". Limits .018-.024".

**Cam Angle or Dwell:**—35° (closed), 25° (open).

**Breaker Arm Spring Tension:**—19-23 ounces.

**Automatic Advance:**—Delco-Remy

Distributor	R.P.M.	Distributor	R.P.M.
Degrees		Degrees	
Start.....	300	1.5.....	600
3.25.....	600	6.5.....	1200
10.75.....	2000	21.5.....	4000

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance:**—Delco-Remy

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
7.5°.....	15°	15-19"

**Fuel Compensator:**—Manual adjustment at distributor providing 10° maximum advance and retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left side of engine. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—For all engines as follows:

**Flywheel Degrees Piston Position**

Std. 6.3-1 head.....2½-4° BTDC.....0026-.0066" BTDC.

Optl. 6.75-1 hd.....4-6° BTDC..0066-.0149" BTDC.

**To Set Timing:**—Remove cover over inspection hole in left front face of flywheel housing under starter. Loosen thumbnut and set Fuel Compensator at '0', tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position, stop when correct graduation on flywheel before dead center mark #1 U.P.D.C. lines up with pointer in inspection hole, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap.

**Timing (Neon Timing Light):**—White mark provided on flywheel at firing point for std. 6.3-1 engine. Mark flywheel similarly at correct firing point when timing Optl. 6.75-1 engines.

**CARBURETOR**

Holley (Chandler-Groves) Model No. A0C-2. 1¼" single barrel downdraft type.

**NOTE:**—Carburetor changes made during production. For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warmed up so that Automatic Choke and Fast Idle inoperative, adjust throttle stopscrew so that engine idles at 8 M.P.H.

Turn idle adjusting screw in until engine begins to miss, then out until engine rolls, finally turn screw in slowly until engine fires smoothly. Readjust stop-screw for correct idle speed.

**Accelerating Pump Setting:**—Throttle lever has 3 holes for pump link connection. Set as follows: Inner Hole (Min. Stroke)—Hi-test fuel, high temps. Center Hole—Normal temperatures. Outer Hole (Max. stroke)—Low-test fuel or low temperatures.

**Fast Idle:**—Integral with carburetor.

For complete data, refer to Carburetion Equip. Index.

**Automatic Choke:**—Integral with carburetor.

For complete data, refer to Carburetion Equip. Index.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1528085 Heavy duty oil-bath type

**Fuel Pump:**—AC. Type AJ #1523202. Diaphragm type combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC. Electric. #1515328 (dash unit),

#1515447 (tank unit).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY:**—Willard, Type WT-1-95. 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity:**—117 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.1 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—Under left front seat.

**STARTER****AUTO-LITE**

Auto-Lite Model MAX-4006. Armature MAW-2006.

**Drive:**—Outboard Barrel Type Bendix No. A-1729.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—125 RPM., 200 amperes, 5 volts.

**Performance Data—Auto-Lite**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5300.....	5.5.....	65
0.65 ".....	3300.....	5.5.....	100
2.75 ".....	1630.....	5.0.....	200
5.5 ".....	970.....	4.5.....	300
8.7 ".....	600.....	4.0.....	400
12.0 ".....	300.....	3.5.....	500
16.5 ".....	Lock.....	3.....	640
25.0 ".....	Lock.....	4.....	880

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:** Auto-Lite Magnetic SS-4001 on starter controlled by panel pushbutton switch.

For complete data, refer to Electrical Equipment Index.

**STARTER****DELCO-REMY**

Delco-Remy Model 739-F. Armature No. 1866105.

**Drive:**—Outboard barrel type Bendix A-1718.

**Cranking Engine:**—125 R.P.M., 200 amps., 5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24-28 ozs. each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5000.....	5.0.....	65
12 ft. lbs.....	Lock.....	3.37.....	525

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange screws.

**Starting Switch:** Delco-Remy 1539 Magnetic type. Delco-Remy 1417 pushbutton panel switch.

**GENERATOR****AUTO-LITE**

Auto-Lite Model No. GCJ-4801A. Armature No. GCJ-2006. Third brush control type with external voltage regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate:**—25 amperes (cold), 22 amperes (hot), 8.0 volts, 2500 RPM. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment:**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section following.

**NOTE:**—Third brush setting 2 commutator bars minus 2 mica strips (minimum), 2 commutator bars minus 1 mica strip (max.) from nearest main brush.

**Performance Data—Auto-Lite**

Cold			Hot		
Amperes	Volts	RPM	Amperes	Volts	RPM
0	6.4	760	0	6.4	850
4	6.65	920	4	6.7	1020
8	6.9	1080	8	7.0	1240
12	7.2	1240	12	7.3	1400
16	7.45	1400	16	7.6	1650
20	7.7	1580	20	7.9	2100
25	8.0	2500	22	8.0	2700

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.9-2.1 amperes at 6.0 volts.

**Motoring Current:**—4.0-4.4 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** See Delco-Remy (following).

**GENERATOR****DELCO-REMY**

Delco-Remy Model 948-U. Armature No. 1854856. Fixed third brush type with Voltage Regulator.

**NOTE:**—Third brush is clamped in position for maximum safe output and should not be disturbed.

**Charging Rate Adjustment:**—Adjusted by changing setting of voltage regulator. See Regulator Data.

**Maximum Charging Rate:**—As given in table below. Reached at car speed of approx. 30 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'BAT' terminal and ground, ground 'F' terminal to eliminate regulator action.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold .....	23-27.....	8.8-9.0.....	3000
Hot .....	18-23.....	8.2-8.7.....	3200

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ozs. (main), 16-20 ozs. (third).

**Field Current:**—2.3-2.6 amperes at 6 volts.

**Removal:**—Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—With bolts loose, swing generator away to give 25 lbs. reading on scale attached to clamp bolt, or ½" thumb deflection on belt midway between generator and fan pulleys.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATOR:**—Delco-Remy Model 961-M. Two brush (shunt) type with vibrating voltage and current regulation.

**Charging Rate Adjustment:**—None. See Regulator.

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## Performance Data

	Amperes	Volts	R.P.M.
Cold	25①	8.0	1650

①—Current Regulator setting. See Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—25 ounces each.

Field Current—2.0-2.2 amperes at 6.0 volts.

Removal & Belt Adjustment:—See Std. Gen. above.

## REGULATOR

## AUTO-LITE

Auto-Lite Model VRD-4001-A. Voltage Regulator. Mounted on dash.

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

## Cutout Relay

Cuts In—6.4-7.0 volts.

Cuts Out—5 ampere Min., 3.0 amperes Max. Cold.

Contact Gap—.015" minimum.

Air Gap—.034-.038" at hinge end of core with contacts open. Measure at hinge end of core.

## Voltage Regulator

Setting—7.5-7.8 volts at 70°F (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F (After 8R-000001.) See Electrical Equipment Section for complete settings and changes.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 MPH. car speed until voltage is steady. Voltmeter reading should be within limits of 7.4-7.9 volts (before 8R-000001), 7.21-7.83 volts (after 8R-000001). See Setting above.

To Adjust (with cover removed)—Change regulator armature spring tension by bending spring hanger at lower end of spring slightly. See Electrical Equipment Section for complete directions.

Contact Gap—.010-.020" (armature against stop pin).

Air Gap—.0595-.0625" with contacts just opening.

## REGULATOR

## DELCO-REMY

Delco-Remy Model 5812 or Delco-Remy Model 5827. Double Core Type Voltage Regulator (with 'IGN' Terminal). Consists of Cutout Relay and vibrating type Voltage Regulator in case on dash.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay—Delco-Remy

Cuts In—6.9-7.6 volts.

Cuts Out—0-4.0 amperes discharge current.

Contact Gap—.018-.025".

Air Gap—.018-.022" with contacts closed.

## Voltage Regulator—Delco-Remy

Setting—7.5-7.9 volts Cold (70°), 7.4-7.6 volts Hot 150° F. Regulator over-compensated for temperature and must be checked at these points.

Adjustment—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator spring tension by bending spring hanger at lower end of armature spring slightly until performance is as given above.

NOTE—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit.

Contact Gap—.015-.025".

Contact Spring Tension—2.7-3.5 ounces.

Air Gap—.060-.070" between armature and center of core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

## REGULATOR

## SPECIAL EQUIPMENT

For 961-M Generator: Delco-Remy 5813 Double Core Type Voltage & Current Regulator (with 'IGN' Terminal). Same design as Std. 5812, 5827 models (above) with additional Current Regulator unit.

For complete data, refer to Electrical Equip. Index.

## Cutout Relay &amp; Voltage Regulator

All specifications and Checking & Adjustment data same as Std. Models 5812, 27 except as follows:

Cutout Relay Cut In Voltage—6.7-7.6 volts.

Voltage Regulator Setting—7.5-7.95 volts Cold (70°), 7.4-7.6 volts Hot (150°).

## Current Regulator

Setting—24-26 amperes.

Checking & Adjustment—Connect test ammeter in charging line at regulator 'BAT' terminal, disconnect lead at regulator 'IGN' terminal (to eliminate voltage regulator action). Operate generator and increase speed until Current Regulator operates, note ammeter reading which should equal Setting above. Adjust by bending spring hanger at lower end of armature spring slightly.

## LIGHTING

LIGHTING:—Headlamps—Hall 'Flex-Beam' Pre-focused type with special non-interchangeable lenses marked Right and Left. Passing beam (upper beam right hand headlamp, lower beam left hand headlamp) obtained by foot selector switch.

Beam Indicator—On face of speedometer dial. Lighted with upper beam (Country Driving) in use.

## Switches

Lighting—Delco-Remy Model 480-L, Y.

Foot Selector—Delco-Remy Model 471-T.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking, Fender, Clock	1½	55
Instr., Reading, Spdmtr.	1½	55
Stop	15	87
Tail	3	63
Indicators	1	51
Dome	6	81
Fog Light	32	1321

## MISC. ELECTRICAL

FUSES:—Accessory—20 amp. on back of lighting switch. Tail Light—20 amp. in lamp lead near light switch.

THERMOSTATIC RELAY:—Thermostatic arm type current limit relay. Mounted on light switch, protects headlamp circuits. Not adjustable. Contacts open with current load of 38 amperes at 70° F.

HORNS:—Sparton Model 1-E-30. Vibrator type, Air tone, twin horns operated by horn relay.

Air Gap—.032-.035" (low note—long air column), .026-.030" (high note—short air column).

Horn Current—22-25 amperes (total).

Horn Relay:—R.B.M. Model 10072. Current draw 4-55 amperes at 6.0 volts. Coil resistance 11-14 ohms.

Closing Voltage—2.75-4.0 volts.

Contact Gap—.015-.025". Air Gap .010-.020" (closed).

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head.

Bore—3 7/16". Stroke—4¼".

Displacement—237 cubic inches.

Rated Horsepower—28.4 (AMA).

Developed Horsepower—100 HP. (Std. 6.3-1 head),

103 HP, (Optl. 6.75-1 head) at 3600 R.P.M.

Compression Ratio & Pressure—As follows:

6.3-1 Std. cast-iron hd. 105 lbs. at 125 R.P.M.

6.75-1 Optl. aluminum hd. 115 lbs. at 125 R.P.M.

Vacuum Reading—Gauge should show steady reading of 18-20" with engine idling at 6 M.P.H.

PISTONS:—Nelson Bohnalite, aluminum alloy, auto-thermic strut type, tin plated, cam ground.

Weight—19.0 ozs. (stripped), 25.4 ozs. (with rings and pin). Length—3¾".

Removal—Pistons and rods removed from above.

Clearance—Skirt .0015". See Fitting New Pistons.

Replacement Pistons:—See Packard Shop Notes for data.

Fitting New Pistons:—.0015" x ½" feeler inserted between piston and cylinder wall on side opposite slot should require 12-18 lbs. pressure to withdraw.

Installing Pistons:—Slot toward valves.

PISTON RINGS:—Two compression, one oil control ring per piston, above pin. Lower ring groove drilled with twelve 5/32" oil drain holes. Rings furnished .005", .010", .020", .030", .040" oversize.

Ring	Width	End Gap	Side Clearance
Compr.	¾"	.007-.012"	.0025-.003"
Oil Cont.	3/16"	.007-.015"	.0015-.002"

NOTE—Install #1 and #3 ring with gap away from

valves, #2 compression ring gap toward valves.

PISTON PIN:—Diameter—¾". Length—2 63/64".

Floating type. Furnished .003" and .006" oversize.

See Connecting Rod Upper Bearing below.

Pin Fit in Piston—Finger push fit with piston heated to 160° F.

Pin Fit in Rod Bushing—Finger push fit at 70° F.

NOTE—Finish ream bushings to .87515-.87485".

CONNECTING ROD:—Weight 33½ ozs. Length 7 11/16".

Upper Bearing (Piston Pin Bushing)—Split type bushings used. Expand to tight fit and ream. Oil

passage in rod must open to groove between bushings.

See Packard Shop Notes for Bushing installation.

Crankpin Journal Diameter—2 3/32".

Lower Bearing—Interchangeable steel-backed, bab-

bitt-lined type. No shims. Bearings furnished .001", .002", .003", .015" undersize.

Clearance—.0005-.0025". Sideplay—.004-.010".

Bearing Adjustment:—None. Replace bearings.

Installing Rods:—Oil squirt hole to camshaft.

CRANKSHAFT:—4 bearing. Integral counterweights.

Journal Diameters—2¾" all bearings.

Bearing Type—Interchangeable steel-backed, bab-

bitt-lined type. No shims. Bearings furnished .001", .002" undersize.

Clearance—.001-.003".

Bearing Adjustment:—None. Replace bearings. Upper

halves may be rotated in place.

End Thrust:—Taken by #1 bearing.

Endplay—.003-.008".

CAMSHAFT:—4 bearing. Non-adjustable chain drive.

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.001-.003".

End Thrust:—Taken by thrust plate in back of cam-

shaft sprocket. Endplay—.002-.004".

Timing Chain:—Morse 1866 RX. Width 1¼". Pitch 3/75". Length 21¾" or 58 links.

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Camshaft Setting:**—Install chain and sprockets together with marks on sprockets adjacent and in line with a straightedge across the shaft centers with #1 piston at top dead center.

*See Packard Shop Notes for Front Assembly and Radiator removal.*

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1.575"	.340"	5 7/8"
Exhaust	1.408"	.340"	5 5/8"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.300"	.0005-.00175"
Exhaust	45°	.300"	.0005-.00175"

**NOTE**—.0005" min. clearance at bottom of guide.

**Valve Guides:**—Guides taper reamed. Install from above with smallest diameter at bottom.

**Valve Springs:**—Int. & Exh. springs interchangeable. 1938 springs only furnished for replacement.

	Spring Pressure	Spring Length
Valve Closed	36-44 lbs.	1 5/8"
Valve Open	105-113 lbs.	1 5/16"

**Valve Lifters:**—Single piece, barrel type. Remove from above. Ream lifter holes from above working thru stem guide with Packard Tool #S.T.-5065. Camshaft need not be removed. Oversize lifters furnished .001", .002", .005".

**VALVE TIMING**

**Tappet Clearance:**—.007" Int., .010" Exh., eng. warm.

**NOTE**—Remove plate in right fender for valve adj.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**T Check Timing:**—Set tappet clearance #1 exhaust valve at .013". This valve should close with piston 5° or .0103" past top dead center when point on flywheel 2 1/2 graduations past #1 UPDC (top dead center mark) lines up with pointer in inspection hole in left front face of flywheel housing under starter. Reset tappet clearance at .010" with engine hot.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type pump on right side of engine.

**NOTE**—Install oil pump with driving slot parallel with center line of camshaft with distributor rotor opposite #1 terminal in cap.

**Normal Oil Pressure:**—35 lbs. at 30 M.P.H. Warm oil.

**Oil Pressure Relief Valve:**—On pump cover. Not adjustable. Replace spring if pressure less than 5-8 lbs. at 2".

**Crankcase Capacity:**—7 quarts (dry).

**CLUTCH**

**CLUTCH:**—Long Model 9 1/2 CF-CS. Semi-centrifugal, single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Woven, 2 required. I.D. 6". O.D. 9 1/2". Thickness .125".

**Adjustment:**—Pedal free travel 1 1/2-2". Adjusting nut on connector link at clutch fork.

**Removal:**—With clutch pedal depressed, insert wedge (ST-879) between each throwout finger and cover (assembly can only be removed from below when in partially released position). Remove transmission (see Transmission Removal below), clutch shifter bearing, pedal rod, and cover capscrews evenly, then remove assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own—Helical gear type with synchronizing shift on second and high gears.

*See Transmission Section for complete data.*

**Removal:**—Remove floorboards, speed. cable, ground strap, propeller shaft, housing lower cover, shifter bearing spring, engine stabilizer (frame to trans.). Remove 2 bolts at trans. end of left support, remove frame bolts in right support with jack supporting rear of engine, 4 trans.-to-housing bolts, and withdraw transmission.

**NOTE**—Keep engine to right when installing.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics—Model 2-C. Roller bearing. 2 used.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own—Semi-floating, hypoid gear type with Hotchkiss drive. Welded cover used.

*See Rear Axle Section for complete data.*

**Ratio:**—4.36-1 (std.). 4.54-1, 4.09-1 (optl.).

**Backlash:**—.003-.005". Screw adjustment for ring gear mesh in pinion. Pinion stationary.

**Removal:**—With wheel, hub and brake assembly removed, axle shafts can be withdrawn from housing. Differential carrier can then be removed from housing (on car) by disconnecting rear universal joint at flange, removing housing bolt nuts (below)

and screw with locknut (at top). Assembly can then be removed from below.

**Wheel Bearing Adjustment:**—None.

**NOTE**—Whenever wheel bearing replaced be sure that spring washer between inner bearing race and hub installed.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco—Mod. 1960-C, D (front), 1717-A, B (rear). Double acting, piston type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent 'Safe-T-Flex' type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE**—Data below applies with car on level floor, tires properly inflated and car weighted as follows: 5 pass. (375 lbs. rear seat, 300 lbs. front), 2-4 pass. (150 lbs. frt. seat, 225 lbs. rear comp't.).

**Front Suspension Height:**—Distance from floor to top of frame side rail at spring should be 17 3/8".

**Kingpin Inclination:**—1 1/2° crosswise.

**Camber:**—1° plus or minus 1/4°. Adjustable.

**Caster:**—2 1/2° plus or minus 1/2°. Shim adjustment.

**Toe In:**—1/32-1/16". Adjust by turning tie rods equally (check for equal lengths after adjustment).

**STEERING GEAR**

**Steering Gear:** Packard (Gemmer design Model 330)

Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix hydraul., duo-servo, single anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Diameter 1 1/16" front wheel, 15/16" rear wheel.

**Drum Diameter:**—11".

**Lining:**—Marshall #1915 (primary), S.R.-600 (secondary). Width 1 3/4". Thickness 3/16". Length per shoe 12".

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).  
**ENGINE NUMBER:** First number X-100001. Stamped on boss on left side of engine near distributor.

## TUNE-UP

**COMPRESSION:**—Ratios and pressure as follows:  
 Head Pressure at 125 R.P.M.  
 Std. 6.43-1 .....110 lbs.  
 Optl. 7.0-1 .....118 lbs.  
 NOTE—Cylinder heads listed above are original aluminum heads. Cast-iron heads only available for replacement.

**VACUUM READING:**—18-20" steady reading with engine idling at 6 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 103S or Champion Y-4. 10 mm. Gaps—.026-.030".  
 NOTE—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.  
 Breaker Gap—.015". Cam Angle—27° closed.  
 Automatic Advance—10° max' at 2200 RPM (distr.).  
 Vacuum Advance—7½° max. with 17" vacuum.

**IGNITION TIMING** See Ignition Timing.  
 Std. Setting—6-8° BTDC (Std. AL head), 2½-4° BTDC (Optl. HC. AL head), 8-9½° BTDC (Repl. iron heads). Flywheel mark (correct degree mark ahead of #1 U.P.D.C) aligned with insp. hole pointer (below starter).

**CARBURETION:** See Carburetor & Carb. Equipment.  
 Idle Setting—Set idle adjusting screws midway between 'miss' and 'roll' points (½-1¼ turns open on Carter carburetors). Idle speed 6 MPH or 300 RPM.  
 Float Level (Stromberg)—Fuel level 15/32" below top edge of bowl. (Carter)—¾" from top of float to underside of cover (gasket removed, valve seated).  
 Fuel Pump Pressure: 4 lbs. maximum.

**VALVES:** See Valve Timing.  
 Tappet Clearance—.007" Intake, .010" Exhaust, hot.  
 NOTE—Remove right front fender plate for adj.  
**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B. Type 7065. Connected to coil by armored cable.  
**Ignition Lock:**—Briggs & Stratton. Mitchell No. 6760. B. & S. #50184 (cylinder). Key Series—P1251-P1500.

**COIL:** Auto-Lite Model CE-4623. Service Coil (less switch & cable) CE-3224-ES. On engine near distributor.  
 Ignition Current—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671J.  
 Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGT-4004. Single breaker, 8 lobe cam, full automatic advance with Vacuum Spark Control and Fuel Compensator or manual adjustment at distributor.

See Electrical Equipment Section for special servicing directions on these distributors.

For complete data, refer to Electrical Equipment Index.  
 Breaker Gap—Set at .015". Limits .0125-.0175".

Cam Angle or Dwell—27° closed, 17° open with .017" gap.

Breaker Arm Spring Tension—18-20 ounces.

## Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
2.....	660	4.....	1320
4.....	1050	8.....	2100
6.....	1430	12.....	2860
8.....	1820	16.....	3640
10.....	2200	20.....	4400

NOTE—Heavier advance weight spring must be mounted on spring lug which has flat auxiliary spring behind it.

**Vacuum Spark Control:**—Vacuum unit mounted on side of distributor housing and linked directly to breaker plate. Provides additional advance for all speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by spring within unit.

## Vacuum Spark Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	6"
2½°.....	5°	9.5"
5°.....	10°	12.4"
7½°.....	15°	17"

**Fuel Compensator:**—Manual adjustment at distributor providing advance or retard adjustment from center '0' point on scale. See Ignition Timing for setting.

**Removal:**—Distributor mounted on left hand side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—For all engines as follows:

Head	Flywheel Degrees	Piston Position
Std. 6.4-1 Al. hd.....	6-8° BTDC.....	.0149-.0262" BTDC.
Optl. 7.0-1 Al. hd. 2½-4° BTDC.....		.0026-.0066" BTDC.
Replmt. Iron hds...8-9½° BTDC.....		.0262-.0371" BTDC.

**Timing**—Remove cover over timing inspection hole in left front face of flywheel housing under starter. Loosen thumbnut and set Fuel Compensator at '0', tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position, stop when proper graduation on flywheel before dead center mark '#1 UP DC' (see table above—each graduation on flywheel equals 2°) lines up with pointer. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt.

**NOTE**—No synchronization required for this distributor.

**Timing (Neon Timing Light)**—White mark provided on flywheel at 7° point. Mark flywheel similarly at 4° point for high compression engines. See Electrical Equipment Section for complete instructions.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model EE-14 (first cars), Carter Model WDO Type 366-S (later cars). 1" Duplex or double barrel downdraft type. **NOTE**—Stromberg carburetor carries code mark 10-29 on air horn.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment (All Models)**—Warm up engine so that Automatic Choke and Fast Idle are inoperative. Set throttle lever stopscrew so that engine idles at 300 R.P.M. or 6 M.P.H. Turn inner idle adjusting screw in until engine begins to miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Not adjustable on either carburetor model.

**Fast Idle**—Integral with carburetor. Stromberg type not adjustable. On Carter models, hold choke valve tightly closed, adjust fast idle lever screw so that throttle opening is .018" as measured on side opposite idle ports.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke**—Stromberg type integral with Carburetor. Carter Climatic Control mounted on carburetor.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1526714 Heavy Duty oil-bath type standard.

**Fuel Pump**—AC. Type AJ #1523202 combination fuel and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC. Electric type. No. 1515326 (dash unit), 1515443 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Prest-O-Lite, Hi-Level Type HR2-17. 6 volt, 17 plate, 144 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Under front seat on left side.

**Delco Battery Type 17-K**. 6 volt, 17 plate, 110 ampere hour capacity (20 hour rate).

**Starting Capacity**—131 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.4 minutes.

## STARTER

**Auto-Lite Model MAX-4006**. Armature MAW-2006.

**Drive**—Outboard Barrel Type Bendix No. A-1729.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 R.P.M., 200 amperes, 5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**: Auto-Lite SS-4001 Magnetic type. Mounted on starter and controlled by pushbutton on instrument panel. See article in Electrical Equipment Section.

*For complete data, refer to Electrical Equipment Index.*

### Switch Specifications

Closes with terminal voltage of 4 volts or less. Remains closed until voltage drops to .75-2.0 volts. Current draw, 3 amperes at 6.0 volts.

## GENERATOR

### STANDARD

**Auto-Lite Model GCJ-4801-A**. Armature No. GCJ-2006. Third brush control type with external voltage regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—25 amperes (cold), 22 amperes (hot), 8.0 volts, 2500 R.P.M. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—Maximum charging rate controlled by third brush. To check charging rate, disconnect regulator 'F' lead, ground field terminal 'F' on generator. Shift third brush counter clockwise to increase, or clockwise to decrease charging rate. Setting must not exceed maximum given above which is equivalent to clearance of not less than 2 commutator bars and one mica strip between third brush and nearest main brush. Remove the field ground and re-connect the regulator. See Regulator Section below for Regulator setting.

Cold			Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	760	0	6.4	850	0	6.4	850
4	6.65	920	4	6.65	1020	4	6.65	1020
8	6.9	1080	8	6.9	1240	8	6.9	1240
12	7.2	1240	12	7.2	1400	12	7.2	1400
16	7.45	1400	16	7.45	1650	16	7.45	1650
20	7.7	1580	20	7.7	2100	20	7.7	2100
25	8.0	2500	22	8.0	2700	22	8.0	2700

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—53 ozs. max. (new brushes). **Field Current**—1.9-2.1 amperes at 6.0 volts. **Motoring Current**—4.0-4.4 amperes at 6.0 volts.

**Removal**—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment**—Swing generator away from engine until reading on scale attached to clamp bolt lug is 25 lbs. or belt deflection midway between fan and generator pulleys is ½" with thumb pressure.

## GENERATOR

### SPECIAL EQUIPMENT

**Delco-Remy Model 961-M** with Regulator Mod. 5813.

*Refer to 1937 Packard 115-C Six pages preceding for all data on these Delco-Remy units.*

## REGULATOR

**Auto-Lite Model VRD-4001-A** Voltage Regulator. Mounted on dash. Consists of Cutout Relay and Vibrating Voltage Regulator in single case.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.5-7.8 volts at 70°F. (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F. (After 8R-000001). See Electrical Equipment Section for complete settings and changes.

**To Check**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads), connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed until voltage is steady. Voltmeter reading should be within limits of 7.4-7.9 volts (Before No. 8R-000001), 7.21-7.83 volts (after 8R-000001). See Setting (above).

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING**—Headlamps—Hall 'Flex-Beam' Pre-focused type with special non-interchangeable lenses marked Right and Left. Passing beam (upper beam right hand headlamp, lower beam left hand headlamp) obtained by foot selector switch.

**Beam Indicator**—On face of speedometer dial. Lighted with upper beam (Country Driving) in use.

### Switches

**Lighting**—Delco-Remy Model 480-L, Y.  
**Foot Selector**—Delco-Remy Model 471-T.

CONTINUED ON NEXT PAGE

## CONTINUED FR M PRECEDING PAGE

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330-L
Parking, Fender, Clock	1½	55
Instrument, Reading, Spdmtr.	1½	55
Indicator, Radio	1	51
Stop	15	87
Tail	3	B63

## MISC. ELECTRICAL

**FUSES:**—Accessory—20 ampere on back of lighting switch.

Tail Light—20 ampere in lamp lead near light switch.

Radio—15 ampere in feed wire.

Clock—1 ampere (Western).

**THERMOSTATIC RELAY:**—Thermostatic arm type current limit relay. Mounted on light switch, protects headlamp circuits. Not adjustable. Contacts open with current load of 38 amperes at 70°F.

**HORNS:**—Sparton Model 1-E-30. Vibrator type, Air tone, twin horns operated by horn relay.

Air Gap—.032-.035" (low note—long air column), .026-.030" (high note—short air column).

Horn Current—22-25 amperes (total).

NOTE—Klaxon horns also used.

Horn Relay:—R.B.M. Model 10072. Current draw 4-55 amperes at 6.0 volts. Coil resistance 11-14 ohms.

Closing Voltage—2.75-4.0 volts.

Contact Gap—.015-.025". Air Gap .010-.020" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

Bore—3¼". Stroke—4¼".

Displacement—282.04 cubic inches.

Rated Horsepower—33.8 (AMA).

Developed Horsepower—120 HP. at 3800 with std. 6.43-1 aluminum head.

Compression Ratio & Pressure—As follows:  
6.43-1 Std. aluminum hd. 110 lbs. at 125 R.P.M.  
7.0-1 Optl. aluminum hd. 118 lbs. at 125 R.P.M.

Vacuum Reading—Gauge should show steady reading of 18-20" with engine idling at 6 M.P.H.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, strut type (split skirt), tin plated (early cars not plated).

Weight—17.6 ozs. (stripped), 23 ozs. (with rings and pin). Length—3¾".

Removal—Pistons and rods removed from above.

Clearance—Skirt .0015". See Fitting New Pistons.

Replacement Pistons:—See Packard Shop Notes for data.

Fitting New Pistons:—.0015"x½" feeler inserted between piston and cylinder wall on side opposite slot should require 12-18 lbs. to withdraw.

Installing Pistons:—Slot toward valves.

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Lower ring groove drilled with twelve 5/32" oil drain holes. Rings furnished .005", .010", .020", .030", .040" oversize.

Ring	Width	End Gap	Side Clearance
Comp.	¾"	.007-.012"	.0025-.003"
Oil Cont.	3/16"	.007-.015"	.0015-.002"

NOTE—Install #1 and #3 ring with gap away from valves, #2 compression ring gap toward valves.

**PISTON PIN:**—Diameter—¾". Length—2 51/64". Floating pin type. Furnished .003" and .006" oversize. See Connecting Rod Upper Bearing below.

Pin Fit in Piston—Finger push fit with piston heated to 160° F.

Pin Fit in Rod Bushing—Finger push fit at 70° F.

NOTE—Finish ream bushings to .87515-.87485".

**CONNECTING ROD:**—Weight 33½ ozs. Length 7 11/16". Upper Bearing (Piston Pin Bushing)—Split type bushings used. Expand to tight fit and ream. Oil passage in rod must be open to groove bet. bushings. See Packard Shop Notes for bushing installation.

Crankpin Journal Diameter—2 3/32".

Lower Bearing—Interchangeable steel-backed, babbit-lined type. No shims. Bearings furnished .001", .002", .003", .015" undersize.

Clearance—.0005-.0025". Sideplay—.004-.010".

Bearing Adjustment:—None. Replace bearings.

Installing Rods:—Oil squirt hole to camshaft.

**CRANKSHAFT:**—5 bearing. Integral counterweights.

Journal Diameters—2¾" all bearings.

Bearing Type—Interchangeable steel-backed, babbit-lined type. No shims. Bearings furnished .001", .002" undersize.

Clearance—.001-.003".

Bearing Adjustment:—None. Replace bearings. Upper halves may be rotated in place.

End Thrust:—Taken by #3 bearing.

Endplay—.003-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive.

Bearing Type—Steel-backed, babbit-lined.

Clearance—.001-.003".

End Thrust:—Taken by thrust plate in back of camshaft sprocket. Endplay—.002-.004".

Timing Chain:—Morse 1866 R.X. Width 1¼". Pitch 375". Length 21¾" or 58 links.

Camshaft Setting:—Install chain and sprockets together with marks on sprockets adjacent and in line with a straightedge across the shaft centers with #1 piston at top dead center.

See Packard Shop Notes for Front Assembly and Radiator Removal.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	340"	5¾"
Exhaust	1 13/32"	340"	5¾"

	Seat Angle	Lift	Stem Clearance
--	------------	------	----------------

Intake	30°	300"	.0005-.00175"
--------	-----	------	---------------

Exhaust	45°	300"	.0005-.00175"
---------	-----	------	---------------

NOTE—.0005" min. clearance at bottom of guide.

Valve Guides:—Guides taper reamed. Install from above with smallest diameter at bottom.

Valve Springs:—Int. & Exh. springs interchangeable. 1938 springs only furnished for replacement.

	Spring Pressure	Spring Length
--	-----------------	---------------

Valve Closed	36-44 lbs.	1½"
--------------	------------	-----

Valve Open	105-113 lbs.	1 5/16"
------------	--------------	---------

**Valve Lifters:**—Single piece, barrel type. Remove from above. Ream lifter holes from above working through stem guide with Packard Tool #S.T.-5065. Camshaft need not be removed. Oversize lifters furnished .001", .002", .005".

## VALVE TIMING

**Tappet Clearance:**—.007" Int., .010" Exh. Warm.

NOTE—Remove plate in right fender for valve adj.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

**To Check Timing:**—Set tappet clearance #1 exhaust valve at .013". This valve should close with piston 5° or .0103" past top dead center when point on flywheel 2½ graduations past #1 UPDC (top dead center mark) lines up with pointer in inspection hole in left front face of flywheel housing under starter. Reset tappet clearance at .010" with engine hot.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type pump on right side of engine.

NOTE—Install oil pump with driving slot parallel with center line of camshaft with distributor rotor opposite #1 terminal in cap.

**Normal Oil Pressure:**—35 lbs. at 30 M.P.H. Warm oil.

**Oil Pressure Relief Valve:**—On pump cover. Not adjustable. Replace spring if pressure less than 5-8 lbs. at 2".

**Crankcase Capacity:**—7 quarts (dry).

## CLUTCH

**CLUTCH:**—Long Model 10CF-CL Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven, 2 required. I.D. 6". O.D. 10". Thickness .137".

**Adjustment:**—Pedal free travel 1½-2". Adjusting nut on connector link at clutch fork.

**Removal:**—With clutch pedal depressed, insert wedge (ST-879) between each throwout finger and cover (assembly can only be removed from below when in partially released position). Remove transmission (see Transmission Removal below), clutch shifter bearing, pedal rod, and cover capscrews evenly, then remove assembly from below.

## TRANSMISSION

**TRANSMISSION:**—Own—Helical gear type with synchronizing shift on second and high gears.

See Transmission Section for complete data.

**Removal:**—Remove floorboards, speedometer cable, ground strap, propeller shaft, housing lower cover, shifter bearing spring, engine stabilizer (frame to transmission). Remove 2 bolts at transmission end of left support, remove frame bolts in right support with jack supporting rear of engine, 4 transmission-to-housing bolts, and withdraw transmission.

NOTE—Keep engine to right when installing.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics—Model 3-C. Roller bearing. 2 used.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own—Semi-floating, 'Angle Set', hypoid gear type with Hotchkiss drive. Welded cover used.  
*See Rear Axle Section for complete data.*

Ratio—4.09-1 (std. pass., optl. hearse), 4.54-1 (std. hearse, optl. pass.), 4.36-1 (optl), 4.7-1 (optl hearse).

Backlash—.003-.005". Screw adjustment for ring gear mesh in pinion. Pinion stationary.

**Removal:**—With wheel, hub and brake assembly removed, axle shafts can be withdrawn from housing. Differential carrier can then be removed from housing (on car) by disconnecting rear universal joint at flange, removing housing bolt nuts (below) and screw with locknut (at top). Assembly can then be removed from below.

**Wheel Bearing Adjustment:**—None.

**NOTE:**—Whenever wheel bearing replaced be sure that spring washed between inner bearing race and hub installed.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco—Mod. 1960-C, D (front), 1717-A, B (rear). Double acting, piston type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent 'Safe-T-Flex' type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE:**—Data below applies with car on level floor, tires properly inflated and car weighted as follows: 5 pass (375 lbs. rear seat, 300 lbs. front), 2-4 pass. (300 lbs. frt. seat, 225 lbs. rear comp't.).

**Front Suspension Height:**—Distance from floor to top of frame side rail at spring should be 18".

**Kingpin Inclination:**—1½° crosswise.

**Camber:**—1° plus or minus ¼°. Adjustable.

**Caster:**—2½° plus or minus ½°. Shim adjustment.  
**Toe In:**—1/32-1/16". Adjust by turning tie rods equally (check for equal lengths after adjustment).

**STEERING GEAR**

**Steering Gear:** Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type. Hand lever applies rear service brakes.  
*See Brake Section for complete data.*

**Wheel Cylinders:**—Diameter 1 1/16" front wheel, 15/16" rear wheel.

**Drum Diameter:**—12".

**Lining:**—Primary: Raybestos #451. Secondary: U.S. #589. Width 1¾". 3/16" thick. Length per shoe 13".

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

**ELECTRICAL EQUIPMENT NOTE:** Both Auto-Lite and Delco-Remy equipment used during production.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on plate on front of dash.

**ENGINE NUMBER:**—First number 395501. Stamped on left side of engine near starter.

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Head	Pressure at 125 R.P.M.
Std. 6.4-1	108 lbs.
Optl. 7.0-1	119 lbs.

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling at 350 R.P.M. or 7 M.P.H.

**FIRING ORDER:** 1-8-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 103S or Champion Y-4. 10 mm. Gaps—.026-.030".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.015". Limits .0125-.0175".

**Cam Angle:**—Closed 27° (Auto-Lite), 31° (Delco-Ry.).

**Automatic Advance—Auto-Lite:** 9° max. at 1800 R.P.M. Delco-Remy: 9¾° max. at 2000 R.P.M. Distr. ° and R.P.M.

**Vacuum Advance—5½°** (distr.) with 16" vacuum.

**NOTE:**—Max. vacuum advance on early units, 7½°.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—6-8° BTDC (Std. hd.), 4-5½° BTDC (HC hd.). Vibration dampener mark (correct degree mark ahead of #1UPDC) aligned with pointer on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 7 MPH.

**Float Level:**—Fuel level ⅝" below top edge of bowl.

**Accelerating Pump:**—Inner Hole (Summer), outer (Winter).

**Fuel Pump Pressure:** 4½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

No adjustment required. See that heat control valve and shaft turn freely by hand.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.006" Intake, .008" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION AUTO-LITE

**Ignition Switch:** Mitchellock 16-S, Type 7210. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton #50184 (Lock cylinder). Key Series—P1251-P1500. Groove—#2.

**COIL:** Auto-Lite Model CE-4026. Service Coil (less switch & cable) CE-3186KS. On cylinder head.

**Ignition Current:**—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671-G.

**Capacity:**—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4005. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and Fuel Compensator. Refer to Electrical Equipment Index for Auto-Lite Distributor article covering special servicing data on these units.

**Breaker Gap:**—Set at .015". Limits .0125-.0175".  
**Cam Angle or Dwell:**—27° closed, 18° open (.017" gap).  
**Breaker Arm Spring Tension:**—18-20 ounces.  
**Rotation:**—Clockwise viewed from top.

### Automatic Advance—Auto-Lite

Distributor	R.P.M.	Engine	R.P.M.
Start	300	0	600
3	800	6	1600
6	1300	12	2600
9	1800	18	3600

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

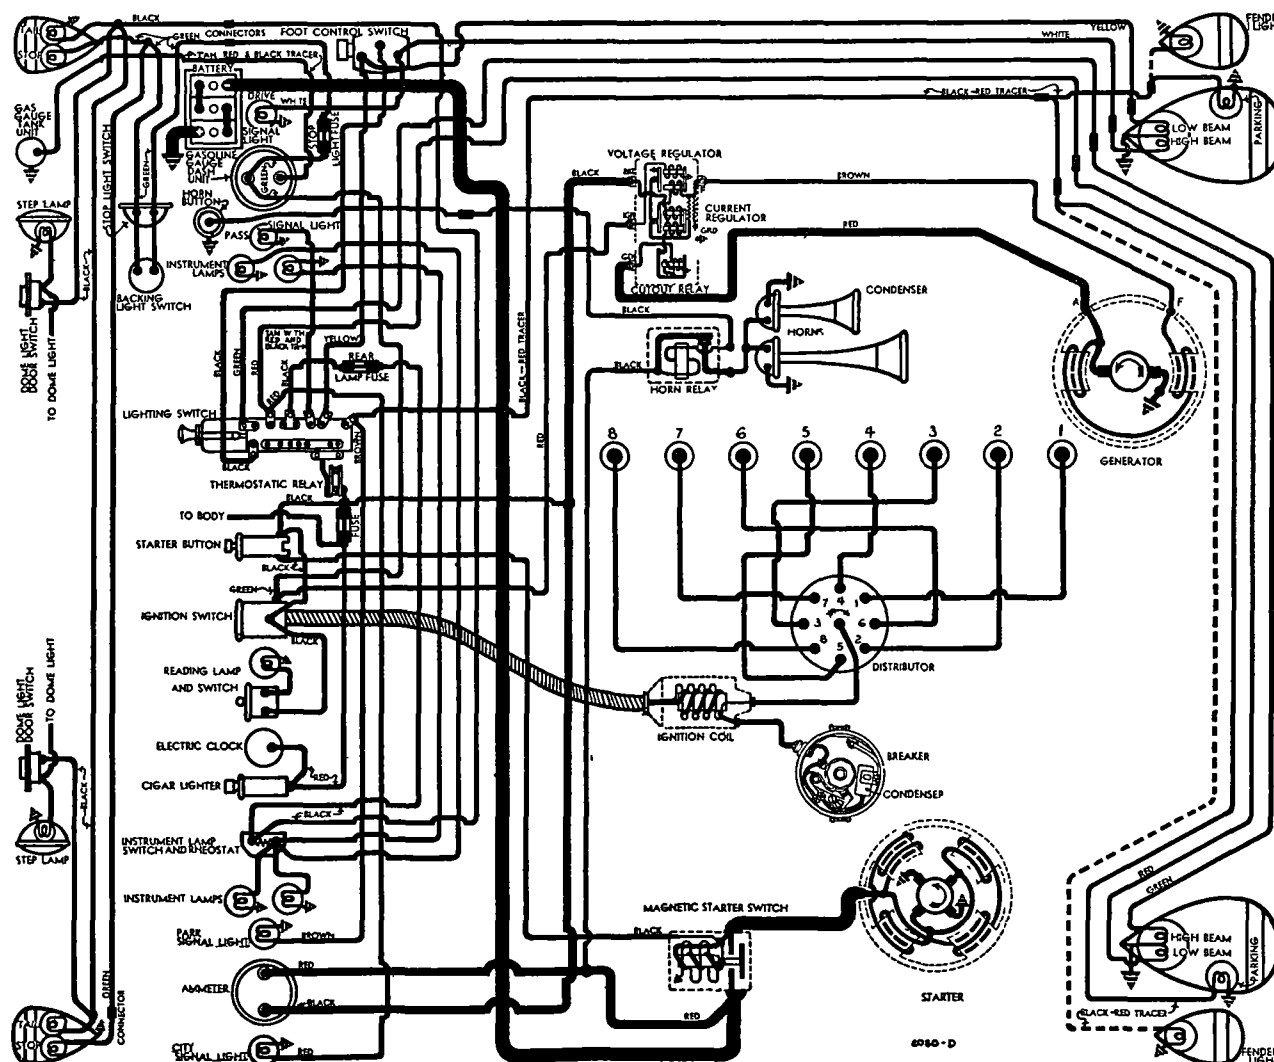

### Vacuum Advance—Auto-Lite

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7"
1°	2°	8½"
3°	6°	12"
4°	8°	13½"
5.5°	11°	16"

**NOTE:**—Max. vacuum advance 7½° on early IGT-4005. Replacement units all 5½° (as above).

**Fuel Compensator:**—Manual adjustment at distributor provides 10° maximum advance or retard from center 'O' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on cylinder head. To remove, disconnect vacuum line connection, take out hold-down screw in advance arm.

1937 DIA RAM—DELCO-REMY EQUIPMENT  
See 1938 Diagram for Auto-Lite internal circuits

**IGNITION****DELCO-REMY**

**Ignition Switch:**—D-R Model 430-L. Connected to coil by armored cable.

**COIL:** Delco-Remy Model 539-K. On cyl. head.  
Ignition Current—½ ampere idling, 2½ stopped.

**CONDENSER:** Delco-Remy Part No. 1866049.  
Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 663-L. Single breaker, 8 lobe cam, full automatic advance type with Vacuum Spark control and Fuel Compensator.  
Breaker Gap—.015". Limits .0125-.0175".  
Cam Angle or Dwell—31° (closed), 14° (open).  
Breaker Arm Spring Tension—19-23 ounces.

Automatic Advance—Delco-Remy			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	1.5	600
9.75	2000	19.5	4000

**Vacuum Spark Delco-Remy 681-L**—Integral type. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance—Delco-Remy			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°	6-8"	
5.5°	11°	14-18"	

**NOTE**—Early type vacuum advance max. was 7½".  
**Fuel Compensator**—Manual adjustment at distributor provides 12° maximum advance or retard from center 'O' position. See Ignition Timing for setting.

**Removal:**—Distributor mounted on cylinder head. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—For all engines as follows:

**Flywheel Degrees Piston Position**  
Std. 6.4-1 head..... 6-8° BTDC.....0168-.0299" BTDC  
Optl. 7.0-1 head.....4-5½° BTDC.....0075-.0141" BTDC  
**NOTE**—Vibration damper at front of engine marked #1 UP DC (top dead center) with 15 one degree graduations before this point.

**To Set Timing**—Loosen thumbnut, set Fuel Compensator at 'O'. With #1 piston on compression, turn engine over until it reaches firing position (see table above), stop when correct line on vibration damper at front of engine lines up with pointer. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor is opposite #1 segment in distributor cap.

**NOTE**—If neon timing light used, idle engine below 500 R.P.M.

**Fuel Compensator Setting**—Provides manual adjustment at distributor for octane rating of fuel used. After ignition set as above, road test car to give a slight 'ping' pulling heavy load. Adjusted by loosening thumbnut and advancing or retarding pointer on scale. Adjustment permits 12° advance or retard from Center 'O' position.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EE-23. 1¼" dual downdraft type with integral automatic choke and fast idle.

*For complete data, refer to Carburetor Index.*

**NOTE**—Carburetor carries code mark 10-28 on air horn.

**Idle Adjustment**—With engine warm, choke valve wide open, engine idling at hot or slow idling speed, set throttle stopscrew so that engine idles at 350 R.P.M. or 7 M.P.H. Turn inner idling adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with outer idling adjusting screw. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Adjusted by changing position of pump link rod in throttle valve lever.  
Inner Hole (Min. stroke)—Summer temperatures.  
Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle & Automatic Choke:**—Integral with carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1528086 oil bath type.

**Fuel Pump:**—AC. Type F #1523196. Combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC. Electric. Dash unit (#1515330-U. S.; #1515332-Canada). Tank unit (#1515448—all).

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:**—Prest-O-Lite, Hi-Level, Type HR4-21. 6 volt, 21 plate, 150 ampere hour capacity (20 hour rate).

**NOTE**—Specific gravity reading for fully charged Hi-Level battery is 1.250.

**Starting Capacity**—175 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Under front seat on left side.

**Export—Willard RH-5-19:**—6 volt, 19 plate, 153 ampere hour capacity (20 hour rate).

**Starting Capacity**—180 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.6 minutes. Five

second voltage—4.51 volts.

**Grounded Terminal & Location**—As given above.

**STARTER****AUTO-LITE**

**Auto-Lite Model MAX-4014.** Armature MAW-2090.

**Drive**—Outboard Barrel Type Bendix Model A-1729.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 R.P.M., 160 amperes, 5.2 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal:**—Starter sleeve mounted on left front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing.

**Starting Switch:** Auto-Lite SS-4001. Magnetic type. Mounted on starter, controlled by pushbutton on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

**STARTER****DELCO-REMY**

**Delco-Remy Model 729-H.** Armature No. 1866105.

**Drive**—Outboard barrel type Bendix A-1729.

**Cranking Engine**—125 R.P.M., 175 amperes, 5.1 volt.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. (each).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5	60
16 ft. lbs.	Lock	3.0	600

**Removal:**—Starter sleeve mounted on left front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing.

**Starting Switch:** Delco-Remy 1540 Magnetic switch mounted on starter controlled by separate push button switch on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

**Delco-Remy 1540 Switch Specifications**

Contacts close with current draw of 3.1-3.7 amperes at 4.0 volts. Remain closed with current draw of .54-.65 amperes at .7 volt.

**NOTE**—Plunger in end of magnetic switch can be used for starting engine at starter.

**GENERATOR****AUTO-LITE**

**Auto-Lite Model GCO-4803-A.** Armature No. GCO-2006F. Two brush, straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—28 amperes (cold), 8.0 volts, 1850 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

**Charging Rate Adjustment**—No adjustment on generator. See Regulator data (following).

**Performance Data—Auto-Lite**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	825	0	6.4	900
4	6.6	940	4	6.6	1025
8	6.85	1050	8	6.85	1160
12	7.1	1175	12	7.1	1310
16	7.3	1300	16	7.3	1475
20	7.55	1450	20	7.55	1660
24	7.8	1610	24	7.8	1880
28	8.0	1850	28	8.0	2200

**NOTE**—Current reg. limits output to 28 amperes.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.47-1.63 amperes at 6.0 volts.

**Motoring Current**—3.94-4.36 amperes at 6.0 volts.

**Removal & Belt Adjustment:** Same as given below

C N T I N U E D N E X T P A G E

C NTINUED FR M PRECEDING PA E

**GENERATOR****DELCO-REMY**

**Delco-Remy Model 961-J.** Armature No. 1857866. Straight shunt (two brush) type with external current and voltage regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Control Unit section below.

**Maximum Charging Rate**—25 amperes (cold) with discharged battery as indicated on test ammeter connected in line at 'BAT' terminal on Control Unit. Decreases as battery comes up on charge. Generator output constant at all speeds above 1650 R.P.M. or approx. 25 M.P.H.

**Performance Data—Delco-Remy Generator Cold**

Amperes	Volts	R.P.M.
25	8.0	1650

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces.

**Field Current**—2.0-2.2 amperes at 6 volts.

**Motoring Current**—3.75 amps @ 6 volts, 450 R.P.M.

**Removal**—Generator pivot mounted at left front of engine. To remove, take out mounting bolts.

**Belt Adjustment**—With bolts loose, swing generator away to give 30 lbs. reading on scale attached to clamp bolt, or  $\frac{1}{2}$ - $\frac{3}{4}$ " thumb deflection on belt midway between generator and fan pulleys.

**REGULATOR****AUTO-LITE**

**Auto-Lite VRB-4002-D Current-Voltage Regulator.** Consists of Cutout Relay, vibrating Voltage and Current Regulator in single case on dash.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay—Auto-Lite**

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

**Voltage Regulator—Auto-Lite**

**Setting**—7.5-7.8 volts at 70°F. (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F. (After 8R-000001). See Electrical Equipment Section for complete settings and changes.

**To Check (Without Breaking Seals)**—Connect ammeter in charging line at 'B' terminal on regulator. Connect voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 MPH. car speed. Voltage should be within limits of 7.4-7.8 volts (Before #8R-000001), 7.21-7.83 volts (after). See Setting above.

**To Adjust (with cover removed)**—Change armature spring tension slightly by bending lower spring hanger. See Electrical Equipment Section for data.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

**Current Regulator—Auto-Lite**

**Setting**—27-29 amperes (marked '28' on cover).

**To Check (Without Breaking Seals)**—Connect meters as for Voltage Regulator test. Operate genera-

tor at 30 MPH. car speed, add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate and bring Current Regulator into action. Charging current should not exceed 28 amperes. If more than slight excess noted, Current Regulator is defective.

**Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

**REGULATOR****DELCO-REMY**

**Delco-Remy Model 5813.** Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage & Current Regulators in a single case on the dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Cover of case is sealed. Units can be checked without breaking seal. To adjust, seal must be broken.

**Cutout Relay—Delco-Remy**

**Cuts In**—6.7-7.6 volts.

**Cuts Out**—3 ampere max. discharge at 6.3 volts.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

**Voltage Regulator—Delco-Remy**

**Setting**—7.55-7.85 volts at 72° F., 7.45-7.55 volts at 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**Checking**—To check without breaking seal, disconnect lead at 'IGN' terminal on case, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3400 R.P.M. Check with setting as above (with 8-10 amps. charging rate). **To Adjust**—This requires breaking of seal in order to remove cover. With voltmeter and ammeter connected (as above), set regulator by bending spring hanger at lower end of armature spring until performance is as shown above. Remove jumper and restore original connections.

**NOTE**—Voltage Regulator readings must be taken with cover on unit and setting should be checked by decreasing speed until Cutout Relay contacts open, and then increasing speed to original point.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.060-.070" between armature and core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**Current Regulator—Delco-Remy**

**Setting**—24-26 amperes.

**Checking**—To check without breaking seal, disconnect 'IGN' and 'BAT' leads, connect ammeter with one lead to 'BAT' terminal and other to 'BAT' lead. Operate generator and check setting.

**To Adjust**—This requires breaking of seal. Proceed as outlined above and set regulator by bending spring hanger at lower end of armature spring until maximum output is as given.

**NOTE**—Generator voltage must not be allowed to exceed 8.5 volts with Voltage Regulator shorted out.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.070-.080" between armature and core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**NOTE**—To repolarize generator whenever Control Unit is disconnected or removed, connect jumper between 'GEN' and 'BAT' terminals momentarily (after all leads connected). Do not run engine.

**LIGHTING**

**LIGHTING**—Headlamps—Hall, Flex beam, pre-focused type with special non-interchangeable lenses marked 'Left' and 'Right'. 'Passing' beam (upper beam right hand headlamp, lower beam left hand headlamp) obtained with Foot Selector switch with Lighting Switch in 'Country Driving' (upper beams, both lamps) position.

**Headlamp Beam Indicator**—Separate beam indicator for each beam position (1—Park, 2—City, 3—Drive, 4—Pass), located on instrument panel (Drive and Pass in Gasoline gauge group, City and Park in Ammeter group).

**Switches**

**Lighting**—Delco-Remy Model 480-M.

**Foot Selector**—D-R Models 471-T, U (RHD).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamp—Right	32-32	2330
Headlamp—Left	32-21	1104
Parking, Fender	1½	55
Instrument, Panel, Tail	3	63
Stop	15	87
Indicator, Radio	1	51
Dome	6	81

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—Thermostatic arm type current limit relay. Mounted on lighting switch. Not adjustable. Contacts open with current load of 38 amperes at 70°F.

**FUSES**—Accessory—20 ampere, on lighting switch.

**Tail Lamp**—20 amperes, in connector near lighting switch.

**Stop Lamp**—20 amperes, in connector near gasoline gauge dash unit.

**Radio**—15 ampere, in feed wire.

**HORNS**—Sparton Model 5-D-30. Vibrator type, Air tone, twin horns operated by horn relay.

**Air Gap**—.032-.035" (low note—long air column), .026-.030" (high note—short air column).

**Horn Current**—22-25 amperes (total).

**Horn Relay**—R.B.M. Model 10072. Current draw .4-55 amperes at 6.0 volts. Coil resistance 11-14 ohms.

Contacts must close with relay in inverted position.

**Closing Voltage**—2.75-4.0 volts.

**Contact Gap**—.015-.025". **Air Gap** .010-.020" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head.

**Bore**—3 3/16". **Stroke**—5".

**Displacement**—320 cubic inches.

**Rated Horsepower**—32.5 (AMA).

**Developed Horsepower**—130 HP. (std. 6.4-1 head), 135 HP. (optl. 7.0-1 head) at 3200 R.P.M.

**Compression Ratio and Pressure**—As follows:

6.4-1 Std. aluminum head. 108 lbs. at 125 R.P.M.

7.0-1 Optl. aluminum head. 119 lbs. at 125 R.P.M.

**Vacuum Reading**—Gauge should show steady reading of 18-19", engine idling at 350 R.P.M. or 7 M.P.H. See Packard Shop Notes for Cylinder Block Removal instructions.

**PISTONS**—Nelson Bohnalite, aluminum alloy, strut type, tin-plated (early cars not plated).

**Weight**—18.7 ozs. (stripped). 24.1 ozs. (with rings)

## ENGINE

CONTINUED FROM PRECEDING PAGE

and pin). Length—4¼".

Removal—Pistons removed from above, rods from below (push assembly up to expose pin, remove pin, lift piston out, remove rod from below with engine warm).

Clearance—Skirt .0015". See Fitting New Pistons.

Replacement Pistons:—See Packard Shop Notes for data.

Fitting New Pistons:—.0015" x ½" feeler inserted between piston and cylinder wall on side opposite slot should require 12-14 lbs. to withdraw.

Installing Pistons:—Slot toward valves.

**PISTON RINGS:**—Two compression, two oil control rings per piston, all above pin. Each oil ring groove drilled with ten ⅛" oil drain holes. Rings furnished .005", .010", .020", .030", .040" oversize.

Ring	Width	End Gap	Side Clearance
Comp. (top) .....	⅛"	.007-.012"	.002-.0025"
Comp. (#70) .....	⅛"	.007-.012"	.0025"
Oil (top #85) .....	5/32"	.007-.015"	.0015"
Oil (X90-85) .....	5/32"	.007-.015"	.0015"

NOTE—Install #1 and 3 rings with gap toward valves, #2 & 4 with gap away from valves.

**PISTON PIN:**—Diameter—⅞". Length—2 47/64".

Floating type. Furnished .003" and .006" oversize.

Pin hole in rod bronze-bushed.

Pin Fit in Piston—Finger push fit with piston heated to 160° F.

Pin Fit in Rod Bushing—Finger push fit at 70° F.

NOTE—Finish ream bushings to .87515-.87485".

**CONNECTING ROD:**—Weight—40⅜ ozs. Length—10⅞".

Crankpin Journal Diameter—2 3/16".

Lower Bearing—Copper lead alloy, interchangeable type. Furnished .001", .002", .003", .015" undersize.

Clearance—.001-.0015". Sideplay—.006". Limits—.005-.008".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Installing Rods:—Oil squirt hole to camshaft.

**CRANKSHAFT:**—9 bearing. Bolted-on counterweights.

Journal Diameters—2⅝".

Bearings—Removable steel-backed, babbit-lined, shimless type. Bearing shells doweled in block and cap. Dowel in cap is flanged (seats between bearing and cap) and hollow (for bearing lubrication). Clearance—.001-.002".

Bearing Adjustment:—None (no shims). Replace bearings (requires removal of crankshaft).

End Thrust:—Taken by #7 bear. Endplay—.003-.005".

**CAMSHAFT:**—8 bearing. Non-adjustable chain drive.

Bearing Type—Steel-backed, babbit-lined.

Clearance—.0015-.0035".

End Thrust:—Taken by thrust plate in back of camshaft sprocket. Endplay—.001-.004".

Timing Chain:—Morse 3682-KX. Width 1½". Pitch .375". Length 70 links or 26¼".

Camshaft Setting:—Install chain and sprockets together with marks adjacent and in line with a straightedge across the shaft centers.

NOTE—Front end disassembly as follows: remove bumper, center bolt at bottom of radiator, trim strips on running board, fender-to-board and frame bolts. Fender and radiator can then be removed as an assembly.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake .....	1 21/32"	.3405"	7 13/32"
Exhaust .....	1 15/32"	.3405"	7 13/32"

	Seat Angle	Lift	Stem Clearance
--	------------	------	----------------

Intake .....	45°	.358"	.0025" min.
Exhaust .....	45°	.358"	.004" min.

Valve Guides:—Pressed in block from above. Reamed to size for correct stem clearance (see table above).

Valve Rocker Arms:—Consist of pivoted arms mounted on bracket on crankcase which transmit motion from cam to valve pushrod (valve lifter).

Removal—Remove screws in bracket on right side of crankcase, withdraw bracket and pushrod assembly.

Pushrods (Valve Lifters):—Mounted on guides seated in crankcase and held down by block which engages guide flange.

Valve Springs:—	Spring Pressure	Length
Valve Closed .....	68-78 lbs.	3 1/16"
Valve Open .....	154-164 lbs.	2 45/64"

## VALVE TIMING

Tappet Clearance:—.006" Int., .008" Exh. hot.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 30° BTDC. Close 65° ALDC.

Exhaust Valves—Open 65° BLDC. Close 30° ATDC.

To Check Timing:—Set tappet clearance #1 exhaust valve at .005" (or .010", then insert .005" feeler). Turn engine over until pointer over damper (at front of engine) lines up with a point 1 1/16" (plus or minus 11/32") past '1-UPDC' mark (feeler should withdraw with finger pull). Valve closes 30° or .4070" ATDC. Reset tappet clearance at .008" hot.

## LUBRICATION

LUBRICATION:—Pressure type. Gear type oil pump mounted in crankcase.

Crankcase Capacity—8 quarts (dry).

Normal Oil Pressure:—55 lbs. max., 5 lbs. min. with SAE #20 oil.

Oil Pressure Relief Valve:—Located under plug on left side of crankcase. Remove acorn nut and adjust by turning screw.

## CLUTCH

CLUTCH:—Long Model 12CB-CL. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven (Raybestos #250). 2 required. I.D. 7". O.D. 12". Thickness .137".

Adjustment—Adjust nut on pedal rod to give 1½" of free travel.

Removal:—Remove transmission (see Transmission Removal below), take out cover mounting screws evenly. Align '0' marks on flywheel and cover at reassembling.

## TRANSMISSION

TRANSMISSION:—Own—Helical gear type with synchronizing shift on second and high gears.

See Transmission Section for complete data.

Removal:—Remove ground strap, propeller shaft, light switch, hand brake cable (at equalizer), two stud nuts (case bracket to rubber support) on either side, stabilizer link (left side), clutch pedal pull rod and spring, place jack under rear of engine. Remove pedal shaft inner bracket, loosen brace rod on right at rear end only, lower cross member, take out bell housing nuts and capscrews, raise rear of engine, remove 2 frame-to-vertical support members on either side and remove. Transmission can now be removed.

## UNIVERSALS

UNIVERSAL JOINTS:—'Detroit Universal'. Series 5350. Cross type with roller bearings. 2 used.

See Universals Section for complete data.

## REAR AXLE

REAR AXLE:—Own—Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—4.69-1 (std.), 4.36-1, 4.9-1 (optl.).

Backlash—.003-.005". Screw adjustment (back off one nut, tighten other nut equal amount with bearings correctly adjusted). Pinion setting controlled by shims furnished .005", .008", .015" thick.

Removal:—With wheel, hub and brake assembly removed, axle shafts may be withdrawn from housing. Differential carrier can then be removed from housing (on car) by disconnecting rear universal joint at flange, removing housing bolt nuts (below) and locknut on screw (at top). Assembly can then be removed from below.

Wheel Bearing Adjustment—Controlled by shims between outer race of inner bearing and shoulder in housing. Remove hub assembly, backing plate, axle shaft, and inner bearing outer race. Add or remove shims to give proper clearance.

Endplay—.003" (at each wheel).

## SHOCK ABSORBERS

SHOCK ABSORBERS:—Delco—Model 1960 C, D (front), 1717 C and D (rear). Double acting, piston type.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

Front Suspension:—Packard Safe-T-Flex, Independent type.

See Front Suspension Section for complete data.

NOTE—Data below applies with car on level floor and car loaded with 300 lbs. (frt.—all), 225 lbs. (rear—Coupe), 375 lbs. (rear—5 Pass.), 675 lbs. (rear—7 & 8 Pass.).

Front Suspension Height—Distance from floor to top of frame side rail at spring should be 20⅞".

Kingpin Inclination—1½° crosswise.

Camber—1° plus or minus ¼°. Adjustable.

Caster—2½° plus or minus ½°. Shim adjustment.

Toe In—1/32-¼". Adjusted by turning tie rods equally (check for equal lengths after adjustment).

## STEERING GEAR

Steering Gear: Packard (Gemmer design Model 375) Worm-and-Roller type with push-pull adjustments and center steering. See Gemmer Model 375 article.

See Steering Gear Section for complete data.

## BRAKES

BRAKES:—Service—Bendix hydraulic, duo-servo, single anchor type. Hand lever applies rear service brakes.

See Brake Section for complete data.

Wheel Cylinders—Diameters—Front wheel 1¼", rear 1⅞".

Drum Diameter—13".

Lining—Primary: Marshall Asb. #1035, Secondary: #600. Width 2½". 3/16" thick. Length per shoe 13".

Clearance—.010" at heel and toe of each shoe.

Hand Brake Adjustment:—See Service Brakes.

**ELECTRICAL EQUIPMENT NOTE:** Both Auto-Lite and Delco-Remy Starters & Generators used during production on these cars.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on plate on front of dash.

**ENGINE NUMBER:**—First number 905501. Stamped on left side of engine block below head.

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:  
Head Pressure at 125 R.P.M.  
Std. 6.4-1 ..... 110 lbs.  
Optl. 7.0-1 ..... 119 lbs.

**VACUUM READING:**—Steady reading at 18-20" with engine idling at 375 R.P.M. or 8 M.P.H.

**FIRING ORDER:** 1R-6L-5R-2L-3R-4L-6R-1L-2R-5L-4R-3L with cylinders numbered as shown on diagram (cylinder banks right 'R' and 'L' left as viewed from driver's seat, #1 cylinder at front).

**SPARK PLUGS:** AC No. 103S or Champion Y-4. 10 mm. Gaps—.026-.030".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.020". **Cam Angle:**—40° Closed.

**Synchronization:**—Set movable contacts to open 33½° after stationary contacts.

**Automatic Advance:**—10° max. at 1400 RPM (for IGO-4001A Distr., 8° max. at 1200 RPM (IGO-4002A).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—6-8° BTDC (for standard cyl. head), 4-5½° BTDC (for HC hd.). Vibration dampener mark (correct graduation ahead of #1R-UDC) aligned with pointer at front of engine. Movable contacts

should open 33½° after this point.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 8 MPH.

**Float Level:**—Fuel level 9/16" below edge of bowl.

**Accelerating Pump:**—Inner Hole (Summer), Outer Hole (Winter temperatures).

**Fuel Pump Pressure:** 4½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:** None in service, hydraul. take-up.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy Model 430-M (switch and cable assembly). Connected to coil unit by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184 (Lock cylinder). Key Series—P1251-P1500. Groove—#2.

**COIL:** Auto-Lite Model CE-1203. Two Coil unit. Service Coil (less switch & cable) CE-3186FS. Mounted at front of engine.

**Ignition Current:**—½ ampere idling, 2½ amperes stopped, for each coil.

**CONDENSER:** Auto-Lite No. IG-2671-E, IG-2671-A (one of each used). Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGO-4002A (Std. hd.), IGO-4001A (HC head). Double breaker, 6 lobe cam, full automatic advance type. Breaker contacts open alternately at 33½° and 26½° intervals corresponding to unequal 67° and 53° firing intervals

of the engine (caused by 67° included angle between cylinder banks) and must be synchronized. See Timing.

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—40° (closed), 20° (open) for each set (operate independently).

**Breaker Arm Spring Tension:**—16-20 ounces.

#### Automatic Advance—IGO-4001-A

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
2.....	515	4.....	1030
4.....	730	8.....	1460
6.....	950	12.....	1900
8.....	1175	16.....	2350
10.....	1400	20.....	2800

#### Automatic Advance—IGO-4002-A

Start.....	300	0.....	600
2.....	525	4.....	1050
4.....	750	8.....	1500
6.....	975	12.....	1950
8.....	1200	16.....	2400

**Removal:**—Distributor mounted between cylinder banks at front of engine. To remove, take off distributor cap and cable conduit assembly, take out screws in mounting bracket.

### IGNITION TIMING

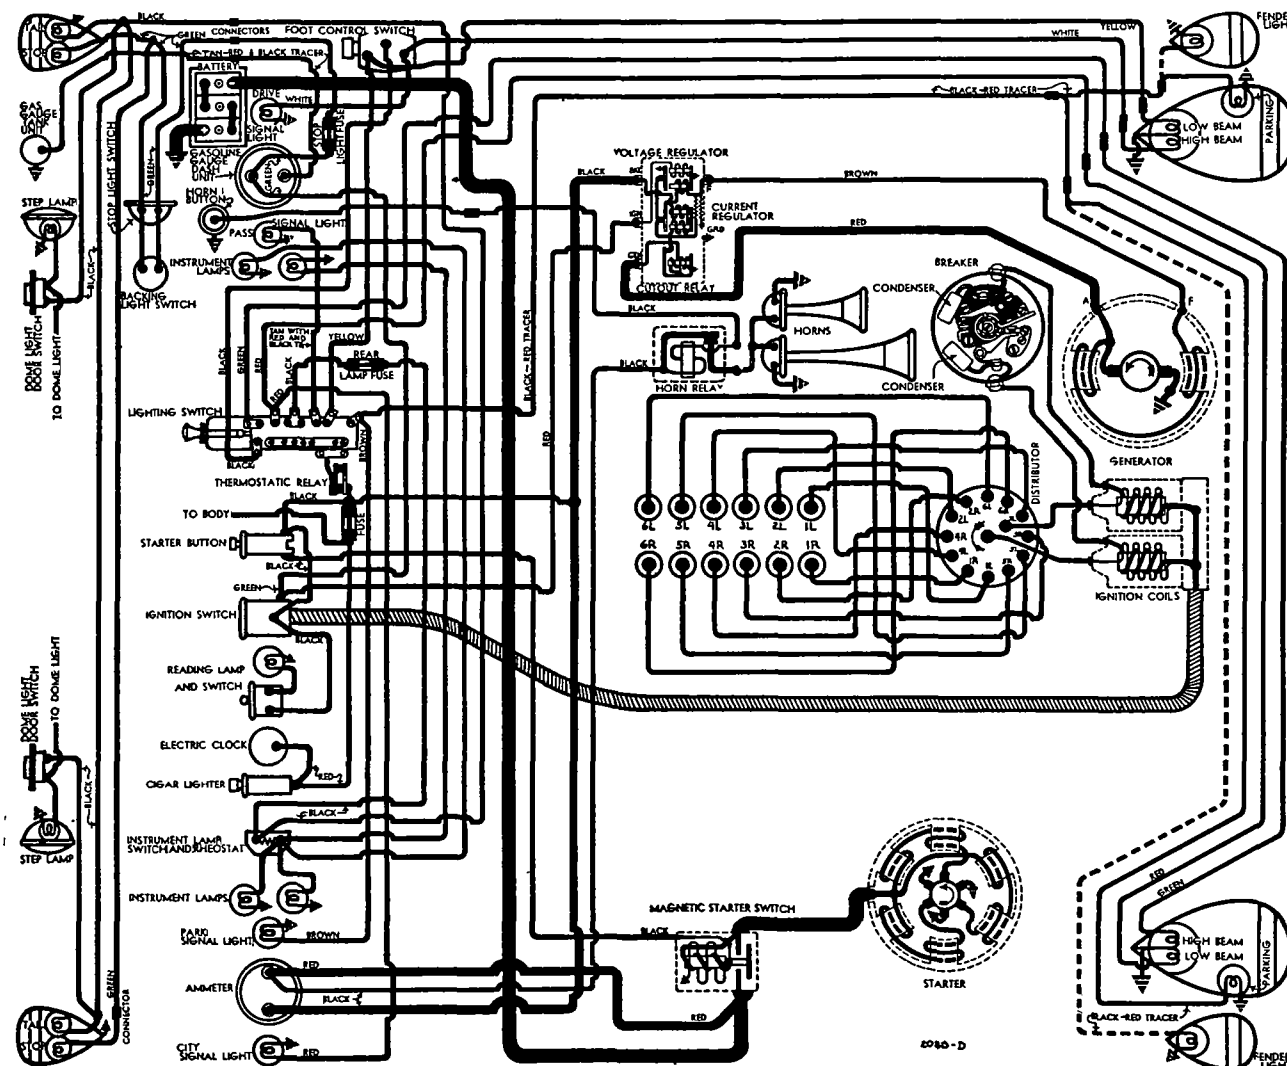

**IGNITION TIMING:**—Settings for all engs. as follows:

**Engine** **Fly wheel Degrees** **Piston Position**

Std. 6.4-1 Head ..... 6-8° BTDC..... 0145-.0255" BTDC

Optl. 7.0-1 Head ..... 4-5½° BTDC..... 0063-.0121" BTDC

**NOTE:**—Vibration dampener at front of engine marked '#1R-UDC' (top dead center for #1 in right cylinder bank) and '#6L-UDC' (top dead center

1937 DIA RAM—DELCO-REMY STARTER, GENERATOR, REGULATOR  
See 1938 Diagram for internal circuits on Auto-Lite Starter, Generator, Regulator

for #6 in left cylinder bank) with fifteen 1° graduations before each of these marks. Time stationary contacts which fire plugs in right hand bank first. **Timing (Stationary Contacts)**—With #1R piston (front cylinder, right bank) on compression, turn engine over until piston reaches firing position, stop when correct graduation preceding '#1R-UDC' mark on vibration dampener lines up with pointer on chain case cover (see settings above). Loosen clampscrew on mounting bracket, rotate distributor until stationary contacts (mounted directly on breaker plate) begin to open, tighten clampscrew. Then synchronize movable contacts.

**Synchronization (Movable Contacts)**—Turn engine over exactly 67° to firing position for #6L (rear piston, left bank), stop when correct graduation preceding '#6L-UDC' mark lines up with pointer, loosen lock screws on sub-plate carrying second or movable contacts, shift plate until contacts begin to open, tighten lock screws.

**Synchronization (other methods)**—Set movable contacts to open exactly 33½° after fixed contacts. Firing intervals are unequal 33½-26½-33½ distributor degrees.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-3, 1½" Dual, Downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Note**—See article in Carburetor Section for shim installation to improve idle operation.

**Idle Adjustment**—Do not adjust until engine warmed up so that Automatic Choke and Fast Idle are inoperative. Set throttle stopscrew so that engine idles at 375 R.P.M. or 8 M.P.H. Turn inner idle adjusting screw in until engine begins to lag, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Adjust outer idle adjusting screw in the same manner. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Adjusted by changing pump link rod engagement in throttle lever as follows:

Inner Hole (Min. stroke)—Summer temperatures.  
Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle:**—Mounted on carburetor. To adjust, stop engine, hold throttle valve and choke valve closed, turn fast idle adjusting screw in until it contacts ear on fast idle cam, then turn screw in additional 6-7 turns.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Stromberg Model C. Early cars carry 10-9 assembly, later cars 10-9A assembly.

**NOTE**—Car manufacturer recommends that 10-9 assemblies be replaced with 10-9A assembly for improved choke action.

*For complete data, refer to Carburetion Equip. Index.*  
**Setting**—28 notches rich (10-9), 16 notches rich (10-9A).

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1525442. Oil-wetted type.

**Fuel Pump:**—AC Type 'T' #1521778 combination fuel-and-vacuum pump. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC Electric Type. #1515334 (dash unit), 1515449 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Prest-O-Lite, Hi-Level, Type HRD-21. 6 volt, 21 plate, 150 ampere hour capacity (20 hour rate).

**NOTE**—Specific gravity reading for fully charged Hi-Level battery is 1.250.

**Starting Capacity**—175 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Under front seat on left side.

**Export**—Willard RH-5-19:—6 volt, 19 plate, 153 ampere hour capacity (20 hour rate).

**Starting Capacity**—180 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.6 minutes. Five second voltage—4.51 volts.

**Grounded Terminal & Location**—As given above.

## STARTER

### OWEN-DYNETO

Owen-Dyneto Model DN-1389. Armature No. 13409.

**Drive**—Outboard Bendix Type RCD10FXTD.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—56-60 ounces each.

**Cranking Engine**—125 R.P.M., 130 amps. 6.6 volts.

### Performance Data—Owen-Dyneto

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3000	6.0	50
5.8 "	850	5.2	200
11.4 "	520	4.8	300
17.0 "	340	4.5	400
23.0 "	220	4.2	500
26.6 "	140	4.0	600
39.0 "	Lock	3.6	810

**Removal:**—Starter sleeve mounted on right front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing.

**Starting Switch:** Auto-Lite SS-4001. Magnetic type. Mounted on starter, controlled by pushbutton on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

## STARTER

### DELCO-REMY

Delco-Remy Model 664. Armature No. 1866090.

**Drive**—Outboard Bendix Type RCD10FXTD.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—36-40 ounces.

**Cranking Engine**—125 R.P.M., 240 amps. 4.75 volts.

### Performance Data—Delco-Remy

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3000	5.0	70
19 "	Lock	3.0	500

**Removal:**—Starter sleeve mounted in right front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing.

**Starting Switch:** Delco-Remy No. 1541. Magnetic type on starter field frame. Controlled by pushbutton on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

### Delco-Remy 1541 Switch Specifications

Contacts close with current draw of 3.1-3.7 amperes at 4.0 volts. Remain closed with current draw of .54-.65 amperes at .7 volt.

## GENERATOR

### AUT -LITE

Auto-Lite Model GCE-4803A. Armature No. GBX-2035F. Two brush, straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—30 amperes (cold), 8.0 volts, 1500 R.P.M. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and is dependent on battery condition.

**Charging Rate Adjustment**—No adjustment on generator. See Regulator Section below for settings.

### Performance Data—Auto-Lite

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	740	0	6.4	785
4	6.6	830	4	6.6	880
8	6.8	920	8	6.8	975
12	7.05	1015	12	7.05	1070
16	7.25	1100	16	7.25	1165
20	7.5	1190	20	7.5	1275
24	7.7	1280	24	7.7	1385
30	8.0	1400	30	8.0	1580

**NOTE**—Current reg. limits output to 30 amperes.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—64-68 ozs. (new brushes).

**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current**—5.03-5.57 amperes at 6.0 volts.

**Removal & Belt Adjustment:** Same as given below.

## GENERATOR

### DELCO-REMY

Delco-Remy Model 930-F. Armature No. 1866069.

Straight shunt, two brush type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—30 amperes at 1650 RPM. Actual charging rate controlled by regulator and dependent on battery condition.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Control Unit Section below.

### Performance Data—Delco-Remy

Amperes	Volts	R.P.M.
28	8.0	1450

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces.

**Field Current**—1.8-2.3 amperes at 6.0 volts.

**Motoring Current**—500 R.P.M., 4.25 amps., 6 volts.

**Removal:**—Generator mounted on special pivot bracket at left front of engine with fan belt drive. To remove, take out clamp bolt and pivot bolts.

**Belt Adjustment:**—Attach spring scale by wire looped over generator field frame, loosen pivot bolts and clamp bolt, pull generator away from engine until scale reading is 70-80 lbs.

**NOTE**—Replace drive belts in matched pairs only

## REGULATOR

### AUT -LITE

Auto-Lite Model VRP-4008-AP. Current-Voltage Type. Consists of Cutout Relay, Vibrating Voltage and Current Regulator in case on dash.

C NTINUED ON NEXT PAGE

**C** NTINUED FR M PRECEDING PAGE

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

For complete data, refer to *Electrical Equipment Index*.

**Cutout Relay—Auto-Lite**

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" Min., .038" Max. with contacts open.

Measure at hinge end of core.

**Voltage Regulator—Auto-Lite**

**Setting**—7.5-7.8 volts at 70°F. (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F. (After No. 8R-000001). See *Electrical Equipment Section* for complete settings and changes.

**To Check (Without Breaking Seals)**—Connect ammeter in charging line at 'B' terminal on regulator, connect voltmeter between 'B' & 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed. Voltage should be within limits of 7.4-7.8 volts (Before No. 8R-000001), 7.21-7.83 (after). See Setting above.

**T Adjust (with cover removed)**—Change armature spring tension slightly by bending lower spring hanger. See *Electrical Equipment Section* for data.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

**Current Regulator—Auto-Lite**

**Setting**—29-31 amperes (marked '30' on cover).

**To Check (Without Breaking Seals)**—Connect meters as for Voltage Regulator test. Operate generator at 30 M.P.H. car speed, add load (use bank of headlamp bulbs or turn on lights and discharge battery) so that generator will charge at peak rate and bring Current Regulator into action. Charging current should not exceed 30 amperes. If more than slight excess noted, Current Regulator is defective.

**Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

**REGULATOR****DELCO-REMY**

Delco-Remy Model 5811, Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage & Current Regulators in a single case on the dash.

For complete data, refer to *Electrical Equipment Index*.

**NOTE**—Cover of regulator case is sealed. Units can be checked without breaking seal. Seal must be broken to make adjustments (voids warranty).

**Cutout Relay—Delco-Remy**

**Cuts In**—6.9-7.6 volts.

**Cuts Out**—4 ampere maximum discharge current.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

**Voltage Regulator—Delco-Remy**

**Setting**—7.55-7.85 volts at 70°F., 7.45-7.55 volts at 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Checking**—To check without breaking seal, disconnect lead at 'IGN' terminal on case, connect jumper between 'IGN' and 'BAT' terminals, connect ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3400 R.P.M., adjust charging rate to 8-10 amperes, check voltage.

**To Adjust**—Remove cover (seal must be broken). Set regulator by bending spring hanger at lower end of armature spring until performance is as shown above (replace cover to check performance). **NOTE**—All voltage regulator readings must be taken with cover in place. Cycle generator before taking readings by decreasing speed until Cutout Relay Contacts open and then increasing speed to original point.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.060-.070" between armature and core with armature down so that fiber bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**Current Regulator—Delco-Remy**

**Setting**—28-30 amperes.

**Checking**—To check without breaking seal, disconnect 'IGN' lead at regulator case, connect test ammeter in charging line at 'BAT' terminal. Operate generator and increase speed until output is constant. Must not exceed setting as given above.

**NOTE**—Do not allow voltage to exceed 8.5 volts with regulator inoperative.

**To Adjust**—Remove cover (seal must be broken). Set regulator by bending spring hanger at lower end of armature spring until correct setting is secured (replace cover to check performance).

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5 ozs. minimum.

**Air Gap**—.070-.080" between armature and core with armature down so that fiber bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**NOTE**—Repolarize generator whenever Control Unit is disconnected or removed by connecting jumper between 'GEN' and 'BAT' terminals momentarily after all leads have been connected.

**LIGHTING**

**LIGHTING**—Headlamps—Hall, Flex beam, pre-focused type with special non-interchangeable lenses marked 'Left' and 'Right'. 'Passing' beam (upper beam right hand headlamp, lower beam left hand headlamp) obtained with Foot Selector switch with Lighting Switch in 'Country Driving' (upper beams both lamps) position.

**Headlamp Beam Indicator**—Separate beam indicator for each beam position (1-Park, 2-City, 3-Drive, 4-Pass), located on instrument panel. (Drive and Pass in Gasoline gauge group, City and Park in Ammeter group).

**Switches**

**Lighting**—Delco-Remy Model 480-M.

**Foot Selector**—D-R Model 471-T, U (RHD).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamp—Right	32-32	2330
Headlamp—Left	32-21	1104
Parking, Fender	1½	55
Instrument, Panel, Tail	3	63
Stop	15	87
Indicator, Radio	1	51

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—Thermostatic arm type current limit relay. Mounted on lighting switch. Not adjustable. Contacts open with current load of 38 amperes at 70°F.

**FUSES**—Accessory—20 ampere on lighting switch.

**Tail Lamp**—20 amp. in connector by lighting switch.

**Stop Lamp**—20 amps. in connector near gasoline gauge dash unit.

**Radio**—15 ampere, in feed wire.

**HORNS**—Sparton Model 6-D-30. Vibrator type, Air tone, twin horns operated by horn relay.

**Air Gap**—.032-.035" (low note—long air column),

.026-.030" (high note—short air column).

**Horn Current**—22-25 amperes (total).

**Horn Relay**—R.B.M. Model 10072. Current draw .4-.55 amperes at 6.0 volts. Coil resistance 11-14 ohms. Contacts must close with relay in inverted position.

**Closing Voltage**—2.75-4.0 volts.

**Contact Gap**—.015-.025". **Air Gap** .010-.020" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS**—Type—Own make. 12 cylinder, 67° Vee, modified 'L' head. Both blocks and upper crankcase cast Enbloc.

**Bore**—3 7/16". **Stroke**—4¼".

**Displacement**—473 cu. ins. **Rated HP**—56.7.

**Developed Horsepower**—175 HP. (Std. 6.4 head), 180 HP. (Optl. 7.0-1 head) at 3200 R.P.M.

**Compression Ratio & Pressure**—All cylinder heads aluminum. Ratios and pressure at 125 RPM. (cranking speed) as follows:

	Ratio	Pressure
Standard	6.4-1	110 lbs.
Optional	7.0-1	119 lbs.

See *Packard Shop Notes for Cylinder Head data*.

**Vacuum Reading**—18-20" at 375 R.P.M. or 8 M.P.H.

**PISTONS**—Nelson Bohnlite, aluminum alloy, Invar strut, split skirt type, tin-plated. Recondition cylinders to take finished replacement pistons.

**Weight**—22 ozs. (stripped), 28.7 ozs. (with rings and pin). **Length**—4.318" (2.336" pin center-line to top.)

**Removal**—Pistons removed through top of engine, rods from below (push pistons up until pin is exposed, remove locking ring, push out pin, lift pistons out, lower rods and remove from below. Removal will be easier if engine is warm.

**Clearance**—Skirt .0015". See *Fitting New Pistons*.

**Replacement Pistons**—See *Packard Shop Notes for data*.

**Fitting New Pistons**—Use .0015" feeler, ½" wide, inserted between piston and cylinder wall on side opposite slot. Pull to withdraw feeler 12-18 lbs.

**Installing Pistons**—Slot toward valves (all pistons).

**PISTON RINGS**—Three compression, one oil control ring per piston, all above pin. Oil ring groove drilled with twelve ⅛" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (1 & 2)	⅛"	.007-.012"	.0025-.003"
Comp. (#3)	⅛"	.007-.012"	.0015-.002"
Oil (X90-85)	5/32"	.007-.015"	.0015-.002"

**NOTE**—On right bank, install #1 and 3 rings with gap toward camshaft, #2 and 4 away from camshaft. Reverse order on left hand bank.

**PISTON PIN**—Diameter ⅞". Length—2 63/64".

Pin floats in piston and rod. Held by locking ring at each end. Pin hole in rod bronze-bushed.

**Pin Fit in Piston**—Finger push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing**—.0002" clearance or thumb push fit with both parts at room temp. (70°F).

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**CONNECTING ROD:**—Weight 38¼ ozs. Length 9".**Crankpin Journal Diameter:**—2½".**Lower Bearing:**—Removable steel-backed, copper-lead alloy lined type. No shims. Bearings furnished std., and .001", .002", .003", .005" undersize.**Clearance:**—.001-.0015". **Sideplay:**—.008-.010".**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.**Installing Rods:**—Install all rods with oil squirt hole toward right or starter side of engine.**CRANKSHAFT:**—Four bearing. Bolted counterweights. **Journal Diameters:**—2¾" all bearings.**Bearing Type:**—Removable steel-backed, babbitt-lined. No shims.**Clearance:**—.001-.002".**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves can be rotated in place). Do not file bearing caps.**End Thrust:**—Taken by #1 front bearing. Endplay .003-.005".**CAMSHAFT:**—Four bearing. Between banks directly above crankshaft. Non-adjustable chain drive.**Bearing Type:**—Steel-backed, babbitt-lined.**Clearance:**—.001-.0015". (#1, 4), .002-.0025" (#2, 3). **Endplay:**—.002-.006".**Timing Chain:**—Morse, No. 1866. Width 1¾". Pitch .500". Length 28" or 56 links.**NOTE:**—Engine must be supported at front end and front casting (engine support, chain case cover, generator and water pump mounting) removed for work on chain or sprockets. Remove fenders and radiator as an assembly.**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that marks are adjacent and in line with straightedge across shaft centers. Install chain endless with both sprockets off engine.

VALVES:—	Head Diam.	Stem Diam.	Length
Intake	1 41/64"	.3405"	6.550"
Exhaust	1 21/32"	.338"	6.550"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.3125"	.0025"
Exhaust	45°	.3125"	.005"

**Automatic Tappet Take-up:**—Must be bled and blocked open when valves are ground and initial clearance must be checked afterward. Clearance must be .030-.045".*See Miscellaneous Section for complete data.***Valve Springs:**—Install springs with painted end down and close-spaced first coil toward valve head. Special 1/32" higher stem keeper furnished to compensate for loss of pressure caused by valve reseal'g.

	Spring Pressure	Length
Valve Closed	70 lbs.	2 7/32"
Valve Open	140 lbs.	1 29/32"

**VALVE TIMING****Tappet Clearance:**—None (automatic take-up).**Valve Timing:**—See camshaft setting above.**Intake Valves:**—Open at TDC. Close 45° ALDC.**Exhaust Valves:**—Open 35° BLDC. Close 10° ATDC.**To Check Valve Timing:**—Intake valve for #1 (front cylinder, right bank) begins to open with piston on top dead center when '#1R-UDC' mark on dampener lines up with pointer on chain case cover. Removal of right cylinder head and dial indicator mounted over valve recommended to check opening.**LUBRICATION****LUBRICATION:**—Pressure type. Gear type oil pump mounted in crankcase. Oil filter and temperature regulator mounted at right of engine.**Normal Oil Pressure:**—5 lbs. idling, 55 lbs. max.**Oil Pressure Regulator:**—Under acorn nut on right side of crankcase below filter.**Adjustment:**—Remove acorn nut, turn slotted screw in to increase pressure.**Crankcase Capacity:**—10 quarts.**CLUTCH****CLUTCH:**—Long Model 12CB-CL. Single plate, dry disc type with Bendix Vacuum Power operation.*See Clutch Section for complete data.***Facings:**—Hyc DV-3903PDX, 2 required. Inside Diameter 7". Outside Diameter 12". Thickness .137".**Pedal & Vacuum Booster Adjustment:**—Free movement of pedal should be 1-1½". To adjust, remove floor boards, operate clutch 10 times, see that pedal is against toeboard spring when engaged. Loosen lock screw at lower end of pedal in front of shaft, pull forward on front lever and rearward on middle lever until all clearance is at front of connecting pin at lower end of levers, tighten lock screw. Depress clutch pedal exactly 1 13/16" and hold in this position, loosen locknut on clutch rod at clutch fork end, turn adjusting nut until throw-out bearing just contacts clutch release levers, tighten locknut.**Removal:**—Remove transmission (see Transmission Removal below), take out clutch cover mounting screws.**TRANSMISSION****TRANSMISSION:**—Own—Constant mesh helical gears (all forward speeds), Synchronized shift (second and high).*See Transmission Section for complete data.***Removal:**—Remove ground cable, speedometer cable, propeller shaft, light switch, two stud nuts (case bracket to rubber support) at each side, hand brake cable at equalizer, left stabilizer link, clutch pedal pull-rod, and pedal spring. Support engine at rear. Remove right brace rod (rear only), lower cross-member, and bell housing nuts and capscrews. Jack up rear of engine, remove two bolts on each side (holding vertical support members to frame), remove support members, pull transmission back and remove.**UNIVERSALS****UNIVERSAL JOINTS:**—Spicer. Roller bearing type. 2 used.*See Universals Section for complete data.***REAR AXLE****REAR AXLE:**—Own make. Semi-floating, 'Angle-set' hypoid gear type with Hotchkiss drive.*See Rear Axle Section for complete data.***Ratio:**—4.41-1 Std., 4.06-1 and 4.69-1 Optl.**Backlash:**—.003-.005". Screw adjustment (back off one nut, tighten other nut equal amount with bear-

ings correctly adjusted). Pinion setting controlled by shims furnished .005", .008", .015" thick.

**Removal:**—Disconnect drive shaft at rear universal, remove wheels and hubs, backing plate (disconnect brake line), axle shafts. Take off differential carrier bolt nuts on flange and stud nuts at top (at rear of housing), remove differential carrier without disturbing housing.**Wheel Bearing Adjustment:**—Remove wheel and hub assembly, backing plate (disconnect brake line), pull axle and bearing assembly, add or remove shims behind inner bearing race, use gasket paste on inner face of bearing cap when replacing. **Endplay:**—.003" plus or minus .001" and equal for both wheels.**SHOCK ABSORBERS****SHOCK ABSORBERS:**—Delco, Model 1952-A, B (front), 2006-G, H (rear). Double acting, hydraulic type.*See Shock Absorber Section for complete data.***FRONT SUSPENSION****Front Suspension:**—Packard Safe-T-Flex, independent type.*See Front Suspension Section for complete data.***NOTE:**—Data below applies with car on level floor and car loaded to 300 lbs. (front seat—all models), 225 lbs. (rear—Coupe), 375 lbs. (rear—5 Passenger), 675 lbs. (rear—7 & 8 Passenger Models).**Front Suspension Height:**—20 7/16" plus or minus ¼" from top of cross-member to floor at spring.**Kingpin Inclination:**—1°30' crosswise.**Camber:**—1° plus or minus ¼°. Adjustable**Caster:**—0° plus 0 or minus ½°. Adjustable.**Toe In:**—1/16" plus or minus 1/16". Adjustable.**STEERING GEAR****Steering Gear:** Packard (Gemmer design Model 375) Worm-and-Roller type with push-pull adjustments and center steering. See Gemmer Model 375 article.*See Steering Gear Section for complete data.***BRAKES****BRAKES:**—Service—Bendix hydraulic duo-servo, single anchor type with Vacuum Power operation. Hand lever applies rear service brakes.*See Brake Section for complete data.***Wheel Cylinders:**—1¼" Diam. (front), 1½" (rear).**Drum Diameter:**—14". Centrifuge drums.**Lining:**—U. S. Asbestos #714 or Raybestos #451 (primary), U. S. Asbestos #589 (secondary). Width 2¾". Thickness ¼". Length 15" per shoe.**Clearance:**—.010" at heel and toe of each shoe.**NOTE:**—Heavier (yellow) retracting spring must be attached to primary, lighter (blue) spring to secondary shoe.**Hand Brake:**—See Service Brakes above.**Vacuum Power Unit:**—Bendix internal valve type Vacuum Cylinder linked to brake pedal lever.*See Brake Section for complete data.*

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On front of dash (use engine number).

**ENGINE NUMBER:—**First number A-1336. Stamped on boss on left side of engine block at upper rear end.

## TUNE-UP

**COMPRESSION:—Ratio—6.52-1 Std. 7.05-1 Optl.  
Pressure—110 lbs. (Std. 6.52-1 hd.), 120 lbs. (Optl.  
7.05-1 hd.) at 125 RPM. cranking speed.**

**VACUUM READING:—18-20" steady reading with engine idling at 6-8 MPH.**

**FIRING ORDER: 1-5-3-6-2-4. See diagram.**

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .0255-.0305". Use AC No. 103S or early Y-4 where slightly colder plug required (new Y-4 has longer center electrode). **NOTE**—These are 10 MM. Metric plugs. When installing plugs, use only 50 inch pound pressure (10 lb. pull on 5½" wrench).

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.020". **Cam Angle**—35° Closed.  
**Automatic Advance**—9½° at 2000 RPM (distr.).  
**Vacuum Advance**—7½° (distr.) with 15-19" vacuum.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—4-6° BTDC (aluminum heads), 5-6½° BTDC (Optl. HC iron head). Flywheel mark (correct degree mark ahead of #1UP.DC) aligned with inspection hole pointer (on left side under starter).

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Set idle adjusting screw midway between "miss" and "roll" points. Idle speed 8 MPH.  
**Float Level**—Fuel level 17/32" below edge of bowl.  
**Accelerating Pump**—Center Hole—Normal Setting.  
**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Make certain that valve operates freely with thermostatic coil resistance only. Do not oil this control.

**VALVES:** See Valve Timing.

**Tappet Clearance—.007" Int., .010" Exh. (hot).**

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Delco-Remy No. 1116254. Connected to coil by armored cable.

**Ignition Lock—Briggs & Stratton No. 50184 (Lock Cylinder). Key Series—P1251-P1500. Groove—#2.**

**COIL:** Delco-Remy Model 539-N. On left side of block.  
**Ignition Current**— $\frac{1}{2}$  ampere idling.  $2\frac{1}{2}$  stopped.

**CONDENSER: Delco-Remy No. 1869704.**  
Capacity—.20-.25 microfarad.

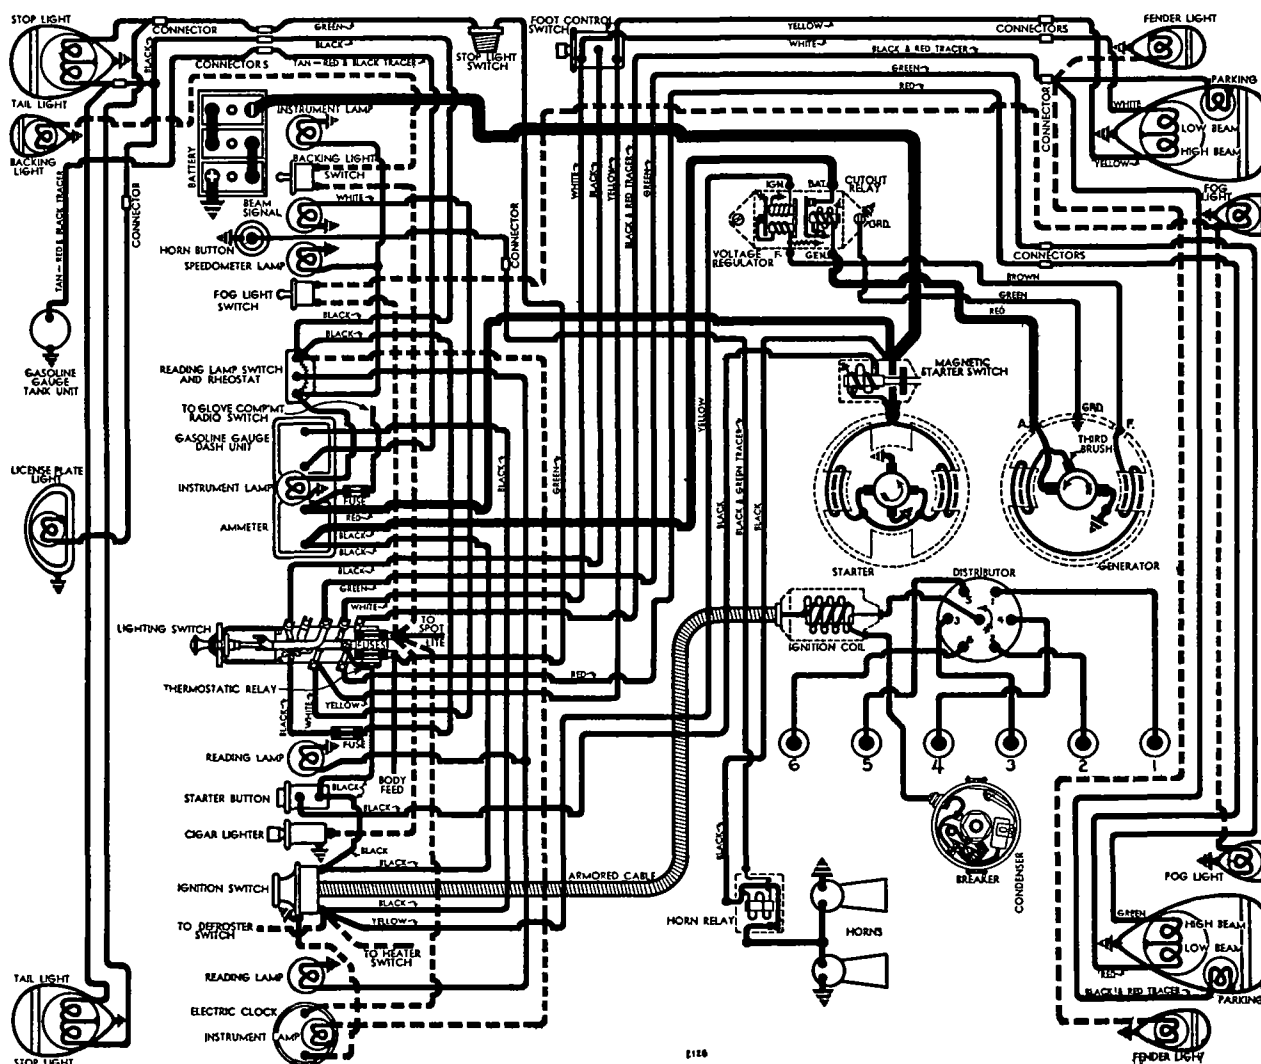

**DISTRIBUTOR:** Delco-Remy 1110203. Single breaker, 6 lobe cam, full automatic advance with vacuum spark control and Fuel Compensator adjustment. Breaker Gap—.020". Limits .018-.024". Cam Angle or Dwell—35° (closed), 25° (open). Breaker Arm Spring Tension—20 ounces. Rotation—Counter-clockwise viewed from top.

Automatic Advance			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	1.5.....	600
4.75.....	800	9.5.....	1600
9.5.....	2000	15.....	4000

**Vacuum Spark Control D-R 681-K.** Integral with distributor. Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Total plunger travel 9/64".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0° .....	5-7"
7.5°.....	15° .....	15-18"

**Fuel Compensator.** Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:—**Mounted on left side of engine at center. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting for all engines as follows (see Fuel Compensator setting below).

**Flywheel Degrees      Piston Position**  
**All heads ..... 4-6° BTDC.....0084-.0149" BTDC.**  
**Replmt. HC head .5-6½° BTDC.....0103-.0174" BTDC.**  
**Replacement HC heads—Cast-iron heads only**  
**available for replacement (original HC heads are**  
**aluminum).**

**To Set Timing**—Remove inspection hole cover on left front face of flywheel housing below starter. Loosen thumbnut and set Fuel Compensator pointer at zero (center graduation) on scale, tighten thumbnut. With #1 piston on compression, turn engine over until correct graduation on flywheel before top dead center mark '#1 UP D. C.' lines up with

pointer in housing. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, adjust Fuel Compensator if required by grade of fuel used.

**Timing (Neon Timing Light)**—White mark provided on flywheel to indicate timing range for standard head ( $4\frac{1}{2}$ -6° BTDC.—leading edge of mark is 6° BTDC.). Mark flywheel similarly for optional high compression head when used.  
NOTE—Flywheel marked '#1 UP D.C.' at top dead center position with five 2° graduations before and after this point.

**Fuel Compensator**—Should be adjusted to eliminate excessive 'ping' caused by use of low-octane fuels. To adjust, loosen thumbnut, rotate distributor and pointer counter-clockwise toward 'low' end of scale to retard spark, clockwise toward 'high' end of scale to advance spark. Tighten thumbnut after adjusting.

## CARBURETOR

Holley (Chandler-Groves) Model AOC-2 (Early '38), Model AOC-25 (for Late 1938 Cars),  $1\frac{1}{4}$ " single barrel, downdraft type with Automatic Choke.  
**Code Mark Identification**—AOC-2 marked 1-AD or 1-BA on spacer above idle needle. AOC-25 marked 119-1, 119-3, or 119-4 on die cast metal directly over idle adjusting needle.

**IMPORTANT**—Car manufacturer recommends that code 119-1 ('38) carburetors be re-worked. Refer to Carburetor Index for carburetor article covering these carburetors.

**Idle Adjustment**—With engine warmed up so that Automatic Choke and Fast Idle inoperative, set throttle stopscrew so that engine idles at 8 MPH., turn idle adjusting screw out until engine begins to roll, then turn screw in slowly until engine fires smoothly. Readjust stopscrew for correct idling speed.

**Accelerating Pump Setting**—Three holes in throttle lever for pump link engagement as follows:

Inner (Min. Stroke)—High-test gas, hot weather.

Center Hole—Normal temperatures and fuel.

Outer (Max. Stroke)—Low-test gas, cold weather.

**Fast Idle**—Part of carburetor assembly.

For complete data, refer to Carburetion Equip. Index.

**Automatic Choke**—Part of carburetor assembly.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1528585 heavy duty oil-bath type.  
NOTE—AC #844751 oil-wetted type air cleaner used on oil filler (crankcase breather).

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric S-W No. 96381 (dash unit), 96466 (tank unit).

For complete data, refer to Carburetion Equip. Index.

**Fuel Pump**—AC Type AJ #1523629 combination fuel-and-vacuum pump standard.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Willard, Type WT-1-95. 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes. Five second voltage—4.17 volts.

**Grounded Terminal**—Positive (+) terminal grounded to frame 'X' member. Engine Ground—Strap connector from left rear transmission cover

bolt to frame 'X' member.

**Dimensions**—Width  $7\frac{1}{16}$ ". Length  $8\frac{15}{16}$ ". Height  $8\frac{13}{16}$ ".

**Location**—On left side under front seat.

## STARTER

Delco-Remy Model 739-F. Armature No. 1866105.

**Drive**—Outboard Barrel type Bendix No. A-1718.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—125 RPM., 150 amperes, 5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	525

**Removal**—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch**: Delco-Remy 1539 Magnetic switch on starter, and controlled by pushbutton on dash. For complete data, refer to Electrical Equipment Index.

**Delco-Remy 1539 Starter Switch Specifications**

Contacts close with current draw of 3.1-3.7 amperes at 4.0 volts. Remain closed with current of .54-.65 amperes at .7 volt.

## GENERATOR

Delco-Remy Model 1100005. Armature No. 1866789. Fixed third brush control type with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—Adjusted by changing setting of regulator. See Regulator data below.

**Maximum Charging Rate**—As given in table below. To check charging rate, connect test ammeter in line at 'BAT' terminal on regulator, connect voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE**—Do not operate generator on open-circuit.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—22-26 ounces (main brushes), 16-20 ounces (third brush).

**Field Current**—2.3-2.6 amperes at 6.0 volts.

**Motoring Current**—4.5 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Loosen clamp bolt and pivot bolts, pull generator out from engine (use spring scale hooked to clamp bolt in top lug of generator) until reading of 25 lbs. secured.

## REGULATOR

Delco-Remy Model 5827. Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in single case on left side of engine dash.

**REPLACEMENT NOTE**—Delco-Remy Model 5860 Voltage Regulator (no IGN terminal) used for service.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.9-7.6 volts, 850 Generator RPM.

**Cuts Out**—3 amperes max. at 6.3 volts.

**Contact Gap**—.020". Air Gap—.020" (closed).

### Voltage Regulator

**Setting**—7.5-7.9 volts at 70°F., 7.4-7.6 volts at 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit.

**Contact Gap**—.020".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.063" between the armature and center of core with armature down and fibre bumper touching stop; .010" between the fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING**—Headlamps—Hall 'Flex-beam', pre-focused type with special non-interchangeable lenses (marked Right and Left). Asymmetrical Passing Beam (lower beam left hand headlamp, upper beam right hand headlamp) controlled by foot selector switch.

**Headlamp Adjustment**—With car fully loaded, tires properly inflated, on level floor 25' from screen, and upper beams lighted (switch in 'Country Driving' position), aim left hand headlamp so that hot spot is centered on vertical lamp-center-line with top cut-off at lamp center height horizontal line. Aim right hand headlamp for same height but with left edge of hot spot at vertical lamp-center-line (entire hot spot to right of this line). Right hand headlamp may be turned slightly more toward right if this setting provides a passing beam which is too blinding. Headlamps adjusted by loosening nut on mounting bracket under lamp.

**Beam Indicator**—Located on face of speedometer dial. Lighted whenever upper beam (Country Driving) in use.

### Switches

**Lighting**—Delco-Remy No. 1994504.

**Foot Selector**—Delco-Remy No. 1997001.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking, Fender, Instrument	$1\frac{1}{2}$	55
Beam & Heater Indicator	1	51
Stop & Tail	21-3	1158
License	3	63
Dome	6	81
Fog Light	32	1321

**NOTE**—Cars with trunk rack use separate stop and tail light bulbs as follows: Stop Light 15 cp. Mazda #87, Tail Light 3 cp. Mazda #63.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Mounted on lighting switch (part of switch assembly). Contacts remain closed with 25 ampere current but open within one minute with 38 ampere current (70°F). Non-adjustable (adjustment is sealed).

**FUSES:**—Fuse Block No. 1868292. Mounted on lighting switch. Two 20 ampere fuses. Protects following circuits:

Right Hand Fuse—Stop light & Body lights.  
Left Hand Fuse—Accessories (Cigar Lighter, Heater, Defroster, Fog Light, etc.).

**Instrument & Tail Lamp:**—20 ampere fuse in connector in instrument switch lead near lighting switch.

**Radio:**—15 ampere in feed wire.

**Clock:**—2 ampere (Borg), 1 ampere (Western).

**HORNS:**—Sparton Model 1-E-30. Vibrator type, Air tone, twin horns operated by horn relay.

**Air Gap:**—.032-.035" (low note—long air column), .026-.030" (high note—short air column).

**Horn Current:**—22-25 amperes (total).

**NOTE:**—Klaxon horns also used.

**Horn Relay:**—R.B.M. Model 790.

**Closing Voltage:**—2.75-4.0 volts.

**Contact Gap:**—.015-.025". **Air Gap:** .010-.020" (closed).

**NOTE:**—Late type relays have cover welded in place and are not adjustable.

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

**Bore:**—3½". **Stroke:**—4¼".

**Displacement:**—245.3 cu. ins. **Rated HP:**—29.4.

**Developed Horsepower:**—100 HP. (Std. 6.52-1 head),

103-105 HP. (Optl. 7.05-1 head) at 3600 R.P.M.

**Compression Ratio and Pressure:**—As follows:

6.52-1 Std. cast-iron hd. 110 lbs. at 125 R.P.M.

7.05-1 Optl. aluminum hd. 120 lbs. at 125 R.P.M.

**Vacuum Reading:**—18-20" idling at 6 M.P.H.

*See Packard Shop Notes for Cylinder Head data.*

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground.

**Weight:**—19.5 ozs. (stripped), 26 ozs. (with rings and pin). **Length:**—3⅞".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Skirt .0015". See Fitting New Pistons.

**Original Bore & Piston Size, Replacement Pistons:**—

*See Packard Shop Notes for complete data.*

**Fitting New Pistons:**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:**—Two compression (Perfect Circle #70), one oil control (#X-90-85) per piston, above pin. Lower ring groove drilled with twelve 5/32" oil drain holes. Rings furnished standard and .005", .010", .020", .030" and .040" oversize.

Ring	Width	End Gap	Side Clearance
Compr.	1235-1240"	.007-.015"	.0025-.003"
Oil Cont.	1860-1865"	.007-.015"	.0015"

**NOTE:**—Install #1 and #3 ring with gap away from valves, #2 compression ring gap toward valves.

**PISTON PIN:**—Diameter—7/8". Length—3 1/64".

Pin floats in piston and rod, held by locking rings. Furnished std. and .003", .006" oversize. See Connecting Rod Upper Bearing below.

**Pin Fit in Piston:**—Finger push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing:**—Finger push fit at 70°F. Finish ream pin hole to .87485-.87515".

**CONNECTING ROD:**—Weight 31.6 oz. Length 7 11/16". Upper Bearing (Piston Pin Bushing)—Split type.

*See Packard Shop Notes for bushing installation.*

**Crankpin Journal Diameter:**—2 3/32".

**Lower Bearing:**—Interchangeable steel-backed, bab-bitt-lined type. Bearings furnished std. and .001", .002", .003", .015" undersize (marked with size).

**Clearance:**—.0005-.0015". **Sideplay:**—.004-.010".

**Bearing Adjustment:**—None. Replace bearings.

**Installing Rods:**—Oil squirt hole to camshaft.

**CRANKSHAFT:**—4 bearing, integral counterweights with rubber friction disc vibration damper mounted on forward end.

**Journal Diameters:**—2¾".

**Bearing Type:**—Interchangeable babbit-lined steel shell type. Bearings furnished standard and .001" and .002" undersize.

**Clearance:**—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Upper halves may be rotated in place.

**End Thrust:**—Taken by #1 bearing.

**Endplay:**—.003-.008".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

**IMPORTANT NOTE:**—2 types of camshafts used: 1938—Cast Alloy Iron on engines with letter "A" following engine number. Use only cast alloy oil pump drive gear with this camshaft.

1938—Forged Steel on engines with letter "B" following engine number. Use only chilled iron valve lifters (DO NOT USE STEEL LIFTERS). Oil pump drive gear must be of same material as shaft.

**Bearing Type:**—Steel-backed, babbit-lined.

**Clearance:**—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. **Endplay:**—.002-.004".

**Timing Chain:**—Morse 1866 RX. Width 1¼". Pitch .375". Length 21¾" or 58 links.

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across shaft centers with #1 piston on top dead center.

*See Packard Shop Notes for Fender & Radiator Assembly removal for work on front of engine.*

**VALVES:**—Head Diameter Stem Diameter Length

Intake .....1.575"......34025".....5½"

Exhaust..... 1 13/32"......34025".....5½"

Seat Angle Lift Stem Clearance

Intake .....30°......3175"......002"

Exhaust .....45°......318"......004"

**Valve Guides:**—*See Packard Shop Notes for guide change on first cars to correct valve sticking.*

**Valve Springs:**—Intake and exhaust springs interchangeable. 1937 type springs used on first cars (1938 type only for replacement).

Spring Pressure Spring Length

Valve Closed .....47-52 lbs......1½"

Valve Open .....114-124 lbs......1 5/16"

**NOTE:**—Serrated washer on top of each spring.

**Valve Lifters:**—New mushroom type. Remove from below with camshaft out. Ream lifter holes through stem guide. Lifters furnished standard and .001", .002", .005" oversize.

**NOTE:**—Chilled-iron or Steel valve lifters furnished for service. *Refer to Packard Shop Notes for Valve Lifter Note for proper type to use with 1938 Camshafts.*

## VALVE TIMING

**Tappet Clearance:**—.007" Int., .010" Exh. engine warm.

**NOTE:**—Remove plate in right front fender for valve adjustment.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**To Check Timing:**—Set tappet clearance #1 exhaust valve at .015". This valve should close with piston 5° or .0103" past top dead center when 5° point on flywheel (midpoint between second and third graduations after top dead center mark '#1 UP DC.') lines up with pointer on housing in inspection hole in left front face of flywheel housing below starter. Reset tappet clearance at .010" hot.

## LUBRICATION

**LUBRICATION:**—Pressure system with gear type oil pump mounted on right side of engine.

*See Packard Shop Notes for Oil Pump Installation and Oil Pump Drive Gear Type for use with 1938 Camshafts.*

**Normal Oil Pressure:**—35 lbs. at 30 M.P.H. (warm oil)

**Oil Pressure Relief Valve:**—Mounted on pump cover. Not adjustable. Replace spring if pressure less than 5 to 8 lbs at 2".

**Crankcase Capacity:**—6 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Removal:**—Remove fan belt, disconnect pump hose, remove pump mounting capscrews, lift off pump assembly.

**Thermostat:**—Sylphon inside top radiator tank (part of shutter thermostat assembly). Assembly changed during 1938, first type 165° used on early '38 cars, 150° type on late '38 cars.

**HEATER NOTE:**—Cylinder head thermostat available for cars with water heater. Use only on cars with 150° shutter assembly. Remove thermostat in summer.

**Setting (with Cover Mark '165'):**—Starts to open 150°. Fully open 160-165°. Sylphon marked 13680.

**Setting (with Cover Mark '150'):**—Starts to open 135°. Fully open 150°. Sylphon marked 14480.

**Setting (Heater—Cyl. head outlet type):**—Marked 162° on strap. Starts to open 160-165°. Fully open 185°

**Water Capacity:**—15 quarts.

## CLUTCH

**CLUTCH:**—Long Model 9¼ CF-CS. Semi-centrifugal, single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Woven (U. S. Asbestos No. 733), 2 required. I.D. 6". O.D. 9½". Thickness .125".

**Adjustment:**—Adjust nut on inner pedal rod to give 1½" free travel (pedal pad to floor board).

**Removal:**—Remove transmission (see Transmission Removal following). With clutch pedal depressed, insert wedge (ST-879) between each throwout finger and cover (assembly can only be removed when in partially released position). Remove clutch shifter bearing, pedal rod, and cover capscrews (release evenly), then remove assembly from below.

### TRANSMISSION

**TRANSMISSION:**—Own make. Helical gear type with synchronizer for second and high speeds.

*See Transmission Section for complete data.*

**Removal:**—Remove floorboards, speedometer cable, ground strap and accelerator pedal. Disconnect propeller shaft at front universal, block shaft up against floor board. Support rear end of engine with jack, unbolt cross-member from frame, disconnect hand brake cable at equalizer, remove flywheel housing lower cover and clutch retracting spring, take out 4 capscrews in transmission mounting flange, pull transmission back and remove.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics. Model 2C. Needle bearing type. Two used.

*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Own make. Semi-floating, hypoid gear type with Hotchkiss drive. Rear face of differential carrier now vertical (supersedes angular type used

previously).

*See Rear Axle Section for complete data.*

**Ratios:**—4.54-1 Std. 4.36-1, 4.7-1 Optional.

**Backlash:**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove nuts on carrier-to-housing bolts and withdraw carrier assembly from housing.

**Wheel Bearing Adjustment:**—Endplay controlled by shims between flanged end of housing and brake backing plate. Adjust by removing backing plate disconnect brake tube clips on housing. Add shims at one wheel only if endplay .050" or below, at both wheels equally if above. Measure with dial indicator against end of shaft. **Endplay:**—.002-.005".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Model 1966-A, B (front), 1751-L, M (rear). Hydraulic, double acting type.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent 'Safe-T-flex' type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE:**—Data below applies with car on level floor, tires properly inflated and car weighted as follows:

300 lbs. front seat, 375 lbs. (rear—5 pass. bodies), 225 lbs (rear—auxiliary seat coupes).

**Front Suspension Height:**—Distance from floor to top side of frame siderail at spring should be 18¾" plus or minus ¼".

**Kingpin Inclination:**—1°54' crosswise.

**Camber:**—½° plus or minus ½°. Adjustable.

**Caster:**—1½° plus or minus ½°. Shim adjustment.

**Toe In:**—1/32-1/16" measured at hub height. Adjust tie rods equally (rod lengths must be equal after adjustment).

### STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service—Bendix, hydraulic, duo-servo, single anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum:**—Centrifuge. Diameter—11".

**Lining:**—Marshall #1915 (primary, SR-600 (secondary) or Marshall #2201 (all). Width 1¾". Thickness 3/16". Length per shoe 12".

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—On plate on front of dash (use engine number)

**ENGINE NUMBER:**—First number A-300001. Stamped on left side of crankcase near distributor.

**TUNE-UP**

**COMPRESSION:**—Ratio—6.6-1 Std., 7.05-1 Optl.  
Pressure—110 lbs. at cranking speed of 125 R.P.M. for Std. 6.6-1 head.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .0255-.0305".  
Use AC 103S or early Y-4 where slightly colder plug required (new Y-4 has longer center electrode).  
**NOTE:**—When installing plugs, use only 50 inch pound pressure (10 lb. pull on 5" wrench.)

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Limit .017" maximum.  
Cam Angle—27° Closed with .017" Breaker Gap.  
Automatic Advance—8¾° max. at 2000 RPM (distr.).  
Vacuum Advance—7½° (IGT-4007), 6° (IGT-4007A) with 17" of vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6-8° BTDC. (std. aluminum head), 2½-4° BTDC. (Optl. HC aluminum hd.), 8-9½° BTDC. (for replacement iron hds.). Flywheel mark (correct degree mark ahead of #1UP.DC) aligned with inspection hole pointer on left side below starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 6 MPH.

**Float Level:**—Fuel level 15/32" below edge of bowl.

**Accelerating Pump:**—No seasonal adjustment.

**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Thermostatic coil mounted on forward end of heat valve shaft with counterweight at rear end. No adjustment required. See that valve operates freely when turned by hand. Do not oil heat control.

**VALVES:** See Valve Timing.

Tappet Clearance—.007" Intake, .010" Exh. (hot).

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-B, Type 7646. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184 (Lock cylinder). Key Series—P1251-P1500. Groove—#2.

**COIL:** Auto-Lite Model CE-4628. Service Coil (less switch & cable) CE-3224-ES. On engine near distributor.

**Ignition Current:**—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671J.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGT-4007 or IGT-4007-A. Single breaker, 8 lobe cam, full automatic advance with Vacuum Spark Control and Fuel Compensator. See Electrical Equipment Section for special Distributor Servicing data.

For complete data, refer to Electrical Equipment Index.

**Breaker Gap:**—.015". Limit .017" Maximum.

**Cam Angle or Dwell:**—27° closed, 18° open (.017" gap).

**Breaker Arm Spring Tension:**—18-20 ozs.

**Rotation:**—Counter-clockwise viewed from the top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
.8	400	1.6	800
2	550	4	1100
4	800	8	1600
6	1300	12	2600
8.75	2000	17.5	4000

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor cup and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle valve) except when engine acceler-

ated or operated with wide open throttle when spark retarded by return spring in unit.

**Vacuum Advance—IGT-4007**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0	6"
2	4	8.8"
4	8	11.8"
6	12	14.8"
7.5	15	17"

**Vacuum Advance—IGT-4007A**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG.)
Start	0	10"
2	4	12.25"
4	8	14.6"
6	12	17"

**Fuel Compensator:**—Manual adjustment at distributor providing 10° maximum advance or retard from center '0' point on scale. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left hand side of crankcase. To remove, disconnect vacuum line connection, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard settings as follows (see Fuel Compensator setting also).

	Flywheel Degrees	Piston Position
Std. al. head	6-8° BTDC	.0149-.0262" BTDC.
Optl. HC al. hd.	2½-4° BTDC	.0026-.0066" BTDC.
All iron hds.	8-9½° BTDC	.0262-.0371" BTDC.

**NOTE:**—Flywheel is marked #1 UP.DC. (top dead center for #1 piston) with five 2° graduations before and after this point.

**To Set Timing:**—Loosen thumbnut on Fuel Compensator pointer, center pointer on scale, tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position when correct graduation on scale on flywheel (visible through inspection hole in left front face of flywheel housing below starter) lines up with pointer on housing. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, check Fuel Compensator setting.

**Timing (Neon Timing Light):**—White mark provided on flywheel to indicate timing range for standard head (6½-8°—leading edge of mark is 8° BTDC). Mark flywheel similarly for optional high compression heads. Idle engine and adjust distributor as directed above.

**Fuel Compensator:**—Should be adjusted to eliminate excessive 'ping' caused by use of low-octane fuels. To adjust, loosen thumbnut, rotate distributor and pointer counter-clockwise toward 'low' end of scale to retard spark, clockwise toward 'high' end of scale to advance spark. Tighten thumbnut after adjusting.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-14, 1" Duplex or Dual Downdraft type with integral Automatic Choke and Fast Idle.

**Code Mark Identification:**—EE-14 marked 10-30, 10-30&, 10-30A or 10-30B. Early codes (before 10-30B) can be re-worked to incorporate latest changes on 10-30B.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm and idling at hot or slow idling speed and Automatic Choke and Fast Idle inoperative, set throttle stop screw so that idling speed is 6 M.P.H., turn one idling adjusting screw in until engine begins to miss or lag, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat adjustment with other idle adjusting screw. Readjust throttle stop screw for correct idling speed. **Accelerating Pump Setting:**—Not adjustable.

**Fast Idle:**—Integral with carburetor (throttle by-pass type). No adjustment required.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Integral with carburetor. See article in Carburetion Equipment Section.

*For complete data, refer to Carburetion Equip. Index.*

**NOTE:**—If mixture is too rich, or too lean, during warming up period, automatic choke setting can be varied not more than 5 graduations in either direction from standard setting of 11 Notches Rich. See Carburetion Equipment Section article for directions.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528585 heavy duty oil-bath type **NOTE:**—AC #844751 oil-wetted type air cleaner is used on crankcase vent (in oil filler cap).

**Fuel Pump:**—AC Type AJ #1523629 Inverted type (vacuum unit at top) combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Stewart-Warner Electric type.

S-W No. 96381 (dash unit), 96466 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Prest-O-Lite Hi-Level, Type HP2-17. 6 volt, 17 plate, 114 ampere hour cap. (20 hour rate).

**NOTE:**—Specific gravity reading for fully charged Hi-Level battery is 1.250.

**Starting Capacity:**—133 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.5 minutes.

**Grounded Terminal:**—Positive (+) terminal grounded to left rear leg of frame 'X' member. **Engine Ground:**—Left rear transmission cover bolt grounded to left front leg of frame 'X' member by strap.

**Dimensions:**—Width 7". Length 10 5/16". H'gt 8¾".

**Location:**—In cradle under left front seat.

## STARTER

**Auto-Lite Model MAX-4006. Armature MAW-2006.**

**Drive:**—Outboard Barrel Type Bendix No. A-1729.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—125 R.P.M., 175 amperes, 5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—Model SS-4001. Magnetic type. Mounted on starter and controlled by pushbutton on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

### Switch Specifications

Closes with terminal voltage of 4 volts or less. Remains closed until voltage drops to .75-2.0 volts. Current draw, 3 amperes at 6.0 volts.

## GENERATOR

**Auto-Lite Model GCJ-4807A-2. Armature GCJ-2006.** Third brush control type with external vibrating voltage regulation. Ventilated by fan.

**Maximum Charging Rate:**—30.5 amperes (cold), 25.5 amperes (hot), 8.0 volts, 3200 R.P.M. To check charging rate, disconnect regulator 'F' lead, ground generator 'F' terminal, connect test ammeter in charging line at regulator 'B' terminal. Operate generator charging battery.

**Charging Rate Adjustment:**—Third brush set for maximum output (1 commutator bar min., 1 commutator bar plus 1 mica strip max. between third brush and insulated or nearest main brush) and this setting must not be exceeded. Actual charging rate controlled by voltage regulator setting. See Regulator data below.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	800	0	6.4	840
4	6.6	900	4	6.65	960
8	6.85	1025	8	6.9	1100
12	7.05	1160	12	7.15	1270
16	7.25	1330	16	7.4	1520
20	7.5	1560	20	7.65	1860
24	7.7	1900	24	7.9	2460
28	7.9	2400	26	8.0	3600
30	8.0	3200			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. Max. (new brushes).

**Field Current:**—1.9-2.1 amperes at 6.0 volts.

**Motoring Current:**—4.0-4.4 amperes at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator away from engine until reading on spring scale attached to clamp bolt lug and parallel to clamp link is 25 lbs. or until belt deflection between generator and water pump pulleys is ½" with thumb pressure.

## REGULATOR

**Auto-Lite Model VRD-4005A (first 5650 1938), Model VRD-4001B (later cars).** Consists of Cutout Relay and vibrating type Voltage Regulator in case.

**NOTE:**—VRD-4005A serviced by Model VRD-4001B. *For complete data, refer to Electrical Equipment Index.*

**NOTE:**—Regulator cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

### Cutout Relay

**Cuts In:**—6.4-7.0 volts Cold.

**Cuts Out:**—5 ampere Min., 3.0 amperes Max. (Cold).

**Contact Gap:**—.015" Minimum.

**Air Gap:**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

**Setting:**—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no.

**To Check (without breaking seal):**—Connect ammeter in charging line at regulator 'B' terminal, connect voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 M.P.H. charging battery until voltage is steady. Voltmeter reading should be within limits of 7.21-7.83 volts. See Regulator Setting above.

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap:**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap:**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING:**—Headlamps—Hall 'Flex-beam', pre-focused type with special non-interchangeable lenses (marked Right and Left). Asymmetrical Passing Beam (lower beam left hand headlamp, upper beam right hand headlamp) controlled by foot selector switch. **Headlamp Adjustment:**—With car fully loaded, tires

C NTINUED ON NEXT PAGE

**CONTINUED FROM PRECEDING PAGE**

properly inflated, on level floor 25' from screen, and upper beams lighted (switch in 'Country Driving' position), aim left hand headlamp so that hot spot is centered on vertical lamp-center-line with top cut-off at lamp center height horizontal line. Aim right hand headlamp for same height but with left edge of hot spot at vertical lamp-center-line (entire hot spot to right of this line). Right hand headlamp may be turned slightly more toward right if this setting provides a passing beam which is too blinding. Headlamps adjusted by loosening nut on mounting bracket under lamp.

**Beam Indicator**—Located on face of speedometer dial. Lighted whenever upper beam (Country Driving) in use.

**Switches**

**Lighting**—Delco-Remy No. 1994504.  
**Foot Selector**—Delco-Remy No. 1997001.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Parking, Fender, Instrument	1½	55
Beam & Heater Indicators	1	51
Stop & Tail	21-3	1158
License	3	63
Dome	6	81
Fog Light	32	1321

NOTE—Cars with trunk rack use separate stop and tail light bulbs as follows: Stop Light 15 cp. Mazda #87, Tail Light 3 cp. Mazda #63.

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—Mounted on lighting switch (part of switch assembly). Contacts remain closed with 25 ampere current but open within one minute with 38 ampere current (70°F). Non-adjustable (adjustment is sealed).

**FUSES**—Fuse Block No. 1868292. Mounted on lighting switch. Two 20 ampere fuses. Protects following circuits:

Right Hand Fuse—Stop light Body lights.  
 Left Hand Fuse—Accessories (Cigar Lighter, Heater, Defroster, Fog Light, etc.)  
**Instrument & Tail Lamp**—20 ampere fuse in connector in switch lead near lighting switch.  
**Radio**—15 ampere in feed wire.  
**Clock**—2 ampere (Borg), 1 ampere (Western).

**HORNS**—Sparton Model 1-E-30. Vibrator type, Air tone, twin horns operated by horn relay.  
**Air Gap**—.032-.035" (low note—long air column), .026-.030" (high note—short air column).  
**Horn Current**—22-25 amperes (total).

NOTE—Klaxon horns and relay also used.

**Horn Relay**—R.B.M. Model 790.

Closing Voltage—2.75-4.0 volts.

Contact Gap—.015-.025". Air Gap .010-.020" (closed).

NOTE—Late type relays not adjustable (cover welded).

**ENGINE**

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head.

Bore—3¼". Stroke—4¼".

Displacement—282.4 cu. ins. Rated HP.—33.8.

Developed Horsepower—120 HP. (std. 6.6-1 al. hd.),

123-125 HP. (optl. 7.05-1 al. hd.) at 3800 R.P.M.

Compression Ratio and Pressure—As follows:

6.6-1 Std. aluminum head (110 lbs. at 125 R.P.M.).

7.05-1 Optional aluminum head.

Vacuum Reading—18-21" idling at 6 M.P.H.

See Packard Shop Notes for Cylinder Head data.

**PISTONS**—Nelson Bohalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground.

Weight—16⅞ ozs. (stripped), 22¾ ozs. (with rings and pin). Length—3⅞".

Removal—Pistons and rods removed from above.

Clearance—Skirt .0015". See Fitting New Pistons.

**Original Bore & Piston Size, Replacement Pistons**—See Packard Shop Notes for complete data.

**Fitting New Pistons**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons**—Slot toward valves.

**PISTON RINGS**—Two compression (Perfect Circle #70), one oil control (#X-90-85) per piston, above pin. Lower ring groove drilled with twelve 5/32" oil drain holes. Rings furnished standard and .005", .010", .020", .030" and .040" oversize.

Ring	Width	End Gap	Side Clearance
Compr.	.1235-.1240"	.007-.015"	.0025-.003"
Oil Cont.	.1860-.1865"	.007-.015"	.0015"

NOTE—Install #1 and #3 ring with gap away from valves, #2 compression ring gap toward valves.

**PISTON PIN**—Diameter—⅞". Length—2 51/64".

Pin floats in piston and rod, held by locking rings. Furnished standard and .003", .006" oversize.

**Pin Fit in Piston**—Finger push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing**—Finger push fit at 70°F. Finish ream pin hole to .87485-.87515".

**CONNECTING ROD**—Weight 31.6 ozs. Length 7 11/16".

Upper Bearing (Piston Pin Bushing)—Split type.

See Packard Shop Notes for bushing installation.

Crankpin Journal Diameter—2 3/32".

Lower Bearing—Interchangeable steel-backed, babbit-lined type. Bearings furnished std. and .001", .002", .003", .015" undersize (marked with size).

Clearance—.0005-.0015". Sideplay—.004-.010".

Bearing Adjustment—None. Replace bearings.

**Installing Rods**—Oil squirt hole to camshaft.

**CRANKSHAFT**—5 bearing, integral counterweights with rubber friction disc vibration damper mounted on forward end.

Journal Diameters—2¾".

Bearing Type—Interchangeable babbit-lined steel shell type. Bearings furnished standard and .001" and .002" undersize.

Clearance—.001-.003".

Bearing Adjustment—None (no shims). Replace bearings. Upper halves may be rotated in place.

**End Thrust**—Taken by #3 bearing.

Endplay—.003-.008".

**CAMSHAFT**—5 bearing. Non-adjustable chain drive. IMPORTANT NOTE—2 types of camshafts used: 1938—Cast Alloy Iron on engines with letter "A" following engine number. Use only cast alloy oil pump drive gear with this camshaft.

1938—Forged Steel on engines with letter "B" following engine number. Use only chilled iron valve lifters (DO NOT USE STEEL LIFTERS). Oil pump drive gear must be of same material as shaft.

Bearing Type—Steel-backed, babbit-lined.

Clearance—.001-.003".

**End Thrust**—Taken by thrust plate in back of camshaft sprocket. Endplay—.002-.004".

**Timing Chain**—Morse 1866 R.X. Width 1¼". Pitch .375". Length 21¾" or 58 links.

**Camshaft Setting**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across the shaft centers with #1 piston on top dead center.

See Packard Shop Notes for Fender & Radiator Assembly removal for work on front of engine.

**VALVES**—Exhaust valves interchangeable with Six.

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.34025"	.5⅝"
Exhaust	1 13/32"	.34025"	.5⅝"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.3175"	.002"
Exhaust	45°	.318"	.004"

Valve Guides—See Packard Shop Notes for guide change on first cars to correct valve sticking.

Valve Springs—Intake and exhaust springs interchangeable. 1937 type springs used on first cars (1938 type only for replacement).

	Spring Pressure	Spring Length
Valve Closed	47-52 lbs.	1⅝"
Valve Open	114-124 lbs.	1 5/16"

NOTE—Serrated washer on top of each spring.

**Valve Lifters**—New mushroom type. Remove from below with camshaft removed. Ream lifter holes through stem guide. Lifters furnished std. and .001", .002", .005" oversize.

NOTE—Chilled-iron or Steel valve lifters furnished for service. Refer to Packard Shop Notes for Valve Lifter Note for proper type to use with 1938 Camshafts.

**VALVE TIMING**

**Tappet Clearance**—.007" Int., .010" Exh., engine warm. NOTE—Remove plate in right front fender for valve adjustment.

**Valve Timing**—See Camshaft Setting.

Intake Valves—Open 1° BTDC. Close 39° ALDC

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

To Check Timing—Set tappet clearance #1 exhaust valve at .015". This valve should close with piston 5° or .0103" past top dead center when 5° point on flywheel (midway between second and third graduations after dead center mark #1 UP.DC.) lines up with pointer in inspection hole in left front face of housing. Reset tappet clearance at .010" (hot).

**LUBRICATION**

**LUBRICATION**—Pressure system with gear type oil pump mounted on right side of engine.

See Packard Shop Notes for Oil Pump Installation and Oil Pump Drive Gear Type for use with 1938 Camshafts.

Normal Oil Pressure—35 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve**—Mounted on pump cover. Not adjustable. Replace spring if pressure less than 5 to 8 lbs. at 2".

**Crankcase Capacity**—6 quarts (refill).

**COOLING**

**COOLING SYSTEM**—Water Pump. Centrifugal, belt-driven, packless type.

See Water Pump Section for complete data.

Removal—With water drained and fan belt removed, disconnect pump hose, remove pump mounting capscrews, and lift pump assembly off.

**Thermostat**—Sylphon inside top radiator tank (part of shutter thermostat assembly). Assembly changed

during 1938, first type 165° used on early '38 cars, 150° type on late '38 cars.

**HEATER NOTE**—Cylinder head thermostat available for cars with water heater. Use only on cars with 150° shutter assembly. Remove thermostat in summer.

**Setting (with Cover Mark '165')**—Starts to open 150°. Fully open 160-165°. Sylphon marked 13680.

**Setting (with Cover Mark '150')**—Starts to open 135°. Fully open 150°. Sylphon marked 14480.

**Setting (Heater—Cyl. head outlet type)**—Marked 162° on strap. Starts to open 160-165°. Fully open 185°.

**Water Capacity**—16 quarts.

## CLUTCH

**CLUTCH**—Long Model 10 CF-CI. Semi-centrifugal, single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings**—Woven-joined, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .137".

**Adjustment**—Adjust nut on inner pedal rod to give 1½" free travel (pedal to toeboard), secure locknut.

**Removal**—Remove transmission (see Transmission Removal following). With clutch pedal depressed, insert wedge (ST-879) between each throwout finger and cover (assembly can only be removed when in partially released position). Remove clutch shifter bearing, pedal rod and cover capscrews (remove assembly from below).

## TRANSMISSION

**TRANSMISSION**—Own make. Helical gear type with synchronizer for second and high speeds.

*See Transmission Section for complete data.*

**Removal**—Remove floorboards, speedometer cable, ground strap and accelerator pedal. Disconnect propeller shaft at front universal, block shaft up against floor board. Support rear end of engine with

jack, unbolt cross-member from frame, disconnect hand brake cable at equalizer, remove flywheel housing lower cover and clutch retracting spring, take out 4 capscrews in transmission mounting flange, pull transmission back and remove.

## UNIVERSALS

**UNIVERSAL JOINTS**—Detroit. Series 5150. Cross type with roller bearings. Two used.

*See Universals Section for complete data.*

**NOTE**—On 1602, Intermediate self-aligning bearing used on drive shaft.

## REAR AXLE

**REAR AXLE**—Own make. Semi-floating, hypoid gear type with Hotchkiss drive. Rear face of differential carrier now vertical.

*See Rear Axle Section for complete data.*

**Ratios**—4.36-1 (1601), 4.7-1 (1601A, 2), 4.09-1, 4.54-1 optional.

**Backlash**—.003-.005". Screw adjustment.

**Removal**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove nuts on carrier-to-housing bolts and withdraw carrier assembly from housing.

**Wheel Bearing Adjustment**—Endplay controlled by shims between flanged end of housing and brake backing plate. Adjust by removing backing plate and disconnect brake tube clips on housing. Add shims at one wheel only if endplay .050" or below, at both wheels equally if above. Measure with dial indicator against end of shaft. Endplay—.002-.005".

## SHOCK ABSORBERS

**SHOCK ABSORBERS**—Houdaille. Model OBBDI (front), OBBCP (rear). Double acting, hydr. type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**—Independent 'Safe-T-flex' type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE**—Data below applies with car on level floor, tires properly inflated and car weighted as follows: 300 lbs. front seat, 375 lbs. (rear—5 pass. bodies), 225 lbs. (rear—Coupe), 675 lbs. (rear—7 Pass.).

**Front Suspension Height**—Distance from floor to top side of frame siderail at spring should be 19¼" plus or minus ¼".

**Kingpin Inclination**—1°54' crosswise.

**Camber**—½° plus or minus ½°. Adjustable.

**Caster**—1½° plus or minus ½°. Shim adjustment.

**Toe In**—1/32-1/16" measured at hub height. Adjust tie rods equally (rod lengths must be equal after adjustment).

## STEERING GEAR

**Steering Gear**: Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES**—Service—Bendix hydraulic, duo-servo, single anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum**—Centrifuse. Diameter—12".

**Lining**—Primary (Raybestos No. 451). Secondary (U. S. Asbestos No. 589-F). Width 1¾" (1601), 2¼" (1601A, 2). Thickness 3/16". Length 13" per shoe.

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment**—See Service Brakes above.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on plate on front of dash.  
**ENGINE NUMBER:**—First number A-500001. Stamped on upper center left side of crankcase.

## TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Head Pressure at 125 R.P.M.  
 Std. 6.5-1 (1603, 4, 5) ..... 110 lbs.  
 Optl. 7.05-1 (All) ..... 119 lbs.

**VACUUM READING:**—Steady 18-19" idling at 7 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .0255-.0305".

Use AC 103S or early Y-4 where slightly colder plug required (new Y-4 has longer center electrode).

**NOTE:**—When installing plugs, use only 50 inch pound pressure (10 lb. pull on 5" wrench).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Limit .017" maximum.

Cam Angle—27° Closed with .017" Breaker Gap.

Automatic Advance—9° at 1800 R.P.M. Distr.°&R.P.M.

Vacuum Advance—5½° (distr.) with 16" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6-8° BTDC. (Std. aluminum head). Vibration dampener mark (correct degree mark ahead of #1 U.P.C.) aligned with pointer at front of engine.

See Ignition Timing for Settings on engines with High Compression or Replacement Heads.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between "miss" and "roll" points. Idling speed should be 350 R.P.M. or 7 MPH.

Float Level—Fuel level ⅝" below top edge of bowl.

Accelerating Pump—Inner Hole (Summer temperatures), Outer Hole (Winter temperatures).

Fuel Pump Pressure: 4½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

Tappet Clearance—.008" Intake, .008" Exhaust, (hot).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Mitchellock Model 24B. No. 7650.

Ignition Lock—Briggs & Stratton. B & S No. 50184.

Key Series—P1251 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4026. Service coil (less switch & cable) CE-3186KS. On cylinder head.

Ignition Current—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671G.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4006. Single breaker, 8 lobe cam, full automatic advance type with Vacuum Spark Control and Fuel Compensator.

Refer to Electrical Equipment Index for Auto-Lite Distributor article covering special servicing data on these units.

Breaker Plate Identification—Maximum vacuum advance limited by slot, marked #5½ on plate.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—27° closed, 18° open (.017" gap).

Breaker Arm Spring Tension—18-20 ounces.

Rotation—Clockwise viewed from the top.

Automatic Advance			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3.....	800	6.....	1600
6.....	1300	12.....	2600
9.....	1800	18.....	3600

**Vacuum Spark Control:**—Integral type. Mounted on distributor cup and linked to breaker plate. Provides additional advance at all speeds above idling except when engine accelerated or operated with wide open throttle (return spring retards spark).

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start.....	0°	7"	
2°.....	4°	10¼"	
4°.....	8°	13½"	
5½°.....	11°	16"	

**Fuel Compensator:**—Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing (below) for setting.

**Distributor Removal:** Mounted on cylinder head. To remove, disconnect vacuum line connection, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting (for 76 Octane fuel) as follows. See Fuel Compensator Setting.

Cyl. Head Flywheel Degrees Piston Position

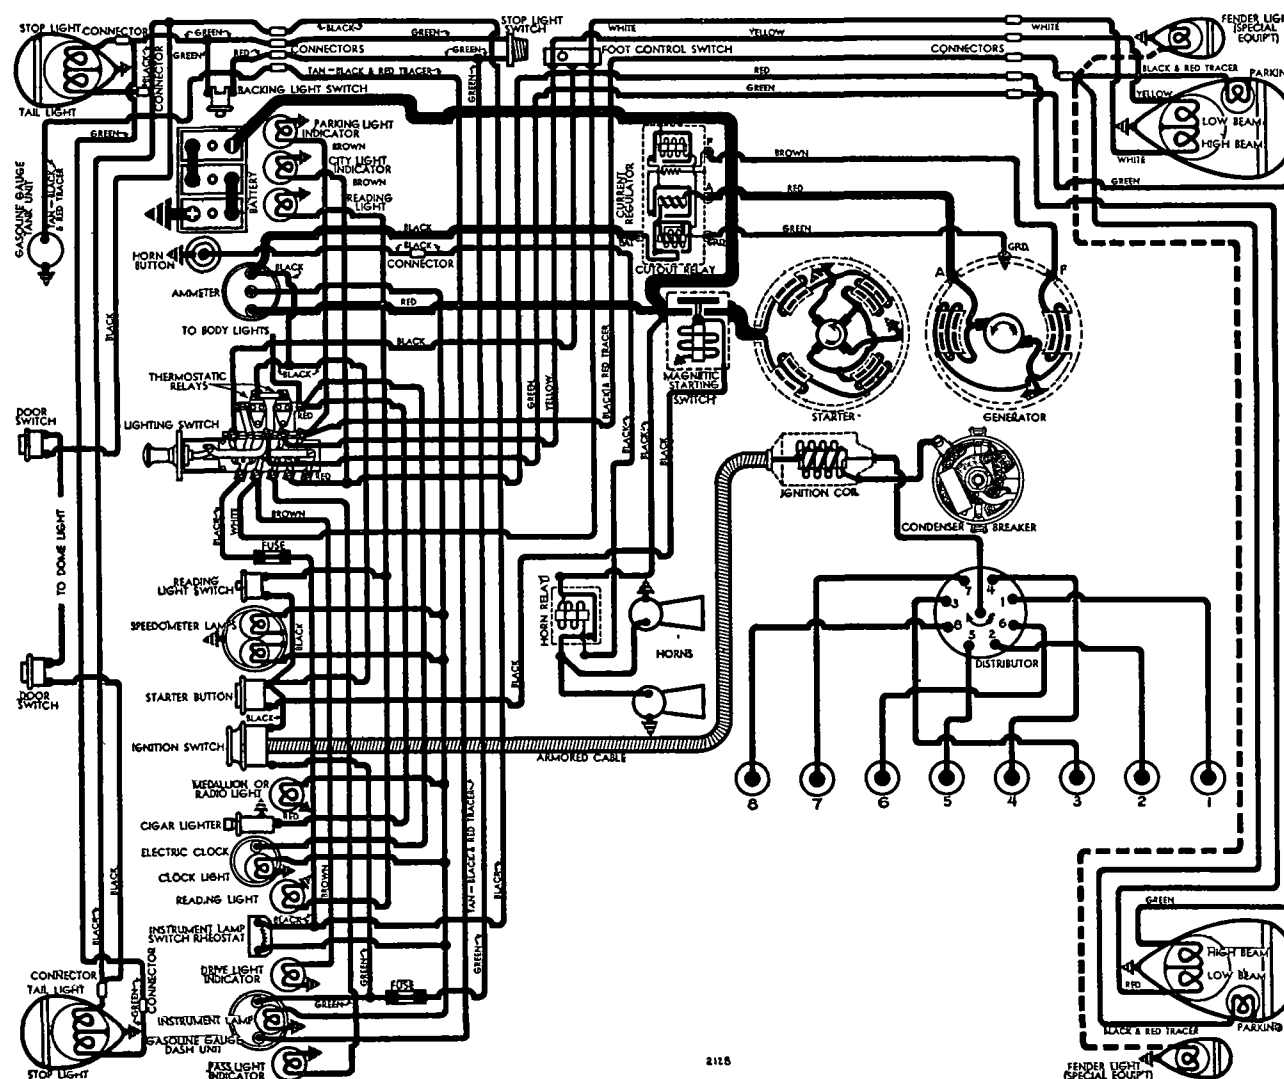

Std. aluminum ..... 6-8° BTDC..... .0168-.0299° BTDC.

Optl. HC alum. .... 4-5½° BTDC..... .0075-.0141° BTDC.

\*Std. iron ..... 8½-10° BTDC..... .0338-.0466° BTDC.

\*Optl. HC iron..... 6½-8° BTDC..... .0199-.0299° BTDC.

\*—These are replacement heads. Use settings for 1939 models if IGT-4006A distributor used.

See Electrical Equipment Section f r Regulator internal wiring when two resistors used.

**NOTE**—Vibration dampener marked #1 UP D.C. at #1 TDC point with 15-1° graduations each side.

**To Set Timing**—Loosen thumbnut, set Fuel Compensator at 'O'. With #1 piston on compression, turn engine over until it reaches firing position (see table above), stop when correct line on vibration damper at front of engine lines up with pointer. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor is opposite #1 segment in distributor cap.

**NOTE**—If neon timing light used, idle engine below 500 R.P.M.

**Fuel Compensator Setting**—Provides manual adjustment at distributor for octane rating of fuel used. After ignition set as above, road test car to give a slight 'ping' pulling heavy load. Adjusted by loosening thumbnut and advancing or retarding pointer on scale. Adjustment permits 10° advance or retard from center 'O' position.

### CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model EE-23. 1½" dual downdraft type with integral automatic choke and fast idle. Marked 10-28.  
*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm, choke valve wide open, engine idling at hot or slow idling speed, set throttle stopscrew so that engine idles at 350 R.P.M. or 7 M.P.H. Turn inner idling adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with outer idling adjusting screw. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Adjusted by changing position of pump link rod in throttle valve lever. Inner Hole (Min. stroke)—Summer temperatures. Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle & Automatic Choke**—Integral type.

*For complete data, refer to Carburetion Equip. Index.*

### CARB. EQUIPMENT

**Air Cleaner**: AC #1528584 oil bath type.

**NOTE**—#1528066 oil vent cleaner (in oil filler cap).

**Fuel Pump**—AC. Type F #1523196. Combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**: Auto-Lite (Motometer design) Electric NG-8673-D (dash unit), 8647-T (tank).

*For complete data, refer to Carburetion Equip. Index.*

### BATTERY

**BATTERY**—Prest-O-Lite, Hi-Level, Type HR4-21. 6 volt, 21 plate, 150 AH. capacity (20 hr. rate).

**Starting Capacity**—175 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.3 minutes.

**Grounded Terminal**—Positive (+) terminal.

Grounded to left rear leg of frame 'X' member. Motor ground on rear motor support.

**Dimensions**—Length 13", Width 7". Height 9½".

**Location**—Under front seat on left side.

### STARTER

**Auto-Lite Model MAX-4014**. Armature MAW-2090.

**Drive**—Outboard Barrel Type Bendix Model A-1729.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM., 160 amperes, 5.2 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300 Min.	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Starter sleeve mounted in left front face of flywheel housing. To remove, take out pilot mounting screw in flywheel housing.

**Starting Switch**: Auto-Lite SS-4001. Magnetic type, on starter controlled by switch on instrument panel.  
*For complete data, refer to Electrical Equipment Index.*

### Auto-Lite SS-4001 Specifications

Closes with terminal voltage of 4 volts or less and will remain closed until voltage drops to .75-2.0 volts. Current draw 3 amperes at 6.0 volts.

### GENERATOR

**Auto-Lite Model GCO-4803A**. Armature GCO-2006F. Two brush (shunt) type with external current and voltage regulat'n. Ventilated by fan on drive pulley. **Maximum Charging Rate**—28 amperes (cold), 8.0 volt, 1850 R.P.M., and above, with load or discharged battery (Current Regulator Setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—No adjustment on generator. See Regulator Section below for Voltage and Current Regulator settings.

Cold Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	825	0	6.4	900
4	6.6	940	4	6.6	1025
8	6.85	1050	8	6.85	1160
12	7.1	1175	12	7.1	1310
16	7.3	1300	16	7.3	1475
20	7.55	1450	20	7.55	1660
24	7.8	1610	24	7.8	1880
28	8.0	1850	28	8.0	2200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.47-1.63 amperes at 6.0 volts.

**Motoring Current**—3.94-4.36 amperes at 6.0 volts.

**Removal**—Generator pivot mounted at left front of engine. To remove, take out clamp and pivot bolts.

**Belt Adjustment**—With mounting bolts loose, swing generator away from engine until reading on scale attached to clamp bolt is 40 lbs., or belt deflection (thumb pressure) midway between fan and generator pulleys is ½-¾".

### REGULATOR

**Auto-Lite Model VRB-4008-C**. Voltage-Current Type. Consists of Cutout Relay, vibrating Voltage Regulator and vibrating Current Regulator in case on dash.

**NOTE**—Regulator cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.5-7.8 volts at 70°F (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F (After 8R-000001). See Electrical Equipment Section for complete settings and changes.

**To Check**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads). Connect voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed until voltage is constant. Voltage should then be within limits of 7.4-7.8 volts (units before 8R-000001), 7.21-7.83 volts (after #8R-000001). See Setting above.

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

### Current Regulator

**Setting**—27-29 amperes (marked '28' on cover).

**To Check**—Connect ammeter and voltmeter as directed for Voltage Regulator test. Operate generator at 30 M.P.H. car speed, add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator will charge at peak rate and bring Current Regulator into action. Charging current should not exceed 28 amperes. If more than slight excess is noted, Regulator is defective.

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for complete instructions.

**Contact Gap & Air Gap**—Same as for Voltage Regulator.

### LIGHTING

**LIGHTING**—Headlamps—Hall, Flex beam, pre-focused type with special non-interchangeable lenses marked 'Left' and 'Right.' 'Passing' beam (upper beam right hand headlamp, lower beam left hand headlamp). Foot control switch gives 'Country Driving' beam with lighting switch in second (City) position, and 'Passing' beam with lighting switch in third (Country Driving) position.

**Headlamp Adjustment**—With car fully loaded, tires properly inflated, on level floor 25' from screen, and upper beams lighted (switch in 'Country Driving' position), aim left headlamp so that hot spot is centered on vertical lamp-center-line with top cut-off at lamp center height horizontal line. Aim right headlamp for same height but with left edge of hot spot at vertical lamp-center-line (entire hot spot to right of this line). Right headlamp may be turned slightly more toward right if this setting provides a passing beam which is too blinding. Adjust by loosening nut on mounting bracket under lamp.

**Headlamp Beam Indicator**—Separate beam indicator for each beam position (1—Park, 2—City, 3—Drive, 4—Pass), located on instrument panel.

### Switches

**Lighting**—Delco-Remy Model 1994505.

**Foot Selector**—Delco-Remy Model 1997001.

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDIN PAGE

Bulb Specifications		
Position	Candlepower	Mazda No.
Headlamp—Right	32-32	2330
Headlamp—Left	32-21	1104
Tail	3	63
Stop	15	87
Parking, Fender, Reading	1½	55
Instrument, Clock, Radio	1½	55
Indicators, Defros., Heat	1	51
Dome, Rear Courtesy	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:** Delco-Remy No. 1868301. Mounted on lighting switch (front—protects dome light, cigar lighter and body wiring; rear—protects headlamp circuit).

## Specifications

Contacts remain closed with 25 ampere current but open within 1 minute with 38 ampere current (70°F). Non-adjustable.

**FUSES:**—Instrument and Tail Lamp—20 ampere capacity in connector near light switch.  
Stop Light—20 ampere capacity in connector near gasoline gauge dash unit.  
Radio—15 ampere in feed wire.  
Clock—1 ampere (Western), 2 ampere (Borg).  
NOTE—New long type SFE fuses used on 1603, 4, 5.

**HORNS:**—Sparton Model 1-E-30. Vibrator type, Air tone, twin horns operated by horn relay.  
Air Gap—.032-.035" (low note—long air column), .026-.030" (high note—short air column).  
Horn Current—22-25 amperes (total).  
NOTE—Klaxon horns and relay also used.

Horn Relay:—R.B.M. Model 10072 or 790.

Closing Voltage—2.75-4.0 volts.

Contact Gap—.015-.025". Air Gap .010-.020" (closed).  
NOTE—Late type relay not adjustable (cover welded).

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

Bore—3 3/16". Stroke—5".

Displacement—320 cubic inches.

Rated Horsepower—32.5 (A.M.A.)

Developed Horsepower—130 HP. (Std. 6.5-1 hd.),

133-135 HP. (optl. 7.05-1 hd.) at 3200 RPM.

Compression Ratio and Pressure—As follows: 6.5-1

std. aluminum head, 110 lbs. at 125 R.P.M. 7.05-1

optl. aluminum head, 119 lbs. at 125 R.P.M.

Vacuum Reading—18-19" idling at 7 M.P.H.

See Packard Shop Notes for Cylinder Head data and Block Removal directions.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground.  
Weight—17¾ oz. (stripped), 24 oz. (with rings and pin). Length—4¼".

Removal—Pistons above, rods below (push piston up to expose pin, remove locking rings, push pin out, lift piston out, lower rod and remove from below). Remove with engine warm.  
Clearance—Skirt .0015". See Fitting New Pistons.

Original Bore & Piston Sizes, Replacement Pistons:—

See Packard Shop Notes for complete data.

**Fitting New Pistons:**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-14 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:**—#1 compression (plain), #2 compression (#70 Perfect Circle), #3 oil (P-C #85), #4 oil (P-C #X90-85) rings per piston, all above pin. Each oil ring groove drilled with ten ⅛" oil drain holes. Rings furnished standard and .003", .005", .010", .015", .020", .025", .030", .035" and .045" oversize.  
NOTE—P-C#200 ring used in #1 groove on early production.

Ring	Width	End Gap	Side Clearance
Compr. 1225-1230"		.007-.015"	.003"
Oil Cont. 1545-1550"		.007-.015"	.0015"

NOTE—Install #1 & 3 rings with slot toward camshaft, #2 & 4 with slot away from camshaft.

**PISTON PIN:**—Diameter—⅞". Length—2 47/64". Pin floats in piston and rod, held by locking rings. Furnished std. and .003", .006" oversize.

**Pin Fit in Piston:**—Finger push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing:**—Finger push fit at 70°F. Finish ream pin hole to .87485-.87515".

**CONNECTING ROD:**—Weight—40.3 oz. Length—10⅞". Crankpin Journal Diameter—2 3/16".

**Lower Bearing:**—Copper lead alloy, interchangeable type. Furnished .001", .002", .003", .015" undersize.

NOTE—Babbitt type for replacement furnished std. and .002", .005", and .015", undersize.

Clearance—.001-.0015". Sideplay—.005-.008".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

**Installing Rods:**—Oil hole toward camshaft.

**CRANKSHAFT:**—9 bearing, 8 bolted counterweights with rubber friction disc vibration damper mounted on forward end.

Journal Diameters—2⅝".

**Bearings:**—Removable steel-backed, babbitt-lined, shimless type. Bearing shells doweled in block and cap. Dowel in cap is flanged (seats between bearing and cap) and hollow (for bearing lubrication).  
Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings (requires removal of crankshaft).

**End Thrust:**—Taken by #7 bearing.

Endplay—.003-.005".

**CAMSHAFT:**—8 bearing. Non-adjustable chain drive.

**Bearing Type:**—Steel-backed, babbitt-lined.

Clearance—.0015-.0035".

**End Thrust:**—Taken by thrust plate assembled in back of camshaft sprocket. Endplay—.001-.004".

**Timing Chain:**—Morse 3682-RX. Width 1½". Pitch .375". Length 70 links or 26¼".

**Camshaft Setting:**—Install chain and sprockets together with marks adjacent and in line with a straightedge across the shaft centers.

See Packard Shop Notes for Fender and Radiator Assembly removal for work on front of engine.

**VALVES:** Head Diameter Stem Diameter Length

Intake .....1 21/32".....3405".....7 13/32"

Exhaust .....1 15/32".....3405".....7 13/32"

Seat Angle Lift Stem Clearance

Intake .....45°.....354"......003"

Exhaust .....45°.....354"......0045"

**Valve Guides:**—Pressed in block from above. Ream to size for correct stem clearance (see above).

**Valve Rocker Arms:**—Consist of pivoted arms mounted on bracket on crankcase which transmit motion from cam to valve pushrod (valve lifter).

**Removal:**—Take out screws in bracket on right side of crankcase, withdraw bracket and pushrod assembly.

**Pushrods (Valve Lifters):**—Mounted on guides seated in crankcase and held down by engine block which engages guide flange.

**Valve Springs:** Spring Pressure Spring Length

Valve Closed .....68-78 lbs.....3 1/16"

Valve Open .....154-164 lbs.....2 45/64"

NOTE—Serrated washer on top of each spring.

## VALVE TIMING

**Tappet Clearance:**—Intake .006", Exhaust .008", hot.

**Valve Timing:**—See Camshaft Setting (above).

**Intake Valves:**—Open 30° BTDC. Close 65° ALDC.

**Exhaust Valves:**—Open 65° BLDC. Close 30° ATDC.

**To Check Timing:**—Set tappet clearance #1 exhaust valve at .005" (or .010", then insert .005" feeler). Turn engine over until pointer over damper (at front of engine) lines up with a point 1 1/16" (plus or minus 11/32") past '1-UPDC' mark (feeler should withdraw with finger pull). Valve closes 30° or .4070" ATDC. Reset tappet clearance at .008" (hot).

## LUBRICATION

**LUBRICATION:**—Pressure system with gear type oil pump mounted in crankcase.

**Normal Oil Pressure:**—55 lbs. (max.), 5 lbs. (min.).

**Oil Pressure Relief Valve:**—Located under plug on left side of crankcase. Remove acorn nut and adjust by turning slotted screw.

**Crankcase Capacity:**—8 quarts.

## COOLING

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, with adjustable type packing.

See Water Pump Section for complete data.

**Removal:**—With water drained and fan belt removed, disconnect pump hose, remove nuts on pump mounting studs and lift off fan and pump assembly.

**Thermostat:**—Sylphon inside top radiator tank (part of shutter thermostat assembly). Assembly changed during 1938, first type 165° used on early '38 cars, 150° type on late '38 cars.

**HEATER NOTE:**—Cylinder head thermostat available for cars with water heater. Use only on cars with 150° shutter assembly. Remove thermostat in summer.

**Setting (with Cover Mark '165'):**—Starts to open 150°. Fully open 160-165°. Sylphon marked 13680.

**Setting (with Cover Mark '150'):**—Starts to open 135°. Fully open 150°. Sylphon marked 14480.

**Setting (Heater—Cyl. head outlet type):**—Marked 162° on strap. Starts to open 160-165°. Fully open 185°

Water Capacity:—20 quarts.

## CLUTCH

**CLUTCH:**—Long Model 12CB-CL. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Moulded (Raybestos No. 250), 2 required. Inside Diam. 7". Outside Diam. 12". Thickness .137".

**Adjustment:**—Adjust nut on pedal rod to give 1-1½" free travel (pedal pad to toe board).

**Removal:**—Remove transmission (see Transmission Removal following), take out cover mounting screws (release pressure evenly), lift assembly out. Align '0' marks on flywheel and cover when reassembling.

## TRANSMISSION

**TRANSMISSION:**—Own make. Helical gear type with synchronizer for second and high speeds.  
*See Transmission Section for complete data.*

**Removal:**—Remove floor boards, speedometer cable, ground strap, drop drive shaft at front universal joint. Remove light switch, two stud nuts (case bracket to rubber support) on each side, hand brake cable (at equalizer), stabilizer link (left side), clutch pedal pull rod and spring, place jack under rear of engine. Remove pedal shaft inner bracket, loosen brace rod on right side at rear only, lower cross member, take out bell housing nuts and cap-screws, jack up rear of engine, remove 2 frame-to-vertical support member bolts on each side, remove support members. Remove transmission.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit. Series 5350. Cross type with roller bearings. Two used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own make. 'Angle-Set', semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.69-1 (std.), 4.36-1, 4.09-1 (optl.).

**Backlash:**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, brake assembly, wheel bearing and axle shaft. Disconnect rear universal joint at flange, drop drive shaft, remove differential housing by removing housing bolt nuts (below), and locknut on stud (at top). Remove carrier.

**Wheel Bearing Adjustment:**—Controlled by shims between outer race of inner bearing and shoulder in housing. Remove wheel, hub, brake assembly, wheel bearing and axle shaft. Add or remove shims. Adjust each wheel independently.

**Endplay:** .003" (plus or minus .001") at each wheel.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Model 1966-A, B (front), 1751-J, K (rear). Hydraulic, double acting type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Packard Safe-T-flex type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE:**—Data below applies with car on level floor tires properly inflated and car loaded with 300 lbs. (frt.—all), 375 lbs. (rear—5 Pass.), 225 lbs. (rear—

Coupe), 675 lbs. (rear—7 & 8 Pass.).

**Front Suspension Height:**—Distance from floor to top of frame siderail at spring should be 20 1/8" plus or minus 1/4".

**Kingpin Inclination:**—1 1/2° crosswise.

**Camber:**—1/2° (plus 3/4°). Adjustable.

**Caster:**—2 1/2° plus or minus 1/2°. Shim adjustment.

**Toe In:**—1/32-1/8". Adjust by turning tie rods equally (check for equal lengths after adjustment).

## STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 375)

Worm-and-Roller type with push-pull adjustments and center steering. See Gemmer Model 375 article.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum:**—Centrifuse. Diameter—12".

**Lining:**—Primary (Marshall #1035), Secondary (#600). Width 2 1/2". Thickness 3/16". Length 13".

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On front of dash (use Engine No.).  
**ENGINE NUMBER:** On block left side below distributor.  
 First number A-600001 ('38), B-600001 ('39).

## TUNE-UP

**COMPRESSION:** Ratio—6.4-1 Std. '38. 6.3-1 Std. '39.  
 High Compression 7.0-1 and Low Compression 6.0-1  
 heads optional. Carry 'HC' or 'LC' marks on head.  
**Pressure**—110 lbs. (Std.), 119 (HC) at 125 RPM.

**VACUUM READING:**—Steady 18-20" at 8 MPH.

**FIRING ORDER:** 1R-6L-5R-2L-3R-4L-6R-1L-2R-5L-4R  
 -3L with cylinder banks right (R) and left (L) as  
 viewed from driver's seat and #1 cylinder nearest  
 radiator. Spark plugs not connected in this order  
 on distributor cap (see diagram).

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm.  
 Gaps—.028". Limits .026-.030".

**NOTE**—If colder plug required use AC No. 103S or  
 Champion Early Y-4. Do not tighten these small  
 plugs excessively. Tightening tension 50 in. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020". **Cam Angle**—40° Closed.

**Synchronization**—Set movable contacts to open  
 33½° after stationary contacts.

**Automatic Advance**—10° max. at 1400 RPM (for  
 IGO-4001A Distr., 8° max. at 1200 RPM (IGO-4002A).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—6-8° BTDC (for standard cyl. head),  
 4-6° BTDC (for HC hd.). Vibration dampener mark  
 (correct graduation ahead of #1R-UDC) aligned  
 with pointer at front of engine. Movable contacts  
 should open 33½° after this point.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screws midway be-  
 tween "miss" and "roll" points. Idle speed 8 MPH.

**Float Level**—Fuel level 9/16" below edge of bowl.

**Fuel Pump Pressure:** 4½ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance** None in service, hydraul. take-up.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 7648.

**Ignition Lock**—Briggs & Stratton. Mitchell #6760.

**COIL:** Auto-Lite Model CE-1203. Two Coil Unit. Service  
 Coil (less switch & cable) CE-3186FS. Mounted at  
 front of the engine.

**Ignition Current**—½ ampere idling, 2½ amperes  
 stopped for each coil.

**CONDENSER:** Auto-Lite No. IG-2671-E, IG-2671-A (one  
 of each used). Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGO-4002A (Std. hd.),  
 IGO-4001A (HC head). Double breaker, 6 lobe cam,  
 full automatic advance type.

**Firing Interval**—Movable contacts open 33½° after  
 fixed set (firing interval 33½-26½-33½ distributor  
 degrees caused by 67° included angle between banks.  
**Breaker Gap**—.020". **Limits** .018-.022".

**Cam Angle or Dwell**—40° closed, 20° for each set of  
 contacts (operate independently).

**Breaker Arm Spring Tension**—16-20 ozs.

**Rotation**—Counter-clockwise viewed from the top.

Automatic Advance—IGO-4002A			
Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start	300	0	600
2	525	4	1050
4	750	8	1500
6	975	12	1950
8	1200	16	2400

Automatic Advance—IGO-4001A			
Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start	300	0	600
2	515	4	1030
4	730	8	1460
6	950	12	1900
8	1175	16	2350
10	1400	20	2800

**Removal:**—Distributor mounted between cylinder  
 banks at front of engine. To remove, take off dis-  
 tributor cap and cable conduit assembly, take out  
 screws in mounting bracket.

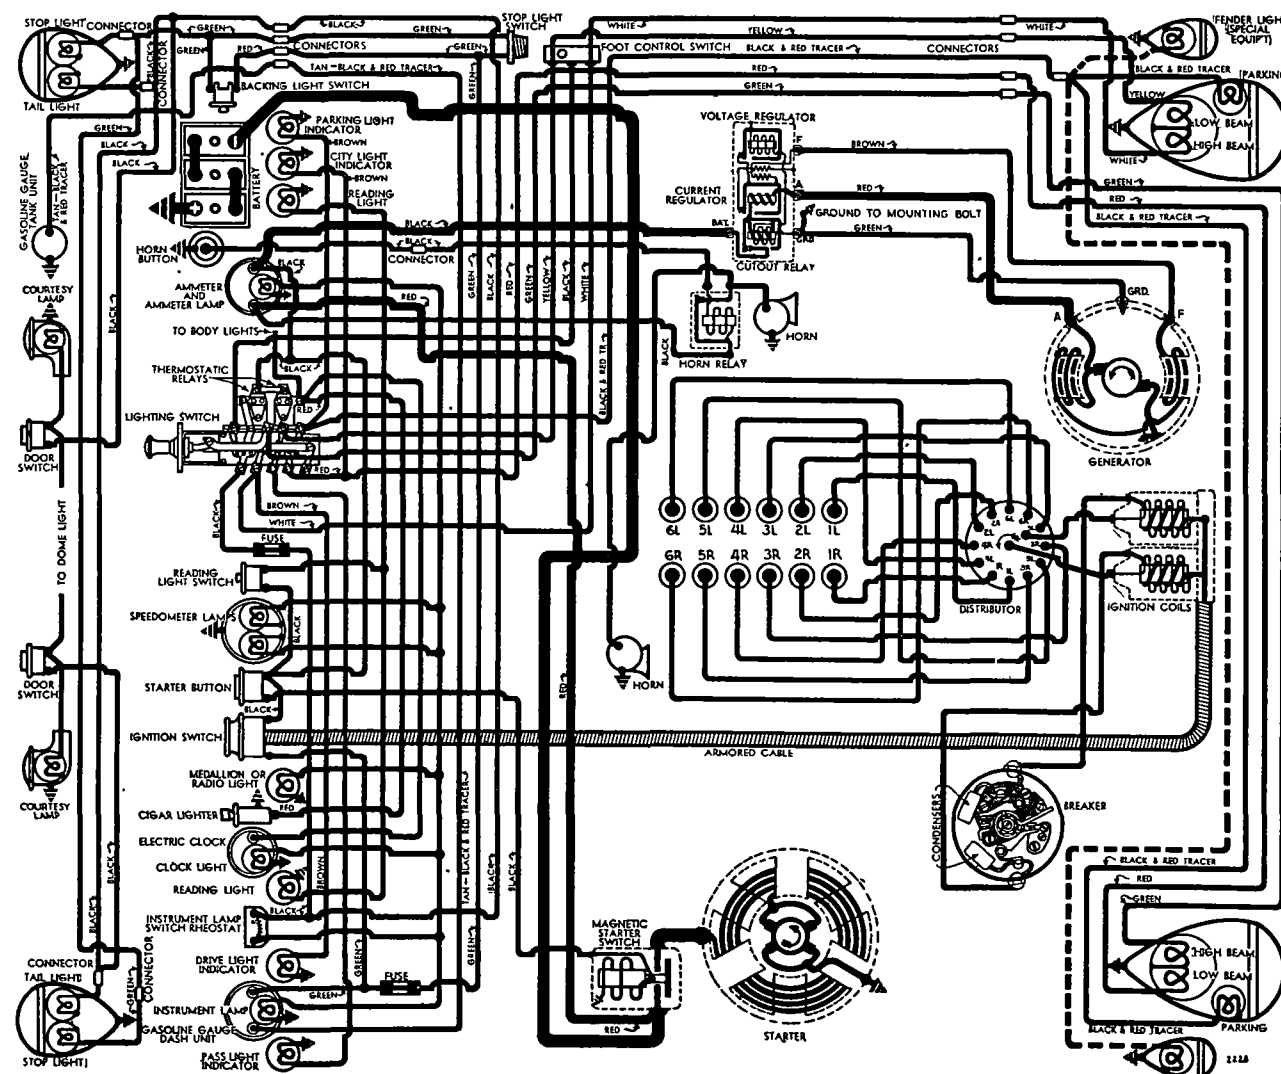

## IGNITION TIMING

**IGNITION TIMING:**—Settings for all engines as fol-  
 lows:

**Flywheel Degrees** **Piston Position**  
 Std. & LC hds. 6-8° BTDC .0145-.0255" BTDC  
 High Comp. hd. 4-6° BTDC .0063-.0145" BTDC

**NOTE**—Vibration dampener at front of engine  
 marked '#1R-UDC' (top dead center #1 piston,  
 right hand bank), '#6L-UDC' (top dead center #6  
 piston, left hand bank), with fifteen 1° gradua-  
 tions before each of these marks.

**Timing (Stationary Contacts)**—With #1R piston  
 (front cylinder, right bank) on compression, turn  
 engine over until piston reaches firing position (see  
 table above), stop when correct graduation on vi-  
 bration dampener at front of engine lines up with  
 pointer on chain case cover. Loosen clampscrew on  
 mounting bracket, rotate distributor until station-  
 ary contacts (mounted directly on breaker plate)

begin to open, tighten clampscrew. Then synchronize movable contacts.

**Synchronization of Movable Contacts (On Engine)**  
—Turn engine over exactly 67° to firing position of piston #6L (rear piston, left bank), stop when correct graduation on vibration dampener lines up with pointer. Loosen lockscrews on movable subplate (on which second set of contacts mounted), shift plate until contacts begin to open, tighten lockscrews.

**Synchronization (Other Methods)**—Set movable contacts to open exactly 33½° after fixed set. Firing intervals are irregular 33½-26½-33½ distributor degrees.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-3. 1½" Duplex or double barrel type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warmed up so that Automatic Choke and Fast Idle inoperative, set throttle lever stopscrew so that engine idles at 6 MPH., turn idle adjusting screw for each barrel (in succession) out until engine begins to roll, then turn screw in slowly until engine fires smoothly. Final setting should be approximately 1-1½ turns of screw out from inner seated position. Readjust throttle stopscrew for correct idle speed.

**Accelerating Pump**—Two holes provided in throttle lever for pump link engagement as follows:  
Outer Hole (Max.)—Normal weather and fuel.  
Inner Hole (Min.)—Hot weather, high-test fuel.

**Fast Idle:**—Integral (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—With choke valve closed, turn fast idle adjusting screw in until it contacts fast idle cam lug, then turn screw in additional 6¾ turns.

**Automatic Choke:**—Stromberg Model C (separate unit).

*For complete data, refer to Carburetion Equip. Index.*  
**Setting**—Pointer should line up with punchmark on thermostatic coil case (16 notches rich from '0' mark). NOTE—Setting may be varied 4 graduations either way for best performance.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528519 oil-wetted type Std.

**Fuel Pump:**—AC Type I #1521778 combination fuel-and-vacuum pump. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Motometer (Auto-Lite) Electric.  
Dash Unit: NG-8673D (1938), NG-9045D (for 1939).  
Tank Unit: NG-8648T (1938 and 1939).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Prest-O-Lite Hi-Level Type Model HR4-21.** 6 volt, 21 plate, 150 A.H. capacity (20 hr. rate).

**Starting Capacity**—175 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.3 minutes.

**Grounded Terminal**—Positive (+) grounded to frame 'X' member. **Engine Ground**—Strap connector at right hand rear engine mounting.

**Dimensions**—Length 13". Width 7". Height 9½".

**Location**—Under left front seat.

**Export Battery**—Willard Type SE-5-153. 6 volt, 19 plate, 153 A.H. capacity (20 hr. rate).

**Starting Capacity**—180 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 6.6 minutes. Five second voltage 4.5 volts.  
**Dimensions**—Length 13". Width 7 1/16". Height 9 5/16".

## STARTER

**Owen-Dyneto Model DN-1389.** Armature No. 13409.

**Drive**—Outboard Bendix Model RCD-10FXTD.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—56-60 ozs. (new brushes).

**Cranking Engine**—125 RPM., 130 amperes, 5.6 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3000	6.0	50
5.8 "	850	5.2	200
11.4 "	520	4.8	300
17.0 "	340	4.5	400
23.0 "	220	4.2	500
28.6 "	140	4.0	600
39.0 "	Lock	3.6	810

**Removal:**—Sleeve mounted on right front face of fly-wheel housing. To remove, take out pilot mounting screw in housing.

**Starting Switch:** Auto-Lite SS-4001. Magnetic type. Mounted on starter, controlled by switch on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Model GCE-4803A.** Armature No. GBX-2035F. Two brush, straight shunt type with vibrating voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—30 amperes (cold), 8.0 volts, 1400 RPM. and above (with discharged battery or load). Actual charging rate controlled by regulator and dependent on battery condition.

**Charging Rate Adjustment**—No adjustment at generator. See Regulator data below.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	740	0	6.4	785
4	6.6	830	4	6.6	880
8	6.8	920	8	6.8	975
12	7.05	1015	12	7.05	1070
16	7.25	1100	16	7.25	1165
20	7.5	1190	20	7.5	1275
24	7.7	1280	24	7.7	1385
30	8.0	1400	30	8.0	1580

NOTE—30 amperes is Current Regulator setting.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—64-68 ozs. (new brushes).

**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current**—5.03-5.57 amperes at 6.0 volts.

**Removal:**—Special pivot mounting at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator out until 70-80 lb. reading secured in spring scale hooked to clamp bolt lug parallel to slot or until deflection midway between generator and water pump pulleys is ½-¾" with thumb pressure. NOTE—Replace both drive belts together as a matched set.

## REGULATOR

**Auto-Lite Model VRB-4008AP.** Consists of Cutout Relay, vibrating Voltage Regulator and Current Regulator in case on dash.

*For complete data, refer to Electrical Equipment Index.*

NOTE—Regulator cover sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts, 700 R.P.M. Cold.

**Cuts Out**—5-3.0 amperes discharge current.

**Contact Gap**—.015" Minimum.

**Air Gap**—.034-.038" with contacts open, measured at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this Serial Number.

**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. until voltage is steady. Voltage should be within limits of 7.21-7.83 volts.

**To adjust** (with cover removed)—Change armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section for complete adjustment directions.

**Contact Gap**—.010-.020" (armature against stop pin).

**Air Gap**—.0595-.0625" with contacts just opening.

### Current Regulator

**Setting**—29-31 amperes (marked '30' on cover).

**To Check** (without breaking seals)—Connect test meters as for voltage test (above). Operate generator at 30 M.P.H., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 30 amperes (if more than slight excess noted, regulator is defective).

**Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

## LIGHTING

**LIGHTING:**—Headlamps—Hall Flex-beam type with pre-focused bulbs. Asymmetrical passing beam (lower beam left hand headlamp, upper beam right hand headlamp) controlled by Beam Selector Switch on toeboard.

**Headlamp Adjustment**—With tires properly inflated, car loaded to rated capacity, 25' from screen with upper beams lighted, aim left hand headlamp so that hot spot centered on lamp vertical center-line and upper edge at horizontal line at lamp center height. Aim right hand headlamp for same height but with left edge of hot spot at lamp vertical center-line (entire hot spot to right of this line).

**Beam Indicators**—Four used (1 & 2 in Water Temperature gauge dial, 3 & 4 in Oil Pressure gauge dial). Lighted when following lights in use:

1. Park—Parking or Fender lights.
2. City—Headlamp lower beam.
3. Drive—Headlamp upper beam.
4. Pass—Headlamp asymmetrical passing beam.

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

## Switches

Lighting—Delco-Remy No. 1994505.  
Beam Selector—Delco-Remy No. 1997001.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamp—Right Hand	32-32	2330
Headlamp—Left Hand	32-21	1104
Parking, Fender, Instrm.	1½	55
Reading, Clock, Glove Compt.	1½	55
Indicators (all)	1	51
Stop	15	87
Tail, Courtesy, Quarter	3	63
Dome	6	81
Fog light	32	1321
Spotlight	32	1323

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Two used. Mounted on lighting switch, protect lighting circuits. Remain closed with 25 amperes but opens in 2 minutes with 38 amperes. Not adjustable.

**FUSES:**—Instrument & Tail Lights—20 ampere. In connector in switch lead near lighting switch.  
Stop Light—20 ampere. In lead near switch.  
Clock—2 ampere. On back of clock.

**HORNS:**—Sparton Model 6D30. Vibrator type, Air tone, Twin horns operated by horn relay.  
Air Gap—.032-.035" (low note—long horn), .026-.030" (high note—short horn).  
Horn Current—22-25 amperes (total).

**Horn Relay:** RBM Model 10072 or 790 ('38), 4757 ('39).  
Closing Voltage—2.75-4.0 volts.  
Contact Gap—.015-.025". Air Gap .010-.020" (closed).  
NOTE—Late type relay not adjustable (cover welded).

## ENGINE

**ENGINE SPECIFICATIONS:**—12 cyl., modified 'L' head, 67° Vee. Blocks and upper crankcase cast Enbloc.  
Bore—3 7/16". Stroke—4¼".  
Displacement—473 cu. ins. Rated HP.—56.7.  
Developed Horsepower—175 HP (standard head), 180 HP (High Compression head) at 3200 RPM.  
Compression Ratio—6.4-1 Std. '38. 6.3-1 Std. '39.  
High Compression 7.0-1 and Low Compression 6.0-1 heads optional. Carry 'HC' or 'LC' marks on head.  
Compression Pressure—110 lbs. (for standard hd.), 119 lbs. (for High Compression head) at 125 RPM.  
Vacuum Reading—18-20" at 375 R.P.M. or 8 M.P.H.  
See Packard Shop Notes for Cylinder Head data.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic strut type, tin plated, cam ground.  
Weight—20 ozs. (stripped), 26¾ ozs. (with rings and pin). Length—4.318".  
Removal—Pistons removed from above, rods from below. Warm engine facilitates removal.  
Clearance—.0005-.001". See Fitting Pistons.

**Original Bore & Pistons Sizes, Replacement Pistons:**  
—See Packard Shop Notes for complete data.

**Fitting New Pistons:**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves (all pistons).

**PISTON RINGS:**—Four rings per piston, #1 Comp. (plain), #2 & 3 Comp. (Perfect Circle #70), #4 Oil Contr. (#X-90), all above pin. Oil ring groove drilled with twelve #30 oil drain holes.

## 1938 Piston Ring Specifications

Ring	Width	End Gap	Side Clearance
Compr.	.1225-.1230"	.007-.015"	.0025-.003"
Oil Contr.	.1545-.1550"	.007-.015"	.0015-.002"

## 1939 Piston Ring Specifications

Ring	Width	End Gap	Side Clearance
Comp. (#1, 2)	.123-.1240"	.007-.017"	.0025-.003"
Comp. (#3)	.123-.1240"	.007-.015"	.0015-.002"
Oil Contr.	.186-.1865"	.007-.015"	.0015-.002"

NOTE—On left bank, ring gap #1 and #3 away from camshaft, #2 and #4 toward camshaft. Reverse procedure for right hand bank.

Replacement Rings:—Std. and .003", .005", .010", .015", .020", .030", .045" oversize.

**PISTON PIN:**—Diameter—7/8". Length—2 63/64".

Pin floats in piston and rod, held by locking rings. Furnished std. and .003", .006" oversize.

Pin Fit in Piston—Finger push fit with piston heated to 160° F.

Pin Fit in Rod Bushing—Finger push fit at 70° F. Finish ream pin hole to .87485-.87515".

**CONNECTING ROD:**—Weight—36 ozs. Length—9".

Crankpin Journal Diameter—2½".

Lower Bearing—Copper lead alloy, interchangeable type. Furnished std. and .001", .002", .003", and .015" undersize.

Clearance—.001-.0015". Sideplay—.008-.010".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Installing Rods:—Oil hole toward starter.

**CRANKSHAFT:**—4 bearing, 6 bolted counterweights with rubber friction disc vibration damper mounted on forward end. Journal Diameters—2¾".

Bearing Type—Interchangeable steel-backed, babbit-lined type. Clearance—.001-.002".

Bearing Adjustment:—None (no shims). Replace bearings. Upper half may be rotated in place.

End Thrust:—By #1 bearing. Endplay—.003-.005".

**CAMSHAFT:**—Four bearing. Between banks directly above crankshaft. Non-adjustable chain drive.

Bearing Type—Steel backed, babbit-lined.

Clearance—.001-.0015" (#1, 4). .002-.0025" (#2, 3).

End Thrust:—Taken at front bearing.

Endplay—.002-.006".

Timing Chain:—Morse No. 1866-N. Width 1¾". Pitch 500". Length 28" or 56 links.

Camshaft Setting:—Install chain and sprockets together with marks adjacent and in line with a straightedge across the shaft centers.

See Packard Shop Notes for Radiator & Fender (unit) removal for work on front end of engine.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 41/64"	.3405"	6 35/64"
Exhaust	1 21/32"	.338"	6 35/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.3125"	.002-.0025"
Exhaust	45°	.3125"	.0045-.005"

Automatic Tappet Take-up:—Hydraulic type (using engine oil pressure). Must be checked when valves ground.

See Miscellaneous Section for complete data.

**Valve Springs:**—Install springs with painted end down and close-spaced first coil toward valve head. Special 1/32" higher stem keeper furnished (compensating for low pressure due to reseating valves).

	Spring Pressure	Spring Length
Valve Closed	65-75 lbs.	2 7/32"
Valve Open	140-150 lbs.	1 29/32"

NOTE—Serrated washer on top of spring to prevent rotation.

## VALVE TIMING

Tappet Clearance:—None (automatic take-up).

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open at TDC. Close 45° ALDC.

Exhaust Valves—Open 35° BLDC. Close 10° ATDC.

To Check Timing—Intake valve for #1 (front cylinder, right bank) begins to open with piston on top dead center when '#1R-UDC' mark on dampener lines up with pointer on chain case cover. (permissible variation 9/16" either side of mark). Removal of right cylinder head and dial indicator mounted over valve recommended to check opening.

## LUBRICATION

**LUBRICATION:**—Pressure system with gear type oil pump mounted in crankcase. Oil filter and temperature regulator mounted on right side of engine.

Normal Oil Pressure:—55-60 lbs. max., 5 lbs. min. idling (SAE #20 oil, engine warm or 150° F.).

Oil Pressure Regulator:—Located under plug on right side of crankcase below filter. Remove acorn nut and adjust by turning slotted screw.

Pressure Relief Valves—Non-adjustable relief valve in regulator housing opens at 17 lbs. back-pressure in filter and cooler and by-passes oil directly to manifold. By-pass valve in filter opens at 7-8 lbs.

Valve Silencer Metering Valve—Spring loaded type in pump body, exposed by removing pump cover.

Crankcase Capacity:—10 quarts.

## COOLING

**COOLING SYSTEM:**—Water Capacity—40 quarts.

Water Pump:—Adjustable packing type, mounted on ball bearings, driven by twin Vee belts.

See Water Pump Section for complete data.

Removal—With water drained and fan belts removed, disconnect pump hose, remove pump mounting bolts, lift fan and pump assembly off.

Thermostat:—In top radiator tank. Operates shutters.

Setting—Starts 135° F. Fully open 150° (no load).

Cover stamped 150°. NOTE—Special thermostat (for heater use with permanent anti-freeze) starts to open at 160°, fully open 170-175°. Marked 175°.

Adjustment—At room temperature with thermostat syphon closed, pull back on shutter pulldown to close shutters, tighten nut to remove all slack in rod, then tighten one turn additional for pre-load.

Temperature Gauge:—Auto-Lite (Motometer) Numbers H-8674 (for 1938), H-9044 (for 1939).

See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Long Model 12CB-CL. Single plate, dry disc type with Bendix Vacuum Power operation.

See Clutch Section for complete data.

Facings—Endless-compressed (Hycov DV 3903 PD), 2 required. I.D. 7". O.D. 12". Thickness .137".

Pedal Adjustment:—Vacuum Power unit must be adjusted whenever pedal free travel insufficient (should be 1" to 1 13/16"). Refer to Clutch Section article for adjustment directions on this unit.

**Removal:**—Remove transmission (see Transmission Removal following), take out cover mounting screws (release pressure evenly), lift assembly out. Align '0' marks on flywheel and cover when reassembling.

### TRANSMISSION

**TRANSMISSION:**—Own Make. Helical gear type with synchronizer for second and high speeds.

*See Transmission Section for complete data.*

**Transmission Control (1939):** Own Steering Col. Shift.

*See Transmission Section for complete data.*

**Removal:**—Remove ground cable, speedometer cable, propeller shaft, light switch, two stud nuts (case bracket to rubber support) at each side, hand brake cable at equalizer, left stabilizer link, clutch pedal pull-rod, and pedal spring. Support engine at rear. Remove right brace rod (rear only), lower cross-member, and bell housing nuts and capscrews. Jack up rear of engine, remove two bolts on each side (holding vertical support members to frame), remove support members, pull transmission back.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Spicer Model 1351-10X (front), 1358-18X (rear). Needle bearing type, 2 used.

*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Own Make. 'Angle-Set', semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—4.41-1 (std.), 4.69-1, 4.06-1 (optl.).

**Backlash**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, brake assembly, wheel bearing and axle shaft. Disconnect rear universal joint at flange, drop drive shaft, remove differential from housing by removing housing bolt nuts (below), and locknut on stud (at top). Remove carrier.

**Wheel Bearing Adjustment:**—Controlled by shims between outer race of inner bearing and shoulder in housing. Remove wheel, hub and brake assembly, wheel bearing and axle shaft. Add or remove shims adjust each wheel independently.

**Endplay**—.003" (plus or minus .001") at each wheel.

### SHOCK ABSORBERS

**SHOCK ABSORBERS:** Delco Double Acting Types. Models 1952-A (right front), 1952-B (left front), 2006-G (right rear), 2006-H (left rear).

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Packard Safe-T-flex type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE:**—Frame Height must be set first before checking Caster and Camber.

**Frame Height:**—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 20½" (load car for correct figure).

**Kingpin Inclination:**—1½° crosswise.

**Camber:**—1° plus or minus ¼°. Adjustable.

**Caster:**—0° (½° reverse max.). Shim adjustment.

**Toe In:**—1/32-⅛". Adjust by turning tie rods equally (check for equal lengths after adjustment).

### STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 375)

Worm-and-Roller type with push-pull adjustments and center steering. See Gemmer Model 375 article.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type with Vacuum Power operation. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum:**—Centrifuse. Diameter—14".

**Lining:**—Primary (Raybestos No. 451). Secondary (U.S. Asbestos No. 589). Width 2¾". Thickness ¼". Length 15" per shoe.

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes.

**Vacuum Power Unit:**—Bendix internal valve type. *See Brake Section for complete data.*

**ELECTRICAL EQUIPMENT NOTE:** These cars have either Auto-Lite or Delco-Remy Electrical Units.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On front of dash (Use Engine No.).  
**ENGINE NUMBER:**—First number B-1501. Stamped on boss on upper left hand side of cylinder block.

## TUNE-UP

**COMPRESSION:**—Ratio—6.52-1 Std., 6.85-1 Optl.

**NOTE:**—These ratios decreased to 6.39-1 & 6.71-1 in production by increasing head gasket thickness to .070". Head Identification—Heads marked with Part No. 324285 (6.52-1), 335664 (6.85-1). Pressure—110 lbs. (Std. 6.52-1 hd.), 118 lbs. (Optl. 6.85-1 hd.) at 125 RPM. cranking speed.

**VACUUM READING:**—Steady 18-20" idling at 6 MPH.  
**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .026-.030".

**NOTE:**—If colder plug required use AC No. 103S or Champion Early Y-4. Do not tighten these small plugs excessively. Tightening tension 50 in. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.020".

**Cam Angle**—Closed 38° (Auto-Lite), 35° (Delco-Remy).

**Automatic Advance**—Auto-Lite: 8¾° at 2000 RPM, Delco-Remy: 9½° at 2000 RPM. Distrib. ° & RPM.

**Vacuum Advance**—7½° (distr.) with 17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—6-7½° BTDC (Std. hd.), 5-6½° BTDC (Optl. 6.85-1 iron head). Flywheel mark (correct degree mark ahead of #1UPDC) aligned with inspection hole pointer (on left side under starter).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screw midway between "miss" and "roll" points. Idle speed 6 MPH.  
**Float Level**—Fuel level 17/32" below edge of bowl.  
**Accelerating Pump**—Center Hole—Normal Setting.  
**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

**Tappet Clearance** .007" Intake, .010" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

### AUTO-LITE

**Ignition Switch:**—Mitchellock Model 24-B, No. 8058.

**Ignition Lock:**—Briggs & Stratton, Mitchell #8760.

**COIL:** Auto-Lite Model CE-4632. Service Coil (less switch & cable) CE-3224ES. On left side of engine.  
**Ignition Current**—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671K.  
**Capacity**—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4013 (Early 1939 cars), IGS-4201 (Later 1939 cars). Single breaker, 6 lobe cam, full automatic advance with Vacuum Spark control and Fuel Compensator adjustment.

**NOTE:**—These distributors are interchangeable.  
**Breaker Plate Identification Note:**—Number stamped on plate (7½) indicates vacuum advance slot limits.  
**Breaker Gap**—Set at .020".

**Cam Angle r Dwell**—38° closed, 22° open.

**Breaker Arm Spring Tension**—16-20 ounces.  
**Rotation**—Counter-clockwise viewed from the top.

Automatic Advance—Auto-Lite			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
.8	400	1.6	800
2	550	4	1100
4	800	8	1600
6	1300	12	2600
8.75	2000	17.5	4000

**Vacuum Spark Control**—Integral type, mounted on distributor cap and linked to breaker plate. Provides additional advance at all speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

### Vacuum Advance—Auto-Lite

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	8"
3	6	10.4"
7.5	15	17"

**Fuel Compensator**—Manual adjustment at distributor provides 10° advance or retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left hand side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION

### DELCO-REMY

**Ignition Switch:**—Delco-Remy No. 1116254. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184 (Lock cylinder). Key Series—P1251-P1500. Groove—#2.

### DELCO-REMY EQUIPMENT

See 1939 '120' Eight Diagram for Auto-Lite internal circuits  
 See Transmission Section for late 1939 type Overdrive Control Wiring

**COIL:** Delco-Remy Model 539-N. On left side of block. Ignition Current— $\frac{1}{2}$  ampere idling,  $2\frac{1}{2}$  stopped.

**CONDENSER:** Delco-Remy Part No. 1869704. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 1110203. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Fuel Compensator.

**Breaker Gap**—Set at .020". Limits .018-.024".

**Cam Angle or Dwell**—35° (closed), 25° (open).

**Breaker Arm Spring Tension**—20 ounces.

**Rotation**—Counter-clockwise viewed from the top.

Automatic Advance—Delco-Remy Distributor			
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	1.5	600
4.75	800	9.5	1600
9.5	2000	19	4000

**Vacuum Spark Control Delco-Remy Model 681-K.** Integral type. Mounted on side of distributor and linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Plunger travel  $9/64$ " maximum.

Vacuum Advance—Delco-Remy			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0		5-7"
7.5	15		15-19"

**Fuel Compensator & Distributor Removal**—Similar to Auto-Lite. See data given above for Auto-Lite.

## IGNITION TIMING

**IGNITION TIMING:** Standard setting for all engines as follows: (see Fuel Compensator Setting below).

Std. Iron hd.	Flywheel Degrees	Piston Position
'39	6-7 $\frac{1}{2}$ " BTDC	.0149-.0231" BTDC
HC Iron hd.	'39	5-6 $\frac{1}{2}$ " BTDC
		.0103-.0174" BTDC

**NOTE**—Flywheel marked #1 UP D.C. with five 2° graduations before and after this point.

**Timing**—Remove inspection hole cover (left front face of flywheel housing below starter). Loosen thumbnut, set Fuel Compensator pointer at '0' (center graduation on scale), tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct graduation on flywheel lines up with pointer. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting.

**Timing (Neon Timing Light)**—White mark provided on flywheel to indicate timing range (leading edge of mark 6° BTDC). Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise toward low end of scale (if ping too severe), clockwise toward high end of scale (if no ping noted), tighten thumbnut and recheck performance.

## CARBURETOR

**Holley (Chandler-Groves) Model A0C-25, No. 119-4A.**  $1\frac{1}{4}$ " single barrel downdraft type. See Carburetor Section for complete data.

**Idle Adjustment**—With engine warmed up so that

Automatic Choke and Fast Idle inoperative, set throttle lever stopscrew so that engine idles at 6 MPH., turn idle adjusting screw out until engine begins to roll, then turn screw in slowly until engine fires smoothly. Setting should be  $\frac{1}{2}$ - $1\frac{1}{2}$  turns of the screw out from the inner seated position. Readjust throttle stopscrew for correct idle speed.

**Accelerating Pump Setting**—Three holes provided in throttle lever for pump link engagement as follows: Inner (Min. stroke)—Hot weather or high-test fuel. Center Hole—Normal temperatures and fuel. Outer (Max. stroke)—Cold weather or low test fuel.

**Fast Idle**—Integral type, operated by choke linkage. For complete data, refer to Carburetion Equip. Index.

**Automatic Choke**—Integral type (on carburetor). For complete data, refer to Carburetion Equip. Index.

**Setting**—Punchmark on thermostat plate lined up with mark on housing. NOTE—Setting may be varied 3 graduations either way from regular setting, if required.

**Throttle Guard (Cars with Overdrive)**—Vacuum operated throttle kicker to prevent engine stalling when free-wheeling below 20 MPH.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC oil-wetted type Std., Heavy Duty oil-bath type #1528585 (first 3523 cars), #1529026 (after 3523 cars) Optl. NOTE—#844751 oil-wetted type crankcase breather (oil filler) cleaner used.

**Fuel Pump**—AC Type AJ #1523867 combination fuel-and-vacuum pump.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric. S-W No. 99255 (dash unit), 96466 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Willard Type SW-1-95 Std., SR-1-95 Exp. 6 volt, 15 plate, 95 A. H. capacity (20 hr. rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Positive (+) grounded to frame 'X' member. **Engine Ground**—Strap connector between transmission cover bolt and frame.

**Dimensions**—Length 9". Width 7". Height 8 13/16".

**Location**—Under left front seat.

## STARTER

### AUTO-LITE

**Auto-Lite Model MAW-4018.** Armature MAW-2006.

**Drive**—Outboard Barrel Type Bendix No. A-1718.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM., 175 amperes, 5.1 volts.

### Performance Data—Auto-Lite

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.6 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch:** Auto-Lite SS-4001 Magnetic type. Mounted on starter, controlled by switch on instrument panel.

For complete data, refer to Electrical Equipment Index.

## STARTER

### DELCO-REMY

**Delco-Remy Model 739-F.** Armature No. 1866105.

**Drive**—Outboard Barrel Type Bendix No. A-1718.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—125 RPM., 150 amperes, 5 volts.

### Performance Data—Delco-Remy

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	525

**Removal:** Same as for Auto-Lite above.

**Starting Switch:** Delco-Remy 1539 magnetic switch mounted on starter and controlled by pushbutton on dash.

For complete data, refer to Electrical Equipment Index.

### Delco-Remy 1539 Switch Specifications

Contacts close with current draw of 3.1-3.7 amperes at 4.0 volts. Remain closed with current of .54-.65 amperes at .7 volt.

## GENERATOR

### AUTO-LITE

**Auto-Lite Model GCJ-4807A-2 Std., GCJ-4810A-2** with Tachometer Drive. Third brush control type with external vibrating Voltage regulation. Ventilated by fan on drive pulley.

**Armature**—GCJ-2006 (GCJ-4807A-2) GCJ-2092 (GCJ-4810A-2).

**Maximum Charging Rate**—30.5 amperes (cold), 25.5 (hot), 8.0 volts. To check generator output, connect ammeter in charging line at regulator 'B' terminal, ground 'F' terminal to eliminate regulator action. Operate generator charging battery (do not run on open-circuit).

**Charging Rate Adjustment**—Third brush set for maximum output (1 comm. bar min., 1 comm. bar plus 1 mica strip max. from nearest or insulated main brush) and setting should not be exceeded. Actual charging rate regulated by Voltage Regulator. See Regulator data below.

### Performance Data—Auto-Lite

Cold		Hot	
Amperes	Volts	Amperes	Volts
0	6.4	0	6.4
4	6.6	4	6.65
8	6.85	8	6.9
12	7.05	12	7.15
16	7.25	16	7.4
20	7.5	20	7.65
24	7.7	24	7.9
28	7.9	28	8.0
30	8.0		3200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.9-2.1 amperes at 6.0 volts.

**Motoring Current**—4.0-4.4 amperes at 6.0 volts.

**Removal:**—Pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

C NTINUED ON NEXT PAGE

## CONTINUED FR M PRECEDIN PA E

**Belt Adjustment:**—Swing generator out until 25 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and pump pulley is  $\frac{1}{2}$ " with thumb pressure.

**GENERATOR****DELCO-REMY**

**Delc -Remy Model 1100005.** Armature No. 1866789. Fixed third brush with external vibrating voltage regulator. Air-cooled by fan on drive pulley.

**NOTE:**—Third brush is clamped in position for maximum safe output and should not be disturbed.

**Charging Rate Adjustment:**—Adjusted by changing Voltage Regulator setting. See Regulator data.

**Maximum Charging Rate:**—As shown in table below. To check charging rate, connect test ammeter in line at 'BAT' terminal on regulator, connect voltmeter between 'GEN' terminal and ground, ground 'F' terminal to eliminate regulator action.

**NOTE:**—Do not operate generator on open-circuit.

**Performance Data—Delco-Remy**

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ounces (main), 16-20 ounces (third brush).

**Field Current:**—2.3-2.6 amperes at 6.0 volts.

**Motoring Current:**—4.5 amperes at 6.0 volts.

**Removal & Belt Adjustment:** Same as for Auto-Lite above.

**REGULATOR****AUTO-LITE**

**Auto-Lite Model VRD-4001-B.** Consists of Cutout Relay and Voltage Regulator in case on dash.

**For complete data, refer to Electrical Equipment Index.**  
**NOTE:**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay—Auto-Lite**

**Cuts In:**—6.4-7.0 volts Cold, 710 RPM (Gen.).

**Cuts Out:**—5-3.0 amperes discharge.

**Contact Gap:**—.015" minimum.

**Air Gap:**—.034-.038" (contacts open). Measure at hinge end of core.

**Voltage Regulator—Auto-Lite**

**Setting:**—7.3-7.6 volts at 70° F.

**To Check (without breaking seal):**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH. charging battery until voltage is steady. Voltmeter reading should be between limits of 7.21-7.83 volts.

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap:**—.010-.020" (armature against stop pin).

**Air Gap:**—.0595-.0625" with contacts just opening.

**REGULATOR****DELCO-REMY**

**Delco-Remy Model 5827.** Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in single case.

**NOTE:**—Model 5860 (no 'IGN' terminal) used for replacement.

**For complete data, refer to Electrical Equipment Index.**

**Cutout Relay—Delco-Remy**

**Cuts In:**—6.9-7.6 volts, 850 R.P.M. (Gen.).

**Cuts Out:**—0-3 ampere discharge.

**Contact Gap:**—.020". **Air Gap:**—.020" (closed).

**Voltage Regulator—Delco-Remy**

**Setting:**—7.5-7.9 volts at 70° F., 7.4-7.6 volts at 150° F. Regulator over-compensated for temperature and must be checked at these points.

**Adjustment:**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between this terminal and 'BAT' terminal, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set), adjust regulator by bending spring hanger at lower end of armature spring slightly to secure setting given above.

**Contact Gap:**—.020". **Contact Spr. Tension:**—2.7-3.5 oz.

**Air Gap:**—.063" between armature and center of core with armature down. .010" between fiber bumper and stop with armature up.

**LIGHTING**

**LIGHTING:**—Headlamps. Hall Flex-beam type with pre-focused bulbs. Asymmetrical passing beam (lower beam left hand headlamp, upper beam right hand headlamp) controlled by beam selector switch on toeboard.

**Headlamp Adjustment:**—With tires properly inflated, car loaded to rated capacity, 25' from screen, aim left hand headlamp so hot spot centered on lamp vertical center-line with upper edge at horizontal lamp center-line. Aim right hand headlamp for same height but with left edge of hot spot at lamp vertical center-line (entire hot spot to right of center-line).

**Beam Indicator:**—In upper edge of speedometer dial. Lighted when upper beams (Country Driving) lighted.

**Switches**

**Lighting:**—Delco-Remy No. 1994507.

**Beam Selector:**—Delco-Remy No. 1997002.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Headlamps (Export)	32-21	1104
Parking, Fender, Radio	1½	55
Instr., Clock, Reading	1½	55
Beam & Heater Indicators	1	51
Stop & Tail	21-3	1158
Stop (Trunk Rack Equip.)	15	87
Tail (Trunk Rack Equip.)	3	63
License Plate	3	63
Dome	6	81
Fog Light	32	1321
Spotlight	32	1323

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—On lighting switch, protects lighting circuits. Remains closed with 25 amperes but opens in 2 minutes with 38 amperes. Not adjustable.

**FUSES:**—Dome, Stop Light and Accessories—Two 20 ampere. On back of lighting switch.

**Instrument and Tail Light:**—20 ampere. In connector in switch lead near lighting switch.

**Clock:**—2 ampere (Borg), 1 ampere (Western).

**HORNS:**—Sparton Model H-32. Vibrator type, Air tone, Twin horns operated by horn relay.

**Air Gap:**—.032-.035" (low note—long horn), .026-.030" (high note—short horn).

**Horn Current:**—22-25 amperes (total).

**Horn Relay:**—R-B-M Model 4760. **NOTE:**—Relay not adjustable (cover welded on).

**Closing Voltage:**—3.5-4.5 volts.

**ENGINE**

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

**Bore:**— $3\frac{1}{2}$ ". **Stroke:**— $4\frac{1}{4}$ ".

**Displacement:**—245.3 cu. ins. **Rated HP:**—29.4.

**Developed Horsepower:**—100 HP. (Std. 6.52-1 head),

103-105 HP. (Optl. 6.85-1 head) at 3600 R.P.M.

**Compression Ratio and Pressure:**—As follows:

6.52-1 Std. cast-iron hd.—110 lbs. at 125 R.P.M.

6.85-1 Optl. H.C. head—118 lbs at 125 R.P.M.

**NOTE:**—On later cars with .070" thick head gasket, these ratios reduced to 6.39-1 Std., 6.71-1 Optl.

**See Packard Shop Notes for Cylinder Head Identification, Replacement, and Installation data.**

**Vacuum Reading:**—Steady 18-20" idling at 6 M.P.H.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground.

**Weight:**—19.5 ozs. (stripped), 26 ozs. (with rings

and pin) and equal within 4 grams. **Length:**— $3\frac{7}{8}$ ".

**Removal:**—Piston and rods removed from above.

**Clearance:**—.0005-.001" skirt. See Fitting Pistons.

**Original Bore & Piston Sizes, Replacement Pistons:**—  
**See Packard Shop Notes for complete data.**

**Fitting New Pistons:**—Insert .0015" feeler  $\frac{1}{2}$ " wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:**—2 compression (Perfect Circle #70), one oil control (X-90) per piston, all above pin.

**Ring**      **Width**      **End Gap**      **Side Clearance**

Comp. #1 ...123-.1240".....007-.017".....0025-.003"

Comp. #2 ...123-.1240".....007-.017".....0025-.003"

Oil Contr. ...186-.1865".....007-.015".....0015"

**Replacement Rings:**—Furnished standard and .005", .010", .020", .030", and .040" oversize.

**PISTON PIN:**—Diameter— $\frac{7}{8}$ ". Length— $3\frac{1}{64}$ "

Pin floats in piston and rod, held by locking rings.

Furnished Std. and .003", .006" oversize.

**Pin Fit in Piston:**—Finger push fit with piston heated to 180° F.

**Pin Fit in Rod Bushing:**—Finger push fit at 70° F.

**CONNECTING ROD:**—Length— $7\frac{11}{16}$ ". Weight—33 ozs.

1939 CHANGE—After Eng. No. B-4607, bearings

are .010" thicker and rod holes .020" larger diameter. Rods with large hole marked '330613' on web at lower end. Use only thicker bearing shells (marked by inked star) in these rods.

**Upper Bearing (Piston Pin Bushing):**—Split type.

**See Packard Shop Notes for complete data.**

**Crankpin Journal Diameter:**— $2\frac{3}{32}$ ".

**Lower Bearing:**—Interchangeable steel-backed; bab-bitt-lined type. Bearings furnished std. and .001", .002", .003", .015" undersize. **NOTE:**—Bearing shells marked with inked star, must be used with new rods marked '330613' on web at lower end.

**Clearance:**—.0005-.0015". **Sideplay:**—.004-.010".

## ENGINE

## CONTINUED FROM PRECEDIN PA E

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps. Tighten bolt nuts to 715-725 in. lbs. See *Packard Shop Notes for 'Palmus' installation data on 1939 engines.*

**Installing Rods:**—Oil squirt hole to camshaft.

**CRANKSHAFT:**—4 bearing, integral counterweights with rubber friction disc vibration damper

**Journal Diameters:**— $2\frac{3}{4}$ ".

**Bearing Type:**—Interchangeable babbitt-lined steel shell type. Bearings furnished standard and .001" and .002" undersize.

**Clearance:**—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings (upper half can be 'rotated' in place). Do not file caps. Tighten bolt nuts to 980-1020 in. lbs.

**End Thrust:**—Taken by #1 bearing.

**Endplay:**—.003-.008".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

**Bearing Type:**—Steel-backed, babbitt-lined.

**Clearance:**—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. Endplay—.002-.004".

**Timing Chain:**—Morse No. 3682-R. Width  $1\frac{1}{4}$ ". Pitch .375". Length  $21\frac{3}{4}$ " or 58 links.

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across the shaft centers. See *Packard Shop Notes for Radiator & Fender (unit) removal for work on front end of engine.*

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.575"	.34025"	5 $\frac{5}{8}$ "
Exhaust	1 13/32"	.34025"	5 $\frac{5}{8}$ "
	Seat Angle	Lift	Stem Clearance
Intake	30°	.317-.319"	.001-.003"
Exhaust	45°	.3165-.3185"	.003-.005"

**Valve Guides:**—New type. Press in block so upper end  $31/32$ " below valve seat and finish-ream to size.

**Valve Springs:**—Intake and exhaust springs interchangeable.

**Spring Pressure**

**Length**

Valve Closed 47-52 lbs. 1 $\frac{5}{8}$ "

Valve Open 114-124 lbs. 1 $\frac{5}{16}$ "

**NOTE:**—Serrated washer installed on top of spring.

**Valve Lifters:**—Mushroom type. Remove from below with camshaft out. Service by reaming (work through valve guide) and installing oversize lifter. Furnished .001", .002", .005" oversize.

## VALVE TIMING

**Tappet Clearance:**—.007" Intake, .010" Exh. (hot).  
**NOTE:**—Remove right front fender plate for adj. to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**To Check Timing:**—Set tappet clearance #1 exhaust valve at .015". This valve should close with piston 5° or .0103" past top dead center when 5° point on flywheel (midpoint between second and third graduations after top dead center mark '#1 UP DC.') lines up with pointer on housing in inspection hole in left front face of flywheel housing below starter. Permissible variation 3 graduations either side of mark. Reset tappet clearance at .010" warm.

## LUBRICATION

**LUBRICATION:**—Gear type pump (right of engine).

See *Packard Shop Notes for Oil Pump Installation.*

**Crankcase Capacity:**—6 qts. (dry), 5 qts. (refill).

**Normal Oil Pressure:**—35 lbs. at 30 M.P.H. (warm oil).

**Oil Pressure Regulator:**—Mounted on pump cover. Not adjustable. Replace spring if pressure less than 5 to 8 lbs. at 2".

## COOLING

**COOLING SYSTEM:**—Capacity—15.2 quarts.

**Water Pump:**—Packless type with ball-bearing shaft.

See *Water Pump Section for complete data.*

**Thermostat:**—In top radiator tank. Operates shutters.

**Setting:**—Starts to open 135° F. Fully open 150°.

Install 162° thermostat in cylinder head for use with heaters (remove in summer).

**Adjustment:**—Pull back on shutter pullrod to close shutters, tighten nut on rod to remove all slack, then tighten 1 turn additional for pre-load.

## CLUTCH

**CLUTCH:**—Long Model 9 $\frac{1}{2}$  CF-CS. Semi-centrifugal, single plate, dry disc type.

See *Clutch Section for complete data.*

**Facings:**—Woven (US Asbestos 1133G), 2 required. Inside Diam. 6". Outside Diam. 9 $\frac{1}{2}$ ". Thickness .125".

**Adjustment:**—Adjust nut on pedal rod (at clutch fork) for  $1\frac{1}{2}$ -2" pedal free movement.

See *Packard Shop Notes for 1941 design clutch linkage which may be installed on these cars to correct wear.*

**Removal:**—Remove Transmission (see Transmission Removal following). Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover capscrews, remove clutch from below.

## TRANSMISSION

**TRANSMISSION:**—Own Make. New type with constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur gear for reverse). Synchronizing mesh (second and high).

See *Transmission Section for complete data.*

**Transmission Control:**—Own Remote Control type.

See *Transmission Section for complete data.*

**Removal:**—Disconnect shifter rods, speedometer cable, ground strap at transmission case. Disconnect drive shaft at front universal and block shaft up against floorpan. Support rear end of engine, unbolt cross-member from frame (on cars with Econo-Drive remove cross-member at rear with stabilizer, disconnect wires at solenoid). Disconnect hand brake cable at equalizer, remove flywheel housing lower cover, clutch throwout retracting spring. Take out transmission-to-bell housing mounting screws and remove assembly.

## OVERDRIVE

**OVERDRIVE (ECONO-DRIVE) 1939:** Warner Model AS9-R6 overdrive unit with electrical control. See *Transmission Section for complete data.*

► Overdrive Change—New Reverse Switch added on later cars (should be installed on early cars): See *Warner R6 Overdrive Control in Transmission Section.*

**Overdrive Solenoid:**—Delco-Remy Model 1569.

**Throttle Switch:**—R-B-M. Adjust for .046" clearance

between switch plunger and accelerator pedal tappet screw with throttle valve wide open (see that pedal has sufficient over-travel to close switch).  
**Control Relay:**—R-B-M Model 4780. No fuse used.

## UNIVERSALS

**UNIVERSAL JOINT:**—Mechanics. Model 2C (Std.), 3C (With Econo-Drive). Needle bearing type. 2 used. See *Universals Section for complete data.*

**CAUTION:**—Do not loosen universal flange nut on first '39 cars (nut controls overdrive rear bearing pre-load). On later '39 cars (with 'M' stamped on flange), bearing pre-load controlled by spring washer and nut should be kept tight.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

**Ratio:**—4.54-1 Std., 4.7-1 with Econo-Drive trans'm.

**Optl. ratios** 4.36-1, 4.54-1, 4.7-1.

**Backlash:**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment:**—Endplay controlled by shims between flanged end of housing and brake backing plate. Endplay—.004-.007".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Model 1966-D (right frt.), 1966-C (left frt.), 1751-Z (right rear), 1751-M (left rear). Double acting, hydraulic type.

See *Shock Absorber Section for complete data.*

**Fifth Shock Absorber (Stabilizer):**—Houdaille Model NFT. Double acting, hydraulic, adjustable type.

See *Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent 'Safe-T-flex' type. See *Front Suspension Section for complete data.*

**NOTE:**—Frame height must be set first.

**Frame Height:**—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 18 $\frac{3}{4}$ " (load car until figure correct).

**Kingpin Inclination:**—1°54' crosswise.

**Camber:**— $\frac{1}{2}$ ° (plus  $\frac{3}{4}$ °, minus 0°). Adjustable.

**Caster:**—1 $\frac{1}{2}$ ° plus or minus  $\frac{1}{2}$ °. Shim adjustment.

**Toe In:**—1/32-1/16" at hub height. Adjust both tie rods equally (must be equal after adjustment).

## STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

See *Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Hand lever applies rear service brakes.

See *Brake Section for complete data.*

**Drums:**—Centrifuge. Diameter—11".

**Lining:**—Marshall #2201 (all shoes). Width 1 $\frac{3}{4}$ ".

**Thickness** 3/16". Length 12" per shoe.

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes (above).

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On front of dash (Use Engine No.).

**ENGINE NUMBER:**—First number B-300001. Stamped on boss on upper left hand side of cylinder block.

## TUNE-UP

**COMPRESSION:**—Ratio—6.41-1 Std., 6.85-1 Optl.

NOTE—Heads marked by number 330812 (6.41-1), 341344 (6.85-1) cast in top surface of head.

Pressure—110 lbs. (Std. 6.41-1 head), 118 lbs. (Optl. 6.85-1 head) at 125 RPM.

**VACUUM READING:**—Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm.

Gaps—.028". Limits .026-.030".

NOTE—If colder plug required use AC No. 103S or Champion Early Y-4. Do not tighten these small plugs excessively. Tightening tension 50 in. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Limit .017" maximum.

Cam Angle—27° Closed with .017" Breaker Gap.

Automatic Advance—8¾° max. at 2000 RPM (distr.).

Vacuum Advance—6° (distr.) with 17" of vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—8-9½° BTDC. (All heads). Flywheel mark (correct degree mark ahead of #1UPDC) aligned with inspection hole pointer below starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 6 MPH.

Float Level—Fuel level 15/32" below edge of bowl.

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

Tappet Clearance .007" Intake, .010" Exhaust, hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 8058.

**Ignition Lock:**—Briggs & Stratton. Mitchell #6760.

**COIL:** Auto-Lite Model No. CE-4632. Service Coil (less switch & cable) CE-3224ES. On left side of block.

Ignition Current—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671-J.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGT-4007-A. Single breaker, 8 lobe cam, full automatic advance type with Vacuum Spark Control and Fuel Compensator. Refer to *Electrical Equipment Index for Auto-Lite Distributor servicing article covering these distributors.*

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and marked by number (#6) on plate.

Contact Gap—.015" Limit .017" Max.

Cam Angle or Dwell—27° clsd., 17° open (.017" gap).

Breaker Arm Spring Tension—18-20 ozs.

Rotation—Counter-clockwise viewed from the top.

## Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
.8	400	1.6	800
2	550	4	1100
4	800	8	1600
6	1300	12	2600
8.75	2000	17.5	4000

**Vacuum Spark Control:**—Integral type. Mounted on distributor cup and linked to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

## Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	10.0"
2	4	12.25"
4	8	14.6"
6	12	17.0"

**Fuel Compensator:**—Manual adjustment at distributor providing 10° advance or retard from center 'O' point. See Ignition Timing for setting.

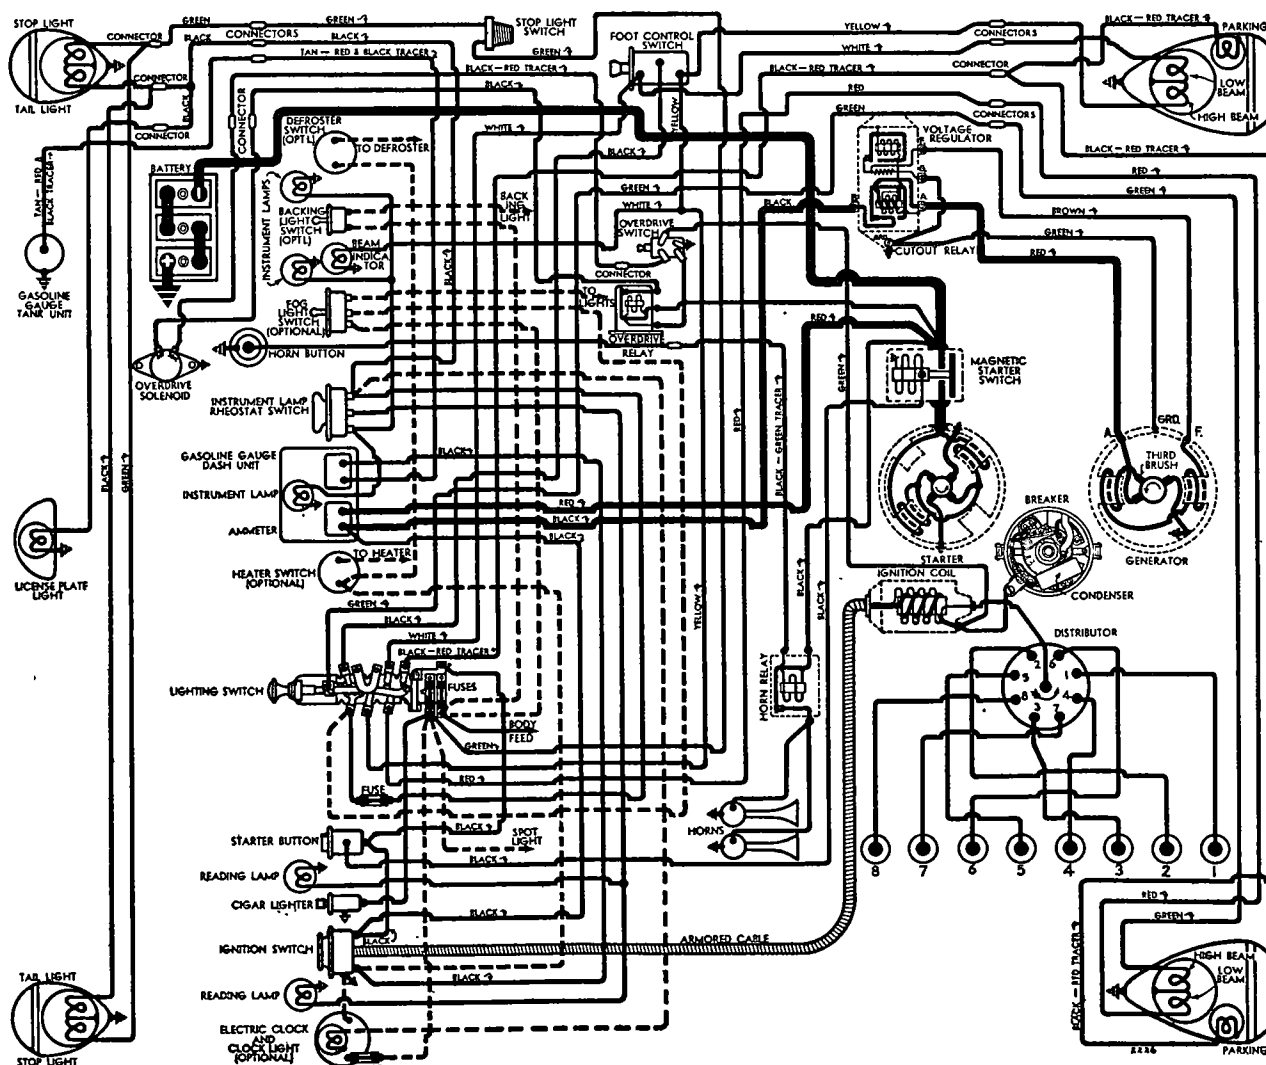

**Distributor Removal:**—Mounted on left hand side of crankcase. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard Setting as follows (see Fuel Compensator Setting below):

Flywheel Degrees      Piston Position

All Engines.....8-9½° BTDC......0262-.0371° BTDC  
(Correct for both 6.41-1 & 6.85-1 Engines).

See Transmission Section for late 1939 type Overdrive Control Wiring

**NOTE**—Flywheel marked #1 UP D.C. with five 2° graduations before and after this point.

**Timing**—Remove inspection hole cover (left front face of flywheel housing below starter). Loosen thumbnut, set Fuel Compensator pointer at '0' (center graduation on scale), tighten thumbnut. With #1 piston on compression, turn engine over until correct graduation on flywheel before top dead center mark '#1 UP D.C.' line up with pointer on housing. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting (below).

**Timing (Neon Timing Light)**—White mark provided on flywheel to indicate timing range (leading edge of mark is 8° BTDC). Idle engine and adjust distributor.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise toward low end of scale (if ping too severe), clockwise toward high end of scale (if no ping noted), recheck performance.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg EE-16 No. A-18341 (code marked 10-33 on upper main body flange or float bowl cover). 1" Duplex double barrel type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warmed up so that Automatic Choke and Fast Idle inoperative, set throttle lever stopscrew so that engine idles at 6 MPH., turn idle adjusting screw (for each barrel in succession) out until engine begins to roll, then turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idle speed.

**Accelerating Pump**—No seasonal adjustment.

**Fast Idle**—Integral type (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*  
**Setting**—Turn fast idle adjusting screw in to contact lowest step of fast idle cam, then back screw off ½ turn.

**Automatic Choke**—Integral (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*  
**Setting**—Inverted 'V' mark on cover scale to line up with reference mark on housing. **NOTE**—Setting may be varied 2 graduations either way, if required, for satisfactory warming up performance.

**Throttle Guard (Cars with Overdrive)**—Vacuum operated throttle-kicker to prevent engine stalling when free-wheeling below 20 M.P.H.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529027 heavy-duty type oil-bath air cleaner Std. **NOTE**—#844751 oil-wetted type crankcase breather (oil filler) cleaner used.

**Fuel Pump**—AC Type AJ #1523867 combination fuel-and-vacuum pump. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric. S-W No. 99255 (Dash unit), 98259 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Prest-O-Lite, Type HP2-17, 6 volt, 17 plate, 114 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes.

**Grounded Terminal**—Positive (+) grounded to frame 'X' member. **Engine Ground**—Strap Connector between transmission cover bolt and frame.

**Dimensions**—Length 10 5/16". Width 7". Height 8 3/4". **Location**—Under left front seat.

**Export Battery**—Willard Type HR-2-120, 6 volt, 17 plate, 120 A.H. Capacity (20 hr. rate).

**Starting Capacity**—152 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage 4.4 volts.

**Dimensions**—Length 10 1/4". Width 7". Height 9".

## STARTER

**Auto-Lite Model MAW-4018**. Armature MAW-2006.

**Drive**—Outboard Barrel Type Bendix No. A-1718.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM., 175 amperes, 5.1 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.6 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal**—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch**—Model SS-4001. Magnetic type. Mounted on starter, controlled by switch on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Model GCJ-4807A-2 Std.**, GCJ-4810A-2 with Tachometer Drive. Third brush control type with external vibrating Voltage regulation. Ventilated by fan on drive pulley.

**Armature**—GCJ-2006 (GCJ-4807A-2), GCJ-2092 (GCJ-4810A-2).

**Maximum Charging Rate**—30.5 amperes (cold), 25.5 (hot), 8.0 volts. To check generator output, connect ammeter in charging line at regulator 'B' terminal, ground 'F' terminal to eliminate regulator action. Operate generator charging battery (do not run on open-circuit).

**Charging Rate Adjustment**—Third brush set for maximum output (1 comm. bar min., 1 comm. bar plus 1 mica strip max. from nearest or insulated main brush) and setting should not be exceeded. Actual charging rate regulated by Voltage Regulator. See Regulator data below.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	800	0	6.4	840
4	6.6	900	4	6.65	960
8	6.85	1025	8	6.9	1100
12	7.05	1160	12	7.15	1270
16	7.25	1330	16	7.4	1520
20	7.5	1560	20	7.65	1860
24	7.7	1900	24	7.9	2460
28	7.9	2400	28	8.0	3600
30	8.0	3200			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.9-2.1 amperes at 6.0 volts.

**Motoring Current**—4.0-4.4 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Swing generator out until 25 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and pump pulley is ½" with thumb pressure.

## REGULATOR

**Auto-Lite Model VRD-4001B**. Consists of Cutout Relay and Voltage Regulator in case on dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold, 710 RPM (Gen.).

**Cuts Out**—5-3.0 amperes discharge.

**Contact Gap**—.015" Minimum.

**Air Gap**—.034-.038" (contacts open). Measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F.

**To Check (without breaking seal)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH. charging battery until voltage is steady. Voltmeter reading should be between limits of 7.21-7.83 volts.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap**—.010-.020" (armature against stop pin).

**Air Gap**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING**—Headlamps. Hall Flex-beam type with pre-focused bulbs. Asymmetrical passing beam (lower beam left hand headlamp, upper beam right hand headlamp) controlled by beam selector switch on toeboard.

**Headlamp Adjustment**—With tires properly inflated, car loaded to rated capacity, 25' from screen, aim left hand headlamp so hot spot centered on lamp vertical center-line with upper edge at horizontal lamp center-line. Aim right hand headlamp for same height but with left edge of hot spot at lamp vertical center-line (entire hot spot to right of center-line).

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Beam Indicator**—In upper edge of speedometer dial. Lighted when upper beams (Country Driving) lighted.

**Switches**

**Lighting**—Delco-Remy No. 1994507.

**Beam Selector**—Delco-Remy No. 1997002.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Headlamps (Export)	32-21	1104
Parking, Fender	1½	55
Instr., Clock, Reading	1½	55
Beam & Heater Indicators	1	51
Stop & Tail	21-3	1158
Stop (Trunk Rack Equip.)	15	87
Tail (Trunk Rack Equip.)	3	63
License Plate	3	63
Dome	6	81
Fog Light	32	1321
Spotlight	32	1323

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—On lighting switch, protects lighting circuits. Remains closed with 25 amperes but opens in 2 minutes with 38 amperes. Not adjustable.

**FUSES**—Dome, Stop Light & Accessories—Two 20 ampere. On back of lighting switch.

**Instrument & Tail Light**—20 ampere. In connector in switch lead near lighting switch.

**Clock**—2 ampere (Borg), 1 ampere (Western).

**HORNS**—Sparton Model H-32. Vibrator type, Air tone, Twin horns operated by relay.

**Air Gap**—.032-.035" (low note—long horn), .028-.030" (high note—short horn).

**Horn Current**—22-25 amperes (total).

**Horn Relay**—R-B-M Model 4760. NOTE—Relay not adjustable (cover welded on).

**Closing Voltage**—3.5-4.5 volts.

**ENGINE**

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head.

**Bore**—3¼". **Stroke**—4¼".

**Displacement**—282.04 cu. ins. **Rated HP.**—33.8.

**Developed Horsepower**—120 HP. (Std. 6.41-1 hd) at 3800 R.P.M.

**Compression Ratio**—6.41-1 Std., 6.85-1 Optl.

**Compression Pressure**—110 lbs. (Std. 6.41-1 hd.), 118 lbs. (Optl. 6.85-1 hd) at 125 R.P.M.

**Vacuum Reading**—Steady 18-21" idling at 6 M.P.H.

See Packard Shop Notes for Cylinder Head data.

**PISTONS**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground.

**Weight**—16½ ozs. (stripped), 22¾ ozs. (with rings and pin) and equal within 4 grams. **Length**—3⅞".

**Removal**—Pistons and rods removed from above.

**Clearance**—.0005-.001" skirt. See Fitting Pistons.

**Original Bore & Pistons Sizes, Replacement Pistons**—

See Packard Shop Notes for complete data.

**Fitting New Pistons**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons**—Slot toward valves.

**PISTON RINGS**—2 compression (Perfect Circle #70), one oil control (#X90-85) per piston, above pin.

**Ring** **Width** **End Gap** **Side Clearance**

Comp. #1 .....123-.1240"......007-.017"......0025-.003"

Comp. #2 .....123-.1240"......007-.017"......0025-.003"

Oil Contr. ....186-.1865"......007-.015"......0015-.002"

**Replacement Rings**—Furnished standard and .005", .010", .020", .030", and .040" oversize.

**PISTON PIN**—Diameter—⅞". Length—2 51/64".

Pin floats in piston and rod, held by locking rings. Furnished std. and .003", .006" oversize.

**Pin Fit in Piston**—Finger push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing**—Finger push fit at 70°F.

**CONNECTING ROD**—Length—7 11/16". Weight 33 ozs.

1939 CHANGE—After Engine No. B-303053, bearings are .010" thicker and rod hole .020" larger diameter. Rods with large hole marked '330613' on web at lower end. Use only thicker bearing shells (marked by inked star) in these rods.

**Upper Bearing (Piston Pin Bushing)**—Split type. See Packard Shop Notes for complete data.

**Crankpin Journal Diameter**—2 3/32".

**Lower Bearing**—Interchangeable steel-backed, babbit-lined type. Bearings furnished std. and .001", .002", .003", .015" undersize. NOTE—.010" thicker bearing shells (marked by inked star) should be used on rods marked '330613' on web at lower end. Clearance—.0005-.0015". Sideplay—.004-.010".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file rods or caps. Tighten bolt nuts to 715-725 in. lbs. See Packard Shop Notes for 'Palnut' installation data.

**Installing Rods**—Oil squirt hole to camshaft.

**CRANKSHAFT**—5 bearing, integral counterweights with rubber friction disc vibration dampener.

**Journal Diameters**—2¾".

**Bearing Type**—Interchangeable babbit-lined steel shell type. Bearings furnished standard and .001" and .002" undersize. Clearance—.001-.003".

**Bearing Adjustment**—None (no shims). Replace bearings (upper half can be 'rotated' in place). Do not file caps. Tighten bolt nuts to 980-1020 in. lbs.

**End Thrust**—Taken by #3 bearing.

**Endplay**—.003-.008".

**CAMSHAFT**—5 bearing. Non-adjustable chain drive.

**Bearing Type**—Steel-backed, babbit-lined.

**Clearance**—.001-.003".

**End Thrust**—Taken by thrust plate in back of camshaft sprocket. **Endplay**—.002-.004".

**Timing Chain**—Morse No. 3682-R. Width 1¼". Pitch .375". Length 21¾" or 58 links.

**Camshaft Setting**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across shaft centers with #1 piston on top dead center.

See Packard Shop Notes for Radiator & Fender (unit) removal for work on front end of engine.

**VALVES**— **Head Diameter** **Stem Diameter** **Length**

Intake ..... 1 17/32"......34025"......5⅝"

Exhaust ..... 1 13/32"......34025"......5⅝"

**Seat Angle** **Lift** **Stem Clearance**

Intake ..... 30°......317-.319"......001-.003"

Exhaust ..... 45°......3165-.3185"......003-.005"

**Valve Guides**—New type. Press in block so that upper end 31/32" below valve seat and finish-ream to size.

**Valve Springs**—Intake and exhaust springs interchangeable. **Spring Pressure** **Length**

Valve Closed ..... 47-52 lbs.....1 5/8"

Valve Open ..... 114-124 lbs.....1 5/16"

NOTE—Serrated washer on top of each spring.

**Valve Lifters**—Mushroom type. Remove from below with camshaft out. Service by reaming (work through valve guide) and installing oversize lifter. Furnished .001", .002", .005" oversize.

**VALVE TIMING**

**Tappet Clearance**—.007" Intake, .010" Exh. (hot).

NOTE—Remove right front fender apron for access to valves.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**To Check Timing**—Set tappet clearance #1 exhaust valve at .015". This valve should close with piston 5° or .0103" past top dead center when 5° point on flywheel (midpoint between second and third graduations after top dead center mark '#1 UP DC.') lines up with pointer on housing in inspection hole in left front face of flywheel housing below starter. Permissible variation 3 graduations either side of mark. Reset tappet clearance at .010" warm.

**LUBRICATION**

**LUBRICATION**—Pressure system with gear type oil pump mounted on right side of engine.

See Packard Shop Notes for Oil Pump installation.

**Normal Oil Pressure**—35 lbs. at 30 M.P.H. (warm oil).

**Oil Pressure Regulator**—Mounted on pump cover. Not adjustable. Replace spring if pressure less than 5 to 8 lbs. at 2".

**Crankcase Capacity**—6 quarts (refill).

**COOLING**

**COOLING SYSTEM**—Capacity—15 quarts.

**Water Pump**—Packless type with ball-bearing shaft. See Water Pump Section for complete data.

**Thermostat**—In top radiator tank. Operates shutters. Use 162° thermostat in cylinder head outlet for heaters. Remove this thermostat in summer.

**Setting**—Starts to open 135°F. Fully open 150°.

**Adjustment**—At room temperature with thermostat syphon closed, pull back on shutter pulldrod to close shutters, tighten nut on rod to remove all slack, then tighten 1 turn additional for pre-load.

**CLUTCH**

**CLUTCH**—Long Model 10 CF-CL. Semi-centrifugal, single plate, dry disc type.

See Clutch Section for complete data.

**Facings**—Woven (US Asbestos 1133G), 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .125".

**Adjustment**—Adjust nut on pedal rod (at clutch fork) for 1½-1¾" pedal free movement.

See Packard Shop Notes for 1941 design clutch linkage which may be installed on these cars to correct wear.

**Removal**—Remove transmission (see Transmission Removal following). Remove clutch throwout bearing, pedal rod, and mounting screws in clutch cover flange, remove clutch from below.

## TRANSMISSION

**TRANSMISSION:**—Own Make. New type with constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur gear for reverse). Synchro-mesh (second and high).

*See Transmission Section for complete data.*

**Transmission Control:**—Own remote control type.

*See Transmission Section for complete data.*

**Removal:**—Disconnect shifter rods, speedometer cable, ground strap at transmission case. Disconnect drive shaft at front universal and block shaft up against floorpan. Support rear end of engine, unbolt cross-member from frame (on cars with Econo-Drive remove cross-member at rear with stabilizer, disconnect wires at solenoid). Disconnect hand brake cable at equalizer, remove flywheel housing lower cover, clutch throwout retracting spring. Take out transmission-to-bell housing mounting screws and remove assembly.

## OVERDRIVE

**OVERDRIVE (ECONO-DRIVE) 1939:** Warner Model AS9-R6 overdrive unit with electrical control. *See Transmission Section for complete data.*

► **Overdrive Change**—New Reverse Switch added on later cars (should be installed on early cars): *See Warner R6 Overdrive Control in Transmission Section.*

**Overdrive Solenoid**—Delco-Remy No. 1569.

**Throttle Switch**—R-B-M. Adjust for .046" clearance between switch plunger and accelerator pedal tappet screw with throttle valve wide open (see that pedal has sufficient over-travel to close switch).

**Control Relay**—R-B-M. Model 4780. No fuse used.

## UNIVERSALS

**UNIVERSAL JOINT:**—Mechanics Model 3C. Needle bearing type. Two used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratios**—4.36-1 Std., 4.54-1 with Overdrive unit.

Long wheelbase—4.7-1 Std. 4.9-1 with Overdrive.

Optional ratios—4.36-1, 4.54-1, 5.22-1.

**Backlash**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment**—Endplay controlled by shims between flanged end of housing and brake backing plate. Endplay—.004-.007".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Model 1966-D (right frt.), 1966-C (left frt.), 1751-Z (right rear), 1751-M (left rear). Double acting, hydraulic type.

*See Shock Absorber Section for complete data.*

**Fifth Shock Absorber (Stabilizer):**—Houdaille Model NPT. Double acting, hydraulic, adjustable type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent 'Safe-T-flex' type *See Front Suspension Section for complete data.*

**NOTE**—Frame Height must be set first before checking Caster and Camber.

**Frame Height**—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 19¼" (load car for correct figure).

**Kingpin Inclination**—1°54' crosswise.

**Camber**—½° (plus ¾°, minus 0°). Adjustable.

**Caster**—1½° (1701), 0° (1702) plus or minus ½°.

**Toe In**—0" (plus 1/16", minus 0") at hub height. Adjust tie rods equally (lengths must be equal after adjustment).

## STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 330)

Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums**—Centrifuse. Diameter—12".

**Lining**—Marshall #2201 (1701). US Asbestos #714—primary, #589—secondary (1701A,2). Width 1¾" (1701), 2¼" (1701A,2). Thickness 3/16". Length 13" per shoe.

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes (above).

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On front of dash (Use Engine No.).  
**ENGINE NUMBER:**—First number B-500001. Stamped on boss on upper left hand side of cylinder block.

## TUNE-UP

**COMPRESSION :**—Ratio—6.45-1 Std., 6.85-1 Optl. HC, 6.20-1 Optl. LC. NOTE—Heads marked 242511 (6.45-1), 335618 (6.85-1), 338960 (6.20-1).

Pressure—110 lbs. (Std. 6.45-1 Hd.), 118 lbs. (Optl. 6.85-1 Hd.) at 125 RPM cranking speed.

**VACUUM READING:** Steady 18-19" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .026-.030".

NOTE—If colder plug required use AC No. 103S or Champion early Y-4. Do not tighten these small plugs excessively. Tightening tension 50 in. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Limit .017" maximum.

Cam Angle—27° Closed with .017" Breaker gap.

Automatic Advance—10½° max. at 1600 RPM (distr.)

Vacuum Advance—5½° (distr.) with 16" vacuum.

**IGNITION TIMING** See Ignition Timing.

Std. Setting 7-8½° BTDC. Vibration dampener mark (correct degree mark ahead of #1 UP D.C.) aligned with pointer at front of engine. See Ignition Timing for Settings on engines with optional heads.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between 'miss' and 'roll' points. Idle speed 6 MPH.

Float Level—Fuel level ⅝" below edge of bowl.

Accelerating Pump—Inner Hole (Summer), outer (Winter).

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that manifold valve operates freely (valve must not stick or bind). Do not oil control.

**VALVES:** See Valve Timing.

Tappet Clearance—.006" Intake, .008" Exh., hot.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 8060.

**Ignition Lock:**—Briggs & Stratton, Mitchell #6760.

**COIL:** Auto-Lite Model No. CE-4633. Service Coil (less switch & cable) CE-3224LS. On cylinder head.

Ignition Current—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671G.

Capacity—.20-.25 microfarad..

**DISTRIBUTOR:** Auto-Lite Model IGT-4006-A. Single breaker, 8 lobe cam, full automatic advance type with Vacuum Spark Control and Fuel Compensator.

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and marked by number (#5½) on plate.

Breaker Gap—.015". Limit .017" Max.

Cam Angle or Dwell—27° clsd., 18° open (.017" gap).

Breaker Arm Spring Tension—18-20 ozs.

Rotation—Clockwise viewed from the top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	500
2½	500	5	1000
5	700	10	1400
7½	1100	15	2200
10½	1600	21	3200

**Vacuum Spark Control:**—Integral type. Mounted on distributor cup and linked to breaker plate. Provides additional advance at all speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG).
Start	0	7"
2	4	10½"
4	8	13½"
5½	11	16"

**Fuel Compensator:**—Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on cylinder head. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting (for 76 Octane fuel) as follows. See Fuel Compensator Setting.

Flywheel Degrees Piston Position

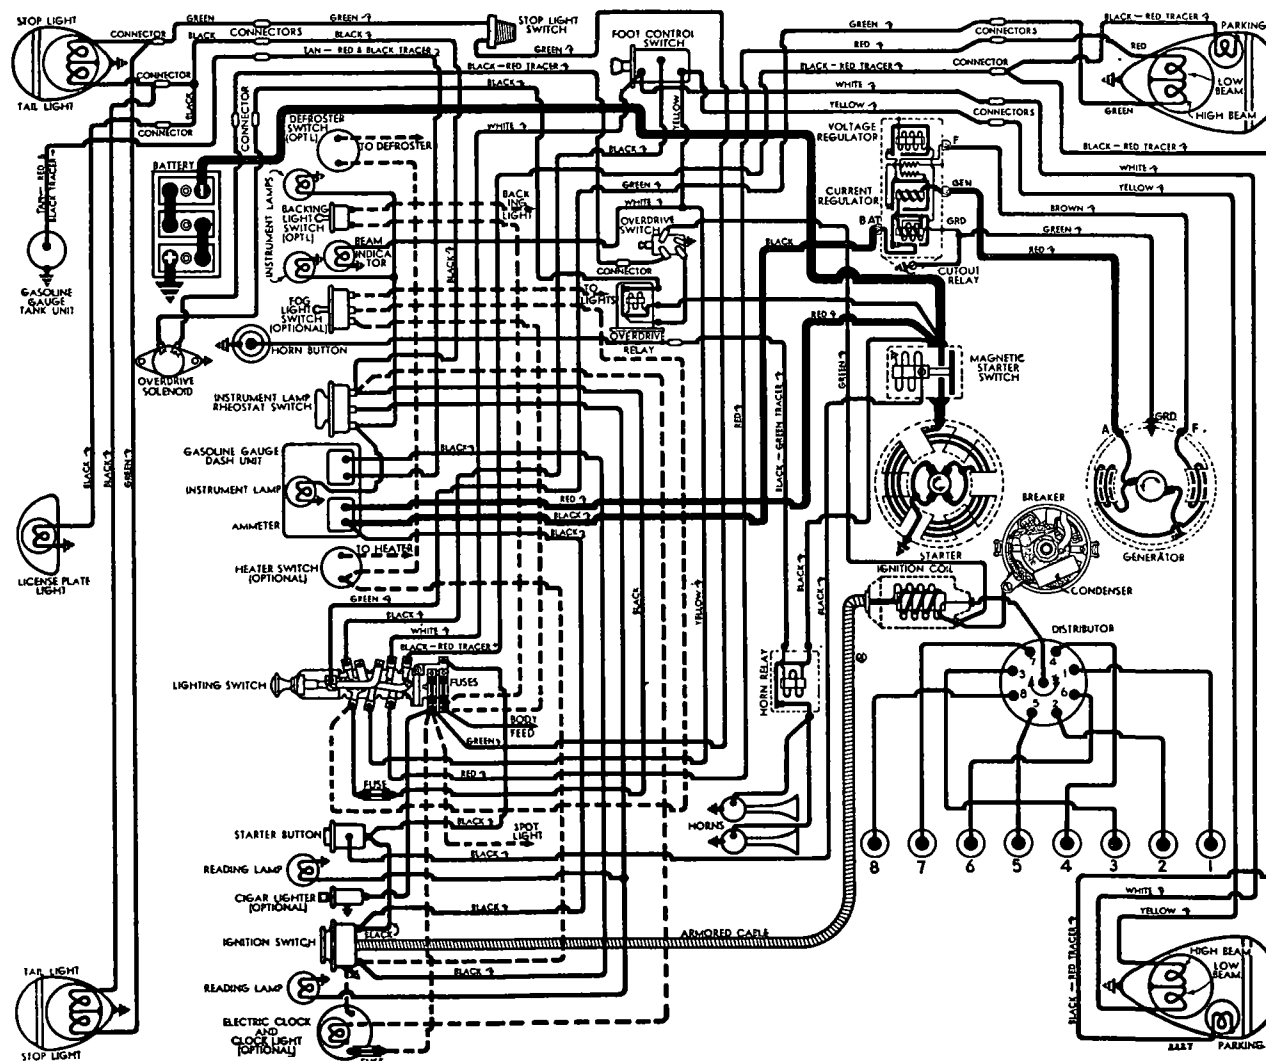

Std. 6.45-1 Head.....7-8½° BTDC.....0230-.0338° BTDC

Optl. HC. 6.85-1.....5-6½° BTDC.....0117-.0199° BTDC

Optl. LC. 6.20-1.....8-9½° BTDC.....0299-.0421° BTDC

NOTE—Vibration dampener marked #1 UP D.C. at #1 TDC. point with 15-1° graduations each side.

Timing—Loosen thumbnut, set Fuel Compensator pointer at '0', tighten thumbnut. With #1 piston on compression, turn engine over until piston

See Transmission Section for late 1939 type Overdrive Control Wiring

reaches firing position (see table above), stop when correct graduation on vibration dampener at front of engine lines up with pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting.

**Timing (Neon Timing Light)**—Mark vibration dampener with white paint at proper point, idle engine below 500 RPM., adjust distributor (above).

**Fuel Compensator Setting**—Should be set for light ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise toward low end of scale (if ping too severe), clockwise toward high end of scale (if no ping noted), recheck performance.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-23. 1¼" Duplex or double barrel, downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warmed up so that Automatic Choke and Fast Idle inoperative, set throttle lever stopscrew so that engine idles at 6 MPH., turn idle adjusting screw for each barrel (in succession) out until engine begins to roll, then turn screw in slowly until engine fires smoothly, readjust throttle stopscrew for correct idling speed.

**Accelerating Pump**—Two holes provided in throttle lever for pump link engagement as follows:

Outer Hole (Max.)—Normal fuel and weather.

Inner Hole (Min.)—Hot weather, high-test fuel.

**Fast Idle:**—Integral (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Turn fast idle screw in 2½-3 turns from point where it contacts fast idle cam (with choke valve closed) to provide .018-.020" throttle opening.

**Automatic Choke:**—Integral (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Pointer on thermostatic coil plate to line up with punchmark (10 notches Rich). Setting may varied 3 graduations, if required, for satisfactory warming up performance.

**Throttle Guard (Cars With Overdrive):**—Vacuum operated throttle-kicker to prevent engine stalling when free-wheeling below 20 M.P.H.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1529077 heavy-duty oil-bath type Std. NOTE—#1528066 oil-wetted type crankcase breather (oil filler) cleaner used.

**Fuel Pump:**—AC Type AJ #1523896 combination fuel-and-vacuum pump. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Stewart (Stewart-Warner) Electric. S-W No. 99332 (dash unit), 98259 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Prest-O-Lite, Type HP2-17. 6 volt, 17 plate, 114 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes.

**Grounded Terminal**—Positive (+) grounded to frame 'X' member. Engine Ground—Strap Connector between transmission cover bolt and frame.

**Dimensions**—Lgth. 10 5/16". Width 7 1/16". Hgt. 8¾".

**Location**—Under left front seat.

**Export Battery**—Willard Type SR-5-153. 6 volt, 19 plate, 153 A.H. Capacity (20 hr. rate).

**Starting Capacity**—180 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 6.6 minutes. Five second voltage 4.5 volts.

**Dimensions**—Length 13". Width 7 1/16". Height 9 5/16".

## STARTER

**Owen-Dyneto Model DI-1568.** Armature No. 16666. Drive—Outboard Barrel type Bendix No. A-1729. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—56-60 ozs. (new brushes). Cranking Engine—125 RPM., 150 amperes, 5.5 volts.

### Performance Data—Owen-Dyneto

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4500	6.0	60
5.0 "	1010	5.2	200
9.4 "	650	4.8	300
14.2 "	410	4.5	400
19.3 "	220	4.2	500
24.0 "	100	3.8	600
29.2 "	Lock	3.6	730

**Removal:**—Sleeve mounted on left front face of fly-wheel housing. To remove, take out pilot mounting screw in housing.

**Starting Switch:** Auto-Lite SS-4012. Magnetic type, on starter controlled by switch on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Model GCO-4803A, 4807A; GCO-4806A, 4808A** With Tachometer Drive. Two Brush straight shunt type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Armature Nos.**—GCO-2006F (GCO-4803A, 4807A), GCO-2047F (GCO-4806A, 4808A).

**Maximum Charging Rate**—28 amperes, 8.0 volts, 1850 RPM. and above (with load or discharged battery). Actual charging rate controlled by regulator and dependent on battery condition.

**Charging Rate Adjustment**—No adjustment at generator. See Regulator data below.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	825	0	6.4	900
4	6.6	940	4	6.6	1025
8	6.85	1050	8	6.85	1160
12	7.1	1175	12	7.1	1310
16	7.3	1300	16	7.3	1475
20	7.55	1450	20	7.55	1660
24	7.8	1610	24	7.8	1880
28	8.0	1850	28	8.0	2200

NOTE—28 amperes is Current Regulator setting.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. Max. (new brushes).

**Field Current**—1.47-1.63 amperes at 6.0 volts.

**Motoring Current**—3.94-4.46 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator ut until 40 lb. reading secured on spring scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and pump pulleys is ½-¾" with thumb pressure.

## REGULATOR

**Auto-Lite Model VRB-4012A.** Consists of Cutout Relay, vibrating Voltage Regulator and Current Regulator in case on dash.

*For complete data, refer to Electrical Equipment Index.*

NOTE—Regulator cover sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts, 800 R.P.M. Cold.

**Cuts Out**—5-3.0 ampere discharge current.

**Contact Gap**—.015" Minimum.

**Air Gap**—.034-.038" with contacts open, measured at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 MPH. until voltage is steady. Voltage should be within limits of 7.21-7.83 volts.

**To Adjust (with cover removed)**—Change armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section for complete adjustment directions.

**Contact Gap**—.010-.020" (armature against stop pin).

**Air Gap**—.0595-.0625" with contacts just opening.

### Current Regulator

**Setting**—27-29 amperes (marked '28' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage test (above). Operate generator at 30 MPH., add load (use bank of headlamp bulbs or turn on car lights and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 28 amperes (if more than slight excess, regulator is defective).

**Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

## LIGHTING

**LIGHTING:**—Guide Multi-beam, 'cross-beam' type with pre-focused bulbs. Asymmetrical passing beam (Upper beam left hand headlamp, lower beam right hand headlamp) controlled by Beam Selector Switch on toeboard.

**Headlamp Adjustment**—With tires properly inflated, car loaded to rated capacity, 25' from screen and upper beams lighted, aim left hand headlamp so that hot spot centered on horizontal line at lamp center height and left edge of hot spot touching vertical line directly ahead of lamp center (entire hot spot to right of this line). Aim right hand headlamp for same height but with right edge of hot spot 10" to right of vertical line directly ahead of this lamp.

**Beam Indicator**—In Speedometer dial. Lighted when Upper Beams (Country Driving) in use.

### Switches

**Lighting**—Delco-Remy No. 1994507.

**Beam Selector**—Delco-Remy No. 1997002.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—On lighting switch, protects lighting circuits. Remains closed with 25 amperes but opens in 2 minutes with 38 amperes. Not adjustable.

**FUSES:**—Dome, Stop Light & Accessories—Two 20 ampere. On back of lighting switch.  
Instrument & Tail Light—20 ampere. In connector in switch lead near lighting switch.  
Clock—2 ampere (Borg), 1 ampere (Western).

**HORNS:**—Sparton Model H-32. Vibrator type, Air tone, Twin horns operated by relay.  
Air Gap—.032-.035" (low note—long horn), .026-.030" (High note—short horn).  
Horn Current—22-25 amperes (total).

**Horn Relay:**—R-B-M Model 4760. NOTE—Relay not adjustable (cover welded on).  
Closing Voltage—3.5-4.5 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.  
Bore—3 3/16". Stroke—5".  
Displacement—320 cu. ins. Rated HP.—32.5.  
Developed Horsepower—130 HP. (Std. Hd.), 135 HP. (Optl. HC. Hd.) at 3200 R.P.M.  
Compression Ratio—6.45-1 Standard, 6.85-1 Optl. H.C., 6.20-1 Optl. L.C.  
Compression Pressure—110 lbs. (Std. 6.45-1 hd.), 118 lbs. (Optl. 6.85-1 hd.) at 125 R.P.M.  
Vacuum Reading—Steady 18-19" idling at 6 MPH.  
See Packard Shop Notes for Cylinder Head data and Block Removal instructions.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground.  
Weight—17¾ ozs. (stripped), 24 ozs. (with rings and pin) and equal within 4 grams. Length—4¼".  
Removal—Pistons from above, rods from below.  
Clearance—.0005-.001" skirt. See Fitting Pistons.

**Original Bore & Pistons Sizes, Replacement Pistons:**—See Packard Shop Notes for complete data.

**Fitting New Pistons:**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler must be 12-14 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:**—#1 compression (plain), #2 compression (#70 Perfect Circle), #3 oil (P-C #85), #4 oil (P.C. #X-90) rings per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Comp. #1 & 2	.123-.1240"	.007-.017"	.003"
Comp. #3	.123-.1240"	.007-.015"	.003"
Oil Contr.	.186-.1865"	.007-.015"	.0015"

Replacement Rings:—Standard and .003", .005", .010", .015", .020", .025", .030", .035" & .045" oversize.

**PISTON PIN:**—Diameter—¾". Length—2 47/64". Pin floats in piston and rod, held by locking rings.

**Pin Fit in Piston:**—Finger push fit with piston heated to 160° F.

**Pin Fit in Rod Bushing:**—Finger push fit at 70° F.

Replacement Pins:—Std. and .003", .006" oversize.

**CONNECTING ROD:**—Length 10⅞". Weight 40-40.125 ozs. (with bearings).

**Crankpin Journal Diameter:**—2 3/16".

**Lower Bearing:**—Copper lead alloy, interchangeable type. Furnished .001", .002", .003", .015" undersize. Clearance—.0007-.00125". Sideplay—.005-.008".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or bearing caps. Tighten rod bolt nuts to 550-570 in. lbs.

**Installing Rods:**—Oil hole toward camshaft.

**CRANKSHAFT:**—9 bearing, 8 bolted counterweights with rubber friction disc vibration dampener.  
Journal Diameters—2⅝" (all bearings).

**Bearings:**—Removable steel-backed, babbitt-lined, shimless type. Bearing shells doweled in block and cap. Dowel in cap is flanged (seats between bearing and cap) and hollow (for bearing lubrication).  
Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings (requires removal of crankshaft).

**End Thrust:**—Taken by #7 bearing. Endplay .003-.005".

**CAMSHAFT:**—8 bearing. Non-adjustable chain drive.  
Bearing Type—Steel-backed, babbitt-lined.  
Clearance—.0015-.0035".

**End Thrust:**—Taken by thrust plate assembled in back of camshaft sprocket. Endplay—.003-.006".

**Timing Chain:**—Morse No. 3682-KX. Width 1½". Pitch .375". Length 26¼" or 70 links.

**Camshaft Setting:**—Install chain and sprockets together with marks adjacent and in line with a straightedge across the shaft centers.

See Packard Shop Notes for Radiator & Fender (unit) removal for work on front of engine.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.3405"	7 13/32"
Exhaust	1 15/32"	.3405"	7 13/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.358"	.0025-.004"
Exhaust	45°	.358"	.004-.006"

**Valve Guides:**—New type. Press guides in block so top is 1 1/32" below valve seat and finish-ream.

**Valve Rocker Arms:**—Consist of pivoted arms mounted on bracket on crankcase which transmit motion from cam to valve pushrod (valve lifter).

**Removal:**—Take out screws in bracket on right side of crankcase, withdraw bracket assembly.

**Valve Lifters (Tappets):**—Removable from above with valve springs removed. Operate in individual guides held in place by bottom face of cylinder block (remove block to remove guides).

Valve Springs:	Spring Pressure	Spring Length
Valve Closed	68-78 lbs.	3 1/16"
Valve Open	154-164 lbs.	2 45/64"

NOTE—Serrated washer on top of each spring.

## VALVE TIMING

**Tappet Clearance:**—.006" Int., .008" Exh. (warm).

NOTE—Remove right front fender plate for adj.

**Valve Timing:**—See Camshaft Setting (above).

**Intake Valves:**—Open 26° BTDC. Close 69° ALDC.

**Exhaust Valves:**—Open 61° BLDC. Close 34° ATDC.

**To Check Timing:**—Set tappet clearance #1 exhaust valve at .005" (or .010", then insert .005" feeler). Turn engine over until pointer over damper (at front of engine) lines up with a point 1 1/16" (plus or minus 11/32") past '1-UPDC' mark (feeler should withdraw with finger pull). Valve closes 34° or .5176" ATDC. Reset tappet clearance at .008" warm.

## LUBRICATION

**LUBRICATION:**—Gear type oil pump in crankcase.

**Normal Oil Pressure:**—55-60 lbs. max., 5 lbs. min. idling (SAE #20 oil, engine warm or 150° F.).

**Oil Pressure Regulator:**—Located under plug on left side of crankcase. To adjust, remove acorn nut, turn slotted screw.

**Relief Valves:**—Non-adjustable relief valve located in regulator housing opens at 17 lbs. back-pressure in filter and cooler to by-pass oil to manifold. By-pass valve in oil filter opens at 7-8 lbs.

**Crankcase Capacity:**—7½ quarts.

## COOLING

**COOLING SYSTEM:**—Water Capacity—22 quarts.

**Water Pump:**—New ball-bearing, packless type.

See Water Pump Section for complete data.

**Thermostat:**—In top radiator tank. Operates shutters. Setting—Starts to open 135° F. Fully open 150° F. NOTE—Install 162° cylinder head thermostat for use with heaters. Remove in summer.

**Adjustment:**—Pull back on the shutter pullrod to close shutters, tighten nut to remove all slack in rod, then tighten one turn additional for pre-load.

## CLUTCH

**CLUTCH:**—Long Model 11CFS-CL Semi-centrifugal, single plate, dry disc type (riveted assembly).

See Clutch Section for complete data.

**Facings:**—Woven (US Asbestos #1133G), 2 required. Inside Diam. 6½". Outside Diam. 11". Thickness .125".  
**Adjustment:**—Adjust nut on pedal rod (at clutch fork) for 1½-2" pedal free movement.

**Removal:**—Remove transmission (see Transmission Removal below), remove flywheel bell housing by taking out 4 screws and removing nuts on 4 studs. Remove mounting screws in clutch cover flange.

## TRANSMISSION

**TRANSMISSION:**—Own Make. New type with constant-mesh, helical, ball-bearing mounted low-speed gear (sliding gear for reverse). Synchro-mesh (second and high).

See Transmission Section for complete data.

**Transmission Control:**—Own remote control type.

See Transmission Section for complete data.

**Removal:**—Disconnect shifter rods, speedometer cable, ground strap at transmission case. Disconnect drive shaft at front universal joint and block shaft up against floorpan. Support rear end of en-

gine, unbolt cross-member from frame (on cars with Econo-Drive remove cross-member at rear with stabilizer, disconnect wires at solenoid). Disconnect hand brake cable at equalizer, remove fly-wheel housing lower cover, clutch throwout retracting spring. Take out transmission-to-bell housing mounting screws and remove assembly.

### OVERDRIVE

**OVERDRIVE (ECONO-DRIVE):** Warner Model AS9-R6. Overdrive unit with electric 'kick-down'. Optl. See *Transmission Section* for complete data.

► **Overdrive Change**—New Reverse Switch added on later cars (should be installed on early cars): See *Warner R6 Overdrive Control in Transmission Section*.

**Overdrive Solenoid**—Delco-Remy No. 1569.

**Throttle Switch**—R-B-M. Adjust for .046" clearance between switch plunger and accelerator pedal tappet screw with throttle valve wide open (see that pedal has sufficient over-travel to close switch).

**Control Relay**—R-B-M. Model 4780. No fuse used.

### UNIVERSALS

**UNIVERSAL JOINT:**—Mechanics Model 3C. Needle bearing type, 2 used.

See *Universals Section* for complete data.

**CAUTION**—Do not disturb universal flange nut on first cars (this nut controls overdrive rear bearing pre-load). On later cars (with 'M' stamped on flange), bearing pre-load controlled by spring washer and nut should be kept tight.

### REAR AXLE

**REAR AXLE:**—Own Make. New type, semi-floating, hypoid gear type with Hotchkiss drive. NOTE—Axle has special Ring Gear Support Roller, differential case is straight (not Angle-set), cover welded on. See *Rear Axle Section* for complete data.

**Ratio**—4.36-1 Std., 4.54-1 With Overdrive (1703), 4.54-1 Std., 4.7-1 With Overdrive (1705).

**Backlash**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, brake assembly, wheel bearing and axle shaft. Disconnect rear universal joint at flange, drop drive shaft, remove differential housing mounting nuts, withdraw carrier.

**Wheel Bearing Adjustment**—Controlled by shims between flanged end of housing and backing plate. **Endplay**—.004-.007".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Model 1966-D, C (front), 1751-Z, M (rear). Double acting, hydraulic type. See *Shock Absorber Section* for complete data.

**Fifth Shock Absorber (Stabilizer):**—Houdaille Model NPT. Double acting, hydraulic, adjustable type.

See *Shock Absorber Section* for complete data.

### FRONT SUSPENSION

**Front Suspension:**—Independent Safe-T-flex type.

See *Front Suspension Section* for complete data.

**NOTE**—Frame Height must be set first before checking Caster and Camber.

**Frame Height**—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 19¼" (load car for correct figure).

**Kingpin Inclination**—1°54' crosswise.

**Camber**—½° plus ¾° minus 0°. Adjustable.

**Caster**—½° (1703, 5), 2½° (1703A) plus or minus ½°. Adjustable.

**Toe In**—1/32-¼" at hub height. Adjust by turning both tie rods equally (lengths must be equal after adjustment).

### STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

See *Steering Gear Section* for complete data.

### BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor type. Hand lever applies rear service brakes.

See *Brake Section* for complete data.

**Drum**—Centrifuse. Diameter—12".

**Lining**—Primary Shoe—US Asbestos #714 (1703, 5), Marshall #1035 (1703A). Secondary Shoe—US Asbestos #589 (1703, 5), Marshall #600 (1703A). Width 2¼" (1703, 5), 2½" (1703A). Thickness 3/16". Length 13" per shoe.

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—See *Service Brakes*.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left side of cowl (use Eng. No.).  
**ENGINE NUMBER:**—First number C-1501. On left side of block between #1 and #2 cylinders.

## TUNE-UP

**COMPRESSION:**—Ratio—6.39-1 Std., 6.71-1 Optl.  
 Pressure—110 lbs. (6.39-1 Std. cast-iron hd.), 118 lbs. (6.71-1 Optl. cast-iron hd.) at 125 RPM.

**VACUUM READING:**—Steady 18-20" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .026-.030".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.020".

**Cam Angle:**—Closed 35° (IGW-4143), 41° (IGW-4143-A), 38° (IGC-4503).

**Automatic Advance:**—8¾" max. at 2000 RPM (4143), 9½" max. at 1600 RPM (IGW-4143A & IGC-4503).

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—4½-6° BTDC. Flywheel mark (correct degree graduation ahead of #1 UP DC) aligned with inspection hole pointer below starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Set idle adjusting screw 1-1¼ turns open. Adjust for smooth idle. Idle speed 6 MPH.

**Float Level:**—Fuel level ⅝" below edge of bowl.

**Accelerating Pump:**—Center Hole—Normal Setting.

**Fuel Pump Pressure:** 4¼ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.007" Intake, .010" Exhaust (hot and idling). **NOTE:**—Remove right front fender apron for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 8058.

**Ignition Lock:**—Briggs & Stratton, B & S No. 50184.

**Key Series:**—P1251 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4632. Service Coil (less switch & cable) CE-3224ES. On left side of block.

**Ignition Current:**—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IGW-3128A.

**Capacity:**—28-32 microfarad.

**NOTE:**—IGW distributors before 1U-0000 fitted with IGW-3075E condenser with .20-25 mfd. capacity.

**DISTRIBUTOR:** Auto-Lite Models IGW-4143, IGW-4143A, IGC-4503. Single breaker, 6 lobe cam, full automatic advance type with Fuel Compensator.

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—(IGW-4143) 35° closed, 25° open; (IGW-4143A) 41° closed, 19° open; (IGC-4503) 38° closed, 22° open (Dist. \* in each instance).

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Counter-clockwise viewed from above.

### Automatic Advance—IGW-4143

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
2	550	4	1100
4	800	8	1600
6	1300	12	2600
8.75	2000	17.5	4000

### Automatic Advance—IGW-4143A, IGC-4503

Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	590	6	1180
5	780	10	1580
7	1150	14	2300
9.5	1600	19	3200

**Fuel Compensator:**—Manual adjustment at distributor provides 12° advance or retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

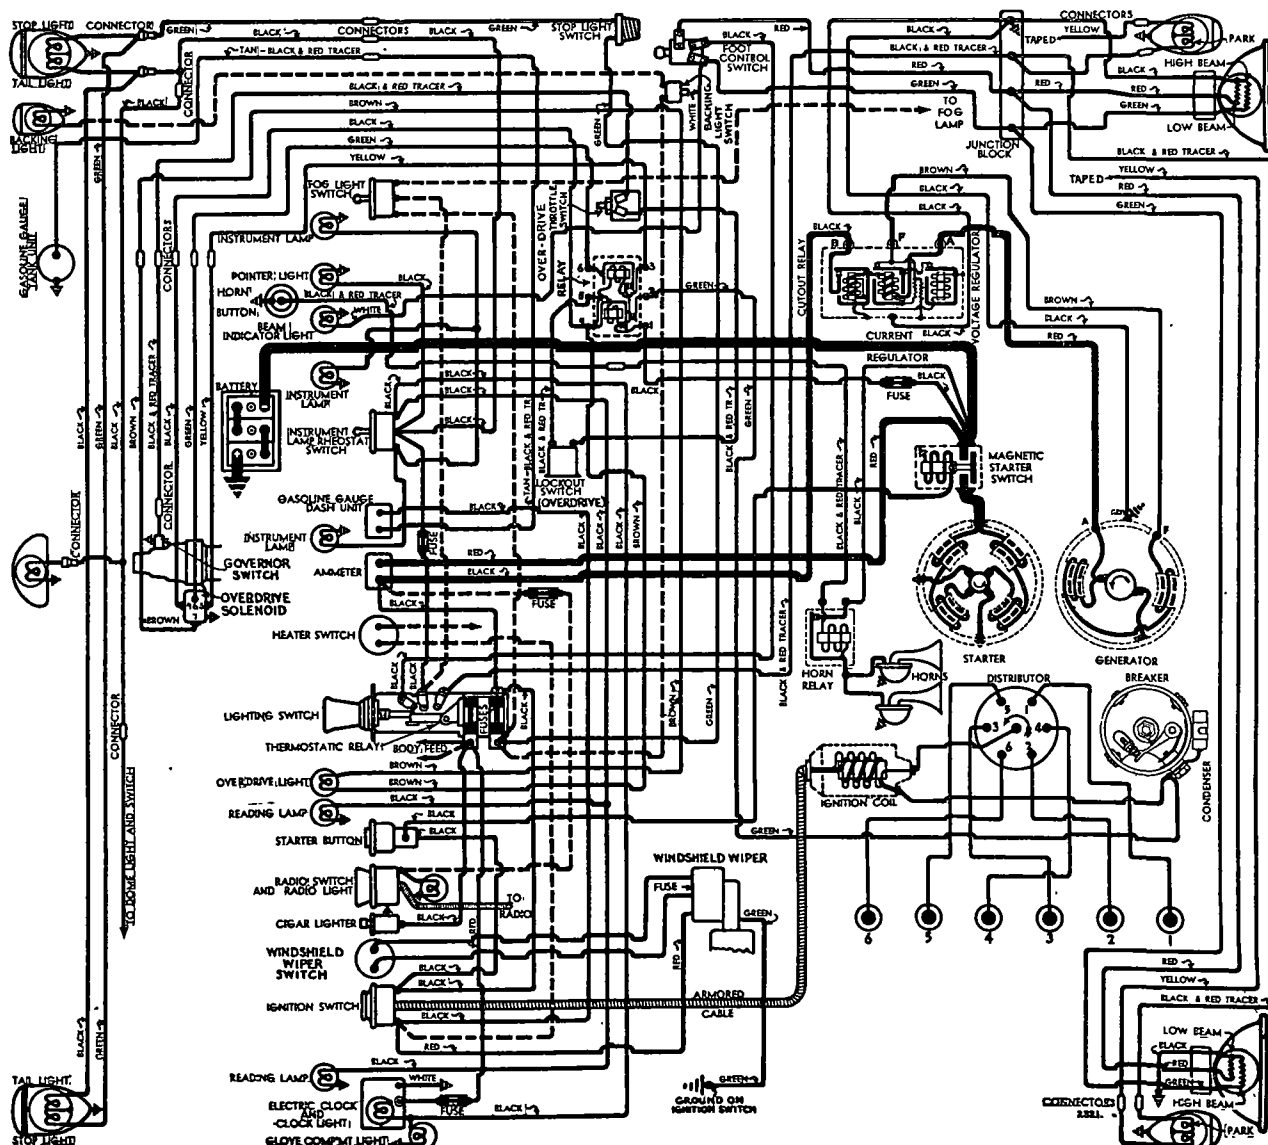

**IGNITION TIMING:**—Standard setting listed below (see Fuel Compensator Setting following):

**Flywheel Degrees** **Piston Position**

All heads ..... 4½-6° BTDC ..... 0083-.0149" BTDC.

**NOTE:**—Flywheel marked '1 UP DC' with five 2° graduations before and after this point.

**Timing:**—Remove inspection hole cover (left front face of flywheel housing below starter). Loosen

thumbnut, set Fuel Compensator pointer at '0' (center graduation on scale), tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct graduation on flywheel lines up with pointer. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting.

**Timing (Neon Timing Light)**—White mark provided on flywheel to indicate timing range (leading edge of mark 6° BTDC). Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg Model BXOV-26 (No. A-19162). 1¼" single barrel, down-draft type. Code marked 10-39.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (1-1¼ turns open—turn screw in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting**—Three holes provided in pump lever for pump link engagement as follows: Inner (min. stroke)—Hot weather or high-test fuel. Center Hole—Normal temperatures and fuel. Outer (max. stroke)—Cold weather or low test fuel.

**Float Level**—Fuel level ⅝" below top edge of bowl.

**Fast Idle**—Integral type, operated by automatic choke. *See article in Carburetion Equipment Section.*

**Fast Idle Setting**—Not adjustable.

**Automatic Choke**—Stromberg BXOV-26 carburetor type.

*For complete data, refer to Carburetion Equip. Index.*

**Choke Setting**—5 Notches Rich ('V' on scale centered on mark on housing). May be varied 2 notches.

**Throttle Guard (Cars with Econo-Drive)**—Vacuum operated throttle kicker to prevent engine stalling when operating below 20 MPH.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529340 oil-wetted type standard. Heavy duty oil-bath type optl. Crankcase filler tube cap equipped with copper mesh cleaner.

**Fuel Pump**—AC Type AT #1537060 diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Prest-O-Lite Type, Model MT1-15.** 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity**—300 amperes for 3.1 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes.

**Grounded Terminal—Positive (+)** grounded to the frame 'X' member. **Engine Ground**—Strap connector between transmission cover bolt and frame. **Dimensions**—Length 9". Width 7". Height 8¾". **Location**—Under left front seat.

## STARTER

**Auto-Lite Model MZ-4078.** Armature No. MZ-2134. **Drive**—Outboard Barrel Type Bendix No. A-1792. **Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—42-53 ozs. (new brushes). **Cranking Engine**—150-175 amperes, 5.1 volts.

### Performance Data

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	4300	5.5	70
.65	" "	2500	5.5	100
2.55	" "	1325	5.0	200
4.95	" "	750	4.5	300
7.65	" "	220	4.0	400
7.8	" "	Lock	3.0	420
11.8	" "	Lock	4.0	560

**Removal**—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch**—Auto-Lite SS-4001. Magnetic type. Mounted on starter, controlled by switch on instrument panel. *See article in Electrical Equipment Section.*

## GENERATOR

**Auto-Lite Model GEA-4801-A.** Armature No. GDZ-2006F. Two brush with current-voltage control.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate**—35 amperes (hot or cold), 8.0 volts, 1570 RPM and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	780	0	6.4	840
4	6.6	870	4	6.6	935
8	6.8	960	8	6.8	1025
12	6.95	1050	12	6.95	1120
16	7.15	1140	16	7.15	1220
20	7.3	1230	20	7.3	1320
24	7.6	1320	24	7.6	1420
28	7.7	1410	28	7.7	1550
32	7.85	1500	32	7.85	1685
35	8.0	1570	35	8.0	1800

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.57-1.75 amperes at 6.0 volts.

**Motoring Current**—4.45-4.9 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Swing generator out until 25 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and water pump pulley is ½" with thumb pressure.

## REGULATOR

**Auto-Lite Model VRB-4012B-1 (First Cars), VRP-4002A, VRP-4201A-1 (Later Cars).** Current-voltage Type. Mounted in single case on engine side of dash. *For complete data, refer to Electrical Equipment Index.* **NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (VRB), 6.4-6.6 volts (VRP).

**Cuts Out**—5-3.0 ampere discharge (VRB), 4.1-4.8 volts with approx. 4-6 ampere discharge (VRP-4002A), 4.8-5.6 volts with approx. 7-8 ampere disch. (VRP-4201A-1).

**Contact Gap**—.015" minimum.

**Air Gap**—.034-.038" (VRB & VRP-4201A-1), .031-.034" (VRP-4002A) with contacts open.

### Voltage Regulator

**Setting**—7.3-7.6 volts (VRB), 7.2-7.5 volts (VRP), at 70° F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be within limits of 7.36-7.66 volts (VRB), 7.2-7.5 volts (VRP) at 70° F. *See Electrical Equipment Section for voltages at other temperatures.*

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. *See Electrical Equipment Section.* **Contact Gap**—.010-.020" (VRB), .012" Min. (VRP) with armature against stop pin.

**Air Gap**—.0595-.0625" (VRB), .048-.052" (VRP) with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs, or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 34-36 amperes. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap**—Same as for Voltage Regulator (above).

**Air Gap**—.0595-.0625" (VRB), .034-.038" (VRP-4002A before No. 5U-000001 & All VRP-4201A-1), .048-.052" (VRP-4002A after above No.).

## LIGHTING

**LIGHTING**—Headlamps—Hall 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—Tell-tale light on speedometer face. Lighted when Country (upper) beams in use.

### Switches

**Lighting**—Delco-Remy 1995011.

**Beam Selector**—R-B-M No. 1050D or Delco-Remy No. 1997001 (LHD), 1997002 (RHD).

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70°F. Not adj.

**FUSES:**—Dome, Stop Light and Accessories—Two 20 ampere. Mounted on back of lighting switch.  
Instrument and Tail Light—20 ampere. In connector in tail light lead near light switch.  
Clock—2 ampere. In feed wire.  
Radio—14 ampere. In feed wire.  
Overdrive—30 ampere. In relay lead near starter.  
Windshield Wiper—14 ampere. On dynamic breaker to right of wiper motor.

**HORNS:**—Sparton Model H-32. Vibrator type, Air tone, Twin horns operated by horn relay.  
Air Gap—.032-.035" (low note—long horn), .026-.030" (high note—short air column).  
Horn Current—22-25 amperes (total).  
Horn Relay:—R-B-M Model 4760.  
NOTE—Relay not adjustable (cover welded on).  
Closing Voltage—3.5-4.5 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type.  
Bore—3½". Stroke—4¼".  
Displacement—245.3 cu. ins. Rated HP—29.4.  
Developed Horsepower—100 HP (Std. 6.39-1 head), 103-105 HP (Optl. 6.71-1 head) at 3200 RPM.  
Compression Ratio and Pressure:—As follows:  
6.39-1 Std. cast-iron head—110 lbs. at 125 RPM.  
6.71-1 Optl. HC cast-iron hd.—118 lbs. at 125 RPM.  
Vacuum Reading—Steady 18-21" idling at 6 MPH.  
See Packard Shop Notes for Cylinder Head data.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground type.  
Weight—20¼ ozs. (stripped), 26½ (with rings & pin). Length—3¾".  
Removal—Pistons and rods removed from above.  
Clearance—.0005-.001". See Fitting Pistons.  
Original Bore & Piston Sizes, Replacement Pistons:—See Packard Shop Notes for complete data.

**Fitting New Pistons:**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:**—2 coated compression (Perfect Circle #200, No. 1 upper inner edge beveled, #70 No. 2), 1 oil cont. (X90-85 expander type), all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (#1).....0930-.0935"		.....007-.017"	.....0025-.003"
Comp. (#2).....1240-.1235"		.....007-.017"	.....0025-.003"
Oil Cont.....1860-.1865"		.....007-.015"	.....0015-.002"

**Replacement Rings:**—Furnished standard size and .005", .010", .020", .030", .040" oversize.

**PISTON PIN:**—Diameter—¾". Length—3 1/64".  
Pin floats in piston and rod, held by locking rings. Pins furnished Std. and .003", .006" oversize.  
**Pin Fit in Piston:**—Finger push fit (piston at 160°).  
**Pin Fit in Rod Bushing:**—Finger push fit at 70° F.

**CONNECTING ROD:**—Length 7 11/16". Weight 31.60 ozs. Upper Bearing (Piston Pin Bushing)—Split type.

See Packard Shop Notes for complete data.

Crankpin Journal Diameter—2 3/32".

Lower Bearing—Interchangeable steel-backed, babbitt-lined. Bearings furnished standard and .001", .002", .003", .015" undersize.

Clearance—.0005-.0015". Endplay—.004-.010".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps. See Packard Shop Notes for 'Palnut' installation data.

Installing Rods:—Oil squirt hole toward camshaft.

**CRANKSHAFT:**—4 bearings, 6 integral counterweights and rubber friction disc vibration damper.

Journal Diameters—2¾".

Bearings—Interchangeable steel-backed, babbitt-lined. Furnished std., .001", .002" undersize.

Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Replace bearings (upper half can be rotated in or out).

End Thrust:—Taken by front (#1) bearing.

Endplay—.003-.008".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.001-.003".

End Thrust:—Taken by thrust plate in back of camshaft sprocket. Endplay—.002-.004".

Timing Chain:—Morse Type C-3682R (#1525) or Ramsey. Width 1¼". Pitch .375". Length 21¾" or 58 links. Same as 1939.

Camshaft Setting:—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across the shaft centers. See Packard Shop Notes for Radiator & Fender (unit) removal for work on front end of engine.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	.....1 17/32"	.....34025"	.....5½"
Exhaust	.....1¾"	.....34025"	.....5½"

	Seat Angle	Lift	Stem Clearance
Intake	.....30°	.....318"	......001-.003"
Exhaust	.....45°	.....3175"	......003-.005"

Valve Guides:—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides counter-bored on upper inner diameter.

Valve Springs:—Intake and exhaust springs interchangeable.  
Spring Pressure Length  
Valve Closed .....47-52 lbs. ....1½"  
Valve Open .....114-124 lbs. ....1 5/16"  
NOTE—Serrated washer installed on top of spring.

Valve Lifters:—New larger (diameter ⅝") mushroom type. Remove from below with camshaft out. Service by reaming (work through valve guide using ST-5144—23/32") and installing oversize lifters furnished .001", .002", .005" oversize.

Diameter—.6235-.6240". Clearance—.0003-.0012".

NOTE—1939 tool (ST-5101) cannot be used.

## VALVE TIMING

Tappet Clearance:—.007" Int., .010" Exh. (hot & idling). NOTE—Self-locking tappet screw used. Remove right front fender plate for access to valves.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 1° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

To Check Timing:—With .0125" tappet clearance #1 intake valve should open with #1 piston 1° or .0004" BTDC when 1° point on flywheel (½ graduation before '1 UP DC' mark) lines up with pointer in inspection hole in flywheel housing below starter (left side). Permissible variation plus or minus 2 graduations. Reset tappet cl. at .007" (hot & idling).

## LUBRICATION

LUBRICATION:—Gear type pump on right of engine.

See Packard Shop Notes for Oil Pump installation.

Normal Oil Pressure:—45 lbs. at 45 MPH.

Oil Pressure Relief Valve:—Mounted on pump cover. Not adjustable. Spring pressure should be 14 lbs. plus or minus 2 ounces at 1½".

Crankcase Capacity:—5 quarts (refill).

## COOLING

COOLING SYSTEM:—Capacity—17 quarts.

Water Pump:—Packless type with ball-bearing shaft.

See Water Pump Section for complete data.

Removal—Remove fan belt, disconnect pump hose, take out pump mounting screws, lift out pump.

Thermostat:—Harrison. In cylinder head outlet. Starts to open at 145° F.

## CLUTCH

CLUTCH:—Long Model 9½ CF-CS. Semi-centrifugal, single plate, dry disc type.

NOTE—Borg & Beck Model 10A7 (marked #948) Single plate, dry disc type with 'Borglite' driven member used after Engine No. 17621 to No. 23824.

See Clutch Section for complete data.

Facings (Long)—Spiral or chevron wound woven, US Asbestos No. 1133G, 2 used, Inside Diam. 6". Outside Diam. 9½". Thickness .125".

Adjustment:—Adjust nut on pedal rod (at clutch fork) for 1½-2" pedal free movement.

See Packard Shop Notes for 1941 design clutch linkage which may be installed on these cars to correct wear.

Removal:—Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover screws and remove assembly from below.

## TRANSMISSION

TRANSMISSION:—Own Make. Constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur gear for reverse). Synchro-mesh (second and high).

See Transmission Section for complete data.

**Transmission Control:—Own Remote Control type.**

*See Transmission Section for complete data.*

**Removal:—**Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, overdrive cable and solenoid wires (if used), front universal (block drive shaft up against floor pan) and rubber bearing at rear of overdrive. Support rear of engine with jack and unbolt cross member (at frame ends and flywheel housing lower cover). Disconnect clutch retractor spring and fore and aft restraint rod. Take out transmission-to-flywheel housing mounting screws and remove assembly from car.

**OVERDRIVE**

**Econo-Drive Transmission:—**New Warner-Packard type (Warner model AS1-R9) overdrive unit with electrical control. Optional equipment on all cars.

*See Transmission Section for complete data.*

**Overdrive Solenoid—**Delco Remy Model 1118005.

**Overdrive Indicator Light—**In light switch knob. Lighted when overdrive is ready to engage (light goes out when accelerator pedal released so that overdrive can engage).

**Throttle Switch—**Cole-Hersee, Packard No. 347496. Adjust tappet screw on throttle lever to just contact switch plunger with carburetor throttle valve in wide open position.

**Lock-out Switch—**Ark-less or Soreng-Manegold, Packard No. 354820 or 347641.

**Control Relay—**Delco-Remy Model 1116801.

**Governor Switch—**Bendix, Packard No. 347478 Std.

*See Warner (Packard) Overdrive Control article in Transmission Section for Optional Switches.*

**UNIVERSALS**

**UNIVERSAL JOINTS:—**Mechanics. Model 2C (Std.), 3C (with Econo-Drive). Needle bearing type. 2 used. *See Universals Section for complete data.*

**CAUTION—**Rear universal flange controls pinion bearing pre-load. See Packard Rear Axle article in Rear Axle Section for complete data.

**REAR AXLE**

**REAR AXLE:—**Own Make. Semi-floating, hypoid gear type with Hotchkiss drive. Cover welded.

**NOTE—**Axle bearings not interchangeable with 1700 cars.

*See Rear Axle Section for complete data.*

**Ratio—**4.36-1 Std., 4.55-1 with Econo-Drive trans'm. Backlash—.003-.005". Screw adjustment.

**Removal:—**Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment—**Endplay controlled by shims between flanged end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted at one wheel).

**Endplay—**.004-.007".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:—** Front Rear

Domestic ..... Delco 2206-A,B..... Monroe 347416

Exp. & Spec..... Delco 2206-A,B..... Delco 1130-W

Front shocks are parallel cylinder type. Rear shocks are direct acting (adjustable type Delco).

*See Shock Absorber Section for complete data.*

**NOTE—**No Fifth Shock Absorber used.

**FRONT SUSPENSION**

**Front Suspension:—**Independent 'Safe-T-flex' type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE—**Frame height must be set first before checking Caster and Camber.

**Frame Height—**With car on level floor, distance from floor to top of frame side rail at front wheel center-line 18 $\frac{5}{8}$ " (load car until figure correct).

**Kingpin Inclination—**1°54' crosswise.

**Camber—**Pos.  $\frac{1}{2}$ ° (plus  $\frac{3}{4}$ °, minus 0°). Adjustable.

**Caster—**Pos. 1 $\frac{1}{2}$ °  $\pm$   $\frac{1}{2}$ °. Shim adjustment.

**Toe In—**0" (+1/16", -0") at hub height. Turn both tie rods equally (must be equal after adjusting).

**Steering Geometry (Toe-out on Turns)—**Inner wheel turned 23°. Outer wheel 20°.

**STEERING GEAR**

**Steering Gear: Packard (Gemmer design Model 330)** Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:—**Service, Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums—**Centrifuse. Diameter—11".

**Lining—**Moulded. Width 1 $\frac{3}{4}$ ". Thickness 3/16".

**Length per shoe** 10 $\frac{5}{8}$ " (primary), 12" (secondary).

**Clearance—**.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:—**See Service Brakes (above).

**MISC. MECHANICAL**

**WINDSHIELD WIPER:—**Stewart-Warner Series 645.

Electric type. 14 ampere fuse mounted on dynamic breaker (behind instrument panel to right of wiper motor).

*See Miscellaneous Section for complete data.*

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left side of cowl (use Eng. No.)

**ENGINE NUMBER:**—First number C-300001. On left side of block between #1 and #2 cylinders.

## TUNE-UP

**COMPRESSION:**—Ratio—6.41-1 Std., 6.85-1 Optl. Pressure—110 lbs. (6.41-1 Std. cast-iron hd.), 118 lbs. (6.85-1 Optl. cast-iron hd.) at 125 RPM.

**VACUUM READING:**—Steady 18-20" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .026-.030".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015" (.017" maximum).

**Cam Angle**—27° Closed with .017" Breaker Gap.

**Automatic Advance**—8° at 1200 RPM (IGP-4501), 11½° at 1550 RPM (IGP-4501A). Distr. ° & RPM.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—6½-8° BTDC (for standard head), 5½-7° BTDC (HC head). Flywheel mark (correct degree mark ahead of #1UPDC) aligned with inspection hole pointer (left front face of housing below starter).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screws 2-2½ turns open. Adjust for smooth idle. Idle speed 6 MPH.

**Float Level**—Fuel level 15/32" below edge of bowl.

**Accelerating Pump**—No seasonal adjustment.

**Fuel Pump Pressure:** 3¾ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.007" Intake, .010" Exhaust (hot and idling). **NOTE:**—Remove right front fender apron for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 8058.

**Ignition Lock:**—Briggs & Stratton, B & S No. 50184.

**Key Series:**—P1251 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4632. Service Coil (less switch & cable) CE-3224ES. On left side of block.

**Ignition Current:**—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671K.

**Capacity:**—20-.25 microfarad..

**DISTRIBUTOR:** Auto-Lite Model IGP-4501 or IGP-4501A. Single breaker, 8 lobe cam, full automatic advance with Fuel Compensator.

**Breaker Gap**—Set at .015".

**Cam Angle or Dwell**—27° clsd., 18° open (.017" gap).

**Breaker Arm Spring Tension**—17-20 ounces.

**Rotation**—Counter-clockwise viewed from the top.

### Automatic Advance—IGP-4501

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	400	6	800
4	560	8	1120
6	875	12	1750
8	1200	16	2400

### Automatic Advance—IGP-4501A

Degrees	R.P.M.	Degrees	R.P.M.
Start	250	0	500
3	525	6	1050
6	800	12	1600
9	1210	18	2420
11.5	1550	23	3100

**Fuel Compensator:**—Manual adjustment at distributor provides 12° advance or retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting listed below (see Fuel Compensator Setting following):

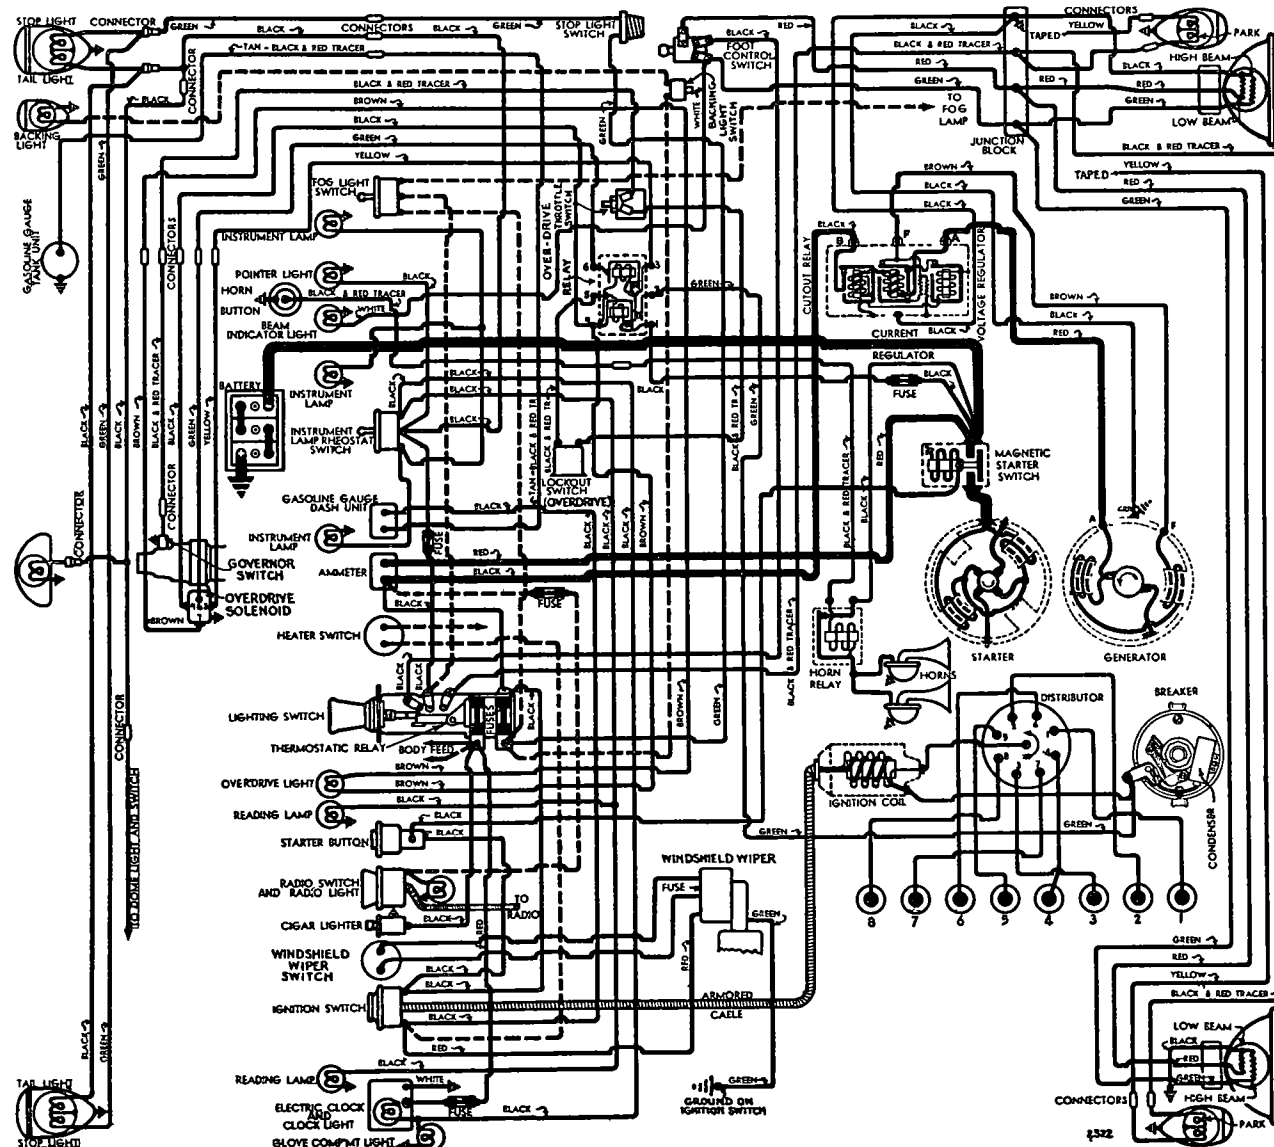

**Flywheel Degrees** **Piston Position**

Std. 6.41-1 head.....6½-8° BTDC.....0174-.0262" BTDC

Optl. 6.85-1 HC hd. 5½-7° BTDC.....0124-.0202" BTDC

**NOTE:**—Flywheel marked '1 UP DC' with five 2° graduations before and after this point.

**Timing:**—Remove inspection hole cover (left front

face of flywheel housing below starter). Loosen thumbnut, set Fuel Compensator pointer at '0' (center graduation on scale), tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct graduation on flywheel lines up with pointer. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting.

**Timing (Neon Timing Light)**—White mark provided on flywheel to indicate timing range (leading edge of mark 8° BTDC). Idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

## CARBURETOR

**CARBURETION**—Carburetor—Stromberg EE-16, No. A-18341 (code marked 10-33A on upper main body flange or float bowl cover. 1" Duplex double barrel downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw (one for each barrel) in succession until engine fires smoothly (2-2½ turns open for each screw—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump**—Not adjustable.

**Float Level**—Fuel level 15/32" below top edge of bowl.

**Fast Idle**—Stromberg EE-16 carburetor type.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Turn screw in to contact lowest step of fast idle cam, then back out ½ turn.

**Automatic Choke**—Stromberg EE-16 carburetor type.

*For complete data, refer to Carburetion Equip. Index.*

**Choke Setting**—4 Notches Rich ('V' on scale centered on mark on housing). May be varied 2 notches.

**Throttle Guard (Cars with Econo-Drive)**—Vacuum operated throttle kicker to prevent engine stalling when operating below 20 MPH.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC # 1529339 oil-wetted type standard. Heavy duty oil-bath type optl. Crankcase filler tube cap equipped with copper mesh cleaner.

**Fuel Pump**—AC Type AH #1537087 diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Willard Type, Model SW-2-113.** 6 volt, 17 plate, 113 ampere hour capacity (20 hour rate).

**Starting Capacity**—134 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.2 minutes.

**Grounded Terminal**—Positive (+) grounded to the

frame 'X' member. Engine Ground—Strap connector between transmission cover bolt and frame.

**Dimensions**—Length 10 5/16". Width 7 1/16". Height 8 13/16".

**Location**—Under left front seat.

## STARTER

**Auto-Lite Model MAW-4018.** Armature MAW-2006.

**Drive**—Outboard Barrel Type Bendix No. A-1718.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM, 175 amperes, 5.1 volts.

### Performance Data

Torque		R.P.M.	Volts	Amperes
0 ft. lbs.		4900	5.5	65
2.75 "	"	1480	5.0	200
5.45 "	"	820	4.5	300
8.50 "	"	400	4.0	400
11.55 "	"	110	3.5	500
11.5 "	"	Lock	3.0	505
18.0 "	"	Lock	4.0	670

**Removal**—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch**—Auto-Lite SS-4001 Magnetic type. Mounted on starter, controlled by switch on instrument panel. See article in Electrical Equipment Section.

## GENERATOR

**Auto-Lite Model GEA-4801-A.** Armature No. GDZ-2006F. Two brush with current-voltage control.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate**—35 amperes (hot or cold), 8.0 volts, 1570 RPM and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	780	0	6.4	840
4	6.6	870	4	6.6	935
8	6.8	960	8	6.8	1025
12	6.95	1050	12	6.95	1120
16	7.15	1140	16	7.15	1220
20	7.3	1230	20	7.3	1320
24	7.6	1320	24	7.6	1420
28	7.7	1410	28	7.7	1550
32	7.85	1500	32	7.85	1685
35	8.0	1570	35	8.0	1800

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.57-1.75 amperes at 6.0 volts.

**Motoring Current**—4.45-4.9 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Swing generator out until 25 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and water pump pulley is ½" with thumb pressure.

## REGULATOR

**Auto-Lite Model VRB-4012B-1 (First Cars), VRP-4002A, VRP-4201A-1 (Later Cars).** Current-voltage Type. Mounted in single case on engine side of dash. *For complete data, refer to Electrical Equipment Index.* NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (VRB), 6.4-6.6 volts (VRP).

**Cuts Out**—5-3.0 ampere discharge (VRB), 4.1-4.8 volts with approx. 4-6 ampere discharge (VRP-4002A), 4.8-5.6 volts with approx. 7-8 ampere disch. (VRP-4201A-1).

**Contact Gap**—.015" minimum.

**Air Gap**—.034-.038" (VRB & VRP-4201A-1), .031-.034" (VRP-4002A) with contacts open.

### Voltage Regulator

**Setting**—7.3-7.6 volts (VRB), 7.2-7.5 volts (VRP), at 70° F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be within limits of 7.36-7.66 volts (VRB), 7.2-7.5 volts (VRP) at 70° F. See Electrical Equipment Section for voltages at other temperatures.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap**—.010-.020" (VRB), .012" Min. (VRP) with armature against stop pin.

**Air Gap**—.0595-.0625" (VRB), .048-.052" (VRP) with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs, or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 34-36 amperes. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap**—Same as for Voltage Regulator (above).

**Air Gap**—.0595-.0625" (VRB), .034-.038" (VRP-4002A before No. 5U-000001 & All VRP-4201A-1), .048-.052" (VRP-4002A after above No.).

## LIGHTING

**LIGHTING**—Headlamps—Hall 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—Tell-tale light on speedometer face. Lighted whenever Country (upper) beam in use.

### Switches

**Lighting**—Delco-Remy 1995011.

**Beam Selector**—R-B-M No. 1050D or Delco-Remy N. 1997001 (LHD), 1997002 (RHD).

CONTINUED N NEXT PA 2

## CONTINUED FROM PRECEDING PAGE

Position	Bulb Specifications	Candlepower	Mazda No.
Headlamps	Sealed Beam		
Front Turn Indic. & Fender	21-3	1158

Fog Light	32	1321	
Spot Light	32	1323	
Backing Light	15	87	

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70°F. Not adj.

**FUSES:**—Dome, Stop Light and Accessories—Two 20 ampere. Mounted on back of lighting switch.

Instrument and Tail Light—20 ampere. In connector in tail light lead near light switch.

Clock—2 ampere. In feed wire.

Radio—14 ampere. In feed wire.

Overdrive—30 ampere. In relay lead near starter.

Windshield Wiper—14 ampere. On dynamic breaker to right of wiper motor.

**HORNS:**—Sparton Model H-32. Vibrator type, Air tone, Twin horns operated by horn relay.

Air Gap—.032-.035" (low note—long horn), .026-.030" (high note—short air column).

Horn Current—22-25 amperes (total).

Horn Relay:—R-B-M Model 4760.

NOTE—Relay not adjustable (cover welded on).

Closing Voltage—3.5-4.5 volts.

**ENGINE**

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type.

Bore—3 1/4". Stroke—4 1/4".

Displacement—282.04 cu. ins. Rated HP—33.8.

Developed Horsepower—120 (Std. hd.) at 3600 RPM.

Compression Ratio—6.41-1 Std., 6.85-1 Optl. CI hds.

Compression Pressure—110 lbs. (Standard 6.41-1

hd.), 118 lbs. (Optl. 6.85-1 head) at 125 RPM.

Vacuum Reading—Steady 18-21" idling at 6 MPH.

See Packard Shop Notes for Cylinder Head data.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground type.

Weight—17 1/4 ozs. stripped, 23 1/8 with rings & pin. Length—3 3/8".

Removal—Pistons and rods removed from above.

Clearance—.0005-.001". See Fitting Pistons.

Original Bore & Piston Sizes, Replacement Pistons:—

See Packard Shop Notes for complete data.

**Fitting New Pistons:**—Insert .0015" feeler 1/2" wide between piston and cylinder wall on side opposite slot.

Pull to withdraw feeler should be 12-18 lbs.

Installing Pistons:—Slot toward valves.

**PISTON RINGS:**—2 coated compression (Perfect Circle #200, No. 1 upper inner edge beveled, #70 No. 2), 1 oil cont. (X90-85 expander type), all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (#1).....	.0930-.0935"	.007-.017"	.0025-.003"
Comp. (#2).....	.1240-.1235"	.007-.017"	.0025-.003"
Oil Cont.....	.1860-.1865"	.007-.015"	.0015-.002"

Replacement Rings:—Furnished standard size and .005", .010", .020", .030", .040" oversize.

**PISTON PIN:**—Diameter—7/8". Length—2 51/64".

Pin floats in piston and rod, held by locking rings.

Pins furnished Std. and .003", .008" oversize.

Pin Fit in Piston—Finger push fit with piston heated to 160° F.

Pin Fit in Rod Bushing—Finger push fit at 70° F.

**CONNECTING ROD:**—Length 7 11/16". Weight 31.60 ozs.

Upper Bearing (Piston Pin Bushing)—Split type.

See Packard Shop Notes for complete data.

Crankpin Journal Diameter—2 3/32".

Lower Bearing—Interchangeable steel-backed, bab-bitt-lined. Bearings furnished standard and .001", .002", .003", .015" undersize.

Clearance—.0005-.0015". Endplay—.004-.010".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps. See Packard Shop Notes for 'Palnut' installation data.

Installing Rods:—Oil squirt hole toward camshaft.

**CRANKSHAFT:**—5 bearings, 8 integral counterweights and rubber friction disc vibration dampener.

Journal Diameters—2 3/4".

Bearings—Interchangeable steel-backed, bab-bitt-lined. Furnished std., .001", .002" undersize.

Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Replace bearing (upper half can be 'rotated' in or out).

End Thrust:—By #3 bearing. Endplay—.003-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive.

Bearing Type—Steel-backed, bab-bitt-lined.

Clearance—.001-.003".

End Thrust:—Taken by thrust plate in back of camshaft sprocket. Endplay—.002-.004".

Timing Chain:—Morse Type C-3682R (#1525) or Ramsey. Width 1 1/4". Pitch .375". Length 21 3/4" or 58 links. Same as 1939.

Camshaft Setting:—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across shaft centers with #1 piston on top dead center.

See Packard Shop Notes for Radiator & Fender (unit) removal for work on front of engine.

**VALVES:**—Head Diameter Stem Diameter Length

Intake .....1 31/64".....34025".....5 5/8"

Exhaust .....1 3/8".....34025".....5 5/8"

Seat Angle Lift Stem Clearance

Intake .....30".....318"......001-.003"

Exhaust .....45".....3175"......003-.005"

Valve Guides:—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides counter-bored on upper inner diameter.

Valve Springs:—Intake and exhaust springs interchangeable.

Spring Pressure Length

Valve Closed .....47-52 lbs.....1 5/8"

Valve Open .....114-124 lbs.....1 5/16"

NOTE—Serrated washer installed on top of spring.

Valve Lifters:—New larger (diameter 5/8") mushroom type. Remove from below with camshaft out. Service by reaming (work through valve guide using ST-5144—23/32") and installing oversize lifters furnished .001", .002", .005" oversize.

Diameter—.6235-.6240". Clearance—.0003-.0012".

**VALVE TIMING**

**Tappet Clearance:**—.007" Int., .010" Exh. (hot & idling). NOTE—Self-locking tappet screw used. Remove right front fender plate for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**To Check Timing:**—With .0125" tappet clearance #1 intake valve should open with #1 piston 1° or .0004" BTDC when 1° point on flywheel (1/2 graduation before '1 UP DC' mark) lines up with pointer in inspection hole in flywheel housing below starter (left side). Permissible variation plus or minus 2 graduations. Reset tappet cl. at .007" (hot & idling).

**LUBRICATION**

**LUBRICATION:**—Gear type pump on right of engine.

See Packard Shop Notes for Oil Pump installation.

**Normal Oil Pressure:**—45 lbs. at 45 MPH.

**Oil Pressure Relief Valve:**—Mounted on pump cover. Not adjustable. Spring pressure should be 14 lbs. plus or minus 2 ounces at 1 7/8".

**Crankcase Capacity:**—6 quarts (refill).

**COOLING**

**COOLING SYSTEM:**—Capacity—18 quarts.

**Water Pump:**—Packless type with ball-bearing shaft.

See Water Pump Section for complete data.

**Removal:**—Remove fan belt, disconnect pump hose, take out pump mounting screws, lift out pump.

**Thermostat:**—Harrison. In cylinder head outlet (1801) in radiator top tank controlling shutters (1801A). Starts to open at 145° F.

**CLUTCH**

**CLUTCH:**—Long Model 10CF-CI. Semi-centrifugal, single plate, dry disc type.

NOTE—Borg & Beck Model 10A7 (marked #922) Single plate, dry disc type with 'Borglite' driven member used after Engine No. 30798 to No. 314328. See Clutch Section for complete data.

**Facings (Long):**—Spiral or chevron wound woven, US Asbestos No. 1133G, 2 used. Inside Diam. 6". Outside Diam. 10". Thickness .125".

**Adjustment:**—Adjust nut on pedal rod (at clutch fork) for 1 1/2-2" pedal free movement.

See Packard Shop Notes for 1941 design clutch linkage which may be installed on these cars to correct wear.

**Removal:**—Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover screws and remove assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur gear reverse). Synchro-mesh (second & high). See Transmission Section for complete data.

**Transmission Control:**—Own Remote Control type. See Transmission Section for complete data.

**Removal:**—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, overdrive cable and solenoid wires (if used).

front universal (block drive shaft up against floor pan) and rubber bearing at rear of overdrive. Support rear of engine with jack and unbolt cross member (at frame ends and flywheel housing lower cover). Disconnect clutch retractor spring and fore and aft restraint rod. Take out transmission-to-flywheel housing screws, remove assembly.

## OVERDRIVE

**Econo-Drive Transmission:**—New Warner-Packard type (Warner model AS1-R9) overdrive unit with electrical control. Optional equipment on all cars. *See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco Remy Model 1118005.

**Overdrive Indicator Light:**—In light switch knob. Lighted when overdrive is ready to engage (light goes out when accelerator pedal released so that overdrive can engage).

**Throttle Switch:**—Cole-Hersee, Packard No. 347496. Adjust tappet screw on throttle lever to just contact switch plunger with carburetor throttle valve in wide open position.

**Lock-out Switch:**—Ark-less or Soreng-Manegold, Packard No. 354820 or 347641.

**Control Relay:**—Delco-Remy Model 1116801.

**Governor Switch:**—Bendix, Packard No. 355075 Std.

*See Warner (Packard) Overdrive Control article in Transmission Section for Optional Switches.*

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Model 3C. Needle bearing type.

*See Universals Section for complete data.*

**CAUTION:**—Rear universal flange controls pinion bearing pre-load. See Packard Rear Axle article in Rear Axle Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive. Cover welded.

*See Rear Axle Section for complete data.*

**Ratio:**—1801—4.09-1 Std., 4.36-1 with Econo-Drive transmission. 1801A Comm'l—4.7-1 Std.

**Backlash:**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment:**—Endplay controlled by shims between flanged end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims

**Endplay:**—.004-.007".

## SHOCK ABSORBERS

SHOCK ABSORBERS:—Delco	Front	Rear
1801 Domestic .....	2206-A,B	1001-V
1801 Exp. & Spec. ....	2206-A,B	1130-W
1801A Comm'l .....	1966-C,D	1751-M,Z

*See Shock Absorber Section for complete data.*

Parallel cylinder type (2206-A,B), Direct Acting (1001-V). Direct Acting Adjustable (1130-W), Double Acting (1966-C,D & 1751-M,Z).

**Fifth Shock Absorber (Stabilizer):**—Houdaille Model NF'T. Double acting, hydraulic, adjustable type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent 'Safe-T-flex' type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE:**—Frame height must be set first.

**Frame Height:**—With car on level floor, distance from floor to top of frame side rail at front wheel

center-line should be 18 $\frac{3}{4}$ " (1801), 19 $\frac{1}{4}$ " (1801A). Load car until this figure correct.

**Kingpin Inclination:**—1°54' crosswise.

**Camber:**—Pos.  $\frac{1}{2}$ ° (plus  $\frac{3}{4}$ °, minus 0°). Adjustable.

**Caster:**—Pos. 1 $\frac{1}{2}$ °  $\pm$   $\frac{1}{2}$ °. Shim adjustment.

**Toe In:**—0" (+1/16", -0") at hub height. Turn both tie rods equally (must be equal after adjusting).

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 22°50'. Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type (no eccentric adjustment on 1801). Hand lever applies rear wheel service brakes.

**NOTE:**—Brakes on 1801A Heavy Duty Ambulance same as on Model 1803A (see next page).

*See Brake Section for complete data.*

**Drums:**—Centrifuse. Diameter—12".

**Lining:**—Moulded. Width 1 $\frac{3}{4}$ " (1801), 2 $\frac{1}{4}$ " (1801A). Thickness 3/16". Length per shoe—13" (except 1801 primary), 11 $\frac{1}{2}$ " (1801 primary).

**Clearance:**—1801—.015" at both end of secondary shoe with primary shoe forced out against drum. 1801A—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service brakes (above).

## MISC. MECHANICAL

**WINDSHIELD WIPER:**—Stewart-Warner Series 645.

Electric type. 14 ampere fuse mounted on dynamic breaker (behind instrument panel to right of wiper motor).

*See Miscellaneous Section for complete data.*

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—On left side of cowl (use Eng. No.).

**ENGINE NUMBER:**—First number C-500,051 (1803,4,5), CC-500,051 (1806,7,8). Stamped on left side of cylinder block between #3 and #4 cylinders.

**TUNE-UP**

**COMPRESSION:**—Ratio—6.45-1 Std., 6.85-1 Optl. (both heads are cast-iron).

Pressure—118 lbs. at cranking speed.

**VACUUM READING:**—Steady 18½" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC No. 104 or Champion Y-4. 10 mm. Gaps—.028". Limits .026-.030".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015" (.017" maximum).

Cam Angle—27° Closed with .017" Breaker Gap.

Automatic Advance—11½° max. at 1800 RPM (dist.).

Vacuum Advance—5½° (distr.) with 16" vacuum.

**IGNITION TIMING** See Ignition Timing.

Std. Setting—3½-5° BTDC (for standard head), 2½-4° BTDC (HC head). Vibration dampener mark (correct degree mark ahead of 'UDC') aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws 1½-1¾ turns open. Adjust for smooth idle. Idle speed 6 MPH.

Float Level—Fuel level ⅝" below edge of bowl.

Accelerating Pump—Lower Hole—Normal Setting.

Fuel Pump Pressure: 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

Tappet Clearance None in service, hydraul. take-up.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-B, No. 8187.

**Ignition Lock:**—Briggs & Stratton. B & S No. 50184.

Key Series—P1251 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4639. Service Coil (less switch & cable) CE-3224RS.

Ignition Current—½ ampere idling, 2½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671J.

Capacity—.20-.25 microfarad..

**DISTRIBUTOR:** Auto-Lite Model IGT-4102. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and Fuel Compensator. Breaker Plate Identification—Maximum vacuum advance limited by slot and marked by number (#5½) on plate.

Breaker Gap—Set at .015".

Cam Angle or Dwell—27° clsd., 18° pen (.017" gap).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from the top.

**Automatic Advance**

Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start	250	0	500
3	475	6	950
6	700	12	1400
9	1300	18	2600
11½	1800	23	3600

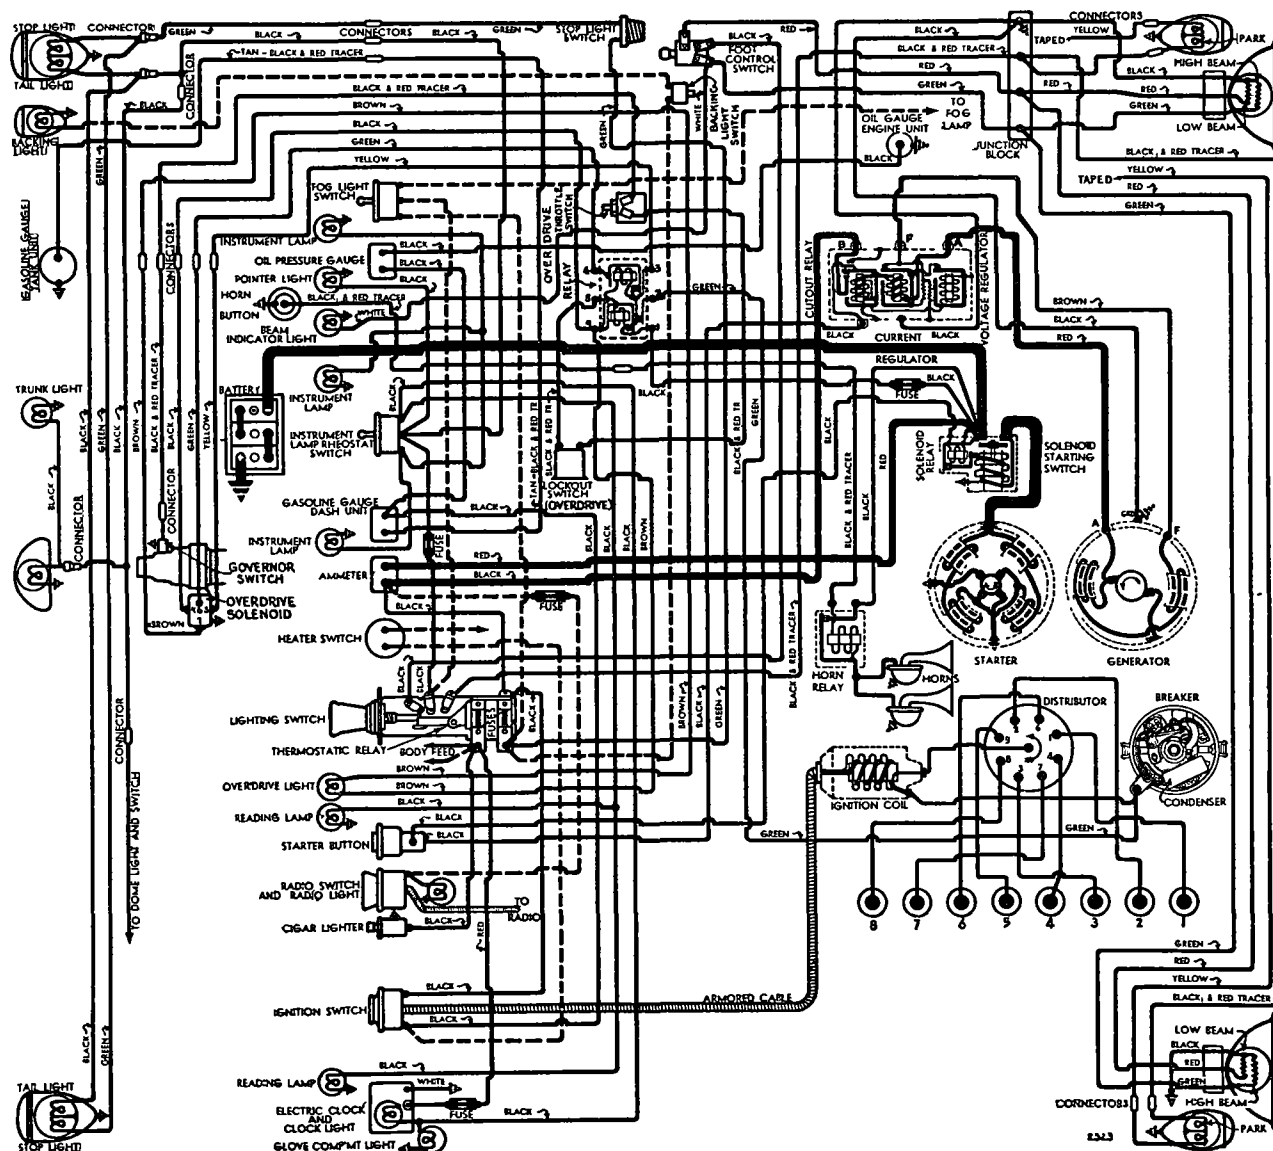

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7"
1°	2°	8⅝"
3°	6°	12"
4°	8°	13½"
5½°	11°	16"

**Fuel Compensator**—Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting listed below (see Fuel Compensator Setting following):

**Flywheel Degrees Piston Position**  
6 45-1 Std. hd. 3½-5° BTDC .0053-.0110" BTDC  
6.85-1 Optl. HC hd. 2½-4° BTDC .0027-.0070" BTDC

**NOTE:**—Vibration damper marked 'UDC' at TDC with 15 (1°) graduations before this point.

**Timing:**—Loosen thumbnut, set Fuel Compensator pointer at '0', tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct graduation on vibration dampener at front of engine lines up with pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting.

**Timing (Neon Timing Light):**—Mark vibration dampener with white paint at proper point, idle engine below 500 RPM, adjust distributor (above).

**Fuel Compensator Setting:**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model AAV-26 No. A-19172 (Code marked 10-40). 1¼" dual, downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm and running, at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw (one for each barrel) in succession until engine fires smoothly (1½-1¾ turns open for each screw—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting:**—Two holes provided in throttle lever for pump link engagement as follows. Lower (max stroke)—Normal setting.

Upper (min stroke)—If less charge required.

**Float Level:**—Fuel level ⅝" below top edge of bowl.

**Fast Idle:**—Stromberg AAV-26 carburetor type. Not adjustable.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Stromberg AAV-26 Carb. type. *For complete data, refer to Carburetion Equip. Index.*

**Choke Setting:**—Aligned 'V' mark on thermostat cover with reference mark on housing. Setting may be varied 2 notches on either side.

**Throttle Guard (Cars with Econo-Drive):**—Vacuum operated throttle kicker to prevent engine stalling when operating below 20 MPH.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1529361 oil-wetted type standard. Heavy duty oil-bath type optional. Crankcase filler tube cap equipped with copper mesh cleaner.

**Fuel Pump:**—AC Type AJ #1523867 combination fuel-and-vacuum pump. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Stewart (Stewart-Warner) Electric. *For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Willard, Type SW-2-113. 6 volt, 17 plate, 113 ampere hour capacity (20 hour rate).

**Starting Capacity:**—134 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 42 minutes.

**Grounded Terminal:**—Positive (+) grounded to the frame 'X' member. Engine Ground—Strap connector between transmission cover bolt and frame.

**Dimensions:**—Length 10 5/16". Width 7 1/16". Height 8 13/16".

**Location:**—Under left front seat.

## STARTER

**Auto-Lite Model MAX-4041. Armature MAW-2069. Drive:**—Overrunning clutch (solenoid pinion shift) through reduction gears.

**Rotation:**—Clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

### Performance Data

Torque	**R.P.M.	Volts	Amperes
0 ft. lbs. . . . .	2695 . . . . .	5.5 . . . . .	77
33 5 " " " " . . . . .	Lock . . . . .	3.0 . . . . .	652
45 9 " " " " . . . . .	Lock . . . . .	4.0 . . . . .	906

\*\*—Pinion shaft R.P.M.

**Removal:**—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch:** Auto-Lite SS-4205 Solenoid type. Controlled through relay by pushbutton on instrument panel. *See article in Electrical Equipment Sect'n.*

**NOTE:**—Cutout relay has extra set of contacts ('T' terminal on regulator connected to starter button) which grounds starter circuit at speeds above cut-in point of Cutout Relay.

## GENERATOR

**Auto-Lite Model GEA-4802-A. Armature No. GDZ-2006F.** Two brush with current-voltage control.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

*See Regulator data following.*

**Maximum Charging Rate:**—35 amperes (hot or cold), 80 volts, 1570 RPM and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data①

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0 . . . . .	6.4 . . . . .	850	0 . . . . .	6.4 . . . . .	865
4 . . . . .	6.6 . . . . .	950	4 . . . . .	6.6 . . . . .	975
8 . . . . .	6.75 . . . . .	1050	8 . . . . .	6.75 . . . . .	1075
12 . . . . .	6.95 . . . . .	1150	12 . . . . .	6.95 . . . . .	1180
16 . . . . .	7.1 . . . . .	1250	16 . . . . .	7.1 . . . . .	1300
20 . . . . .	7.3 . . . . .	1345	20 . . . . .	7.3 . . . . .	1425
24 . . . . .	7.5 . . . . .	1440	24 . . . . .	7.5 . . . . .	1560
28 . . . . .	7.7 . . . . .	1540	28 . . . . .	7.7 . . . . .	1695
32 . . . . .	7.85 . . . . .	1635	32 . . . . .	7.85 . . . . .	1850
35 . . . . .	8.0 . . . . .	1700	35 . . . . .	8.0 . . . . .	1970

①—With new type service brushes. Refer to '120' Eight (GEA-4801A) for performance with original type brushes.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.57-1.75 amperes at 6.0 volts.

**Motoring Current:**—4.45-4.9 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator out until 25 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and water pump pulley is ½" with thumb pressure.

## REGULATOR

**Auto-Lite Model VRP-4003A (First Cars), VRP-4202A-1 (Later Cars).** Voltage-current type. Mounted in single case on engine side of dash. **NOTE:**—Cutout Relay has extra set of contacts ('T' terminal) for grounding of starter solenoid relay circuit.

*For complete data, refer to Electrical Equipment Index.*

**NOTE:**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In:**—6.4-6.6 volts, 700 Gen. RPM.

**Cuts Out:**—4.1-4.8 volts with approx. 4-6 ampere discharge (VRP-4003A), 4.8-5.6 volts with approx. 7-8 ampere discharge (VRP-4202A-1).

**Contact Gap:**—0.15" minimum with upper ground contacts closed (closed when main contacts open).

**Air Gap:**—.031-.034" (VRP-4003A), .034-.038" (VRP-4202A-1) with contacts open. Measure at hinge end.

### Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F. (All Models).

**To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be within limits of 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap:**—0.12" Min. (armature against stop pin).

**Air Gap:**—.048-.052" with contacts just opening.

### Current Regulator

**Setting:**—34-36 amperes (marked '35' on cover).

**To Check (without breaking seals):**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs, or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 34-36 amperes. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap:**—Same as for Voltage Regulator (above).

**Air Gap:**—.034-.038" (VRP-4003A before No. 5U-000001 and all VRP-4202A-1), .048-.052" (VRP-4003A after above Number).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**LIGHTING**

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type. For complete data, refer to *Electrical Equipment Index*. Headlamp Adjustment—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height. Beam Indicator—Tell-tale light on speedometer face. Lighted whenever Country (upper) beam in use.

**Switches**

Lighting—Delco-Remy 1995011.  
Beam Selector—Delco-Remy 1997001, 2 (RHD).

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Front Turn Indic. & Fender	21-3	1158
Instr., Speed'mtr., Clock	1½	55
Front Reading, Radio, Trunk	1½	55
Glove Comp't., Rear Radio	1	51
Beam, Heater & Defrost Indic.	1	51
Dome and Rear Reading	6	81
Rear Quarter & Vanity Cabinet	3	63
Stop & Tail	21-3	1158
Rear License	3	63
Fog Light	32	1321
Spot Light	32	1323
Backing Light	15	87

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70°F. Not adj.

**FUSES:**—Dome, Stop Light and Accessories—Two 20 ampere. Mounted on back of lighting switch. Instrument and Tail Light—20 ampere. In connector in tail light lead near light switch. Clock—2 ampere. In feed wire. Radio—14 ampere. In feed wire. Overdrive—30 ampere. In relay lead near starter.

**HORNS:**—Sparton Model H-32. Vibrator type, Air tone, Twin horns operated by horn relay. Air Gap—.032-.035" (low note—long horn), .026-.030" (high note—short air column). Horn Current—22-25 amperes (total).

Horn Relay:—R-B-M Model 4760.  
NOTE—Relay not adjustable (cover welded on). Closing Voltage—3.5-4.5 volts.

**ENGINE**

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type. Bore—3½". Stroke—4½". Displacement—356 cu. ins. Rated HP—39.2. Developed Horsepower—160 at 3600 RPM (Std. hd.). Compression Ratio—6.45-1 Std. 6.85-1 Optl. CI hds. Compression Pressure—118 lbs. at cranking speed for standard head. Vacuum Reading—18½" steady idling at 6 MPH.

**PISTONS:**—Nelson Bohnalite, aluminum alloy, auto-thermic, strut type, tin plated, cam ground. Weight—20¼ ozs. (stripped), 26½ (with rings & pin). Length—3⅞". Removal—Pistons and rods removed from above. Clearance—.0005-.001". See Fitting Pistons.

Original Bore & Piston Sizes, Replacement Pistons:—See Packard Shop Notes for complete data.

Fitting New Pistons:—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

Installing Pistons:—Slot toward valves.

**PISTON RINGS:**—2 coated compression (Perfect Circle #200, No. 1 upper inner edge beveled, #70 No. 2), 1 oil cont. (X90-85 expander type), all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (#1).....	.0930-.0935"	.007-.017"	.0025-.003"
Comp. (#2).....	.1240-.1235"	.007-.017"	.0025-.003"
Oil Cont.....	.1860-.1865"	.007-.015"	.0015-.002"

Replacement Rings:—Furnished standard and .005", .010", .020", .030" and .040" oversize.

**PISTON PIN:**—Diameter—⅞. Length—3 1/64". Pin floats in piston and rod, held by locking rings. Furnished standard and .003", .008" oversize. Pin Fit in Piston—Finger push fit with piston heated to 160°F. Pin Fit in Rod Bushing—Finger push fit at 70°F.

**CONNECTING ROD:**—Length—9¼". Weight—42.0 ozs. Upper Bearing (Piston Pin Bushing)—Split type. See Packard Shop Notes for complete data. Crankpin Journal Diameter—2¼". Lower Bearing—Interchangeable steel-backed, bab-bitt lined type. Bearings furnished std. and .001", .002", .003", .015" undersize. Clearance—.0005-.0015". Sideplay—.004-.010".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Installing Rods:—Oil squirt hole to camshaft.

**CRANKSHAFT:**—9 bearing type with 8 bolted-on counter-weights. Vibration dampener on front end. Journal Diameters—2¾".

Bearings—Interchangeable steel-backed, bab-bitt-lined. Furnished std., .001", .002" undersize. Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Replace bearings (upper half can be 'rotated' in or out). Do not file caps.

End Thrust:—Taken by #5 bearing. Endplay .003-.008".

**CAMSHAFT:**—8 bearing. Non-adjustable chain drive. Bearing Type—Steel-backed, bab-bitt-lined. Clearance—.001-.003".

End Thrust:—Taken by thrust plate behind camshaft sprocket. Endplay—.002-.004".

Timing Chain:—Morse Type C-3682R (#765) or Ramsey. Width 1¼". Pitch ⅝". Length 62 links or 23¼".

Camshaft Setting:—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across the shaft centers. See Packard Shop Notes for Radiator & Fender (unit) removal for work on front end of engine.

VALVES:	Head Diameter	Stem Diameter	Length
Intake.....	1 43/64"	.34025"	6 3/16"
Exhaust.....	1 7/16"	.34025"	6 3/16"

	Seat Angle	Lift	Side Clearance
Intake.....	30°	.340"	.001-.003"
Exhaust.....	45°	.340"	.003-.005"

Valve Guides:—Straight reamed type pressed in block from above. Install with stepped end up (Intake), down (Exh) & top of guide 31/32" below valve seat.

**Valve Springs:**—Washer used on top of each spring. Spring Pressure.....Length

Valve Open.....147-157 lbs.....1 13/32"

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters (mushroom type). Remove from below with camshaft out. Service by reaming (use tool ST-5101, work through valve guide hole) and installing lifters furnished .001", .002", .005" oversize. See Miscellaneous Section for complete data.

Diameter .7177-.7182". Clearance .0002" selective. See Packard Shop Notes for Valve Lifter Clearance check when grinding valves.

**VALVE TIMING**

**Tappet Clearance:**—None in service (hydraulic type lifter). See Valve Servicing in Packard Shop Notes.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 4° BTDC. Close 51° ALDC.

**Exhaust Valves:**—Open 49° BLDC. Close 10° ATDC.

**To Check Timing:**—#1 exhaust valve closes 10° or .0438" after top dead center with hydraulic lifter dry (oil drained) and built up with shim stock for zero tappet clearance.

**LUBRICATION**

**LUBRICATION:**—Pressure (pump on right of engine). See Packard Shop Notes for Oil Pump installation.

Normal Oil Pressure:—50 lbs. at 45 MPH.

**Oil Pressure Relief Valve:**—Mounted on pump cover. Not adjustable. Spring pressure should be 17½-18½ lbs. at 1⅞".

**Oil Pressure Gauge:** Stewart-Warner electric type. Crankcase Capacity: 7 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity—20 quarts.

**Water Pump:**—Packless type with ball-bearing shaft. See Water Pump Section for complete data.

**Removal:**—Remove fan belt, disconnect pump hose, take out pump mounting screws, lift out pump.

**Thermostat:**—Harrison. In radiator top tank. Operates radiator shutters. Starts to open 145° F.

**CLUTCH**

**CLUTCH:**—Long Model 11CFS-CI. Semi-centrifugal, single plate, dry disc type (riveted assembly).

NOTE—Borg & Beck Model 11A6 (marked #944) Single plate dry disc type with 'Borglite' driven member used after Engine No. 501609 to No. 503811. See Clutch Section for complete data.

Facings (Long)—Ammco No. 8263M1, 2 used. Inside Diam. 6½". Outside Diam. 11". Thickness .125".

**Adjustment:**—Adjust nut on pedal rod (at clutch fork) for 1¾-2¼" pedal free movement.

**Removal:**—Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover screws and remove assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur gear reverse). Synchro-mesh (second & high). See Transmission Section for complete data.

**Transmission Control:**—Own Remote Control type. See Transmission Section for complete data.

**Removal:**—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, overdrive cable and solenoid wires (if used), front universal (block drive shaft up against floor pan) and rubber bearing at rear of overdrive. Support rear of engine with jack and unbolt cross member (at frame ends and flywheel housing lower cover). Disconnect clutch retractor spring and fore and aft restraint rod. Take out transmission-to-flywheel housing screws, remove assembly.

### OVERDRIVE

**Econo-Drive Transmission:**—New Warner-Packard type (Warner Model AS1-R9A) overdrive unit with electrical control. Optional.

*See Transmission Section for complete data.*

**Overdrive Solenoid**—Delco Remy Model 1118005.

**Overdrive Indicator Light**—In light switch knob. Lighted when overdrive is ready to engage (light goes out when accelerator pedal released so that overdrive can engage).

**Throttle Switch**—Cole-Hersee, Packard No. 347496. Adjust tappet screw on throttle lever to just contact switch plunger with carburetor throttle valve in wide open position.

**Lock-out Switch**—Ark-less or Soreng-Manegold, Packard No. 354820 or 347641.

**Control Relay**—Delco-Remy Model 1116801.

**Governor Switch**—Bendix, Packard No. 355075 Std.

*See Warner (Packard) Overdrive Control article in Transmission Section for Optional Switches.*

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics Model 3C. Needle bearing type. 2 used.

*See Universals Section for complete data.*

**CAUTION**—Rear universal flange controls pinion bearing pre-load. See Packard Rear Axle article in Rear Axle Section for complete data.

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive and special Ring Gear Support Roller. Cover is welded in place.

*See Rear Axle Section for complete data.*

Model	Ratios:—	Std.	Econ-Dr.	Optl.
1803, 1806	.....	3.92-1	4.36-1	4.09-1
1804, 1807	.....	4.09-1	4.36-1	4.36-1
1805, 1808	.....	4.36-1	4.54-1	4.54-1
1803A	.....	4.54-1	4.7-1	4.7-1

**Backlash**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment**—Endplay controlled by shims between flanged end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted at one wheel).

**Endplay**—.004-.007".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**— Front Rear

1803,6	.....	Delco 2206-A,B	.....	Monroe 351194
" " Export	.....	Delco 2206-A,B	.....	Delco 1130-W
1804,5,7,8	.....	Delco 1966-C,D	.....	Delco 2007-G,H
1803A Comm'l	.....	Delco 1966-C,D	.....	Delco 1751-M,Z

*See Shock Absorber Section for complete data.*

**Parallel cylinder type** (2206-A,B). Double acting type (1966-C,D; 2007-G,H; 1751-M,Z). Direct acting type (Monroe 351194). Direct acting adjustable type (Delco 1130-W).

**Fifth Shock Absorber (Stabilizer):**—Houdaille Model NFT. Double acting, hydraulic, adjustable type.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent 'Safe-T-fleX' type with coil springs.

*See Front Suspension Section for complete data.*

**NOTE**—Frame height must be set first.

**Frame Height**—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 19¼" (load car until figure correct).

**Kingpin Inclination**—1°54' crosswise.

**Camber**—Pos. ½° (plus ¾°, minus 0°). Adjustable.

**Caster**—Neg. 1° ± ½° (except 1803A). Pos. 2½° ± ½° (1803A Comm'l).

**Toe In**—0" (+1/16", —0") at hub height. Turn both tie rods equally (must be equal after adjusting). **Steering Geometry**—Inner wheel turned 22°50' 1803,6, 22°30' (1804,7), 22°20' (1805,8). Outer 20°.

### STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment (except 1803,6). Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums**—Centrifuse. Diameter 12".

**Lining**—Moulded. Width 2" (1803,6), 2¼" (1804,5,7,8), 2½" (1803A). Thickness 3/16". Length per shoe 13" (except 1803,6 primary shoe which is 11½").

**Clearance**—All except 1803,6—.010" at heel and toe of each shoe. 1803,6—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service brakes (above).

**EQUIPMENT NOTE:**—Both Delco-Remy & Auto-Lite Electrical Equipment are used on this model.

**HOOD LOCK:**—Conventional center hinge hood. Hood latch handles located on side panels.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left side of cowl (use Eng. No.).

**ENGINE NUMBER:**—First No. D-1551. Stamped on left side of engine block between #2 and #3 cylinders.

### TUNE-UP

**COMPRESSION:**—Ratio—6.39-1 Std., 6.71-1 Optl. Pressure—110 lbs. at 125 RPM. (Std. Hd.).

**VACUUM READING:**—18-20" steady idling at 6 MPH.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—AC No. 104 or Champion Y4. 10 MM.

Gaps—.028". Limits .0255-.0305".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020".

Cam Angle—Closed 38° (Auto-Lite), 35° (Delco-Remy).

Automatic Advance—Auto-Lite: 9½° at 1600 RPM. Delco-Remy: 10¼° at 1600 RPM. Distr. ° & RPM.

Vacuum Advance—7½° (distr.) with 17" vacuum.

**IGNITION TIMING** See Ignition Timing.

Std. Setting—6° BTDC for all engines. Vibration dampener mark (correct degree mark ahead of #1UPDC) aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw 1-1½ turns open. Adjust for smooth idle. Idle speed 6 MPH.

Float Level—Fuel level ⅝" below top edge of bowl. Accelerating Pump—Center Hole—Normal Setting.

Fuel Pump Pressure: 4¼ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Make certain that valve operates freely and does not bind or stick. Do not oil control.

**VALVES:** See Valve Timing.

Tappet Clearance:—.007" Int., .010" Exh. Warm. Adjusting screws are self-locking (no locknuts).

Removable fender plate under right front fender.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

#### AUTO-LITE

**Ignition Switch:**—Mitchellock Model 24-B, No. 8781.

**Ignition Lock:**—Briggs & Stratton No. 50184.

Key Series—P-1250 to P-1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4644 or CE-4652. Service Coil (less switch and cable) CE-3224VS (for CE-4644), CE-3224US (for CE-4652). Mounted on engine.

Ignition Current—2.75 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IGW-3128.

Capacity—.28-.32 microfarad.

**DISTRIBUTOR:** Auto-Lite IGC-4505. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Fuel Compensator adjmt. Breaker Gap—.020".

Cam Angle r Dwell—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

#### Automatic Advance—Auto-Lite

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3 .....	590	6.....	1180
5 .....	780	10.....	1560
7 .....	1150	14.....	2300
9.5 .....	1600	19.....	3200

**Vacuum Spark Control:**—Separate unit mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

#### Vacuum Advance—Auto-Lite

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	6"
4° .....	8°	11⅞"
7.5° .....	15°	17"

**Fuel Compensator Adjustment:**—Permits 40° range of adjustment by loosening vacuum unit link screw at distributor quadrant. See Ignition Timing below.

**Removal:**—Distributor mounted on left side of crankcase. To remove, disconnect vacuum line, take out screw in hold-down plate, lift entire unit out.

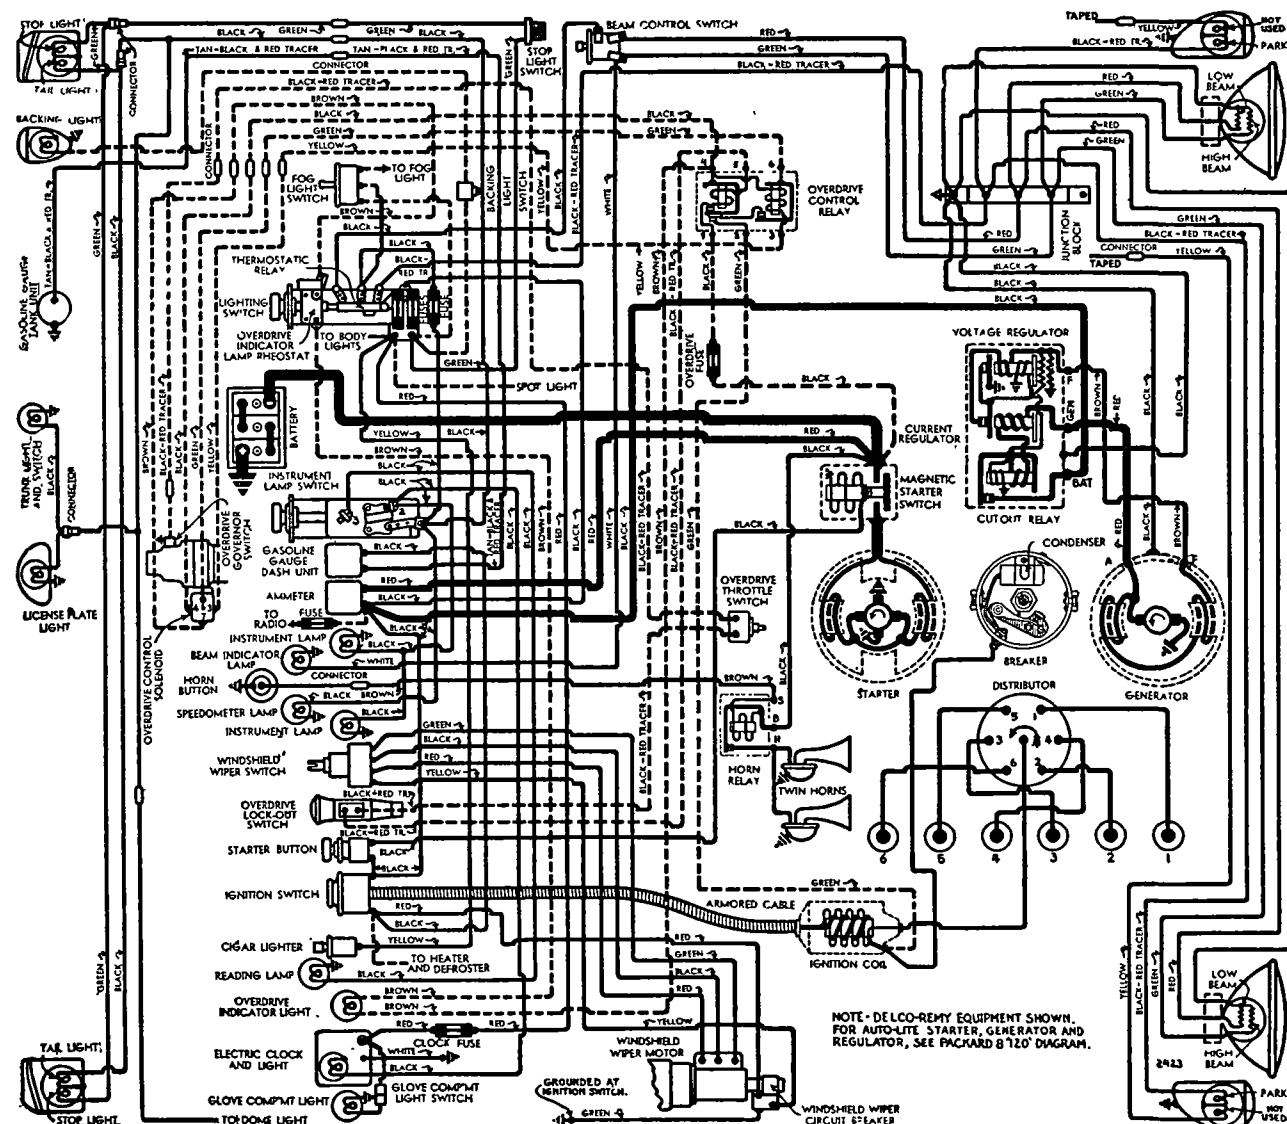

### IGNITION

#### DELCO-REMY

**Ignition Switch:**—Delco-Remy No. 1116308 (Std.), 1116318 (RHD). Coil connection armored.

**Ignition Lock:**—Briggs & Stratton No. 50184.

Key Series—P-1250 to P-1500. Groove—No. 2.

#### DELCO-REMY EQUIPMENT

See 1941 '120' Eight Diagram for Auto-Lite internal circuits

**COIL:** Delco-Remy 1115001, 1115029 (Conv. Coupe & RHD). Mounted on engine with armored cable coil connection.

**CONDENSER:** Delco-Remy Part No. 1869704. Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 1110092. Single breaker, 6 lobe cam, full automatic advance type with Vacuum Spark Control and Fuel Compensator. Breaker Gap—.020". Limits .018-.024". Cam Angle or Dwell—35° closed, 25° open. Breaker Arm Spring Tension—19-23 ozs. Rotation—Counter-clockwise viewed from above.

Automatic Advance—Delco-Remy		Engine	
Distributor	R.P.M.	Distributor	R.P.M.
Degrees		Degrees	
Start.....	300	1.5.....	600
5.....	700	10.....	1400
10.25.....	1600	20.5.....	3200

**Vacuum Spark Control**—Separate unit mounted on hold-down plate and linked to distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance—Delco-Remy		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
7.5.....	15°	15-19"

**Fuel Compensator Adjustment**—Slot in advance plate permits distributor to be advanced or retarded from center point on scale when hold-down screw loosened. See Ignition Timing for setting.

**Removal:**—Same as for Auto-Lite model (above).

## IGNITION TIMING

**IGNITION TIMING:**—See Fuel Compensator setting also. Flywheel Degrees Piston Position

All Engines ..... 6° BTDC ..... .0149" BTDC

**Timing Mark Note**—Marks now on vibration dampener at front of engine. Dampener marked '#1 UP-DC' with fifteen 1° graduations before this point.

**Timing**—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), hold-down screw in advance arm (Delco-Remy Distributors), rotate distributor until contacts begin to open, tighten screw. Check Fuel Compensator setting (below).

**Timing (Neon Timing Light)**—Mark correct graduation on vibration dampener, clip neon timing light to #1 spark plug and direct light on vibration dampener, idle engine and adjust distributor as directed **Fuel Compensator Setting**—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model BXO-V-26 (Code 10-45). 1½" downdraft type with Automatic Choke. For data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm so that choke valve wide open and fast idle inoperative, set throttle stop screw for 6 MPH hot or slow idle speed. Adjust idle adjusting screw for smooth idling performance (screw should 1-1½ turns open from inner seated position—turn screw in for leaner mixture).

Recheck idle speed.

**Accelerating Pump Setting**—Throttle lever has 3 holes for pump rod link connection as follows:

Inner (Min. stroke)—Hot weather or high-test fuel.  
Center (Med. stroke)—Normal temperatures & fuel.  
Outer (Max. stroke)—Cold weather or low test fuel.  
**Float Level**—Fuel level ⅝" below top edge of bowl with engine idling (3 lbs. pressure).

**Metering Jets**—See Stromberg Jet Table in Carburetor Section for complete data.

**Fast Idle:**—Integral (operated by Automatic Choke). For complete data, refer to Carburetion Equip. Index. **Setting**—To check, hold stop screw against lowest step of fast idle cam, move choke valve toward closed position as far as possible, check choke valve opening with 11/32" drill. Adjust by bending connector rod.

**Automatic Choke:**—Stromberg BXOV-26 type.

For complete data, refer to Carburetion Equip. Index. **Setting**—'V' mark on thermostat case in line with reference mark on housing. May be varied not more than two graduations to improve warming up.

**Throttle Guard (Cars with Econo-Drive):**—Vacuum operated throttle kicker to prevent engine stalling when free-wheeling. Kicks in 4 MPH., out 9 MPH. For complete data, refer to Carburetion Equip. Index. **Setting**—Set gap between plunger and carburetor throttle lever at .060" (carburetor set for 6 MPH slow idle speed), set spring tension adjusting screw 3/16" out beyond face of locknut.

## CARB. EQUIPMENT

**Air Cleaner:**—AC No. 1542093 oil-wetted type Std., Heavy duty oil-bath type Optl.

**Fuel Pump:**—AC Type AT. Inverted, diaphragm type. Pump Replacement Exchange No. 524G.

For complete data, refer to Carburetion Equip. Index. **Gasoline Gauge:**—Stewart (Stewart-Warner) Electric. See article in Carburetion Equipment Section.

## BATTERY

**BATTERY:**—Willard Type SW-1-95. 6 volt, 15 plate, 95 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Positive (+) to frame 'X' member. **Engine Ground**—Separate strap connector from transmission to frame 'X' member.

**Location**—Under left front seat.

**Dimensions**—Length 9". Width 7". Height 8¾".

## STARTER

### AUTO-LITE

Year	Auto-Lite Model	Armature Number	Magnetic Switch
Early '41	MAW-4021	MAW-2006	SS-4017
Late '41	MAW-4024	MAW-2128	SS-4017
Drive—Outboard Barrel Type Bendix No. A-1718 (with MAW-4021), A-1792 (with MAW-4024 starter).			
Rotation—Counter-clockwise at commutator end.			
Brush Spring Tension—42-53 ozs. (new brushes).			
Cranking Engine—125 RPM., 175 amperes, 5.1 volts.			

### Performance Data—Auto-Lite

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
0.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal:** Similar to Delco-Remy data below.

**Starting Switch:**—A-L Model SS-4017. Magnetic type. Mounted on starter and controlled by R.B.M. #5380 pushbutton switch on instrument panel.

For complete data, refer to Electrical Equipment Index.

## STARTER

### DELCO-REMY

Delco-Remy Model 1107037. Armature No. 1878077. Drive—Outboard Barrel Type Bendix No. A-1792. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—24-28 ozs. each.

### Performance Data—Delco-Remy

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, disconnect wires, take out flange mounting screws, remove starter and switch as an assembly.

**Starting Switch:**—Delco-Remy No. 1452. Magnetic type mounted on starter and controlled by pushbutton switch on instrument panel.

For complete data, refer to Electrical Equipment Index.

## GENERATOR

### AUTO-LITE

Auto-Lite Model GDZ-4801F. Armature No. GDZ-2006F. Two brush type (Current-Voltage control). **Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate**—35 amperes (hot or cold), 8.0 volts, 1900 RPM and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data—Auto-Lite

Cold		Hot	
Amperes	Volts	Amperes	Volts
0.....	6.4.....	0.....	6.4.....
4.....	6.6.....	4.....	6.6.....
8.....	6.75.....	8.....	6.75.....
12.....	6.95.....	12.....	6.95.....
16.....	7.15.....	16.....	7.15.....
20.....	7.3.....	20.....	7.3.....
24.....	7.5.....	24.....	7.5.....
28.....	7.7.....	28.....	7.7.....
32.....	7.9.....	32.....	7.9.....
*35.....	8.0.....	35.....	8.0.....

\*—Current Regulator setting.

**Rotation**—Counter-clockwise at commutator end.

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Removal & Belt Adjustment:** See data given below.

## GENERATOR

### DELCO-REMY

Delco-Remy Model 1102682. Armature No. 1879002. Two brush with Current-Voltage Control. **Charging Rate Adjustment**—None. Charging rate controlled by Voltage Regulator, maximum output controlled by Current Regulator. See Regulator **Maximum Charging Rate**—32-34 amperes, 8.0 volts hot. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data—Delco-Remy

Cold	Amperes	Volts	R.P.M.
.....	30①	8.0	1750

① Not maximum output. See Current Regulator.

CONTINUED ON NEXT PAGE

## C NTINUED FROM PRECEDING PAGE

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.67-1.82 amperes at 6.0 volts.

**Removal**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—50 lbs. tension on spring scale hooked to generator frame, or ½" thumb-pressure deflection midway between gen. and pump pulleys.

## GENERATOR

## SPECIAL EQUIPMENT

**Taxicab Generator**: Auto-Lite GEB-4802C-2 with VRP-4002D Regulator. Refer to 1941-42 Packard '120' pages following for complete data on these units.

## REGULATOR

## AUTO-LITE

**Auto-Lite Model VRP-4002C-3-unit Current-Voltage type**. In case on left side of engine dash.

*For complete data, refer to Electrical Equipment Index.*  
**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

## Cutout Relay—Auto-Lite

**Cuts In**—6.4-6.6 volts. 920 RPM (cold).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator—Auto-Lite

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.  
**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap**—.012" min. (armature against stoppin).  
**Air Gap**—.048-.052" with contacts just opening.

## Current Regulator—Auto-Lite

**Setting**—34-36 amperes (marked '35' on the cover).  
**To Check** (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.  
**Adjustment, Contact Gap, Air Gap**—Same as given for Voltage Regulator (above).

## REGULATOR

## DELCO-REMY

**Delco-Remy Model 1118202**. Single Core Current Voltage Regulator. In case on dash.

*For complete data, refer to Electrical Equipment Index.*  
**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay—Delco-Remy

**Cuts In**—6.2-6.7 volts hot, 900 RPM.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

## Voltage Regulator—Delco-Remy

**Setting**—7.2-7.4 volts hot (operating temperature). Should be checked with cover in place and hot.

**To Check**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F.), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for other (2nd.) spring adjustment.  
**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator—Delco-Remy

**Setting**—34-36 amperes hot (at operating temp.).  
**To Check**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F.), current reading should agree with setting (above).  
**To Adjust**—Same as for Voltage Regulator (above).  
**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING**—Headlamps—Hall 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center hght.).  
**Beam Indicator**—Red light on left side of speedometer. Lighted when Upper Beams in use.

## Switches

**Lighting**—Delco-Remy No. 1995011 (Std.), 1995019 (With Econo-drive—has dimmer switch for Econo-drive Indicator light controlled by switch knob).  
**Beam Selector**—Delco-Remy No. 1997001 (LHD cars), 1997002 (RHD cars).

## Bulb Specifications

Position	Bulb Specifications	Candlepower	Mazda No.
Headlamps	Sealed Beam		
Front Fender	21-3	1154	
Instr., Speed'mtr., Clock	1½	55	
Front Reading, Econo Dr. Ind.	1½	55	
Glove Compt., Beam Indicator	1	51	
Stop & Tail	21-3	1154	
Rear License	3	63	
Dome	6	81	

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70°F. Not adj.

**FUSES**—Stop Light, Cigar Lighter & Accessories—Two 20 ampere. On back of lighting switch.

**Instrument & Tail Light**—20 ampere. In connector in lead near ammeter.

**Clock**—4 ampere. In lead near clock.

**Econo-drive**—30 ampere. In relay lead near starter.

**Windshield Wiper**—No fuse (circuit-breaker).

**HORNS**—Sparton. Vibrator type, air tone, twin horns

**Horn Current**—22-25 amperes (total both horns).

**Horn Relay**—R-B-M Model 6006.

**Contacts Close**—3-4 volts (with relay upright).

## ENGINE

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head type.

**Bore**—3½". **Stroke**—4¼".

**Displacement**—245 cu. ins. **Rated HP**—29.4.

**Developed Horsepower**—100 at 3600 RPM (Std. hd.).

**Compression Ratio and Pressure**—As follows:

6.39-1 Std. cast-iron head—110 lbs. at 125 RPM.

6.71-1 Optl. HC cast-iron hd.—118 lbs. at 125 RPM.

See Packard Shop Notes for Cylinder Head data.

**Vacuum Reading**—18-20" steady idling at 6 MPH.

**PISTONS**—Aluminum alloy, autothermic, strut type, tin plated, cam ground type. **Length**—3¾".

**Weight**—20¼ ozs. (stripped), 26¾ (with rings & pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0005-.001". See Fitting New Pistons.

**Original Bore & Piston Sizes, Replacement Pistons**—See Packard Shop Notes for sizes and markings.

**Fitting New Pistons**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons**—Slot toward valves.

**PISTON RINGS**—2 Ferrox coated compression rings (Perfect Circle—#1 K-200 upper inner edge beveled, #2 K-70 lower outer edge grooved), 1 oil control (X-90 'C' wall) ring, all above pin. **CAUTION**—Use 'K' type rings only (have greater wall thickness than S.A.E. type). See Packard Shop Notes for Replacement (Triple Action) Piston Ring installation data.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0930-.0935"	.007-.017"	.0025-.003"
Comp. (#2)	.1240-.1235"	.007-.017"	.0025-.003"
Oil Control	.1865-.186"	.007-.015"	.0015-.002"

**Replacement Rings**—.005", .010", .020", .030", .040" O.S. Triple Action (packaged sets) std. & .020" oversize.

**PISTON PIN**—Diameter—.875". **Length**—3 1/64". Pin floats in piston and rod, held by locking rings.

**Pin Fit in Piston**—Finger push fit (piston at 160°).

**Pin Fit in Rod Bushing**—Finger push fit at 70° F.

**Replacement Pins**—Std. and .003", .006" oversize.

**CONNECTING ROD**—Length 7 11/16". **Weight** 31.6 ozs.

**Upper Bearing (Piston Pin Bushing)**—Split type.

See Packard Shop Notes for servicing data.

**Crankpin Bearing Diameter**—2 3/32".

**Lower Bearing**—Shimless, precision, steel backed, babbitt lined type. Bearings furnished standard and .001", .002", .003", .015" undersize.

**Clearance**—.0005-.0015". **Endplay**—.004-.010".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file rods or caps.

See Packard Shop Notes for 'Palnut' installation data.

**Installing Rods**—Oil squirt hole toward camshaft.

**CRANKSHAFT**—4 bearings, 6 integral counterweights  
**Bearing Diameter**—2¾".

**Bearings**—Interchangeable, shimless, precision, steel-backed, babbitt lined type. Furnished standard size and .001", .002" undersize.

**Clearance**—.0005-.0015".

**Bearing Adjustment**—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

**End Thrust**—Taken by front (#1) bearing.

**Endplay**—.003-.008".

**CAMSHAFT**—4 bearing. Non-adjustable chain drive.

See Packard Shop Notes for Radiator & Fender assembly (unit) removal for work on front end of engine.

## ENGINE

## C CONTINUED FROM PRECEDING PAGE

**Bearings**—Shimless, precision, steel backed, babbit lined type. Clearance—.001-.003".

**End Thrust**—Taken by thrust plate in back of camshaft sprocket. Endplay—.0025-.006".

**Timing Chain**—Morse Type C-3682R (No. 1525) or Ramsey. Width 1 1/4". Pitch .375". Length 21 3/4" or 58 links.

**Camshaft Setting**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 19/32"	33975"	5.619"
Exhaust	1 3/8"	33975"	5.619"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.318"	.002-.003"
Exhaust	45°	.3175"	.004-.005"

**Valve Guides**—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides counter-bored on upper inner diameter to 3/8" diameter and 3/8" deep.

**Valve Springs**—Intake and exhaust springs interchangeable. Spring Pressure Spring Length  
Valve Closed 47-52 lbs. 1 5/8"  
Valve Open 114-124 lbs. 1 5/16"

NOTE—Serrated washer installed on top of springs.

**Valve Lifters**—Mushroom type. Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

Diameter—.6235-.6240". Clearance—.0003-.0012".

## VALVE TIMING

**Tappet Clearance**—.007" Intake, .010" Exh. (warm & idling). NOTE—Self-locking tappet screw used. Remove right front fender plate for access to valves.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

With tappet clearance of .0125" Intake, .015" Exh. **Valve Timing Check**—With .0125" tappet clearance #1 intake valve should open with #1 piston 1° or .0004" BTDC with 1st graduation before top dead center mark #1 UPDC on vibration damper lined up with pointer (permissible variation 4° either way). Reset tappet clear. .007" (hot & idling).

## LUBRICATION

**LUBRICATION**—Pressure (pump on right of engine). See Packard Shop Notes for Oil Pump installation.

**Normal Oil Pressure**—40 lbs. at 45 MPH.

**Oil Pressure Relief Valve**—Mounted on pump cover. Not adjustable. Spring pressure 14 lbs. ± 2 oz. @ 1 1/6".

**Crankcase Capacity**—5 quarts.

## COOLING

**COOLING SYSTEM**—Capacity—15 quarts.

**Pressure Valve**—In filler cap. Opens at 4 1/2 lbs. (Std.), 12 lbs. (with Air Conditioning equipment).

**Water Pump**—Packless, sealed ball-bearing type. See Water Pump Section for complete data.

**Removal**—Remove fan belt, disconnect pump hose, take out pump mounting screws, lift out pump.

**Thermostat**—Bishop & Babcock. In head outlet.

**Setting**—Starts to open at 147 1/2° F.

## CLUTCH

**CLUTCH**—Long Model 9 1/2 CF-CS, 11 CFS-CI (Early Taxi), 11 CF-CI (Late Taxi). Semi-centrifugal, single plate, dry disc types. NOTE—11 CFS-CI (Early Taxi) is a riveted assembly.

See Clutch Section for complete data.

**Facings**—Woven (U.S. Asbestos No. 1133-G), 2 used. I.D. 6", 6 1/2" (Taxi). O.D. 9 1/2", 11" (Taxi). Thick. 1/8".

**Adjustment**—Adjust nut on pedal rod (at clutch fork) for 1 1/2-1 3/4" free travel (2" when equipped with Electromatic Clutch).

**Removal**—Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover screws (release tension evenly) and lower assembly out.

## ELECTROMATIC CLUTCH

**ELECTROMATIC CLUTCH**: Vacuum type with electrical control. Optional on all models.

**Control Solenoid**—Auto-Lite SSD-4001.

**Control Relay**—Auto-Lite HRH-4001.

See Clutch Section for complete data.

## TRANSMISSION

**TRANSMISSION**—Own Make. Constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur reverse gear). Synchro-mesh (second & high).

See Transmission Section for complete data.

**Transmission Control**—Own Remote Control type. See Transmission Section for complete data.

**Removal**—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, overdrive cable and solenoid wires (if used), front universal (block drive shaft up against floor pan) and rubber bearing at rear of overdrive. Support rear of engine with jack and unbolt cross member (at frame ends and flywheel housing lower cover). Disconnect clutch retractor spring and fore and aft restraint rod. Take out transmission-to-flywheel housing screws, remove assembly.

## OVERDRIVE

**OVERDRIVE**: Warner Type R9 (Kick-down). Model AS2-R9 overdrive unit with electrical control.

See Transmission Section for complete data.

**Overdrive Solenoid**—Delco-Remy Model 1118005.

**Overdrive Indicator Light**—Green light on right side of speedometer dial. Lighted whenever overdrive is ready to engage (light goes out when accelerator pedal is released so that overdrive can engage).

**Throttle Switch**—Cole-Hersee. Packard No. 347496. Adjust tappet screw on throttle lever to just contact switch plunger with throttle valve wide open.

**Governor Switch**—Bendix No. 364782.

**Control Relay**—Delco-Remy Model 1116801.

**Removal**: Procedure same as for regular transmission (see above) plus the following: Disconnect control cable, solenoid wires, and overdrive rear mounting.

## UNIVERSALS

**UNIVERSAL JOINTS**—Detroit-Universal Series 4251 (4200 front, 5150 rear). Front joint is ball & trunnion type with roller bearings (takes slip or end travel—no slip joint used). Rear joint is roller bearing type with cross.

See Universals Section for complete data.

► **CAUTION**—Rear universal flange controls pinion bearing pre-load. For complete data, refer to the Rear Axle Section for Packard Rear Axle article.

## REAR AXLE

**REAR AXLE**—Own Make. Semi-floating, Hypoid gear type with Hotchkiss drive. Cover welded in place.

See Rear Axle Section for complete data.

**Ratio**—4.3-1 Std. 4.55-1 with Overdrive.

**Backlash**—.003-.005". Screw adjustment.

**Removal**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment**—Endplay controlled by shims between flanged end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted to desired .006" at one wheel). Endplay—.004-.007".

## SHOCK ABSORBERS

**SHOCK ABSORBERS**:— Front Rear  
Domestic ..... Delco 1966-C,D ..... Monroe 364630  
Export ..... Delco 1966-C,D ..... Delco 1130-W  
Front shocks are double acting type. Rear shocks are direct acting (adjustable type Delco).  
See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension**—Independent 'Safe-T-flex' type (parallelogram type—coil springs & torque arms). See Front Suspension Section for complete data.

NOTE—Frame height must be set first before checking Caster and Camber.

**Frame Height**—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 17 3/8" (load car until figure correct).

**Kingpin Inclination**—2 1/2° crosswise.

**Camber**—Pos. 1/2° (plus 3/4°, minus 0°). Adjustable.

**Caster**—Pos. 1/2° ± 1/2°. Shim adjustment.

**Toe In**—0" (+ 1/16", — 0") at hub height. Turn both tie rods equally (rod lengths equal within 1/2").

**Steering Geometry**—Inner wheel 23 1/2°. Outer 20°.

## STEERING GEAR

**Steering Gear**: Packard (Gemmer design Model 330) Worm-and-Roller type with center steering. Refer to Gemmer Model 330 article.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums**—Centrifuse. Diameter 11".

**Lining**—Molded (Marshall 2201). Width 1 3/4". Thick. 3/16". Length 10 3/8" (primary shoe), 12" (secondary).

**Clearance**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake**—See Service Brakes above.

## MISC. MECHANICAL

**WINDSHIELD WIPER**—Stewart-Warner Series 645-E. Electric type. NOTE—'Klixon' type circuit-breaker mounted on unit (no fuse used).

See Miscellaneous Section for complete data.

**Power Operated Convertible Top**: Vacuum Power type. See Miscellaneous Section for complete data.

**EQUIPMENT NOTE:**—Both Delco-Remy & Auto-Lite Electrical Equipment are used on this model.

**CLIPPER HOOD LOCK DATA & FRONT SHEET METAL ASSEMBLY REMOVAL:** See Packard Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left side of cowl (use Eng. No.).

**ENGINE NUMBER:**—First number E1551. On upper left side of block between #3 and #4 cylinders.

**COMPRESSION:**—Ratio—6.71-1 cast-iron head. No Optl. Pressure—118 lbs. at 125 RPM.

**VACUUM READING:**—18-20" steady idling at 6 MPH.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC #104 or Champion Y4-A. 10 mm.

Gaps—.028". Limits .0255-.0305".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020".

Cam Angle Closed 38° (Auto-Lite), 35° (Delco-Remy).

Automatic Advance—Auto-Lite: 9½° at 1600 RPM.

Delco-Remy: 10¼° at 1600 RPM. Distr. ° & RPM.

Vacuum Advance—7½° (distr.) with 17" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—4° BTDC for all engines. Vibration dampener mark (correct degree mark ahead of #1UP.DC) aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw ½-1½ turns open. Adjust for smooth idle. Idle speed 6 MPH.

Float Level—¾" from projection on bowl cover to top of float seam at free end (invert to check).

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure: 4¼ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Make certain that valve operates freely and does not bind or stick. Do not oil control.

**VALVES:** See Valve Timing.

Tappet Clearance:—.007" Intake, .010" Exh. warm.

Adjusting screws are self-locking type (no lock-nuts). Removable fender plate under fender.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION AUTO-LITE

**Ignition Switch:**—Mitchellock Model 24-B, No. 8781.

**Ignition Lock Cylinder:**—Briggs & Stratton 50184.

Key Series—P1251 to P1500. Groove—No. 2.

**COIL:** Auto-Lite CE-4659 (Clipper), CE-4652 (Others).

On dash (Clipper), on left side of engine (Others).

Service Coil (less switch & cable) CE-3224US.

**Ignition Current:**—2.75 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite No. IGW-3128.

Capacity—.28-.32 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGC-4505. Single

breaker, 6 lobe cam, full automatic advance type

with Vacuum Spark Control and Fuel Compensator.

**Breaker Gap:**—.020".

Cam Angle or Dwell—38° closed, 22° open.

**Breaker Arm Spring Tension:**—17-20 ozs.

**Rotation:**—Counter-clockwise viewed from above.

Automatic Advance (Auto-Lite)			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3.....	590	6.....	1180
5.....	780	10.....	1560
7.....	1150	14.....	2300
9.5.....	1600	19.....	3200

**Vacuum Spark Control:**—Separate unit mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance (Auto-Lite)		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	6"
4°.....	8°	11⅞"
7.5°.....	15°	17"

**Fuel Compensator Adjustment:**—Permits 40° range

of adjustment by loosening vacuum unit link screw

**Removal:**—Distributor mounted on left side of crank-

case. To remove, disconnect vacuum line; take out

screw in hold-down plate, lift entire unit out.

### IGNITION

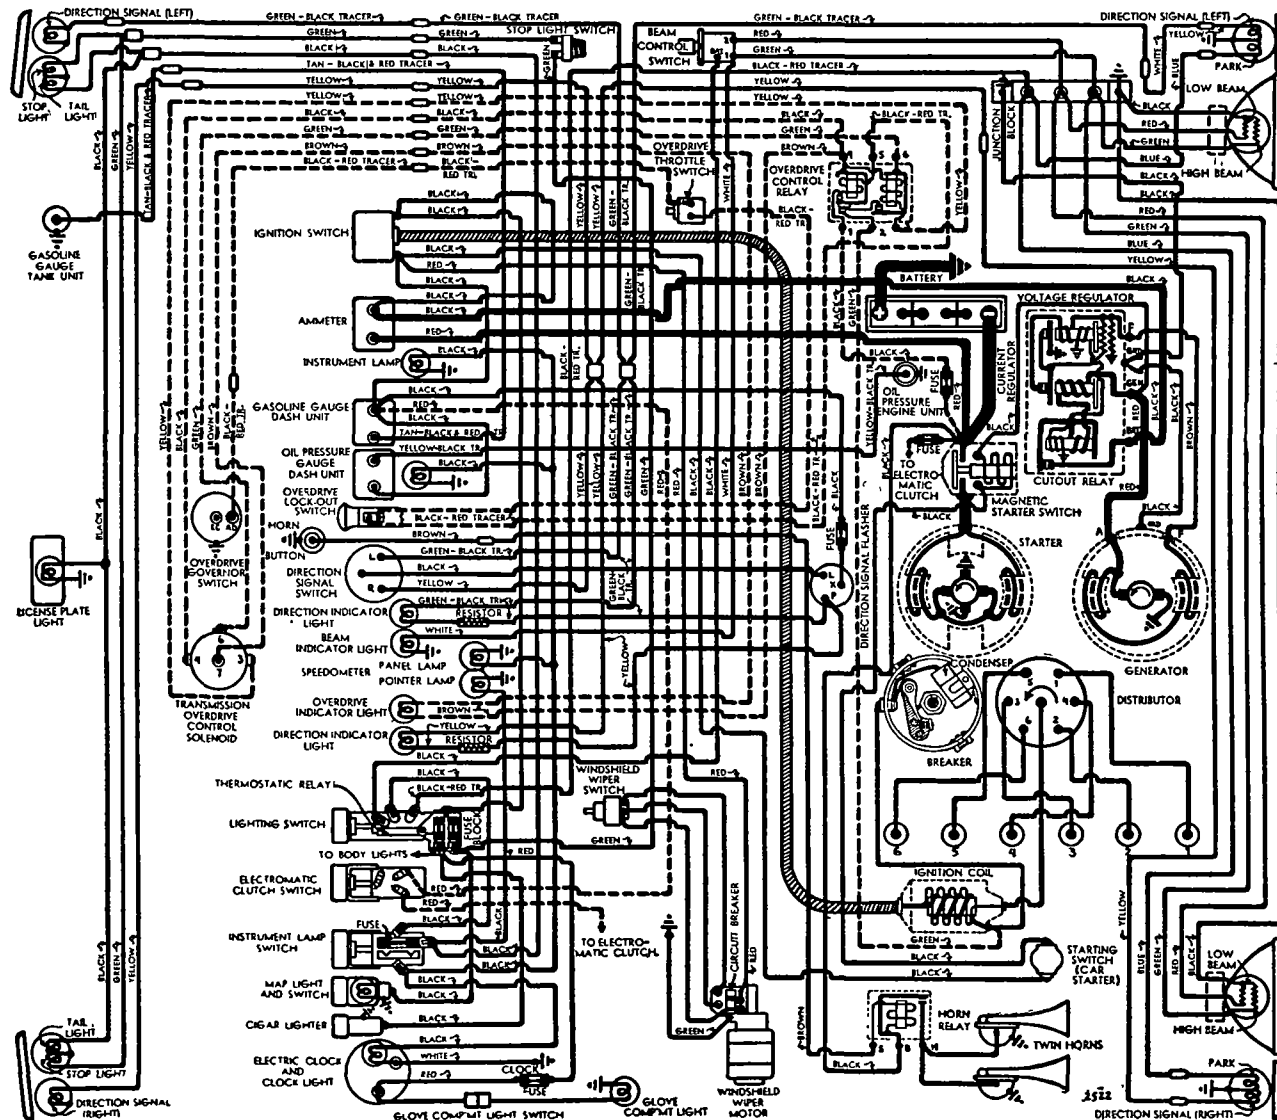

#### DELCO-REMY

**Ignition Switch:**—Delco-Remy No. 1116333 (stand-

ard), 1116321 (Conv. Coupe), 1116323 (RHD).

**Ignition Lock Cylinder:**—Briggs & Stratton 50184.

Key Series—P1251 to P1500. Groove—No. 2.

#### DELCO-REMY EQUIPMENT

See 1942 '120' Eight Diagram for Auto-Lite internal circuits

**COIL:** Delco-Remy 1115001, 1115029 (Conv. Coupe & RHD). On dash (Clipper), on left side of engine (Others).

Ignition Current—2.75 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy No. 1869704.

Capacity—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110092 or 1110132. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Fuel Compensator Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	1.5.....	600
5.....	700	10.....	1400
10.25.....	1600	20.5.....	3200

Vacuum Spark Control—Separate unit mounted on hold-down plate and linked to distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°.....	5-7"
7.5°.....	15°.....	15-19"

Fuel Compensator Adjustment—Slot in advance plate permits distributor to be advanced or retarded from center point on scale when hold-down screw loosened. See Ignition Timing for setting.

Removal:—Same as for Auto-Lite model (above).

### IGNITION TIMING

**IGNITION TIMING:**—See Fuel Compensator Setting following.

Flywheel Degrees Piston Position

All Engines .....4° BTDC.....0066" BTDC

Timing Mark—Vibration dampener marked #1UP.

DC at TDC with 15 (1°) graduations before mark.

Timing—With #1 piston on compression, turn engine over until piston reaches firing position (see table above) with 4th graduation ahead of #1UP.DC

mark in line with pointer on chain case cover. Loosen vacuum unit link screw in distributor quadrant

(Auto-Lite distributors), or hold-down screw in advance arm (Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.

Timing (Neon Timing Light)—Mark 4th graduation ahead of #1UP.DC mark on vibration dampener with white paint, clip neon timing light at #1

spark plug and direct light on vibration dampener, idle engine below 600 RPM and adjust distributor as directed above until mark in line with pointer on chain case cover.

Fuel Compensator Setting—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

### CARBURETOR

**CARBURETION:**—Carburetor. Carter Type WA-1, Model 530-S. 1¼" single barrel downdraft type with Carter Climatic Control.

For complete data, refer to Carburetor Index.

Idle Setting—With engine warm (fast idle inoperative), set throttle stopscrew for 6 MPH. idle speed.

Adjust idle adjusting screw for smooth idling performance (½-1½ turns open—turn screw in for leaner mixture). Recheck idle speed. NOTE—Cars with Electromatic Clutch, idle speed 8-10 MPH.

Accelerating Pump—Non-adjustable type.

Float Level—¾" from projection on bowl cover to top of float seam at free end (invert to check).

Metering Rods & Jets—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

Fast Idle:—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index.

Fast Idle Setting—¾" clearance between choke valve and air horn (gauge T109-85) with throttle stopscrew against (not on) first step of fast idle cam. Adjust by bending fast idle link offset.

Automatic Choke:—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

Setting—Coil housing centered (at index mark).

### CARB. EQUIPMENT

**Air Cleaner:**—AC No. 1542265 oil-wetted type Std. #1542266 heavy duty oil-bath type Optl. Use Replacement Filter Element Assembly: Type #3 (for #1542265), #1542245 (for 1542266).

**Fuel Pump:**—AC 'AT' #1537403—Exch. No. 524G diaphragm type fuel pump. Pressure—4½ lbs. max.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Stewart (Stewart-Warner) electric

For complete data, refer to Carburetion Equip. Index.

### BATTERY

**BATTERY:**—Clipper: Auto-Lite P-15ZR or Willard Type SW-1D-100 (End-to-End Types). 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).

Starting Capacity—120 amperes (A-L), 122 amperes (Willard), for 20 minutes.

Zero Capacity—300 amperes for 3.2 minutes. Five second voltage 4.2 volts (for both types).

Grounded Terminal—Positive (+) to frame.

Dimensions—Length 19¾". Width 4". Height 9 3/16" (Auto-Lite), 8 15/16" (Willard).

Location—On left side in engine compartment.

**Convertible Coupe:** Willard Type SW-1-93. 6 volt, 15 plate, 93 ampere hour capacity (20 hr. rate).

Starting Capacity—117 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

Grounded Terminal—Positive (+) to frame.

Engine Ground—Strap from transmission to frame.

Dimensions—Length 9". Width 7". Height 8¾".

### STARTER

#### AUTO-LITE

Auto-Lite Model MAW-4027. Armature MAW-2128.

Drive—Outboard Barrel Type Bendix No. A-1792.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—125 RPM., 175 amperes, 5.1 volts.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	4900.....	5.5.....	65
0.6 ".....	3300.....	5.5.....	100
2.75 ".....	1480.....	5.0.....	200
5.45 ".....	820.....	4.5.....	300
8.50 ".....	400.....	4.0.....	400
11.55 ".....	110.....	3.5.....	500
11.5 ".....	Lock.....	3.0.....	505
18.0 ".....	Lock.....	4.0.....	670

Removal:—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch:** Auto-Lite SS-4025. Magnetic type. Mounted on starter and controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal starting).

For complete data, refer to Electrical Equip. Index for Auto-Lite Magnetic Starter Control and Carter Car Starter.

### STARTER

#### DELCO-REMY

Delco-Remy Model 1107037 (first 3300), 1107056 (on Later Cars). Armature No. 1878077.

Drive—Barrel Type Bendix No. A-1792.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs. each.

#### Performance Data (Delco-Remy)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5000.....	5.0.....	65
12 ".....	Lock.....	3.37.....	525

Removal:—Starter flange mounted on left front face of flywheel housing. To remove, disconnect wires, take out flange mounting screws, remove starter and switch as an assembly.

**Starting Switch:**—Delco-Remy Model 1460. Magnetic type. Mounted on starter and controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal starting). For data, refer to Electrical Equipment Index for Auto-Lite Magnetic Starter Control and Carter Car Starter articles.

### GENERATOR

#### AUTO-LITE

Auto-Lite Model GDZ-4801F. Armature GDZ-2006F. Two brush type with Current & Voltage Control.

Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

Maximum Charging Rate—35 amperes, 8.0 volts hot.

Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

#### Performance Data

Performance Data					
Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.

\*—Current Regulator setting.

Rotation—Counter-clockwise at commutator end.

Field Current—1.60-1.78 amperes at 6.0 volts.

Motoring Current—4.15-4.60 amperes at 6.0 volts.

Brush Spring Tension—53 ozs. max. (new brushes).

Removal:—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

Belt Adjustment:—50 lbs. tension on spring scale hooked to generator frame, or ½" thumb-pressure deflection midway between generator and pump pulleys.

### GENERATOR

#### DELCO-REMY

Delco-Remy Model 1102682. Armature No. 1879002.

Two brush type with Current & Voltage Control.

Charging Rate Adjustment—None. Charging rate controlled by Voltage Regulator, maximum output controlled by Current Regulator. See Regulator.

C N T I N U E D O N N E X T P A E

## CONTINUED FROM PRECEDING PAGE

**Maximum Charging Rate**—32-34 amperes, 8.0 volts hot. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data (Delco-Remy)**

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

① Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.67-1.82 amperes at 6.0 volts.

**Removal**—Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—50 lbs. tension on spring scale hooked to generator frame, or ½" thumb-pressure deflection midway between gen. and pump pulleys.

**REGULATOR****AUTO-LITE**

**Auto-Lite Model VRP-4002-C.** Current—Voltage type. In case on left side of engine dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

**Cuts In**—6.4-6.6 volts, 920 generator RPM (cold).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting**—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin.)

**Air Gap**—.048-.052" with contacts just opening.

**Current Regulator**

**Setting**—34-36 amperes (marked '35' on the cover).

**To Check (without breaking seals)**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH., charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.

**To Adjust (with cover removed)**—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap**—Same as Voltage Regulator.

**REGULATOR****DELCO-REMY**

**Delco-Remy Model 1118202.** "Single Core" Current Voltage Regulator. In case on dash.

*For complete data, refer to Electrical Equipment Index.*

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—6.2-6.7 volts at 800 RPM (cold).

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts hot (operating temperature).

Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**To Check**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for other (2nd) spring adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting**—34-36 amperes hot (at operating temp.).

**To Check**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F), reading should agree with setting (above).

**To Adjust**—Same as for Voltage Regulator (above).

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**LIGHTING**—Headlamps—Hall 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—Red light on left side of speedometer. Lighted when Upper beams in use.

**Direction Signal**—Refer to Electrical Equip. Index.

**Switches**

**Lighting**—Delco-Remy No. 1995021 (Clipper), No. 1995011 (Conv. Coupe).

**Beam Selector**—Delco-Remy No. 1997002.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

**FUSES**—Stop Light, Cigar Lighter, Accessories—Two 20 ampere fuses on back of lighting switch.

**Instrument & Tail Light**—20 ampere. In socket in tail lamp lead near lighting switch.

**Clock**—3 ampere. In feed wire near clock.

**Aero-Drive & Electro-Matic Clutch**—Separate 30 ampere fuses. In feed wire from starter switch.

**Direction Signal**—9 ampere. In feed wire to flasher.

**Windshield Wiper No fuse** (Klixon circuit breaker).

**HORNS**—Sparton. Vibrator type, air tone, twin horns

**Horn Current**—22-25 amperes (total both horns).

**Horn Relay**—R-B-M Model 6006.

**Contacts Close**—3-4 volts (with relay upright).

**ENGINE**

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head type.

**Bore**—3½". **Stroke**—4¼".

**Displacement**—245 cubic inches. **Rated HP**—29.4.

**Developed Horsepower**—105 at 3600 RPM.

**Compression Ratio**—6.71-1 cast-iron head. No Optl.

**Compression Pressure**—118 lbs. at 125 RPM.

**Vacuum Reading**—18-20" steady idling at 6 MPH.

*See Packard Shop Notes for Cylinder Head data.*

**PISTONS**—Aluminum alloy, autothermic, strut type, tin plated, cam ground type. **Length**—3¾".

**Weight**—20¼ oz. (stripped), 26¾ (with rings & pin).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0005-.001". See Fitting New Pistons.

**Original Bore & Piston Sizes, Replacement Pistons**—*See Packard Shop Notes for sizes and markings.*

**Fitting New Pistons**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot.

Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons**—Slot toward valves.

**PISTON RINGS**—Three 'K' type rings, all above pin.

#1 Comp. (K-200), #2 Comp. (K-70), #3 Oil Control (X-90 'B' wall). **CAUTION**—Use 'K' type rings only (have greater wall thickness than S.A.E. type rings). Refer to Packard Shop Notes for Replacement (Triple Action) Piston Ring installation data.

**Ring**

**Width**

**End Gap**

**Side Clearance**

Comp. (#1) .....093-.0935".....007-.017".....0025-.003"

Comp. (#2) .....124-.1235".....007-.017".....0025-.003"

Oil Control.....1865-.186".....007-.015".....0015-.002"

**Replacement Rings**—-.005", .010", .020", .030", .040" O. S.

**Triple Action** (packaged sets) std. & .020" oversize.

**PISTON PIN**—Diameter—.875". **Length**—3 1/64". Pin floats in piston and rod, held by locking rings.

**Pin Fit in Piston**—Finger push fit (piston at 160°).

**Pin Fit in Rod Bushing**—Finger push fit at 70° F.

**Replacement Pins**—Std. and .003", .006" oversize.

**CONNECTING ROD**—Length 7 11/16". **Weight** 31.6ozs.

**Upper Bearing (Piston Pin Bushing)**—Split type.

*See Packard Shop Notes for Piston Pin servicing data.*

**Crankpin Bearing Diameter**—2 3/32".

**Lower Bearing**—Shimless, precision, steel backed, babbitt lined type. Bearings furnished standard and .001", .002", .003", .015" undersize.

**Clearance**—.0005-.0015". **Endplay**—.004-.010".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file rods or caps.

*See Packard Shop Notes for 'Palnut' installation data.*

**Installing Rods**—Oil squirt hole toward camshaft.

**CRANKSHAFT**—4 bearings, 6 integral counterweights.

**Bearing Diameter**—2¾".

**Bearings**—Interchangeable, shimless, precision, steel-backed, babbitt lined type. Furnished stand-

**ENGINE**

CONTINUED FROM PRECEDING PAGE

ard size and .001", .002" undersize.

Clearance—.0005-.0015".

**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves can be rotated in and out).  
**End Thrust:**—At front bearing. Endplay .003-.008".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.  
**Bearings:**—Shimless, precision, steel-backed, babbit lined type. Clearance—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. Endplay—.0025-.006".

**Timing Chain:**—Morse C-3682R (No. 1525) or Ramsey. Width 1 1/4". Pitch .375". Length 21 3/4" or 58 links.

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with straightedge across shaft centers.

**VALVES:**—

	Head Diameter	Stem Diameter	Length
Intake	1 19/32"	.33975"	5.619"
Exhaust	1 13/8"	.33975"	5.619"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.318"	.002-.003"
Exhaust	45°	.3175"	.004-.005"

**Valve Guides:**—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides counter-bored on upper inner diameter to 3/8" diameter and 3/8" deep.

**Valve Springs:**—Intake and exhaust springs interchangeable. Anti-rotation washer installed on top of springs.

	Spring Pressure	Spring Length
Valve Closed	52-57 lbs.	1 5/8"
Valve Open	119-129 lbs.	1 5/16"

**Valve Lifters:**—Mushroom type. Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

Diameter—.6235-.6240". Clearance—.0003-.0012".

**VALVE TIMING**

**Tappet Clearance:**—.007" Intake, .010" Exh. (warm & idling). NOTE—Self-locking tappet screws used. Remove right front fender plate for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

With tappet clearance of .0125" Intake, .015" Exh.

**Valve Timing Check:**—With .0125" tappet clearance #1 intake valve should open with #1 piston 1° or .0004" BTDC with 1st graduation before top dead center mark '1 UP.DC' on vibration damper lined up with pointer (permissible variation 4° either way). Reset tappet clearance .007" (hot & idling).

**LUBRICATION**

**LUBRICATION:**—Pressure (pump on right of engine). See Packard Shop Notes for Oil Pump Installation.

**Normal Oil Pressure:**—40 lbs. at 45 MPH.

**Oil Pressure Relief Valve:**—Mounted on pump cover. Not Adj. Spring pressure 14 lbs. ± 2 ozs. at 1 7/8".

**Oil Pressure Gauge:**—Stewart-Warner electric type.

**Crankcase Capacity:**—5 quarts.

**COOLING**

**COOLING SYSTEM:**—Cap. 15 qts. (Clipper), 14 (Others). See Packard Shop Notes for Radiator Core Removal.

**Pressure Valve:**—In filler cap. Opens at 4 1/2 lbs. (Std.), 12 lbs. (with Air Conditioning equipment).

**Water Pump:**—Packless, sealed ball-bearing type. See Water Pump Section for complete data.

**Thermostat:**—Bishop & Babcock. In cyl. head outlet. Setting—Starts to open 147 1/2°F.

**CLUTCH**

**CLUTCH:**—Long Model 9 1/2 CF-CS (Std.), 10 CF-CI (with Electromatic Clutch), 11 CF-CI (Taxi). Semi-centrifugal, dry disc types.

See Clutch Section for complete data.

**Facings:**—Woven (U. S. Asbestos No. 1133-G), 2 used. Inside Diam. 6" (9 1/2 CF, 10 CF), 6 3/8" (11 CF). Outside Diam. 9 1/2" (9 CF), 10" (10 CF), 11" (11 CF). Thick. 1/8".

**Pedal Adjustment:**—1 1/2-1 3/4" (Std.), 2" (with Electromatic Clutch) free travel. Adjusting nut (with lock-nut) at clutch fork end of connector link.

**Removal:**—Remove transmission (see below). Disconnect pedal linkage, remove throw-out bearing. Remove cover mounting screws evenly, remove clutch.

**ELECTROMATIC CLUTCH**

**ELECTROMATIC CLUTCH:**—Vacuum type with electrical control. Optl. on all models.

See Clutch Section for complete data.

**Control Solenoid:**—Auto-Lite SSD-4001.

**Control Relay:**—Auto-Lite HRH-4001.

**Control Governor ('42):**—Auto-Lite TGC-4001.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. Helical, constant-mesh (low speed gear), constant-mesh, synchro-mesh (second and high). Sliding spur (reverse gear).

See Transmission Section for complete data.

**Transmission Control:**—Steering column mech. shift. See Transmission Section for complete data.

**Removal:**—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, and ground strap at transmission. Disconnect front universal, block drive shaft up for clearance. Support rear of engine with jack, unbolt frame cross-member carrying rear engine mountings, remove flywheel housing lower cover, disconnect stabilizer (transmission to X-member). Take out transmission to flywheel housing screws, withdraw transmission.

**OVERDRIVE**

**Aero-Drive Transmission:**—Warner-Packard type (Warner Model AS2-R9) overdrive unit with electrical control. Optional equipment on all cars.

See Transmission Section for complete data.

► **Overdrive Lock-up in Reverse Correction for Clipper:** Install 1948 Safety Switch (Kit No. 394484). See 1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed.

**Overdrive Solenoid:**—Delco-Remy Model 1118005.

**Overdrive Indicator Light:**—Green light on right side of speedometer dial. Lighted whenever overdrive is ready to engage (light goes out when accelerator pedal is released so that overdrive can engage).

**Throttle Switch:**—Cole-Hersee. Packard No. 347496. Adjust tappet screw on throttle lever to just contact switch plunger with throttle valve wide open.

**Governor Switch:**—Packard No. 367335, or Packard No. 377787 (with Electromatic Clutch).

**Control Relay:**—Delco-Remy Model 1116823.

**Removal:** Procedure same as for regular transmission (see above) plus the following: Disconnect control cable, solenoid wires, and overdrive rear mounting.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics Type 3CR (Clipper), Detroit Universal Series 4251 (Others). See Universals Section for complete data.

► **CAUTION:**—Rear universal flange nut controls pinion bearing pre-load (must be adjusted whenever nut is loosened). Refer to Rear Axle Section for 'Packard Rear Axle' article for complete data.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive. Cover welded in place. See Rear Axle Section for complete data.

**Ratio:**—4.3-1 Std. 4.55-1 with Aero-Drive.

**Backlash:**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment:**—Endplay controlled by shims between flange end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted to desired .006" at one wheel). Endplay—.004-.007".

**SHOCK ABSORBERS**

	Front	Rear
Clipper	Delco 1946-J.K.	Monroe 371195
Conv. Coupe	Delco 1966-C.D.	Monroe 364630
Taxi	Delco 1966-C.D.	Delco 1021-V

See Shock Absorber Section for complete data.

**Fifth Shock Absorber (Stabilizer):**—Monroe 956790. Direct acting type. Used on Clipper models only. See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension (Clipper):**—New type Packard Safe-T-flex (parallelogram type with upper & lower support arms & coil springs—no torque arms).  
**Other Models:**—Packard Safe-T-flex type. Parallelogram type with coil springs and torque arms.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—5°35' (Clipper), 2 1/2° (Others).

**Caster:**—Neg. 1° ± 1/2" (Clipper), 1/4° ± 1/2" (Others).

**Camber:**—0° ± 1/2" (Clipper), 0° + 3/4" — 1/4" right wheel, Min. 0° + 1° — 0° left wheel (Others).

**Toe In:**—0-1/16" measured 10" up from floor.

**Steering Geometry Inner wheel:** 23° ± 1/2". Outer 20°

**STEERING GEAR**

**Steering Gear:** Packard (Gemmer design Model 330). Worm-and-Roller type with idler arm on right frame rail (Clippers), center steering (Others). Refer to Gemmer Model 330 article.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums:**—Centrifuse. Diameter 12" (front), 11" (rear).

**Lining:**—Moulded (Marshall 2201-H-8). Width 1 3/4".

**Thickness:** 3/16". Length: Primary shoe 11 1/2" (front) 10 5/8" (rear). Secondary 13" (front), 12" (rear).

**Clearance:**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service Brakes above.

**MISC. MECHANICAL**

**WINDSHIELD WIPER:**—Stewart-Warner Series 645-H (Clipper), 645-E (Others). Electric type. 'Klixon' circuit-breaker mounted near wiper motor.

See Miscellaneous Section for complete data.

**Power Operated Convertible Top:** Vacuum Power type. See Miscellaneous Section for complete data.

# CLIPPER HOOD LOCK DATA & FRONT SHEET METAL ASSEMBLY REMOVAL: See Packard Shop Notes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).  
**ENGINE NUMBER:** On upper left side of block between #2 and #3 cyls. ('41), #3 and #4 ('41 Clip., All '42).  
1st No. D-300051 '41, D-400051 '41 Clip., E-300051 '42.

## TUNE-UP

**COMPRESSION:** Ratio—6.41-1 (Standard head '41), 6.85-1 ('41 Clipper, All '42, Optl. HC head '41).

**Pressure**—110 lbs. (6.41), 118 (6.85) at 125 RPM.

**VACUUM READING:**—Steady 18-20" idling at 6 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:**—AC No. 104 or Champion Y4. 10 MM. Gaps—.028". Limits .0255-.0305".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015".

**Cam Angle**—Closed 27° with .017" Breaker Gap.

**Automatic Advance**—11½° (IGP-4502), 10¾° (4502A) at 1550 RPM. Distributor degrees & RPM. Vacuum Advance—6° (distr.) with 17" vacuum.

**IGNITION TIMING** See Ignition Timing.

**Std. Setting** 7° BTDC '41, 5° BTDC '41 Clipper & '42. Vibration dampener mark (correct degree mark ahead of #1UP.DC) at pointer on front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screws ½-1½ turns open. Adjust for smooth idle. Idle speed 6 MPH (or 8-10 MPH for cars with Electromatic Clutch).

**Float Level**—5/32" from top of float to bowl cover with valve seated (remove gasket & invert to check).  
**Accelerating Pump**—Inner Hole (Summer), Outer (winter).

**Fuel Pump Pressure:** 3¾ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.007" Int., .010" Exh. Warm. Adjusting screws are self-locking (no locknuts).

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 8781.

**Ignition Lock:**—Briggs & Stratton. B & S No. 50184.

**Key Series**—P1250 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4644 ('41), CE-4652 ('41-42), CE-4659 (Clipper). Service Coil (less switch & cable) CE-3224VS (for CE-4644), CE-3224US (CE-4652, 59)  
**Ignition Current**—2.4 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671K.

**Capacity**—20-25 microfarad..

**DISTRIBUTOR:** Auto-Lite IGP-4502 or IGP-4502A. Single breaker, 8 lobe cam, full automatic advance with vacuum spark control and Fuel Compensator. Breaker Gap—Set at .015".

**Cam Angle or Dwell**—27° clsd., 18° open (.017" gap).

**Breaker Arm Spring Tension**—17-20 ounces.

**Rotation**—Counter-clockwise viewed from above.

### Automatic Advance—IGP-4502

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	0.....	500
3.....	525	6.....	1050
6.....	800	12.....	1600
9.....	1210	18.....	2420
11.5.....	1550	23.....	3100

### Automatic Advance—IGP-4502A

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	325	0.....	650
3.....	600	6.....	1200
5.3.....	800	10.6.....	1600
8.....	1175	16.....	2350
10.75.....	1550	21.5.....	3100

**Fuel Compensator Adjustment**—Permits 40° range of adjustment by loosening vacuum unit link screw at distributor quadrant. See Ignition Timing below.  
**Vacuum Spark Control**—Separate unit mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

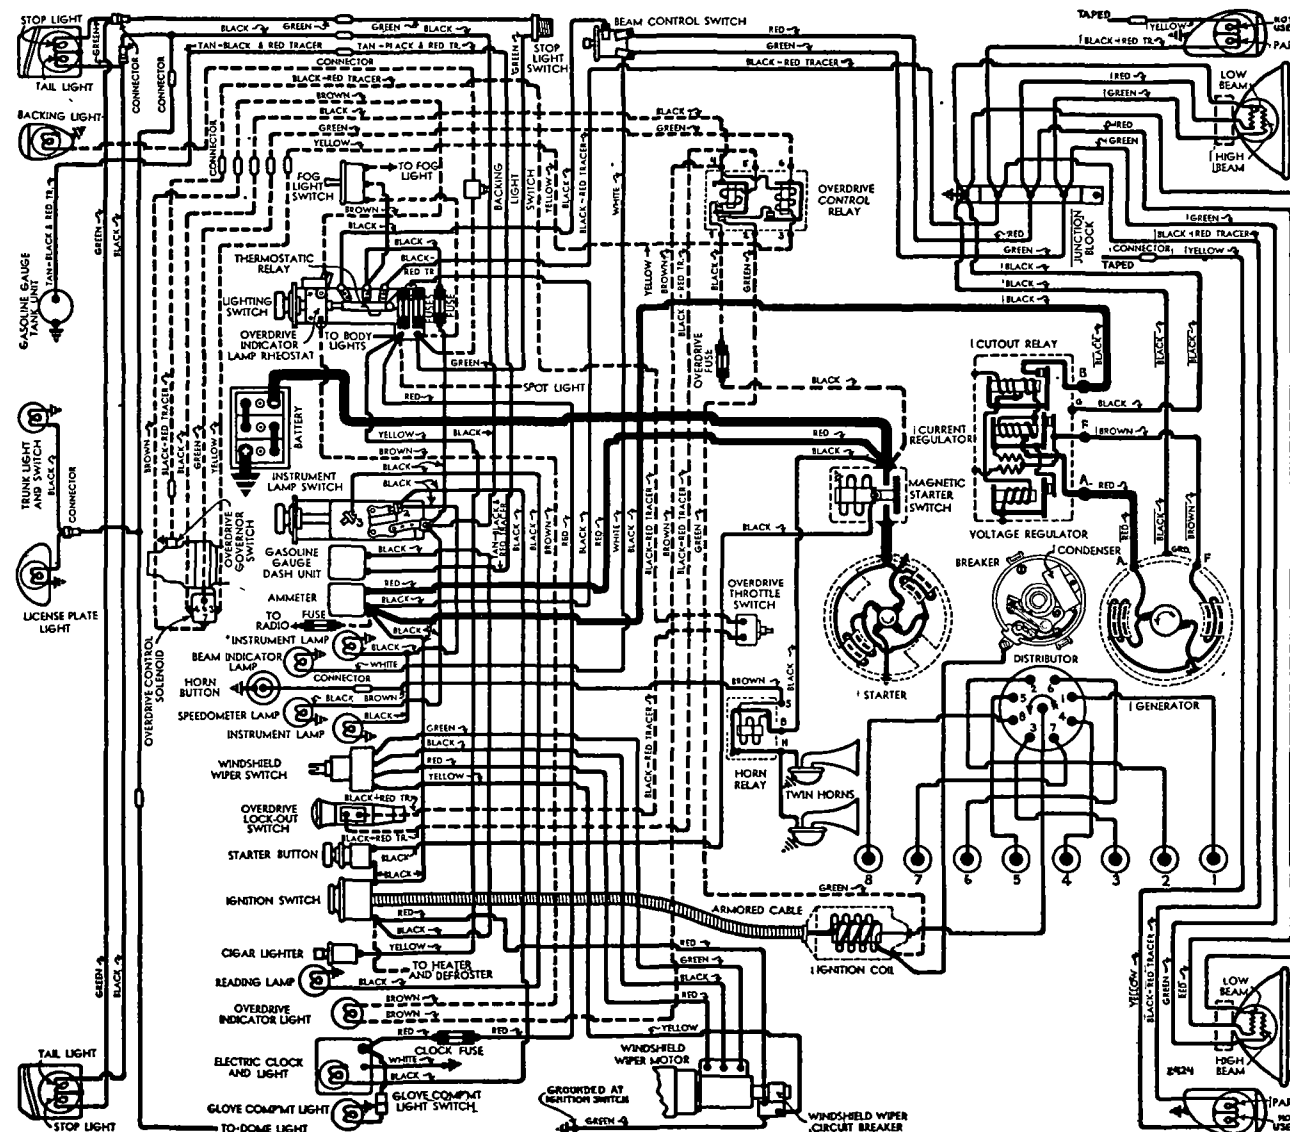

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	10"
1°	2°	11½"
3°	6°	13½"
5°	10°	15½"
6°	12°	17"

**Removal:**—Distributor mounted on left side of crankcase. To remove, disconnect vacuum line, take out screw in hold-down plate, lift entire unit out.

## IGNITION TIMING

**IGNITION TIMING:** Flywheel Deg. Piston Position  
'41 exc. Clip'r.....7° BTDC.....0202" BTDC  
'41 Clip'r, All '42.....5° BTDC.....0103" BTDC  
**NOTE:**—Vibration dampener marked '#1UP.DC' at TDC with 15 (1°) graduations before this point.

1941 MODELS (EXCEPT CLIPPER MODEL 1951)

**Timing**—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen vacuum unit link screw in distributor quadrant, rotate distributor until contacts begin to open, tighten screw. Check Fuel Compensator Setting (below).

**Timing (Neon Timing Light)**—Mark correct graduation on vibration dampener, clip neon timing light to #1 spark plug and direct light on vibration dampener, idle engine, adjust distributor as above.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw distributor quadrant, rotate one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

## CARBURETOR

Carter WDO, 478-S ('41), 512-S ('41 Clipper, All '42). 1" dual downdraft types with Carter Climatic Control. #327 ('41), #371 ('42) cast on face of flange. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH. Idle speed. Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly (1½-1½ turns open for each screw—turn screws in for leaner mixture). Readjust idle speed. Set at 8-10 MPH for cars equipped with Electromatic Clutch.

**Accelerating Pump**—2 holes in pump arm as follows Inner (min. stroke)—Hot weather or hi-test fuel. Outer (max. stroke)—Cold weather or low-test fuel. Float level—5/32" from top of float to bowl cover

with valve seated (remove gasket & invert to check). Metering Rods & Jets—See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index. Setting—With choke valve closed adjust fast idle screw, .030" 478-S, .020" 512-S throttle opening.

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index. Setting—Thermostatic coil housing should be set 1 Notch Rich (478-S), at Index Mark (512-S).

**Throttle Guard (1941 with Overdrive)**—Vacuum operated throttle kicker to prevent engine stalling when free-wheeling. Kicks in 4 MPH, out 9 MPH.

For complete data, refer to Carburetion Equip. Index. Setting—Set gap between plunger and carburetor throttle lever at .020" (carburetor set for 6 MPH. slow idle speed), set spring tension adjusting screw 3/16" out beyond face of locknut.

## CARB. EQUIPMENT

**Air Cleaner**: AC oil wetted type #1542094 (1941), 1529847 ('42). Optl. oil bath type #1542240 ('42). Use Replacement Filter Element Assembly: Type #3 (for 1529847), #1542245 (for 1542240).

**Fuel Pump**: AC Type 'AH'. #1537067 ('42). Exchange Pump #525 ('41-42). Pressure—3¼ lbs.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric. For complete data, refer to Carburetion Equip. Index.

## BATTERY

1941 Clipper: Auto Lite P-17ZR. Refer to 1941-42 Packard Super 8 article following for data.

1942 Clipper: Auto-Lite Type P-15ZR or Willard Type SW-1D-100 (End-to-End Types). 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).

**Starting Capacity**—120 amperes (A-L), 122 amperes (Willard), for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes. Five second voltage 4.2 volts (for both types).

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 19½". Width 4". Height 9 3/16" (Auto-Lite), 8 15/16" (Willard).

**Location**—On left side in engine compartment.

**Other Models**—Auto-Lite Type PN-17P. 6 volt, 17 plate, 114 ampere hour capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.1 minutes.

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 10¼". Width 7". Height 8½".

**Location**—Under left front seat.

## STARTER

Early '41: Auto-Lite MAW-4021. Arm. No. MAW-2006.

Late '41: Auto-Lite MAW-4024. Arm. No. MAW-2128.

1942: Auto-Lite MAW-4027. Armature # MAW-2128.

**Drive**—Outboard Barrel Bendix A-1718 (MAW-4021), A-1792 (for MAW-4024 and 4027 Starters).

**Rotation**—Counter-clockwise at commutator end.

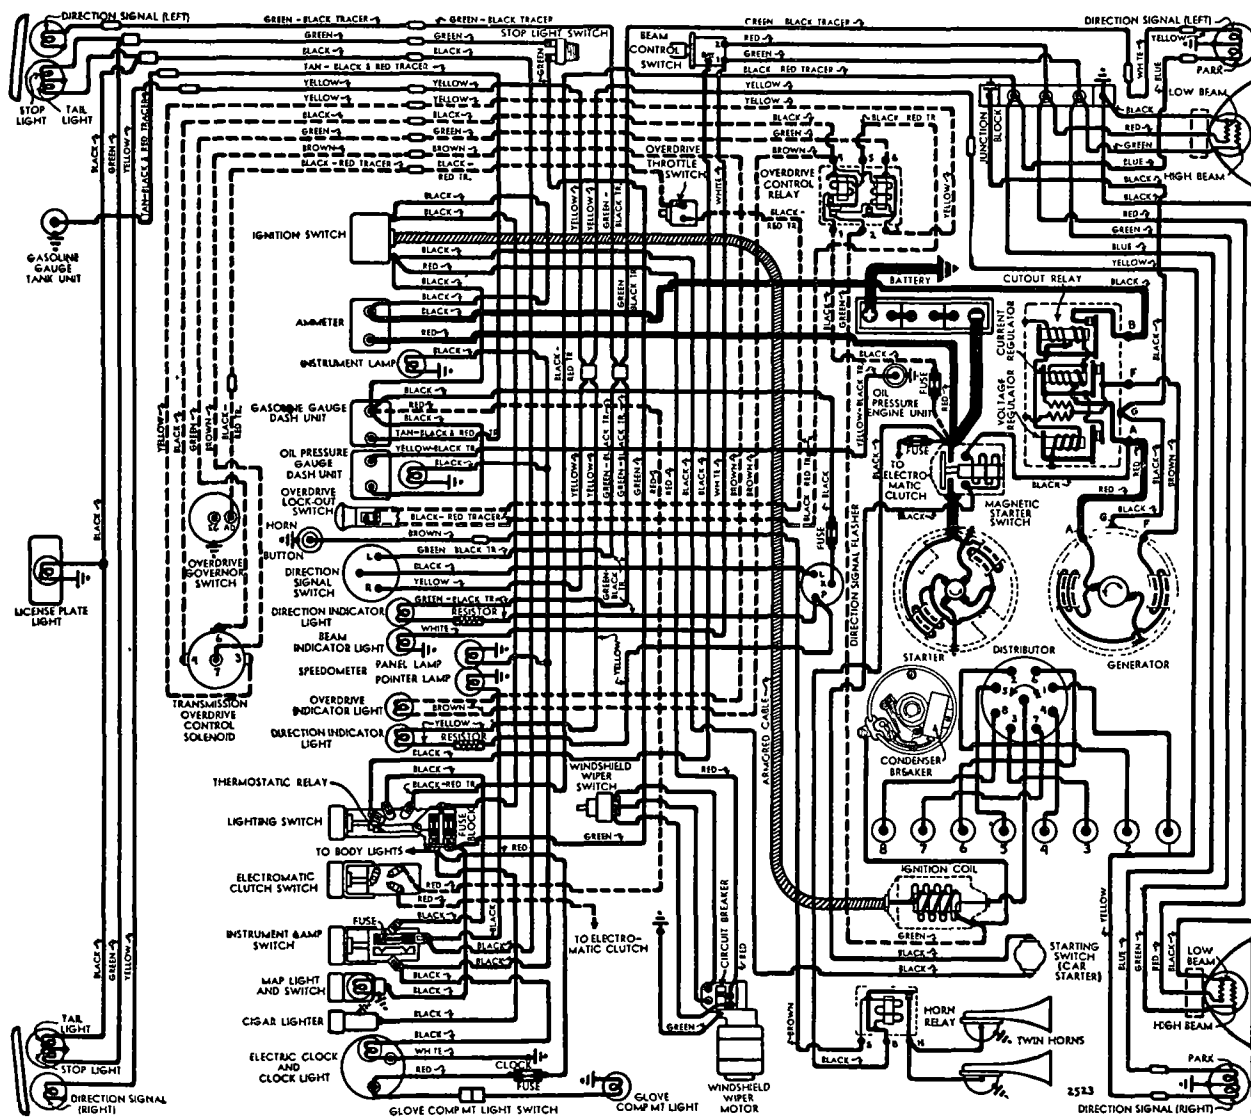

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM, 175 amperes, 5.1 volts.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

C NTINUED N NEXT PAGE

ALL 1942 MODELS & 1941 CLIPPER MODEL 1951

## CONTINUED FROM PRECEDING PAGE

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.  
**Starting Switch:** Auto-Lite SS-4017 ('41), SS-4025 ('42) Magnetic type. Mounted on starter and controlled by instrument pushbutton switch RBM 5350 (1941), by Carter Car Starter 192-11U ('41 Clip'r, All 1942—accelerator pedal starting). See *Auto-Lite Magnetic Starter Control and Carter Car Starter articles in Electrical Equipment Section for data.*

## GENERATOR

**Auto-Lite GDZ-4801F ('41-42), GDZ-4801G ('41), Armature GDZ-2006F (Std.), GEB-4802C-2, Armature GEB-2006F (Taxicab & Police).** Two brush (shunt) types with voltage and current regulation. **Charging Rate Adjustment:**—None. See Regulator. **Maximum Charging Rate:**—35 amperes, 8.0 volts hot. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

## Performance Data—GDZ-4801F

\*—Current Regulator setting.

**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—53 ozs. max. (GDZ Gen.), 64-68 ozs. (GEB Generator) with new brushes.  
**Field Current:**—1.60-1.78 amperes at 6.0 volts (all).  
**Motoring Current:**—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Generator) at 6.0 volts.  
**Removal:**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.  
**Belt Adjustment:**—50 lbs. tension on spring scale hooked to generator frame, or 1/2" thumb-pressure deflection between generator and pump pulleys.

## REGULATOR

**Auto-Lite Model VRP-4002C (GDZ Gen.), VRP-4002D (GEB Gen.).** Current-Voltage type on dash. For complete data, refer to *Electrical Equipment Index*. NOTE—Regulator cover sealed. Warranty void if seals broken.

## Cutout Relay

**Cuts In:**—6.4-6.6 volts, 920 generator RPM (cold).  
**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap:**—.015" Min. Air Gap—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F. See *Electrical Equipment Section for settings at other temperatures.*

**Checking (without breaking seals) & Adjustment:**—See *Electrical Equipment Section for complete data.*  
**Contact Gap:**—.012" min. (armature against stop pin).  
**Air Gap:**—.048-.052" with contacts just opening.

## Current Regulator

**Setting:**—34-36 amperes (marked '35' on the cover).  
**Checking (without breaking seals) & Adjustment:**—See *Electrical Equipment Section for complete data.*  
**Contact & Air Gap:**—Same as for Voltage Regulator.

## LIGHTING

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.

For complete data, refer to *Electrical Equipment Index*.  
**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator:**—Red light on left side of speedometer. Lighted when Country (Upper) beams in use.  
**Direction Signal ('42):**—See *Electrical Equip. Section*.

## Switches

**Lighting:**—Delco-Remy 1995021 (Clipper), 1995011 (Others), 1995019 (Others—with Overdrive, equipped with Overdrive Indic. Light dimmer rheostat which is controlled by light switch knob).  
**Beam Selector:**—Delco-Remy 1997001 or 1997002.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam

Direction & Ovd. Ind.	1 1/2	55
Stop & Tail	21-3	1154
Rear License	3	63
Dome & Courtesy	6	.81 ('41), 82 ('42)

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70° F. Not adj.

**FUSES:**—Stop Light, Cigar Lighter and Accessories—Two 20 ampere. On back of lighting switch.  
**Instrument & Tail Light:**—20 ampere. In connector near ammeter, or on Clipper instrum't light switch.  
**Overdrive & Electro-matic Clutch:**—Separate 30 ampere fuses. In feed wire from starter switch.  
**Clock:**—3 amp. ('41), 4 amp. ('42). In feed wire.  
**Direction Signal:**—9 ampere. In feed wire to flasher.  
**Windshield Wiper:**—No fuse (circuit-breaker).

**HORNS:**—Sparton—Vibrator type, air tone, twin horns operated by relay.

**Horn Current:**—22-25 amperes (total both horns).

**Horn Relay:**—R-B-M Model 6006.

**Contacts Close:**—3-4 volts (with relay upright).

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type. Bore—3 1/4". Stroke—4 1/4".

**Displacement:**—282 cu. ins. Rated HP—33.8.

**Developed Horsepower:**—120 HP (for 1941 engines) 125 HP ('41 Clipper, All '42) at 3600 RPM.

**Compression Ratio and Pressure:**—As follows:

6.41-1 (Std. '41) ..... 110 lbs. at 125 RPM

6.85-1 ('41 Clip'r, '42, Optl. '41) ..... 118 lbs. at 125 RPM

See *Packard Shop Notes for Cylinder Head data.*

**Vacuum Reading:**—18-20" steady idling at 6 MPH.

**PISTONS ('41-42 ALUMINUM):** Aluminum alloy, auto-thermic strut, cam ground, tin plated. Length 3 3/8". Weight—17 1/4 oz. (stripped), 23 1/8 (with rings & pin). Removal—Pistons and rods removed from above. Clearance—.0005-.001". See *Fitting New Pistons*.

**Original Bore & Piston Sizes, Replacement Pistons:**—See *Packard Shop Notes for sizes and markings.*

**Fitting New Pistons:**—Insert .0015" feeler 1/2" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTONS ('42 CAST IRON):** Cast iron, cam ground pistons used on later cars. NOTE—Engines with cast-iron pistons carry suffix 'C' after Engine No. Length—3 11/16".

Weight—22 3/4 oz. (stripped). 28 5/8 (with rings & pin).

Removal—Pistons and rods removed from above.

Clearance—.0013-.00175" for Skirt.

**Original Bore & Piston Sizes, Replacement Pistons:**—See *Packard Shop Notes for sizes and markings.*

**PISTON RINGS:**—2 Ferrox coated compression rings (Perfect Circle—#1 K-200 upper inner edge beveled, #2 K-70 lower outer edge grooved), 1 oil control (X-90, 'C' wall '41, 'B' wall '42). CAUTION—Use 'K' type rings only (have greater wall thickness than S.A.E. type). See *Packard Shop Notes for Replacement (Triple Action) Piston Ring installation data.*

Ring Width End Gap Side Clearance

Comp. (#1) .0925-.0935" .007-.017" .0025-.003"

Comp. (#2) .1240-.1235" .007-.017" .0025-.003"

Oil Control .1865-.186" .007-.015" .0015-.002"

**Replacement Rings:**—.005", .010", .020", .030", .040" O.S. Triple Action (packaged sets) std. & .020" oversize.

**PISTON PIN:**—Diameter—.875". Length—2 51/64". Pin floats in piston and rod, held by locking rings.

**Pin Fit in Piston:**—Finger push fit with piston heated to 160°F (Al. Pistons), push fit in piston at 70° or press fit of 80-130 lbs. per sq. in. (C.I. Pistons).

**Pin Fit in Rod Bushing:**—Finger push fit at 70° F.

**Replacement Pins:**—Std. and .003", .006" oversize.

**CONNECTING ROD:**—Length 7 11/16". Weight 31.6 ozs.

**Upper Bearing (Piston Pin Bushing):**—Split type.

See *Packard Shop Notes for servicing data.*

**Crankpin Bearing Diameter:**—2 3/32".

**Lower Bearing:**—Shimless, precision, steel backed, babbitt lined type. Bearings furnished standard and .001", .002", .003", .015" undersize.

Clearance—.0005-.0015". Endplay—.004-.010".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

See *Packard Shop Notes for 'Palmist' installation data.*

**Installing Rods:**—Oil squirt hole toward camshaft.

**CRANKSHAFT:**—5 bearings, 8 integral counterweights Bearing Diameter—2 3/4".

**Bearings:**—Interchangeable, shimless, precision, steel-backed, babbitt lined type. Furnished standard size and .001", .002" undersize.

Clearance—.0005-.0015".

**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

**End Thrust:**—By #3 bearing. Endplay—.003-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive. See *Packard Shop Notes for Radiator & Fender assembly (unit) removal for work on front end of engine.*

**Bearings:**—Shimless, precision, steel backed, babbitt lined type. Clearance—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. Endplay—.0025-.006".

**Timing Chain:**—Morse Type C-3682R or Ramsey.

Width 1 1/4". Pitch .375". Length 21 3/4" or 58 links.

## ENGINE

### C NTINUED FR M PRECEDIN PA E

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 31/64"	.33975"	5.619"
Exhaust	1 13/16"	.33975"	5.619"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.318"	.002-.003"
Exhaust	45°	.3175"	.004-.005"

**Valve Guides:**—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides counter-bored on upper inner diameter to 3/8" diameter and 3/8" deep.

**Valve Springs:** Intake & Exhaust interchangeable.  
Pressure— 1941 1942 Length  
Closed 47-52 lbs. 52-57 lbs. 1 5/8"  
Open 114-124 lbs. 119-129 lbs. 1 5/16"  
NOTE—Serrated washer installed on top of springs.

**Valve Lifters:**—Mushroom type. Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.  
Diameter—.6235-.6240". Clearance—.0003-.0012".

## VALVE TIMING

**Tappet Clearance:**—.007" Intake, .010" Exh. (warm & idling). NOTE—Self-locking tappet screw used. Remove right front fender plate for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 1° BTDC. Close 39° ALDC.  
**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.  
For .0125" Intake, .015" Exhaust tappet clearance.  
**Valve Timing Check:**—With .0125" tappet clearance #1 intake valve should open with #1 piston 1° or .0004" BTDC with 1st graduation before top dead center mark '1 UP.DC' on vibration damper lined up with pointer (permissible variation 4° either way). Reset tappet clear. .007" (hot & idling).

## LUBRICATION

**LUBRICATION:**—Pressure (pump on right of engine).

See Packard Shop Notes for Oil Pump installation.

**Normal Oil Pressure:**—40 lbs. at 45 MPH.

**Oil Pressure Relief Valve:**—Mounted on pump cover. Not adjustable. Spring pressure 14 lbs. ± 2 oz. @ 1 1/8".

**Oil Pressure Gauge ('42):** Stewart-Warner Electric.

**Crankcase Capacity:** 6 qts. ('41), 5 1/2 qts. ('42).

## COOLING

**COOLING SYSTEM:**—Capacity—17 quarts.

**Pressure Valve:**—In filler cap. Opens at 4 1/2 lbs. (Std.), 12 lbs. (with Air Conditioning equipment).

**Water Pump:**—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

**Removal:**—Remove fan belt, disconnect pump hose, take out pump mounting screws, lift out pump.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Starts to open 147 1/2° (135° for radiator shutter thermostat used on 1901A).

## CLUTCH

**CLUTCH:**—Long Model 10CF-CI. Semi-centrifugal, single plate, dry disc type. See Clutch Section for data.

**Facings:**—Woven (Pass.—US Asbestos 1133 G, Com'l.—Hycoc DV3112A), 2 required. Inside Diameter 6". Outside Diameter 10". Thickness .125".

**Adjustment:**—Adjust nut on pedal rod (at clutch fork) 1 1/2-1 3/4" free travel (2" Electromatic Clutch).

**Removal:**—Remove transmission (see Transmission

Removal following) and flywheel housing lower cover. Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover screws (release tension evenly) and lower assembly out.

## ELECTROMATIC CLUTCH

**ELECTROMATIC CLUTCH:** Vacuum electric type Optl. See Clutch Section for complete data.

## TRANSMISSION

**TRANSMISSION:**—Own Make. Constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur reverse gear). Synchro-mesh (second & high).

See Transmission Section for complete data.

**Transmission Control:**—Own Remote Control type.

See Transmission Section for complete data.

**Removal:**—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, overdrive cable and solenoid wires (if used), front universal (block drive shaft up against floor pan) and rubber bearing at rear of overdrive. Support rear of engine with jack and unbolt cross member. Disconnect clutch retractor spring & fore and aft restraint rod. Take out transmission-to-flywheel housing screws, remove assembly.

## OVERDRIVE

**OVERDRIVE:** Warner Type R9 (Kick-down). Model AS2-R9 overdrive unit with electrical control.

See Transmission Section for complete data.

► **Overdrive Lock-up in Reverse Correction for Clipper:** Install 1948 Safety Switch (Kit No. 394484). See 1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed.

**Overdrive Solenoid:**—Delco-Remy Model 1118005.

**Overdrive Indicator Light:**—Green light on right side of speedometer dial. Lighted whenever overdrive is ready to engage (light goes out when engaged).

**Throttle Switch:**—Cole-Hersee. Packard No. 347946. Adjust tappet screw on throttle lever to just contact switch plunger with throttle valve wide open.

**Governor Switch:**—Bendix No. 364782 (1941), Packard #367335 '42, 377787 '42 Electromatic Clutch.

**Control Relay:** Delco-Remy 1116801 '41, 1116823 '42.

**Removal:** Procedure same as for regular transmission (see above) plus the following: Disconnect control cable, solenoid wires, and overdrive rear mounting.

## UNIVERSALS

**UNIVERSAL JOINTS:** Mechanics 3CR. Needle bearings.

See Universals Section for complete data.

► **CAUTION:**—Rear universal flange controls pinion bearing pre-load. For complete data, refer to the Rear Axle Section for Packard Rear Axle article.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, Hypoid gear type with Hotchkiss drive. Cover welded in place.

See Rear Axle Section for complete data.

Ratios—	Std.	Overdrive	Optional
'41 Clpr., Others...	4.09-1	4.36-1	
'42 Clipper	4.1-1	4.3-1	
Long WB	4.7-1	4.9-1	5.22-1

Backlash—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment:**—Endplay controlled by shims between flanged end of housing and brake

backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted to desired .006" at one wheel). Endplay—.004-.007".

## SHOCK ABSORBERS

SHOCK ABSORBERS:	Front	Rear
'41 Clipper	Delco 1946-J, K	Monroe 371196
'42 Clipper	Delco 1946-J, K	Delco 1020-V
'42 Clipper	Delco 1946-J, K	Monroe 379465
Others	Delco 1966-C, D	Delco 1021-V
Long WB Exp.	Delco 1966-C, D	Delco 1130-W

Double acting (Front), Direct acting (Rear).  
Fifth Shock Absorber (Stabilizer): Clipper: Monroe 373935 '41, 956790 '42. Others: Houde NFT.  
See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent 'Safe-T-flex' type (parallelogram type—coil springs & torque arms). NOTE—No torque arms used on Clipper Suspension. See Front Suspension Section for complete data.

NOTE—Frame height must be set first before checking Caster and Camber.

**Frame Height:**—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 18 1/8" (1901), 18 3/4" (1901A), equal on both sides within 1/16-5/16" (1942 except Clipper) with car loaded.

	Kingpin Incl.	Caster	Camber
1941	2 1/2°	1/2° ± 1/2°	1/2° (1/2-1 1/4°)
1942	2 1/2°	1/4°	0° (-1/4° + 3/4°)
Clipper	5°35'	Neg 1° ± 1/2°	0° ± 1/2°

Toe In—0-1/16" measured 10" up from floor.  
**Steering Geometry:**—With the outer wheel turned 20°, inner wheel 23 1/2° (1941-42), 23° ± 1/2° (Clipper).

## STEERING GEAR

**Steering Gear:** Packard (Gemmer design Model 330). Worm-and-Roller type with idler arm on right frame rail (Clippers), center steering (Others). Refer to Gemmer Model 330 article.  
See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.  
See Brake Section for complete data.

► **Model 1901A Note:**—Refer to 1941-42 Super Eight pages following for all brake data on these models.

**Drums:**—Centrifuse. Diameter 12".  
**Lining:**—Molded (Marshall 2201). Width 1 3/4". Thick. 3/16". Length 11 1/2" (primary shoe), 13" (secondary). Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See Service Brake (above).

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Stewart-Warner No. 645-H (Clipper), 645-E (Others). Electric type. 'Klixon' circuit breaker mounted on or near wiper motor. See Miscellaneous Section for complete data.

**Power Operated Convertible Top:** Vacuum Power type. See Miscellaneous Section for complete data.

**Power Window Regulators:** Hydro-Electric type.

See Miscellaneous Section for complete data.

**Window Lift Relay:**—Auto-Lite No. HRD-4001.

# CLIPPER HOOD LOCK DATA & FRONT SHEET METAL ASSEMBLY REMOVAL: See Packard Shop Notes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left side of cowl (use Eng. No.).  
**ENGINE NUMBER:** On left side of block between #3 & #4 cylinders. First number: D-500051 ('160' 1941), CD-500051 ('180' 1941), E-500051 (1942).

## TUNE-UP

**COMPRESSION:** Ratio—6.45-1 (Std. iron hd., for '41), 6.85-1 (Std. iron '42, Optl. HC '41).  
Pressure—110 lbs. at 125 RPM (for 6.45-1 hd.), 133 lbs. at 300 RPM (for 6.85-1 head).

**VACUUM READING:**—Steady 18½" idling at 6 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:**—AC No. 104 or Champion Y4. 10 MM. Gaps—.028". Limits .0255-.0305".

**NOTE:**—Do not tighten these small plugs excessively. Tightening tension 50 inch lbs. maximum.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015".

**Cam Angle**—Closed 27° with .017" Breaker Gap.

**Automatic Advance**—11½° max. at 1800 RPM, distr. Vacuum Advance—5½° (distr.) with 16" vacuum.

**IGNITION TIMING** See Ignition Timing.

**Std. Setting**—3½-5° BTDC ('41 Std. hd.), 2½-4° BTDC ('41 HC hd.), 4° BTDC (1942). Vibration dampener mark (correct degree mark ahead of 'UDC') aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screws 1-1½ turns open (Stromberg '41), ½-1½ turns (Carter '42). Adjust for smooth idle. Idle speed 6 MPH (or 8-10 MPH on cars with Electromatic Clutch).

**Float Level**—Fuel level should be ⅝" below top edge of bowl (Stromberg '41), or 5/32" from top of float to bowl cover with gasket removed and valve seated (Carter '42).

**Accelerating Pump**—Normal setting—Outer hole max. for Stromberg, inner hole min. for Carter.

**Fuel Pump Pressure:** 4 lbs. (AJ '41), 3¾ lbs. (AH '42).  
**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Make certain that valve operates freely (valve must not bind or stick). Do not oil control.

**VALVES:** See Valve Timing.

**Tappet Clearance** None in service, hydraul. take-up.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-B, No. 8779.

**Ignition Lock**—Briggs & Stratton. B & S No. 50184.

**Key Series**—P1250 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4645 ('41), CE-4654 ('41-42), CE-4659 (Clipper). Service Coil (less switch and cable) CE-3224RS (for CE-4645), CE-3224ABS (CE-4654), CE-3224US (for CE-4659). On left side engine.

**Ignition Current**—2.4 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671J.

**Capacity**—20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4102 ('41, Early '42), IGT-4203 (Late '42). Single breaker, 8 lobe cam, full automatic advance with vacuum spark control and Fuel Compensator.

**Breaker Plate Identification**—Maximum vacuum advance limited by slot (plate marked 5½).

**Breaker Gap**—Set at .015".

**Cam Angle or Dwell**—27° clsd., 18° open (.017" gap).

**Breaker Arm Spring Tension**—17-20 ounces.

**Rotation**—Counter-clockwise viewed from the top.

Automatic Advance			
Distributor	Engine	Degrees	R.P.M.
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	0.....	500
3.....	475	6.....	950
6.....	700	12.....	1400
9.....	1300	18.....	2800
11½.....	1800	23.....	3600

**Fuel Compensator**—Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing for setting.

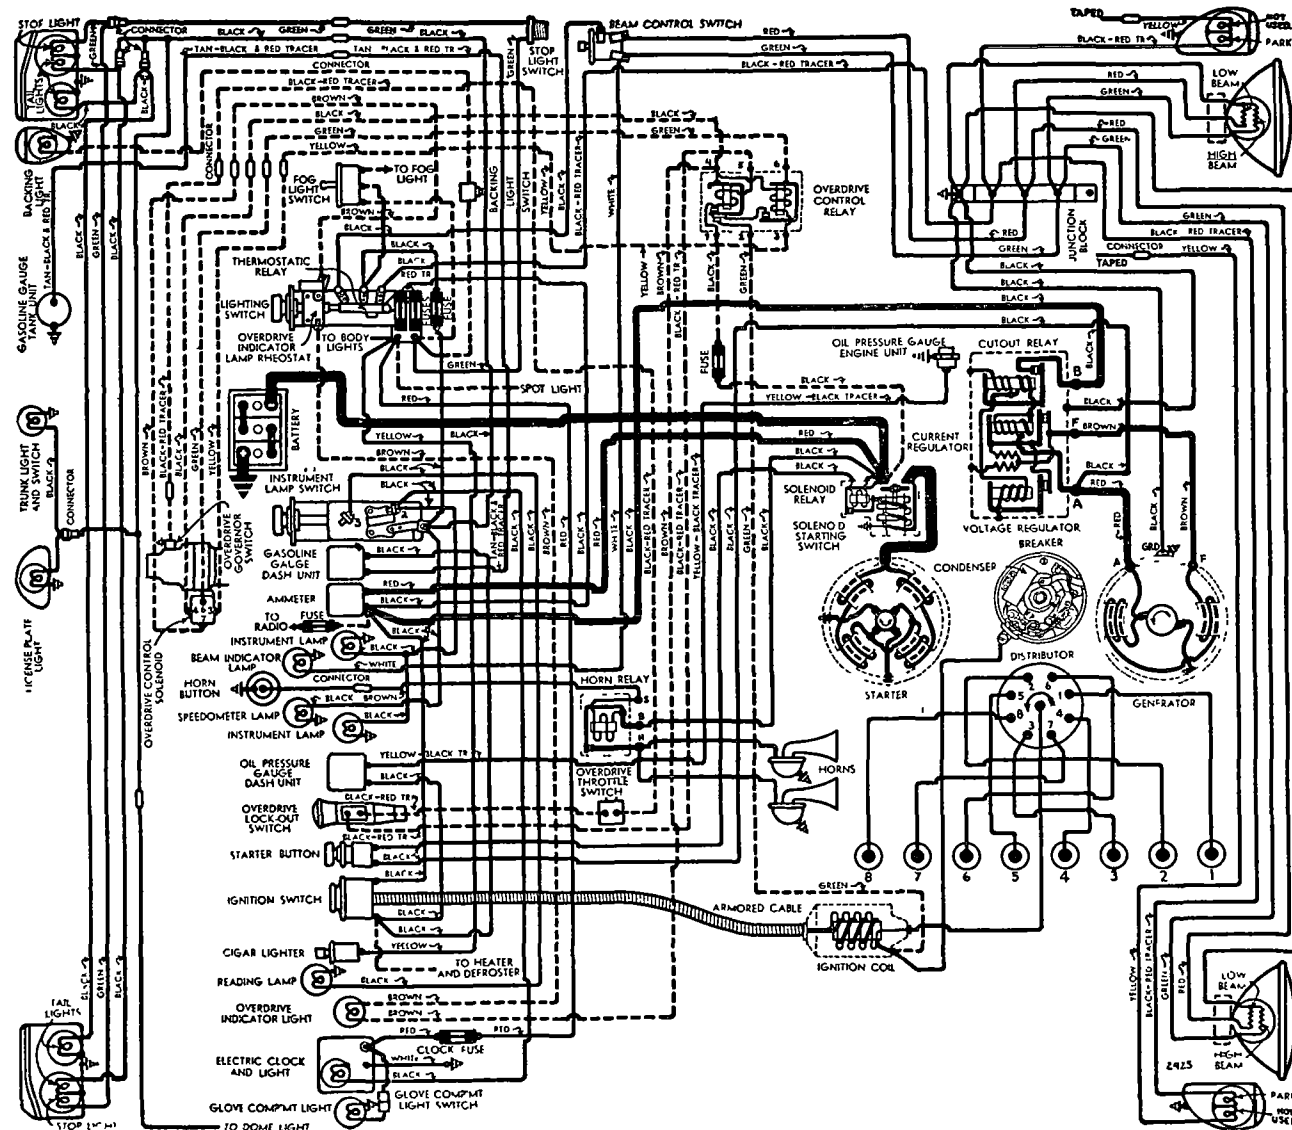

**Vacuum Spark Control**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7"
1°.....	2°	8½"
3°.....	6°	12"
5½°.....	11°	16"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:** Flywheel Deg. Piston Position  
'41 Std. head ..... 3½-5° BTDC.....0053-.0110" BTDC  
'41 HC head ..... 2½-4° BTDC.....0027-.0070" BTDC  
1942 ..... 4° BTDC.....0070" BTDC  
**NOTE:**—Vibration dampener marked 'UDC' at TDC with 15 (1°) graduations before this point.

1941 MODELS

**Timing**—Loosen thumbnut, set Fuel Compensator pointer at '0', tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position (see table above), stop when correct graduation on vibration dampener at front of engine lines up with pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting.

**Timing (Neon Timing Light)**—Mark vibration dampener with white paint at proper point, idle engine below 500 RPM, adjust distributor (above). **Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

## CARBURETOR

**1941—Stromberg Model AAV-26.** Code marked 10-44, 10-44A, or 10-44B. 1 1/4" dual downdraft type with Automatic Choke. *For recommended change to improve idling performance on first carburetors and complete data on all models, refer to Carburetor Section for Stromberg AAV-26 carburetor article.*

**1942—Carter Type WDO, Model 531-S.** 1 1/4" dual downdraft type with Carter Climatic Control and Carter Car Starter. *See Carburetor Section for data.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw (one for each barrel) in succession until engine fires smoothly. (1-1 1/2 turns open Stromberg '41, 1/2-1 1/2 turns open Carter '42). Readjust idle speed. **NOTE**—On cars

with Electromatic Clutch set idle speed 8-10 MPH. **Accelerating Pump Setting**—Two holes provided for pump link connection. Set as follows:  
Outer (max. stroke)—Normal Setting (Stromberg).  
Inner (min. stroke)—Normal Setting (Carter).  
**Float Level (Stromberg)**—Fuel level 5/8" below top edge of bowl with engine idling (3 lbs. pressure).  
(Carter)—5/32" from top of float to bowl cover with valve seated (remove gasket & invert to check).  
**Metering Jets**—See Stromberg Jet Table or Carter Downdraft Jet Table in Carburetor Section.

**Fast Idle:** Stromberg AAV-26 type ('41 Stromberg), Carter Dual Carburetor Type ('42 Carter).

*For complete data, refer to Carburetion Equip. Index.*  
**Setting (Stromberg)**—Hold throttle stopscrew against high lobe of fast idle cam, move choke valve toward closed position as far as possible, check choke valve opening. Adjust by bending fast idle connector rod for 7/64" choke valve opening.

**Setting (Carter)**—Adjust fast idle screw for .023-.028" throttle opening with choke closed.

**Automatic Choke:** Stromberg AAV-26 type or Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*  
**Setting**—'V' mark on thermostat cover lined up with mark on housing (Stromberg). Set Coil Housing 1 Notch Rich (Carter).

**Throttle Guard (1941 with Overdrive):** Vacuum operated throttle kicker to prevent engine stalling when free-wheeling. Kicks in 4 MPH, out 9 MPH.

*For complete data, refer to Carburetion Equip. Index.*  
**Setting**—Set gap between plunger and carburetor throttle lever at .020" (carburetor set for 6 MPH slow idle speed), set spring tension adjusting screw 7/32" out beyond face of locknut.

## CARB. EQUIPMENT

**Air Cleaner:** AC oil bath type Std. #1542095 ('41), #1543318 ('42). Use Replacement Filter Element Assembly #1542261 (for #1543318).

**Fuel Pump:** AC Type 'AJ' (1941), Type 'AH' #1537700 ('42). Exchange No. 537 (for 1941), No. 545 (for '42).

*For complete data, refer to Carburetion Equip. Index.*  
**Gasoline Gauge:**—Stewart (Stewart-Warner) Electric.

## BATTERY

**Clipper Models: Auto-Lite Type P-17ZR.** (End-to-End type). 6 volt, 17 plate, 120 ampere hour capacity. **Starting Capacity**—138 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.1 minutes.

**Grounded Terminal**—Positive (+) to frame. **Dimensions**—Length 19 3/8". Width 4". Height 9 3/16".

**Location**—On left side in engine compartment.

**Other Models:—Auto-Lite Type PN-17P.** 6 volt, 17 plate, 114 ampere hour capacity (20 hour rate).

**Starting Capacity**—135 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.1 minutes.

**Grounded Terminal**—Positive (+) to frame. **Engine Ground**—Strap from transmission to frame.

**Dimensions**—Length 10 1/4". Width 7". Height 8 5/8". **Location**—Under left front seat.

## STARTER

**1941—Auto-Lite MAX-4041.** Armature MAW-2069.

**1942—Auto-Lite MAX-4052.** Armature MAW-2069.

**Drive**—Overrunning clutch (solenoid pinion shift) through reduction gears.

**Rotation**—Clockwise at commutator end. **Brush Spring Tension**—42-53 ozs. (new brushes).

C N T I N U E D N E X T P A E

1942 MODELS

## CONTINUED FROM PRECEDING PAGE

Performance Data			
Torque	**R.P.M.	Volts	Amperes
0 ft. lbs.	2695	5.5	77
33.5 "	Lock	3.0	652
45.9 "	Lock	4.0	906

\*\*—Pinion shaft R.P.M.

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch:** Auto-Lite SS-4205 Solenoid type. Mounted on starter and controlled through relay by pushbutton switch RBM 5380 (1941), by Carter Car Starter No. 192-11U (1942—accelerator pedal starting). See *Auto-Lite Solenoid Starter Control and Carter Car Starter in Electrical Equip. Section.*

## GENERATOR

**Auto-Lite Mod. GEA-4802A-1. Armature GDZ-2006F.** Two-brush type with Current-Voltage control. Charging Rate Adjustment—None. See Regulator. Maximum Charging Rate—35 amperes (hot or cold), 8.0 volts, 1570 RPM and above with load or discharged battery (Current Regulator setting).

Cold Performance Data Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	850	0	6.4	865
4	6.6	950	4	6.6	975
8	6.75	1050	8	6.75	1075
12	6.95	1150	12	6.95	1180
16	7.1	1250	16	7.1	1300
20	7.3	1345	20	7.3	1425
24	7.5	1440	24	7.5	1560
28	7.7	1540	28	7.7	1695
32	7.85	1635	32	7.85	1850
35	8.0	1700	35	8.0	1970

**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—53 ozs. max. (new brushes).  
**Field Current:**—1.57-1.75 amperes at 6.0 volts.  
**Motoring Current:**—4.45-4.9 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator out until 50 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and pump pulleys is 1/2".

## REGULATOR

**Auto-Lite Model VRP-4002-C. Current-Voltage Type.** Mounted in single case on engine side of dash. For complete data, refer to *Electrical Equipment Index*. NOTE—Regulator cover sealed. Warranty void if seals broken.

## Cutout Relay

**Cuts In:**—6.4-6.6 volts, 780 generator RPM (cold).  
**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap:**—.015" minimum.  
**Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

**Setting:**—7.2-7.5 volts at 70°F.  
**To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage steady. Voltage should agree with setting. To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See *Electrical Equipment Section*.  
**Contact Gap:**—.012" min. (armature against stop pin).  
**Air Gap:**—.048-.052" with contacts just opening.

## Current Regulator

**Setting:**—34-36 amperes (marked '35' on the cover).  
**To Check (without breaking seals):**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above.  
**Adjustment, Contact Gap, Air Gap:**—Same as for Voltage Regulator (above).

## LIGHTING

**LIGHTING:**—Headlamps—Hall 'Sealed Beam' type.

For complete data, refer to *Electrical Equipment Index*.  
**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator:**—Red light on left side of speedometer. Lighted when Country (upper) beam in use.  
**Direction Signal ('42):**—See *Electrical Equip. Section*.

## Switches

**Lighting:**—Delco-Remy 1995021 (Clipper), 1995011 (Others), 1995019 (Others—with Overdrive, equipped with Overdrive Indic. Light dimmer rheostat which is controlled by light switch knob).  
**Beam Selector:**—Delco-Remy 1997001 or 1997002.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Front Dir. Sig. & Park	21-3	1154
Rear Dir. Signal	21	1129
Beam Indic., Glove Compt.	1	51
All Other Instrument Lights	1 1/2	55
Stop & Tail	21-3	1154
Rear License	3	63
Dome & Courtesy	6	.81 ('41), 82 ('42)

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. @ 70° F. Not adj.

**FUSES:**—Stop Light, Cigar Lighter and Accessories—Two 20 ampere. On back of lighting switch.

**Instrument & Tail Light:**—20 ampere. In connector near ammeter, or on Clipper instrum't light switch.  
**Overdrive & Electro-matic Clutch:**—Separate 30 ampere fuses. In feed wire from starter switch.  
**Clock:**—3 amp. ('41), 4 amp. ('42). In feed wire.

**Direction Signal:**—9 ampere. In feed wire to flasher.

**HORNS:**—Sparton—Vibrator type, air tone, twin horns operated by relay.

**Horn Current:**—33-38 amperes (total both horns).

**Horn Relay:**—R-B-M Model 6006.

**Contacts Close:**—3-4 volts (with relay upright).

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type.

**Bore:**—3 1/2". **Stroke:**—4 5/8".

**Displacement:**—356 cu. ins. **Rated HP:**—39.2.

**Developed Horsepower:** 160 '41, 165 '42 at 3600 RPM.

**Compression Ratio and Pressure:**—As follows:

6.45-1 iron (Std. '41).....110 at 125 RPM

6.85-1 iron (Std. '42, Optl. '41).....133 at 300 RPM

See *Packard Shop Notes for Cylinder Head data*.

**Vacuum Reading:**—18 1/2" steady idling at 6 MPH.

**PISTONS:**—Aluminum alloy, autothermic, strut type, tin plated, cam ground type. Length—3 3/8".

**Weight:**—20 1/4 ozs. (stripped), 26 3/4" (with rings&pin).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—.0005-.001". See *Fitting New Pistons*.

**Original Bore & Piston Sizes, Replacement Pistons:**—See *Packard Shop Notes for sizes and markings*.

**Fitting New Pistons:**—Insert .0015" feeler 1/2" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:**—2 Ferrox coated compression rings (Perfect Circle—#1 K-200 upper inner edge grooved, #2 K-70 lower outer edge grooved), 1 oil control (X-90 'C' wall) ring, all above pin. CAUTION—Use 'K' type rings only (have greater wall thickness than S.A.E. type). See *Packard Shop Notes for Replacement (Triple Action) Piston Ring installation data*.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0930-.0935"	.007-.017"	.0025-.003"
Comp. (#2)	.1240-.1235"	.007-.017"	.0025-.003"
Oil Control	.1865-.186"	.007-.015"	.0015-.002"

**Replacement Rings:**—.005", .010", .020", .030", .040" O.S. Triple Action (packaged sets) std. & .020" oversize.

**PISTON PIN:**—Diameter—.875". Length—3 1/64". Pin floats in piston and rod, held by locking rings.

**Pin Fit in Piston:**—Finger push fit (piston at 160°).

**Pin Fit in Rod Bushing:**—Finger push fit at 70° F.

**Replacement Pins:**—Std. and .003", .006" oversize.

**CONNECTING ROD:**—Length 9 1/4". Weight 42.0 ozs.

**Upper Bearing (Piston Pin Bushing):**—Split type.

See *Packard Shop Notes for servicing data*.

**Crankpin Bearing Diameter:**—2 1/4".

**Lower Bearing:**—Shimless, precision, steel backed, babbitt lined. Furn. Std., .001", .002", .003", .015" US. Clearance—.0005-.0015". Endplay—.004-.010".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

**Installing Rods:**—Oil squirt hole toward camshaft.

**CRANKSHAFT:**—9 bearings, 8 bolted counterweights. Bearing Diameter—2 3/4".

**Bearings:**—Interchangeable, shimless, precision, steel-backed, babbitt lined type. Furnished standard, .001", .002" undersize. Clearance—.0005-.0015".

**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

**End Thrust:**—By #5 bearing. Endplay—.003-.008".

**CAMSHAFT:**—8 bearing. Non-adjustable chain drive. See *Packard Shop Notes for Radiator & Fender Assembly (unit) removal for work on front end of engine*.

**Bearings:**—Shimless, precision, steel-backed, babbitt lined type. Clearance—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. Endplay—.0025-.006".

**Timing Chain:**—Morse Type C-3682R (No. 765). Width 1 1/4". Pitch .375". Length 62 links or 23 1/4".

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

Intake .....1.670".....33975"①.....6.212"②

Exhaust .....1 7/16".....33975"①.....6.212"②

Seat Angle Lift Stem Clearance

Intake .....30".....340"......002-.003"

Exhaust .....45".....340"......004-.005"

①—For '42: .34025". ②—For '42: 6.224".

**Valve Guides:**—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides upper end counterbored to 3/8" diameter, 3/8" deep.

**Valve Springs:**—Washer used on top of each spring.

Spring Pressure Spring Length

Valve Closed .....55-61 lbs. ....1 1/4"

Valve Open .....130-140 lbs. ....1 13/32"

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters (mushroom type). Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5101 (piloted in valve guide) and ream for .005" oversize lifters.

## ENGINE

C NTINUED FR M PRECEDING PAGE

See Packard Shop Notes for Valve Lifter Clearance check when grinding valves.

Diameter .7177-.7182". Clearance .0002" selective.

See Miscellaneous Section for complete data.

## VALVE TIMING

Tappet Clearance:—None in service (hydraulic type lifter). See Valve Servicing in Packard Shop Notes.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 4° BTDC. Close 51° ALDC.

Exhaust Valves—Open 49° BLDC. Close 10° ATDC.

Valve Timing Check—#1 exhaust valve close 10° after top dead center (#1 piston .0438" ATDC) with hydraulic lifter dry (all oil drained out) and built up with feeler stock for zero tappet clearance.

## LUBRICATION

LUBRICATION:—Pressure (pump on right of engine).

See Packard Shop Notes for Oil Pump Installation.

Normal Oil Pressure:—50 lbs. at 45 MPH.

Oil Pressure Relief Valve:—On pump cover. Not adjustable. Spring pressure 17½-18½ lbs. at 1½".

Oil Pressure Gauge:—Stewart-Warner Electric type.

Crankcase Capacity:—7 quarts.

## COOLING

COOLING SYSTEM:—Capacity—20 quarts.

Pressure Valve—In filler cap. Opens at 7 lbs. (Std.), 12 lbs. (with Air Conditioning equipment).

Water Pump:—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

Thermostat:—Harrison. In cyl. head outlet (Clipper).

In radiator top tank operating shutters (Others).

Setting—Std.: Starts to open 162° F (Clipper), 135° (Others). Alcohol Anti-Freeze: 147° F (Clipper). For heater use 162° F cyl. head outlet type for all models.

## CLUTCH

CLUTCH: Long Model 11CF-CI (Late '41, All '42), Model 11CFS-CI (Early 1941). Semi-centrifugal, single plate, dry disc types. NOTE—Early 1941 (11CFS-CI) are riveted assemblies and cannot be dismantled.

See Clutch Section for complete data.

Facings—Woven (U.S. Asbestos No. 1133-G), 2 used. Inside Diam. 6½". Outside Diam. 11". Thick. .125".

Pedal Adjustment:—1¾-2¼" (Std.), 2" (with Electromatic Clutch) free travel. Adjusting nut (with lock-nut) at clutch fork end of connector link.

Removal:—Remove transmission (see below). Disconnect pedal linkage, remove throw-out bearing. Remove cover mounting screws evenly, remove clutch.

## ELECTROMATIC CLUTCH

ELECTROMATIC CLUTCH: Vacuum electric type Optl.

See Clutch Section for complete data.

## TRANSMISSION

TRANSMISSION:—Own Make. Constant-mesh, helical, ball-bearing mounted low speed gear (sliding spur reverse gear). Synchro-mesh (second &amp; high).

See Transmission Section for complete data.

Transmission Control:—Own Remote Control type.

See Transmission Section for complete data.

Removal:—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, and ground strap at transmission. Disconnect front universal, block drive shaft up for clearance. Support rear of engine with jack, unbolt frame cross-member carrying rear engine mountings, remove flywheel housing lower cover, disconnect stabilizer (transmission to X-member). Take out transmission to fly-wheel housing screws, withdraw transmission.

## OVERDRIVE

OVERDRIVE: Warner Type R9 (Kick-down). Model AS1-R9A overdrive unit with electrical control.

See Transmission Section for complete data.

► Overdrive Lock-up in Reverse Correction for Clipper: Install 1948 Safety Switch (Kit No. 394484).

See 1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed.

Overdrive Solenoid—Delco-Remy Model 1118005.

Overdrive Indicator Light—Green light on right side of speedometer dial. Lighted whenever overdrive is ready to engage (light goes out when engaged).

Throttle Switch—Cole-Hersee, Packard No. 347496. Adjust tappet screw on throttle lever to just contact switch plunger with throttle valve wide open.

Governor Switch—Bendix No. 364782 (1941), Packard #367335 '42, 377787 '42 Electromatic Clutch.

Control Relay Delco-Remy 1116801 '41, 1116823 '42.

Removal: Procedure same as for regular transmission (see above) plus the following: Disconnect control cable, solenoid wires, and overdrive rear mounting.

## UNIVERSALS

UNIVERSAL JOINTS: Mechanics 3CR or 3C (front shaft Long Whbse. Cars). Needle bearing types.

See Universals Section for complete data.

► CAUTION—Rear universal flange controls pinion bearing pre-load. For complete data, refer to the Rear Axle Section for Packard Rear Axle article.

## REAR AXLE

REAR AXLE:—Own Make. Semi-floating, Hypoid gear type with Hotchkiss drive and special Ring Gear Support Roller. Cover welded in place.

See Rear Axle Section for complete data.

Model Axle Ratio: Standard Overdrive

1903, 6 ..... 3.92-1 ..... 4.36-1

1904, 7; 2004, 7 ..... 4.09-1 ..... 4.36-1

1903A ..... 4.54-1 ..... 4.7-1

1903AB ..... 5.12-1 ..... —

1905, 8; 2005, 8 ..... 4.36-1 ..... 4.54-1

2003, 6, 2023 ..... 3.92-1 ..... 4.09-1

Backlash—.003-.005". Screw adjustment.

Removal:—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

Wheel Bearing Adjustment—Endplay controlled by shims between flanged end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims Endplay—.004-.007".

## SHOCK ABSORBERS

SHOCK ABSORBERS: Front Rear

Clipper ..... Delco 1946-J, K ..... Monroe 371197

1903 Coupe, 1906 ..... Delco 1966-C, D ..... Monroe 364725

1903 Sedans ..... " " ..... Monroe 362710

2023 Conv. Coupe. " " ..... Monroe 371197

All Others ..... " " ..... Delco 1021-V

Exp't (exc. Clip'r) " " ..... Delco 1130-W

Double acting (Front), Direct Acting (Rear).

Fifth Shock Absorber (Stabilizer): Monroe 958790 direct acting type (Clipper), Houde NFT (Others).

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

Front Suspension:—Independent 'Safe-T-flex' type (parallelogram type—coil springs &amp; torque arms).

NOTE—No torque arms used on Clipper Suspension.

See Front Suspension Section for complete data.

NOTE—Frame height must be set first before checking Caster and Camber.

Frame Height—With car on level floor, distance from floor to top of frame side rail at front wheel center-line 18¾" (1903, 4, 5, 6, 7, 8), 19¼" (1903A, 3AB).

equal on both sides within 1/16-5/16" (1942 models except Clipper). Load car until figure correct.

Kingpin Incl. Caster Camber

1941 ..... 2½° ..... Neg. ¾° ± ½° ① ..... ½° (½-1¼°)

1942 ..... 2½° ..... Neg. 1¼° ± ½° ..... 0° ②

Clipper ..... 5°35' ..... Neg. 2° ± ½° ..... 0° ± ½°

①—Caster 2½° ± ½° for 1903A (Long Wheelbase).

②—Limits—¼° to +¾° Right, 0° to +1° Left.

Toe In—0-1/16" measured 10" up from floor.

## STEERING GEAR

Steering Gear: Packard (Gemmer design Model 330).

Worm-and-Roller type with idler arm on right frame rail (Clippers), center steering (Others). Refer to Gemmer Model 330 article.

See Steering Gear Section for complete data.

## BRAKES

BRAKES: Service. (1903, 6; 2023 &amp; Clipper) Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. (All Others) Bendix hydraulic, duo-servo, single anchor with eccentric adjustment.

Hand lever applies rear service brakes on all cars. See Brake Section for complete data.

Drum—Centrifuse. Diameter 12".

Lining—Moulded type. Marshall 2201.

## 1941 Models

Model Width Thickness Length per Shoe

1903, 6 ..... 2" ..... 3/16" ..... 11½" ..... 13"

1904, 5, 7, 8 ..... 2¼" ..... 3/16" ..... 13" ..... 13"

1901A① ..... 2¼" ..... 3/16" ..... 13" ..... 13"

1901A② ..... 2½" ..... 3/16" ..... 13" ..... —

1901A③ ..... 2¼" ..... 3/16" ..... — ..... 13"

1903A① ..... 2½" ..... 3/16" ..... 13" ..... 13"

1903AB③ Front 2½" ..... 3/16" ..... 13" ..... 13"

1903AB③ Rear 2¾" ..... ¼" ..... 15" ..... 15"

①—Hearse &amp; Ambulance. ③—Airport Limousine.

②—Heavy Duty Ambulance 4194HD, 4194HDF.

1942—Moulded (Marshall 2201-H-8). Thick 3/16". Width 2" (All wheels 2023, Rear wheels Clipper), 2¼" (All Others). Length per shoe: Primary 13" (2004, 5, 7, 8), 11½" (Others). Secondary 13" (All).

Clearance—(Clipper &amp; 1903, 6; 2023)—.015" at both ends of secondary shoe with primary shoe forced out against drum. All Others—.010" at heel and toe of each shoe.

Hand Brake:—See Service Brakes (above).

## MISC. MECHANICAL

WINDSHIELD WIPER:—Stewart-Warner Series 645-H (Clipper), 645-E (Others). Electric type. 'Klixon' circuit breaker mounted on or near wiper motor.

See Miscellaneous Section for complete data.

Power Operated Convertible Top: Vacuum Power type. See Miscellaneous Section for complete data.

Power Window Regulators: Hydro-Electric type.

See Miscellaneous Section for complete data.

Window Lift Relay—Auto-Lite No. HRD-4001.

**IGNITION****DELCO-REMY**

**IGNITION SWITCH:** Delco-Remy Model 1116333 (Std.), 1116356 (RHD. Cars). Switch & cable assembly (connected to coil by armored cable).

Lock Cylinder—Briggs & Stratton No. 50184.  
Key Series—P1251 to P1500. Groove No. 2.

**COIL:** Delco-Remy 1115001 or 538-Z. On dash.  
Ignition Current—2.75 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.  
Capacity—18-25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110092 or 1110132. Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)		Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	1.5.....	600		
5 .....	700	10 .....	1400		
10.25.....	1600	20.5.....	3200		

Fuel Compensator Adjustment—Slot in advance plate permits distributor to be advanced or retarded from center point on scale when hold-down screw loosened. See Ignition Timing for setting.

**Vacuum Spark Control:** Delco-Remy Unit. Mounted on hold-down plate and linked to distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance (Delco-Remy)			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start.....	0°	5-7"	
7.5° .....	15°	15-19"	

Removal: Same as for Auto-Lite unit (above).

**IGNITION TIMING**

**Std. Setting**—As given below. See Fuel Compensator Setting for service and fuel corrections.

**Flywheel Degrees**      **Piston Position**  
All Engines ..... 4° BTDC ..... 0066" BTDC.

**Timing Mark**—Vibration dampener marked #1UP. DC at TDC with 15 (1°) graduations before mark.

**Timing**—With #1 piston on compression, turn engine over until piston reaches firing position (see table above) with 4th graduation ahead of #1UP. DC mark in line with pointer on chain case cover. Loosen vacuum unit link screw in distributor quadrant (Auto-Lite distributors), or hold-down screw in advance arm (Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.

**Timing (Neon Timing Light)**—Mark 4th graduation ahead of #1UP. DC mark on vibration dampener with white paint, clip neon timing light at #1 spark plug and direct light on vibration dampener, idle engine below 600 RPM and adjust distributor as directed above until mark in line with pointer on chain case cover.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw

in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

**CARBURETOR**

**Carter Vacumeter Type WA-1, Model 530S.** 1¼" Single barrel, downdraft type with Carter Climatic Control and Carter Car Starter.

**NOTE**—Carburetor Casting No. 317 on flange. See Carburetor Section for complete data.

**Idle Setting**—With engine warm (choke valve wide open and fast idle inoperative), set throttle stop-screw for 6 MPH. Idle speed (8-10 MPH. on cars with Electromatic Clutch), set idle adjusting screw for smooth idling performance (screw ½-1½ turns open, turn screw in for leaner mixture). Recheck idle speed.

**Accelerating Pump**—No seasonal adjustment.

**Float Level**—¾" from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated (invert to check).

**Metering Rods & Jets**—See Carter Jet Specification Table in Carburetor Section for data.

**Fast Idle:** Integral type (built-in carburetor).

See Carburetion Equipment Section for data.

**Setting**—⅝" clearance between edge of choke valve and air horn (Gauge T109-85) with throttle stop-screw against (not on) first step of fast idle cam. Adjust by bending fast idle link at the offset.

**Automatic Choke:** Carter Climatic Control.

See Carburetion Equipment Section for data.

**Setting**—Centered (at Index).

**CARB. EQUIPMENT**

**Air Cleaner:** AC. Oil-wetted type Std., Heavy duty Oil-bath type Optl.

**Servicing (Oil-wetted type)**—Wash and re-oil filter element whenever crankcase oil changed (1000-2000 mile intervals for normal service).

**Servicing (Oil-bath type)**—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), SAE No. 30 (Winter) to level of indicator line on case (approx. 1 pint) whenever crankcase oil changed (1000-2000 mile intervals).

**Oil Filler Cap (Crankcase Ventilator Filter)**—Wash filter element in filler cap and re-oil when servicing air cleaner.

**Fuel Pump:** AC. Type AT (Std.), Type AJ (Optl.). Diaphragm type fuel pump (AT), combination fuel-and-vacuum pump (AJ). Pump Exchange AC. No. 524 (AT), 508 (AJ).

See Carburetion Equipment Section for data.

**Pressure**—3-4 lbs. (AT), 3-3¼ lbs. (AJ).

**Gasoline Gauge:** Stewart (Stewart-Warner) electric See Carburetion Equipment Section for data.

**BATTERY**

**Auto-Lite Type PN-15ZR** or Willard Type SW-1D-100. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate). End-to-end type.

**Starting Capacity**—120 amperes (Auto-Lite), 122 amperes (Willard) for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes. Five second voltage 4.15 volts (Auto-Lite), 4.2 volts (Willard).

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 19¾". Width 4". Height 9 3/16" (Auto-Lite), 8 15/16" (Willard).

**Location**—On left side in engine compartment.

**STARTER****AUTO-LITE**

**Auto-Lite Model MAW-4024** or MAW-4027. Armature No. MAW-2128.

**Drive**—Outboard Barrel Type Bendix No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM., 175 amperes, 5.1 volts.

**Performance Data—Auto-Lite**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
0.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal:** Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch:** Auto-Lite Model SS-4017 Magnetic Switch mounted on starter and controlled by Carter Car Starter Model 192-11U on carburetor.

See Electrical Equipment Section for complete data on Magnetic Switch & Carter Car Starter.

**STARTER****DELCO-REMY**

**Delco-Remy Model 1107037** or 1107056. Armature No. 1878077 (All Models).

**Drive**—Outboard Barrel Type Bendix No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Performance Data (Delco-Remy)**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Removal:** Starter flange mounted on left front face of flywheel housing. To remove, disconnect wires, take out flange mounting screws, remove starter and switch as an assembly.

**Starting Switch:** Delco-Remy Model 1460. Magnetic type. Mounted on starter and controlled by Carter Car Starter Model 192-11U on carburetor.

See Electrical Equipment Section for complete data on Magnetic Switch and Carter Car Starter.

**GENERATOR****AUTO-LITE**

**Auto-Lite Model GDZ-4801F** (Std.), GEB-4802C-2 (Taxicab). Armature No. GDZ-2006F (GDZ Gen.), GEB-2006F (GEB Gen.). Two brush (shunt) type with voltage and current regulation. Ventilated.

SEE 1946-47 PACKARD 8 CAR PAGES FOR DATA

C NTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**GENERATOR****DELCO-REMY**

**Delco-Remy Model 1102682.** Armature No. 1879002. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—None. Charging rate controlled by Voltage Regulator, maximum output controlled by Current Regulator. See Regulator. **Maximum Charging Rate**—34-36 amperes, 8.0 volts hot. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data (Delco-Remy)**

	Amperes	Volts	RPM.
Cold	30①	8.0	1750

①Not maximum output. See Current Regulator. **Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—25 ozs. each. **Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal:** Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** 50 lbs. tension on spring scale hooked to generator frame, or 1/2" thumb-pressure deflection midway between generator and pump pulleys.

**REGULATOR****AUT-LITE**

**Auto-Lite Model VRP-4002C (GDZ-4801F Gen.), Model VRP-4002D (GEB-4802C-2 Taxi Generator).** SEE 1946-47 PACKARD 8 CAR PAGES FOR DATA

**REGULATOR****DELCO-REMY**

**Delco-Remy Model 1118202 (1946), 1118278 (1946-47).** Single Core Type. Vibrating type Voltage and Current Regulators in case with Cutout Relay. See *Electrical Equipment Section for complete data.* **CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—6.2-6.7 volts at 800 RPM (cold). **Cuts Out**—0-4.0 ampere discharge current. **Contact Gap**—.020" (same for both sets). **Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**To Check**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in *Electrical Equipment Section* for other (2nd) spring adjustment. **Air Gap**—.070" between center of core and arma-

ture with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting**—34-36 amperes hot (operating temp.). **To Check**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F), reading should agree with setting (above). **To Adjust**—Same as for Voltage Regulator (above). **Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**Headlamps:** Hall "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See *Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.). **Beam Indicator**—Red light on left side of speedometer dial. Lighted when Country (upper) beams in use.

**Direction Signal:** See *Electrical Equipment Section.*

**Direction Signal Indicator**—Illuminated arrows on face of speedometer dial. Right or Left arrow lighted when direction signal on same side operating.

**Switches**

**Lighting**—Delco-Remy No. 1995021.

**Beam Selector**—Delco-Remy No. 1997008.

**Bulb Specifications**

Position	Candlepower	Mazda No.

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY:** Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

**FUSES:** Auxiliary (Stop Light, Cigar Lighter, Body Lights, Accessories)—SFE 20 ampere. Two fuses on lighting switch.

**Instrument & Tail Light**—SFE 20 ampere. On Panel Light Switch.

**Clock**—SFE 4 ampere. In clock lead near clock.

**Overdrive**—SFE 30 ampere. In relay lead.

**Direction Signal**—9 ampere. In flasher lead.

**HORNS:** Sparton. Vibrator type, air tone, twin horns operated by relay.

**Horn Current**—22-25 amperes.

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS:** 6 cylinder, 'L' head type.

**Bore**—3 1/2". **Stroke**—4 1/4".

**Displacement**—245 cubic inches. **Rated H.P.** 29.4.

**Developed Horsepower**—105 at 3600 RPM.

**Compression Ratio**—6.71-1 Std. Cast Iron head.

**Compression & Vacuum Reading**—See *Tune-up data.*

**ORIGINAL BORE & PISTONS:** See *Packard Shop Notes*

**TIGHTENING TORQUES:** See *Packard Shop Notes.*

**CYLINDER HEAD:** Tightening Torque & Cylinder

**Head Diagram**—See *Packard Shop Notes.*

**PISTONS:** Aluminum alloy, Autothermic strut type.

**Length**—3 7/8".

**Weight**—20 1/4 ozs. (stripped), 26 3/4 ozs. (complete).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0005-.001". See *Fitting New Pistons.*

**Replacement Pistons:** See *Packard Shop Notes.*

**Fitting New Pistons:**—Insert .0015" feeler 1/2" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:** Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

**Ring** **Width End Gap Side Clearance**

Compr. (#1) .....093-.0935".....007-.017".....0025-.003"

Compr. (#2) .....1235-.124".....007-.017".....0025-.003"

Oil Contr. (#3) .186-.1865".....007-.015".....0025-.003"

**NOTE**—Oil Ring (Perfect Circle No. 86) has coil spring type expander spring.

**Replacement Rings:**—.005", .010", .020", .030", .040" O. S. Triple Action (packaged sets) std. & .020" oversize. See *Packard Shop Notes for Piston Ring data.*

**PISTON PIN:** Diameter .875". Length 3 1/64".

Pin floats in piston and rod, held by locking rings.

**Pin Fit in Piston**—Palm push fit with piston at 160°F. (heat in water).

**Pin Fit in Rod Bushing**—Finger push fit at 70° F.

**Piston Pin & Connecting Rod Bushing Servicing**—See *Packard Shop Notes.*

**Replacement Pins:**—Std. and .003", .006" oversize.

**CONNECTING ROD:** Length 7 11/16". Wgt. 31.6 ozs.

**Upper Bearing (Piston Pin Bushing)**—Split type.

See *Packard Shop Notes for Piston Pin servicing data.*

**Crankpin Bearing Diameter**—2 3/32".

**Lower Bearing**—Shimless, precision, steel backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.

**Clearance**—.0005-.0015". **Endplay**—.004-.010".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

See *Packard Shop Notes for 'Palmnut' installation data.*

**Replacement Bearings:** Furnished Std. size and .001", .002", .003", .015" Undersize.

**Installing Rods:**—Oil squirt hole toward camshaft.

**CRANKSHAFT:** Four bearing type with integral counterweights and vibration dampener on forward end.

**Bearings**—Interchangeable, shimless, precision type steel-backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.

**Bearing Diameter**—2 3/4". **Clearance**—.0005-.0015".

**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

**ENGINE**

CONTINUED FR M PRECEDING PAGE

**Replacement Bearings:** Furnished Std. size and .001", .002" Undersize.

**End Thrust:** Taken by front bearing. Endplay .003-.008".

**CAMSHAFT:** Four-bearing type. Driven by non-adjustable chain (two-sprocket drive). Bearings—Shimless, precision, steel-backed, babbit lined type. Clearance—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. Endplay—.0025-.006".

**Timing Chain:** Morse or Ramsey. Width 1 1/4". Pitch .375". Length 21 3/4" or 58 links.

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with straightedge across shaft centers.

**VALVES:** Head Diameter Stem Diameter Length  
Intake ..... 1 19/32" ..... 33975" ..... 5.619"  
Exhaust ..... 1 3/8" ..... 33975" ..... 5.619"

Seat Angle Lift Stem Clearance  
Intake ..... 30° ..... 318" ..... .0025"  
Exhaust ..... 45° ..... 3175" ..... .0045"

**Valve Guides:**—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guide upper end counterbored to 3/8" diameter, 3/8" deep.

**Valve Springs:**—Intake and exhaust springs interchangeable. Anti-rotation washer installed on top of springs.

Spring Pressure Spring Length  
Valve Closed ..... 52-57 lbs. ..... 1 5/8"  
Valve Open ..... 119-129 lbs. ..... 1 5/16"

**Valve Lifters:**—Mushroom type. Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters. Diameter—.6235-.6240". Clearance—.0003-.0012".

**VALVE TIMING**

**Tappet Clearance:**—.007" Intake, .010" Exh. (warm & idling). NOTE—Tappet screws are self-locking type.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

With tappet clearance of .0125" Intake, .015" Exh.

**Valve Timing Check:**—With .0125" tappet clearance

#1 intake valve should open with #1 piston 1° or

.0004" BTDC with 1st graduation before top dead

center mark #1 UP.DC' on vibration damper lined

up with pointer (permissible variation 4° either

way). Reset tappet clearance .007" (hot & idling).

**LUBRICATION**

**Engine Oiling System:** Full pressure system (pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain). Oil pump mounted externally on right side of crankcase.

**Crankcase Capacity:**—5 quarts.

**Normal Oil Pressure:**—40 lbs. at driving speeds.

**Oil Pressure Regulator:**—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 14 lbs. ± 2 oz. at 1 1/8".

**Oil Pump:** Gear type. On right side of crankcase.

**Oil Pump Installation:**—See Packard Shop Notes.

**Oil Filter:** Special equipment.

**Servicing:**—Renew filter cartridge at 8000-10000 mile intervals.

**Oil Pressure Gauge:**—Stewart-Warner electric type.

**COOLING**

**Cooling System:** Pressure type with pressure valve (relief valve) in radiator filler cap. Water pump mounted on front of engine with fan belt drive. Capacity—14 quarts.

**Radiator Core Removal:**—See Packard Shop Notes.

**Pressure Valve:**—In filler cap. Opens at 4 1/2 lbs. (Passenger Cars), 7 lbs. (Taxicab).

**Water Pump:**—Packless, sealed ball-bearing type. See Water Pump Section for complete data.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:**—Bishop & Babcock. In cyl. head outlet. Setting—Starts to open at 145-150°F. (Std. Type), 160-165°F. (Optl. High Reading Type).

**CLUTCH**

**Long Model 9 1/2 CF-CS (Std.), 11 CF-CI (Taxicab).** Single plate, semi-centrifugal, dry disc type. See Clutch Section for complete data.

**Facings:**—Woven (US Asbestos type), 2 required.

**Pass. Cars:** I.D. 6". O.D. 9 1/2". Thickness .125" (1/8").

**Taxicab:** I.D. 6 5/8". O.D. 11". Thickness .125" (1/8").

**Pedal Adjustment:**—1 1/2-1 3/4" (Std.), 2" (with Electromatic Clutch) free travel. Adjusting nut (with locknut) at clutch fork end of connector link.

**Removal:**—Remove transmission (see below). Disconnect pedal linkage, remove throw-out bearing. Remove cover mounting screws evenly, remove clutch.

**ELECTROMATIC CLUTCH**

**Electromatic Clutch:**—Vacuum electric type. Optl.

See Clutch Section for complete data.

**TRANSMISSION**

**Own Make:**—3 Speed type. Helical, constant-mesh (low speed gear), constant-mesh, synchro-mesh (second and high). Sliding spur (reverse gear). See Transmission Section for complete data.

**Transmission Control:** Steering col. mechanical shift.

See Transmission Section for complete data.

**Removal:**—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, and ground strap at transmission. Disconnect front universal, block drive shaft up for clearance. Support rear of engine with jack, unbolt frame cross-member carrying rear engine mountings, remove flywheel housing lower cover, disconnect stabilizer (transmission to X-member). Take out transmission to flywheel housing screws, withdraw transmission.

**OVERDRIVE**

**Warner Model AS2-R9 ("Econo-drive" used with Packard Transmission).** Electric solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down."

See Transmission Section for complete data.

► **Overdrive Lock-up in Reverse Correction for Clipper:** Install 1948 Safety Switch (Kit No. 394484). See 1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed.

**Overdrive Indicator Light:**—Green light on right side of speedometer dial. Lights when overdrive is ready to engage (at car speed of 22 MPH), goes out when accelerator pedal released for engagement.

**Overdrive Relay:**—Delco-Remy No. 1116823.

**Removal:** Disconnect control cable and all leads to solenoid, governor, and lockout switch. Free mounting at rear of overdrive case. Then remove overdrive & transmission. See Transmission Removal

**UNIVERSALS**

**Mechanics Type 3CR.** Needle bearing type, 2 used. See Universals Section for complete data.

► **CAUTION:**—Rear universal flange nut controls rear axle pinion bearing pre-load which must be adjusted whenever nut is loosened. See Packard Rear Axle article in Rear Axle Section for complete data.

**REAR AXLE**

**Own Make—Hypoid Gear Type.** Semi-floating type with Hotchkiss drive. Rear cover welded in place. See Rear Axle Section for complete data.

**Ratio:**—4.3-1 (std.), 4.54-1 (with Overdrive & Taxi). **Backlash:**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment:**—Endplay controlled by shims between flanged end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted to desired .008" at one wheel). Endplay—.004-.007".

**SHOCK ABSORBERS**

**Delco Model 1946-J,K (front), Model 1040-V (rear).** Hydraulic, double acting (front), direct (rear).

**Fifth Shock Absorber (Stabilizer):**—Monroe 956790 direct acting type (in one end of stabilizer bar). See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:** Clipper Type Packard Safe-T-Flex, independent, linked parallelogram type.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—5°35' crosswise.

**Caster:**—Negative 1° plus or minus 1/2°.

**Camber:**—0° plus or minus 1/4°.

**Toe In:**—0-1/16" measured 10" up from floor.

**Steering Geometry Inner wheel:** 23° ± 1/2°. Outer 20°

**STEERING GEAR**

**Steering Gear:** Own Make (same design as the Gemmer 335) Worm & Roller, "push-pull" adjustment. See Steering Gear Section for complete data.

**BRAKES**

**Service:** Bendix Hydraulic, 4-wheel, Duo-Servo, Single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums:**—Centrifuse type. Diameter: Passenger Car 12" (front), 11" (rear). Taxicab: 12" (all wheels).

**Lining:**—Primary: Marshall 2201H-8. Secondary:

Marshall B-50 (Pass. Car), Marshall 9017 (Taxicab).

**Thickness:** 3/16". Width 2" (Taxi rear wheels), 1 3/4"

(all shoes Pass. Cars, front wheels Taxi). Length

per shoe: Front Wheels Primary 11 1/2", Secondary 13"

**Rear Wheels:**—Primary 10 5/8" (Pass. Cars), 11 1/2"

(Taxi). Secondary 12" (Pass. Car), 11 1/2" (Taxi).

**Clearance:**—.015" at both ends of secondary shoe

with primary shoe forced out against drum.

**Hand Brake:**—See Service Brakes above.

**MISC. MECHANICAL**

**WINDSHIELD WIPER:** Stewart-Warner Type 645-H. Electric type. "Klixon" type circuit breaker mounted near wiper motor.

See Miscellaneous Section for complete data.

**ELECTRICAL EQUIPMENT NOTE:** If Delco-Remy units are used (Starter, Generator, Regulator), refer to preceding article on Packard Clipper Six for complete data on these units.

**HOOD LOCK:** One piece side hinge hood. To raise hood, release lever under instrument panel on side to be raised, lift hood slightly, release safety catch (approx. 2 feet from rear edge of hood), raise hood, engage prop on dash to hold hood open.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On left side of cowl (use Eng. No.)  
**ENGINE NUMBER:** First No. F-300001 (1946), F-320001 (1947). On upper left side of cylinder block between #3 and #4 cylinders.

### TUNE-UP

**COMPRESSION:** Pressure—118 lbs. at cranking speed.

**VACUUM READING:** Steady 18-20" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4.

**SPARK PLUGS:** AC No. 104 or Champion Y4-A. 10 mm. or Auto-Lite No. P-4. 10 mm.

Gaps—.028" (.0255-.0305").

**NOTE:** Tighten plugs to 50 inch lbs. only.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017". Cam Angle—27° Closed.

Breaker Arm Spring Tension—17-20 ozs.

Automatic Advance—Starts 325 RPM., 5.3° at 800

RPM., Max. 10.75° at 1500 RPM. Distr. ° & RPM.

Vacuum Advance—Starts with 10" of vacuum, Max. 6° with 17" vacuum. Distributor degrees.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° BTDC.

**Timing Mark:** Vibration dampener at front of engine marked "#1UPDC" with fifteen 1° graduations before this point. Set ignition contacts to open at 5th graduation before "DC" mark.

**Fuel Compensator:** Set for slight ping accelerating with wide open throttle (shift link on quadrant).

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting:** Set both idle adjusting screws ½-1½ turns open. Adjust for smooth 6 MPH. idle speed.  
**Float Level:** 5/32" from top of float to cover with valve seated (remove gasket and invert to check).  
**Accelerating Pump:** Inner Hole (minimum) Normal, outer hole (max. stroke) if greater charge required.

**Fuel Pump Pressure:** 4¾ lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type. Make certain that valve operates freely and does not bind or stick. Do not oil control.

**VALVES:** See Valve Timing.

Tapet Clearance—.007" Intake, .010" Exh., Hot.

**STARTING:** See Battery, Starter, Generator and Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock Switch Model 24-B. Auto-Lite No. CE-2260BCS Lock Switch and cable. Ignition Lock—Briggs & Stratton. B & S No. 50184. Key Series—P1250 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4659. Service coil (less switch & cable) CE-3224US. On left side of engine. Ignition Current—2.4 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671K. Capacity—20-25 microfarad..

**DISTRIBUTOR:** Auto-Lite Model IGP-4502A. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and Fuel Compensator. Breaker Gap—.017" Limits .0125-.0175".

Cam Angle or Dwell—27° clsd., 18° open (.017" gap).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	325	0.....	650
3.....	600	6.....	1200
5.3.....	800	10.6.....	1600
8.....	1175	16.....	2350
10.75.....	1550	21.5.....	3100

**Fuel Compensator Adjustment:** Permits 40° range of adjustment by loosening vacuum unit link screw

at distributor quadrant. See Ignition Timing below.

**Vacuum Spark Control:** Auto-Lite Unit. Mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	10"
1°.....	2°	11 1/8"
3°.....	6°	13 1/4"
5°.....	10°	15 1/8"
6°.....	12°	17"

**Removal:**—Distributor mounted on left side of crankcase. To remove, disconnect vacuum line, take out screw in hold-down plate, lift entire unit out.

## IGNITION TIMING

**Std. Setting**—As given below. See Fuel Compensator Setting for service and fuel corrections.

**Flywheel Degrees** **Piston Position**  
All Engines ..... 5° BTDC ..... 0103° BTDC

**Timing Mark Note**—Marks on vibration dampener at front of engine. Dampener marked '#1 UP.DC' with fifteen 1° graduations before this point.

**Timing**—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen vacuum unit link screw in distributor quadrant, rotate distributor until contacts begin to open, tighten screw. Check Fuel Compensator Setting (below).

**Timing (Neon Timing Light)**—Mark correct graduation on vibration dampener, clip neon timing light to #1 spark plug and direct light on vibration dampener, idle engine and adjust distributor as directed above.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant, rotate one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

## CARBURETOR

**Carter Type WDO, Model 512S. 1" Dual** (double barrel), Downdraft type with Carter Climatic Control. See Carburetor Section for complete data.

**NOTE**—Carburetor Casting No. 371 on flange.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of 6 MPH. (8-10 MPH. for cars with Electromatic Clutch). Turn idle adjusting screw for each barrel (in succession) until engine fires smoothly (½-1½ turns open for each screw—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump**—Pump arm under dust cover at top of carburetor has two holes for pump link engagement. Set as follows:

**Inner (min. stroke)**—Normal weather & fuel.

**Outer (max. stroke)**—Cold weather or low-test fuel.

**Float Level**—5/32" from top of float to bowl cover with valve seated (remove gasket & invert to check).

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle**—Integral type (built-in carburetor).

See Carburetion Equipment Section for data.

**Setting**—Adjust fast idle screw for .020" throttle opening with choke valve closed.

**Automatic Choke**—Carter Climatic Control.

See Carburetion Equipment Section for data.

**Setting**—Set thermostat coil housing at Index mark.

## CARB. EQUIPMENT

**Air Cleaner**: AC. Oil-wetted type Std., Heavy duty Oil-bath type Optl.

**Servicing (Oil-wetted type)**—Wash and re-oil filter element whenever crankcase oil changed (1000-2000 mile intervals for normal service).

**Servicing (Oil-bath type)**—Clean filter element, clean and refill oil reservoir with SAE No. 50 en-

gine oil (Summer), SAE No. 30 (Winter) to level of indicator line on case (approx. 1 pint) whenever crankcase oil changed (1000-2000 mile intervals). Oil Filler Cap (Crankcase Ventilator Filter)—Wash filter element in filler cap and re-oil when servicing air cleaner.

**Fuel Pump**: AC. Type AH (Std.), Type AJ (Optl.). Diaphragm type fuel pump (AH), combination fuel-and-vacuum pump (AJ). Pump Exchange AC. No. 525 (AH), 508 (AJ).

**Pressure**—4-4¾ lbs. (AH), 3-3¾ lbs. (AJ).

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric. See Carburetion Equipment Section for data.

## BATTERY

**Auto-Lite Type PN-15ZR or Willard Type SW-1D-100. 6 Volt, 15 Plate, 100 Ampere Hour Capacity** (20 hour rate). End-to-end type.

**Starting Capacity**—120 amperes (Auto-Lite), 122 amperes (Willard) for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes. Five second voltage 4.15 volts (Auto-Lite), 4.2 volts (Willard).

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 19¾". Width 4". Height 9 3/16" (Auto-Lite), 8 15/16" (Willard).

**Location**—On left side in engine compartment.

## STARTER

**Auto-Lite Model MAW-4024 or MAW-4027. Armature No. MAW-2128.**

**Drive**—Outboard Barrel Type Bendix No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—125 RPM., 175 amperes, 5.1 volts.

### Performance Data—Auto-Lite

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
0.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal**: Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch**: Auto-Lite Model SS-4017 Magnetic Switch mounted on starter and controlled by Carter Car Starter Model 192-11U on carburetor.

See Electrical Equipment Section for complete data on Magnetic Switch & Carter Car Starter.

## GENERATOR

**Auto-Lite Model GDZ-4801F (Std.), GEB-4802C-2 (Taxicab). Armature No. GDZ-2006F (GDZ Gen.), GEB-2006F (GEB Gen.).** Two brush (shunt) type with voltage and current regulation. Ventilated.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator.

**Maximum Charging Rate**—35 amperes, 8.0 volts, 1900 RPM and above with load or discharged battery. Actual charging rate controlled by voltage regulator and dependent on battery condition.

### Performance Data—GDZ-4801F

Cold			Hot		
Amperes	Volts	RPM.	Amperes	Volts	RPM.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
*35	8.0	1900	35	8.0	2250

### Performance Data—GEB-4802C-2

Cold			Hot		
Amperes	Volts	RPM.	Amperes	Volts	RPM.
0	6.4	560	0	6.4	620
5	6.6	640	5	6.6	700
10	6.8	720	10	6.8	800
15	7.1	800	15	7.1	910
20	7.3	880	20	7.3	1040
25	7.5	980	25	7.5	1170
30	7.8	1080	30	7.8	1340
*35	8.0	1200	35	8.0	1520

\*—Current Regulator Setting.

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—35-53 ozs. (GDZ Gen.), 64-68 ozs. (GEB Gen.) for new brushes.

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Gen.) at 6.0 volts.

**Removal**: Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment**: 50 lbs. tension on spring scale hooked to generator frame, or ½" thumb-pressure deflection midway between generator and pump pulleys.

## REGULATOR

**Auto-Lite Model VRP-4002C (GDZ-4801F Gen.), Model VRP-4002D (GEB-4802C-2 Gen.). Voltage-Current Type.** Vibrating type Voltage and Current Regulators in case with Cutout Relay.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

### Cutout Relay

**Cuts In**—6.4-7.0 volts. 920 RPM (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stoppin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover). **To Check (without breaking seals)**—Connect test meters as for voltage check (above). Operate gen-

## C NTINUED FR M PRECEDING PAGE

erator at speed equivalent to 30 MPH, charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective. To Adjust (with cover removed)—Same as for Voltage Regulator (above). Contact Gap & Air Gap—Same as Voltage Regulator.

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See *Electrical Equipment Section* for complete data.

**Adjustment:** Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.). **Beam Indicator:** Red light on left side of speedometer dial. Lighted with upper beam "on".

**Direction Signal:** See *Electrical Equipment Section*.

**Direction Signal Indicator:** Illuminated arrows on face of speedometer dial. Right or Left arrow lighted when direction signal on same side operating.

## Switches

**Lighting:** Delco-Remy No. 1995021.

**Beam Selector:** Delco-Remy No. 1997008.

## Bulb Specifications

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:** Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

**FUSES:** Auxiliary (Stop Light, Cigar Lighter, Body Lights, Accessories)—SFE 20 ampere. Two fuses on lighting switch.

**Instrument & Tail Light:** SFE 20 ampere. On Panel Light Switch.

**Clock:** SFE 4 ampere. In clock lead near clock.

**Overdrive:** SFE 30 ampere. In relay lead.

**Direction Signal:** 9 ampere. In flasher lead.

**HORNS:** Sparton. Vibrator type, air tone, twin horns operated by relay.

**Horn Current:** 22-25 amperes.

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap:** .025". **Air Gap:** .015" (closed).

**Contacts Close:** 2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:** Eight cylinder "L" head type. Bore—3¼". Stroke—4¼".

**Displacement:** 282 cubic ins. **Rated HP.**—33.8.

**Developed Horsepower:**—125 at 3600 RPM.

**Compression Ratio:**—6.85-1 Std. cast iron head.

**Compression & Vacuum Reading:**—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Packard Shop Notes*

**TIGHTENING TORQUES:** See *Packard Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder

**Head Diagram:**—See *Packard Shop Notes*.

**PISTONS:** Aluminum alloy, autothermic strut type. Length 3⅞".

**Weight:**—17¼ ozs. (stripped), 23⅛ (with rings&pin).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—.0005"-.001". See *Fitting New Pistons*.

**Replacement Pistons:** See *Packard Shop Notes*.

**Fitting New Pistons:**—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:** Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

**Ring**      **Width**      **End Gap**      **Side Clearance**

Comp. (#1) .....0925-.0935".....007-.017".....0025-.003"

Comp. (#2) .....1240-.1235".....007-.017".....0025-.003"

Oil Control .....1865-.186" .....007-.015".....0025-.003"

**NOTE:**—Oil Ring (Perfect Circle No. 86) has coil spring type expander spring.

**Replacement Rings:**—.005, .010", .020", .030", .040" O.S.

**Triple Action** (packaged sets) std. & .020" oversize.

See *Packard Shop Notes* for *Piston Ring data*.

**PISTON PIN:** Diameter .875". Length 2 51/64".

Pin floats in piston and rod, held by locking rings.

**Pin Fit in Piston:**—Palm push fit with piston at 160°F. (heat in water).

**Pin Fit in Rod Bushing:**—Finger push fit at 70°F.

**Piston Pin & Connecting Rod Bushing Servicing:**—

See *Packard Shop Notes*.

**Replacement Pins:**—Std. and .003", .006" oversize.

**CONNECTING ROD:** Length 7 11/16". Weight 31.6 oz.

**Upper Bearing (Piston Pin Bushing):**—Split type.

See *Packard Shop Notes* for *servicing data*.

**Crankpin Bearing Diameter:**—2 3/32".

**Lower Bearing:**—Shimless, precision, steel backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.

**Clearance:**—.0005-.0015". **Endplay:**—.004-.010".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

See *Packard Shop Notes* for *'Palmut' installation data*.

**Replacement Bearings:**—Furnished Std. size and .001", .002", .003", .015" Undersize.

**Installing Rods:**—Oil squirt hole toward camshaft.

**CRANKSHAFT:** Five bearing type with integral counterweights and vibration dampener on forward end. **Bearing Diameter:**—2¾".

**Bearings:**—Interchangeable, shimless, precision type steel-backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type. **Clearance:**—.0005-.0015".

**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

**Replacement Bearings:**—Furnished Std. size and .001", .002" Undersize.

**End Thrust:**—By #3 bearing. **Endplay:**—.003-.008".

**CAMSHAFT:** Five bearing type. Non-adjustable (two sprocket) chain drive.

**Bearings:**—Shimless, precision, steel backed, babbitt lined type. **Clearance:**—.001-.003".

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. **Endplay:**—.0025-.006".

**Timing Chain:** Morse or Ramsey. Width 1¼". Pitch .375". Length 21¾" or 58 links.

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with straightedge across shaft centers.

**VALVES:** Head Diameter      Stem Diameter      Length  
Intake .....1 31/64".....33975".....5.619"  
Exhaust .....1 3/8".....33975".....5.619"

Seat Angle      Lift      Stem Clearance

Intake .....30°.....318"......0025"

Exhaust .....45°.....3175"......0045"

**Valve Guides:**—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides counter-bored on upper inner diameter to ⅝" diameter and ⅜" deep.

**Valve Springs:**—Intake and exhaust springs interchangeable. Anti-rotation serrated washer installed on top of springs.

Spring Pressure      Spring Length

Valve Closed .....52-57 lbs. ....1 5/8"

Valve Open .....119-129 lbs. ....1 5/16"

**Valve Lifters:**—Mushroom type. Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

**Diameter:**—.6235-.6240". **Clearance:**—.0003-.0012".

## VALVE TIMING

**Tappet Clearance:**—.007" Intake, .010" Exh. (warm & idling). **NOTE:**—Self-locking tappet screw used.

**Valve Timing:**—See *Camshaft Setting* above.

**Intake Valves:**—Open 1° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

Above figures correct with .0125" Intake, .015" Exhaust tappet clearance.

**Valve Timing Check:**—With .0125" tappet clearance #1 intake valve should open with #1 piston 1° or .0004" BTDC with 1st graduation before top dead center mark '1 UP.DC' on vibration damper lined up with pointer (permissible variation 4° either way). Reset tappet clearance .007" (hot & idling).

## LUBRICATION

**Engine Oiling System:** Full pressure system (pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain). Oil pump mounted externally on right side of crankcase.

**Crankcase Capacity:**—5½ quarts.

**Normal Oil Pressure:**—40 lbs. at driving speeds.

**Oil Pressure Regulator:**—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 14 lbs. ± 2 oz. at 1⅞".

**Oil Pump:** Gear type. On right side of crankcase.

**Oil Pump Installation:**—See *Packard Shop Notes*.

**Oil Filter:** Special equipment.

**Servicing:**—Renew filter cartridge at 8000-10000 mile intervals.

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in radiator filler cap. Water pump mounted on front of engine with generator & fan belt drive.

**Capacity**—17 quarts.

**Radiator Core Removal**—See *Packard Shop Notes*.

**Pressure Valve**—In filler cap. Opens at 4½ lbs.

**Water Pump:**—Packless, sealed ball-bearing type.

See *Water Pump Section* for complete data.

**Removal**—Remove fan belt, disconnect pump hose, take out pump mounting screws, lift out pump.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting**—Starts to open at 145-150°F. (Std. Type), 160-165°F. (Optl. High Reading Type).

## CLUTCH

**Long Model 10CF-CI.** Single plate, semi-centrifugal, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Woven (US Asbestos) type, 2 required. I.D. 6". O.D. 10". Thickness .125" (⅛").

**Adjustment:**—Adjust nut on pedal rod (at clutch fork) for 1½-1¾" free travel (2" on cars with Electromatic Clutch).

**Removal:**—Remove transmission (see *Transmission Removal* following) and flywheel housing lower cover. Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover screws (release tension evenly) and lower assembly out.

## ELECTROMATIC CLUTCH

**Electromatic Clutch**—Vacuum type actuation with electrical control. Optl. on all models.

See *Clutch Section* for complete data.

## TRANSMISSION

**Own Make.** Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.

See *Transmission Section* for complete data.

**Transmission Control:** Remote control type with shift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal:**—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground

strap, overdrive cable and solenoid wires (if used), front universal (block drive shaft up against floor pan) and rubber bearing at rear of overdrive. Support rear of engine with jack and unbolt cross member (at frame ends and transmission case), disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission assembly.

## OVERDRIVE

**Warner Model AS2-R9** ("Econo-drive" used with Packard Transmission). Electric solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down."

See *Transmission Section* for complete data.

► **Overdrive Lock-up in Reverse Correction for Clipper:** Install 1948 Safety Switch (Kit No. 394484). See *1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed*.

**Overdrive Indicator Light**—Green light on right side of speedometer dial. Lights when overdrive is ready to engage (at car speed of 22 MPH), goes out when accelerator pedal released momentarily to engage overdrive.

**Overdrive Relay**—Delco-Remy No. 1116823.

**Removal:** Disconnect control cable and all leads to solenoid, governor, and lockout switch. Free mounting at rear of overdrive case. Then remove overdrive and transmission assembly as directed in *Transmission removal* (above).

## UNIVERSALS

**Mechanics Type 3CR.** Needle bearing type, 2 used. See *Universals Section* for complete data.

► **CAUTION**—Rear universal flange nut controls rear axle pinion bearing pre-load which must be adjusted whenever nut is loosened. See *Packard Rear Axle article in Rear Axle Section* for complete data.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

**Ratio**—4.1-1 (Std.), 4.3-1 (With Overdrive).

**Backlash**—.003-.005". Screw adjustment.

**Removal:**—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

**Wheel Bearing Adjustment**—Endplay controlled by shims between flanged end of housing and brake

backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted to desired .008" at one wheel). Endplay—.004-.007".

## SHOCK ABSORBERS

**Delco Model 1946-J,K** (front), **Model 1040-V** (rear). Hydraulic, double acting (front), direct (rear).

See *Shock Absorber Section* for complete data.

**Fifth Shock Absorber (Stabilizer):**—Monroe 373935. Direct acting, hydraulic (built-in rear stabilizer).

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:** Clipper Type Packard Safe-T-Flex, independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5°35' crosswise.

**Camber**—0° plus or minus ¼°.

**Caster**—Neg. 1° plus or minus ½°. Adjustable.

**Toe In**—0" (plus 1/16", minus 0") at hub height. Adjust by turning adjuster at outer end of each tie rod equally.

**Steering Geometry**—Inner wheel 23° ± ½°. Outer 20°.

## STEERING GEAR

**Steering Gear:** Own Make (same design as Gemmer Model 335) Worm & Roller with "push-pull" adjustment.

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Bendix Hydraulic, 4-wheel, Duo-Servo, Single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Drums**—Centrifuse. Diameter 12".

**Lining**—Marshall 2201H-8 (primary shoe), Marshall B-50 (secondary). Width 1¾". Thickness 3/16". Length per shoe 11½" (primary), 13" (secondary).

**Clearance**—.015" at both end of secondary shoe with primary shoe forced out against drum.

**Hand Brake:**—See *Service Brake* (above).

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Stewart-Warner Type 645-H. Electric type. NOTE—"Klixon" type circuit-breaker mounted on unit (no fuse used).

See *Miscellaneous Section* for complete data.

**HOOD LOCK:** One piece design, side hinge type hood with remote control levers at each side of front compartment under instrument panel. To raise hood, push remote control lever in to unlocked position on side to be raised, raise hood about 1", release safety catch under hood (approx. 2" ahead of rear edge of hood), raise hood up and prop in open position with lever pivoted on dash.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).  
**ENGINE NUMBER:** First No. F-500001 (1946), F-506001 (1947). On upper left side of cylinder block between #3 and #4 cylinders.

### TUNE-UP

**COMPRESSION:** Pressure—133 lbs. at 300 RPM.

**VACUUM READING:** Steady 18½" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4.

**SPARK PLUGS:** AC No. 104 or Champion Y4-A. 10mm. or Auto-Lite No. P-4. 10 mm.

**Gaps:** .028" (.0255-.0305").

**NOTE:** Tighten spark plugs to 50 inch lbs. only.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:** .017". **Cam Angle:** 27° Closed.

**Breaker Arm Spring Tension:** 17-20 ozs.

**Automatic Advance:** Starts 250 RPM, 6° at 700 RPM, Max. 11½° at 1800 RPM. Distributor degrees & RPM.

**Vacuum Advance:** Starts with 7" of vacuum, Max. 5½" with 16" of vacuum. Distributor degrees.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:** 4° BTDC.

**Timing Mark:** Vibration dampener at front of engine marked "#1 UP.DC" with fifteen 1° graduations before this point. Set ignition contacts to open at 4th graduation before "DC" mark.

**Fuel Compensator:** Set for slight ping accelerating with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:** Set both idle adjusting screws 1 to 2 turns open. Adjust for smooth idle. Idle speed 6 MPH.

**Float Level:** 5/32" from top of float to cover with valve seated (remove gasket and invert to check).

**Accelerating Pump:** Inner Hole (minimum) Normal, outer hole (max. stroke) if greater charge required.

**Fuel Pump Pressure:** 4¾ lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type. Make certain that valve operates freely and does not bind or stick.

**VALVES:** See Valve Timing.

**Tappet Clearance:** None in service (automatic hydraulic type tappet take-up).

**STARTING:** See Battery, Starter, Generator, and Regulator.

### IGNITION

**IGNITION SWITCH:** Mitchellock Switch Model 24-B. Auto-Lite No. CE-2260BCS Lock Switch and cable.

**Ignition Lock Cylinder:** Briggs & Stratton 50184. Key Series—P1251 to P1500. Groove—No. 2.

**COIL:** Auto-Lite No. CE-4659. Service Coil (less switch & cable) CE-3224US. On dash.

**Ignition Current:** 2.4 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671J.

**Capacity:** .20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IGT-4203 (or IGT-4102). Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.

**Breaker Plate Identification:** Maximum vacuum advance limited by slot and marked by number (#5½) on plate.

**Breaker Gap:** Set at .017".

**Cam Angle:** 27° closed, 18° open (with .017" gap).

**Breaker Arm Spring Tension:** 17-20 ozs.

**Rotation:** Counter-clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	0.....	500
3.....	475	6.....	950
6.....	700	12.....	1400
9.....	1300	18.....	2600
11½.....	1800	23.....	3600

**Fuel Compensator:** Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing for setting.

**Vacuum Spark Control:** Auto-Lite Unit. On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

#### Vacuum Advance

Distr. Degrees	Engine Degrees	Vacuum (" of HG)
Start.....	0°	7"
1°.....	2°	8½"
3°.....	6°	12"
4°.....	8°	13½"
5½°.....	11°	16"

**Distributor Removal:** Mounted on left side of crankcase. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

**IGNITION TIMING**

**Std. Setting**—As given below. See Fuel Compensator Setting for service and fuel corrections.

**Flywheel Degrees Piston Position**  
All Engines .....4° BTDC.....0070° BTDC.

**Timing Mark**—Vibration dampener at front of engine marked '#1 UPDC' at top dead center for #1 piston with 15 (1°) graduations before this mark.  
**Timing**—Loosen thumbnut, set Fuel Compensator pointer at '0', tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position (see table above) with 4th graduation ahead of #1UPDC mark in line with pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting (following).

**Timing (Neon Timing Light)**—Mark 4th graduation ahead of #1UPDC mark on vibration dampener with white paint, clip neon timing light at #1 spark plug and direct light on vibration dampener, idle engine below 500 RPM and adjust distributor as directed above until mark in line with pointer on chain case cover.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

**CARBURETOR**

**Carter Type WDO, Model 531S.** 1¼" Dual (double barrel), Downdraft type with Carter Climatic Control.

See Carburetor Section for complete data.

**NOTE**—Carburetor has Casting No. 377 on flange.

**Idle Setting**—With engine warm (fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. (Std.), 8-10 MPH. (Cars with Electromatic Clutch) Adjust both idle screws (1 for each barrel, adjust alike) for smooth idling performance (turn screws in for leaner mixture, correct setting 1 to 2 turns open for each screw. Recheck idle speed.

**Accelerating Pump**—Pump arm under dust cover at top of carburetor has two holes for pump link engagement. Set as follows:

**Inner Hole (min. stroke)**—Normal setting.

**Outer (max. stroke)**—If greater charge required.

**Float Level**—5/32" from top of float to bowl cover with valve seated (remove gasket & invert to check).

**Metering Rods & Jets**—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

**Fast Idle**—Integral type (built-in carburetor).

See Carburetion Equipment Section for data.

**Setting**—Adjust fast idle screw for .023-.028" throttle opening (Gauge T109-189) with choke closed.

**Automatic Choke**—Carter Climatic Control.

See Carburetion Equipment Section for data.

**Setting**—Set thermostat coil housing 1 Notch Rich.

**CARB. EQUIPMENT**

**Air Cleaner:** AC. Oil-wetted type Std., Heavy duty Oil-bath type Optl.

**Servicing (Oil-wetted type)**—Wash and re-oil filter element whenever crankcase oil changed (1000-2000 mile intervals for normal service).

**Servicing (Oil-bath type)**—Clean filter element,

clean and refill oil reservoir with SAE No. 50 engine oil (Summer), SAE No. 30 (Winter) to level of indicator line on case (approx. 1 pint) whenever crankcase oil changed (1000-2000 mile intervals).  
**Oil Filler Cap (Crankcase Ventilator Filter)**—Wash filter element in filler cap and re-oil when servicing air cleaner.

**Fuel Pump:** AC. Type AH, Diaphragm type fuel pump. Exchange Pump AC No. 545.

See Carburetion Equipment Section for data.

**Pressure**—4-4¾ lbs. max.

**Gasoline Gauge:**—Stewart (Stewart-Warner) electric. See Carburetion Equipment Section for data.

**BATTERY**

**Auto-Lite Type PN-17ZR.** 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—138 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.1 minutes. Five second voltage 4.35 volts.

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 19¾". Width 4". Hgt. 9 3/16".

**Location**—On left side in engine compartment.

**STARTER**

**Auto-Lite Model MAX-4052.** Armature MAW-2069. Drive—Overrunning clutch (solenoid pinion shift) through reduction gears.

**Rotation**—Clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Performance Data**

Torque	RPM①	Volts	Amperes
0 ft. lbs.	2700	5.5	77
33.5 "	Lock	3.0	650
45.9 "	Lock	4.0	900

①—Pinion shaft RPM. (reduction gear drive).

**Removal:**—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

**Starting Switch:** Auto-Lite Model SS-4205 Solenoid type. Mounted on starter and controlled by Carter Car Starter Model 192-11U mounted on carburetor (accelerator pedal starting). See Electrical Equipment Section for Auto-Lite Solenoid Switches and Carter Car Starter.

**GENERATOR**

**Auto-Lite Model No. GEA-4802A-1.** Armature No. GDZ-2006F. Two brush type with Current and Voltage control. Air cooled by fan on pulley.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—35 amperes (hot or cold), 8.0 volts, 1700 RPM and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	850	0	6.4	865
4	6.6	950	4	6.6	975
8	6.75	1050	8	6.75	1075
12	6.95	1150	12	6.95	1180
16	7.1	1250	16	7.1	1300
20	7.3	1345	20	7.3	1425
24	7.5	1440	24	7.5	1560
28	7.7	1540	28	7.7	1695
32	7.85	1635	32	7.85	1850
35	8.0	1700	35	8.0	1970

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.57-1.75 amperes at 6.0 volts.

**Motoring Current**—4.45-4.9 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator out until 50 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and water pump pulley is ½" with thumb pressure.

**REGULATOR**

**Auto-Lite Model VRP-4002C.** Voltage-Current Type. Vibrating type Voltage and Current Regulators in case with Cutout Relay.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

**Cuts In**—6.4-7.0 volts, 780 RPM (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap**—.012" min. (armature against stoppin).  
**Air Gap**—.048-.052" with contacts just opening.

**Current Regulator**

**Setting**—34-36 amperes (marked '35' on the cover).

**To Check (without breaking seals)**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH, charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.

**To Adjust (with cover removed)**—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap**—Same as Voltage Regulator.

**LIGHTING**

**Headlamps:** Hall "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red light on left side of speedometer. Lighted when Upper beams in use.

## CONTINUED FR M PRECEDIN PAGE

**Direction Signal:** See *Electrical Equipment Section*.

**Direction Signal Indicator:** Illuminated arrows on face of speedometer dial. Right or Left arrow lighted when direction signal on same side operating.

## Switches

**Lighting—Delco-Remy No. 1995021.**

**Beam Selector—Delco-Remy No. 1997008.**

## Bulb Specifications

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:** Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

**FUSES:** Auxiliary (Stop Light, Cigar Lighter, Body Lights, Accessories)—SFE 20 ampere. Two fuses on lighting switch.

**Instrument & Tail Light—SFE 20 ampere.** On Panel Light Switch.

**Clock—SFE 4 ampere.** In clock lead near clock.

**Overdrive—SFE 30 ampere.** In relay lead.

**Direction Signal—9 ampere.** In flasher lead.

**HORNS:** Sparton. Vibrator type, air tone, twin horns operated by relay.

**Horn Current—22-25 amperes.**

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap—.025". Air Gap—.015" (closed).**

**Contacts Close—2.75-4.0 volts.**

## ENGINE

**ENGINE SPECIFICATIONS:** Eight cylinder, "L" head type.

**Bore—3½". Stroke—4½".**

**Displacement—356 cubic inches. Rated HP—39.2.**

**Developed Horsepower—165 at 3600 RPM.**

**Compression Ratio—6.85-1 cast-iron head. No Optl.**

**Compression & Vacuum Reading—See Tune-up data.**

**ORIGINAL BORE & PISTONS:** See *Packard Shop Notes*

**TIGHTENING TORQUES:** See *Packard Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Packard Shop Notes*.

**PISTONS:** Aluminum alloy, autothermic strut type. Length—3⅞".

**Weight 20¼ oz. (stripped), 26¾ (with rings & pin).**

**Removal—Pistons and rods removed from above.**

**Clearance—.0005-.001". See Fitting New Pistons.**

**Replacement Pistons:** See *Packard Shop Notes*.

**Fitting New Pistons:** Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Installing Pistons:**—Slot toward valves.

**PISTON RINGS:** Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

**Ring Width End Gap Side Clearance**

Comp. (#1) ...0930-.0935" ...007-.017" ...0025-.003"

Comp. (#2) ...1240-.1235" ...007-.017" ...0025-.003"

Oil Control ...1865-.186" ...007-.015" ...0025-.003"

**NOTE—Oil Ring (Perfect Circle No. 86) has coil spring type expander spring.**

**Replacement Rings:**—.005", .010", .020", .030", .040" O.S. Triple Action (packaged sets) std. & .020" oversize. See *Packard Shop Notes for Piston Ring data*.

**PISTON PIN:** Diameter ⅞". Length 3 1/64".

Pin floats in piston and rod. Held by locking rings.

**Pin Fit in Piston—Palm push fit with piston at 160°F (heat in water).**

**Pin Fit in Rod Bushing—Finger push fit at 70°F.**

**Piston Pin & Connecting Rod Bushing Servicing—** See *Packard Shop Notes*.

**Replacement Pins:** Std. and .003", .006", oversize.

**CONNECTING ROD:** Length—9¼". Weight—39 ozs.

**Upper Bearing (Piston Pin Bushing)—Split type.**

See *Packard Shop Notes for Piston Pin servicing data*.

**Crankpin Bearing Diameter—2¼".**

**Lower Bearing—Shimless, precision, steel backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.**

**Clearance—.0005-.0015". Endplay—.004-.010".**

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:** Furnished Std. size and .001", .002", .003", .015" Undersize.

**Installing Rods:**—Oil squirt hole toward camshaft.

**CRANKSHAFT:** Nine bearing type with bolted-on counterweights and vibration dampener at forward end.

**Bearing Diameter—2¾".**

**Bearings—Interchangeable, shimless, precision, steel-backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.**

**Clearance—.0005-.0015".**

**Bearing Adjustment:**—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

**Replacement Bearings:** Furnished Std. size and .001", .002" Undersize.

**End Thrust:**—By #5 bearing. Endplay—.003-.008".

**CAMSHAFT:** Eight bearing type. Non-adjustable (two-sprocket) chain drive.

**Bearings—Shimless, precision, steel-backed, babbitt lined type. Clearance—.001-.003".**

**End Thrust:**—Taken by thrust plate in back of camshaft sprocket. Endplay—.0025-.006".

**Timing Chain:** Morse. Width 1¼". Pitch .375" (⅜"). Length 23¼" or 62 links.

**Camshaft Setting:**—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across the shaft centers.

**VALVES:** Head Diameter Stem Diameter Length  
Intake .....1.670" .....34025" .....6.224"  
Exhaust .....1 7/16" .....34025" .....6.224"

**Seat Angle Lift Stem Clearance**  
Intake .....30" .....340" .....002"  
Exhaust .....45" .....340" .....004"

**Valve Guides:**—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guide upper end counterbored to ⅝" diameter, ⅜" deep.

**Valve Springs:**—Washer used on top of each spring.

**Spring Pressure Spring Length**  
Valve Closed .....60-66 lbs. ....1¾"  
Valve Open .....135-145 lbs. ....1 13/32"

**Valve Lifters:**—Wilcox-Rich 'Zero-lash' type hydraulic lifters (mushroom type). Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5101 (piloted in valve guide) and ream for .005" oversize lifters.

Refer to *Packard Shop Notes for checking Valve Lifter Clearance when grinding valves*.

**Diameter .7177-.7182". Clearance .0002" selective.** See *Miscellaneous Section for complete data*.

## VALVE TIMING

**Tappet Clearance:**—None in service (hydraulic type lifter). See *Valve Servicing in Packard Shop Notes*.

**Valve Timing:**—See *Camshaft Setting* above.

**Intake Valves—Open 4° BTDC. Close 51° ALDC.**

**Exhaust Valves—Open 49° BLDC. Close 10° ATDC.**

**Valve Timing Check—**#1 exhaust valve close 10° after top dead center (#1 piston .0438" ATDC) with hydraulic lifter dry (all oil drained out) and built up with feeler stock for zero tappet clearance.

## LUBRICATION

**Engine Oiling System:** Full pressure system (pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain). Oil pump mounted externally on right side of crankcase.

**Crankcase Capacity—7 quarts.**

**Normal Oil Pressure—50 lbs. at driving speeds.**

**Oil Pressure Regulator—**On oil pump cover. Not adjustable. Pressure regulator spring tension should be 17½-18½ lbs. at 1½".

**Oil Pump:** Gear type, on right side of crankcase.

**Oil Pump Installation—**See *Packard Shop Notes*.

**Oil Filter:** Std. equipment. On left side of engine.

**Servicing—**Replace filter cartridge at 8000-10000 mile intervals.

**Oil Pressure Gauge:** Stewart-Warner Electric type.

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in radiator filler cap. Water pump mounted on front of engine (belt driven with generator and fan).

**Capacity—20 quarts.**

**Pressure Valve—**In filler cap. Opens at 7 lbs. (Std.), 12 lbs. (with Air Conditioning equipment).

**Water Pump:**—Packless, sealed ball-bearing type. See *Water Pump Section for complete data*.

**Thermostat:** Harrison. In water outlet elbow on cylinder head.

**Setting**—Starts to open at 145-150°F. (Std. Type), 160-165°F. (Optl. High Reading Type).

## CLUTCH

**Long Model 11CF-CI.** Single plate, semi-centrifugal, dry disc type.

*See Clutch Section for complete data.*

**Facings**—Woven type (US Asbestos), 2 required. I.D. 6". O.D. 11". Thickness .125" ( $\frac{1}{8}$ ").

**Pedal Adjustment:**  $1\frac{3}{4}$ - $2\frac{1}{4}$ " (Std.), 2" (with Electromatic Clutch) pedal free travel. Adjusting nut (with locknut) located on clutch fork end of connecting link.

**Removal:** Remove Transmission (see Transmission Removal below), disconnect pedal linkage, remove throw-out bearing. Remove clutch cover mounting screws evenly to relieve spring pressure, remove clutch and driven member.

## ELECTROMATIC CLUTCH

**Electromatic Clutch**—Vacuum type actuation with electrical control. Optl. on all models.

*See Clutch Section for complete data.*

## TRANSMISSION

**Own Make.** Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low), sliding spur gear (Reverse). Constant-mesh gears (Low & Second) are ball-bearing mounted.

*See Transmission Section for complete data.*

**Transmission Control:** Remote control type with shift lever mounted on steering column.

*See Transmission Section for complete data.*

**Removal:** Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, and ground strap at transmission. Disconnect front universal joint, block drive shaft up for clearance. Support engine with jack, unbolt frame cross-member carrying rear engine mountings and remove cross-member. Remove flywheel housing lower cover, disconnect stabilizer rod (from transmission to X-member). Take out transmission-to-housing mounting screws, pull transmission straight back and remove from car.

## OVERDRIVE

**Warner Model AS1-R9A** ("Econo-drive" used with Packard Transmission). Electric solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down."

*See Transmission Section for complete data.*

► **Overdrive Lock-up in Reverse Correction for Clipper:** Install 1948 Safety Switch (Kit No. 394484). *See 1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed.*

**Overdrive Indicator Light**—Green light on right side of speedometer dial. Lights when overdrive is ready to engage (at car speed of 22 MPH), goes out when accelerator pedal released momentarily to engage overdrive.

**Overdrive Relay**—Delco-Remy No. 1116823.

**Removal:** Disconnect control cable and all leads to solenoid, governor, and lockout switch. Free mounting at rear of overdrive case. Then remove overdrive and transmission assembly as directed in Transmission removal (above).

## UNIVERSALS

**Mechanics Type 3CR.** Needle bearing type, 2 used. *See Universals Section for complete data.*

► **CAUTION**—Rear universal flange nut controls rear axle pinion bearing pre-load which must be adjusted whenever nut is loosened. *See Packard Rear Axle article in Rear Axle Section for complete data.*

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss Drive. NOTE—Ring gear has special Support Roller. Housing cover is welded in place.

*See Rear Axle Section for complete data.*

► **Pinion Bearing Spacer**—**CAUTION**— $\frac{1}{16}$ " spacer used on some 2103, 2106, 2126 cars. *See 1946-47 Packard in Rear Axle Section.*

**Ratio**—3.92-1 (Std.), 4.09-1 (With Overdrive).

**Backlash**—.003-.005". Screw adjustment.

**Removal:** Remove wheel, hub, and brake backing plate assembly, withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove axle carrier mounting bolt nuts, withdraw carrier assembly.

**Wheel Bearing Adjustment**—Endplay controlled by shims between flanged end of housing and brake

backing plate. To adjust endplay, unbolt backing plate and clips holding brake tube to housing, add or remove shims.

**Endplay**—.004-.007"

## SHOCK ABSORBERS

**Delco No. 1946-J.K** (front), **Monroe No. 18096** (rear), Hydraulic, double acting (front), direct (rear).

**EXPORT CARS**—Used Delco 1040-V (direct) rear. *See Shock Absorber Section for complete data.*

**Fifth Shock Absorber (Stabilizer):** Monroe Model 373935 Direct acting type (built-in one end of stabilizer bar).

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension (Clipper):**—New type Packard Safe-T-fleX (parallelogram type with upper & lower support arms and coil springs—no torque arms)

*See Front Suspension Section for complete data.*

**Kingpin Inclination**— $5^{\circ}35'$  crosswise.

**Caster**—Negative  $1^{\circ}$  plus or minus  $\frac{1}{2}^{\circ}$ .

**Camber**— $0^{\circ}$  plus or minus  $\frac{1}{4}^{\circ}$ .

**Toe In**— $0$ - $\frac{1}{16}$ " measured 10" up from floor.

**Steering Geometry** Inner wheel  $23^{\circ} \pm \frac{1}{2}^{\circ}$ . Outer  $20^{\circ}$ .

## STEERING GEAR

**Steering Gear:** Own Make (same design as Gemmer Model 335) Worm & Roller with "push-pull" adjustment.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Bendix Hydraulic, 4-wheel, Duo-Servo, Single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums**—Centrifuse type. Diameter 12".

**Lining**—Marshall 2201H-8 (primary), B-50 (secondary). Width  $2\frac{1}{4}$ " (front wheels), 2" (rear wheels). Thickness  $\frac{3}{16}$ ". Length per shoe  $11\frac{1}{2}$ " (primary), 13" (secondary).

**Clearance**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Stewart-Warner Type 645-H. Electric type. NOTE—"KLIXON" type circuit breaker mounted near wiper motor.

*See Miscellaneous Section for complete data.*

**ELECTRICAL EQUIPMENT NOTE:** Both Auto-Lite and Delco-Remy electrical equipment are used.

**HOOD LOCK:** One piece side hinge hood. To raise hood, release lever under instrument panel on side to be raised, lift hood slightly, release safety catch (approx. 2 feet from rear edge of hood), raise hood, engage prop on dash to hold hood open.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).

**ENGINE NUMBER:** Stamped on upper left side of cylinder block between #3 and #4 cylinders.  
1948 Numbers—G-200001 Up (8), G-400001 Up (Super 8).

► **ENGINE NUMBER CODE:** Code marks following engine number indicate changes or differences over unmarked engines as follows:

- ★—Engine Bore, .020" Oversize.
- "A"—Oversize Valve Guides used.
- "C"—Late type Pistons and Rings used.
- "CD"—Same as "C" and "D".
- "CE"—Same as "C" and "E".
- "D"—7 qt. oil pan—"7 qt." mark on dip stick.
- "E"—7 qt. oil pan and Late type Camshaft used.

## TUNE-UP

**COMPRESSION PRESSURE:** 120 lbs. at cranking speed.

**VACUUM READING:** Steady 18-20" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAP:** .028", Limits .025-.030".

Plug Types—Auto-Lite P-4, AC No. 104, or Champion Y4A. 10 mm. Metric.

**CAUTION—**Avoid overtightening plugs. Tighten snugly with fingers using plug wrench.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.017". Limits .013-.018".

Cam Angle—Closed 27° Auto-Lite, 31° Delco-Remy.

Breaker Arm Spring Tension—17-20 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** 6° BTDC.

Timing Procedure—See Ignition Timing.

**Vibration Dampener Mark**—"#1UP.DC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC" mark.

**Fuel Compensator Setting**—Slight ping accelerating with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**— $\frac{5}{8}$ -1 $\frac{1}{8}$  turns open (Eight),  $\frac{3}{4}$ -1 $\frac{1}{4}$  turns open (Super 8). Two screws—turn out for richer mixture.

**Idle Speed (standard)**—6 MPH.

**Float Level**— $\frac{5}{32}$ " from top of float to cover with valve seated (remove gasket and invert to check).  
**Accelerating Pump**—Not adjustable on 643S, SA. Inner Hole (Normal 644S). Outer hole if more charge needed.

**Fuel Pump Pressure**—4-4 $\frac{3}{4}$  lbs.

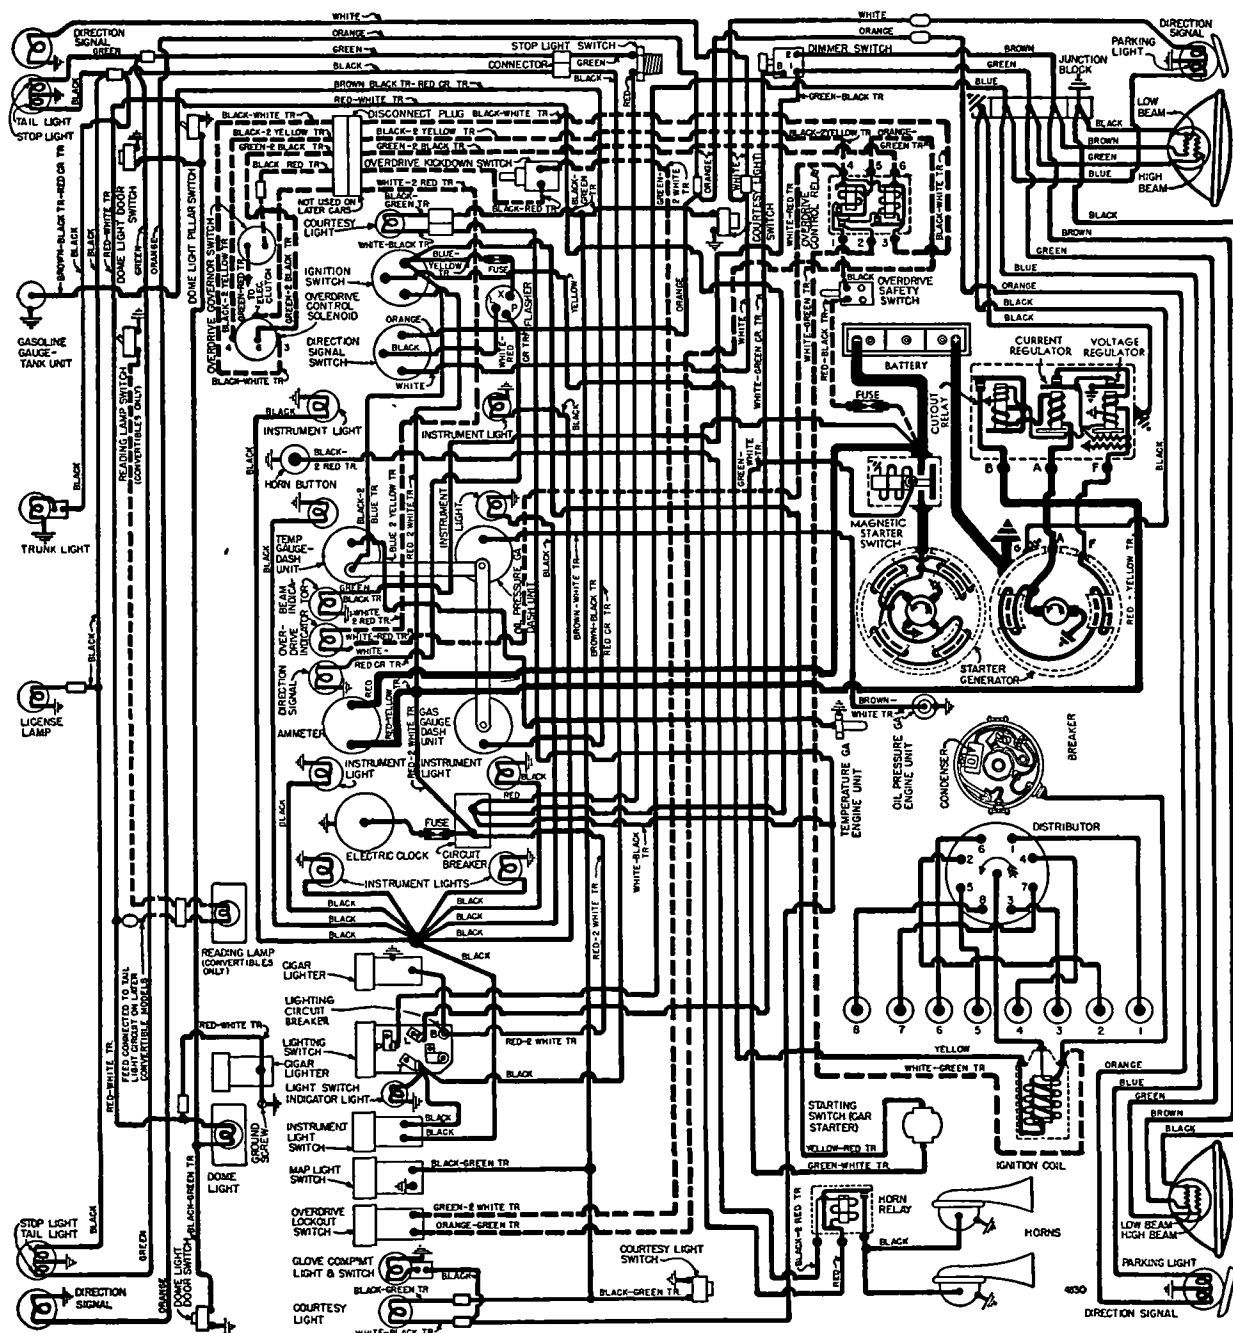

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve must operate freely.

► **VALVE TAPPET CLEARANCE (EARLY CAMSHAFT):**  
.006" Intake, .008" Exhaust, Hot. For engines **WITH-OUT** code letters "CE" or "E" following Engine Number. This setting reduced from production setting of .007" Intake and .010" Exhaust to reduce tappet noise.

► **VALVE TAPPET CLEARANCE (LATE CAMSHAFT):**  
.007" Intake, .010" Exhaust, Hot. for engines **WITH** code letters "CE" or "E" following Engine Number.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

CARS WITH DELCO-REMY EQUIPMENT

**IGNITION****AUT -LITE****IGNITION SWITCH:** Mitchellock Type 42-B.**Ignition Lock—**Briggs & Stratton, B & S No. 50184.**Key Series—**P1251 to P1500, Groove—No. 2.**COIL:** Auto-Lite Model CE-4033.**Location—**Left side of engine above distributor.**Ignition Current—**2.4 amperes idling, 5 stopped.**CONDENSER:** Auto-Lite Part No. IG-2671K.**Capacity—**.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGP-4502B. Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.  
**Breaker Gap—**.017". Limits .013-.018".  
**Cam Angle—**27° Closed, 18° Open.  
**Breaker Arm Spring Tension—**17-20 ounces.  
**Rotation—**Counter-clockwise viewed from above.

**Automatic Advance (Auto-Lite)**

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start	.....	300	0	.....	600
1	.....	400	2	.....	800
3	.....	600	6	.....	1200
6	.....	1200	12	.....	2400
8	.....	1600	16	.....	3200

**Fuel Compensator:** 40° range of adjustment on quadrant at vacuum link connection. See Ignition Timing.

**Vacuum Spark Control:** Auto-Lite. Mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

**Vacuum Advance (Auto-Lite)**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	.....	0°
2°	.....	4°
4°	.....	8°
6°	.....	12°
7°	.....	14°

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out hold-down plate screw, lift off.

**IGNITION****DELCO-REMY****IGNITION SWITCH:** Mitchellock Type 42-B.**Ignition Lock—**Briggs & Stratton, B & S No. 50184.**Key Series—**P1251 to P1500, Groove No. 2.**COIL:** Delco-Remy No. 1115380.**Location—**Left side of engine above distributor.**Ignition Current—**2.4 amperes idling, 5 stopped.**CONDENSER:** Delco-Remy Part No. 1869704.**Capacity—**.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 1110811. Automatic advance type with Vacuum Spark Control and Fuel Compensator.

**Breaker Gap—**.017". Limits .013-.018".**Cam Angle—**31° Closed, 14° Open.**Breaker Arm Spring Tension—**17-20 ounces.**Rotation—**Counter-clockwise viewed from above.**Automatic Advance (Delco-Remy)**

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start	.....	300	2	.....	600
4	.....	600	8	.....	1200
9	.....	1600	32	.....	3200

**Fuel Compensator:** 10° advance or retard adjustment at distributor. See Ignition Timing.

**Vacuum Spark Control:** Delco-Remy 1116041. Integral type mounted on distributor and linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger Travel—5/32" max.

**Vacuum Advance (Delco-Remy)**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	.....	0°
7°	.....	14°

**Distributor Removal:** Same as for Auto-Lite (above)

CARS WITH AUT -LITE EQUIPMENT

C NTINUED N NEXT PAGE

C NTINUED FROM PRECEDIN PAGE

**IGNITION TIMING**

Std. Setting ..... 6° BTDC.

NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.

Timing—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen vacuum unit link screw in distributor quadrant (Auto-Lite distributors), or hold-down screw in advance arm (Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.

Timing (with Neon Timing Light)—Mark 6th line ahead of "#1UP.DC" mark on vibration dampener with white paint, clip timing light to #1 spark plug. Idle engine below 600 RPM., adjust distributor (as directed above) until mark lines up with pointer.

Fuel Compensator Setting—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

**CARBURETOR**Eight.....Carter WDO, No. 644S or SA.  
Super Eight.....Carter WDO, No. 643S or SA.  
1¼" dual barrel downdraft types with Carter Climatic Control.Casting No. on Flange—377 (643S), 561 (643SA, 644S).  
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Rods &amp; Jets—See Carter Jet Table in Carburetor Section.

Fast Idle: Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for complete data.

Setting—.026" (643S, SA), .020" (644S) throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of fast idle cam.

Automatic Choke: Carter Climatic Control (Dual Carburetors).

See Carburetion Equipment Section for complete data.

Setting—Centered (at index).

**CARB. EQUIPMENT**

Fuel Pump (Fuel-&amp; Vacuum): AC Type AJ. No. 1523867.

Replacement Pump—AC No. 508.

Pressure—4-4¾ lbs.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.

Dash Unit—K-S No. 41635.

Tank Unit—K-S No. 41678 (Eight), 41676 (Super 8).

See Carburetion Equipment Section for complete data.

Air Cleaner (std.—oil wetted): AC No. 1544180 (Type #6 element).

Optl. (oil bath)—AC.

Servicing (oil-wetted type)—Wash and re-oil filter element every 1000 to 2000 miles whenever crank-case oil is changed.

Servicing (oil bath type)—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.

**BATTERY**

Auto-Lite Type PN-15ZR or Willard SW-1D-100.

6 volt, 15 plate, 100 amp. hr. capacity (20 hr. rate). Starting Capacity—120 amperes (Auto-Lite), 122 amperes (Willard) for 20 minutes.

Zero Capacity—300 amperes for 3.2 minutes. Five second voltage—4.2 volts.

Grounded Terminal—Positive (+) to frame.

Dimensions—Length 19¾". Width 4". Height 9 3/16" (Auto-Lite), 8 15/16" (Willard).

Location—Left side in engine compartment.

**STARTER****AUTO-LITE**

Auto-Lite Model MCL-6003. Armature No. MCH-2021

Drive—Outboard Barrel Type Bendix No. A-1915.

Rotation—Counter-clockwise at commutator end.

Cranking Engine—175-225 amperes.

Brush Spring Tension—42-53 ozs. (new brushes).

**Performance Data (Auto-Lite)**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
8.0 "	Lock	2.0	410

Removal: On left front face of flywheel housing. To remove, take out flange mounting screws.

Starting Switch: Auto-Lite Model SS-4017 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).

See Electrical Equipment Section for complete data.

**STARTER****DELCO-REMY**

Delco-Remy Model 1107943. Armature No. 1910938.

Drive—Outboard Barrel Type Bendix No. A-1792.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs. each.

Cranking Engine—175-225 amperes.

**Performance Data (Delco-Remy)**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

Removal: Same as Auto-Lite data (above).

Starting Switch: Delco-Remy Model 1452 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).

See Electrical Equipment Section for complete data.

**GENERATOR****AUTO-LITE**

Auto-Lite Model GDZ-4801F. Armature GDZ-2006F.

2 brush with voltage and current regulation.

Maximum Charging Rate—35 amperes, 8.0 volts.

Charging Rate Adjustment—None. See Regulator.

**Ignition—Carburetion—Electrical****Performance Data (Auto-Lite)**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
*35	8.0	1900	35	8.0	2250

\*—Current Regulator Setting.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35-53 ozs. (new brushes).

Field Current—1.60-1.78 amperes at 6.0 volts.

Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Pivot mounted at left front of engine. To remove, take out strap screw and mounting bolts.

Belt Adjustment: ¼" belt deflection between fan and generator. Loosen adjusting strap screw, pry generator out for ¼" setting, tighten screw.

**GENERATOR****DELCO-REMY**

Delco-Remy Models 1102699 or 1102705.

Armature No.—Delco-Remy No. 1879002.

2 brush with voltage and current regulation.

Maximum Charging Rate—35 amperes at 8.0 volts.

Charging Rate Adjustment—None. See Regulator.

**Performance Data (Delco-Remy)**

Amperes	Volts	R.P.M.
Cold	30①	8.0
		1750

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—25 ounces each.

Field Current—1.75-1.9 amperes at 6.0 volts.

Removal &amp; Belt Adjustment: See Auto-Lite (above).

**REGULATOR****AUTO-LITE**

Auto-Lite Model VRP-4402A. Voltage-current type.

See Electrical Equipment Section for complete data.

NOTE—Regulator cover sealed. Warranty void if seals broken.

**Cutout Relay**

Cuts In—6.4-7.0 volts, 920 RPM. (set to 6.4-6.6 volts).

Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" minimum.

Air Gap—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

Checking (without breaking seals) &amp; Adjustment—

See Electrical Equipment Section for complete data.

Contact Gap—.012" min. (armature against stop pin).

Air Gap—.048-.052" with contacts just opening.

**Current Regulator**

Setting—34-36 amperes (marked '35' on cover).

Checking (without breaking seals) &amp; Adjustment—

See Electrical Equipment Section for complete data.

Contact Gap—.012" min. (armature against stop pin).

Air Gap—.048-.052" with contacts just opening.

**REGULATOR****DELCO-REMY**

**Delco-Remy 1118278 Single Core Voltage & Current type.**

*See Electrical Equipment Section for complete data.*

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts hot (operating temperature).

Regulator over-compensated for temperature.

Should be checked with cover in place and hot.

**Checking & Adjustment**—*See Electrical Equip. Section.*

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting**—34-36 amperes hot (operating temp.).

**Checking & Adjustment**—*See Electrical Equip. Section.*

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**Headlamps:** Hall "Sealed Beam" type.

*See Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Left hand indicator below speedometer. Lighted when Upper Beam "on".

**Direction Signal:** Std. *See Electrical Equipment Section.*

**Direction Signal Indicator**—Below speedometer. Flashes when Signal in use.

**Switches**

**Lighting**—Packard No. 393563.

**Beam Selector**—Delco-Remy No. 1997008.

**Instrument**—Packard No. 393565.

**Map Light**—Packard No. 396675.

**Courtesy Light (Door Switch)**—Packard 393517.

**Dome Light**—Packard No. 399289.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030

Beam & Dir. Sig. Indicators	1	51
Overdrive Indicator	1½	55
Courtesy & Reading	6	82
Stop & Tail	21-3	1158
Rear License	3	63

**MISC. ELECTRICAL**

**CIRCUIT BREAKERS:** Vibrating, thermostatic types.

Packard No. 410047 (Lighting), 393746 (Accy.).

**Lighting**—On lighting switch, 30 ampere.

**Accessory (Stop & Body Lights)**—Behind instrument panel above Clock, 30 ampere.

**Hydro-Lectric Power (Convertible)**—On engine side of dash on pump upper bracket.

**FUSES:** Clock—SFE 2 ampere in lead near Clock.

**Direction Signal**—SFE 9 ampere. In Flasher feed wire above speedometer.

**Overdrive**—SFE 30 ampere. In lead from Starter to Overdrive Safety Switch.

**Electromatic Clutch**—9 ampere. In lead from Ignition Switch to Electromatic Switch.

**Heater**—SFE 30 ampere. In cable under clock.

**HORNS:** Sparton. Dual horns operated by relay.

**Horn Current**—22-25 amperes.

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS:** 8 cylinder, "L" head type.

	Eight	Super 8
Bore	3½" ①	3½" ①
Stroke	3¾"	4¼"
Displacement	288 cu. ins.	327 cu. ins.
Rated HP	39.2	39.2
Developed HP	130 at 3600	145 at 3600

①—For Original Bore Sizes, see Packard Shop Notes.

**Compression Ratio**—7.0-1 std. cast iron head.

**Compression & Vacuum Reading**—*See Tune-Up data.*

►.020" OVERSIZE BORE ENGINES: Marked by star following engine number.

**TIGHTENING TORQUES:** *See Packard Shop Notes.*

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—*See Packard Shop Notes.*

**PISTONS:** Aluminum alloy, autothermic strut type. Original Piston Sizes & Markings, see Packard Shop Notes.

►LATE TYPE PISTONS AND RINGS: Used on engines marked with letters "C", "CD", or "CE" following engine number.

**Length**—3⅞".

**Weight**—19½ ozs. (stripped), 25⅞ (with rings & pin)

**Removal**—Pistons and rods removed from above.

**Clearance**—.0005-.001". See Fitting New Pistons.

**Replacement Pistons:** *See Packard Shop Notes.*

**Fitting New Pistons:** Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Install Pistons:** Slot toward valves.

**PISTON RINGS:** Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

►LATE TYPE PISTONS AND RINGS: Used on engines marked C, CD, or CE following engine number.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	...0930-.0935"	...007-.017"	...0025-.003"
Comp. (#2)	...1235-.124"	...007-.017"	...0025-.003"
Oil Control	...186-.1865"	...007-.015"	...0025-.003"

**Oil Ring Note**—Perfect Circle No. 86 with coil spring type expander.

**Replacement Rings:** .005", .010", .020", .030", .040" OS. Triple Action Sets (std. & .020" OS.). For installation of these sets see Packard Shop Notes.

**PISTON PIN Diameter**—.875". **Length**—3 1/64".

Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.

**Pin Fit in Piston**—Palm push fit with piston at 160°F. (heat piston in water only).

**Pin Fit in Rod Bushing**—Finger push fit at 70°F.

**Piston Pin (Connecting Rod) Bushing Installation**—*See "Piston Pins" in Packard Shop Notes.*

**Replacement Pins:** Std. and .003", .006" oversize.

**CONNECTING ROD:** Length 7 15/16" (8), 7 11/16" (Super 8).

**Weight**—35.7 ozs. (Eight), 35.4 ozs. (Super 8).

**Connecting Rod Journal Diameter**—2.250".

**Lower Bearing**—Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.

**Clearance**—.0005-.0025". **Endplay**—.004-.010".

**NOTE**—Plastigage can be used for checking bearing clearance as described in Packard Shop Notes.

**Bearing Adjustment:** None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

**Replacement Bearings:** .001", .002", .003", .015" U. S.

**Installing Rods:** Oil squirt hole toward camshaft.

**CRANKSHAFT:** 5 bearing type with integral counterweights.

**Vibration Dampener**—Houde with Silicone fluid (8), Rubber Friction Disc (Super 8).

**Dampener Removal Note**—Use Puller Tool No. J-2636 to avoid damaging Dampeners. Denting of housing may impair balancer operation.

**Main Bearing Journal Diameter**—2.7465".

**Bearings**—Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24.

**Clearance**—.0005-.0025".

**NOTE**—Plastigage can be used for checking bearing clearance as described in Packard Shop Notes.

**Bearing Adjustment:** None (no shims). Replace bearings (upper halves can be rotated in and out).

**Replacement Bearings:** Std., .001", .002" undersize.

**End Thrust:** At #3 bearing. **Endplay**—.003-.008".

**CAMSHAFT:** 5 bearing. Non-adjustable chain drive.

►LATE TYPE CAMSHAFT—Has redesigned cam lobe contour reducing tappet noise. Engines equipped with this camshaft marked "E" or "CE" following engine number.

►CAUTION—Different tappet clearance settings used for each camshaft. See Tappet Clearance under VALVE TIMING.

**Bearings**—Steel-backed, babbitt lined bushings.

**Clearance**—.001-.003".

**End Thrust:** Taken by thrust plate in back of camshaft sprocket. **Endplay**—.0025-.006".

**Timing Chain:** Morse or Ramsey. Width 1¼". Pitch .375". Length 21¾" or 58 links.

**Camshaft Setting:** Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 43/64"	.3417"	.5 7/8"
Exhaust	1 7/16"	.3398"	.5 7/8"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.002"
Exhaust	45°	.342"	.004"

**Valve Guides:** Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Exhaust guides counterbored on upper inner diameter to .375" diameter and .375" deep.

► **OVERSIZE VALVE GUIDES**—Used on engines marked "A" following engine number.

**Valve Springs:** Intake and exhaust springs interchangeable. Anti-rotation serrated washer installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1 3/4"
Valve Open	135-145 lbs.	1 13/32"

**Valve Lifters:** Mushroom type. Remove from below Diameter—.6235-.6240". Clearance—.0003-.0012".

**Replacement Lifters**—.001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

**VALVE TIMING**

► **VALVE TAPPET CLEARANCE (EARLY CAMSHAFT):** .006" Intake, .008" Exhaust, Hot. For engines WITH OUT code letters "CE" or "E" following Engine Number. This setting reduced from production setting of .007" Intake and .010" Exhaust to reduce noise.

► **VALVE TAPPET CLEARANCE (LATE CAMSHAFT):** .007" Intake, .010" Exhaust, Hot. for engines WITH code letters "CE" or "E" following Engine Number.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 10° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 5° ATDC.

Above figures for .0125" Intake, .015" Exhaust tappet clearance.

**Valve Timing Check**—With .0125" tappet clearance #1 intake valve should open with #1 piston 10° BTDC. with 10th graduation before top dead center mark "#1UP.DC" on vibration dampener aligned with pointer. Reset tappet clearance .007" Hot.

**LUBRICATION**

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain. Oil pump mounted externally on right side of engine.

► **Crankcase Capacity**—CAUTION—6 quarts on unmarked engines. 7 quarts on engines marked "CD", "CE", "D", or "E" following engine number and "7 qt." mark on dip stick.

**Normal Oil Pressure**—40 lbs. Normal Driving.

**Oil Pressure Regulator**—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 14 lbs. ± 2 ozs. at 1 1/8".

**Oil Pump:** Gear type. On right side of crankcase.

**Oil Pump Installation**—See Packard Shop Notes.

**Oil Filter:** Optl. Replace cartridge at 8000-10000 miles or when oil shows signs of being dirty.

**Oil Pressure Gauge:** King-Seeley Electric.

**Dash Unit**—K-S No. 41640.

**Engine Unit**—K-S No. 40767.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe in valve compartment cover at rear.

**COOLING**

**Cooling System:** Pressure type with pressure relief valve in filler cap and fan belt driven pump.

**Capacity**—18 qts. (Eight), 20 qts. (Super 8), with 2 quarts additional for heater and defroster.

**Radiator Core Removal**—See Packard Shop Notes.

**Pressure Valve**—AC 850005 Filler Cap. Opens 7 lbs.

**Water Pump:** Centrifugal, belt-driven, packless type. See Water Pump Section for complete data.

**Belt Adjustment**—See Generator Belt Adjustment.

**Thermostat:** In cylinder head outlet.

**Setting (std.)**—Starts to open 145-150°F.

**Setting (Optl. High Reading)**—Starts to open 160-165°F. or 175-180°F.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit**—K-S No. 41645.

**Engine Unit**—K-S No. 41085.

See Miscellaneous Section for complete data.

**CLUTCH**

**Long 10CF-TI (Eight), 11CF-10 1/2 TI (Super Eight).** Single plate, semi-centrifugal, dry disc type.

See Clutch Section for complete data.

**Facings**—Woven (U. S. Asbestos). Thickness .125". I.D. 6 3/4" (8), 7" (Super 8). Outside Diameter 10" (8), 10 1/2" (Super 8).

**Pedal Adjustment:** 1 1/4-1 1/2" free travel. Adjusting nut on rod between relay lever and throwout lever.

**Removal:** Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

**ELECTROMATIC CLUTCH**

**Electromatic Clutch:** Vacuum type clutch actuation with electrical control. Optional equipment.

See Clutch Section for complete data.

**TRANSMISSION**

**Own Make.** Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.

See Transmission Section for complete data.

**Transmission Control:** Steering column type.

See Transmission Section for complete data.

**Removal:** Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

**OVERDRIVE**

**Warner Model AS2-R9 (Eight), AS1-R9A (Super Eight).** Optl. equipment used with Packard transmission. Overdrive is solenoid operated type no centrifugal pawls) with Governor Control and throttle operated "kick-down".

See Transmission Section for complete data.

► **Overdrive Short-Circuit Correction**—Disconnect Plug under car (as shown in wiring diagram) discontinued on Late 1948 Cars to avoid short circuits at this point due to water and corrosion. On earlier cars Plug can be removed and wires spliced, soldered, taped and coated with shellac to prevent short circuits.

► **Overdrive Safety Switch**—Mounted at lower end of steering column and operated by first and reverse shift lever when in reverse position to open circuit between battery and overdrive relay (see wiring diagram). Switch has two extra terminals to operate back-up light. 1947 & Earlier Clipper Models—To prevent overdrive lock-up when car shifted to reverse, this Safety Switch (Kit No. 394484) can be installed.

**Overdrive Indicator Light**—Next to high beam indicator under speedometer. Lights when overdrive ready to engage (22 MPH and up), goes out when accelerator pedal released to engage overdrive.

**Overdrive Relay**—D-R 1116823, Packard 347943.

**Throttle Kick-down Switch**—Packard No. 347496.

**Safety (Rev. Lock-out) Switch**—Packard 403303.

**Lock-out Switch**—Packard No. 354820.

**Removal:** Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

**UNIVERSALS**

**Mechanics Type 3CR (Type 3C used at front on Long WB. Cars with 3 universals).** Needle bearing.

**NOTE**—Shaft is one-piece type (without Overdrive).

See Universals Section for complete data.

► **CAUTION**—Rear universal flange nut controls rear axle pinion bearing pre-load which must be adjusted whenever nut is loosened. See Packard Rear Axle article in Rear Axle Section for complete data.

**REAR AXLE**

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss Drive.

**Model 2222 (141" WB. 7-Pass. Sedan) Note**—Axle is Custom 8 type with Ring Gear Idler Roller.

See Rear Axle Section for complete data.

**Ratio**—Std.: 3.9-1 (39-10). OD.: 4.1-1 (41-10).

**NOTE**—Some cars without Overdrive use 4.1-1 ratio.  
2222 **NOTE**—Std. Ratio 4.09-1 (45-11).

**Backlash**—.004-.006". Screw adjustment.

**Removal:** Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.

**Axle Shaft Removal:** Remove wheel, brake drum (use screw type puller KMO-476—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner oil seal). Use Tool J-943-B to remove inner oil seal.

**Wheel Bearing Adjustment:** Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay.

**Endplay**—.004-.007".

## SHOCK ABSORBERS

**Delco Model 1946-J, K (front), Model 1040-V (rear).** Double acting (front), direct acting (rear).  
*See Shock Absorber Section for complete data.*

**Fifth Shock Absorber (Stabilizer):** Monroe 373935. Direct acting, hydraulic (built-in rear stabilizer).  
*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:** Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers.  
*See Front Suspension Section for complete data.*

**Kingpin Inclination**—5°50' crosswise.

**Caster**—Neg. 1° ± ½°. Eccentric adjustment.

**Camber**—0° ± ¼°. Eccentric adjustment.

**Toe In**—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

## STEERING GEAR

**Packard—Gemmer Model 335—"3-tooth" Worm-and-Roller type** with "push-pull" adjustment. See Gemmer.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinder**—Front 1 1/16" (1" on 7-pass.), Rear 15/16".

**Drums**—12" centrifuse type.

**Lining**—Marshall 2201H-8 (primary shoe), Marshall B-50 (secondary). Width 1¾". Thickness 3/16". Length per shoe 11½" (primary), 13" (secondary).

**Model 2222 7-Pass. Note**—Lining width 2¼" all shoes except 2" on rear wheel secondary shoe.

**Clearance**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows & Front Seat:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

*See Miscellaneous Section for complete data.*

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).  
**ENGINE NUMBER:** Stamped on upper left side of cylinder block between #3 and #4 cylinders.  
 1948 Numbers—G-800001 Up.

► **ENGINE NUMBER CODE:** Code marks following engine number indicate changes or differences over unmarked engines as follows:

★—Engine Bore .020" Oversize.

"C"—Late type Pistons and Rings used.

**TUNE-UP**

**COMPRESSION PRESSURE:** 135 lbs. at 300 RPM.

**VACUUM READING:** Steady 18-20" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See Diagram.

**SPARK PLUG GAP:** .028". Limits .025-.030".

Plug Types—Auto-Lite P-4, AC No. 104, or Champion Y4A, 10 mm. Metric.

**CAUTION:** Tighten plugs with plug wrench snugly with fingers. Avoid overtightening.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—Set at .017". Limits .015-.019".

Cam Angle—27° closed, 18° open (with .017" gap).

Breaker Arm Spring Tension—17-20 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** 6° BTDC.

Timing Procedure—See Ignition Timing.

Vibration Dampener Mark—"1UPDC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC".  
**Fuel Compensator Setting:** Slight plng accelerating with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

► **METERING ROD CHANGE ON EARLY 531-S CARBURETORS FOR SMOOTHER PERFORMANCE DURING WARM-UP AND AT LOW SPEED (ALSO INCREASED GAS MILEAGE):** New rod No. 75-616 (stamped on shank of rod) installed on 531-S carburetors marked with round hole punched in brass inspection tag on carburetor. This rod used on all 531-SA carburetors (later type). Car manufacturer recommends this rod be installed on unmarked 531-S carburetors.

Idle Setting—1½-2 turns open. Two screws—turn out for richer mixture.

Idle Speed (standard)—6 MPH.

Float Level—5/32" from top of float to cover with valve seated (remove gasket and invert to check).

Accelerating Pump—Not adjustable.

Fuel Pump Pressure—4-4¼ lbs.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve must operate freely.

**VALVE TAPPET CLEARANCE:** None in service (hydraulic type lifters).

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock Type 42-B.

Ignition Lock—Briggs & Stratton. B & S No. 50184.

Key Series—P1251 to P1500. Groove—No. 2.

**COIL:** Auto-Lite Model CE-4033.

Location—Left side of engine above distributor.

Ignition Current—2.4 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671J.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4203. Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.

**Breaker Plate Identification—**Maximum vacuum advance limited by slot (marked 5½) on plate.

**Breaker Gap—**Set at .017". Limits .015-.019".

**Cam Angle—**27° closed, 18° open (with .017" gap).

**Breaker Arm Spring Tension—**17-20 ounces.

**Rotation—**Counter-clockwise viewed from above.

**Automatic Advance**

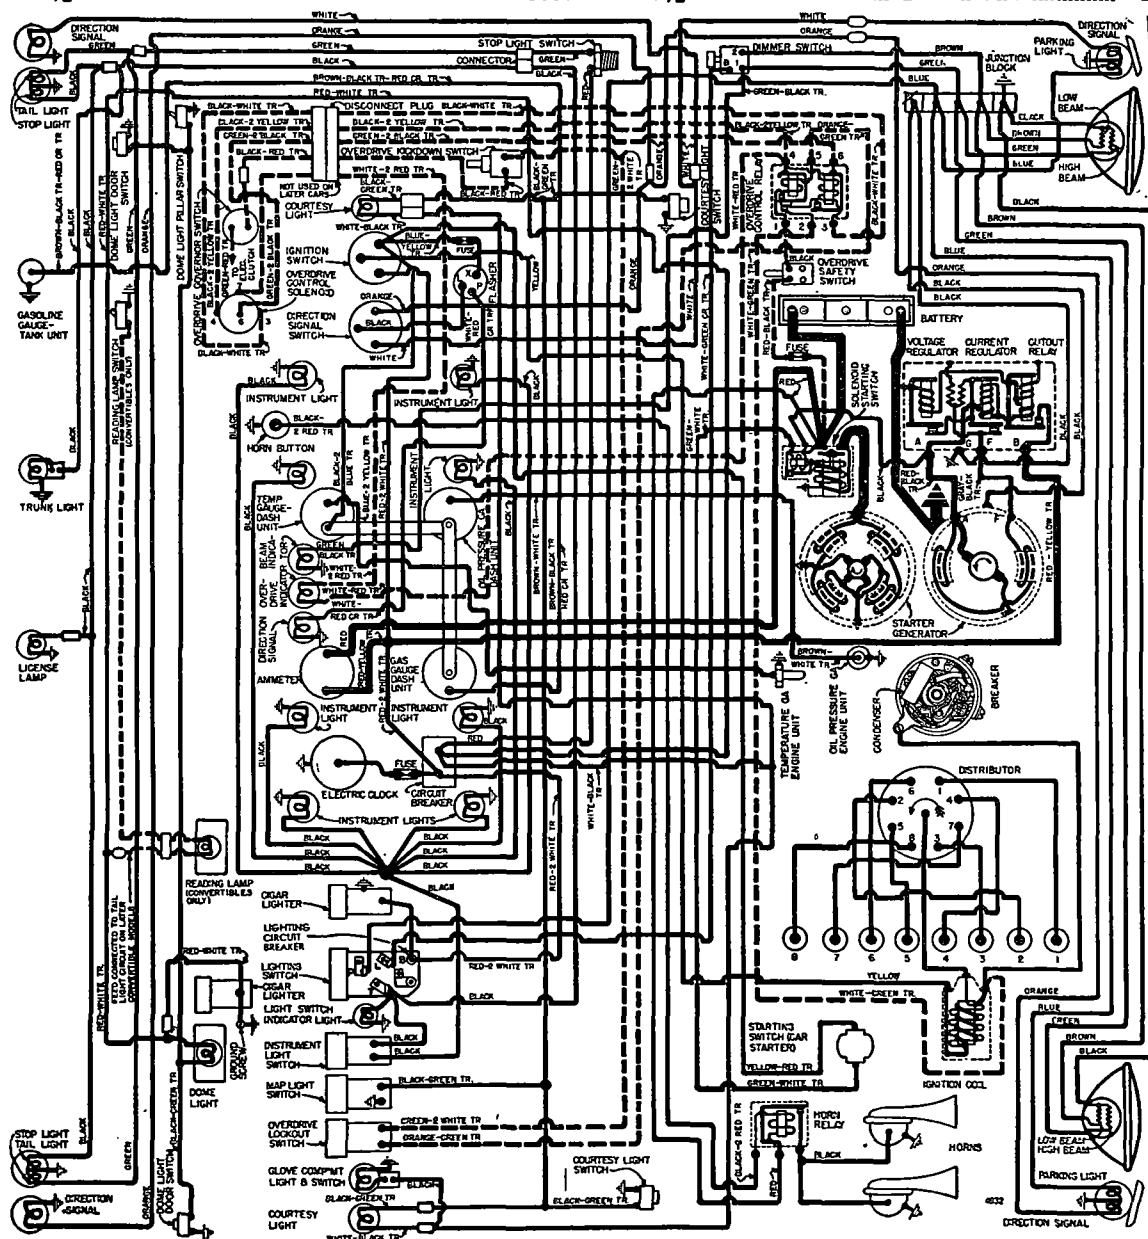

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start	.....	250	0	.....	500
3	.....	475	6	.....	950
6	.....	700	12	.....	1400
9	.....	1300	18	.....	2600
11½	.....	1800	23	.....	3600

**Fuel Compensator:** 10° advance or retard manual adjustment at distributor. See Ignition Timing.

**Vacuum Spark Control:** Auto-Lite. On distributor, linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7"
1°	2°	8½"
3°	6°	12"
4°	8°	13½"
5½°	11°	16"

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out hold-down screw, lift off.

## IGNITION

**Std. Setting** ..... 6° BTDC.  
NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

**Vibration Dampener Mark**—"#1UP.DC" with fifteen 1° graduations ahead of mark.

**Timing**—Set Fuel Compensator at "0". With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. Check spark plug connections (see diagram), see that rotor opposite #1 segment in cap. Check Fuel Compensator Setting.

**Timing (with Neon Timing Light)**—Mark 6th line ahead of "#1UP.DC" mark on vibration dampener with white paint, clip timing light to #1 spark plug. Idle engine below 500 RPM., adjust distributor (as directed above) until mark lines up with pointer.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

## CARBURETOR

**Carter WDO, No. 531S (Early), 531SA (Later).** 1¼" Dual barrel downdraft type with Carter Climatic Control.

**Casting No. on Flange**—377 (for 531S), 564 (531SA). See Carburetor Section for complete data.

► **Production Change 531S to 531SA.** New metering rods used in 531SA carburetors for smoother performance during warm up and slow speeds (and improved gas mileage). Can be installed in 531S carburetors. See Carter WDO Vacuum Carburetor article in Carburetor Section.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for complete data.

**Setting**—Adjust fast idle screw for .023-.028" throttle opening (Gauge T109-189) with choke closed.

**Automatic Choke:** Carter Climatic Control (Dual Carburetors).

See Carburetion Equipment Section for complete data.

**Setting**—Centered (at index).

## CARB. EQUIPMENT

**Fuel Pump (Fuel-& Vacuum):** AC Type AH. No. 1539116.

**Replacement Pump**—AC No. 9116.

**Pressure**—4-4¾ lbs.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit**—K-S No. 41635.

**Tank Unit**—K-S No. 41676.

See Carburetion Equipment Section for complete data.

**Air Cleaner (std.—oil bath):** AC No. 1542318.

**Element**—AC No. 1542261.

**Servicing (oil bath type)**—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.

## BATTERY

**Auto-Lite Type PN-17ZR.** 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—138 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.1 minutes. Five second voltage—4.3 volts.

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 19¼". Width 4". H. 8 29/32".

**Location**—On left side in engine compartment.

## STARTER

**Auto-Lite Model MAX-4052.** Armature MAW-2069.

**Drive**—Overrunning clutch (solenoid pinion shift) through reduction gears.

**Rotation**—Clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—200-250 amperes.

### Performance Data

Torque	RPM①	Volts	Amperes
0 ft. lbs.	2560	5.5	70
13.0 "	Lock	2.0	410

①—Pinion Shaft RPM. (reduction gear drive).

**Removal:** On left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:** Auto-Lite Model SS-4205 Solenoid Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).

See Electrical Equipment Section for complete data.

## GENERATOR

**Auto-Lite Model GDZ-4801G.** Armature GDZ-2006F. 2 brush with voltage and current regulation.

**Maximum Charging Rate**—35 amperes, 8.0 volts.

**Charging Rate Adjustment**—None. See Regulator.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out strap screw and mounting bolts.

**Belt Adjustment:** ¼" belt deflection between fan and generator. Loosen adjusting strap screw, pry generator out for ¼" setting, tighten screw.

## REGULATOR

**Auto-Lite Model VRP-4402A.** Voltage-current type.

See Electrical Equipment Section for complete data.

NOTE—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts, 920 RPM. (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

## Current Regulator

**Setting**—34-36 amperes (marked '35' on cover).

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Left hand indicator below speedometer. Lighted when Upper Beam "on".

**Direction Signal:** Optl. See Electrical Equip. Section.

**Direction Signal Indicator**—Below speedometer. Flashes when Signal in use.

## Switches

**Lighting**—Packard No. 393563.

**Beam Selector**—Delco-Remy No. 1997008.

**Instrument**—Packard No. 393565.

**Map Light**—Packard No. 396675.

**Courtesy Light (Door Switch)**—Packard 393517.

**Dome Light**—Packard No. 399289.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking (no Dir. Signal)	3	63
Dir. Signal & Parking	21-3	1154
Rear Dir. Signal	21	1129
Instrument, Glove Box	1½	55
Light Switch Position Indic.	1	51
Beam & Dir. Sig. Indicators	1	51
Overdrive Indicator	1½	55
Courtesy & Reading	6	82
Stop & Tail	21-3	1158
Rear License	3	63

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Vibrating, thermostatic types.

Packard No. 410047 (Lighting), 393746 (Accy.).

**Lighting**—On lighting switch, 30 ampere.

**Accessory (Stop & Body Lights)**—Behind instrument panel above Clock, 30 ampere.

**Hydro-Lectric Power (Convertible)**—On engine side of dash on pump upper bracket.

**FUSES:** Clock—SFE 2 ampere in lead near Clock.

**Direction Signal**—SFE 9 ampere. In Flasher feed wire above speedometer.

**Overdrive**—SFE 30 ampere. In lead from Starter to Overdrive Safety Switch.

**Electromatic Clutch**—9 ampere. In lead from Ignition Switch to Electromatic Switch.

**Radio**—SFE 14 ampere in cable at left of radio.

**Heater**—SFE 30 ampere. In cable under clock.

**HORNS:** Sparton. Dual horns operated by relay.

**Horn Current**—22-25 amperes.

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## C NTINUED FR M PRECEDING PA E

## ENGINE

**ENGINE SPECIFICATIONS:** 8 cylinder, "L" head type. Bore— $3\frac{1}{2}$ "<sup>①</sup>. Stroke— $4\frac{5}{8}$ ".

<sup>①</sup>—For Original Bore Sizes, see Packard Shop Notes.

► **.020" OVERSIZE BORE ENGINES:** Marked by star following engine number.

Displacement—356 cubic inches. Rated HP.—39.2.

Developed Horsepower—160 at 3600 RPM.

Compression Ratio—7.0-1 std. cast iron head.

Compression & Vacuum Reading—See Tune-Up data.

**TIGHTENING TORQUES:** See Packard Shop Notes.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Packard Shop Notes.

**PISTONS:** Aluminum alloy, autothermic strut type. Original Piston Sizes & Markings, see Packard Shop Notes.

► **LATE TYPE PISTONS AND RINGS:** Used on engines marked with letter "C" following engine number.

Length— $3\frac{3}{8}$ ".

Weight—19½ ozs. (stripped), 25⅞ (with rings & pin)

Removal—Pistons and rods removed from above.

Clearance—.0005-.001". See Fitting New Pistons.

Replacement Pistons: See Packard Shop Notes.

**Fitting New Pistons:** Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**Install Pistons:** Slot toward valves.

**PISTON RINGS:** Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

► **LATE TYPE PISTONS AND RINGS:** Used on engines marked with letter "C" following engine number.

Ring	Width	End Gap	Side Clearance
Comp. (#1) ...0930-.0935"	.....007-.017"	.....0025-.003"	
Comp. (#2) ...1235-.124"	.....007-.017"	.....0025-.003"	
Oil Control ...186-.1865"	.....007-.015"	.....0025-.003"	

Oil Ring Note—Perfect Circle No. 86 with coil spring type expander.

**Replacement Rings:** .005", .010", .020", .030", .040" OS. Triple Action Sets (std. & .020" OS.). For installation of these sets see Packard Shop Notes.

**PISTON PIN Diameter**—.875". Length— $3\frac{1}{4}$ ". Floating type retained by lock ring at each end. Split type bushing used in upper end of rod. Pin Fit in Piston—Palm push fit with piston at 160°F. (heat piston in water only). Pin Fit in Rod Bushing—Finger push fit at 70°F. Piston Pin (Connecting Rod) Bushing Installation—See "Piston Pins" in Packard Shop Notes.

**Replacement Pins:** Std. and .003", .006" oversize.

**CONNECTING ROD:** Length  $9\frac{1}{4}$ ". Weight 38.9 ozs.

Connecting Rod Journal Diameter—2.250".

Lower Bearing—Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.

Clearance—.0005-.0025". Endplay—.004-.012".

**NOTE**—Plastigage can be used for checking bearing clearance as described in Packard Shop Notes.

**Bearing Adjustment:** None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

**Replacement Bearings:** .001", .002", .003", .015" U. S.

**Installing Rods:** Oil squirt hole toward camshaft.

**CRANKSHAFT:** 9 bearing with bolted-on counterweights. Rubber friction disc dampener on front end.

**Main Bearing Journal Diameter**—2.7465".

**Bearings**—Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24. Clearance—.0005-.0025".

**NOTE**—Plastigage can be used for checking bearing clearance as described in Packard Shop Notes.

**Bearing Adjustment:** None (no shims). Replace bearings (upper halves can be rotated in and out).

**Replacement Bearings:** Std., .001", .002" undersize.

**End Thrust:** At #5 bearing. Endplay—.003-.008".

**CAMSHAFT:** 8 bearing. Non-adjustable chain drive.

**Bearings**—Steel-backed, babbitt lined bushings.

Clearance—.001-.003".

**End Thrust:** Taken by thrust plate in back of camshaft sprocket. Endplay—.0025-.006".

**Timing Chain:** Morse. Width  $1\frac{1}{4}$ ". Pitch .375" ( $\frac{3}{8}$ "). Length  $23\frac{1}{4}$ " or 62 links.

**Camshaft Setting:** Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

**VALVES:**

	Head Diameter	Stem Diameter	Length
Intake	.....1 43/64"	.....3417"	.....6 7/32"
Exhaust	.....1 7/16"	.....3398"	.....6 7/32"

	Seat Angle	Lift	Stem Clearance
Intake	.....30°	.....342"	.....002"
Exhaust	.....45°	.....342"	.....004"

**Valve Guides:** Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Exhaust guides counterbored on upper inner diameter to .375" diameter and .375" deep.

**Valve Springs:** Intake and exhaust springs interchangeable. Anti-rotation serrated washer installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	.....60-66 lbs.	.....1 13/32"
Valve Open	.....135-145 lbs.	.....1 13/32"

**Valve Lifters:** Wilcox-Rich "Zero-lash" type hydraulic lifters (mushroom type). Remove from below with camshaft out.

Diameter .7177-.7182". Clearance .0002" selective.

See Miscellaneous Section for complete data.

**Replacement Lifters**—.001", .002", .005" oversize. Use Tool S.T. 5101 (piloted in valve guide) and ream for .005" oversize lifters.

**Valve Lifter Clearance Check when Grinding Valves**—See Packard Shop Notes.

## VALVE TIMING

**Tappet Clearance:** None in service (hydraulic type lifters). See Valve Lifters above.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 4° BTDC. Close 51° ALDC.

**Exhaust Valves**—Open 49° BLDC. Close 10° ATDC.

**Valve Timing Check**—#1 exhaust valve closes 10° after top dead center (#1 piston .0438" ATDC) with hydraulic lifter dry (all oil drained out) and built up with feeler stock for zero tappet clearance.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain. Oil pump mounted externally on right side of engine.

**Crankcase Capacity**—7 quarts.

**Normal Oil Pressure**—50 lbs. Normal Driving.

**Oil Pressure Regulator**—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 17½-18½ lbs. at 1⅞".

**Oil Pump:** Gear type. On right side of crankcase.

**Oil Pump Installation**—See Packard Shop Notes.

**Oil Pressure Gauge:** King-Seeley Electric.

**Dash Unit**—K-S No. 41640.

**Engine Unit**—K-S No. 40767.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe in valve compartment cover at rear.

**Servicing**—Wash filter element in gasoline and re-oil when changing oil (1000-2000 miles).

## COOLING

**Cooling System:** Pressure type with pressure relief valve in filler cap and fan belt driven pump.

**Capacity**—20 qts.

**Radiator Core Removal**—See Packard Shop Notes.

**Pressure Valve**—AC No. 850005 pressure cap. Opens at 7 lbs.

**Water Pump:** Centrifugal, belt-driven, packless type. See Water Pump Section for complete data.

**Belt Adjustment**—See Generator Belt Adjustment.

**Thermostat:** In cylinder head outlet.

**Setting (std.)**—Starts to open 145-150°F.

**Setting (Optl. High Reading)**—Starts to open 160-165°F. or 175-180°F.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit**—K-S No. 41645.

**Engine Unit**—K-S No. 41085.

See Miscellaneous Section for complete data.

## CLUTCH

**Long Model 11CF-TL.** Single plate, semi-centrifugal, dry disc type.

See Clutch Section for complete data.

**Facings**—Woven (U. S. Asbestos). Thickness .125". Inside Diameter 7". Outside Diameter 11".

**Pedal Adjustment:** 1¼-1½" free travel. Adjusting nut on rod between clutch relay lever and throwout lever.

**Removal:** Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

## ELECTROMATIC CLUTCH

**Electromatic Clutch:** Vacuum type clutch actuation with electrical control. Optional equipment.

See Clutch Section for complete data.

## TRANSMISSION

**Own Make.** Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.

See Transmission Section for complete data.

**Transmission Control:** Steering column type.

See Transmission Section for complete data.

**Removal:** Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

## OVERDRIVE

Warner Model AS1-R9A. Optl. equipment used with Packard Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down". A new Overdrive Safety Switch is used.

See Transmission Section for complete data.

► **Overdrive Short-Circuit Correction**—Disconnect Plug under car (as shown in wiring diagram) discontinued on Late 1948 Cars to avoid short circuits at this point due to water and corrosion. On earlier cars Plug can be removed and wires spliced, soldered, taped and coated with shellac to prevent short circuits.

► **Overdrive Safety Switch**—Mounted at lower end of steering column and operated by first and reverse shift lever when in reverse position to open circuit between battery and overdrive relay (see wiring diagram). Switch has two extra terminals to operate back-up light. 1947 & Earlier Clipper Models—To prevent overdrive lock-up when car shifted to reverse, this Safety Switch (Kit No. 394484) can be installed.

**Overdrive Indicator Light**—Next to high beam indicator under speedometer. Lights when overdrive ready to engage (22 MPH and up), goes out when accelerator pedal released to engage overdrive.

**Overdrive Relay**—D-R 1116823, Packard 347943.

**Throttle Kick-down Switch**—Packard No. 347496.

**Safety (Rev. Lock-out) Switch**—Packard 403303.

**Lock-out Switch**—Packard No. 354820.

**Removal:** Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

## UNIVERSALS

Mechanics Type 3CR (Type 3C used at front on Long Wheelbase Cars with 3 Universals). Needle bearing type.

**NOTE**—One-piece shaft used on cars without Overdrive.

See Universals Section for complete data.

► **CAUTION**—Rear universal flange nut controls rear axle pinion bearing pre-load which must be adjusted whenever nut is loosened. See Packard Rear Axle article in Rear Axle Section for complete data.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive and Ring Gear Idler Roller.

See Rear Axle Section for complete data.

**Ratio**—Std. 3.92-1 (47-12). OD.: 4.09-1 (45-11).

**NOTE**—2226 (148" WB.) Std. Ratio 4.09-1 (45-11).

**Backlash**—.004-.006". Screw adjustment.

**Removal:** Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.

**Axle Shaft Removal:** Remove wheel, brake drum (use screw type puller KMO-476—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner oil seal). Use Tool J-943-B to remove inner oil seal.

**Wheel Bearing Adjustment:** Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay. Endplay—.004-.007".

## SHOCK ABSORBERS

Delco No. 1946-J, K (front), Monroe No. 18096 (rear).

Hydraulic, double acting (front), direct (rear).

See Shock Absorber Section for complete data.

**Fifth Shock Absorber (Stabilizer):** Monroe 373935. Direct acting, hydraulic (built-in rear stabilizer).

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:** Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers.

See Front Suspension Section for complete data.

**Kingpin Inclination**—5°50' crosswise.

**Caster**—Neg. 2° ± ½°. Eccentric adjustment.

**Camber**—0° ± ¼°. Eccentric adjustment.

**Toe In**—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

## STEERING GEAR

**Packard—Gemmer Model 335**—"3-tooth" Worm-and-Roller type with "push-pull" adjustment. See Gemmer.

See Steering Gear Section for complete data.

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinder**—Front 1". Rear 15/16". For Model 2226 7-Pass. 1¼" front, 1⅛" rear.

**Lining**—Marshall 2201H-8 (primary shoe), Marshall B-50 (secondary). Width 2¼" (front wheel), 2" (rear). Length per shoe 11½" (primary), 13" (secondary). Thickness 3/16".

**Model 2226 7-Pass. Note**—Marshall 9017 (secondary). All shoes 13" long, 2½" wide.

**Clearance**—.015" at both ends of secondary shoe.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows & Front Seat:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See Miscellaneous Section for complete data.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on plate on right (1936), left (1937-38) side rail at rear of front spring rear shackle. First number as follows:

	(438-138" WB)	(444-144" WB)	(447-144" WB)
1936	2,215,001	2,600,001	
1937	2,225,001	2,610,001	1,100,001
1938	2,230,001	2,615,001	1,105,001

**ENGINE NUMBER:**—Stamped on left side of cylinder block below head at center of engine.

## TUNE-UP

**COMPRESSION:—Ratio—6.4-1** Standard aluminum hd. No optl. ratios. **Pressure—148 lbs. at 2500 RPM or 75-80 lbs. at cranking speed (100-105 R.P.M.).**

**VACUUM READING:**—Gauge should show steady reading of 19-20" with engine idling.

**FIRING ORDER: 1-6-2-5-8-3-7-4.** See diagram.

**SPARK PLUGS:** Champion Type J-6. 14 mm. Metric.  
Gaps—.025". Limits .022-.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Passenger Cars**  
**Breaker Gap—.018". Cam Angle—33° Closed.**

**Synchronization**—Set movable contacts to open 45° after stationary contacts.

**Automatic Advance—9° max. at 1550 RPM (distr.).**

**Transportation Sedan**  
**Breaker Gap—0.015". Cam Angle—31° Closed**

**Breaker Gap**—.015". **Cam Angle**—31° **Closed**  
**Automatic Advance**—10° max. at 1750 RPM (distr.).  
**Vacuum Advance**—7½° (distr.) with 14-17" vacuum.

**IGNITION TIMING** See Ignition Timing.

**Std. Setting**—5° BTDC. Flywheel mark 'IGN/5-4' aligned with inspection hole indicator (on left side of housing) for #4 cylinder (stationary contacts). Moveable contacts should open 45° after this point. See **IGNITION TIMING** for detailed instructions.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screws midway between 'miss' and 'roll' points. Idle speed 37-39 explosions in 15 seconds (removable inspection plug in exhaust manifold provided).

**Accelerating Pump**—Inner Hole (Summer), outer (winter).

**Fuel Pump Pressure:** 4¼ lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance** None in service, hydraulic take-up.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:—**Delco-Remy Model 430-U. Switch and cable assembly with armored coil connection.

**COIL:** Delco-Remy Model 539-K. Mounted on dash.

**Ignition Current**—2 amperes idling, 4 stopped.

**CONDENSER:** Delco-Remy Part No. 829092 (for 662-J).  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR (PASSENGER CARS):** Delco-Remy 662-J. Double breaker, 4 lobe cam, semi-automatic advance. Contacts open alternately at 45° intervals corresponding to 90° firing interval of engine, and must be synchronized. See IGNITION TIMING.

**Cam Angle or Dwell—33° closed, 12° open (distrib.).**  
Both sets together when properly synchronized.

**Manual Advance—33° (engine-maximum). Consists of retard operated by pulling out button on dash. Used for hand cranking or heavy pulling.**

## Automatic Advance—662-J

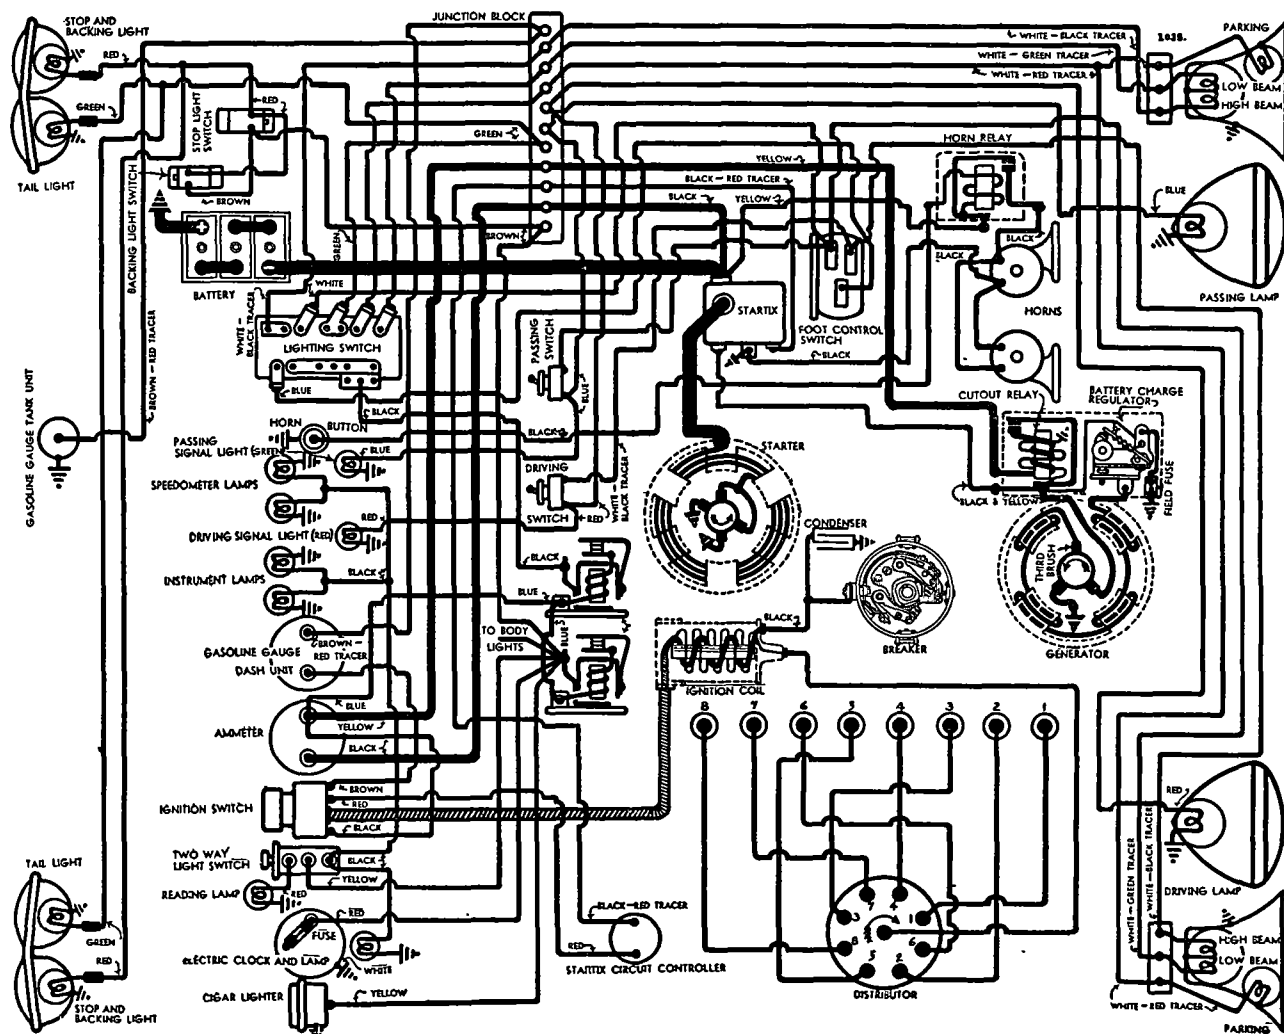

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	2 .....	600
9 .....	1550	18 .....	3100

**DISTRIBUTOR (TRANSPORTATION SEDAN):** Delco-Remy Model 663-M. Single breaker, 8 lobe cam, full automatic advance with Vacuum spark control.  
**NOTE**—No synchronization required.

**Breaker Gap—.015". Limits .0125-.0175".**  
**Cam Angle or Dwell—31° closed, 14° open (distr.).**  
**Breaker Arm Spring Tension—22 ounces.**  
**Rotation—Clockwise viewed from the top.**  
**Manual Advance—33° engine (retard only).**

### Automatic Advance—663-M

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	2.....	600
4.75.....	700	9.5.....	1400
10.....	1750	20.....	3500

compression, turn engine over until flywheel mark 'IGN/4' lines up with indicator on housing (mark is 5° before top dead center mark 'UDC/4'), loosen advance arm clamp bolt, rotate distributor until stationery contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then check synchronization.

**Synchronization (Movable Contacts)**—Turn engine over 90° or ¼ revolution to firing position for piston #1, stop when flywheel mark 'IGN./1-8' lines up with indicator (mark is 5° before top dead center mark 'UDC./1-8'), loosen lock screws on movable sub-plate, turn eccentric adjusting screw until contacts begin to open, tighten lock screws, check spark plug connections.

**Synchronization (Using Tool)**—Use special synchronizing tool, Delco-Remy Part No. 1838182, and follow complete directions in Equipment Section.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Mod. EE-3, 1½" dual downdraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at hot or slow idling speed.

**Idle Adjustment**—Adjust each screw individually with engine idling on four cylinders (ground #1, 2, 7, 8 plug cables when adjusting inner screw, #3, 4, 5, 6 while adjusting outer screw). Turn screw in until engine begins to lag or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with other adjusting screw in the same manner. Adjust throttle stopscrew so that idle speed is 37-39 explosions in 15 seconds (checked by removing plug in exhaust manifold).

**Accelerating Pump Setting**—Adjusted by changing position of pump link rod in throttle valve lever.

**Inner Hole (Min. stroke)**—Summer temperatures.

**Outer Hole (Max. stroke)**—Winter temperatures.

**Fast Idle:**—Stromberg type. See special article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Stromberg Type 'C' No. A-17630.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. oil-wetted type standard.

**Fuel Pump:**—AC. Type D #1522112. Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Motometer Electric. Dash unit—NG-7833 (1936), NG-8440D (1937). Tank unit—NG-7741T (all).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Willard Type WH-4-17, or RH-4-17 (Export).** 6 volt, 17 plate, 136 amp. hour capacity (20 hour rate).

**Starting Capacity**—160 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.4 minutes.

**Grounded Terminal**—Positive (+) term. grounded to transmission cover bolt.

**Location**—Left hand side under front floor.

## STARTER

**Owen-Dyneto Model DI-1314.** Armature No. 16437. Drive—Bendix Type RCD11FXT-10.

**Cranking Engine**—100-105 R.P.M., 175 amperes at 5.35 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—56-60 unces each.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4500	6.0	60
2 "	1600	5.5	130
3.6 "	1200	5.35	170
7.4 "	800	5.05	250
14.4 "	400	4.5	400
28.0 "	Lock	3.5	650
29.24 "	Lock	3.6	720

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out three flange mounting capscrews.

**Starting Switch:**—Startix Type 'D'. Automatic starting switch and Startix circuit controller (anti-back-fire unit), controlled by ignition switch. See special article in Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Owen-Dyneto Model CO-1309.** Armature No. 23691. Air-cooled. Third brush control type with Battery Charge Regulator (two-step charging rate).

**Charging Rate Adjustment**—Third brush shifted through rack-and-pinion control by slotted adjusting screw on commutator end plate. To adjust, turn adjusting screw to right or clockwise to increase, and to left or counter-clockwise to decrease charging rate.

**Maximum Charging Rate**—32 amperes (cold), 8.0 volts, 1900 R.P.M., 20-25 M.P.H.

Performance Data—Regulator Inoperative					
Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	7.0	580	0	7.3	625
5	7.2	630	5	7.5	700
10	7.5	700	10	7.7	800
15	7.7	790	15	7.9	930
20	7.9	910	20	8.0	1100
25	8.0	1080	25	8.0	1380
30	8.0	1380	28	8.0	2000
32	8.0	1900			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—20-22 ozs. (main), 12-14 ozs. (third).

**Field Current**—3.5-3.7 amperes at 6.0 volts.

**Motoring Current**—16.7-18 amperes at 6.0 volts (½ ampere more if relay and regulator in circuit).

**Field Fuse**—5 ampere capacity in knurled plug in side of regulator case.

**Removal:**—Generator cradle mounted at left front of engine with fan belt drive (double Vee belt). To remove, slack off drive belt, disconnect water pump drive coupling, loosen mounting clamp band.

**Belt Adjustment:**—To adjust, loosen clamp bolt on fan bracket, turn eccentric shaft spindle until 10 lb. pull on belt midway between pulleys causes 1" deflection, tighten clamp bolt. Additional range of adjustment secured by taking bracket off engine and moving bracket up until mounting bolts engage lower holes.

## REGULATOR

**Owen-Dyneto 40300 Battery Charge Regulator.** Consists of Cutout Relay and Battery Charge Regulator in a single case on the generator field frame. *For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.8-7.2 volts, 600 R.P.M., 8 M.P.H.

**Cuts Out**—0-2.5 amperes discharge current.

**Contact Gap**—.030-.032".

**Air Gap**—.020-.025" with contacts closed.

### Battery Charge Regulator

**Setting**—8.2 volts (cold), 7.8 volts (hot)—contact opening point.

**Regulator Resistance**—1.85 ohms.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, Pre-focused, Cross-beam type with special non-interchangeable lenses. Headlamps aimed straight ahead with lenses removed. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp), controlled by foot selector switch with lighting switch in 'Country Driving' position. **Driving Lamp**—Mounted on right of radiator. Controlled by separate switch on instrument panel with Red indicator lamp lighted with driving lamp 'on'. Lighted with lighting switch in 'Country Driving' position except when Driving Lamp Switch turned off.

**Passing Lamp**—Mounted at left of radiator. Controlled by separate switch on instrument panel with Green indicator lamp lighted with passing lamp 'on'. Lighted with lighting switch in 'City Driving' position or with foot selector switch in passing position (see Headlamps above) except when Passing Lamp Switch turned off.

### Switches

**Lighting**—Delco-Remy Model 479-M.

**Instrument Lamps**—Delco-Remy Model 1411.

**Foot Selector**—Delco-Remy Model 471-Z.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2330
Stop and Backing	21	1129
Driving and Passing	32	1323 **
Driving and Passing Pilots	3	64
License Plate	3	63
Instrument Panel, Parking	1½	55
Tail, Dome & Corn., Smoke Cab.	6	81

\*\* This bulb Pre-focused, single contact type.

## MISC. ELECTRICAL

**FUSES:**—Electric Clock—5 ampere on back of clock.

**Generator Field**—5 ampere in regulator case.

**CURRENT LIMIT RELAY:** Delco-Remy 410-N. 2 units used. Vibrating type. Starts to operate with current load of 35-40 amperes, limiting load to 5-22 amps.

**Horn Relay:**—Model 266-TK. Requires .25 amperes to close contacts. Current draw .8 amperes.

**Contact Gap**—.012-.030".

**Air Gap**—.015-.030" with contacts closed.

**Spring Tension**—5 ounces minimum measured at brass button.

**HORNS:**—Klaxon Model K-33-S. Type 2051 (low note), 2052 (high note). Vibrator type, blended tone, twin horns operated by horn relay.

**Horn Type** Current at 6 volts Air Gap

2051 (low note) 11-13 .042-.046"

2052 (high note) 10-12 .032-.036"

**Contact Gap**—.015-.025".

**Air Gap**—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, In Line, 'L' hd.

**Bore**—3½". **Stroke**—5".

**Displacement**—385 cubic inches.

**Rated Horsepower**—39.2 (AMA).

**Developed Horsepower**—150 at 3400 R.P.M.

**Compression Ratio**—6.4-1 Std. aluminum head, no optional ratios.

**Compression Pressure**—148 lbs. at 2500 R.P.M. or

C N T I N U E D N E X T P A G E

**ENGINE****CONTINUED FROM PRECEDING PAGE**

75-80 lbs. at cranking speed.

Vacuum Reading—Gauge should show steady reading of 19-20" with engine idling.

**PISTONS:**—Bohn, Bohnalite aluminum alloy, Invar strut, split skirt type or Lynite aluminum alloy, "T" slot type with Anodic finish (special hard oxide bearing surface). Length—4¼".

Weight—22.71 ozs. (stripped).

Removal—Pistons and rods removed from above.

Clearance—Top .025" (Bohn), .035" (Lynite), Bottom .002". See Fitting New Pistons.

Replacement Pistons:—Pistons furnished in standard oversizes of .002", .004", .010", .020".

Fitting New Pistons:—Pistons should be snug on .0015" feeler and locked on .002" feeler.

Installing Pistons:—Slot should be toward left viewed from driver's seat.

**PISTON RINGS:**—Before Eng. No. 314480. Four rings per piston, one plain compression ring (top), two Perfect Circle #70 scraper rings (#2 & 3), one Perfect Circle #85 oil control ring, all above pin. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Comp. (all)	.1235-.1240"	.013-.018"	.001-.002"
Oil Cont.	.1860-.1865"	.013-.018"	.001-.002"

**PISTON RINGS:**—After Eng. No. 314480. Four rings per piston, two compression (Perfect Circle #70), two oil control (Perfect Circle #85). Both oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compression	.1235"	.020-.025"	.001-.002"
Oil Control	.1545"	.013-.021"	.001-.002"

**PISTON PIN:**—Diameter .8749". Length 3.031".

Pin floats in piston and rod. Held by retaining rings.

Pin hole in connecting rod is bronze bushed.

Pin Fit in Piston—Thumb push fit at 70° F.

Pin Fit in Rod Bushing—.0004-.0006" clearance.

**CONNECTING ROD:**—Weight 34.82 ozs. Length 8.999". Crankpin Journal Diameter—.251-.2515".

Lower Bearing—Centrifugally cast, babbitt-lined type. No shims used.

Clearance—.001-.0025". Sideplay .004-.006".

Bearing Adjustment:—None (no shims). Replace rods. Do not file caps.

NOTE—Oil spray holes in both sides of connecting rod lower bearing upper half.

**CRANKSHAFT:**—9 bearing. Integral counterweights. Journal Diameters—2½" all bearings.

Bearing Type—Removable bronze-backed, babbitt-lined. No shims.

Clearance—.0015-.003".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps.

End Thrust:—Taken by front bearing. Endplay .002-.004". Adjustable by adding or removing shims.

**CAMSHAFT:**—6 bearing. Non-adjustable chain drive. Bearing Type—Steel-backed, babbitt-lined.

Clearance—.002". Endplay .003-.009".

Timing Chain:—Whitney #CL-206. Width 1½". Pitch ½". Length 25" or 50 links.

Camshaft Setting:—Sprockets are marked. Mesh chain with sprockets turned so that a straightedge across shaft centers splits the 'O' mark on the crankshaft sprocket and is midway between the two 'O' marks on the camshaft sprocket.

NOTE—Special puller tool necessary to install timing chain. Timing chain must be installed 'endless.'

**VALVES:**— Head Diameter Stem Diameter Length  
Intake ..... 1 9/16" ..... 3725-.3735" ..... 4¾"  
Exhaust ..... 1 9/16" ..... 3715-.3725" ..... 4¾"

	Seat Angle	Lift	Stem Clear.
Intake	45°	.355"	.0015-.0025"
Exhaust	45°	.355"	.0025-.0035"

NOTE—Exhaust valve lift .343" on 1936 model.

**Valve Springs:**— Spring Pressure Spring Length  
Valve Closed ..... 60-65 lbs. .... 2 3/32"  
Valve Open ..... 120-128 lbs. .... 1 25/32"

**Valve Lifters:** Wilcox-Rich 'Zero-Lash' type hydraulic lifters.

See Miscellaneous Section for complete data.

NOTE—Hydraulic lifters have been redesigned. Service instructions as given for previous types apply to the new type but new type lifters are not interchangeable in part or as a unit with previous lifters. Lifters used on eight and twelve cylinder engines not interchangeable (longer body used on eight). Cannot be adapted to twelve engine as previously (by changing plunger cap).

Installing Hydraulic Valve Lifters—Install this type lifter without oil. Oil in lifter will retard escape of air and delay quieting of lifter when engine is operated. Remove plunger from lifter body, wash out all oil with gasoline. Do not interchange plungers—they are selective fit in lifter bodies—this is important.

**VALVE TIMING**

Tapet Clearance:—None in service. See data above on Hydraulic Valve Lifters.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 5° ATDC. Close 45° ALDC.

Exhaust Valves—Open 40° BLDC. Close 12° ATDC.

To Check Valve Timing—Remove #1 intake hydraulic valve lifter, pull out plunger, remove spring, wash lifter assembly in gasoline, replace plunger, install lifter in bracket. Check clearance between end of plunger and valve stem (valve closed—clearance will be about .070"). Insert sufficient feeler stock to take up all except .010" clearance. Turn engine over until piston #1 is .0123" past top dead center, stop when flywheel mark 'IN.OP./1-8' lines up with indicator on housing. #1 intake valve should begin to open at this point. Remove feeler stock, re-assemble hydraulic valve lifter as directed above.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

Normal Oil Pressure—40 lbs. at 40 M.P.H. (1936), 53 M.P.H. (1937-38).

Oil Pressure Regulator:—Located at pump. Opens at 50 lbs. Adjustable by adding or removing spacer washers.

Oil temperature Regulator:—Harrison Radiator Co. type.

Crankcase Capacity:—9 qts. (refill). 10 qts. (dry).

**CLUTCH**

**CLUTCH:**—Long Model 12CB-CL. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions. No adjustment for wear. See Clutch Section for complete data.

Facings—Moulded type, 2 required. Inside diameter 7". Outside diameter 12". Thickness .137".

Adjustment—Free movement of clutch pedal must be ¾-1¼". Screw adjustment provided at bell housing. Pedal should have free clearance at underside of toeboard.

Removal:—Remove transmission (see Transmission Section below), remove clutch housing, take out mounting screws in clutch cover mounting flange on flywheel.

**TRANSMISSION**

**TRANSMISSION:**—Warner with Overdrive. Model AS1-T82A (1937-38). Constant mesh, synchro-mesh (second and high), sliding helical gear (low and reverse).

See Transmission Section for complete data.

Removal:—Disconnect drive shaft at front universal, take out transmission mounting bolts, pull transmission straight back.

**OVERDRIVE**

**OVERDRIVE(1937-38):** Warner Type R1. Model AS1-T82A transmission and overdrive unit.

See Transmission Section for complete data.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit Series 5350. Roller bearing type, 2 used.

See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

Ratio—4.58-1.

Backlash—.002-.003". Shim adjustment.

**FRONT SUSPENSION**

Front Suspension:—Conventional 'I' beam section axle with Reverse-Elliott ends and semi-elliptic springs.

Kingpin Inclination—8° crosswise.

Caster (1936)—¾° plus or minus ¼° for axles with plain bearings, 1° plus or minus ¼° for axles with needle bearings. Spring seat on axle should tilt down at rear 4° 15' (axles with plain bearings), 4° (axles with needle bearings). Correct caster by inserting wedge shims between spring and spring pad on axle.

Caster (1937-38)—1°. Adjust by inserting wedge shims between spring and spring pad on axle.

Camber—1° (plus or minus ½°). Wheel felloe at top of wheel should be not more than 15/32" or less than 5/32" outside felloe at bottom. No adjustment provided.

Toe In—3/16" plus 0" or minus 1/16" (1936), ¼" (1937-38). Adjust by loosening clamp bolts and turning tie rod.

Steering Geometry—Inner wheel turned 40°, outer wheel 30°.

**STEERING GEAR**

Steering Gear:—Ross Model 660. Cam-and-Lever type. See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Stewart-Warner mechanical four wheel type with vacuum power operation. Hand lever applies all four service brakes.

See Brake Section for complete data.

Drum Diameter—16".

Lining—Moulded type. Width 2¼". Thickness ¼". Length per wheel 38".

Clearance—.009" (front wheels), .012" (rear wheels), at heel and toe of each shoe.

Hand Brake Adjustment:—See Service Brakes.

Power Unit:—Bendix vacuum power unit.

See Brake Section for complete data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—Stamped on plate on right (1936), left (1937-38) frame side rail at rear of front spring rear shackle. First number as follows:

	138" WB	144" WB	147" WB
1602	3,130,001	3,140,001	
1603			3,150,001
1702	3,160,001	3,170,001	
1703			3,180,001
1802	3,165,001	3,175,001	
1803			3,190,001

**ENGINE NUMBER:**—Stamped on left cylinder block below head at center of engine.

**TUNE-UP**

**COMPRESSION:**—Ratio—6.4-1 Standard aluminum head. No optl. ratios. Pressure—140 lbs. at 2500 R.P.M. or 80-85 lbs. at cranking speed (100-105 R.P.M.)

**VACUUM READING:**—Gauge should show steady reading of 19-20" with engine idling.

**FIRING ORDER:** 1-4-9-8-5-2-11-10-3-6-7-12 with cylinders numbered as shown on diagram:

Right Bank—2, 4, 6, 8, 10, 12.

Left Bank—1, 3, 5, 7, 9, 11.

**SPARK PLUGS:** Champion Type J-6. 14 mm. Metric. Gaps—.025". Limits .022-.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.018". Cam Angle—38° Closed.

Synchronization—Set movable contacts to open 40° after stationary contacts.

Automatic Advance—7° max. at 1400 RPM (distr.).

**IGNITION TIMING** See Ignition Timing.

Std. Setting—5° BTDC. Flywheel mark 'IGN.#1' aligned with inspection hole indicator on housing for #1 cylinder (stationary contacts). Movable contacts should open 40° after this point. See **IGNITION TIMING** for detailed instructions.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw midway between 'miss' and 'roll' point (adjust each carburetor separately by cutting out ignition on opposite bank—then synchronize throttle valves—see carburetor article in Carburetor Section for complete data). Idle speed 37-39 explosions in 15 seconds (removable inspection plug in exhaust manifold provided).

Float Level—Fuel level 9/16" below edge of bowl. Accelerating Pump—Inner Hole (Summer), outer (winter).

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance None in service, hydraulic take-up.

**STARTING:** See Battery, Starter Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Delco-Remy Model 430-T. Switch and cable assembly. Connected to coil unit by armored cable. See article in Equipment Section.

**COIL:** Delco-Remy Model 553-E (2 used). On dash.

Ignition Current—2 amperes idling, 4 amperes stopped, for each coil.

**CONDENSER:** Delco-Remy Part No. 1837231. 2 used.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 4105 (for 1936), Delco-Remy Model 4160 (for 1937-38 cars). Double breaker, 6 lobe cam, semi-automatic advance type. Contacts open alternately at 20° and 40° intervals (corresponding to 40° and 80° firing intervals of engine—caused by 80° included angle between cylinder banks). Contacts must be synchronized—see **Timing**.

**Breaker Gap:**—Set at .018". Limits .018-.024".  
**Cam Angle or Dwell:**—Closed 38° Open 22° (distr.). Each set operates independently.  
**Breaker Arm Spring Tension:**—19-23 ounces.  
**Manual Advance:**—33° (engine—maximum). Consists of a retard operated by pulling button on dash out. Used for hand cranking or heavy pulling.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start -----	400	2 -----	800
7 -----	1400	14 -----	2800

**Distributor Removal:**—Mounted at rear of engine between cylinder banks. Take out distributor bracket screws.

**IGNITION TIMING**

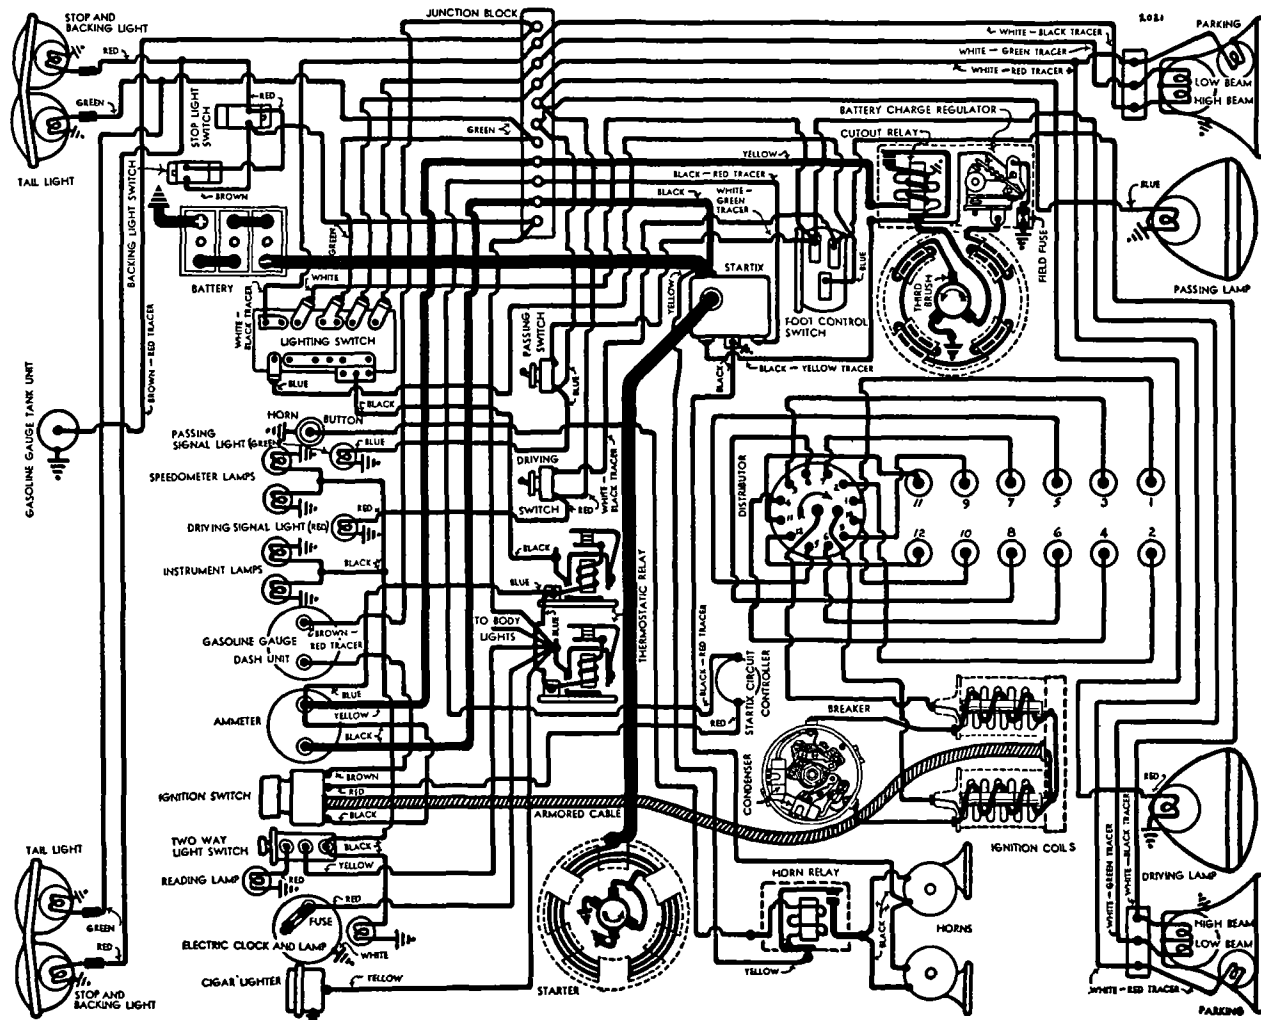

**IGNITION TIMING:**—Flywheel Deg. Piston Position  
All engines 5° BTDC .0091" BTDC  
**Timing (Stationary Contacts):**—Advance spark control (push button in), if ignition turned 'on' turn key to 'on' position with automatic starting inoperative, remove cover over inspection hole in flywheel housing. With #1 piston on compression,

turn engine over until flywheel mark 'IGN.#1' lines up with indicator on housing (mark is 5° before top dead center mark 'UDC/No.1'). Loosen locking screw in center of breaker cam, carefully locate cam so that stationary contacts (mounted directly on breaker plate) are just opening, tighten locking screw, check rotor position. Then check synchronization.

**Synchronization (Movable Contacts):**—Turn engine over 40° or exactly 1/9 revolution to firing position of piston #4 (#2 on right hand bank), stop when flywheel mark 'IGN/No. 4' lines up with indicator on housing (mark is 5° before top dead center mark 'UDC/No. 4'). Loosen lock screws on movable subplate, turn eccentric adjusting screw until contacts open. Tighten lock screws.

**Synchronization—Other Methods:**—Use synchronizing tool or rotary spark gap, set movable contacts to open exactly 20° after first or stationary contacts (adjust by loosening lock screws and turning eccentric adjusting screw on sub-plate). Firing intervals are 20-40-20 (distributor degrees).

CONTINUED ON NEXT PAGE

C NTINUED FROM PRECEDING PAGE

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EX-32, 1½" downdraft type. One carburetor used for each bank of cylinders (throttles must be synchronized.) For complete data, refer to Carburetor Index.

**NOTE:**—Do not adjust carburetors until engine is warmed up so that choke valve is wide open and engine idling at hot or slow idling speed.

**Idle Adjustment:**—Adjust one carburetor at a time. Cut out the six cylinders of the other bank by grounding the high tension lead of the coil firing that bank. Turn idle adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Then check idling speed by taking out plug in exhaust manifold and counting explosions or form small gap by disconnecting one high tension lead at spark plug and count sparks. Adjust throttle lever stop screw so that there are 37-39 explosions in 15 seconds. Recheck idle adjusting screw setting (this must be reset if idling speed has been changed. After adjusting each carburetor, connect both coils, idle engine on all twelve cylinders and check throttle valve synchronization (see article in Carburetion Section).

**Accelerating Pump Setting:**—Adjusted by changing position of pump link rod in throttle valve lever. Inner Hole (Min. stroke)—Summer temperatures. Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle:**—Stromberg type. See special article in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

**Automatic Choke:**—Stromberg Type 'C' No. A-16090.

For complete data, refer to Carburetion Equip. Index.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. oil-wetted type standard, oil-bath heavy duty type optional.

**Fuel Pump:**—AC. Type D #1523010. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Motometer Electric. Dash unit—NG-8055D (1936), NG-8440D (1937). Tank unit—NG-7741T (all).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**Willard Type WH-5-19 or RH-5-19 (Export).** 6 volt, 19 plate, 153 amp. hour (20 hour rate).

**Starting Capacity:**—180 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 6.6 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—Left hand side under front floor.

**STARTER**

**Owen-Dyneto Model DI-1313.** Armature No. 16437. Drive—Bendix Type RCD11FXT-10.

**Cranking Engine:**—100-105 R.P.M., 175 amperes at 5.35 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—56-60 ounces each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4500	6.0	60
2 "	1600	5.5	130
3.6 "	1200	5.35	170
7.4 "	800	5.05	250
14.4 "	400	4.5	400
28.0 "	Lock	3.5	650
29.24 "	Lock	3.6	720

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out three flange mounting capscrews.

**Starting Switch:**—Startix Type 'D' Automatic starting switch and Startix circuit controller (anti-backfire unit), controlled by ignition switch. See special article in Equipment Section for complete data.

For complete data, refer to Electrical Equipment Index.

**GENERATOR**

**Owen-Dyneto Model CO-1309.** Armature No. 23691. Air-cooled. Third brush control type with Battery Charge Regulator (two-step charging rate).

**Charging Rate Adjustment:**—Third brush shifted through rack-and-pinion control by slotted adjusting screw in commutator end plate. To adjust, turn adjusting screw to right or clockwise to increase, and to left or counter-clockwise to decrease charging rate.

**Maximum Charging Rate:**—32 amperes (cold), 8.0 volts, 1900 R.P.M., 25-30 M.P.H.

**Performance Data—Regulator Inoperative**

Cold			Hot		
Amps	Volts	R.P.M.	Amps	Volts	R.P.M.
0	7.0	580	0	7.3	625
5	7.2	630	5	7.5	700
10	7.5	700	10	7.7	800
15	7.7	790	15	7.9	930
20	7.9	910	20	8.0	1100
25	8.0	1080	25	8.0	1380
30	8.0	1380	28	8.0	2000
32	8.0	1900			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—20-22 ozs. (main), 12-14 ozs. (third).

**Field Current:**—3.5-3.7 amperes at 6.0 volts.

**Motoring Current:**—16.7-18 amperes at 6.0 volts (½ ampere more if relay and regulator in circuit).

**Field Fuse:**—5 ampere capacity in knurled plug in side of regulator case.

**Removal:**—Generator cradle mounted on left front of engine with fan belt drive (double Vee belt). To remove, slack off drive belt, disconnect water pump drive coupling, loosen mounting clamp band.

**Belt Adjustment:**—To adjust, loosen clamp bolt on fan bracket, turn eccentric shaft spindle until 10 lb. pull on belt midway between pulleys causes 1" deflection, tighten clamp bolt. Additional range of adjustment secured by taking bracket off engine and moving bracket up until mounting bolts engage lower holes.

**REGULATOR**

**Owen-Dyneto 40300 Battery Charge Regulator.** Consists of Cutout Relay and Battery Charge Regulator in a single case on the generator field frame.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

**Cuts In:**—6.8-7.2 volts, 600 R.P.M., 8 M.P.H.

**Cuts Out:**—0-2.5 amperes discharge current.

**Contact Gap:**—.030-.032".

**Air Gap:**—.020-.025" with contacts closed.

**Battery Charge Regulator**

**Setting:**—8.2 volts (cold), 7.8 volts (hot)—contact opening point.

**Regulator Resistance:**—1.85 ohms.

**LIGHTING**

**LIGHTING:**—Headlamps—Guide Multi-beam, Pre-focused, Cross-beam type with special non-interchangeable lenses. Headlamps aimed straight ahead

with lenses removed. Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp), controlled by foot selector switch with lighting switch in 'Country Driving' position. **Driving Lamp:**—Mounted on right of radiator. Controlled by separate switch on instrument panel with Red indicator lamp lighted with driving lamp 'on'. Lighted with lighting switch in 'Country Driving' position except when driving lamp switch turned off.

**Passing Lamp:**—Mounted on left of radiator. Controlled by separate switch on instrument panel with Green indicator lamp lighted with passing lamp 'on'. Lighted with lighting switch in 'City Driving' position or with foot selector switch in passing position (see Headlamps above) except when passing lamp switch turned off.

**Switches**

**Lighting:**—Delco-Remy Model 479-M.

**Instrument Lamps:**—Delco-Remy Model 1411.

**Foot Selector:**—Delco-Remy Model 471-Z

**Bulb Specifications**

Position	Candlepower	Mazda N.
Headlamps	32-32	2330
Stop and Backing	21	1129
Driving and Passing	32	1323**
Driving and Passing Pilots	3	64
License Plate	3	63
Instrument Panel, Parking	1½	55
Tail, Dome & Corn., Smok. Cab.	6	81

\*\* This bulb Pre-focused, single contact type.

**MISC. ELECTRICAL**

**FUSES:**—Electric Clock—5 ampere on back of clock.

**Generator Field:**—5 ampere in regulator case.

**CURRENT LIMIT RELAY:** Delco-Remy 410-N, 2 units used. Vibrating type. Starts to operate with current load of 35-40 amperes, limiting load to 5-22 amperes. **Contact Gap:**—.012-.030".

**Air Gap:**—.015-.030" with contacts closed.

**Spring Tension:**—5 ounces minimum measured at brass button.

**HORNS:**—Klaxon Model K-33-S. Type 2051 (low note), 2052 (high note). Vibrator type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2051 (low note)	11-13	.042-.046"
2052 (high note)	10-12	.032-.036"

**Horn Relay:**—Model 266-TK. Requires .25 amperes to close contacts. Current draw .8 amperes.

**Contact Gap:**—.015-.025".

**Air Gap:**—.012-.017" with contacts closed.

**ENGINE**

**ENGINE SPECIFICATIONS:**—12 cylinder, 80° included angle Vee, 'L' head type. Cylinders cast en bloc for each bank.

**Bore:**—3½". **Stroke:**—4".

**Displacement:**—462 cubic inches.

**Rated Horsepower:**—58.8 (AMA).

**Developed Horsepower:**—185 at 3400 R.P.M.

**Compression Ratio:**—6.4-1 Std. aluminum head. No. optional ratios.

**Compression Pressure:**—140 lbs. at 2500 R.P.M. or 80-85 lbs. at cranking speed.

**Vacuum Reading:**—Gauge should show steady reading of 19-20" with engine idling.

**PISTONS:**—Bohn, Bohnalite aluminum alloy, Invar strut, split skirt type or Lynite aluminum alloy, 'T' slot type with Anodic finish (special hard oxide

bearing surface). Length—4¼".

Weight—22.70-22.82 ozs. (stripped).

Removal—Pistons and rods removed from above.

Clearance—Top .025" (Bohn), .035" (Lynite), Bottom .002". See Fitting New Pistons.

Replacement Pistons:—Pistons furnished in standard oversizes of .002", .004", .010", .020".

Fitting New Pistons:—Pistons should be snug on .0015" feeler and locked on .002" feeler.

Installing Pistons:—Slot should be toward left on both banks (viewed from driver's seat).

**PISTON RINGS (1936):**—Four rings per piston, three compression, one oil control, all above pin. Oil Ring groove drilled radially with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (all)	.1235-.1240"	.013-.018"	.001-.002"
Oil Cont.	.1860-.1865"	.013-.018"	.001-.002"

**PISTON RINGS (1937-38):**—Four rings per piston, two compression (one stepped ring, one plain), two oil control, all above pin. Both oil ring grooves drilled radially with oil drain holes.

Ring	Width	End Gap	Side Clearance
Compression	.1235"	.020-.025"	.001-.002"
Oil Control	.1545"	.013-.021"	.001-.002"

**PISTON PIN:**—Diameter—.8749-.8751".

Length—3.031-3.041".

Pin floats in piston and rod. Held by retaining rings. Pin hole in rod is bronze-bushed.

Pin Fit in Piston:—Thumb push fit at 70° F.

Pin Fit in Rod Bushing:—.0004-.0006" clearance.

**CONNECTING ROD:**—Weight—35.62 ounces.

Length—9.936-9.939" (center-to-center).

Crankpin Journal Diameter—2.126-2.1265".

Lower Bearing—Centrifugally-cast, babbitt-lined type. No shims used.

Clearance—.001-.0025". Sideplay .006-.009".

Bearing Adjustment:—None (no shims). Replace rods. Do not file caps. Bearings .010" and .020" undersize furnished for service.

NOTE—Oil spray holes are drilled in both sides of connecting rod lower bearing upper half. Rods are installed at factory with chamfer in crankpin bore next to crankshaft cheek (rods mounted side by side).

**CRANKSHAFT:**—7 bearing. Integral counterweights.

Journal Diameters—2½" all bearings.

Bearing Type—Removable bronze-backed, babbitt-lined. No shims used.

Clearance—.0015-.003".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps.

End Thrust:—Taken by front bearing. Endplay .002-.004" Adjustable by adding or removing shims.

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

Bearing Type—Steel-backed, babbitt-lined.

Clearance—.002". Endplay .003-.009".

Timing Chain:—Whitney CLG-208. Width 1½". Pitch ½". Length 26½" or 53 links.

Camshaft Setting:—Sprockets are marked. Mesh chain with sprockets turned so that marks are adjacent and in line with a straightedge across the shaft centers.

NOTE—Special puller tool necessary to install timing chain. Install timing chain 'endless.'

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 21/32"	.3725-.3735"	4¾"
Exhaust	1 9/16"	.3715-.3725"	4¾"

	Seat Angle	Lift	Stem Clear.
Intake	45°	.324"	.0015-.0025"
Exhaust	45°	.324"	.0025-.0035"

Valve Springs:—Install springs with small end up. Flat coil spring type dampener installed on all springs at top.

	Spring Pressure	Length
Valve Closed	60-65 lbs.	2 3/32"
Valve Open	120-128 lbs.	1 25/32"

Valve Lifters: Wilcox-Rich 'Zero-Lash' type hydraulic lifters.

See Miscellaneous Section for complete data.

NOTE—Hydraulic lifters have been redesigned. Service instructions as given for previous types apply to the new type but new type lifters are not interchangeable in part or as a unit with previous lifters. Lifters used on eight and twelve cylinder engines not interchangeable (longer body used on eight). Cannot be adapted to eight engine as previously (by changing plunger cap).

## VALVE TIMING

Tappet Clearance:—None in service. See data above on hydraulic valve lifters.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 19° BTDC. Close 69° ALDC.

Exhaust Valves—Open 56° BLDC. Close 28° ATDC.

To Check Valve Timing—Remove #1 intake hydraulic valve lifter, pull out plunger, remove spring, wash lifter assembly in gasoline to remove all oil, replace plunger, install lifter in bracket, check clearance between end of plunger and valve stem (valve closed—clearance will be about .070"). Insert sufficient filler stock to take up all except .004" clearance, turn engine over with #11 piston on compression, stop when flywheel mark 'IN.OP.#1/' lines up with indicator on housing, #1 intake valve should begin to open at this point. Remove feeler stock, reassemble hydraulic valve lifter.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump located in crankcase.

Normal Oil Pressure:—45 lbs. at 53 M.P.H.

Oil Pressure Relief Valve:—Located at oil pump. Operates at 50 lbs. Adjustable by adding or removing spacing washers.

Oil Temperature Regulator:—Harrison Radiator Co. type.

Crankcase Capacity:—11 qts. (refill).

## CLUTCH

**CLUTCH:**—Long Model 12CB-CL. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions. No adjustment for wear required.

See Clutch Section for complete data.

Facings—Moulded type, 2 required. Inside diameter 7". Outside diameter 12". Thickness .137".

Adjustment—Free movement of clutch pedal must be ¾-1¼". Screw adjustment provided at bell housing. Pedal must have free clearance at underside of toeboard.

Removal:—Remove transmission (see Transmission Section below), remove clutch housing, take out mounting screws in clutch cover mounting flange on flywheel.

## TRANSMISSION

**TRANSMISSION:**—Warner with Overdrive. Model AS1-T82A (1937-38). Constant mesh, synchro-mesh (second and high), sliding helical gear (low and reverse).

See Transmission Section for complete data.

Removal:—Disconnect drive shaft at front universal, take out transmission mounting bolts, pull transmission straight back.

## OVERDRIVE

**OVERDRIVE (1937-38):** Warner Type R1. Model AS1-T82A transmission and overdrive unit.

See Transmission Section for complete data.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit Series 5350. Roller bearing type. 2 used.

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

Ratio—4.58-1.

Backlash—.002-.003". Shim adjustment.

## FRONT SUSPENSION

**Front Suspension:**—Conventional axle with Reverse-Elliott ends and semi-elliptic springs.

Kingpin Inclination—8° crosswise.

Caster—¾° (1936), 1° (1937-38). Adjust by inserting wedge shims between spring and spring pad on axle.

Camber—1° (plus or minus ½°). Wheel felloe at top of wheel should be not more than 15/32" or less than 5/32" outside felloe at bottom. No adjustment provided.

Toe In—¼". Adjusted in usual manner by loosening clamp bolts and turning tie rod.

Steering Geometry—Inner wheel turned 40°, outer wheel 30°.

## STEERING GEAR

**Steering Gear:** Ross Model 660. Cam-and-Lever type. See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Stewart-Warner mechanical four wheel type with vacuum power operation. Hand lever applies all four service brakes.

See Brake Section for complete data.

Drum Diameter—16".

Lining—Moulded type. Width 2¼". Thickness ¼". Length per wheel 38".

Clearance—.009" (front wheels), .012" (rear wheels), at heel and toe of each shoe.

Hand Brake Adjustment:—See Service Brakes.

Power Unit:—Bendix vacuum power unit.

See Brake Section for complete data.

## MODEL IDENTIFICATION

**NOTE**—Economy Model equipped with smaller carburetor, intake manifold and 3.7-1 ratio rear axle. This series may be distinguished by letter 'E' inserted in engine number: thus P2-E241409. This letter 'E' should not be confused with letters 'A', 'B', etc., following engine number. This series does not have separate serial numbers.

**SERIAL NUMBER**:—On right front door hinge pillar post. First number:

	Detroit	Los Angeles	Evansville	Canada
P1	1,111,701	3,151,151	9,000,101	9,397,351
P2	2,841,401	3,040,801	9,025,101	9,332,286

**ENGINE NUMBER**:—First number—P2-1001 (see note above). Stamped on left side of cylinder block between #1 and 2 cylinders. Letter 'A' following number indicates bore .020" larger than standard. 'B' indicates main and connecting rod bearings .010" smaller than standard. 'AB' indicates that bore and bearing sizes are as above. 'C' indicates main and connecting rod bearings standard, but outside diameter of connecting rod bearings .005" larger than standard.

## TUNE-UP

**COMPRESSION**:—Ratio—6.7-1 Std. cast-iron head, 6.07-1 cast-iron head (available for export only). Pressure—(6.7-1 Std. head) 140-150 lbs. at 1000 R.P.M. or approx. 113 lbs. at cranking speed.

**VACUUM READING**:—Gauge should show steady reading of 16-18" with engine idling at 6 M.P.H.

**FIRING ORDER**: 1-5-3-6-2-4. See diagram.

**SPARK PLUGS**: AC Type K-9 superseded by Champion Type J-8. 14 mm. Metric type. Gaps—.025".

**IGNITION**: See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle—38° Closed.

**Automatic Advance**—11° maximum at 1600 RPM for IGS-4003-1 & 4003A-1, 1850 RPM for IGS-4003B-1.

**Vacuum Advance**—10° (distr.) with 14" vacuum.

**IGNITION TIMING**—See Ignition Timing.

**Std. Setting**—4° ATDC. Crankshaft pulley mark (correct graduation after dead center '0' mark) aligned with pointer at front of engine.

**CARBURETION**: See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screw  $\frac{1}{8}$ – $\frac{3}{4}$  turn open. Adjust for smooth idle. Idle speed 6 MPH. Float Level— $\frac{5}{64}$ " from top of float (not seam) to top edge of bowl with needle valve seated.

**Accelerating Pump**—Center hole normal setting.

**Fuel Pump Pressure**:  $3\frac{1}{2}$  lbs. maximum.

**VALVES**: See Valve Timing.

**Tappet Clearance**—.006" Int., .008" Exh. (hot). .010" Exh. recommended for sustained high speed.

**STARTING**: See Battery, Starter Generator, Regulator.

## IGNITION

**Ignition Switch**:—Mitchellock Model 24-R, Type 6517. Connected to coil by armored cable.

**Ignition Lock**—Yale & Towne Model DP-108, Mitchell No. 6286.

**COIL**: Auto-Lite Model IG-4629. Service Winding (less switch & cable) IG-3224S. Mounted on dash.

**Ignition Current**—2.5 amperes idling, 5.5 stopped.

**CONDENSER**: Auto-Lite Part No. IG-3927A.

**Capacity**—25–28 microfarad.

**DISTRIBUTOR**: Auto-Lite Model IGS-4003-1 (early), IGS-4003A-1 or IGS-4003B-1 (later). Single breaker 6 lobe cam, full automatic advance with vacuum spark control.

See Electrical Equipment Section for special servicing directions on these distributors.

For complete data, refer to Electrical Equipment Index.

**Breaker Gap**—Set at .020".

**Cam Angle or Dwell**—38° closed, 22° open.

**Breaker Arm Spring Tension**—16-20 ounces.

**Automatic Advance**—IGS-4003-1, IGS-4003A-1

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
11	1600	22	3200

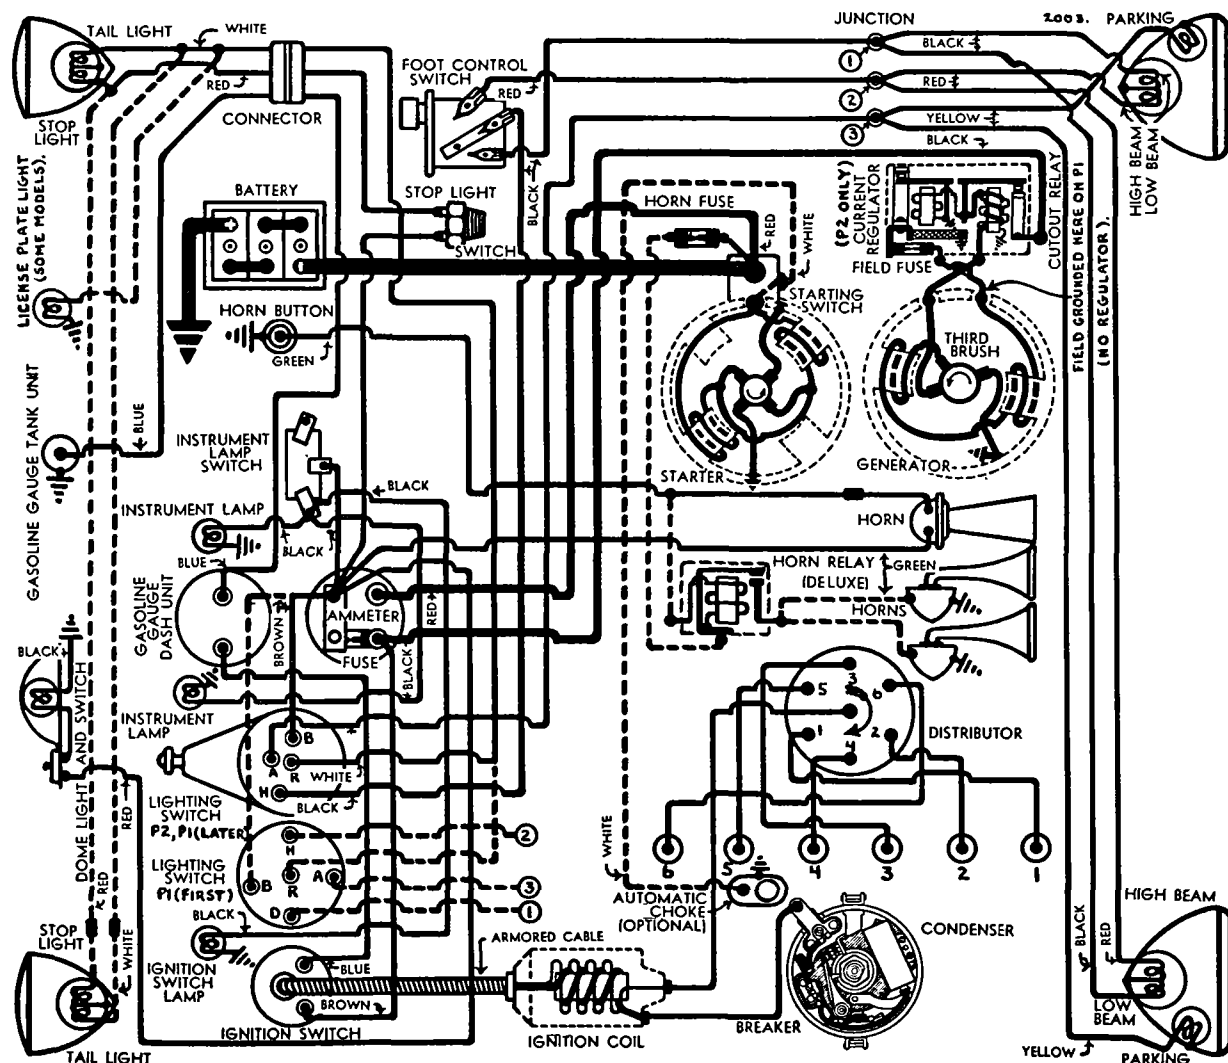

**Automatic Advance**—IGS-4003B-1

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	950	12	1900
9	1500	18	3000
11	1850	22	3700

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for all speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
5°	10°	9.5"
10°	20°	14"

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Flywheel Degrees      Piston Pos.  
6.7-1 Std. head ..... 4° ATDC ..... 0068° ATDC.  
6.07-1 Export ..... 4° ATDC ..... 0068° ATDC.

See Manual Adjustment (following) for final setting for best performance depending on fuel used.

**Timing (Using Timing Light)**—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston is 4° (or .0068") past top dead center, stop when fourth graduation to left of center '0' mark on fan pulley at front of engine lines up with pointer on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until lamp goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light at fan pulley, fill in 4° mark to left of center '0' mark with chalk or white paint. See Equipment Section.

**Manual Adjustment:**—After setting ignition as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10 to 30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance more than 5° on scale.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter (Ball & Ball) Model C6E1 (Motor No. P2-1001 to P2-269322 inclusive), C6E2 (P2-269323 and up), 1½" downdraft type with Fast Idle. Model B6F1, 1" downdraft type (No. P2-E241409 and up—Economy Model). See Carburetion Section for complete adjustment, overhaul, and Jet Specifications.

For complete data, refer to Carburetor Index.

**NOTE:**—Do not make carburetor adjustments until engine is warmed up with choke valve wide open and fast idle inoperative.

**Idle Adjustment:**—Adjust throttle stop screw so that idle speed is 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to lag or miss, then out until engine begins to roll, finally turn screw in until engine fires smoothly. Final setting should be ⅓-¾ (C6E1, 2), ¼-¾ (B6F1) turn of screw from inner closed or seated position. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump Setting:**—Engage pump link in proper hole in throttle lever for seasonal requirements as follows:

**Inner Hole (Min. stroke)**—Extremely warm weather  
**Center Hole**—Normal summer setting.

**Outer Hole (Max. stroke)**—Extremely cold weather.

**NOTE:**—5% and 10% lean main metering screws (high altitude calibration) may be used at lower altitudes for maximum fuel economy although with considerably reduced speed and power. See Carter (B & B) Jet Specifications in Carburetion Section.

**Fast Idle:**—Integral with carburetor (C6E1, C6E2 only)  
No adjustment.

**Throttle Cracker:** Linkage between starter pedal and throttle lever provides one-third throttle opening when starter pedal depressed.

**Automatic Choke:**—Sisson Type AC-751B available as optional equipment on C6E1, C6E2 carburetors. See article in Carburetion Section for complete data.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1526642 oil-wetted type standard, #1526712 heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type B #1522237 (early cars), #1522995 (later cars). Diaphragm type. See article in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Motometer Electric. Dash unit—NG-7762-D (P1), NG-7642-D (P2). Tank unit—NG-7687-T (all). See article in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Willard Type WHT-1-90 (U. S.), R-1-90 (Export).** 6 volt, 13 plate, 90 ampere hr. capacity (20 hr. rate). Starting Capacity—114, 109 (Exp.) amps. for 20 min. Zero Capacity—300 amperes for 3.0, 2.3 (Exp.) mins. Grounded Terminal—Positive (+) terminal. Location—On left side under front seat.

**Radio:** Willard Type WT-1-90. 6 volt, 15 plate, 90 ampere hour capacity (20 hour rate). Starting Capacity—117 amperes for 20 minutes. Zero Capacity—300 amperes for 3.1 minutes. Grounded Terminal & Location—Same as above.

## STARTER

**Domestic—Auto-Lite MAW-4009. Arm. MAW-2030. Export—Auto-Lite MAW-4011. Armature MAW-2030. Drive—Positive shift outboard pinion.**

**Cranking Engine—Approx. 175 amperes at 5 volts.**

**Rotation—Counter-clockwise at commutator end.**

**Brush Spring Tension—42-53 ozs. (new brushes).**

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs. ....	4900.....	5.5.....	65
.60 " .....	3300.....	5.5.....	100
2.75 " .....	1480.....	5.0.....	200
5.45 " .....	820.....	4.5.....	300
8.50 " .....	400.....	4.0.....	400
11.55 " .....	110.....	3.5.....	500
11.5 " .....	Lock.....	3.0.....	505
18.0 " .....	Lock.....	4.0.....	670

**Removal:**—Flange mounted on left front face of flywheel housing. To remove, take out two flange mounting screws.

**Starting Switch:** Auto-Lite SW-2677-A. On starter frame and operated by pinion shift (starting pedal). For complete data, refer to Electrical Equipment Index.

## GENERATOR

### STANDARD MODEL

**Auto-Lite Model GBM-4603-B. Armature GBM-2006F.** Third brush type used with Cutout Relay.

**Charging Rate Adjustment:**—Use test meters to check generator output. Shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate until output is 17-19 amperes at 8.25 volts, with generator at room temperature (70° F.). Third brush held in position by friction.

**Commutator Bar Method:**—Shift third brush until there are exactly 4 commutator bars exposed between edge of third brush and nearest main brush. **Maximum Charging Rate:**—As given above. Do not exceed.

### Performance Data—GBM-4603-B

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0 .....	6.4.....	800	0 .....	6.4.....	850
4 .....	6.8.....	950	4 .....	6.9.....	1050
8 .....	7.25.....	1125	8 .....	7.4.....	1250
12 .....	7.7.....	1375	12 .....	7.9.....	1680
16 .....	8.1.....	1800	15.2 .....	8.3.....	2500
18 .....	8.3.....	2400			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—50-60 ozs. (new brushes).

**Field Current:**—3.80-4.20 amps. at 6.0 volts.

**Motoring Current:**—5.7-6.3 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment:**—Swing generator away from engine until 40-50 lb. reading indicated on scale attached to generator frame.

## GENERATOR

### DELUXE MODEL

**Auto-Lite Model GAR-4608E-5. Armature GAR-2116F.** Third brush type used with Two-Charge Regulator.

**Charging Rate Adjustment:**—Use test meters. Connect jumper between fuse cup on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 21 amperes at 8.6 volts with generator at room temperature (70° F.). Third brush held in position by friction. Remove jumper.

**Commutator Bar Method:**—Shift third brush until exactly 4 commutator bars are exposed between brush and nearest main brush.

**Maximum Charging Rate:**—As given above. Do not exceed.

### Performance Data—GAR-4608E-5

Cold			Regulator Contacts Closed			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0 .....	6.4.....	800	0 .....	6.4.....	825			
4 .....	6.8.....	950	4 .....	6.8.....	1000			
8 .....	7.25.....	1100	8 .....	7.25.....	1200			
12 .....	7.7.....	1275	12 .....	7.7.....	1440

21 .....	8.6.....	2400	18.5 .....	8.35.....	2500			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—50-60 ozs. (new brushes).

**Field Current:**—3.51-3.89 amps. at 6.0 volts.

**Motoring Current:**—5.03-5.57 amps. at 6.0 volts.

**Field Fuse:**—5 ampere in plug on regulator case.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

**Belt Adjustment:**—Swing generator away from engine until 40-50 lb. reading indicated on scale attached to generator frame.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' article for complete data on special Generators and Regulators which may be found on these cars.

CONTINUED N NEXT PAGE

C CONTINUED FROM PRECEDING PAGE

**CUTOUT RELAY****STANDARD MODEL**

Auto-Lite Model CB-4014 (for GBM Generator).  
For complete data, refer to Electrical Equipment Index.

Cuts In—6.5-7.25 volts.

Cuts Out—5-2.5 amperes discharge current.

Contact Gap—.015-.045".

Air Gap—.010-.030" with contacts closed.

**REGULATOR****DELUXE MODEL**

Auto-Lite Model TC-4301A. Two-Charge Regulator Type. On generator. Consists of Cutout Relay and Current Regulator (two-rate charging control). See article in Equipment Section for complete data.

For complete data, refer to Electrical Equipment Index.

Cutout Relay—Same as CB-4014 (see above).

**Current Regulator**

Contacts Open—8.25-8.75 volts at 70° F.

Contacts Close—1.2-1.4 volts below opening point.

Contact Gap—.005" minimum.

Air Gap—.045" with contacts closed.

**LIGHTING**

**LIGHTING**—Headlamps—Corcoran Brown Pre-focused type. Headlamps aimed straight ahead (upper beam with lenses in place). Lower beam deflected slightly to right. Upper and lower beams controlled by foot selector switch except for early P1 models.

**Switches**

Lighting—Plymouth Part No. 659631 (early P1), 635451 (P2 and later P1 models). Douglas switch which is available only through Plymouth Parts Dept.

Foot Selector—Clum Model 9654.

Stop Light—R.B.M. No. 910. Hydraulic type mounted on brake master cylinder.

**Bulb Specifications**

Location	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Ign.Sw.	1½	55
Stop and Tail	21-3	1158
Instrument	3	63
Dome	15	87

**MISC. ELECTRICAL**

**FUSES**—Lighting—20 ampere on back of ammeter.

Generator Field—5 ampere in plug on regulator (P2 only).

Twin Horns—20 ampere in connector near starter.

**HORNS**—Auto-Lite Model HA-4001 (P1), HB-4001 (P2), Std. Klaxon Model K-33-F Type 2101 (low note), 2102 (high note) Optl. Vibrator type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2101	11-13	.040-.044"
2102	9-11	.032-.036"

NOTE—Auto-Lite Horn Set HC-5003 also used.

Horn Relay—Model 266-TK. Requires .25 amperes at 2 volts min. to close contacts. Current draw .8 amps.

Contact Gap—.015-.025".

Air Gap—.012-.017" with contacts closed.

**ENGINE**

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head.

Bore—3½". Stroke—4¾".

Displacement—201.31 cubic inches.

Rated Horsepower—23.44 (AMA).

Developed Horsepower—82 at 3600 R.P.M.

Compression Ratio—6.7-1 Std. cast-iron head. No optional ratios.

Compression Pressure—140-150 lbs. at 1000 R.P.M. or approximately 113 lbs. at cranking speed.

Vacuum Reading—Gauge should show steady reading of 16-18" with engine idling at 6 M.P.H.

**PISTONS**—Aluminum alloy, "T" slot, Cam ground type with anodized finish (special hard oxide formed on bearing surface). Length—3 11/16".

Weight—Held to two gram max. variation.

Removal—Pistons and rods removed from above.

Clearance—Top .022". Skirt .0005". Limits .0005-.001". See Fitting New Pistons.

Replacement Pistons—Finished anodized pistons furnished in standard and .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversizes. Semi-finished pistons furnished: (1) standard to .023" oversize. (2) .025-.050" oversize, not interchangeable. Pistons should be slotted and then finished on cam grinding equipment.

Fitting New Pistons—Micrometer gauge recommended. Check cylinder bore and piston diameter. Measurement on piston made at bottom of skirt at right angles to piston pin (pin must be removed).

Installing Pistons—Slot should be at left or away from valves.

**PISTON RINGS**—Two undercut compression rings, two oil control rings per piston, all above pin. Lower ring groove drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp (all)	⅛"	.007-.015"	.002-.003"
Oil (both)	5/32"	.007-.015"	.002-.003"

Replacement Rings—Furnished in standard and .003", .010", .020", .030", .040", .050", .060" oversizes.

NOTE—Install compression rings with step down.

**PISTON PIN**—Diameter 55/64". Length 2¾". Pin floats in piston and rod. Held by retaining rings. Pin hole in rod is bronze-bushed.

NOTE—Heat piston in boiling water to remove or install pins.

Pin Fit in Piston—Tight thumb push fit with piston heated to 130° F.

Pin Fit in Rod Bushing—Tight thumb push fit with piston and rod at 70° F.

Replacement Pins—Pins furnished in standard and .003", .005", .008" oversizes. Ream rod bushing and pin holes in piston bosses for correct fit.

**CONNECTING ROD**—Weight—All rods held to ¼ oz. maximum variation. Length—7 15/16".

Crankpin Journal Diameter—1 15/16".

Lower Bearing—Steel-backed, copper-lead lined, interchangeable. Furnished standard and .010" undersize.

Clearance—.001-.003". Sideplay .0055-.0115".

Bearing Adjustment—None (no shims). Replace bearings. Do not file rods or caps. Install new bearings so small bosses engage grooves in rod and cap.

Installing Rods—Lower bearings are offset. Install rods with widest half of bearing toward rear (#1, 3, 5) and toward front (#2, 4, 6). Oil hole in lower bearing upper half toward camshaft on all rods.

**CRANKSHAFT**—4 bearing. Integral counterweights.

Journal Diameters—2¼" (all bearings).

Bearing Type—Removable steel-backed, babbitt-lined (#1 and 4), copper-lined or cadmium-nickel (#2 and 3). Furnished standard & .010" undersize.

Clearance—(#1 & 4) .001-.002". (#2 & 3) .0015-.0025"

Bearing Adjustment—None (no shims). Replace bearings. For Front Main Bearing Cap Removal and Bearing Adjustment data, refer to Chrysler Shop Notes. Replacement Bearings & Bearing Caps: See Chrysler Shop Notes for complete data.

End Thrust—Taken by flange faces on rear (#4) bearing. Endplay .003-.007".

**CAMSHAFT**—4 bearing. Non-adjustable chain drive. Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

Bearing Type—Removable steel-backed, babbitt-lined (except #4 machined in crankcase).

Clearance—.001-.003" (#1), .0015-.0035" (all others).

NOTE—New bearings require no line-reaming.

End Thrust—Taken by thrust plate at rear of sprocket hub. Endplay .002-.006".

Timing Chain—Morse. Width 1". Pitch .500". Length 24" or 48 links.

Camshaft Setting—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers. Install chain endless.

NOTE—Engine must be supported under front end of oil pan and front engine support removed for work on timing chain and camshaft.

**VALVES**—Head Diameter Stem Diameter Length  
All valves 1 15/32" 340-341" 4 25/32"

Seat Angle Lift Stem Clearance

Intake 45° 5/16" .001-.003"

Exhaust 45° 5/16" .003-.005"

See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.

Valve Guides—Use special tool to remove and install guides. Insert guides with taper end up (intake) and down (exhaust). Top of guide must be ⅞" below top of block. After installing finish ream new guides to give correct stem clearance.

Valve Springs—Variable pitch type. Install springs with close coil at top. Do not compress springs to over all length of less than 1¾".

Spring Pressure Spring Length

Valve Closed 34-38 lbs. 1¾"

Valve Open 77-83 lbs. 1 7/16"

Valve Lifters—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

**VALVE TIMING**

Tappet Clearance—.006" Int., .008" Exh., with engine hot. .010" Exh., recommended for sustained high speed.

Valve Timing—See Camshaft Setting above.

Intake Valves—Open 6° ATDC. Close 46° ALDC.

Exhaust Valves—Open 42° BLDC. Close 8° ATDC.

To Check Valve Timing—Install regular timing gauge in timing plug hole over #6 piston, set tappet clearance #6 valves at .011" (intake), .012" (exhaust). Intake valve should open with piston .015" past top dead center, and exhaust valve close with piston .027" past top dead center. Reset tappet clearance at .006" (intake), .008" (exhaust) with eng. hot.

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump located at right of crankcase.

**NOTE:**—Ignition timing should be checked whenever oil pump is installed in engine.

**Normal Oil Pressure:**—30-40 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under plug on left hand side of crankcase. Operates at 40 lbs. Adjustable by changing spring. Standard spring unpainted. Heavy spring (to increase pressure) painted green. Lighter spring (to decrease pressure) painted red.

**Crankcase Capacity:**—5 qts. (refill).

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 9A6. Single plate, dry disc type. See article in Clutch Section for data.

*See Clutch Section for complete data.*

**Facings:**—Woven (pressure plate side), molded (fly-wheel side), 2 required. Inside Diam. 5 $\frac{5}{8}$ ". Outside Diam. 9 $\frac{1}{4}$ ". Thickness .133".

**Adjustment:**—Clutch pedal should just clear under side of toe board with clutch engaged. To adjust, turn stopscrew located just above clutch pedal shaft. Free movement of pedal should be 1 1/16". To adjust, loosen locknut and turn adjusting nut (clevis) on clutch fork adjusting rod.

**Removal:**—Disconnect clutch pedal linkage, remove fork pivot screw, take out clutch fork. Remove

transmission (release bearing and spring are withdrawn with transmission), remove clutch housing pan, prick punch clutch cover and flywheel (install in same position to maintain balance), take out clutch mounting bolts, turning all bolts out evenly to release spring tension and avoid distortion of clutch cover. Remove clutch from below. Use pilot studs when removing and installing transmission to avoid springing clutch plate.

**Automatic Clutch:**—See article in Clutch Section.

*See Clutch Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional tubular section front axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination:**—9 $\frac{1}{2}$ ° crosswise. Limits 9-10°. **Caster:**—2° (1 $\frac{1}{2}$ -2 $\frac{1}{2}$ °). Adjust by inserting wedge plates between springs and axle pads. Wedges available in  $\frac{1}{2}$ , 1, 2° angles.

**Camber:**— $\frac{1}{2}$ ° ( $\frac{1}{4}$ - $\frac{3}{4}$ °). No adjustment. Replace tubular axle if camber is out more than  $\frac{1}{2}$ °.

**Toe In:**—0- $\frac{1}{8}$ ". Adjust in usual manner by loosening tie rod end clamps and rotating tie rod.

**STEERING GEAR**

**Steering Gear:** Chrysler (Gemmer design Model 300)

Worm-and-Roller type. See Gemmer 300 article.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Lockheed Hydraulic, double anchor type. Hand lever applies brake at rear of transmission or rear wheel service brakes (special equipment). See article in Brake Section.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Diameters, Front Wheel (Front end 1 $\frac{1}{4}$ ", Rear end 1 $\frac{3}{8}$ "). Rear Wheel (Front end 1 $\frac{1}{8}$ ", Rear end 1 $\frac{1}{4}$ ").

**Drum Diameter:**—10".

**Lining:**—Moulded type. Width 2". Thickness 13/64".

**Length per wheel:** 19 13/16".

**Clearance:**—.012" toe, .006" heel for each shoe.

**Hand Brake:**—External type on drum at rear of transmission. See Service Brake (above) for cars with rear wheel hand brake.

**Adjustment:**—With lever in released position, remove anchor screw locking wire, turn anchor screw so that clearance between lining and drum is 1/16", lock anchor screw with wire. Adjust brake band guide bolt nut to give 1/16" clearance (as above) for lower portion of band, secure with locknut. Finally, adjust brake adjusting bolt nut to give 1/16" clearance (as above), making sure that groove in bolt nut is lined up with ridge lockwasher.

**Drum Diameter:**—6".

**Lining:**—Width 2". Thickness 5/32". Length 18 13/32".

**NOTE:**—Clearance at anchor and saddle .005" max.

## MODEL IDENTIFICATION

**NOTE**—Economy Model equipped with smaller carburetor, intake manifold and 3.7-1 ratio rear axle. This series may be distinguished by letter 'E' inserted in engine number: thus P4-E-478653. This letter 'E' should not be confused with letters 'A', 'B', etc., following engine number. This series does not have separate serial numbers.

**SERIAL NUMBER**:—On right front door hinge pillar post. First number as follows:

Detroit Los Angeles Evansville Canada  
P-3 ..... 1,184,001.....3,101,401.....9,085,551.....9,376,676  
P-4 ..... 10,101,001.....3,162,501.....9,950,001.....9,339,691

**ENGINE NUMBER**:—First number—P-4-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Shop Notes for engine number lettering data (denoting special bore and bearing sizes).

## TUNE-UP

**COMPRESSION**:—Ratio—6.7-1 Std. cast-iron head. Pressure—(6.7-1 Std. head) 140-150 lbs. at 1000 R.P.M. or approx. 113 lbs. at cranking speed.

**VACUUM READING**:—Gauge should show steady reading of 18-21" with engine idling at 6 M.P.H.

**FIRING ORDER**: 1-5-3-6-2-4. See diagram.

**SPARK PLUGS**: Champion Type J-8. 14 mm. Metric. Gaps—.025".

**IGNITION**: See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle—38° Closed. Automatic Advance—11° max. at 1850 RPM (distr.). Vacuum Advance—10° max. with 14" vacuum.

**IGNITION TIMING**:—See Ignition Timing. Std. Setting—4° ATDC. Crankshaft pulley mark (correct graduation after dead center '0' mark) aligned with pointer at front of engine.

**CARBURETION**: See Carburetor & Carb. Equipment. Idle Setting—Set idle adjusting screw ½-1¼ turns open (Carter). Adjust for smooth idle. Idle speed 6 MPH.

**Float Level**—(Carter) 5/64" from top of float (not seam) to top edge of bowl with valve seated. (Chandler-Groves) Fuel level 17/32" below top edge of bowl.

**Accelerating Pump**—Center hole normal setting.

**Fuel Pump Pressure**: 3½ lbs. maximum.

**VALVES**: See Valve Timing.

**Tappet Clearance**—.006" Intake, .008" Exhaust, hot. Remove right front wheel and wheel housing for access to valve compartment.

**STARTING**: See Battery, Starter Generator, Regulator.

## IGNITION

**Ignition Switch**:—Mitchellock Model 24-R, Type 7061. Connected to coil by armored cable.

**Ignition Lock**—Yale & Towne, Mitchell No. 6286.

**COIL**: Auto-Lite Model IG-4601 or CL-4601. Service Winding (less switch & cable) IG-3224S for IG-4601, CL-3224S for CL-4601. Mounted on dash.

**Ignition Current**—2½ amperes idling, 5½ stopped.

**CONDENSER**: Auto-Lite Part No. IG-3927A. Capacity—.25-.28 microfarad.

**DISTRIBUTOR**: Auto-Lite Model IGS-4003B-1. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control.

See Electrical Equipment Section for special servicing directions on these distributors.

For complete data, refer to Electrical Equipment Index.

**Breaker Gap**—Set at .020".

**Cam Angle r Dwell**—38° (closed), 22° (pen).

**Breaker Arm Spring Tension**—16-20 ounces.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	950	12.....	1900
9.....	1500	18.....	3000
11.....	1850	22.....	3700

**Vacuum Spark Control**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for all speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start .....	0°	5"
5° .....	10°	9.5"
10° .....	20°	14"

**Distributor Removal**:—Mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING**:—Flywheel Degrees Piston Pos.  
6.7-1 Std. head ..... 4° ATDC ..... .0068" ATDC.

See Manual Adjustment (following) for final setting for best performance depending on fuel used.

**Timing (Using Timing Light)**:—Connect timing light between distributor terminal and battery terminal on generator control unit. With #1 piston on compression, turn engine over until piston is 4° (or .0068") past top dead center, stop when fourth grad-

uation to left of center '0' mark on fan pulley at front of engine lines up with pointer on chain case cover. Loosen hold-down screw in advance arm, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until lamp goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Clip lead to #1 spark plug, direct light at fan pulley, fill in 4° mark to left of center '0' mark with chalk or white paint. See article in Electrical Equipment Section.

**Manual Adjustment:**—After setting ignition as above, road test car and adjust for slight ping with wide open throttle when accelerating from 10 to 30 M.P.H. To adjust, loosen hold-down screw, advance (counter-clockwise), retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance more than 5° on scale.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter (Ball & Ball) Models C6F1 (Motor No. P-4-1001 to 10497), C6F2 (P4-10498 to 88610), C6F3 (P4-88611 to 96179), C6F4 (P4-96180 to 136611), C6F5 (P4-136612 and up). 1¼" downdraft type with Fast Idle.

For complete data, refer to Carburetor Index.

**NOTE**—See recommended changes for early carburetors for improved performance in article in Carburetion Section.

**Holley (Chandler-Groves) Model A-2**—Used on Late P-3 and Commercial Model PT-50. 1¼" downdraft type with Fast Idle.

For complete data, refer to Carburetor Index.

**Economy Carburetor**—Carter (Ball & Ball) Model B6F1, 1" downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm, choke valve wide open and fast idle inoperative, adjust throttle stopscrew so that idle speed is 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting (Carter) should be ½-1¼ turns of screw from closed or seated position. Re-adjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Engage pump link in proper hole in throttle lever as follows:

Inner Hole (Min. stroke)—Extremely hot climate.

Center Hole (Med. stroke)—Normal setting.

Outer Hole (Max. stroke)—Extremely cold weather.

**Fast Idle:**—On standard carburetors only. Integral with carburetor. No adjustment.

**Throttle Cracker:** Linkage between starter pedal and throttle lever provides one-third throttle opening when starter pedal depressed.

**Automatic Choke:**—Sisson Type AC-751B available as special equipment on standard carburetors.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1528196 oil-wetted type standard, #1528197 heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type B #1522995 diaphragm type. Type AL #1523137 combination Fuel-and-Vacuum pump optional.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Motometer Electric. Dash unit—NG-8279D. Tank unit—NG-8257T.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Willard Type WHT-1-90.** 6 volt, 13 plate, 90 ampere hour capacity (20 hour rate).

**Starting Capacity**—114 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.0 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—Left side under drivers seat.

**(Radio)—Willard, Type WHT-2-105. RHT-2-105 (Exp. Radio).**—6 volt, 15 plate, 105 ampere hour capacity (20 hr. rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.9 minutes.

**Grounded terminal and Location** as above.

## STARTER

**Domestic—Auto-Lite MAW-4009. Arm. MAW-2030.**

**Export—Auto-Lite MAW-4011. Armature MAW-2030.**

**Drive**—(MAW-4009) Positive pinion shift. (MAW-4011) magnetic pinion shift type.

**Cranking Engine**—Approx. 175 amperes at 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out two flange mounting screws.

**Starting Switch:** MAW-4009 Auto-Lite SW-2677A. on starter field frame and operated by pinion shaft (starting pedal). See article in Electrical Equipment Section for pedal adjustment.

MAW-4011 Auto-Lite SS-4104 Solenoid Type Controlled through relay by pushbutton on dash.

For complete data, refer to Electrical Equipment Index.

### Solenoid Switch

Closes against 105 lb. pull with ¾" air gap drawing 65 amperes. Holds switch closed with draw of 15 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close**—3.5-4.5 volts. **Open**—1.5-2.5 volts.

**Contact Gap**—.025-.030". **Air Gap**—.005-.007" (closed).

## GENERATOR

### STANDARD MODEL

**Auto-Lite Model GBM-4606C-1. Arm. GBM-2065F.** Third brush control type used with Cutout Relay.

**Charging Rate Adjustment**—Use test meters to check generator output. Shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate until output is 18 amperes at 8.3 volts, with generator at room temperature (70° F.). Third brush held in position by friction.

**Commutator Bar Method**—Shift third brush until there are exactly 4 commutator bars exposed between edge of third brush and nearest main brush.

**Maximum Charging Rate**—As given above. Do not exceed figure given.

### Performance Data—GBM-4606C-1

Cold			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	800	0	6.4	850
4	6.8	950	4	6.9	1050
8	7.25	1125	8	7.4	1250
12	7.7	1375	12	7.9	1680
16	8.1	1800	15.2	8.3	2500
18	8.3	2400			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. (new brushes).

**Field Current**—3.90-4.20 amperes at 6.0 volts.

**Motoring Current**—5.7-6.3 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment:**—Swing generator away from engine until 40-50 lb. reading indicated on scale attached to generator frame.

## GENERATOR

### DELUXE M DEL

**Auto-Lite Model GCJ-4802A. Armature GCJ-2006F.** Third brush control used with vibrating Voltage Regulator in case on dash.

**Charging Rate Adjustment**—Disconnect wire on generator at 'F' terminal, ground terminal. Connect ammeter in line at 'A' terminal. Connect voltmeter between 'A' terminal and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 25 amperes at 8.0 volts with generator at room temperature (70° F.). Third brush held in position by friction. Actual charging rate controlled by regulator setting. See Regulator Section below.

**Commutator Bar Method**—Shift third brush until 2 to 2½ commutator bars are exposed between brush and nearest main brush.

**Maximum Charging Rate**—As given above. Do not exceed this figure.

### Performance Data—GCJ-4802A

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	850
4	6.65	920	4	6.7	1020
8	6.9	1080	8	7.0	1240
12	7.2	1240	12	7.3	1406
16	7.45	1400	16	7.6	1650
20	7.7	1580	20	7.9	2100
25	8.0	2500	22	8.0	2700

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.9-2.1 amperes at 6.0 volts.

**Motoring Current**—4.0-4.4 amperes at 6.0 volts.

**Removal and Belt Adjustment** as given above.

## GENERATOR

### SPECIAL EQUIPMENT

**Police Generators:** Auto-Lite GCB-4802-A (City Police), GCB-4802-B (State Police). Used with Model VRB-4904C Regulator. See 1939 De Soto Model S6 pages for data on these generators and regulators.

**Model GBW-4803A (Export), C (Bolivia), E (P4 Taxi).** Used with Model VRB-4005A Regulator. See 1937 Chrysler Model C16 pages for data on these generators and regulator.

C NTINUED ON NEXT PA E

## CONTINUED FROM PRECEDING PAGE

**Special Generators—Other Makes:**—Refer to *Electrical Equipment Index* for 'Special Generators' article for complete data on special Generators and Regulators which may be found on these cars.

**CUTOUT RELAY****STANDARD MODEL**

**Auto-Lite Model CB-4014** (for GBM Generator). For complete data, refer to *Electrical Equipment Index*.

**Cuts In**—6.5-7.25 volts.

**Cuts Out**—5-2.5 amperes discharge current.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" with contacts closed.

**REGULATOR****DELUXE MODELS**

**Auto-Lite Model VRD-4002A Voltage Regulator.** Consists of Cutout Relay and Vibrating Voltage Regulator in case on dash. See article in *Electrical Equipment Section*.

For complete data, refer to *Electrical Equipment Index*.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

**Cutout Relay**

**Cuts In**—6.4-7.0 volts Cold.

**Cuts Out**—5 ampere Min., 3.0 amperes Max. Cold.

**Contact Gap**—.015" minimum.

**Air Gap**—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

**Voltage Regulator**

**Setting**—7.5-7.8 volts at 70°F (Before Serial No. 8R-000001), 7.3-7.6 volts at 70°F (After 8R-000001). See *Electrical Equipment Section* for complete settings and changes.

**To Check**—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads), connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed until voltage is steady. Voltmeter reading should be within limits of 7.4-7.9 volts (Before No. 8R-000001), 7.3-7.6 volts (cold 70°), 7.1-7.4 volts (hot 140°) for units after 8R-000001. See *Setting* above.

**To Adjust**—Change regulator armature spring tension by bending lower spring hanger. See *Electrical Equipment Section* for complete instructions.

**Contact Gap**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap**—.0595-.0625" with contacts just opening.

**LIGHTING**

**LIGHTING**—Headlamps—Corcoran-Brown, pre-focused type. Aim headlamps straight ahead (lenses in place, upper beams lighted, car unloaded) with center of hot spot of beam 3" below center horizontal line of headlamps, at 25 feet. Upper and lower beams (lower beam deflected slightly to right) controlled by foot selector switch with lighting switch in full out position.

**Headlamp Beam Indicator**—Located in light switch knob. Lighted whenever upper beams in use.

**Switches**

**Lighting**—Plymouth Part No. 675344.

**Instrument Light**—Plymouth Part No. 675345.

**Foot Selector**—Plymouth Part No. 659512.

**Stop Light**—Plymouth Part No. 661721.

**Bulb Specifications**

Location	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking	1½	55
Stop and Tail	21-3	1158
Instruments, Indicator	1	51
Rear License	3	63
Dome	15	87

**MISC. ELECTRICAL**

**FUSES**—Lighting—20 amperes on back of ammeter.

**Horn**—Single horn—20 ampere in connector near starter. Dual horns—30 ampere in horn relay.

**HORNS**—Auto-Lite HA-4020, B. Single horn std., HC-5103, B dual horns with HR-4002 horn relay optl.

**ENGINE**

**ENGINE SPECIFICATIONS**—8 cylinder, 'L' head.

**Bore**—3½". **Stroke**—4¾".

**Displacement**—201.31 cubic inches.

**Rated Horsepower**—23.44 (AMA).

**Developed Horsepower**—82 at 3600 R.P.M.

**Compression Ratio**—6.7-1 Std. cast-iron head.

**Compression Pressure**—140-150 lbs. at 1000 R.P.M.

or approximately 113 lbs. at cranking speed.

**Vacuum Reading**—Steady reading of 18-21" with engine idling at 6 M.P.H.

**PISTONS**—Aluminum alloy, U-slot, cam ground type with anodized finish. Length—3 11/16".

**Weight**—14.43 ozs. (plus or minus 2 grams).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top .022". Skirt .0005". Limits .0005-.001".

**Replacement Pistons**—Finished pistons furnished standard and .003", .005", .010", .015", .023", .025", .030", .040", .050", .060" oversizes. Semi-finished pistons furnished (1) standard to .023" oversize, (2) .025-.050" oversize, not interchangeable. Pistons should be slotted, then cam ground.

**Fitting New Pistons**—Check piston (across pin support ribs at bottom of skirt) and cylinder bore with micrometer gauge. Piston should pass through bore with slight drag (70° F), with pin removed.

**Installing Pistons**—Slot to left, away from valves.

**PISTON RINGS**—2 undercut compression, 2 oil control rings per piston, all above pin. Ten ⅛" oil drain holes #3 groove, five in #4 groove.

**Ring**      **Width**      **End Gap**      **Side Clearance**

**Compression** ..... ⅛" ..... .007-.015" ..... .0015-.003"

**Oil Control** ..... 5/32" ..... .007-.015" ..... .0015-.003"

**Replacement Rings**—Furnished standard and .003", .005", .010", .015", .020", .025", .030", .040", .050", .060" oversizes.

**NOTE**—Install compression rings with step down.

**PISTON PIN**—Diameter 55/64". Length—2¾". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**—Thumb push fit at 130° F.

**Pin Fit in Rod Bushing**—Thumb push fit at 70° F. **Replacement Pins**—Furnished standard and .003", .005", .008" oversize. Ream bushing and pin hole to size.

**CONNECTING ROD**—Weight—31.0 ounces.

**Length**—7 15/16".

**Crankpin Journal Diameter**—1 15/16".

**Lower Bearing**—Steel-backed, babbitt-lined, interchangeable. Furnished standard and .0015", .010" undersize.

**Clearance**—.0005-.0025". **Sideplay**—.0055-.0115".

**Bearing Adjustment**—None. Install new bearings with bosses engaging grooves in rod and cap.

**Installing Rods**—Lower bearings offset. Install wide portion to rear on #1, 3, 5, to front on #2, 4, 6. Oil hole in lower bearing upper half toward valves.

**CRANKSHAFT**—4 bearing. Integral counterweights.

**Journal Diameters**—2¼" (all bearings).

**Bearing Type**—Removable steel-backed, babbitt-lined. Furnished standard and .0015", .010" undersize. **Clearance**—.001-.002".

**Bearing Adjustment**—See *Chrysler Shop Notes for Front Main Bearing Cap Removal & Adjustment* data.

**Replacement Bearings & Bearing Caps**: See *Chrysler Shop Notes for complete data*.

**End Thrust**—Taken by flange faces on rear (#4) bearing. **Endplay**—.003-.007".

**CAMSHAFT**—4 bearing. Non-adjustable chain drive. **Journal Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

**Bearing Type**—Removable steel-backed, babbitt-lined (except #4 machined in crankcase).

**Clearance**—.0015-.0035".

**End Thrust**—Taken by thrust plate at rear of camshaft sprocket hub. **Endplay**—.002-.008".

**Timing Chain**—Morse. Width 1". Pitch .500". Length 24" or 48 links.

**Camshaft Setting**—Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES**—

Head Diameter	Stem Diameter	Length
All valves	1 15/32"	340-.341"
		4 25/32"

**Seat Angle**      **Lift**      **Stem Clearance**

**Intake** ..... 45° ..... 5/16" ..... .001-.003"

**Exhaust** ..... 45° ..... 5/16" ..... .003-.005"

See *Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions*.

**Valve Guides**—Guides must be ⅞" below top of block. Ream guides after installing (.342-.343" Int., .344-.345" Exh.).

**Valve Springs**—1¾" limit of compression.

**Spring Pressure**      **Spring Length**

**Valve Closed** ..... 34-38 lbs ..... 1¾"

**Valve Open** ..... 77-83 lbs ..... 1 7/16"

**Valve Lifters**—Mushroom type. Ream guides to take following oversizes: .001", .008", .030", .060".

**VALVE TIMING**

**Tappet Clearance**—.006" Int., .008" Exh., hot.

Remove front wheel and wheel housing to adjust.

**Valve Timing**—See *Camshaft Setting* above.

**Intake Valves**—Open 6° ATDC. Close 46° ALDC.

**Exhaust Valves**—Open 42° BLDC. Close 8° ATDC.

**To Check Valve Timing**—Install timing gauge in hole over #6 piston, set intake valve at .011" (cold). Valve should open with piston .015" past top dead center. Reset tappet clearance .006" (hot).

## LUBRICATION

**LUBRICATION:**—Gear type oil pump on rt. of engine.  
NOTE—Check ignition timing whenever oil pump installed on engine.

Normal Oil Pressure:—30-45 lbs. at 30 M.P.H.

Oil Pressure Relief Valve:—Under plug on left side of crankcase. Operates at 40-50 lbs. Adjustable. Heavy (green) spring to increase pressure, lighter (red) spring to decrease pressure.

Crankcase Capacity:—5 quarts (refill).

## CLUTCH

**CLUTCH:**—Borg & Beck Mod. 9A6. Mod. #869 stamped on cover. Single plate, dry disc type.  
See *Clutch Section for complete data.*

Facings—Moulded (flywheel side), woven (pressure plate side). 2 required. I.D. 5 $\frac{5}{8}$ ". O.D. 9 $\frac{1}{4}$ ". Thickness .133".

Adjustment—Adjust stopscrew (just above clutch pedal shaft) so that pedal arm just clears floor board. Free movement of pedal should be 1 1/16" (adjust by turning release fork rod adjusting nut).

Removal:—Remove floor board, remove transmission (see Transmission Removal below), remove housing under-pan, mark cover and flywheel, remove cover bolts evenly, remove assembly from below.

## TRANSMISSION

**TRANSMISSION:**—Own—All helical gear type with synchronizing shift on second and high gears.

See *Transmission Section for complete data.*

Removal:—Disconnect front and rear U-joints, disconnect hand brake, remove nuts from studs at clutch housing, disconnect release fork pull-back spring, pull release fork out of clutch housing, remove transmission cover assembly, remove unit with two pilot studs in upper stud holes.

NOTE—Run-out of clutch housing .003" maximum.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit Universal Series 4200.

Ball and trunnion type with roller bearings. 2 used.

NOTE—Three U-joints used on 7 pass. sedan.

See *Universals Section for complete data.*

Propeller Shaft Center Bearing:—Used on 7 Pass. models. See *Chrysler Shop Notes for data.*

## REAR AXLE

**REAR AXLE:**—Own—Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

Ratio—P-3 std. 3.9-1, optl. 3.73-1.

P-3, 4 (5.25x20" tires), P-4 (7 pass.) 4.3-1.

P-4 (5 pass.) 4.1-1, (coupe) 3.9-1.

Backlash—.006-.010". Shim adjustment.

Removal:—Remove axle shaft nut, hub and drum assembly (use hub puller, do not hammer out or bearing damage may result), disconnect brake line at wheel cylinder, remove backing plate (with oil seal). Use shaft puller to remove axle shaft and bearing. With axle shafts removed, differential carrier may be removed by disconnecting rear U-joint at flange and removing housing capscrews.

Wheel Bearing Adjustment—Controlled by shims between brake backing plates and flanged ends of housing. Remove brake backing plates (see above) and add or remove shims to give proper clearance.  
Endplay—.003-.008".

NOTE—Shims supplied .010", .0125", .030" thick.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco—Model 1162-U (front), 1163-U (rear). Direct acting, hydraulic type.

See *Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Conventional tubular section axle, Reverse-Elliott ends, semi-elliptic springs.

Kingpin Inclination—4 $\frac{1}{2}$ -5 $\frac{1}{2}$ " crosswise.

Caster—2° (1-3°). Adjust by inserting wedge shims between spring & axle pad.  $\frac{1}{2}$ " & 2" wedges supplied.

Camber— $\frac{1}{2}$ " ( $\frac{1}{4}$ - $\frac{3}{4}$ " ). No adjustment.

Toe In—1/16" (0- $\frac{1}{8}$ " ). Adjust by turning tie rod.

Steering Geometry—Outer wheel turned 20°. Inner wheel turned 22°50'. 22°20' (7 pass.).

## STEERING GEAR

**Steering Gear:** Chrysler (Gemmer design Model 300) Worm-and-Roller type. See Gemmer 300 article.

See *Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brake at rear of transmission.

See *Brake Section for complete data.*

Wheel Cylinders—Stepped or two-stage bore type:

Front Wheel—Front cyl. 1 $\frac{1}{4}$ ", Rear 1 $\frac{3}{8}$ ".

Rear Wheel—Front cyl. 1 $\frac{1}{8}$ ", Rear 1 $\frac{1}{4}$ ".

Drum Diameter:—10".

Lining—Moulded. Width 2". Thickness .200". Length (Rear wh. rear shoe) 7 25/64", (all others) 9 29/32".

Clearance—.012" toe, .006" heel for each shoe.

Braking Power—55% front wheels, 45% rear.

Hand Brake:—On drum at rear of transmission.

Adjustment—Fully release hand brake lever. Remove anchor screw locking wire (left side), adjust anchor screw for .025" clearance between band and drum, set anchor screw with lock wire. Free large adjusting bolt nut (upper end of band), loosen locknut, adjust guide bolt nut to .025" clearance between band and drum, set with locknut. Tighten adjusting bolt nut until tension on either end of guide bolt is just relieved (groove in nut must align with ridge in lockwasher).

Drum Diameter—8".

Lining—Width 2". Thickness 5/32". Length 16 15/16".

NOTE—Clearance at anchor and saddle .005" max.

**MODEL IDENTIFICATION**

**ECONOMY MODEL:**—Equipped with smaller carburetor, intake manifold and special 3.54-1 ratio rear axle. Identified by letter 'E' inserted in engine number (P6-E-1234). Do not confuse with other letters before or after engine number.

**SERIAL NUMBER:**—On right front door hinge pillar post. First number as follows:

Detroit Los Angeles Evansville Canada  
P-5.....1,240,001.....3,105,000.....9,097,601.....9,381,161  
P-6.....10,470,001.....3,206,001.....20,001,001.....9,349,566

**ENGINE NUMBER:**—First number P-6-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Special Shop Notes for engine number lettering data (for special bore and bearing sizes).

**TUNE-UP**

**COMPRESSION:**—Ratio and pressure as follows:

Ratio Pressure at 1000 R.P.M. At 100 R.P.M.  
6.7-1 Std. hd. ....140-150 lbs. ....Approx. 113 lbs.  
7.0-1 Optl. hd. ....150-160 lbs. ....Approx. 117 lbs.

**VACUUM READING:**—Steady 18-21" idling at 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 (for P5), Auto-Lite A-7 (for P6), Champion H-10 (for Al. hd.). 14 mm. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° Closed.

Automatic Advance—11° maximum at 1850 RPM for IGS-4003B-1, 13° at 1450 RPM for IGS-4015-1.

Vacuum Advance—10° with 14" vacuum (IGS-4003B-1), 10° with 12" vacuum (for IGS-4015-1). Distr. degrees.

**IGNITION TIMING:**—See Ignition Timing.

Std. Setting—4° ATDC (for standard iron head), 3° ATDC (for Optl. aluminum HC hd.). Crankshaft pulley mark (correct graduation after dead center) aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw ¾ turn open (P5 Chandler Grove Carb.), ½-1¼ turns (P6 Deluxe, Carter Carb.), ¼-¾ turn (P5, 6 Economy Carb.). Adjust for smooth idle. Idle speed 6 MPH.

Float Level—(Carter) 5/64" from top of float (not seam) to top edge of bowl with valve seated. (Chandler-Groves) Fuel level 17/32" below top edge of bowl.

Accelerating Pump—Center hole normal setting.

Fuel Pump Pressure: 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Thermostatic coil assembled on manifold heat valve shaft beside silencer and counterweight assembly. Setting—With center end of thermostatic coil engaged in heat valve shaft, wind coil up 1/3 turn counter-clockwise and hook outer end on stop pin.

CAUTION—Do not wind coil up more than 1/3 turn.

**VALVES:** See Valve Timing.

Tappet Clearance—.006" Int., .008" Exh. (hot).

NOTE—Additional .002" exhaust clearance recommended for sustained high speed driving.

**STARTING:** See Battery, Starter Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-R, Type 7061. Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne, Mitchell No. 6286.

**COIL:** Auto-Lite Model CL-4601. Service Winding (less switch & cable) CL-3224S. Mounted on dash.

**Ignition Current:**—2½ amperes idling, 5½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4003B-1, Model IGS-4015-1 (Canada—part production). Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and manual adjustment at distributor.

See Electrical Equipment Section for Distributor servicing data.

Breaker Gap—Set at .020".

Cam Angle or Dwell—38° (closed), 22° (open).

Breaker Arm Spring Tension—18-20 ounces.

Rotation—Clockwise viewed from top.

**Automatic Advance—IGS-4003B-1**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
6.....	950	12.....	1900
9.....	1500	18.....	3000
11.....	1850	22.....	3700

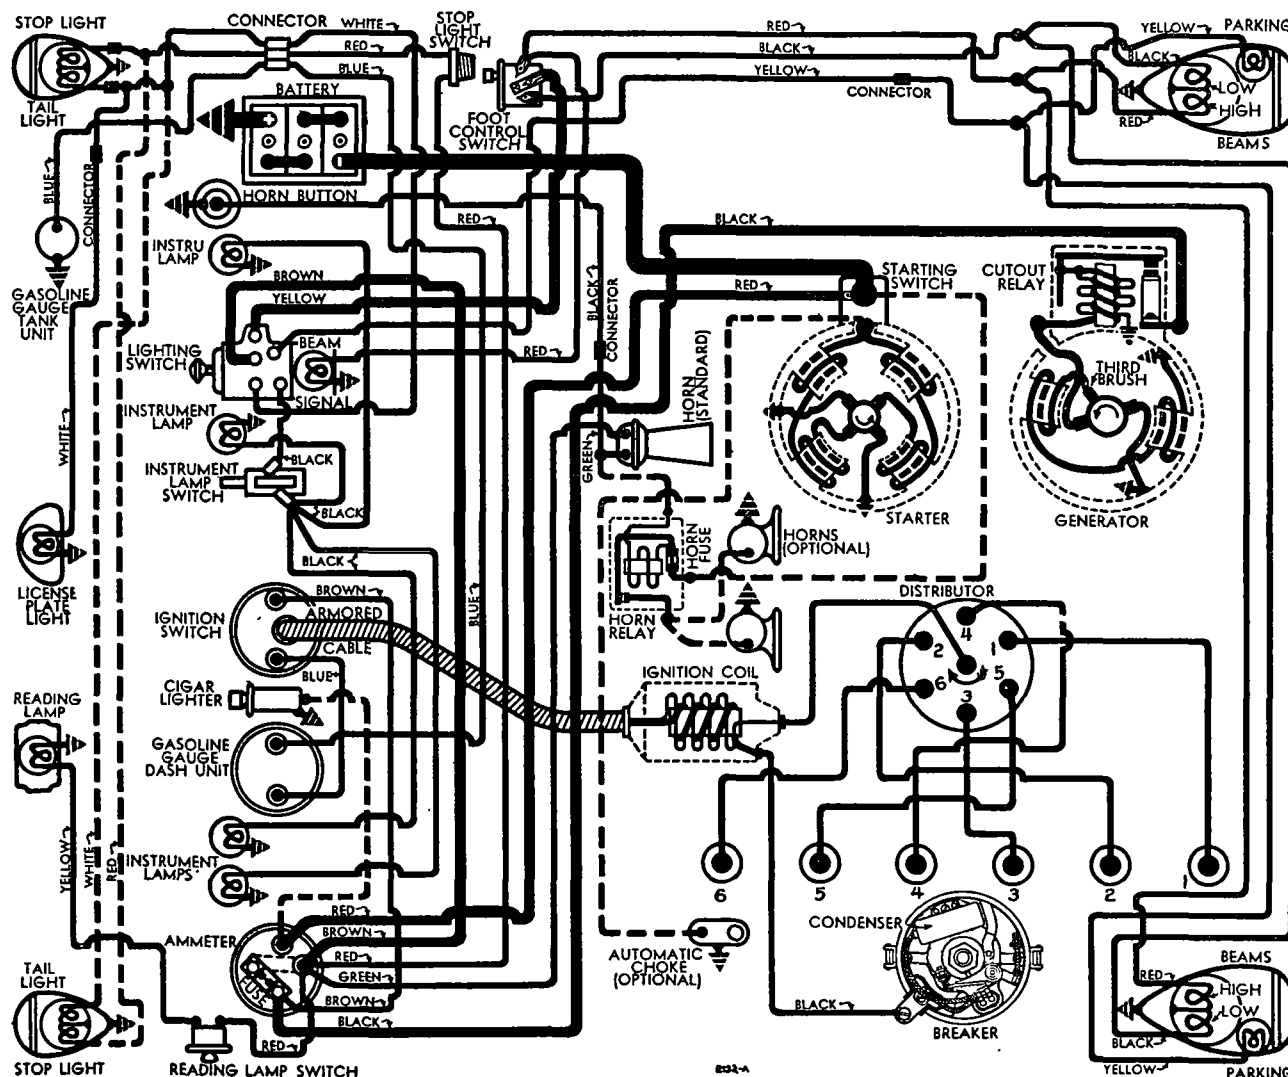

**Automatic Advance—IGS-4015-1**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
7.....	820	14.....	1640
11.....	1240	22.....	2480
13.....	1450	26.....	2900

**Vacuum Spark Control:**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for all speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance—IGS-4003B-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°.....	5"
5°.....	10°.....	9-10"
10°.....	20°.....	14"

Vacuum Advance—IGS-4015-1			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°	4 3/4"	
5°	10°	8 3/8"	
10°	20°	12"	

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm, disconnect vacuum line.

### IGNITION TIMING

**IGNITION TIMING**—Initial setting (for gasoline of approximately 70 octane rating). See Manual Adjustment Setting (following).

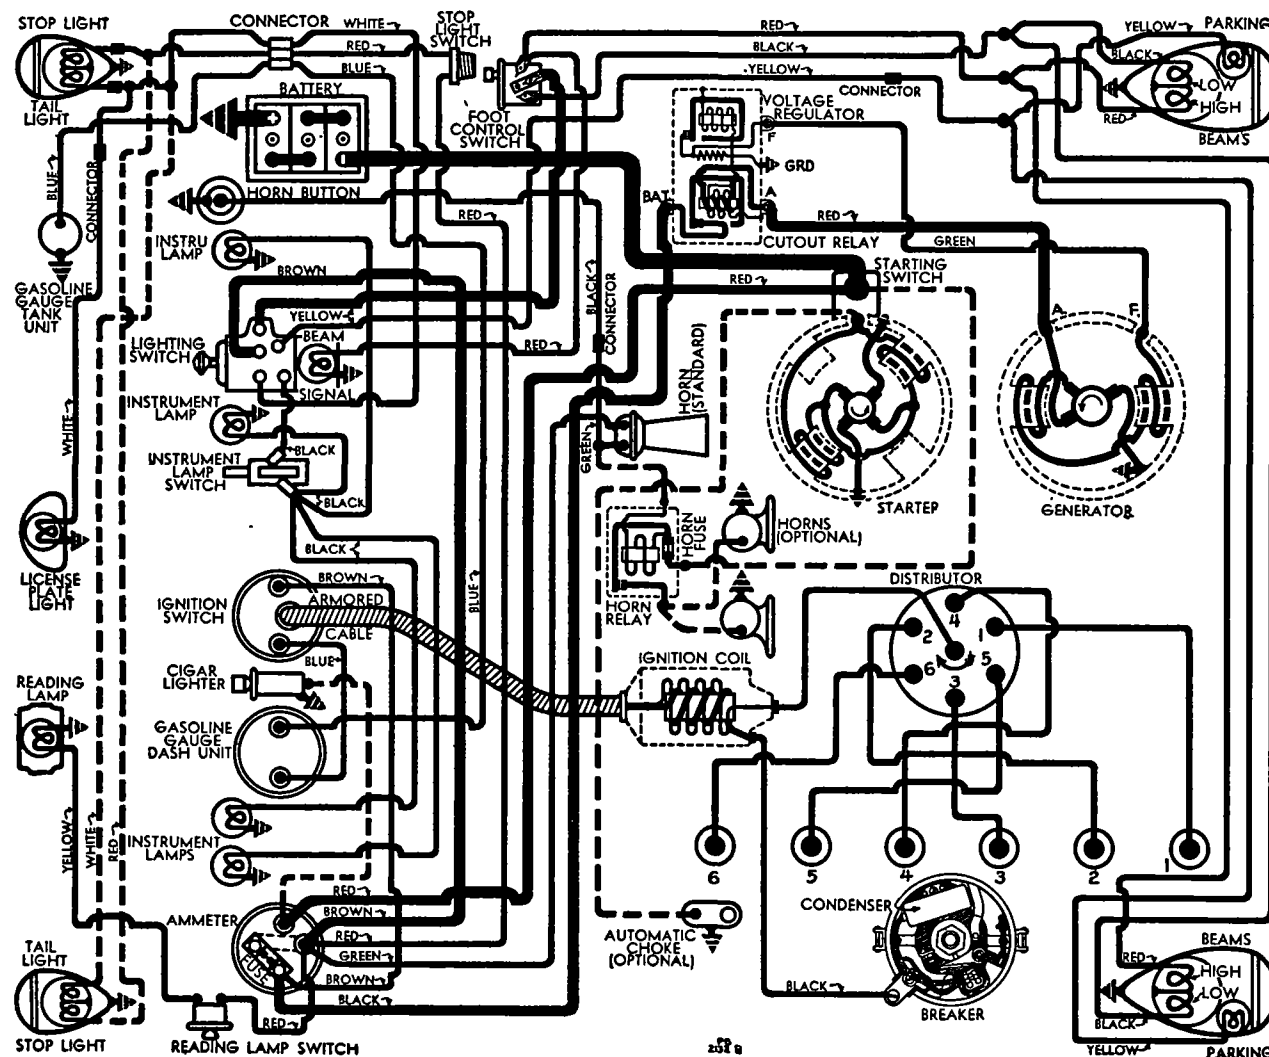

Flywheel Degrees		Piston Position
6.7-1 Std. CI. hd.	4° ATDC	.0068" ATDC.
7.0-1 Optl. AL. hd.	3° ATDC	.0038" ATDC.

**NOTE**—Crankshaft pulley marked 'DC' at TDC with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on generator regulator. With #6 piston on compression, turn engine over until piston reaches firing position (see table), stop when correct line on impulse neutralizer lines up with pointer on chain case cover. Loosen distributor hold-down screw, center pointer on scale, tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt.

**Timing (Using Synchroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer, fill in correct mark with white chalk.

**Manual Adjustment Setting**—After ignition set as above, road test car to give slight ping with wide open throttle at speeds of 10-30 M.P.H. To adjust, loosen hold-down screw and advance (counter-clockwise) or retard (clockwise) pointer on scale. Scale graduated in engine degrees. Do not advance pointer more than 5° on scale.

DELUXE M DELS

### CARBURETOR

#### P5 STANDARD & PT-57 COMMERCIAL

Holley (Chandler-Groves) Mod. A-25. Code No. 117-1. 1 1/4" downdraft type.

For complete data, refer to Carburetor Index.

#### P6 DELUXE

Carter (B & B) Model C6J1 (without crankcase ventilator). Model C6K1 (with crankcase ventilator). 1 1/4" single barrel downdraft types.

For complete data, refer to Carburetor Index.

#### P5 & P6 ECONOMY

Carter (B & B) Model B6H1 (without governor), Model B6J1 (with governor). Single barrel downdraft type. **NOTE**—Approximately first 25 cars with B6H1 carburetors equipped with incorrect gasket (1A-32) under carburetor flange. This should be changed to 1A-33 (with 4 slots). Original gaskets may cause poor mileage.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and choke valve wide open (fast idle inoperative), adjust throttle stopscrew so that idle speed is approximately 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting 3/4 (Ch-Gr), 1/2-1 1/4 (P6), 1/4-3/4 (Econ. B & B) turns of screws from inner position. Readjust throttle stopscrew for correct idling speed. **NOTE**—Car manufacturer recommends use of vacuum gauge. Set for highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (Short stroke)—Extremely warm weather or altitudes above 3000 feet.

Center Hole—Normal summer temperatures.

Outer Hole (Long stroke)—Winter temperatures.

**Fast Idle**: Used on Chandler-Groves and Carter (B & B) except Economy Models. Not adjustable.

**Throttle Cracker**—Consists of an interconnecting linkage between the starter pedal and the accelerator rod by which the throttle valve is opened slightly when starter pedal is depressed. Adjusting screw is located on forward side of throttle cracker lever directly above starter switch.

**Automatic Choke**: Sisson AC-758B optional equipm't.

For complete data, refer to Carburetion Equip. Index.

### CARB. EQUIPMENT

**Air Cleaner**—AC. #1528196 oil-wetted type standard. #1528197 oil-bath type optional used in conjunction with oil vent cleaner #1525313.

**Fuel Pump**—AC. Type B #1522995 diaphragm type. Type AL #1523137 fuel & vacuum pump optional.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite (Motometer) Electric.

Dash: NG8743D (P5), NG8702D (P6). Tnk: NG8697T.

For complete data, refer to Carburetion Equip. Index.

### BATTERY

**Willard Type WHT-1-90 (Regular), RHT-1-90 (Export)**. 6 volt, 13 plate, 90 AH capacity (20 hr. rate). **Starting Capacity**—114 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.0 minutes. Five second voltage—4.12 volts.

**Grounded Terminal**—Positive (+) to transmission. **Dimensions**—Length 9 1/16" (WHT), 8 15/16" (RHT). Width 7 1/16". Height 8 7/32 (WHT), 8 13/16" (RHT).

**Location**—Left side under driver's seat.

C NTINUED ON NEXT PAGE

## CONTINUED FR M PRECEDING PAGE

**Radio Battery**—Willard, Type WHT-2-105, RHT-2-105 (Special Export). 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).  
**Starting Capacity**—133 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 3.9 minutes. Five second voltage—4.27 volts.  
**Dimensions**—Length 10 5/16". Width 7 1/16". Height 8 13/16".  
**Grounded Terminal & Location**—As above.

## STARTER

**P5—Auto-Lite MZ-4056.** Armature No. MZ-2108.  
**P6—Auto-Lite MAW-4009.** Armature MAW-2030.  
**P5 Canada—Auto-Lite MAW-4009.** Arm. MAW-2030.  
**RHD Exp.—Auto-Lite MAW-4011A.** Arm. MAW-2030.  
**Drive**—Manual (solenoid on RHD Export) operated positive pinion shift through overrunning clutch.  
**Rotation**—Counter-clockwise at commutator end.  
**Cranking Engine**—Approx. 160 amperes at 5 volts.  
**Brush Spring Tension**—42-53 ozs. (new brushes).

## Performance Data—MZ Starters

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.	420
11.8 "	Lock	4.	560

## Performance Data—MAW Starters

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.55 "	Lock	3.	505
18. "	Lock	4.	670

**Removal:**—Flange mounted on left front face of fly-wheel housing. Disconnect wire connections (tape battery lead), oil filter lines (if so equipped), and 2 clips on linkage. Remove two fastening bolts.

**Starting Switch:** Auto-Lite SW-2677A. On starter, operated by pinion shift (starter pedal).  
**RHD EXPORT NOTE**—Cars with MAW-4011A starter use Auto-Lite SS-4203 Solenoid controlled through relay by pushbutton on instrument panel.  
*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

## STANDARD MODEL

**Auto-Lite Model GBM-4606C-1.** Arm. GBM-2065F. Third brush control type used with Cutout Relay. **Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate (brush held in position by friction). **Commutator Bar Method**—Standard third brush setting (for maximum output as shown in table below) 4 commutator bars between third brush and insulated (nearest) main brush.  
**Maximum Charging Rate**—18 amperes (cold), 15.2 (hot), 8.3 volts, 2500 RPM.

Cold Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	800	0	6.4	850
4	6.8	950	4	6.9	1050
8	7.25	1125	8	7.4	1250
12	7.7	1375	12	7.9	1680
16	8.1	1800	15.2	8.3	2500
18	8.3	2400			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—50-60 ozs. (new brushes).  
**Field Current**—3.90-4.20 amperes at 6.0 volts.  
**Motoring Current**—5.7-6.3 amperes at 6.0 volts.  
**Removal & Belt Adjustment:** Same as given below.

## GENERATOR

## DELUXE MODEL

**Auto-Lite Model GDF-4801A.** Armature No. GDF-2006F. Third brush control type with external voltage regulation. Ventilated by fan on drive pulley. **Charging Rate Adjustment**—Disconnect wire on generator at 'F' terminal, ground terminal. Connect ammeter in line at 'A' terminal. Connect voltmeter between 'A' terminal and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 28-32 amperes at 8.0 volts, generator at room temp. 70°F. Actual charging rate controlled by regulator.  
**Commutator Bar Method**—Shift third brush until 2 to 2½ commutator bars are exposed between brush and insulated (nearest) main brush.  
**Maximum Charging Rate**—As given above.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	1000
4	6.8	1030	4	6.8	1140
8	6.8	1140	8	6.85	1280
12	7.0	1300	12	7.1	1440
16	7.25	1460	16	7.3	1640
20	7.45	1650	20	7.55	1840
24	7.65	1880	24	7.75	2220
28	7.9	2220	28.3	8.0	3200
32	8.0	3100			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.90-2.10 amperes at 6.0 volts.  
**Motoring Current**—5.3-5.9 amperes at 6.0 volts.  
**Belt Adjustment:**—Swing generator away from engine until 40-50 lb. reading indicated on scale attached to generator frame.

**Removal:**—Pivot mounted at left front of engine. To remove, take out two pivot bolts and one clamp bolt.

## GENERATOR

## SPECIAL EQUIPMENT

**State Police: Auto-Lite GDA-4801A.** Used with Model VRB-4004B Regulator. See 1938 Dodge Model D8 pages for data on this generator and regulator.

**City Police: Auto-Lite GCB-4802A.** Used with Model VRB-4009A Regulator. See 1939 De Soto Model S6 pages for data on this generator and regulator.

**Special Generators—Other Makes:**—Refer to Electrical Equipment Index for 'Special Generators' article for complete data on special Generators and Regulators

## CUTOUT RELAY

## STANDARD

**Auto-Lite Model CB-4014.** Mounted on generator. *For complete data, refer to Electrical Equipment Index.*  
**Cuts In**—6.5-7.25 volts.  
**Cuts Out**—5-2.5 amperes discharge current.  
**Contact Gap**—.015-.045".  
**Air Gap**—.010-.030" with contacts closed.

## REGULATOR

## DELUXE MODEL

**Auto-Lite Model VRD-4002B.** Voltage Type. Consists of Cutout Relay and Voltage Regulator on dash. *For complete data, refer to Electrical Equipment Index.*

## Cutout Relay

**Cuts In**—6.4-7.0 volts Cold.  
**Cuts Out**—5 ampere min., 3.0 amperes max. cold.

**Contact Gap**—.015" minimum.  
**Air Gap**—.034" min., .038" max. with contacts open  
**Measure at hinge end of core.**

## Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no. **To Check** (without breaking seal)—Connect ammeter in charging line at 'BAT' terminal on regulator, connect voltmeter between 'BAT' terminal and ground. Operate generator at speed equivalent to 30 M.P.H., charging fully charged battery until voltage is constant. Voltmeter reading should be within limits of 7.3-7.6 volts (cold—70°F), 7.1-7.4 volts (hot—140°F). See Regulator Setting above.  
**To Adjust** (with cover removed)—Change regulator armature spring tension slightly by bending lower spring hanger. Check setting as directed above.  
**Contact Gap**—.010-.020" (armature against stop pin)  
**Air Gap**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by foot control switch with lighting switch on.  
**Headlamp Adjustment**—Aim headlamps straight ahead (upper beam lighted, lenses in place, car unloaded) with center of hot spot 4" below center horizontal line of headlamps at 25 feet.  
**Headlamp Beam Indicator**—In light switch knob. Lighted when headlamp upper beam in use.

## Switches

**Lighting**—Plymouth Part No. 684038.  
**Instrument Panel**—Plymouth Part No. 685888.  
**Foot Dimmer**—Plymouth Part No. 659512.  
**Stop Light**—Plymouth Part No. 677112.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Park'g., Beam Indicator	1½	55
Instrum., Ign. Sw.	1½	55
Dome	15	87
Rear License	3	63

## MISC. ELECTRICAL

**FUSES:**—Lighting—20 ampere on back of ammeter.  
**Single Horn**—Early cars as shown on diagram. On later cars horn feed taken from regulator with 20 ampere fuse in connector on dash.  
**Dual Horns**—30 ampere on horn relay. NOTE—New long type (SFE-30) fuse used. Replaces 3AG type.  
**HORNS:**—Klaxon Model K-16 Type 2016 Single Horn Std., Auto-Lite Horn Set Model HC-5105 Twin Horns Optl. Twin horns operated by horn relay.  
**Horn Relay:**—Auto Lite Model HR-4101S. A 30 ampere fuse on base. Contacts Close—2.5-3.5 volts.  
**Contact Gap**—.026". Air Gap—.012-.017" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.  
**Bore**—3½". **Stroke**—4¾".  
**Displacement**—201.3 cubic inches.  
**Rated Horsepower**—23.44 (A.M.A.).  
**Developed Horsepower**—82 HP. (std. 6.7-1 head), 86 HP. (optl. 7.0-1 head) at 3600 R.P.M.  
**Compression Ratio & Pressure**—As follows:  
**Ratio** Pressure at 1000 RPM. At 100 RPM.  
 6.7-1 Std. C.I. head.....140-150 lbs.....Approx. 113 lbs.  
 7.0-1 Optl. Al. head.....150-160 lbs.....Approx. 117 lbs.  
**Vacuum Reading**—Steady 18-21" idling at 6 MPH.

## ENGINE

CONTINUED FROM PRECEDIN PA E

**PISTONS:**—Aluminum alloy, U-slot, cam ground type anodized finish. Length 3 11/16". Weight 14.56 oz. Removal—Pistons and rods removed from above. Clearance—Top .022". See Fitting New Pistons.

**Replacement Pistons:**—See Chrysler Shop Notes.

**Fitting New Pistons:**—Check piston size with micrometer at right angles to pin bosses at bottom of skirt. Fit piston with slight drag using .0005-.001" feeler between piston and cylinder wall. Piston should float through cylinder with feeler removed.

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—2 undercut compression, 2 slotted oil rings per piston, above pin.

Ring	Width	End Gap	Side Clearance
Compression	1/8"	.007-.015"	.0015-.003"
Oil Control	5/32"	.007-.015"	.0015-.003"

**Replacement Rings:**—See Chrysler Shop Notes.

**PISTON PIN:**—Diameter—55/64". Length—2 5/8". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston:**—Thumb push fit. Piston 100° F.

**Pin Fit in Rod Bushing:**—Thumb push fit at 70° F.

**Replacement Pins:**—Furnished std. & .003", .005", .008" oversize. Ream bushing and pin hole to size.

**CONNECTING ROD:**—Weight 29.13 oz. Length 7 15/16".

**Crankpin Journal Diameter:**—1 15/16".

**Lower Bearing:**—Removable steel-backed, babbitt-lined. Furnished std. & .002", .010", .012" undersize. Clearance—.0005-.0025". Sideplay—.0055-.0115".

**Bearing Adjustment:**—None. Install new bearings with bosses engaging grooves in rod and cap.

**Installing Rods:**—Install rods with wide portion of bearing to rear on #1, 3, 5, to front on #2, 4, 6. Oil spit hole to camshaft (all rods).

**CRANKSHAFT:**—4 bearing type, 7 counterweights.

**Journal Diameters:**—2 1/4" all bearings.

**Bearing Type:**—Steel-backed, babbitt-lined.

**Clearance:**—.001-.002".

**Bearing Adjustment:**—See Chrysler Shop Notes for Bearing Removal and Adjustment, Front Main Bearing Cap Removal, and Crankshaft Front & Rear Oil Seals.

**Replacement Bearings & Bearing Caps:**—See Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#4) bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

**Journal Diameters:**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".

**Bearing Type:**—Removable steel-backed babbitt-lined bushings (except #4 machined in block).

**Clearance:**—.001-.003" (#1), .0015-.0035" (all others).

**NOTE:**—Replacement bushings finish reamed.

**End Thrust:**—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Timing Chain:**—Morse #1866 (restricted bend). Width 1". Pitch .500". Length 24" or 48 links.

**See Chrysler Special Shop Notes for front end removal for work on timing chain.**

**Camshaft Setting:**—Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

All valves	1 15/32"	340-.341"	4 25/32"
------------	----------	-----------	----------

	Seat Angle	Lift	Stem Clearance
Intake	45°	5/16"	.001-.003"
Exhaust	45°	5/16"	.003-.005"

**See Chrysler Special Shop Notes for Exhaust valve seat insert removal and installation instructions.**

**Valve Guides:**—Install with round end up to 3/8" below top of block. Finish ream guides after installing

to .342-.343" Int., .344-.345 Exh.

**Valve Springs:**—Free length approx. 2 3/32". Limit of compression 1 9/32". Spring Pressure Length

Valve Closed	34-38 lbs.	1 3/4"
--------------	------------	--------

Valve Open	77-83 lbs.	1 7/16"
------------	------------	---------

**Valve Lifters:**—Mushroom type. Ream guides from above for following oversizes: .001", .008", .030", .060".

## VALVE TIMING

**Tappet Clearance:** .008" Int., .008" Exh. (hot). .010" Exh. setting recommended for sustained high speed driving. Valves accessible by removing right front wheel and wheel housing panel.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 6° ATDC. Close 46° ALDC.

**Exhaust Valves:**—Open 42° BLDC. Close 8° ATDC.

**To Check Timing:**—Set tappet clearance #6 intake valve at .011". This valve should open with piston 6° (.0153") past top dead center when 6° ATDC.

mark on crankshaft pulley at front of engine lines with pointer. Reset tappet cl. at .006" (hot).

## LUBRICATION

**LUBRICATION:**—Gear type oil pump on right of engine.

**Normal Oil Pressure:**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under plug on left side of engine. Operates at 40 lbs. Adjustable. Change to heavy (green) spring to increase pressure, light (red) spring to decrease.

**Crankcase Capacity:**—5 quarts (refill).

## COOLING

**Water Pump:** Centrifugal, belt driven packless type.

**See Water Pump Section for complete data.**

**Removal:**—Drain water, remove hood and side panels, disconnect inlet & outlet hoses, remove fan blades and pulley (attached by 4 cap screws), remove radiator core-to-shell bolts, lift out radiator, disconnect pump hoses, remove nuts from pump mounting studs and lift out.

**Thermostat:**—Bishop & Babcock. In outlet on hd. Setting—Start to open 150-155° F. Fully open 176° F.

**Water Capacity:**—14 quarts.

**Drain Valves:**—At lower left corner of radiator and on left side of block in front of distributor.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6, 11A6 (P-5 Taxi). Model #918, 917 (Taxi) stamped on cover. Single plate, dry disc type. New pressure plate oil baffle used. Spiral grooved type facings used on 11A6

**See Clutch Section for complete data.**

**Facings:**—Molded-woven (spiral grooved—Taxi only), 2 required. .133", 1/8" (Taxi) thick. I.D. 5 5/8", 6 1/2" (Taxi). O.D. 9 1/4", 11" (Taxi).

**Adjustment:**—Adjust stop screw (to rear of pedal) so that pedal arm just clears floor board. Pedal free movement must be 1 1/16". Adjusting nut provided on fork rod next to release fork.

**Removal:**—Remove transmission (see following), remove clutch housing underpan, mark cover and flywheel, remove cover bolts evenly, take out assembly from below.

## TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear type with synchro-mesh on second and high speeds.

**See Transmission Section for complete data.**

**Removal:**—Remove floor boards, battery cable, disconnect front and rear universals (see Propeller Shaft Center Bearing below for 7 pass. sedan), free hand brake cable at clevis. Take off nuts on mounting studs, disconnect clutch release fork pull-back

spring, free clevis pin on release fork rod, remove transmission cover with gear-shifter assembly and mounting stud nuts. Install two pilot studs and withdraw transmission.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal. Series 4200.

Ball and trunnion type with roller bearings. 2 used.

**NOTE:**—Three universals used on 7 pass. sedan.

**See Universals Section for complete data.**

**Propeller Shaft Center Bearing:**—Used on 7 Pass. models. See Chrysler Shop Notes for data.

## REAR AXLE

**REAR AXLE:**—Own make. Semi-floating, hypoid gear type with Hotchkiss drive.

**See Rear Axle Section for complete data.**

**Ratio:**—3.54-1 (P-5 Econ.). 3.73-1 (P-5 optl., P-6 Econ.). 3.9-1 (P-5 std., P-6 Coupe). 4.1-1 (P-6 Sedan). 4.3-1 (P-5.6 with 18" or 20" tires; P-6 7 pass.).

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Remove wheel, hub, and drum assembly (using screw type hub puller). Place block under brake pedal, disconnect brake line, remove backing plate and oil seal, pull axle shaft and bearing (Tool C-158). With shafts removed, carrier may be removed by disconnecting rear universal at flange, and removing housing cap screws.

**Wheel Bearing Adjustment:**—Controlled by shims at flanged ends of axle housing. With wheel and hub removed measure endplay with dial indicator.

To adjust remove backing plate (see above) and add or remove shims (equally at both sides) to proper clearance. Endplay—.003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco—Model 1162-U (front), 1163-U (rear). Direct acting, hydraulic type.

**See Shock Absorber Section for complete data.**

## FRONT SUSPENSION

**Front Suspension:**—Conventional tubular section axle, Reverse-Elliott ends, semi-elliptic springs.

**Kingpin Inclination:**—4 1/2-5 1/2° crosswise.

**Caster:**—2° (1-3°). Adjust by inserting wedge plates between springs and axle center.

**Camber:**—1/2° (1/4-3/4°). Not adjustable.

**Toe In:**—1/16" (0-1/8"). Turn tie rod to adjust.

**Steering Geometry:**—Outer wheel 20°. Inner 22°-50°.

## STEERING GEAR

**Steering Gear:**—Chrysler (Gemmer design Model 300) Worm-and-Roller type. See Gemmer 300 article.

**NOTE:**—RHD cars equipped with Gemmer Model 305.

**See Steering Gear Section for complete data.**

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand brakes at rear of transmission.

**See Brake Section for complete data.**

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Front Wheel:**—Front cylinder 1 1/4". Rear 1 3/8".

**Rear Wheel:**—Front cylinder 1 1/8". Rear 1 1/4".

**Drum:**—Centrifuge. Diameter 10" (11" on 7 Pass.).

**Lining:**—Moulded. Width 2". Thickness 13/64".

**Length (frt. shoe)** 10 9/32", 11 15/32"—7 pass., (rear shoe) 7 11/16", 7 31/32"—7 Pass.

**Clearance:**—.012" toe, .006" heel for each shoe.

**Braking Power:**—55% front, 45% rear.

**Hand Brake:**—External at rear of transmission.

**Adjustment:**—See Chrysler Shop Notes.

**Drum:**—Cast-iron. Diameter—6".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See Chrysler Shop Notes for directions.

### MODEL IDENTIFICATION

**ECONOMY MODEL NOTE:**—These cars have special Carburetor and rear axle ratio. Identified by 'E' in Eng. No. as follows: P7-E-1234 or P8-E-1234.

**SERIAL NUMBER:** On right front door hinge post.

	Detroit	Los Angeles	Evansville	Canada
P-7	1,298,001	3,110,001	9,150,401	9,603,586
P-8	10,630,001	3,222,001	20,027,001	9,358,626

**ENGINE NUMBER:**—First number P-8-1001. Stamped on left side of block between #1 and #2 cylinders. See Chrysler Shop Notes for Engine Number Lettering ('Special Standard' bore and bearing sizes).

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
6.7-1 Std. C.I. head	140-150 lbs.	Approx. 113 lbs.
7.0-1 Optl. Al. head	150-160 lbs.	Approx. 117 lbs.

**VACUUM READING:**—Steady 18-21" idling at 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** Champion Type J-8 or Auto-Lite A-7 (for Std. hd.). Champion H-10 (Al. hd.). 14 mm. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° Closed.

Distributor	Autom. Advance	Vacuum Adv.
IGS-4102A-2	13° at 1450 RPM	10° at 12"
IGS-4102B-2	12° at 1750 RPM	10° at 12"
IGS-4103-1	11° at 1850 RPM	10° at 14"
IGS-4103A-1	11° at 1850 RPM	10° at 17"

**IGNITION TIMING:**—See Ignition Timing.

Std. Setting—TDC. Crankshaft pulley 'DC' mark aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw 1/2-1 1/4 turns open (1/2-1 1/2 for B6M1). Idle speed setting 6 MPH.

Float Level—5/64" (5/32" for B6M1) from top of float (not seam) to top edge of bowl, valve seated.

Accelerating Pump—Center hole normal setting.

Fuel Pump Pressure: 4 1/2 lbs. (3 1/2 lbs. RHD cars) max.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. See that shaft and valve rotate freely. When installing coil, wind up free end 1/3 turn counter-clockwise and hook end over stop pin.

**VALVES:** See Valve Timing.

Tappet Clearance:—.006" Int., .008" Exh. hot. Remove right front wheel and housing panel for adjustment.

NOTE—Tappet screws are self-locking (no lock-nuts). .002" additional exhaust tappet clearance recommended for sustained high speed driving.

**STARTING:** See Battery, Starter Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, Type 8052.

**Ignition Lock:**—Yale & Towne.

**COIL:** Auto-Lite Model CL-4069 (P7), IG-4654 (P8), CL-4069X (P7 Canada). Service Winding (less switch & cable) CL-3224DS (for CL), IG-3224JS (for IG). Ignition Current—2 1/2 amperes idling, 5 1/2 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Models for 1939 as follows:

IGS-4103-1	U. S. cars to Eng. No. 67594
IGS-4103A-1	U. S. cars after Eng. No. 67594
IGS-4102A-1	Canada cars to Eng. No. 4660
IGS-4102B-2	Canada cars after Eng. No. 4660

Single breaker, 6 lobe cam, full automatic advance with vacuum spark control and Manual Adjustm't.

**Breaker Plate Identification—Maximum vacuum advance limited by slot (plate marked #10).**

**Breaker Gap—Set at .020".**

**Cam Angle or Dwell—38° (closed), 22° (open).**

**Breaker Arm Spring Tension—18-20 ounces.**

**Rotation—Clockwise viewed from top.**

#### Automatic Advance—IGS-4102A-2

10°.....	20°	17"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of 70 octane rating at low altitudes) shown below. See Manual Adjustment (following).

**NOTE**—Use premium fuel with HC 7.0-1 optl. head.

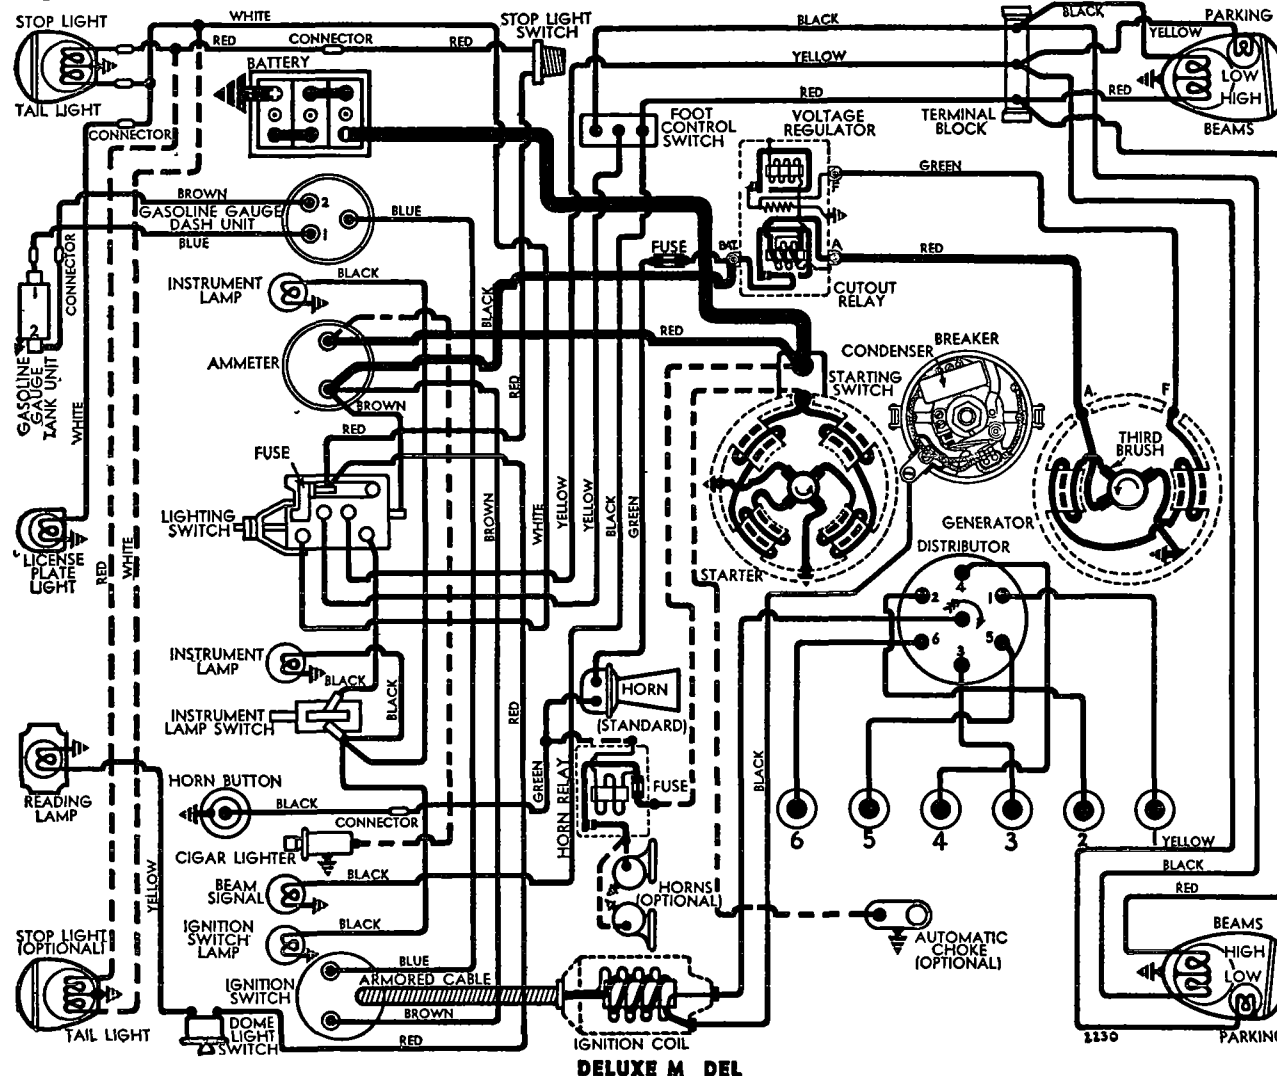

**Flywheel Degrees**      **Piston Position**  
All Engines ..... 0° at TDC ..... .0000" TDC.  
Crankshaft pulley marked 'DC' at TDC point with 15 one-degree graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on

generator relay. With #6 piston on compression, turn engine over until piston reaches firing position (see Initial Setting), stop when correct mark on crankshaft pulley lines up with pointer on chain case cover. Loosen advance arm hold-down screw, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check manual adjustment setting as directed below.

**Timing (Using Synchroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on crankshaft pulley (correct mark filled in with paint or chalk), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Standard ignition setting should be varied not more than 4° (piston 4° or .0068" before or after top dead center) so that slight ping noticeable between 10 and 30 MPH. when accelerating with wide open throttle for best performance. To adjust, loosen hold-down screw, rotate distributor counter-clockwise to advance spark (if no ping), clockwise to retard (if ping too severe).

## CARBURETOR

**CARBURETION**—Carburetor. Carter (Ball & Ball) Model D6A1 (early), D6A2 (later). 1½" downdraft. For complete data, refer to Carburetor Index.

**Economy Carburetor**—Carter (Ball & Ball) Model B6K1, B6M1. 1¼" downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and choke valve wide open (fast idle inoperative), adjust throttle stopscrew so that idle speed is approximately 300 R.P.M. or 6 M.P.H. Turn idle adjusting screw in until engine begins to hesitate or miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be ½-1¼ (D6A1, B6K1), ½-1½ (B6M1) turns of screw from inner closed or seated position. Readjust throttle stopscrew for correct idle speed. If vacuum gauge used, set for highest reading.

**Accelerating Pump**—Pump lever has three holes for pump link engagement. Set as follows:

**Inner Hole (Short Stroke)**—Extremely warm weather or altitudes above 3000 feet.

**Center Hole**—Normal summer temperatures.

**Outer Hole (Long Stroke)**—Winter temperatures.

**Throttle Cracker**—Interconnector between starting pedal and accelerator rod which opens throttle slightly when pedal depressed for starting. Adjust by loosening throttle pickup clamp bolt (above starter switch), shift clamp on rod.

**Fast Idle (D6A1, 2)**—Integral type. No adjustment.

**Automatic Choke**—Sisson Type AC-758B. Optional.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1528196 oil-wetted type Std., #1528839 heavy duty oil-bath type Optl.

**NOTE**—AC #1525313 crankcase vent cleaner used.

**Fuel Pump**—AC Type AT #1523647, Type B #1522995

RHD. Std., Type AS #1523648, Type AL #1523885

RHD. combination fuel-and-vacuum pump Optl.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite Electric. No. NG-9009D (dash unit), NG-8989T (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Auto-Lite CT-1-13** or **Willard SW-1-90**. 6 volt, 13 plate, 90 ampere hour capacity (20 hour rate).

**Starting Capacity**—114 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.0 minutes.

**Grounded Terminal**—Positive (+) to transmission.

**Dimensions**—Length 9". Width 7". Height 9".

**Location**—On left side under front seat.

## STARTER

**Domestic**: Auto-Lite MZ-4062. Armature MZ-2108.

**Canada**: Auto-Lite MAW-4016. Arm. MAW-2030.

**Drive**—Overrunning clutch, manual pinion shift.

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—150-175 amperes, 5.1 volts.

**Brush Spring Tension**—42-53 ozs. (new brushes).

## Performance Data—MZ-4062

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300

7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## Performance Data—MAW-4016

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18. "	Lock	4.0	670

Removal:—Flange mounted on left front face of fly-wheel housing. Remove cables, 2 clips on starter linkage, oil filter lines, 2 mounting bolts. Lift off. Starting Switch: Auto-Lite SW-2813. On starter. Manually operated by starter pedal (pinion shift).

For complete data, refer to Electrical Equipment Index.

## GENERATOR

## ROAD KING—FIRST CARS

Auto-Lite Model GBM-4606C-1. Arm. GBM-2065F. Third brush control type used with Cutout Relay. Charging Rate Adjustment—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate (brush held in position by friction). Commutator Bar Method—Set third brush four commutator bars from nearest main brush. Maximum Charging Rate—18 amperes (cold), 15.2 (hot), 8.3 volts, 2500 R.P.M.

Cold Performance Data			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	800	0	6.4	850
4	6.8	950	4	6.9	1050
8	7.25	1125	8	7.4	1250
12	7.7	1375	12	7.9	1680
16	8.1	1800	15.2	8.3	2500
18	8.3	2400			

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—50-60 ozs. (new brushes).

Field Current—3.80-4.20 amperes at 6.0 volts.

Motoring Current—5.7-6.3 amperes at 6.0 volts.

Removal:—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolt.

Belt Adjustment:—Swing generator away from engine until 40-50 lb. reading secured on scale attached to generator frame.

## GENERATOR

## ROAD KING &amp; DELUXE MODELS

Auto-Lite Model GDF-4801A. Armature No. GDF-2006F. Third brush type with Voltage Regulator. Charging Rate Adjustment—Disconnect wire on generator at 'F' terminal, ground terminal. Connect ammeter in line at 'A' terminal. Connect voltmeter between 'A' terminal and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate until output is 28-32 amperes at 8.0 volts, generator at room temp. 70°F. Actual charging rate controlled by regulator. Commutator Bar Method—Set third brush 2-2½ commutator bars from nearest main brush.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	920	0	6.4	1000
4	6.8	1030	4	6.6	1140
8	6.8	1140	8	6.85	1280
12	7.0	1300	12	7.1	1440

28	7.9	2220	28.3	8.0	3200
32	8.0	3100			

Rotation—Counter-clockwise at commutator end. Brush Spring Tension—53 ozs. max. (new brushes). Field Current—1.90-2.10 amperes at 6.0 volts. Motoring Current—5.3-5.9 amperes at 6.0 volts. Removal & Belt Adjustment: Same as given above.

## GENERATOR

## SPECIAL EQUIPMENT

Auto-Lite Model GCE-4804-B. Armature Number GBX-2006AF. 2brush type (current-voltage control). Wiring Note—Internal wiring for GCE generator & VRB regulator same as shown on '39 Dodge diagram. Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. Maximum Charging Rate—As given in table below.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	740	0	6.4	785
4	6.6	830	4	6.6	880
8	6.8	920	8	6.8	975
12	7.05	1015	12	7.05	1070
16	7.25	1100	16	7.25	1165
20	7.5	1190	20	7.5	1275
24	7.7	1280	24	7.7	1385
*30	8.0	1400	30	8.0	1580

\*—Current Regulator Setting. See Regulator data.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—64-68 ozs. (new brushes).

Field Current—1.66-1.84 amperes at 6.0 volts.

Motoring Current—5.03-5.57 amperes at 6.0 volts.

Removal & Belt Adjustment:—As given above.

SPECIAL GENERATORS:—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' article for complete data on special Generators and Regulators which may be found on these cars.

## CUTOUT RELAY

## ROAD KING—FIRST CARS

Auto-Lite Model CB-4014 (P7 for GBM Generator). Mounted on generator.

For complete data, refer to Electrical Equipment Index.

Cuts In—6.5-7.25 volts.

Cuts Out—5-2.5 amperes discharge current.

Contact Gap—.015-.045".

Air Gap—.010-.030" with contacts closed.

## REGULATOR

## ROAD KING &amp; DELUXE MODELS

Auto-Lite Model VRD-4002B (for GDF Generator). Voltage Regulator. In case on dash.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay

Cuts In—6.4-7.0 volts Cold.

Cuts Out—.5 ampere min., 3.0 amperes max. cold.

Contact Gap—.015" minimum.

Air Gap—.034" min., .038" max. with contacts open.

## Voltage Regulator

Setting—7.3-7.6 volts at 70°F.

To Check (without breaking seal)—Connect ammeter in charging line at 'BAT' terminal on regulator, connect voltmeter between 'BAT' terminal and ground. Operate generator at speed equivalent to 30 M.P.H., charging fully charged battery until voltage is constant. Voltmeter reading should be within limits of 7.3-7.7 volts (cold—70°F), 7.1-7.4 volts (hot—140°F). See Regulator Setting above.

To Adjust (with cover removed)—Change regulator armature spring tension slightly by bending lower spring hanger. Check setting as directed above.

Contact Gap—.010-.020" (armature against stop pin)

Air Gap—.0595-.0625" with contacts just opening.

## REGULATOR

## SPECIAL EQUIPMENT

Auto-Lite Model VRB-4004A (for GCE Generator). Current-Voltage Regulator. In case on dash.

For complete data, refer to Electrical Equipment Index.

Cutout Relay & Voltage Regulator

Same as VRD-4002B regulator (see data above).

## Current Regulator

Setting—29-31 amperes (marked '30' on cover).

To Check (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories so that generator charges at peak rate and Current Regulator operates. Current should not exceed setting. Adjustment, Contact Gap, Air Gap—Same as for Voltage Regulator (see above).

## LIGHTING

LIGHTING:—Headlamps—Corcoran-Brown pre-focused type. Upper and lower beams controlled by foot switch on toeboard with light switch on.

Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 4" below lamp center hght.). Beam Indicator—Red light on instrument panel above speedometer. Lighted with upper beams on.

## Switches

Lighting—Chrysler No. 853295 or 852535.

Beam Selector—Chrysler No. 853323 or 659512.

Instrument—Chrysler No. 695943.

Stop Light—Chrysler No. 677112.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Stop and Tail	21-3	1158
Parking, Instrument	1½	55
Beam Indic., Ign. Switch	1	51
Dome	15	87
Rear License	3	63

## MISC. ELECTRICAL

FUSES:—Lighting. 20 ampere. On light switch.

Horn—20 ampere in connector at starter on single horns. 30 amp. on relay for duals.

Clock—2 ampere (when factory equipped).

HORNS:—Single. Klaxon Model K-16 Type 2016. Std.

Dual—Auto-Lite HH or HL-4001 (low pitch), HH or HL-4002 (high pitch), operated by horn relay.

Horn Relay:—Auto-Lite Model HR-4101. 30 ampere fuse mounted on base. Contacts Close—2.5-3.5 volts.

Contact Gap—.026". Air Gap—.012-.017" (closed).

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head type.

Bore—3½". Stroke—4½". Displacement—201.3 cu.ins.

Rated Horsepower—23.44 (A.M.A.).

Developed Horsepower—82 @ 3600 RPM. (Std. 6.7-1

hd.). 86 @ 3600 RPM. (Optl. 7.0-1 Al. hd.).

Compression Ratio & Pressure—As follows:

Ratio Pressure at 1000 RPM. At 100 RPM.

6.7-1 Std. C.I. head...140-150 lbs. Approx. 113 lbs.

7.0-1 Optl. Al. head...150-160 lbs. Approx. 117 lbs.

Vacuum Reading—Steady 18-21" idling at 6 M.P.H.

PISTONS:—Aluminum alloy, U-slot, Cam-ground, with

Anodic finish. Length 3 11/16". Weight 14.56 ozs.

Removal—Pistons and rods removed from above.

Clearance—Top .021". Skirt .0001-.0011".

Original Bore & Piston Sizes, Replacement Pistons:—

See Chrysler Shop Notes for sizes and markings.

Fitting New Pistons:—Use micrometers. Check piston at bottom of skirt at right angles to pin bosses. With piston and wall dry, piston should pass through bore of own weight with slight drag (pin removed),

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**Installing Pistons:**—Slot away from camshaft.

**PISTON RINGS:**—Four rings, all above pin—#1 Compression (upper inner edge beveled), #2 Comp. (lower edge stepped), #3 & 4 (slotted oil rings).

Ring	Width	End Gap	Side Clearance
Comp. (Top)	1/8"	.007-.015"	.002-.004"
Comp. (#2)	1/8"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.0015-.003"

**Replacement Rings:**—Furnished Std. and .005", .010", .015", .020", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2 3/8". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston:**—Thumb push fit. Piston 100°F.

**Pin Fit in Rod Bushing:**—Thumb push fit at 70°F.

**Replacement Pins:**—Std. & .003", .005", .008" oversize.

**CONNECTING ROD:**—Weight 29.13 oz. Length 7 15/16". Crankpin Journal Diameter—1 15/16".

**Lower Bearing:**—Removable steel-backed, babbit-lined. Furnished Std. & .002", .010", .012" undersize. Clearance—.0005-.0025". Sideplay—.0055-.0115".

**Bearing Adjustment:**—None (no shims). Install bearings with boss engaging groove in rod and cap.

**Installing Rods:**—Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:**—4 bearing type with 7 counterweights. Journal Diameters—2 1/4" all bearings.

**Bearing Type:**—Removable, precision type steel-backed, babbit-lined. Clearance—.001-.002".

**Bearing Adjustment:**—None (no shims). Replace bearings. For Front Main Bearing Cap Removal, Bearing Adjustment, and Crankshaft Front and Rear Oil Seals, refer to Chrysler Shop Notes.

**Replacement Bearings & Bearing Caps:** See Chrysler Shop Notes for complete data.

**End Thrust:**—Taken by flange faces on rear (#4) bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".

**Bearing Type:**—Removable, Steel-backed, babbit-lined bushings (except #4 machined in block). Clearance—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:**—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Timing Chain:**—Morse Type 1866-N, No. 2661. Width 1". Pitch .500". Length 24" or 48 links.

**Camshaft Setting:**—Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across the shaft centers.

**VALVES:**—

	Head Diameter	Stem Diameter	Length
All valves	1 15/32"	340-341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	5/16"	.001-.003"
Exhaust	45°	5/16"	.003-.005"

See Chrysler Shop Notes for Exh. Valve Seat Insert data.

**Valve Guides:**—Remove from above. Press new guides in (tapered end up) so top 7/8" below top of block, then finish ream to .342-.343" Int., .344-.345" Exh.

**Valve Springs:**—Free length 2 3/32". Limit of compression 1 9/32".

Valve Closed	Spring Pressure	Length
Valve Closed	34-38 lbs.	1 3/4"
Valve Open	77-83 lbs.	1 7/16"

**Valve Lifters:**—Mushroom type. Ream holes from above (pilot in valve stem guide) for new lifters .001", .008", .030", .060" oversize. Stem Diam. 5/8".

## VALVE TIMING

**Tappet Clearance:**—.008" Int., .008" Exh. (hot). .002" additional exhaust clearance recommended for sustained high speed driving. NOTE—Tappet screws self-locking type. Remove right front wheel and housing panel for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 6° ATDC. Close 46° ALDC.

**Exhaust Valves:**—Open 42° BLDC. Close 8° ATDC.

**To Check Timing:**—Set tappet clearance #6 intake valve at .011". This valve should open with piston 6° (.0153") past top dead center when 6° ATDC. mark on crankshaft pulley at front of engine lines up with pointer. Reset tappet cl. .006" (hot).

## LUBRICATION

**LUBRICATION:**—Gear type pump (right of engine).

**Normal Oil Pressure:**—30-45 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve:**—Under cap below starter. Opens at 40-45 lbs. To increase pressure use heavy (green) spring, to decrease use light (red) spring.

**Crankcase Capacity:**—5 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Capacity—14 quarts.

**Radiator Core Removal:**—See Chrysler Shop Notes.

**Water Pump:**—Packless type. See Water Pump Section for complete data.

**Thermostat:**—Bishop & Babcock. In head outlet. Setting—Start to open 157-162°F. Fully open 183°.

**Temperature Gauge:**—Motometer (Auto-Lite) No. H-9008. See article in Miscellaneous Section for data.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6, 11A6 (P-7 Taxi). Single plate, dry disc type. Marked #918 (9A6), 931 (11A6) on cover. Pressure plate oil-baffle and new Over-center return spring (hooked to pedal) See Clutch Section for complete data.

**Facings:**—Woven & compressed, 2 required. Inside Diam. 5 5/8" (9A6), 6 1/2" (11A6). Outside Diam. 9 3/4" (9A6), 11" (11A6). Thick. .133" (9A6), .125" (11A6). NOTE—Spiral grooved type facings used on 11A6.

**Adjustment:**—Pedal should just clear toeboard (adjust stop screw on lower end) and have 1" free movement (adjust nut on link rod at clutch fork).

**Removal:**—Remove floor board, unhook clutch fork pull-back spring and take out clevis pin in connecting link. Remove transmission (see Transmission Removal below), remove housing underpan, mark cover & flywheel, remove clutch cover bolts evenly.

## TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with steering column gear shift (P8). See Transmission Section for data.

**Transmission Control (P-8):**—Remote control type. See Transmission Section for complete data.

**Removal:**—Remove floor boards, disconnect battery ground cable, speedometer cable, front and rear universal joints (see Chrysler Shop Notes for Propeller Shaft Center Bearing on 7 Pass. models), free hand brake cable at clevis, disconnect gear shifter rod and selector cable at transmission case (P-8 only). Remove mounting stud nuts, take out cover capscrews and lift off cover assembly (with shift lever on P-7), install two pilot studs in upper mounting stud holes, withdraw transmission.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200. Ball and trunnion type with roller bearings. See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—On 7 pass. sedans. See Chrysler Shop Notes for servicing.

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive. See Rear Axle Section for complete data.

**Ratio:**—3.54-1 (P-7 Econ.), 3.73-1 (P-7 Spec., P-8 Econ.), 3.9-1 (P-7 Std., P-8 Coupe), 4.1-1 (P-8 Sedan), 4.3-1 (P-7, 8 with 18" or 20" tires, P-8 7 pass.). Backlash—.006-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal, remove axle shafts (see below), remove capscrews on carrier flange, pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, hub and drum assembly (use screw type hub puller), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate & oil seal, pull shaft & bearing.

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims equally (at both sides). Endplay—.003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Direct acting type. Domestic—Front 1110-C. Rear 1111-T, W (20" wh.). Exp.—Front 1114-C. Rear 1115-T, W (20" wh.). Adj. Exp.—Front 1134-E. Rear 1130-W, Y (20" wh.). Adj. See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs. See Front Suspension Section for complete data.

**Kinpin Inclination:**—5 1/4-6 1/2° (4 3/4-6°—7 pass.).

**Caster:**—Minus 1/4° to Plus 1 1/2° (plus 1/2-2 1/2° 7 pass.).

**Camber:**—0° preferred. Limits minus 1/4° to plus 1/2°.

**Minus 1/4° to Plus 3/4° (7 passenger).**

**Toe In—1/16" (0-1/8").** Set long tie rod to 31 11/16" (between ball centers). Adjust short rod only.

**Steering Geometry:**—Outer wheel 20°. Inner 22°30'.

## STEERING GEAR

**Steering Gear:** Chrysler (Gemmer design Model 300) Worm-and-Roller type. See Gemmer 300 article. NOTE—RHD cars equipped with Gemmer Mod. 305. See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake. See Brake Section for complete data.

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Drum:**—Centrifuge. Diameter 10", 11" (7 pass.).

**Lining:**—Moulded type. Width 2". Thickness 13/64".

**Length per shoe, Front 10 9/32", 11 15/32" (7 Pass.), Rear 7 11/16", 7 31/32" (7 Pass.).**

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See Chrysler Shop Notes for data.

**Drum:**—Cast-iron. Diameter—6".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

## MISC. MECHANICAL

**Power Operated Convertible Top:** Vacuum Power type. See Miscellaneous Section for complete data.

**FRONT END ASSEMBLY (UNIT) REMOVAL:**—Should be removed as a unit for work on front of engine. See *Chrysler Shop Notes* for directions.

### MODEL IDENTIFICATION

**ECONOMY MODEL NOTE:**—These cars have special Carburetor and rear axle ratio. Identified by 'E' in Eng. No. as follows: P9-E-1234 or P10-E-1234.

**SERIAL NUMBER:**—On right front door hinge post.  
 Detroit Los Angeles Evansville Canada  
 P9 ..... 1,378,001.....3,114,801.....9,062,201.....9,368,516  
 P10 .....10,883,001.....3,242,501.....20,063,001.....9,607,611

**ENGINE NUMBER:**—P9-1001 Up (P9), P10-1001 Up (P10). Left side of block between #1 and #2 cylinders. See *Chrysler Shop Notes* for Engine Number Lettering ('Special Standard' bore and bearing sizes). See *Economy Model Note* above.

### TUNE-UP

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
6.7-1 cast-iron hd.	145-155 lbs.	Approx. 115 lbs.
7.0-1 aluminum hd.	150-160 lbs.	Approx. 120 lbs.

**VACUUM READING:** Steady 18-21" idling (below 1000').

**FIRING ORDER:** 1-5-3-6-2-4. See wiring diagram.

**SPARK PLUGS:** Champion Type J-8 or Auto-Lite A-7B (for std. iron head), Champion Type H-10 or Auto-Lite Type AL-7A (Optl. HC aluminum hd.). 14 mm. Gaps—.025".

**NOTE:**—Spark plug tightening tension 26-32 ft. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:**—.020". **Cam Angle:**—38° Closed.

**Automatic Advance:**—(U.S.) 11° max. at 1850 RPM.

(Canada) 12° max. at 1750 RPM (distr. ° and RPM).

**Vacuum Advance:**—(U.S.) 10° with 17" vacuum.

(Canada) 7° with 15" vacuum (except early P9, P10 with IGS-4108A-1, 11° with 17" vacuum).

**IGNITION TIMING:**—See Ignition Timing.

**Std. Setting:**—TDC. Crankshaft pulley 'DC' mark aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Set idle adjusting screw ½-1¼ turns open (½-1½ for B6P1 Economy carburetor). Adjust for smooth idle. Idle speed setting 6 MPH.

**Float Level:**—5/64" from top of float (not seam) to top edge of bowl with needle valve seated.

**Accelerating Pump:**—Center hole normal setting.

**Fuel Pump Pressure:** 4¼ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

See that shaft and valve rotate freely. When installing coil, wind up free end ½ turn counter-clockwise and hook and over stop stud.

**CAUTION:**—Do not wind coil up more than ½ turn.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.006" Int., .008" Exh. (hot&idling).

.002" add'l exh. clearance desirable for sustained high speeds. **NOTE:**—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and fuel pump shield for access to valves.

**STARTING:** See Battery, Starter Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8197.

**Ignition Lock:**—Yale & Towne or Briggs & Stratton. B&S No. 80651. Key Series 1BP to 1000BP. Groove #24.

**COIL:** Auto-Lite Model No. IG-4661. Service Winding (less switch & cable) IG-3224JS. Mounted on dash. Ignition Current—2¼ amperes idling, 5½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A. Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Models for 1940 as follows:

Car Model Distributor

P9 & P10.....IGS-4109-1

P9 Canada up to Eng. No. P9C-1375.....IGS-4108A-1

P9 Canada after Eng. No. P9C-1375.....IGS-4108-1

P10 Canada up to Eng. No. P10C-1942.....IGS-4108A-1

P10 Canada after Eng. No. P10C-1942.....IGS-4108-1

Single breaker, 6 lobe cam, full automatic advance with vacuum spark control and Manual Adjustm't.

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and marked with number (#10—IGS-4109-1, #11—IGS-4108A-1, #7—IGS-4108-1) stamped on breaker plate.

**Breaker Gap:**—Set at .020". Limits .018-.022".

**Cam Angle or Dwell:**—38° closed, 22° open (distr.).

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Clockwise viewed from the top.

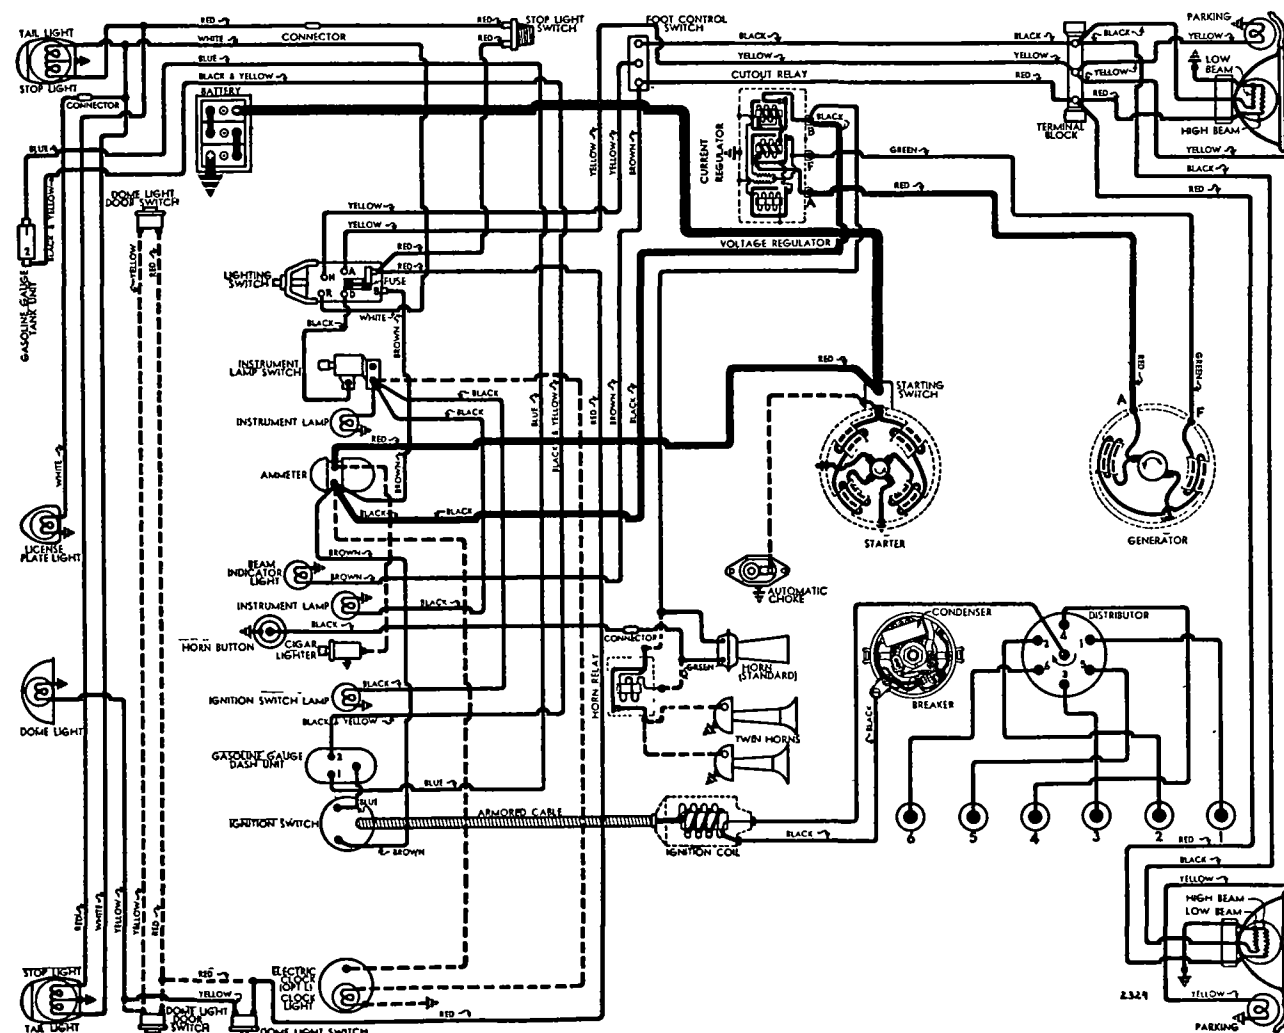

**Automatic Advance—IGS-4108-1, IGS-4801A-1**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	350	0.....	700
3 .....	400	6.....	800
6 .....	850	12.....	1700
9 .....	1300	18.....	2600
12 .....	1750	24.....	3500

**Automatic Advance—IGS-4109-1**

Start	350	0	700
3	400	6	800
6	950	12	1900
9	1500	18	3000
11	1850	22	3700

**Vacuum Spark Control:**—Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

**Vacuum Advance—IGS-4108-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0° .....	5"
1° .....	2° .....	6½"
3° .....	6° .....	9¼"
5° .....	10° .....	12½"
7° .....	14° .....	15"

Start.....	0° .....	5"
2° .....	4° .....	7¼"
5° .....	10° .....	10½"
8° .....	16° .....	13¾"
11° .....	22° .....	17"

**Vacuum Advance—IGS-4109-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0° .....	5"
2° .....	4° .....	7¾"
5° .....	10° .....	11"
8° .....	16° .....	14½"
10° .....	20° .....	17"

**Manual Adjustment**—At distributor. Provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate.

**IGNITION TIMING**

**IGNITION TIMING**—Initial setting (correct for fuel of 70 octane rating at low altitudes for both cast-iron and aluminum heads) shown below. See Manual adjustment (following) for correction (not to exceed 4° either way) dependent on fuel regularly used and operating conditions.

**Flywheel Degrees Piston Position**  
6.7 & 7.0-1 heads .....0° at TDC.....0000" at TDC.  
NOTE—Crankshaft pulley marked 'DC' at TDC with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor and battery terminal on generator regulator. With #8 piston on compression, turn engine over until piston reaches firing position (see Initial Setting), stop when correct mark on crankshaft pulley lines up with pointer on chain case cover. Loosen advance arm hold-down screw, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check manual adjustment setting as directed below.

**Timing (Using Synchroscope)**—Tool No. C-374. Clip lead to #1 spark plug, direct light on crankshaft pulley (correct mark filled in with paint or chalk), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Initial ignition setting should be varied not more than 4° (piston 4° or .0068" before or after top dead center) so that slight ping noticeable between 10 and 30 MPH. when accelerating with wide open throttle for best performance. To adjust, loosen hold-down screw, rotate distributor counter-clockwise to advance spark (if no ping noted), clockwise to retard spark (if ping too severe) not more than 4°. Scale graduated in engine degrees.

**CARBURETOR**

**CARBURETION**—Carburetor—Carter (Ball & Ball) Model D6A2. 1½" downdraft type. NOTE—Model D6C2 used on cars with automatic choke optl.

For complete data, refer to Carburetor Index.

**Economy Carburetor**—Carter (Ball & Ball) Model B6P1. 1¼" single barrel, downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative on D6A2 & D6C2), set throttle stopscrew for 6 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (½-1¼ turns open D6A2 & D6C2, ½-1½ turns open B6P1—turn screw in for leaner mixture). Readjust idle speed. NOTE—Car manufacturer recommends use of vacuum gauge. Set idle screw for highest reading on gauge.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (min. stroke)—Extreme hot temperatures or altitudes above 3000 feet.

Center Hole (med. stroke)—Normal setting.

Outer Hole (max. stroke)—Winter temperatures.

NOTE—If lean metering jets (High Alt. calibration) used at lower altitudes for increased economy, reduced speed and power will result (not recommended by manufacturer). See Carter (B&B) Jet Table in Carburetor Section for complete jet data.

**Float Level**—5/64" from top of float (not soldered seam) to top edge of float bowl.

**Fast Idle**—Used on D6A2, D6C2 only. Not adjustable.

**Throttle Cracker**—Interconnector between starting pedal and accelerator rod which opens throttle approximately one-third when pedal depressed for starting. Adjust by loosening throttle pickup clamp bolt (above starter switch), shift clamp on rod.

**Automatic Choke**—Sisson Type AC-758B. Optl.

For complete data, refer to Carburetion Equip. Index.

**CARB. EQUIPMENT**

**Air Cleaner**—AC #1528196 oil-wetted type standard.

**Fuel Pump**—AC Type AT #1523647 diaphragm type std. Type AS #1523648 comb. fuel-and-vacuum pump Optl. See article in Carburetion Equip. Section.

**Gasoline Gauge**—Auto-Lite Electric. No. NG-9335D (dash unit). No. NG-9329T (tank unit).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**Auto-Lite CT-1-13**.....P9 & P10

6 volt 13 plate, 90 ampere hr. capacity (20 hr. rate).

**Starting Capacity**—114 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.0 minutes. Five second voltage—4.1 volts.

**Grounded Terminal**—Positive (+) grounded to the transmission case.

**Dimensions**—Length 9 1/16". Width 7 1/16". Height 8 15/16".

**Location**—Left side under front seat.

**STARTER**

U.S.—Auto-Lite MZ-4062 or A. Arm. No. MZ-2108.  
Canada—Auto-Lite MAW-4016. Arm. MAW-2030.  
Drive—Overrunning clutch, manual pinion shift.  
Rotation—Counter-clockwise at commutator end.  
Cranking Engine—150-175 amperes, 5.1 volts.  
Brush Spring Tension—42-53 ozs. (new brushes).

**Performance Data—MZ Starters**

Torque	ft. lbs.	R.P.M.	Volts	Amperes
0	.....	4300	5.5	70
.65	"	2500	5.5	100

11.55	"	110	3.5	500
11.5	"	Lock	3.0	505
18.0	"	Lock	4.0	670

**Removal**—Flange mounted on left front face of fly-wheel housing. Remove cables, 2 clips on starter linkage, oil filter lines, 2 mounting bolts. Lift off.  
**Starting Switch**—Auto-Lite SW-2813. On starter. Manually operated by starter pedal (pinion shift).

For complete data, refer to Electrical Equipment Index.

**GENERATOR**

Auto-Lite Model GDZ-4801-A (Std.), GDZ-4801-B or GEB-4801A (Police). Armature No. GDZ-2006F (GDZ-4801A, B), GEB-2006F (GEB-4801A). Two brush type with current voltage control. Air-cooled. Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. Maximum Charging Rate—35 amperes (GDZ Gen.), 32 amperes (GEB Gen.), 8.0 volts, 2200 Gen. RPM (GDZ), 1400 RPM (GEB), at approx. 24 MPH (GDZ) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by voltage regulator and dependent on battery

\*—Current regulator setting.

C N T I N U E D N E X T P A G E

## C NTINUED FR M PRECEDIN PAGE

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—53 ozs. max. (GDZ Gen.), 64-68 ozs. (GEB Gen.), with new brushes.

Field Current—1.60-1.78 amperes at 6.0 volts (all).  
Motoring Current—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Gen.) at 6.0 volts.

Removal:—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

Belt Adjustment:—Loosen clamp and pivot bolts, swing generator out until scale (attached to field frame) reads 40-50 lbs., tighten bolts.

## GENERATOR

## SPECIAL EQUIPMENT

**SPECIAL GENERATORS:**—Other Makes—Refer to Electrical Equipment Index for 'Special Generators' article for complete data on special Generators and Regulators which may be found on these cars.

## REGULATOR

Auto-Lite Model VRP-4001A (GDZ Gen.), VRP-4001B (GEB Gen.). Current-voltage type. In case on dash. NOTE—For Two-way Radio (Neg. Grd.), VRP-4005A (GDZ Gen.), VRP-4005B (GEB Gen.) used. For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

Cuts In—6.4-6.6 volts at approximately 1000 generator RPM (VRP-4001A, 5A), 600 RPM (VRP-4001B, 5B).  
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" minimum.

Air Gap—.031" min., .034" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

Setting—7.2-7.5 volts at 70° F.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
Contact Gap—.012" Min. (armature against stop pin).

Air Gap—.048-.052" with contacts just opening.

## Current Regulator

Setting (VRP-4001A, 5A)—34-36 amperes (marked '35' (VRP-4001B, 5B) 31-33 amperes (marked '32').

To Check (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at speed equivalent to 30 MPH charging battery, turn on car lights and accessories so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed maximum setting noted above. If more than slight excess noted, regulator is defective.

Adjustment & Contact Gap—Same as for Voltage Regulator (above).

Air Gap—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown 'Sealed Beam' type. See article in Electrical Equipment Section.  
Headlamp Adjustment—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

Beam Indicator—Red light above speedometer dial. Lighted with Country (upper) beam in use.

## Switches

Lighting—Chrysler No. 854756, 854757 Optl.

Beam Selector—Chrysler No. 859974.

Instrument—Chrysler No. 853371.

Stop Light—Chrysler No. 677112.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instrument	1½	55
Beam Indicator, Ign. Sw.	1	51
Stop and Tail	21-3	1158
Rear License	3	63
Dome or Reading	15	87

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 amp. On back of light switch.

Clock—2 ampere. In connector behind clock.

Horns—No fuse used on either single or duals.

**HORNS:**—Single—Delco-Remy No. 1999911 standard.

Dual—Auto-Lite HO-5001 horn set. HL-4001 (low pitch), HL-4002 (high pitch) operated by horn relay.

Current Draw—Approx. 7 amps. single, 35-40 dual.

Horn Relay:—Auto-Lite Model HRC-4001 (no fuse).

Contacts Close—1.5-3.0 volts. Open—.5 volt.

Contact Gap—.026". Air Gap—.016-.020" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type.

Bore—3½". Stroke—4¾".

Displacement—201.3 cu. ins. Rated HP—23.44.

Developed Horsepower—84 at 3600 RPM (Std. hd.).

Compression Ratio and Pressure—As follows:

Ratio	Pressure at 1000 RPM	At 100 RPM
6.7-1 cast-iron hd.	145-155 lbs.	Approx. 115 lbs.
7.0-1 aluminum hd.	150-160 lbs.	Approx. 120 lbs.

Vacuum Reading—Steady 18-21" idling at 6 MPH.  
See Chrysler Shop Notes for Engine Removal data.

**PISTONS:**—Aluminum alloy, U-slot, cam ground, tin coated. Length 3 11/16". Weight 14.4 ozs. (stripped).  
Removal—Pistons and rods removed from above.  
Clearance—Top .011". Skirt .0001-.0011".

Original Bore & Piston Sizes, Replacement Pistons:—See Chrysler Shop Notes for sizes and markings.

Fitting New Pistons:—Use micrometers. Check piston at bottom of skirt at right angles to pin bosses. With piston and wall dry, piston should pass through bore of own weight with slight drag (pin removed) at normal room temperature (70°F).

Installing Pistons: Slot away from camshaft.

**PISTON RINGS:**—4 rings, all above pin—#1 Compression (upper inner edge beveled), #2 Comp. (lower outer edge stepped), #3 & 4 (slotted oil rings).

Ring	Width	End Gap	Side Clearance
Comp. (Top)	¾"	.007-.015"	.002-.004"
Comp. (#2)	¾"	.007-.015"	.0015-.0035"
Oil Control	5/32"	.007-.015"	.001-.0025"

Replacement Rings:—Std. & .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2⅝". Floating type. Pin hole in rod bronze bushed.

Pin Fit in Piston—Thumb push fit. Piston 100°F.

Pin Fit in Rod Bushing—Thumb push fit at 70°F.

Replacement Pins:—Std. & .003", .005", .008" oversize.

**CONNECTING ROD:**—Weight—30.7 ozs. (with bearings and bolts). Length—7 15/16".

Crankpin Journal Diameter—1 15/16".

Lower Bearing—Removable, precision type, steel-backed babbitt.

Clearance—.0005-.0025". Sideplay—.0055-.0115".

Bearing Adjustment:—None (no shims). Install bearings with boss engaging groove in rod and cap.

Replacement Bearings: Refer to Chrysler Shop Notes.

Installing Rods:—Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:**—4 bearing type with 7 counterweights.

Journal Diameters—2¼" all bearings.

Bearing Type—Removable, precision type, steel-backed, babbitt-lined. Clearance—.001-.002".

Bearing Adjustment:—See Chrysler Shop Notes for Bearing Removal and Adjustment, Front Main Bearing Cap Removal and Crankshaft Front & Rear Oil Seals.

Replacement Bearings & Bearing Caps: See Chrysler Shop Notes for complete data.

End Thrust:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

See Chrysler Shop Notes for camshaft removal.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

Timing Chain:—Morse Type 1883-N, No. 2661. Width 1". Pitch .500" (½"). Length 24" or 48 links.

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length  
All valves 1 15/32" 340-341" 4 25/32"

Seat Angle Lift Stem Clearance

Intake 45° 5/16" .001-.003"

Exhaust 45° 5/16" .003-.005"

See Chrysler Shop Notes for Exh. valve seat insert data.

Valve Guides:—Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (use Tool CM-83), then finish ream to .342-.343" Intake, .344-.345" Exhaust.

Valve Springs:—Install with closely coiled ends to top. Free length 2 3/32". Spring Pressure Length

Valve Closed 34-38 lbs. 1¼"

Valve Open 77-83 lbs. 1 7/16"

Valve Lifters:—Mushroom type (remove from below). Stem diam. ⅝". Ream holes from above (pilot in valve stem guide). Oversizes .001", .008", .030", .060". Clearance in block—.000-.001".

## VALVE TIMING

Tappet Clearance:—.006" Int., .008" Exh. (hot & idling). .002" add'l exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel, lower housing panel and pump shield for access.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 6° ATDC. Close 46° ALDC.

**Exhaust Valves:**—Open 42° BLDC. Close 8° ATDC.

**Valve Timing Check:**—With .011" (cold) tappet clearance, #6 intake valve should open with #6 piston 6° or .0153" ATDC with 6th graduation after DC mark on crankshaft pulley aligned with pointer on chain cover. Reset tappet clearance .006" (hot).

### LUBRICATION

**LUBRICATION:**—Pressure (pump on right of engine).

See Chrysler Shop Notes for oil pump removal.

**Normal Oil Pressure:**—30-45 lbs. @ 30 MPH, 15 idling.

**Oil Pressure Relief Valve:**—Under plug below starter.

Opens at 40-45 lbs. To increase pressure use heavy (green) spring, to decrease use light (red) spring.

**Crankcase Capacity:**—5 quarts (refill).

### COOLING

**COOLING SYSTEM:**—Capacity—14 quarts.

See Chrysler Shop Notes for radiator core removal.

**Water Pump:**—Packless type with belt drive.

See Water Pump Section for complete data.

**Removal:**—Drain water. Remove fan belt. Disconnect pump inlet hose. Remove pump mounting stud nuts and lockwashers and move pump and fan assembly against radiator core. Remove 3 pump mounting studs. Lift pump and fan out.

**Thermostat:**—Bishop & Babcock or Fulton (Fulton only on P9). Starts to open 157-162°F. Fully open 183°.

**Temperature Gauge:**—Motometer (A-L) Type H-9334.

See Miscellaneous Section for complete data.

### CLUTCH

**CLUTCH:**—Borg & Beck Model 9A7, 11A6 (Taxi) with 'Borglite' member. #926 or #955 (9A7), #931 (11A6) stamped on cover. Single plate dry disc type with spiral grooved facings & pressure plate oil baffle. See Clutch Section for complete data.

**Facings:**—Spiral wound moulded woven, 2 used. Inside Diam. 8" (9A7), 6½" (11A6). Outside Diam. 9¼" (9A7), 11" (11A6). Thickness ⅛" (all).

**Adjustment:**—Pedal should just clear toeboard (adjust stopscrew on lower end) and have 1" free movement (adjusting nut on link rod at clutch fork).

**Removal:**—Remove release fork pull-back spring. Transmission (see following) and housing under-

pan. Disconnect release fork from pivot and pull out as far as possible. Mark cover and flywheel, remove clutch cover screws evenly, lower assembly out.

### TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift.

See Transmission Section for complete data.

**Transmission Control:**—Steering column shift Std.

See Transmission Section for complete data.

**Removal:**—Remove propeller shaft (loosen comp. flange nut if transmission to be disassembled—See Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, battery ground cable, hand brake cable, and gear shift rod and cable at transmission. Remove mounting stud nuts and lockwashers. Pull unit back, lower and remove from under car.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200 (3 & 5 pass.), Series 7200 (7 pass.). Roller bearings with ball & trunnion (4200), cross type (7200).

See Universals Section for complete data.

**Propeller Shaft Center Bearing:**—Used on 7 passenger sedans. See Chrysler Shop Notes for servicing.

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear. See Rear Axle Section for complete data.

**Ratio:**—3.54-1 (P9 Econ.). 3.73-1 (P9 Spec., P10 Econ.). 3.9-1 (P9 Std., P10 Coupe). 4.1-1 (P10 Sedan). 4.3-1 (P9, 10—18 or 20" whls.; P10 7 Pass.). Backlash—.006-.010". Screw adjustment.

**Removal:**—Disconnect drive shaft at rear universal. Remove axle shafts (see below) and capscrews on carrier flange. Pull carrier assembly out.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (Tool C-158). NOTE—Use Tool C-358 to pull oil washer, C-201, 2 to install.

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate, add or remove shims at both wheels equally. Endplay—.003-.008".

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Domestic—Delco Direct Acting.

Export—Delco Direct Acting or Delco Adjustable Direct Acting (Special Equip. Dom. also).

See Shock Absorber Section for complete data.

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Pos. ¼°. Limits 0° to Pos. ¾°.

**Caster:**—Neg. 1° to Pos. 1°. Not adjustable.

**Toe In:**—1/16" (0-⅛"). Turn both rods equally.

**Steering Geometry:**—Outer wheel 20°, Inner 22°.

### STEERING GEAR

**Steering Gear:** Chrysler (Gemmer design Model 300)

Worm-and-Roller type. See Gemmer 300 article.

NOTE—7 Pass. equipped with Gemmer Model 305.

See Steering Gear Section for complete data.

### BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand brake applies independent shaft brake. See Brake Section for complete data.

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Drums:**—Centrifuse. Diameter—10", 11" (7 pass.).

**Lining:**—Molded. Width 2". Thickness 13/64".

**Length per shoe:** Front—10 5/16", 11 15/32" (7 pass.), Rear—7 11/16", 7 31/32" (7 passenger).

**Clearance:**—.012" toe, .006" heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See Chrysler Shop Notes for data.

**Drum:**—Cast-iron. Diameter—8".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

### MISC. MECHANICAL

**Power Operated Convertible Top:** Vacuum Power type.

See Miscellaneous Section for complete data.

**HOOD LOCK, FRONT END ASSEMBLY & OIL PAN REMOVAL:**—See Chrysler Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge post.

Detroit Los Angeles Evansville Canada  
P11 15,000,101 3,121,501 22,001,001 9,821,241  
P12 11,123,001 3,269,301 20,105,001 9,616,761

**ENGINE NUMBER:**—P11-1001 & up (P11), P12-1001 & up (P12). On left side of block between #1 & #2 cyls. See Chrysler Shop Notes for Engine Number Lettering data ('Special Standard' bore and bearing sizes).

**ECONOMY MODEL NOTE:**—These cars have special Carburetor and Rear Axle ratio. Identified by 'E' in Eng. No. as follows: P11-E-1001 or P12-E-1001.

### TUNE-UP

**COMPRESSION:**—Ratio—6.7-1 cast-iron head std.

Pressure—145-155 lbs. at 1000 RPM or approx. 115 lbs. at cranking speed (std. head). 10 lbs. maximum variation between cylinders.

**VACUUM READING:**—Steady 18-20" idling (below 1000').

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—Auto-Lite A-7B. 14 MM. metric.

Gaps—.025".

**NOTE:**—Spark plug tightening tension 26-32 ft. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° Closed.

Automatic Advance—(U.S.) 11° max. at 1850 RPM.

(Canada) 12° max. at 1750 RPM (distr. ° and RPM).

Vacuum Advance—(U.S.) 10° max. with 17" vacuum.

(Canada) 7° max. with 15" vacuum. Distr. degrees.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Crankshaft pulley 'DC' mark aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw ½-1¼ turns open (½-1½ for B6P1 Economy carburetor). Adjust for smooth idle. Idle speed setting 6 MPH.

Float Level—5/64" from top of float (not seam) to top edge of bowl with needle valve seated.

Accelerating Pump—Center hole normal setting.

Fuel Pump Pressure: 4¼ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

See that valve and shaft rotate freely. When installing coil, place inner end in slot in valve shaft, wind free end up one turn only counter-clockwise

**VALVES:** See Valve Timing.

Tappet Clearance:—.008" Intake, .010" Exh. (hot & idling). .002" add'l. exh. clearance desirable for sustained high speeds. **NOTE:**—Self-locking tappet screws used. Remove right front wheel and lower wheel housing panel for access to valves.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8197.

Ignition Lock—Yale & Towne or Briggs & Stratton. B&S No. 80592. Key Series 1BP to 1000BP. Groove #24.

**COIL:** Auto-Lite IG-4661 (Dom.), IG-4668 (Canada).

Service Coil (less switch & cable) IG-3224 JS.

Ignition Current—2.25 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite IGS-4111-1 or IGS-4204-1 (U.S.), IGS-4113-1 or IGS-4202-1 (Canada). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and Manual Adjustment at distributor.

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and plate marked #10 (IGS-4111-1, IGS-4204-1), #7 (IGS-4113-1, IGS-4202-1).

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—38° closed, 22° open (distr. °).

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Clockwise viewed from above.

**Automatic Advance—IGS-4111-1, 4204-1**

Distributor	R.P.M.	Distributor	R.P.M.
Start.....	350	Start.....	700
3.....	400	6.....	800
6.....	950	12.....	1900
9.....	1500	18.....	3000
11.....	1850	22.....	3700

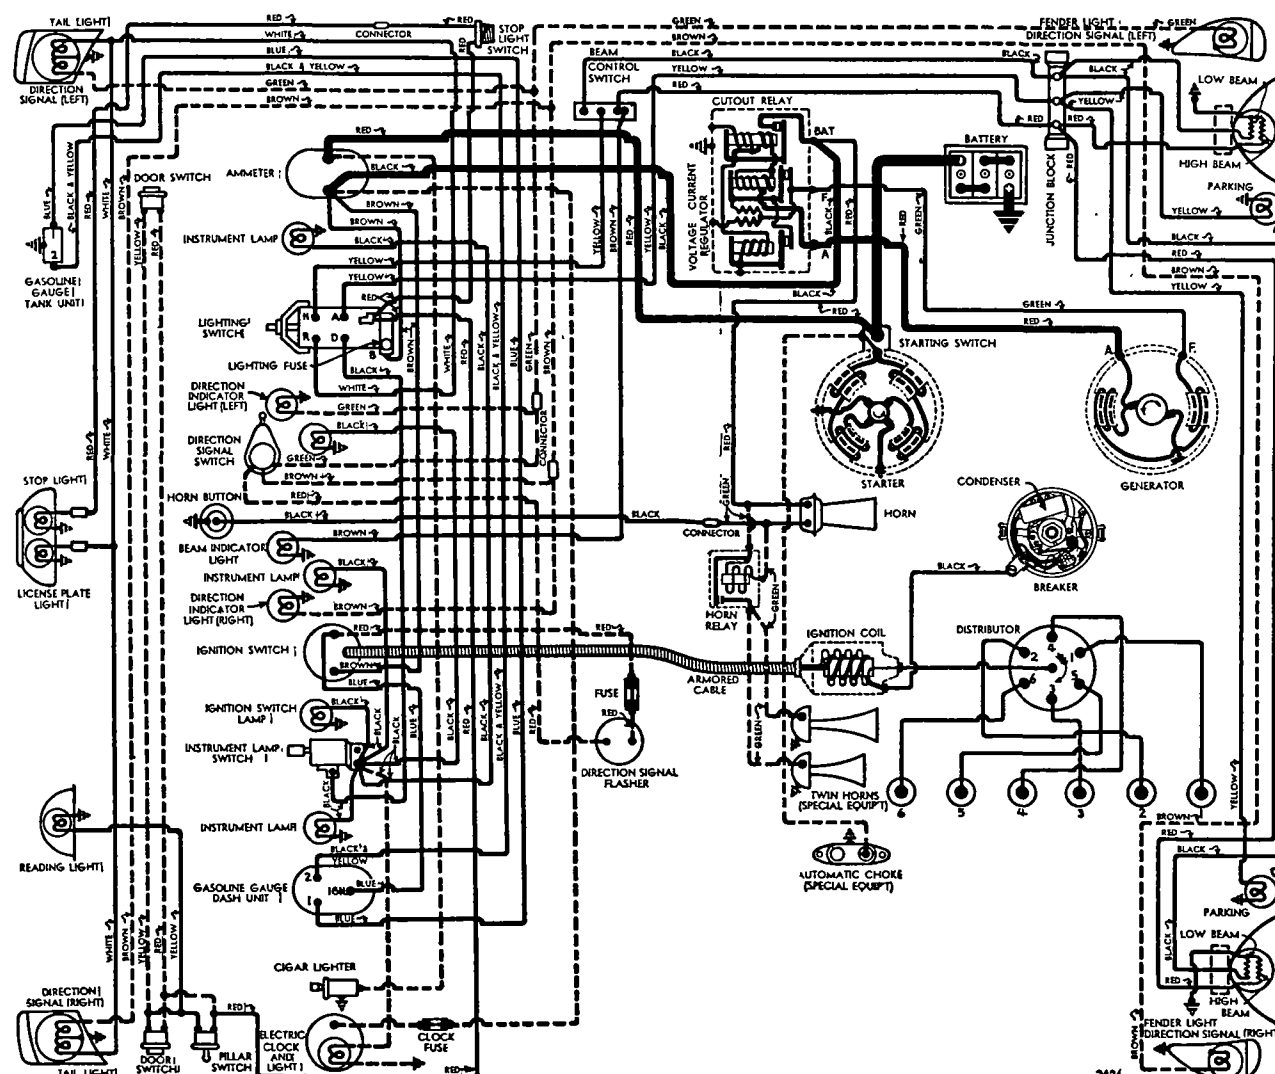

**Automatic Advance—IGS-4113-1, 4202-1**

Start.....	0°	5"
1° .....	2°	6 1/4"
3° .....	6°	9 1/4"
5° .....	10°	12 1/4"
7° .....	14°	15"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position (at TDC) and rotor opposite #1 segment in cap.

### IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of approx. 70 octane rating at low altitudes for all heads shown below. See Manual Adjustment also.

Flywheel Degrees	Piston Position
All cyl. heads.....	0° at TDC.....0000° at TDC

**NOTE**—Crankshaft pulley marked "DC" at TDC point with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on crankshaft pulley aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on crankshaft pulley (mark correct graduation with paint), idle engine and adjust distributor (as above) until mark appears in line with pointer.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

### CARBURETOR

**CARBURETION**—Carburetor—Carter (Ball & Ball) Models D6A2 (Std.), D6C2 (with Automatic Choke). 1 1/2" single barrel, downdraft types.

*For complete data, refer to Carburetor Index.*

**Economy Carburetor**—Carter (Ball & Ball) Model B6P1. 1 1/4" single barrel, downdraft type.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative on D6A2 & D6C2), set throttle stopscrew for 6 MPH min. idle speed. Adjust idle adjusting screw until engine fires smoothly (1/2-1 1/4 turns open D6A2 & D6C2, 1/2-1 1/2 turns open B6P1—turn screw in for leaner mixture). Recheck idle speed.

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet. Center Hole (med. stroke)—Normal summer setting. Outer Hole (max. stroke)—Winter setting.

**Float Level**—5/64" from top of float (not seam) to

top edge of bowl with valve seated. Use Tool C-449. **Metering Jet**—See Carter (B&B) Jet Tables in Carburetor Section for complete data.

**NOTE**—If lean metering jet (High Altitude calibration) used at lower altitudes for increased economy, speed and power are reduced (not recommended).

**Fast Idle**—D6A2 & D6C2 only. Not adjustable.

**Throttle Cracker**—Not adjustable.

**Automatic Choke**—Sisson AC-758B (on optl. D6C2). *For complete data, refer to Carburetion Equip. Index.*

### CARB. EQUIPMENT

**Air Cleaner**—AC #1529937 heavy duty oil-bath type.

**Fuel Pump**—AC diaphragm type pump. Replacement Exchange Pump No. 505.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Auto-Lite electric. No. NG-9651D (dash unit), No. 9329T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

### BATTERY

**BATTERY**—Auto-Lite CF-1-13 (P11), CF-1-13R (P12). 6 volt, 13 plate, 90 ampere hour (20 hour rate).

**Starting Capacity**—114 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.0 minutes. Five second voltage—4.1 volts.

**Grounded Terminal**—Positive (+) to engine.

**Dimensions**—Lgth. 9". Width 7 1/16". Hght. 9 5/16".

**Location**—Under hood in left fender shield.

### STARTER

Car Model	Auto-Lite Model	Armature Number

11.5 ".....	Lock.....	3.0.....	505
18.0 ".....	Lock.....	4.0.....	670

**Removal**—Flange mounted on left front face of flywheel housing. Disconnect wires (tape battery lead). Remove oil filter tubes, filter and 2 starter bolts.

**Starting Switch**—A-L SW-2813. On starter. Manually operated by starter (pinion shift) pedal.

*For complete data, refer to Electrical Equipment Index.*

### GENERATOR

**Auto-Lite Model GDZ-4801B (Std.)**, Models GEB-4801A, GEG-4818A (City Police & Taxicab), GEG-4818B (State Police). Two brush. With current and voltage regulation. Ventilated.

**Armature Nos.**—No. GDZ-2006F (GDZ-4801B), GEB-2006F (GEB-4801A), GEG-2006F (GEG-4818B).

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate**—35 amperes (GDZ Gen.), 40 amperes (GEG Gen.), 8.0 volts, 2200 Gen. RPM (GDZ), 1680 RPM (GEG), at approx. 24 MPH (GDZ) and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by voltage regulator, dependent on battery condition.

①—Current regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—53 ozs. max. (GDZ Gen.), 64-68 ozs. (GEB & GEG Gen.) with new brushes.

**Field Current**—1.60-1.78 amperes at 6.0 volts (all).

**Motoring Current**—4.16-4.60 amperes (GDZ Gen.), 4.5 amps. (GEB), 4.7-5.2 amps. (GEG) at 6.0 volts.

**Removal**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

### GENERATOR

#### SPECIAL EQUIPMENT

**SPECIAL GENERATORS**—Other Makes—Refer to Electrical Equipment Index for "Special Generators" article for complete data on special Generators and Regulators which may be found on these cars.

C NTINUED ON NEXT PAGE

C NTINUED FROM PRECEDING PA E

**REGULATOR**

Auto-Lite Regulator		Generator Model
Positive Grd.	Neg. Ground	
VRP-4001A	VRP-4005A	GDZ-4801-A, B
VRP-4001B	VRP-4005B	GEB-4801-A
VRP-4001F	VRP-4005E	GEG-4818-A, B

Current-Voltage types in single case on dash.  
For complete data, refer to Electrical Equipment Index.  
NOTE—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

**Cutout Relay**

Cuts In—6.4-6.6 volts at approx. 1000 gen. RPM (VRP-4001A, 5A), 600 RPM (1B, 5B), 820 RPM (1F, 5E).  
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).  
Contact Gap—.015" Min. Air Gap—.031-.034" with contacts open (measure at hinge end of core).

**Voltage Regulator**

Setting—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.  
To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage steady. Voltage should agree with setting.  
To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
Contact Gap—.012" min. (armature against stop pin).  
Air Gap—.048-.052" with contacts just opening.

**Current Regulator**

Regulator	Setting	Cover Mark
VRP-4001A & 5A	34-36 amperes	'35'
VRP-4001B & 5B	31-33 amperes	'32'
VRP-4001F & 5E	39-41 amperes	'40'

To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at max. rate with regulator operating. Current reading should agree with setting above.  
Adjustment, Contact Gap, Air Gap—Same as for for Voltage Regulator (above).

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown 'Sealed Beam' type. For data refer to Elec. Equip. Index.  
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
Beam Indicator—Red light on upper edge of panel above speedometer. Lighted with upper beams on.  
Direction Signal—Refer to Electrical Equip. Index.  
Switches  
Lighting—Plymouth No. 863823.  
Beam Selector—Plymouth No. 859974.  
Instrument—Plymouth No. 853371.  
Direction Signal—Plymouth No. 865763.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Park., Instr., Dir. Ind.	1½	55
Front Direction Signal	21	1129
Beam Ind., Ign. Switch	1	51
Rear Dir. Sig. & Tail	21-3	1158
Stop	21	1129
Rear License, Tail (No Sig.)	3	63
Reading or Dome	15	87

**MISC. ELECTRICAL**

**FUSES:**—Lighting—30 amp. On back of light switch.  
Direction Signal (late cars)—30 amp. Behind instr. panel in wire from ign. switch to flasher.  
**HORNS:** Auto-Lite or Delco-Remy types as follows:  
Single Delco-Remy 1999911, 18, 21, or 24 (6 volt), D-R 1999912 (12 volt), or Auto-Lite HA-4001 (6 volt).  
Dual—Auto-Lite Horn Set HO-5005, HO-5007, or HT-5005. HO-5003 (Canada). Low Note Auto-Lite HA-4028 or HA-4030, High Note HA-4029 or HA-4031.  
Current Draw—Approx. 7 amps. single, 35-40 dual.  
Horn Relay:—Auto-Lite Model HRC-4001 (no fuse).  
Contacts Close—1.5-3.0 volts. Open—.5 volt.  
Contact Gap—.026". Air Gap—.016-.020" (closed)

**ENGINE**

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type.  
Bore—3½". Stroke—4¾".  
Displacement—201.3 cu. ins. Rated HP—23.44.  
Developed Horsepower—87 HP at 3800 RPM.  
Compression Ratio—6.7-1 cast-iron head std.  
Compression Pressure—145-155 lbs. at 1000 RPM or 110-120 lbs. at cranking speed (125 RPM).  
Vacuum Reading—Steady 18-20" idling (below 1000').  
See Chrysler Shop Notes for Engine Removal directions.

**PISTONS:**—Two types used optionally: (1)—Aluminum alloy, U-slot type, or (2)—Steel-banded, aluminum alloy and steel. Both types cam ground & tin coated.  
Length—3 11/16" (Al.), 3 5/16" (steel-banded).  
Weight—14.4 ozs. (Al.), 14.5 ozs. (steel-banded).  
Removal—Pistons and rods removed from above.  
Clearance—Top land .028" (U-slot), .031" (steel banded). Skirt .0001-.0011" (U-slot), .001-.002" (steel).  
Original Bore & Piston Sizes, Replacement Pistons:—See Chrysler Shop Notes for sizes and markings.  
Fitting New Pistons:—Check piston size with micrometer at bottom of skirt at right angles to pin bosses. With piston and wall dry, piston should pass through bore of own weight (pin removed) with slight drag at normal room temperature (70° F.).  
Installing Pistons:—Slot away from valves (U-slot). Strut toward front of engine (steel-banded type).

**PISTON RINGS:**—4 rings, all above pin—#1 Compression (upper inner edge stepped), #2 Comp. (lower outer edge stepped), #3 and #4 (slotted oil rings).  
Ring Width End Gap Side Clearance  
Compr. (Top) 3/32" .007-.015" .0025-.004"  
Compr. (#2) ½" .007-.015" .0015-.0035"  
Oil Control 5/82" .007-.015" .001-.0025"  
Replacement Rings:—Std. & .003", .005", .010", .015", .020", .023", .025", .030", .040", .050", .060" oversize.

**PISTON PIN:**—Diameter—55/64". Length—2½". Floating type. Pin hole in rod bronze bushed.  
Pin Fit in Piston—Thumb push fit (piston at 100°).  
Pin Fit in Rod Bushing—Thumb push fit at 70° F.  
Replacement Pins:—Std. & .003", .005", .008" oversize.

**CONNECTING ROD:**—Weight 31.52 ozs. (with bearings and bolts). Length—7 15/16".  
Lower Bearing Diameter—1 15/16". See Engine Lettering Note in Chrysler Shop Notes for 'Special Std.' size.  
Lower Bearing—Removable, precision type, thin babbitt. Clearance .0005-.0015". Sideplay .0055-.0115".  
Bearing Adjustment:—None (no shims). Replace bearings. See Chrysler Shop Notes for instructions.  
Replacement Bearings:—See Chrysler Shop Notes.  
Installing Rods:—Wide portion of bearing to rear (#1, 3, 5) to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:**—4 bearings, 7 integral counterweights.  
Bearing Diameters—2¼". See Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' size.  
Bearing Type—Removable, precision type, thin babbitt on steel. Clearance—.001-.002".  
Bearing Adjustment:—See Chrysler Shop Notes for Front Main Bearing Cap Removal and Adjustment data.  
Replacement Bearings & Bearing Caps: See Chrysler Shop Notes for complete data.  
End Thrust:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007".  
**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. NOTE—2 types used (see Valve Timing).  
See Chrysler Shop Notes for Camshaft Removal.  
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".  
Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).  
Clearance—.0015-.0035".  
End Thrust:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".  
Timing Chain:—Morse Type 1883N, No. 2661. Width 1". Pitch .500" (½"). Length 24" or 48 links.  
Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.  
**VALVES:**—Head Diameter Stem Diameter Length  
All Valves 1 15/32" .340-.341" 4 25/32"  
Seat Angle Lift Stem Clearance  
Intake 45° ¾" .001-.003"  
Exhaust 45° ¾" .003-.005"  
See Chrysler Shop Notes for Exhaust Valve Seat Inserts.  
Valve Guides:—Remove from above. Press new guides in (stepped end down) with upper end ⅝" below top of block, ream to .342-.343" Int., .344-.345" Exh.  
Valve Springs:—Install with closely coiled end to top. Free length 2". Spring Pressure Length  
Valve Closed 40-45 lbs. 1¾"  
Valve Open 107-115 lbs. 1¾"  
Valve Lifters:—Mushroom type (remove from below). Stem diam. ⅝". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".  
Lifter Clearance in Block—.000-.001".

**VALVE TIMING**

Tappet Clearance:—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.  
Valve Timing:—See Camshaft Setting above.

Engine Numbers 1001 to 150391

Intake Valves—Open 12° BTDC. Close 44° ALDC.  
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.

Engine Number 150392 and Up

Intake Valves—Open 9° BTDC. Close 47° ALDC.  
Exhaust Valves—Open 47° BLDC. Close 9° ATDC.  
Valve Timing Check—With .014" (cold) tappet clearance #8 intake valve should open with #6 piston 12° or .060" (up to Engine No. 150391), 9° or .0343" BTDC (Engine No 150392 and Up) with 12th graduation (first cars), 9th graduation (later cars) before DC mark on crankshaft pulley aligned with pointer on cover. Reset tappet clear .008" hot.

**LUBRICATION**

**LUBRICATION:**—Pressur (pump n right of engine).  
See Chrysler Shop Notes for Oil Pump Removal.  
Normal Oil Pressure:—30-45 lbs. at 30 MPH and above.  
Oil Pressure Relief Valve:—Under plug below starter.

Opens at 40-45 lbs. Spring painted red, green or unmarked. If spring replaced, use same color spring. Crankcase Capacity:—5 quarts (refill).

### COOLING

**COOLING SYSTEM:**—Capacity 14 qts. *See Chrysler Shop Notes Radiator Core Removal & Water Distrib. Tube data.*

**Water Pump:**—Packless type with grease fitting.

*See Water Pump Section for complete data.*

**Thermostat:**—Bishop & Babcock or Fulton (Fulton only on P11). Starts to open 157-162° F. Fully open 183°. Temperature Gauge—Auto-Lite (Motometer) Vapor tension type. A-L Part No. H-9650.

*See Miscellaneous Section for complete data.*

### CLUTCH

**CLUTCH:**—Borg & Beck Model 9A7, 11A6 (Taxi) with 'Borglite' driven member. #955 (9A7), #931 (11A6) stamped on cover. Single plate, dry disc types.

*See Clutch Section for complete data.*

**Facings:**—Molded-Woven, 2 used. I.D. 6" (9A7), 6½" (11A6). O.D. 9¼" (9A7), 11" (11A6). Thickness ⅛".

**Adjustment:**—Pedal should just clear toeboard (adjust stopscrew an lower end of pedal & have 1" free travel (adjusting nut on connector link at fork).

**Removal:**—Remove release fork pull-back spring, transmission (see Transmission) and housing underpan. Disconnect release fork from pivot, pull out release bearing and sleeve. Mark cover and flywheel. Take out cover screws evenly, remove assembly.

### TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift.

*See Transmission Section for complete data.*

**Transmission Control:**—Steering column shift. Manual type Std. Power Shift (vacuum type) Optl. *See Transmission Section for complete data.*

**Removal:**—Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to clutch housing cap screws and nuts. Pull unit to rear, down and out of car.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200 (3 & 5 pass.), Series 7200 (7 pass.). Roller bearings, ball and trunnion type (4200), cross type (7200).

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:**—Used on 7 passenger sedans. *See Chrysler Shop Notes for servicing.*

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, Hypoid gears with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—3.73-1 (P11, 12 Econ.), 3.9-1 (P11 Coupe), 4.1-1 (P11 Sedan, P12 Coupe exc. Conv.), 4.3-1 (P12 5 & 7 pass. Sedans, Conv. Coupe), 4.56-1 (P11, 12 6.00x18" tires). Backlash .006-.010". Screw adjustmet.

**Removal:**—Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and bearing (using Tool C-158).

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008"

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco—Direct Acting (Dom. & Exp.), Adjustable Direct Acting (Dom. 20" wheels, and Export Models).

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Positive ¼°. Limits 0° to Pos. ¾°.

**Caster:**—Negative 1° to Positive 1°. Not adjustable.

**Toe In:**—1/16" (0-⅛"). Turn both rods equally.

**Steering Geometry:**—Inner wheel 22°0'. Outer 20°.

### STEERING GEAR

**Steering Gear:** Chrysler (Gemmer design Model 305, 335 on 7 passenger) Worm-and-Roller with 'push-pull' adjustments. *See Gemmer Model 305, 335 article.*

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake.

*See Brake Section for complete data.*

**Drums:**—10" centrifuse, 11" (7 passenger).

**Lining:**—Molded asbestos. 2" wide, 13/64" thick.

**Length per shoe:** Front—10 5/16", 11 15/32" (Seven passenger); Rear—7 11/16", 7 31/32" (7 passenger).

**Clearance:**—.012" Toe (top), .006" Heel, for each shoe.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—*See Chrysler Shop Notes for instructions.*

**Drum:**—Cast-iron. Diameter 6".

**Lining:**—Width 2". Thick. 5/32". Length 17 1/16".

### MISC. MECHANICAL

**Power Operated Convertible Top:** Vacuum Power type. *See Miscellaneous Section for complete data.*

**HOOD LOCK, FRONT END ASSEMBLY & OIL PAN REMOVAL:**—Refer to Chrysler Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On right front door hinge post.

	Detroit	Evansville	Los Angeles
P14S Deluxe	15,135,501	22,037,001	3,134,501
P14C Spec. Del.	11,399,501	20,148,001	3,297,001

**ENGINE NUMBER:**—First number P14-1001. On pad on left side of block between #1 and #2 cylinders. Refer to Chrysler Shop Notes for Engine Number Lettering data (Special Standard bore and bearing sizes).

Economy Engine Note—Economy models (with special carburetor) marked by letter 'E' inserted in Engine Number as follows: P14-E-1001.

### TUNE-UP

**COMPRESSION:**—Ratio—6.80-1. Cast-iron head.

Pressure—160-170 lbs. at 1000 RPM. or 125-135 lbs. at cranking speed of 125 RPM.

**VACUUM READING:**—18-21" steady, idling at 6 MPH.

**FIRING ORDER:**—1-5-3-6-2-4.

**SPARK PLUGS:**—Auto-Lite A7. 14 MM. Metric.

Gaps—.025".

NOTE—Spark plug tightening tension 26-32 ft. lbs.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° Closed. Automatic & Vacuum Advance—Maximum as follows:

Distributor	Automatic Adv.	Vacuum Adv.
IGS-4203A-1	9° at 1300 RPM	9° at 14"
IGS-4203B-1	10° at 1150 RPM	8½° at 16"
IGS-4203C-1	10° at 1150 RPM	7½° at 15"
IGS-4113-1 & 4202-1	12° at 1750 RPM	7° at 15"

**IGNITION TIMING:**—See Ignition Timing.

Std. Setting—TDC. Impulse neutralizer 'DC' mark aligned with pointer at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw ½-1¼ turns open. Adjust for smooth idle. Idle speed 6 MPH. Float Level—5/64" from top of float (not seam) to top edge of bowl with valve seated.

Accelerating Pump—Center hole normal setting.

Fuel Pump Pressure: 4¼ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

See that valve and shaft rotate freely. When installing coil, place inner end in slot in valve shaft, wind free end up one turn only counter-clockwise and hook free end over stop.

**VALVES:** See Valve Timing.

Tappet Clearance:—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

**STARTING:** See Battery, Starter Generator, Regulator.

### IGNITION

Ignition Switch:—Mitchellock Model 24-R, No. 8197.

Ignition Lock—Yale & Towne or Briggs & Stratton. B&S No. 80592. Key Series 1BP to 1000BP. Groove 24.

**COIL:** Auto-Lite Model IG-4676. Service Winding (less switch & cable) IG-3224JS. On engine dash.

Ignition Current—2¼ amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927A.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite Models for 1942 as follows:

P14	IGS-4203A-1 or 4203B-1
P14 with Iron Pistons	IGS-4203C-1
P14 Canada	IGS-4113-1 or 4202-1

Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and manual adjustment at distributor.

**Breaker Plate Identification:**—Maximum vacuum advance limited by slot and marked with number stamped on plate as follows:

#9—IGS-4203A-1

#8.5 or #8½—IGS-4203B-1

#7.5 or #7½—IGS-4203C-1

#7—IGS-4113-1 or IGS-4202-1

Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

### Automatic Advance—IGS-4203A-1

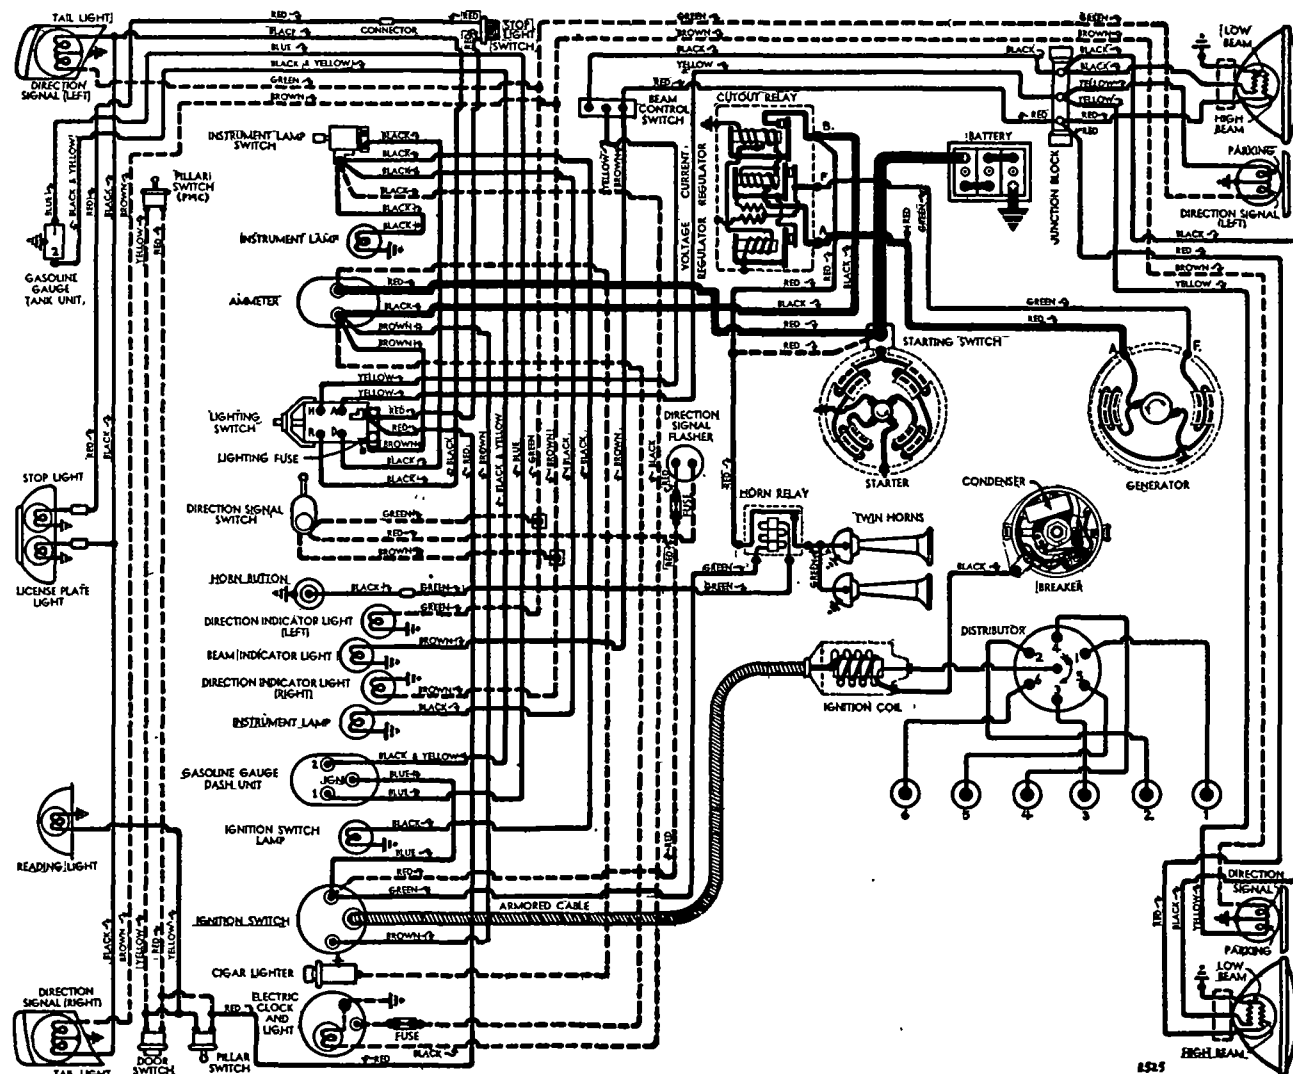

Distributor	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
5	700	10	1400
7	1000	14	2000
9	1300	18	2600

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. Installation—Install distributor with #1 piston in firing position (see table below) and rotor opposite #1 segment in cap.

## IGNITION TIMING

**IGNITION TIMING**—Initial setting (correct for fuel of approx. 70 octane rating at low altitudes for all engines) shown below. See Manual Adjustment (following) for Final Setting.

Flywheel Degrees		Piston Position	
All Engines	0° at TDC	0000°	at TDC.
NOTE—Impulse neutralizer marked 'DC' at TDC. with 15 (1°) graduations on either side.			

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following) for final setting.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle.

To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

## CARBURETOR

**CARBURETION**—Carburetor. Carter (Ball & Ball) Model D6G1. 1 $\frac{1}{2}$ " single barrel, downdraft type. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative on D6G1), set throttle stopscrew for 6 MPH min. idle speed. Adjust idle adjusting screw for smooth idling ( $\frac{1}{2}$ -1 $\frac{1}{4}$  turns open—turn screw in for leaner mixture). Readjust idle speed. NOTE—If vacuum gauge used, adjust for highest reading on gauge (see Vacuum Reading above).

**Accelerating Pump Setting**—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet. Center Hole (med. stroke)—Normal summer setting. Outer Hole (max. stroke)—Winter temperatures.

**Float Level**—5/64" from top of float (not seam) to top edge of bowl with valve seated. Use Tool C-449. Metering Jets—Refer to Carburetor Index for Carter (B&B) Downdraft Carburetor Jet Specification Table.

NOTE—If lean metering jet (High Altitude calibration) used at lower altitudes for increased economy, speed and power are reduced (not recommended).

**Fast Idle**—Non-adjustable type.

**Throttle Cracker**—Not adjustable.

**Automatic Choke**—Sisson Type AC-758B. Optional.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1542283 heavy duty oil-bath type. Use Replacement Filter Element Assembly #1542296.

**Fuel Pump**—AC 'AT' #1523847—Exch. No. 505 diaphragm type pump. Pressure—4 lbs.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite electric. No. NG-9913D (dash unit), No. NG-9329T (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY**—Auto-Lite PF-1-15 or Willard WT-1-15C. 6 volt, 15 plate, 95 ampere hour (20 hour rate).

**Grounded Terminal**—Positive (+) to engine.

**Location**—Under hood in left fender shield.

## STARTER

**STARTER**—Auto-Lite MZ-4105. Armature MZ-2106. MAW-4026 (Canada). Armature MAW-2030.

**Drive**—Overrunning clutch (manual pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150-175 amperes, 5.1 volts.

Performance Data—MZ-4105			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

## Performance Data—MAW-4026

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900 Min.	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
12.0 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal**—Flange mounted on left front face of fly-wheel housing. Disconnect wires (tape battery lead). Remove oil filter tubes, filter and 2 starter bolts.

**Starting Switch**—Auto-Lite SW-2813 or SW-2677A. On starter. Operated by starter pedal (pinion shift). For complete data, refer to Electrical Equipment Index.

## GENERATOR

### STANDARD

**GENERATOR (STD.)**—Auto-Lite GDZ-4801B (Domestic), GDZ-4801A (Canada) Armature No. GDZ-2006F. Two brush with current & voltage regulation.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate**—35 amperes, 8.0 volts, 2200 gen. RPM or approx. 25 MPH, and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data—GDZ-4801A, B

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0.....	6.4	925	0.....	6.4	1000
5.....	6.85	1060	5.....	6.85	1150
10.....	6.85	1200	10.....	6.85	1290
15.....	7.05	1340	15.....	7.05	1430
20.....	7.3	1480	20.....	7.3	1590
25.....	7.55	1620	25.....	7.55	1750
30.....	7.8	1760	30.....	7.8	1980
35①.....	8.0	1900	35.....	8.0	2250

①—Current regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal**—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

## GENERATOR

### SPECIAL EQUIPMENT

**SPECIAL GENERATORS**—Auto-Lite GEB-4801A (City Police), GEG-4818B (State Police). For complete data on these generators (and regulators used with these generators) refer to 1941 Plymouth pages (preceding).

## REGULATOR

**REGULATOR**—Auto-Lite VRP-4001A. Current-Voltage type. In case on left side of engine dash. NOTE—For negative battery ground use VRP-4005A.

For complete data, refer to Electrical Equipment Index.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## Cutout Relay

Cuts In—6.4-6.6 volts at approx. 1000 gen. RPM.  
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).  
Contact Gap—.015" minimum.  
Air Gap—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.  
To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
Contact Gap—.012" min. (armature against stop pin).  
Air Gap—.048-.052" with contacts just opening.

## Current Regulator

Setting—34-36 amperes (marked '35' on the cover).  
To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.  
To Adjust (with cover removed)—Same as for Voltage Regulator (above).

Contact Gap & Air Gap—Same as Voltage Regulator.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown 'Sealed Beam' type. For data, refer to Elec. Equipment Index.  
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
Beam Indicator—Small red light on instrument panel above speedometer. Lighted with upper beams on.  
Direction Signal—Refer to Electrical Equip. Index.

## Switches

Lighting—Plymouth No. 863823 or No. 910507 (with Lighting Circuit Breaker).  
Beam Selector—Plymouth No. 859974.  
Instrument—Plymouth No. 976098.  
Dome Light—Plymouth No. 317180 (Pillar Switch), No. 882943 (Door Switch).  
Stop Light—Plymouth No. 677112.  
Direction Signal—Plymouth No. 938926.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking (without Dir. Signal)	3.....	63
Front Dir. Signal & Parking	21-3.....	1158
Instrument	6.....	81
Beam & Dir. Ind., Ign. Sw.	1.....	51
Tail (without Direct. Signal)	3.....	63
Rear Direct. Signal & Tail	21-3.....	1158
Stop Light	21.....	1129
Rear License	3.....	63
Reading or Dome	15.....	87

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 amp. On back of light switch.  
Clock—2 ampere. In clock lead connector.  
Direction Signal—9 ampere. In fuse connector in wire from ignition switch to flasher.

**HORNS:**—Dual, Auto-Lite HA-4028 (low pitch), HA-4029 (high pitch) or horn set HO-5005 or HT-5001.  
Current Draw—35-40 amperes.

NOTE—Horns connected through ignition switch and are operative only with ignition switch 'on'.

Horn Relay—Auto-Lite Model HRL-4001.

Contacts Close—1.5-3.0 volts. Open—5 volt.

Contact Gap—.026". Air Gap—.016-.020" (closed).

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type.  
Bore—3¼". Stroke—4¾".  
Displacement—217.8 cubic inches. Rated HP—25.35.  
Developed Horsepower—95 at 3400 RPM.  
Compression Ratio—6.8-1 cast-iron head standard.  
Compression Pressure—160-170 lbs. at 1000 RPM or 125-135 lbs. at cranking speed. Variation 10 lbs. max.  
Vacuum Reading—18-21" steady idling at 6 MPH.  
Refer to Chrysler Shop Notes for Engine Removal data.

**PISTONS:**—Cast-iron, cam ground, ribbed, coated, lightweight type. Length—3½".  
Removal—Pistons and rods removed from above.  
Clearance—Top land .021". Skirt .0008-.0018".

Original Bore & Piston Sizes, Replacement Pistons:—Refer to Chrysler Shop Notes for sizes and markings.

Fitting New Pistons:—Check piston size with micrometer at bottom of skirt 90° from pin bosses. With piston and wall dry and clean, insert .0015"x½" feeler between cylinder wall and piston (piston inverted, pin removed) with feeler 90° from pin bosses. Feeler pull 10-15 lbs. (with piston and block at 70°F).

**PISTON RINGS:**—4 rings, all above pin. #1 & 2 Compression. (upper inner edge stepped). #3 & 4 Oil (slotted).

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.007-.015"	.0025-.004"
Oil Control	5/32"	.007-.015"	.001-.0025"

Replacement Rings:—Refer to Chrysler Shop Notes.

**PISTON PIN:**—Diameter—55/64". Length—2¾". Floating type. Pin hole in rod bronze bushed.

Pin Fit in Piston—Loose thumb push fit at 70°F. Pin should fall out if piston jarred.

Pin Fit in Rod Bushing—Thumb push fit at 70°F.

Replacement Pins:—Standard and .003, .008" oversize.

**CONNECTING ROD:**—Length—7 15/16".

Lower Bearing Diameter 2 1/16". See Engine Lettering 'Special Standard' Note in Chrysler Shop Notes.

Lower Bearing—Removable, precision type, thin babbitt. Clearance .001-.002". Sideplay .005-.011".

Bearing Adjustment:—Refer to Chrysler Shop Notes for bearing removal and fitting data.

Replacement Bearings: See Chrysler Shop Notes.

Installing Rods:—Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:**—4 bearings, 7 integral counterweights with new impulse neutralizer (vibration dampener).

Bearing Diameter—2½". See Engine Lettering Note in Chrysler Shop Notes for 'Special Standard' sizes.

Bearing Type—Removable, precision type, thin babbitt on steel. Clearance—.001-.002".

Bearing Adjustment:—Refer to Chrysler Shop Notes for bearing removal, adjustment, & Crankshaft Oil Seals.  
Replacement Bearings & Bearing Caps: See Chrysler Shop Notes for complete data.

End Thrust:—Taken by flange faces on rear (#4) main bearing. Endplay—.003-.007" (.003" desired).

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. Refer to Chrysler Shop Notes for Camshaft Removal.

Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

Clearance—.0015-.0035".

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

Timing Chain:—Morse Type 1883N, No. 2661. Width 1". Pitch .500" (½"). Length 24" or 48 links.

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	4 25/32"
Exhaust	1 13/32"	.340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.003-.005"

Refer to Chrysler Shop Notes for Exhaust Valve Seat Insert servicing and replacement data.

Valve Guides:—Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block, ream to .342-.343" Int., .344-.345" Exh.

Valve Springs:—Install with closely coiled end to top. Free length 2". Spring Pressure

Valve Closed	Length
40-45 lbs.	1¾"
Valve Open	107-115 lbs.

Valve Lifters:—Mushroom type (remove from below). Stem diam. 5/8". Ream holes from above (pilot in valve guide). Oversizes .001", .008", and .030".

Lifter Clearance in Block—.000-.001".

## VALVE TIMING

Tappet Clearance:—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking. Remove right front engine inspection shield between fender and frame for access to valves.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 12° BTDC. Close 44° ALDC.

Exhaust Valves—Open 50° BLDC. Close 6° ATDC.

Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston 12° or .061" BTDC with 12th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance at .008" hot.

## LUBRICATION

**LUBRICATION:**—Pressure (pump on right of engine). Refer to Chrysler Shop Notes for Oil Pump Removal.

Normal Oil Pressure:—30-45 lbs. above 30 MPH.

Oil Pressure Relief Valve:—Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

Crankcase Capacity:—5 quarts (refill).

## COOLING

**COOLING SYSTEM:**—Capacity—15 quarts.

*Refer to Chrysler Shop Notes for Radiator Core Removal and Water Distribution Tube servicing.*

**Water Pump:**—Packless type with grease fitting.  
*See Water Pump Section for complete data.*

**Thermostat:**—Bishop & Babcock or Fulton (Fulton on P14S). Starts to open 157-162°F. Fully open 183°. NOTE—By-pass thermostat on P14C must be installed with 2 by-pass ports to front, 2 to rear.

**Temperature Gauge:**—Auto-Lite (Motometer) Vapor tension type. Auto-Lite Part No. H-9912.  
*See Miscellaneous Section for complete data.*

## CLUTCH

**CLUTCH:**—Borg & Beck 9A7 (Std.), 11A6 (Taxi) with 'Borglite' driven member. #955 or 928 (9A7), 931 (11A6) stamped on cover. Single plate, dry disc types.  
*See Clutch Section for complete data.*

**Facings:**—Spiral woven, 2 used. I.D. 6" (9A7), 6½" (11A6). O.D. 9¼" (9A7), 11" (11A6). Thickness ⅛".

**Adjustment:**—Pedal should just clear toeboard (adjust stopscrew on lower end of pedal) and have 1" free travel (adjusting nut on connector link at fork). NOTE—Do not disturb turnbuckle on pedal link (controls pedal over-center spring tension).

**Removal:**—Remove transmission (see below), release fork pull-back spring and housing underpan. Disconnect release fork from pivot, pull out release bearing and sleeve. Mark cover and flywheel. Take out cover screws evenly, lower assembly out.

## TRANSMISSION

**TRANSMISSION:**—Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse) with remote shift.  
*See Transmission Section for complete data.*

**Transmission Control:**—Steering column shift. Manual type Std. Power Shift (vacuum type) Optl.  
*See Transmission Section for complete data.*

**Removal:**—Jack up front end of car. Remove propeller shaft (loosen mainshaft flange nut if transmission to be dismantled). Disconnect speedometer cable, hand brake cable at brake band, gearshift rods, vacuum and air hose (if Power Shift used). Remove transmission-to-clutch housing capscrews. Pull transmission to rear and lower out of car.

NOTE—When installing transmission, use pilot studs to prevent springing clutch plate.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit-Universal Series 4200. Ball and trunnion type with roller bearings.  
*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.1-1 Suburban, 3.9-1 All other models.

**Backlash:**—.006-.010". Screw adjustment.

**Removal:**—Hoist rear end of car, remove rear wheels. Disconnect brake hose at frame bracket, lower ends of shock absorbers and rear universal. Support axle housing, remove rear spring hold-down clips and withdraw assembly from car. NOTE—Carrier can be removed without taking out housing by removing axle shafts, disconnecting rear universal and removing carrier screws.

**Axle Shaft Removal:**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-319), block brake pedal, disconnect brake line at wheel cylinder, take off backing plate with oil seal, pull shaft and wheel bearing (use Tool C-158).

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Own make, direct acting hydraulic (same as Delco design). NOTE—Delco Direct acting, adjustable, shock absorbers used for export.  
*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs and direct acting shocks.  
*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4¾° to 6°.

**Camber:**—Positive ¼°. Limits 0° to Pos. ¾°.

**Caster:**—Negative 1° to Positive 1°. Not adjustable.

**Toe In:**—0-1/16". Turn both tie rods equally

**Steering Geometry:** Inner wheel 22° ± 1°. Outer 20°.

## STEERING GEAR

**Steering Gear:** Chrysler (Gemmer design 305) Worm-&-Roller with 'push-pull' adjustments. See Gemmer.  
*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies independent shaft brake.  
*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Drums:**—Centrifuse. Diameter 10".

**Lining:**—Molded asbestos. Width 2". Thick, 13/64".

**Length per shoe:** Front 10 5/16", Rear 7 11/16".

**Clearance:**—.012" Toe (top), .006" Heel, for each shoe.

**Braking Power:**—60% front wheels, 40% rear.

**Hand Brake:**—On drum at rear of transmission.

**Adjustment:**—See Chrysler Shop Notes for instructions.

**Drum:**—Cast-iron. Diameter 6".

**Lining:**—Woven asbestos. Width 2". Thickness 5/32". Length 16 11/16".

## MISC. MECHANICAL

**WINDSHIELD WIPER:**—Auto-Lite EWH-5001, 5003 (Conv. Coupe). Electric type with circuit-breaker.  
*See Miscellaneous Section for complete data.*

**Circuit Breaker:**—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

**Power Operated Convertible Top:** Vacuum Power type.  
*See Miscellaneous Section for complete data.*

## MODEL IDENTIFICATION

SERIAL NUMBER: On right front door hinge post.

	Detroit	Evansville	Los Angeles
1946 Deluxe	15,154,001	22,042,001	26,000,001
1947 Deluxe	15,206,936	22,053,040	26,003,589
1948 Deluxe	15,252,279	22,063,370	26,010,840
1946 Spec. Del.	11,496,001	20,165,001	25,000,001
1947 Spec. Del.	11,643,104	20,185,186	25,009,753
1948 Spec. Del.	11,854,386	20,233,168	25,035,586

ENGINE NUMBER: Stamped on boss on left front side of engine block between #1 and #2 cylinders.

## TUNE-UP

COMPRESSION: Pressure—120 lbs. at cranking speed.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUGS: Auto-Lite Type A-5. 14 mm. Metric. Gaps—.025".

IGNITION: See Coil, Condenser, and Distributor.

Breaker Gap—.020". Limits .018-.022".

Cam Angle or Dwell—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic &amp; Vacuum Advance—See Distributor.

IGNITION TIMING: See Ignition Timing.

Std. Setting—At Top Dead Center.

Timing Mark—"DC" mark on dampener aligned with pointer on chain case cover. Vary as follows:

OCTANE SELECTOR—Set for slight ping when accelerating with wide open throttle between 10-30 MPH.

CARBURETION: See Carburetor &amp; Carb. Equipment.

Idle Setting—With engine warm, set throttle stop-screw for 6 MPH. idle speed. Set idle adjusting screw 1/2-1 1/4 turns open (Carter B&amp;B), 1 1/4-2 1/4 turns open (Carter W1), adjust all models for smooth idle.

Idle Speed—6 MPH. hot or slow idle speed.

Float Level (Carter B&amp;B)—Top of the float (not soldered seam) 5/64" ± 1/64" below top edge of bowl.

Float Level (Carter W1)—1/2" from top of float at free end to machined surface (gasket seat) on bowl cover with valve closed (invert to check).

Float Level (Stromberg)—Fuel level 5/8" below top edge of bowl (even with bottom of inspection hole).

Accelerating Pump—Center Hole Normal Setting, Outer Hole (max.) Winter, Inner (min.) Summer.

Carter W1 carburetor does not have adjustment.

Fuel Pump Pressure: 3-4 1/2 lbs.

MANIFOLD HEAT CONTROL: Thermostatic coil type.

Install coil so approx. one full turn (335°) required to hook free end over stop stud for correct operation.

VALVES: See Valve Timing.

Tapet Clearance—.008" Intake, .010" Exh., Hot.

STARTING: See Battery, Starter, Generator, and Regulator.

## IGNITION

IGNITION SWITCH: Briggs &amp; Stratton or Mitchell. NOTE—No armored cable used.

Briggs &amp; Stratton—B &amp; S Switch No. 85985.

Mitchellock Type 42-R—No. E-10182 (Yale &amp; Towne lock), No. E-10663 (Hurd lock).

Lock Cylinder—Yale &amp; Towne, Hurd, or Briggs &amp; Stratton. B &amp; S No. 85915 (Key Series CA1-CA800).

COIL: Auto-Lite No. IG-4806 or IG-4809. Mounted above distributor on ignition cable bracket.

Ignition Current—2 1/4 amperes idling, 5 1/2 stopped.

CONDENSER: Auto-Lite Part No. IG-3927A.

Capacity—25-28 microfarad.

DISTRIBUTOR: Auto-Lite Model IGS-4207-1 (U. S.), IGS-4208B-1 (Canada). Automatic advance type with Vacuum Spark Control and Octane Selector.

Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Marked for identification by number: #10 (IGS-4207-1), #7 (IGS-4208B-1) stamped on plate.

Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

Automatic Advance—IGS-4207-1

Distributor	R.P.M.	Engine	R.P.M.
Start.....	350	0.....	700
3.....	400	6.....	800
5.....	700	10.....	1400
7.....	1000	14.....	2000
9.....	1300	18.....	2600

Automatic Advance—IGS-4208B-1

Start.....	350	0.....	700
3.....	400	6.....	800
6.....	850	12.....	1700
9.....	1300	18.....	2600
12.....	1750	24.....	3500

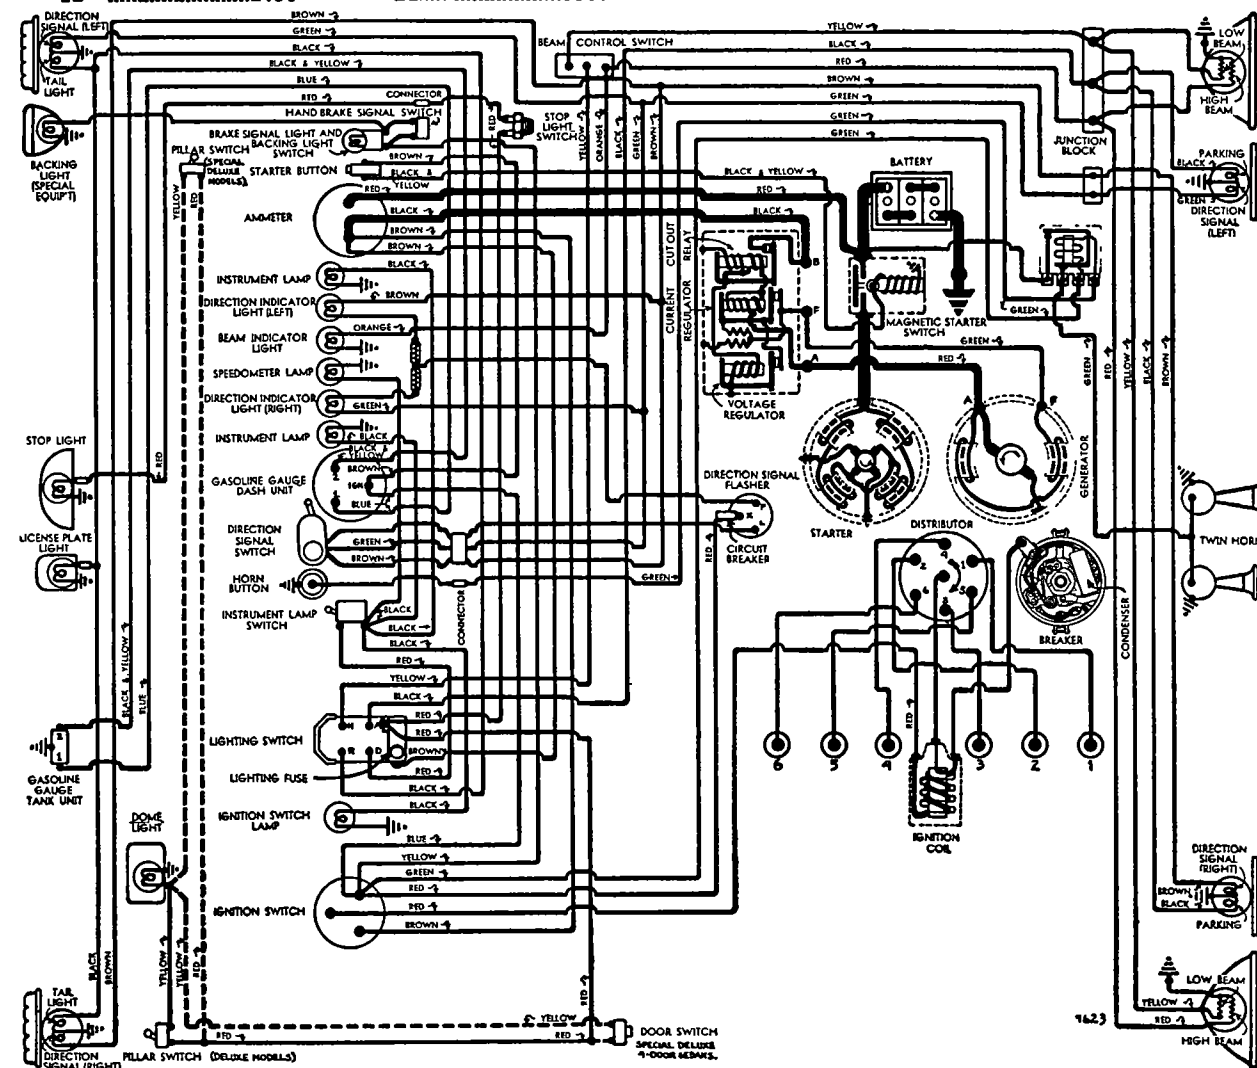

Vacuum Spark Control: Auto-Lite Units. Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

Vacuum Advance—IGS-4207-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
2°	4°	6 3/4"
5°	10°	9 1/2"
8°	16°	12 1/4"
10°	20°	14"

Vacuum Advance—IGS-4208B-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
1°	2°	6 3/4"
3°	6°	9 1/4"
5°	10°	12 1/8"
7°	14°	15"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal:** Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. Installation Note—Install distributor with #1 piston in firing position.

## IGNITION TIMING

**Std. Setting**—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees Piston Position**  
All Engines ..... 0° at TDC ..... 000° TDC  
NOTE—Impulse neutralizer marked "DC" at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following) for final setting.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

## CARBURETOR

### CARTER (B&B)

**Carter (B&B) Model D6G1 (Std.), B6V1 or B6W1 (Economy Models).** 1½" Single barrel, downdraft type with manual choke control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carter (B&B) Jet Tables in Carburetor Section for complete jet data.

## CARBURETOR

### CARTER W1

**Carter W1, No. 574S.** 1¼" Single barrel, downdraft type with manual choke control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rod & Jet**—See Carter Jet Table in Carburetor Section for complete data.

## CARBURETOR

### STROMBERG

**Stromberg Model BXV-3.** Stromberg No. 380220. Code No. 3-84. 1½" single barrel, downdraft type.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Stromberg Jet Table in Carburetor Section for complete jet data.

## CARB. EQUIPMENT

**Fast Idle:** Throttle opened to fast idle position when choke valve closed. Not used on Economy carb.

**Automatic Choke:** Sisson type Optl.

See Carburetion Equipment Section for data.

**Air Cleaner:** AC No. 1543851 Heavy duty oil-bath type. Filter Element AC No. 1544091.

**Servicing**—Wash filter element in kerosene, drain and clean oil reservoir and refill to indicated level mark with 1 pint SAE No. 50 engine oil (SAE No. 20W for temperatures below freezing) at 1000 mile or 30 day intervals, or more often if required.

**Oil Filler Cap (crankcase Ventilator) Air Cleaner:** Wash filter element in cap in kerosene and re-oil by dipping in SAE No. 50 engine oil at 1000 mile or 30 day intervals or more often if required.

**Crankcase Ventilator Outlet Air Cleaner**—Special equipment for cars operating in dusty regions. Servicing same as given for Oil Filler Cap Cleaner.

**Fuel Pump:** AC No. 1539042 or Carter No. M594S.

Diaphragm type fuel pump.

**Replacement Pump**—AC No. 577 (for 1539042).

Pressure—3½-5½ lbs.

See Carburetion Equipment Section for data.

**Fuel Tank Filter:** New Ollite metal filter in tank.

**Servicing**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite Electric type. Dash Unit No. NG-10878D, Tank Unit No. NG-10862T.

See Carburetion Equipment Section for data.

## BATTERY

**Auto-Lite Type 1M-100D or Willard WT-1-15C (Orig. Equip.), Auto-Lite Type PN-15 or Willard HW-1-100 (Replacement).** 6 volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes (Auto-Lite), 3.3 minutes (Willard). Five second voltage 4.15 volts (Auto-Lite), 4.2 volts (Willard).

**Grounded Terminal**—Positive (+) to engine.

**Location**—In left fender shield under engine hood.

**Dimensions**—Length 9 3/32" (A-L), 9" (W). Width 7½" (A-L), 7" (W). Height 8½" (A-L), 8¾" (W).

## STARTER

**Auto-Lite Model MZ-4133 (U.S.), MAW-4041 (Can.).** Armature—Auto-Lite No. MZ-2108 (MZ-4133 Starter), MAW-2030 (MAW-4041 Starter).

**Drive**—Outboard Barrel Type Bendix No. A2089.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150-175 amperes, 5.1 volts.

### Performance Data—MZ-4133

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
0.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

### Performance Data—MAW-4041

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Model SST-4001. Magnetic type mounted on left front fender shield and controlled by pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

## GENERATOR

### STANDARD

**Auto-Lite Model GDZ-4801A.** Armature GDZ-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—None. See Regulator. **Maximum Charging Rate**—35 amperes, 8.0 volts, 2200 gen. RPM or approx. 25 MPH, and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:** Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen pivot and clamp bolts, pull out on generator until belt is snug (40-50 lbs. tension secured on scale attached to field frame) or ¼" belt deflection between generator and pump

## GENERATOR

### SPECIAL EQUIPMENT

**Auto-Lite GEG-4823A or GEG-4823B.** Armature No. GEG-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated.

SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.

## REGULATOR

**Std. (for "GDZ" Gen.)**—Auto-Lite VRP-4001A, VRP-4401A, VRP-4501A, VRP-4503A.

**Spec. Equip. (for "GEG" Gen.)**—Auto-Lite VRP-4001F, VRP-4401B, VRP-4501C (VRP-4005E for negative ground). Vibrating voltage and current regulators with Cutout Relay.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

C NTINUED ON NEXT PA E

## CONTINUED FR M PRECEDIN PA E

## Circuit Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).  
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).  
Contact Gap—.015" minimum.  
Air Gap—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.  
Checking (without breaking seals) & Adjustment—See Electrical Equipment Section.  
Contact Gap—.012" min. (armature against stop pin).  
Air Gap—.048-.052" with contacts just opening.

## Current Regulator

Setting (VRP-4001A, 4401A)—34-36 amperes ("35").  
Setting (VRP-4001F, 4005E, 4401B)—39-41 amperes (marked "40").  
Setting (VRP-4501A, 4503A)—35 amperes (42 amperes at 70°F. after 15 minutes run, 33-37 amperes at 70° after additional 15 minutes run). CAUTION—These regulators are temperature-compensated and setting decreases with temperature rise.  
Setting (VRP-4501C)—40 amperes (46 amperes at 70°F. after 15 minutes run, 38-42 amperes at 70° after additional 15 minutes run). CAUTION—This regulator temperature-compensated and setting decreases with temperature rise as indicated.  
Checking (without breaking seals) & Adjustment—See Electrical Equipment Section.  
Contact Gap—.012" min. (armature against stop pin).  
Air Gap—.048-.052" with contacts just opening.

## LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type. See Electrical Equipment Section for complete data.

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).  
Beam Indicator—Red light directly above center of speedometer. Lighted with upper beams "on".

Direction Signal: Optl. See Electrical Equipment Sec'n.  
Direction Signal Indicator—On either side of Headlamp Beam Indicator (above speedometer).

## Switches

Lighting—Plymouth No. 910507.  
Beam Selector—Plymouth No. 859974.  
Instrument—Plymouth No. 1232617.  
Map Light—Plymouth No. 1154278.  
Dome Lamp Pillar—Plymouth No. 317180.  
Door Switches—Plymouth No. 882943.  
Stop Light—Plymouth No. 920355.  
Direction Signal—Plymouth No. 1163984.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	45-35 watts	Sealed Beam
Parking	3	63
Park & Frt. Dir. Sig.	21-3	1158
Beam & Dir. Sig. Ind.	1	51
Instrument	3	63
Ign. Switch	1	51
Tail (No Dir. Sig.)	3	63
Tail & Rear Dir. Sig.	21-3	1158
Stop	21	1129
Rear License	3	63
Dome	15	87

## MISC. ELECTRICAL

FUSES: Lighting—30 ampere. On back of lighting switch. NOTE—To replace fuse, press up on knurled cap or fuse and turn to left, withdraw cap and fuse.  
Clock—2 ampere. In clock lead connector.  
Radio—14 ampere. In fuse connector at radio.

CIRCUIT BREAKER: Direction Signal—On flasher behind instrument panel. 8 ampere, vibrating type.

HORNS: Auto-Lite Model HT-4011 (Low Pitch), HT-4012 (High Pitch). Dual horns operated by relay.

Horn Relay: Auto-Lite HRL-4101. Connected through ignition switch, operates only with ignition on.  
Contact Close—1.5-3.0 volts (seal to core with 4 V).  
Contacts Open—5 volt min. (open from seal).  
Contact Gap—.028". Air Gap—.016-.020" (armature air gap with contacts closed but not sealed). .015-.018" (gap between armature leg and yoke with armature sealed to core).

## ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, "L" hd. type.  
Bore—3¼". Stroke—4¾".  
Displacement—217.8 cu.ins. Rated H.P. 25.35.  
Developed Horsepower—95 at 3600 RPM.  
Compression Ratio—6.6-1 Std. Cast Iron Head.  
Compression & Vacuum Reading—See Tune-up data.

ORIGINAL BORE & PISTONS: See Chrysler Shop Notes.

ORIGINAL BEARING SIZES: See Chrysler Shop Notes.

OIL PAN REMOVAL: See Chrysler Shop Notes.

ENGINE REMOVAL: See Chrysler Shop Notes.

TIGHTENING TORQUES: See Chrysler Shop Notes.

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—See Chrysler Shop Notes.

PISTONS: Aluminum alloy, "U" slot, cam ground type. NOTE—Piston skirt is elliptical (.010-.012" smaller diameter across pin bosses than across thrust faces), and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).  
Length—3 11/16". Weight—16.0 ozs. (stripped).  
Removal—Pistons and rods removed from above.  
Clearance—.028-.032" (Head & Ring Lands), .0005-.001" (Skirt—across thrust faces and ¾" up from bottom). See Fitting New Pistons.

Fitting New Pistons: Measure piston size with micrometer across thrust faces (right angles to pin bosses) ¾" up from bottom of skirt with piston at 70°F. To fit pistons, with cylinder wall and piston dry and clean and at 70°F., invert piston in cylinder bore. Piston should have slight drag but should pass slowly through bore of own weight.

Replacement Pistons: See Chrysler Shop Notes.  
Installing Pistons: "U" slot away from valves.  
PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3, 4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.

Replacement Rings: See Chrysler Shop Notes.

PISTON PIN: Diameter 55/64". Length 2¾".  
Pin floats in piston and rod, held by lock rings.

Pin Fit in Piston—Thumb push fit (piston at 130°F).  
Pin Fit in Rod Bushing—Tight thumb push fit at 70°F.

Replacement Pins: Std., .0006", .003", .008" Oversize.

CONNECTING ROD: Length 7 15/16". Weight 1.941 lbs. with bolts less bearings.

NOTE—Pin hole in rod bronze bushed.

Lower Bearing Diameter—2 1/16". See "Original Bearing Size" in Chrysler Shop Notes.

Lower Bearing—Removable, precision type, steel-backed, thin babbitt lined. No shims.

Clearance—.001-.0015". Sideplay .0055-.0115".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps. See "Connecting Rod & Bearings" in Chrysler Shop Notes.

Replacement Bearings: See Chrysler Shop Notes.

Installing Rods: Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

CRANKSHAFT: 4 bearings, 7 integral counterweights, with vibration dampener on front end.

Bearing Diameter—2½". See "Original Bearing Size" in Chrysler Shop Notes.

Bearings—Removable, precision type, steel-backed, thin babbitt lined. No shims.

Clearance—.001-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. See "Crankshaft and Main Bearings" in Chrysler Shop Notes.

Replacement Bearings: See Chrysler Shop Notes.

Crankshaft Front & Rear Oil Seals: See "Crankshaft and Main Bearings" in Chrysler Shop Notes.

End Thrust: Taken by flanged faces of #4 (rear) main bearing. Endplay—.003-.007".

CAMSHAFT: 4 bearing. Non-adjustable chain drive. Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".

Bearings—Removable, steel-backed, babbitt lined bushings (except #4—machined in crankcase).  
Clearance—.001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	4 25/32"
Exhaust	1 13/32"	.340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	¾"	.001-.003"
Exhaust	45°	¾"	.003-.005"

Exhaust Valve Seat Inserts—See Chrysler Shop Notes.

Valve Guides: Remove from above. Press new guides in with stepped end down and upper end ⅛" below top of block, ream guides to inside diameter of .342-.343" (Intake), .344-.345" (Exhaust).

Valve Springs: Install with close-coil end to top. Free Length 2". Spring Pressure Spring Length  
Valve Closed 40-45 lbs. 1¾"  
Valve Open 107-115 lbs. 1½"

Valve Lifters: Mushroom type (remove from below with camshaft out of engine). Stem diameter ⅝". Service by reaming lifter holes (work from above piloting reamer in valve guide) and installing over-size lifters furnished .001", .008", .030" Oversize.

## VALVE TIMING

**Tappet Clearance:** .008" Intake, .010" Exhaust, Hot.  
NOTE—Tappet screws self-locking type.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—**Open 12° BTDC. Close 44° ALDC.  
**Exhaust Valves—**Open 50° BLDC. Close 6° ATDC.  
**Valve Timing Check—**With .014" tappet clearance (Cold), #6 intake valve should open with #6 piston 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump.

**Crankcase Capacity—**5 qts. (refill).

**Normal Oil Pressure—**40-45 lbs. above 30 MPH.

**Oil Pressure Regulator—**Under plug on left side of crankcase (below starter). Opens at 40-45 lbs. Adjustable by replacing spring (Std. spring Unpainted, Lighter spring—Red, Heavier spring—Green).

**CAUTION—**Install replacement spring of same color as original spring.

**Oil Pump:** New "Rotor" type on right side of engine. Servicing—See "Oil Pump" in Chrysler Shop Notes.

**Oil Filter:** On left side of engine above starter.

Servicing—Replace filter at 8000 mile intervals.

**Oil Pressure Gauge:** Auto-Lite No. G-10875 (not elec.).

## COOLING

**Cooling System:** Positive circulation with water pump on front of engine and water distribution tube in cylinder block. Special Deluxe model has by-pass type thermostat (with bypass between outlet on cylinder head and pump inlet) for re-circulation of water through engine with thermostat closed.  
**Capacity—**15 quarts.

**Radiator Core Removal & Water Distribution Tube Servicing:** See "Cooling System" in Chrysler Shop Notes.

**Water Pump:** Packless type with grease fitting.

See Water Pump Section for complete data.

**Removal—**Drain cooling system, loosen generator mounting bolts and remove fan belt. Disconnect water inlet hose at pump (and by-pass hose connection on Special Deluxe models). Remove pump mounting capscrews, lift out pump and fan.

**Thermostat:** In cylinder head water outlet connection. NOTE—By-pass type on Special Deluxe.

**Setting—**Starts to open at 157-162°F. Fully open at 183-187°F.

**Temperature Gauge:** Auto-Lite H-11002. Not electric.

## CLUTCH

**Borg & Beck.....**9A7 (Std.), 10A7 (Fleet), 11A6 (Taxi)  
**Auburn (1948 Part Production).....**Model 9251-11

**Clutch Identification:** 3 pressure plate springs used on Auburn, 9 springs on Borg & Beck.

**Borg & Beck Cover Nos.** 955 (9A7), 938 (10A7), 931 (11A6).

See Clutch Section for complete data.

**Facings (Borg & Beck)—**Woven, 2 required.

**Inside Diam. Outside Diam. Thickness**

9A6 .....	6"	9 1/4"	.125"	(1/8")
10A7 .....	7"	10"	.125"	(1/8")
11A6 .....	6 1/2"	11"	.125"	(1/8")

**Pedal Adjustment:** Set pedal to just clear toeboard (stopscrew on lower end of pedal) and set for 1" free travel (adjust nut on connector link at fork). NOTE—Do not disturb turnbuckle on pedal link.

**Clutch Over-Center Spring—**See "Clutch Notes" in Chrysler Shop Notes for setting procedure.

**Removal:** Remove Transmission (see Transmission Removal below), remove release fork pull-back spring and clutch housing underpan. Disconnect release fork from pivot, withdraw release bearing and sleeve from housing. Mark clutch and flywheel (to insure correct re-installation), remove all clutch cover mounting screws evenly, remove clutch cover assembly and driven member through opening at bottom of housing.

## TRANSMISSION

**Own Make.** All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

**Transmission Control:** Remote control type with gear-shift lever mounted on steering column.

See Transmission Section for complete data.

**Removal:** Jack up front end of car. Disconnect front universal by taking out bolts in shaft flange (if transmission to be dismantled, loosen flange retaining nut), and rear universal by removing bearing caps on rear axle yoke (wire bearing cups in place to prevent loss of bearing rollers). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission case. Remove transmission mounting screws in clutch housing, pull transmission straight back to free clutch shaft, then lower transmission and remove from beneath car.

NOTE—When installing transmission, use pilot studs installed in upper mounting screw holes to maintain alignment and prevent springing clutch driven member.

## UNIVERSALS

**Detroit Universal Series 4283 (Early), 4200 (Late).** 4283 is ball & trunnion front, cross type rear.

4200 is ball & trunnion front and rear.

See Universals Section for complete data.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

**Ratio (Std.)—**3.9-1 (exc. Sta. Wgn.), 4.1-1 (Sta. Wgn.).

**Ratio (Optl.)—**3.54-1, 3.73-1, 4.1-1, 4.3-1, 4.56-1 & 4.78-1 (Export).

**Backlash—**.006-.010". Screw adjustment.

**Removal:** Hoist rear end of car. Remove rear wheels. Disconnect brake hose at frame bracket, disconnect lower end of shock absorbers. Disconnect propeller shaft by removing capscrews from bearing caps on rear axle yoke (wire bearing caps in place to prevent loss of bearing rollers). Support axle housing, remove rear spring "U" bolts, lower axle assembly and remove from beneath car.

NOTE—Carrier assembly can be removed without disturbing axle housing by removing axle shafts and taking out carrier-to-housing mounting screws.

**Axle Shaft Removal—**Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675),

block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use Puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

**Axle Shaft Oil Seal:** New leather type mounted on brake support (backing plate).

**Oil Seal Servicing—**See "Rear Axle" in Chrysler Shop Notes.

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## SHOCK ABSORBERS

**Delco—**Model 1030-C (Front), 1031-T (Rear).

**Monroe—**Model K-11148 (Front), K-11149 (Rear).

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See Front Suspension Section for complete data.

**Kingpin Inclination—**4 3/4° to 6° crosswise.

**Camber—**Positive 1/4°. Limits 0° to Pos. 3/4°.

**Caster—**Negative 1° to Positive 1°. No adjustment.

**Toe In—**0" (0-1/16"). Adjust by turning both tie rods equally.

**Steering Geometry—**Inner wheel 22 1/2°. Outer 20°.

## STEERING GEAR

**Own Make.** Worm-and-roller type with "push-pull" adjustments. Same as Gemmer design Model 305.

NOTE—See Gemmer Model 305 article for data.

See Steering Gear Section for complete data.

## BRAKES

**Service:** Chrysler "Safe-guard" Lockheed Hydraulic type as follows:

**Front Wheels—**Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels—**Double anchor type with single double-acting wheel cylinder.

See Brake Section for complete data.

**Wheel Cylinders—**Single acting type (front), double acting type with straight (1 1/8") bore (rear).

**Drums—**Centrifuge type. Diameter 10".

**Lining—**Molded Asbestos. Width 2". Thick. 13/64". Length per wheel 21" (front wheels), 18 1/2" (rear wheels).

**Clearance—**.006" at each end of all brake shoes.

**Hand Brake:** Independent type. Hand lever actuates band on drum at rear of transmission.

**Drum Diameter—**6". Cast-iron.

**Lining—**Width 2". Thickness 5/32". Lgth. 16 11/16".

**Clearance—**.015-.020" around band.

**Adjustment—**See Chrysler Shop Notes.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Vacuum power type. See Miscellaneous Section for complete data.

**HOOD ASSEMBLY****1939 MODELS**

**HOOD SIDE PANEL BUMPERS:** Eight bumpers, Part No. 500222, installed on front and lower edge of side panels to prevent rattles beginning with following Serial Nos.: P6EB35374, P6EA37719, P8EA23622. These bumpers can be installed on earlier cars as follows: Drill four  $\frac{1}{4}$ " holes in each panel at following positions, #1 on lower edge  $4\frac{1}{8}$ " forward from rear edge, #2  $11\frac{3}{4}$ " ahead of #1, #3 on lower edge  $3\frac{5}{16}$ " to rear of front edge, #4 on front edge  $3\frac{1}{4}$ " up from lower front corner. Press rubber bumper in each of these holes.

**1940 MODELS**

**FITTING HOOD PANELS:** Hoods that are slightly loose at cowl can be fitted snugly by inserting  $7/16$ " flat washer between flange of hood and hinge at each of three attaching bolts located on lower edge of hood at each hinge. This will place more tension on hood when in closed position.

**1940 MODELS**

**HOOD LOCK ADJUSTMENT:** Should be made whenever considerable force necessary to lock or unlock hood. Check hood and align so that lock hook is centered on lock bar. Remove hand hole cover and adjust lock stud height so that front of ornament is approximately  $1\frac{5}{8}$ " from hood with hood closed and ornament in released position. Lock studs should incline toward rear of car approximately  $7^\circ$  (lock will not operate properly if angle greater or less than  $7^\circ$ ). Stud heights must be equal so that lock bar horizontal and stud nuts must be kept tight (install lockwashers under lower nuts if studs loosen in service). Only light hand pressure should be required to snap lock ornament in place to lock hood. If excessive pressure required after adjustment, check lock ornament for binding and oil pivot pin.

**1941-48 MODELS**

**HOOD LOCK ADJUSTMENT:** If lock control button requires considerable effort to release catch, or if hood must be slammed to engage lock, lubricate all parts of lock mechanism. If this does not correct trouble, adjust lock pilot stud by loosening locknut on upper end of stud and turning stud in or out (lower end of stud slotted for screwdriver). Check operation and make certain that stud locknut tightened securely. With correct adjustment, hood should close and lock from a position 12" above the hood catch plate with moderate one-hand motion.

**1941 MODELS**

**HOOD REMOVAL & INSTALLATION:** Before removing hood, mark location of hinge on cowl (scribe around hinge with pointed tool) so that hinge can be re-installed in exact same position. Use pry bar to remove hood hinge springs, remove two bolts from hood hinge assembly at right and left side of cowl, remove hood. Hood panels can be dismantled by removing center silver streak and then taking out 14 sheet metal screws holding panels together. Re-install hood in same manner.

**Hood Fitting**—If hood does not fit tightly at cowl, loosen hood hinge to cowl bolts slightly and drive hinge down, tighten hinge bolts. When installing new hinges, install hinge on cowl, note alignment and whether hinge binds with mounting bolts tight. Shim with washers installed between bracket and cowl, if necessary, so that hinge operates freely, then bolt hinge to hood.

**1942-48 MODELS**

**HOOD SERVICING: Replacing Hood Hinges.** Lubricate all rivet joints in hinges with engine oil, install hinge in hood, tightening four outer bolts on each end of hinge reinforcement first and four center bolts last (to avoid straining back of hood and hinge). Place hood and hinge assembly on cowl, start outside bolts on each side and tighten only finger-tight. Lower hood and lock in position, align hood with cowl, doors, and fenders. If nose of hood does not line up with radiator center grille and fender, loosen radiator support bolt nuts and shift entire front end assembly by prying on radiator support (to maintain alignment between back of hood and cowl). Without disturbing position of hood, install and tighten both inside bolts on each side (use punch in one bolt hole to line up holes and start the other bolt). Raise hood and tighten outside bolts on each side. Install hood springs.

**Hood Adjustment**—Disconnect hood hinge springs, loosen outside bolts on both sides (leave nuts finger tight). Lower hood and lock in place. Loosen inside bolts on both sides. Space hood properly at cowl, rear of front fenders, front radiator grille, and fender assembly. Tighten inside bolts on both sides, then raise hood and tighten outside bolts at both sides. Install hinge springs.

**Hinge Spring Removal & Installation**—Will be facilitated if special removing tool made up to keep spring extended. Tool consists of open sided cylinder of sheet metal with end plates brazed on (make up from  $1/16$ " thick sheet  $3\frac{3}{16}$ " wide by  $6\frac{5}{8}$ " long with  $3/32$ " slant at each end, bend in arc of  $7/16$ " radius with open side  $1\frac{5}{8}$ " wide, braze piece on each end). To use this tool, open hood approximately half-way so that spring is stretched, slip tool on spring with end plates between spring coils. Fully raise hood. Spring will remain extended and can be easily unhooked. Leave tool on spring until spring re-installed.

**FRONT END SHEET METAL****1936-38 MODELS**

**FRONT FENDER & RADIATOR REMOVAL:** Work on front of engine can be facilitated by removing radiator and front fenders as an assembly. Removal as follows:—Remove hood, side panels, front bumper, drain cooling system and free radiator tie rods at dash. Disconnect headlamp wires at lamps and withdraw from radiator shell. Free fenders from running boards and body, disconnect radiator and front fender support from frame cross member by removing two nuts under center of cross member. Lift off radiator and fenders as an assembly.

**1939 MODELS**

**FRONT FENDER & RADIATOR REMOVAL:** To facilitate work on front of engine remove front end assembly as follows: Remove hood side panels, front bumper assembly, fender-to-body and fender-to-frame brace hex head bolts, drain cooling system. Remove 6 stove bolts at top of fender side apron releasing headlamp wiring clips. Disconnect lamp wires at body side of terminal on apron, free wires from apron. Free radiator support by removing nuts on 2 support bolts under center of radiator. Lift off front end assembly as a unit.

**1940-41 MODELS**

**FRONT FENDER & RADIATOR ASSEMBLY REMOVAL:**—To facilitate work on front of engine, remove fenders and radiator as an assembly as

follows: Drain radiator, disconnect hoses, remove separate hood side panels on 1940 car models only, front bumper assembly, hex head fender-to-body bolts, Fender-to-frame brace bolts, headlamp wires from top side of fender apron and headlamp terminal at body side of terminal, right headlamp wires from back of terminal on right fender side apron, wire harness from radiator, and 2 nuts from beneath radiator support. Lift front end assembly off

**1942-48 MODELS****FRONT END SHEET METAL ASSEMBLY UNIT**

**REMOVAL:** Front sheet metal, fenders, & radiator core can be removed as a unit as follows: Disconnect wiring assembly and remove fender moulding. Remove fender bolts as follows: 4 (5 on Torpedo) at rear, 3 at rear to rocker panel extension, and 2 fender baffle-to-frame bolts and nuts. Disconnect radiator hoses and hood lock cable. Remove 2 nuts at bottom of radiator support and take off Front End Assembly.

**Front End Assembly Alignment**—Entire front end assembly should be aligned by inspecting and correcting alignment at each of the following points:

1. **Front Door Alignment at Cowl**—Each front door must be properly aligned in door opening with  $3/16$ " clearance ( $\frac{1}{4}$ " max.) at point where door, hood, and cowl meet. Move door forward or backward, as necessary, for correct clearance.

2. **Front Fender Alignment at Door**—Rear edge of each front fender should be parallel with front edge of door and have uniform clearance of  $3/16$ ". To adjust, remove cowl kick pad, loosen four fender mounting bolts, shift fender forward or backward, raising or lowering front end of fender as required for uniform clearance. NOTE—Fender Cap must be aligned to provide clearance for opening of door. See Fender Cap Alignment following.

3. **Hood Fit at Cowl**—Rear end of hood should have uniform clearance of  $3/16$ " on cowl (at top) and at each front door. Before adjusting, mark original location of hood hinges on cowl, loosen hinge retaining bolts  $\frac{1}{2}$ -1 turn, shift hood by tapping on hinges. CAUTION—Make certain that lower edges of hinge flange section are parallel on both hinges and that neither tilts down at front. Unequal action of hinges will cause hood to bind and may buckle hinge straps.

4. **Hood Fit at Fenders**—If nose of hood does not line up with center grille and clearance between hood and fenders is unequal, entire front end sheet metal assembly should be shifted by loosening radiator support bolt nuts and prying against radiator support (CAUTION—make certain that hood guide pin and safety catch are properly lined up). If fender clearance insufficient and fender interferes with hood closing, loosen two bolts at fender and radiator support and shift fender away from hood. If fenders are low (excessive clearance at hood edge), pry up on fender and drive up on radiator support (use wood block).

**1942-48 MODELS**

**FRONT FENDER REMOVAL:** Disconnect fender, see Front End Sheet Metal Assembly Removal (above), then remove attaching bolts and screws along inner edge as follows: one bolt and nut at end of front splash apron, two sheet metal screws at end of baffle, two bolts and nuts at top of baffle, two bolts

at hood lock plate reinforcement, two bolts from ends of hood lock plate, and two bolts at radiator support bracket. Lift fender off.

#### 1942 MODELS

**Front Fender Noise Corrections**—May be caused by fender baffle or hood spring contact with fender and should be corrected as follows:

**Fender Baffle Clearance**—Insufficient clearance between fender baffle and fender at point where baffle attached to fender bottom flange will cause drumming noise on rough roads. Correct by loosening attaching screws and moving baffle so that clearance is  $\frac{1}{8}$ – $\frac{1}{4}$ ", then retighten screws.

**Hood Spring Clearance**—Contact between hood coil springs and edge of fender will cause rattles. Correct by removing springs and brackets and bending brackets in a vise so that forward end (to which spring attached) is bent  $\frac{1}{4}$ " toward center of car. This will provide greater clearance between bracket and fender.

**Front Fender Road Splash Correction**—Road splash on front fenders may be caused by water getting on fender at opening near headlamp rim or at front edge of fender cap & should be corrected as follows:

**Headlamp Rim Sealing**—Remove headlamp rim, clean all foreign material from top of headlamp, apply heavy coating of FS-655 Sealer around upper edge of headlamp, replace rim and clean off surplus sealer.

**Fender Baffle Sealing**—Splash appearing at fender cap is forced over top of fender baffle and baffle should be sealed by installing piece of door weather-strip as follows: Clean fender and top of baffle with gasoline and wipe dry, apply heavy coat of FS-655 Sealer to piece of door weatherstrip approximately 10" long, coat top of baffle and underside of fender with this sealer, install weatherstrip so as to close this opening above the baffle.

#### 1942 MODELS

**RADIATOR GRILLE REMOVAL**: Pull parking light bulb out of socket, remove parking light cap by removing two nuts from behind grille, also parking light by taking out two nuts behind grille. Individual parts of grille assembly can then be removed as follows:

**Outer Grilles**—Remove 2 sheet metal screws on face of grille and attaching bolts as follows: 3 at bottom edge and 2 at each end.

**Right or Left Center Grille**—Take out 3 sheet metal screws at each side.

**Right or Left Grille Moulding**—Remove 4 sheet metal screws (2 beneath parking light, 2 at end of center grille), 2 bolts and nuts at top of grille moulding, and 2 screws at top inside end of moulding.

**Center Grille Panel**—Remove bolt and nut at top and center of panel. Disconnect right and left grille. Remove 2 screws from inner end and 2 top bolts and nuts in each moulding. Free lock plate and slide to rear, lift off center grille panel.

#### 1942-48 MODELS

**FRONT FENDER CAP ALIGNMENT**: Fender cap mounting permits fore-and-aft and up-and-down adjustment of cap to give proper spacing with front fender. To adjust, loosen sheet metal screw at upper front corner of cap and 2 bolts in each bracket at front and rear end of cap, shift cap for proper fit.

If clearance between fender cap and fender is insufficient for door operation, or too great, front fenders (and door) can be shifted in or out. NOTE—to shift door in or out, loosen hinge bolts in body sill, move door, retighten bolts (loosen hinge bolts in door only when adjusting door up-or-down).

**Front Fender Cap Removal & Installation**: Remove molding along lower edge of fender by disengaging seven clips and removing one bolt and nut at forward end. Remove three bolts along the side, and three screws in flange at forward end, of rocker panel extension (fender cap lower mounting bracket), remove extension from below. Remove bolt and nut in lower front bracket, sheet metal screw in lower rear bracket, and sheet metal screw from inside door flange at upper front corner of fender cap. Lift fender cap up and out. Replace fender cap in same manner and adjust as directed above.

**Special Fender Cap Tool**—On later Streamliner models, front fender door cap rear support bolt requires use of long thin wrench for access to bolt. This wrench can be made up as follows: Weld 10" piece of  $\frac{1}{2}$ " x  $\frac{3}{16}$ " strap iron on end of  $\frac{1}{4}$ " drive ratchet wrench. Make up  $\frac{1}{2}$ " socket with  $\frac{1}{4}$ " drive by welding together a  $\frac{5}{16}$ " socket with  $\frac{1}{4}$ " drive and  $\frac{1}{2}$ " socket with  $\frac{3}{8}$ " drive (for  $1\frac{1}{4}$ " overall length). NOTE—Bolt need only be loosened to point where fender cap flange can be slipped out from under clamp.

#### 1946-47-48 MODELS

**REAR FENDER REMOVAL & INSTALLATION**: On these cars, the bumper guard, outer section of bumper impact bar, and apron extension must be removed before the fender can be taken off.

**New Fender Installation Note**—New fenders furnished for these cars do not have the four holes drilled for the bumper apron extension mounting. It is recommended that the fender be installed before drilling and the apron extension then placed in position and used as a template to locate the mounting holes.

### ENGINE REMOVAL

#### 1941 MODELS

**POWER PLANT (ENGINE & TRANSMISSION) REMOVAL**:—Drain radiator and cylinder block, remove hood. Remove Front Fenders and Radiator as a unit (see above). Disconnect and remove selector control rod from transmission, disconnect shifter lever from transmission shifter shaft. Disconnect fuel line at pump, oil pressure gauge line, windshield wiper tube, throttle control rods, temperature gauge engine unit, engine ground strap and all wiring, speedometer cable at transmission, clutch control bracket at flywheel housing, clutch throw-out fork, exhaust pipe at manifold. Disconnect rear universal joint, remove propeller shaft (withdraw shaft from transmission). Disconnect front engine support by taking out two bolts. Attach chain hoist to engine, remove bolts from rear engine mountings, lift engine free of rear support cross-member, pull engine and transmission assembly forward and remove from frame. Re-install in same manner using new exhaust pipe gaskets. Adjust clutch pedal free travel, Safety Shift adjustments, and throttle linkage after engine installed.

#### 1942-48 MODELS

**POWER PLANT (ENGINE & TRANSMISSION) REMOVAL**:—Remove hood, disconnect headlamp wires, take out radiator (see Radiator Core Re-

moval). Drill out 4 rivets in fender support cross bar (when re-assembling bar use bolts in place of rivets). Disconnect engine front insulator at engine. Remove selector control rod from transmission, disconnect shift lever from transmission shifter shaft. Disconnect gas line from fuel pump, oil pressure gauge line, windshield wiper tube from manifold, throttle control rods, temperature gauge engine unit from head, engine ground strap, all wiring at generator and starter, etc., speedometer cable at transmission, clutch control bracket at flywheel housing, clutch throw-out fork, and exhaust pipe at manifold. Disconnect rear universal joint and remove propeller shaft (withdraw shaft from transmission). Disconnect front engine support (take out 2 bolts). Attach chain hoist to engine, remove bolts from rear engine mountings, lift engine free of rear support cross member, pull engine and transmission forward and remove from car. NOTE—When re-installing Power Plant, reverse Removal Procedure given above. Use new exhaust pipe gaskets. After engine installed, carefully adjust Safety-shift, Clutch Pedal, and Throttle Linkage.

### ENGINE MOUNTINGS

#### 1940-48 MODELS

**FRONT ENGINE INSULATOR REMOVAL**: Remove splash shields in back of radiator, disconnect exhaust pipe, remove two bolts from front engine to mounting support, jack engine up enough at front end for access to insulator. Clean dirt off mounting from below, remove two screws holding mounting on frame, remove mounting. Re-install in same manner and tighten all mounting bolts securely. 1942-47 Models. Front insulator redesigned to provide clearance for new rebound clamp which is assembled over top of insulator. Movement of engine does not effect parts since insulator clears clamp. Insulator and clamp can be disassembled by clamping exposed ends of insulator with 'C' clamp. This new clamp should not be used on earlier models.

#### 1940 MODELS

**REAR ENGINE SUPPORT INSULATOR RE-INFORCEMENT PLATE**: On some cars rear support insulators loosen from frame (insulator-to-frame bolt self-locking nuts gouge into washers). New hardened reinforcement plate #504992 (replacing washers) and longer bolts #120758 used in production starting with following serial numbers: Special Six—P6HA-5028, L6HA-1976, C6HA-1467. Deluxe Six—P6HB-17109, L6HB-4067, C6HB-3165. Deluxe 8—P8HA-8047, L8HA-2425, C8HA-1863. Torpedo 8—P8HB-5440, L8HB-1969, C8HB-1541. NOTE—This plate can be installed on early cars.

### ENGINE EXCHANGE

#### 1946 MODELS

**NUMBERING OF CYLINDER BLOCK & PISTON ASSEMBLIES**: All partial engine assemblies and cylinder blocks fitted with pistons will be numbered in production after Sept. 17, 1946. Numbers are stamped in pad on left side of cylinder block at rear (Serial No. pad on left side at front end is left blank). First Nos. are as follows:

Six Cylinder Engines—S-6-5001  
Eight Cylinder Engines—S-8-5001.

NOTE—Nos. 1001 to 5000 will be used to designate partial engine assemblies and cylinder blocks prior to beginning date (when required).

C NTINUED ON NEXT PA E

C NTINUED FROM PRECEDING PA E

**CYLINDER HEAD**

ALL MODELS

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature. Tightening Torque—See Tightening (Torque Wrench) Specifications below.

PONTIAC 6

PONTIAC 8

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS**

ALL MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews .....	80	720
Main Bearing Cap Screws.....	85	1020
Connecting Rod Bolts.....	45	540
Flywheel to Crankshaft Bolts (6)	105	1260①
Flywheel to Crankshaft Bolts (8)	70	840①
Lower Control Arm Pin & Bar		
Bushings .....	200	2400

①—On 1946-48 models with self-locking bolts (no lockwashers), torque should be 100 ft. lbs. or 1200 in. lbs.

**ORIGINAL BORE & PISTONS**

1937-48 MODELS

**ORIGINAL BORE & PISTON SIZES:** Original bore sizes, and size of pistons installed in each cylinder bore, may be determined by letter stamped on piston head and on top face of cylinder block. Piston sizes graduated in .0005" steps as follows:

1937-40 Models

Piston & Engine Mark:	Six—Piston Size—Eight	
'A'	3.4355"	3.247"
'B'	3.436"	3.2475"
'C'	3.4365"	3.248"
'D'	3.437"	3.2485"
'E'	3.4375"	3.249"

1941-48 Models

Piston & Engine Mark	Six	Eight
'A'	3.5605"	3.247"
'B'	3.561"	3.2475"
'C'	3.5615"	3.248"
'D'	3.562"	3.2485"
'E'	3.5625"	3.249"

**PISTONS**

1937-48 MODELS

**REPLACEMENT PISTONS:** Standard Size. Furnished in following sizes for replacement of Standard Production Pistons listed above. Sizes and part numbers for each model as follows:

1937-38 Models

Part No. (6)	Size	Part No. (8)	Size
496949	3.4355"	549628	3.247"
496950	3.4365"	549629	3.248"
496951	3.4375"	549630	3.249"

1939-40 Models

Part No.	Size	Part No.	Size
503045	3.4355"	503048	3.247"
503046	3.4365"	503049	3.248"
503047	3.4375"	503050	3.249"

1941 Models

Part No. — Six —	Size	Part No. — Eight —	Size
505036	3.5605"	503048	3.247"
505037	3.5615"	503049	3.248"
505038	3.5635"	503050	3.249"

1942-48 Models

Part No. — Six —	Size	Part No. — Eight —	Size
507554	3.5605"	503048	3.247"
507555	3.5615"	503049	3.248"
507556	3.5635"	503050	3.249"

First size covers 'A' and Low Limit 'B' production pistons. Second size covers High Limit 'B', all 'C', and Low Limit 'D' pistons. Third size covers High Limit 'D' and all 'E' pistons.

**IMPORTANT 6 CYL. PISTON NOTE:**—1941 type pistons must not be used on 1942 engines. If 1942 type pistons used on 1941 engines, install 1942 type piston rings and piston pin also.

**Oversize Replacement Pistons:**—Finished pistons furnished in following oversizes: .005", .010", .020", .030".

**NOTE:**—All factory replacement pistons held to uniform weight within 1/16 oz. and all oversize pistons up to .030" oversize are same weight as standard pistons.

**CAUTION:**—Factory replacement pistons electroplated after being finished to size and must not be ground.

ALL MODELS

**PISTON OIL RING GROOVE DRAIN HOLE CHANGE:**

It is recommended that whenever rings are being installed on old type pistons (with 10 oil drain holes in oil ring groove) that 10 additional oil drain holes be provided on these pistons. New type pistons (with 20 oil drain holes in oil ring groove) have been used on 1942 6 Cyl. cars and both 6 Cyl. and 8 Cyl. cars beginning with 1946 production.

**PISTON RINGS**

1936-48 MODELS

**REPLACEMENT PISTON RINGS:** Regular Type. These rings should be used on engines where out-of-round does not exceed .003".

**Sealed Power Type:**—Special piston ring sets furnished under Group No. 0.643 may be used where out-of-round is within limits of .003" to .009".

**Piston Ring Note:** 1942 6 Cyl. Piston Rings. These rings tin-plated to prevent scuffing.

**CAUTION:**—Do not use 1941 type rings (not plated) in 1942 engines. 1941 type rings may cause scuffing.

1946-48 Piston Rings—Rings are plated type.

**PISTON PINS**

1936-48 MODELS

**PISTON PIN FITTING:** Pin case-hardened & ground (out-of-round .0002" max.). To install pins, coat inside of piston bosses with graphite grease, insert slotted end of pin in lock screw boss and press in place. Pressure to install pin in piston should be 200-300 lbs. If necessary, pin holes in piston can be sized with expansion reamer to secure this fit.

**CAUTION:**—Pins will be noisy if fit in piston is too loose, and pin bosses may be fractured when installing pin if fit in piston is too tight.

**NOTE:**—Car manufacturer recommends use of the following tools (in conjunction with arbor press): hydraulic cylinder & gauge (J-1325-SA-1), piston rest block (J-1325-1), piston pin remover (J-1325-2), piston skirt plug (J-1325-3).

**1941 Engine Note:**—Pins are installed with slot to one side (toward bottom on previous models) and new self-locking pin lock screw is used.

**1942 Engine Note:**—Pins are slotted on side (similar to 1941) but slot is shorter and is concealed by piston when installed. Do not interchange pins, use 1942 type pins only in 1942 type pistons.

**1946-48 Engine Note:**—Pins are shot-peened before final grinding and lapping. Slot same as for 1942.

1936-48 MODELS

**PISTON PIN BUSHING: New Type Service Bushings.**

New type aluminum bronze bushings which are more resistant to corrosion furnished for service as follows: Part No. 505320 (6), 505321 (8). May be distinguished from previous bronze type by lighter color and less coppery appearance (bushings darken and may require polishing or buffing to bring out difference in color).

**Installation:**—Press bushings in place, making sure that 3/32" groove between bushings aligned with oil hole in rod. Burnish bushings securely in place with burnishing bar. Then hone bushings for .0004-.0006" (1941 on), .0003-.0005" (1940 & earlier). The car manufacturer recommends use of following tools for servicing pin bushings: J-540-1—Bushing Remover. J-540-2—Bushing Replacer (tool fitted with shoulder which prevents bushings from being pressed too far in or from collapsing while being installed), J-516 Burnisher Bar, and J-526 Burnisher Block. **NOTE:**—These tools are used in conjunction with an arbor press using the J-526 Burnisher Block as a support for the rod on the press.

**CONNECTING ROD & BEARINGS**

1937-48 MODELS

**CONNECTING ROD LOWER BEARING:** Removable type. No adjustment. Shims should not be used or bearing caps filed. When replacing bearings check crankpins. If scored or out-of-round and taper exceeds .001" crankshaft should be replaced.

**Fitting:**—Use .0015" brass shim 1/2" wide and 7/8" long. Remove cap and lay shim across bearing. Tighten cap (with shim in place). Check bearing fit as follows:—Rod should be locked when testing end movement by hand but should slide on crankpin when tapped lightly with hammer. With shim removed rod should move freely on pin. If rod can be moved by hand with shim in place install .001" undersize bearing.

**Installation**—Bearing shells fitted with tangs (Six—one to each edge of bearing, Eight—two on each edge). Install cap with tangs on opposite sides of rod (Six), on opposite ends of crankpin (Eight).

## CRANKSHAFT & MAIN BEARINGS

### 1936-48 MODELS

**MAIN BEARINGS:** Removal. Remove the bearings with caps removed and crankshaft in place by inserting suitable tool (see NOTE following) in oil hole in shaft and rotating shaft in usual direction.

**NOTE**—Bearing Removal Tool can be made from  $\frac{1}{8}$ "x $1\frac{1}{2}$ " cotter key. Bend each end of key up  $\frac{5}{16}$ " to make  $\frac{5}{8}$ " long base. With this as a base, bend key to form 59° angle. With this tool inserted in place end will just protrude far enough to engage bearing.

**Installation**—Insert plain edge of bearing in indented side of bearing support, slowly rotate crankshaft until bearing seated.

### 1937-48 MODELS

**FITTING MAIN BEARINGS:** If the crankshaft is badly scored manufacturer recommends that it be replaced. To check bearing fit, use .002" brass shim  $\frac{1}{2}$ " wide and 1" long. With cap removed place shim across bearing. Tighten cap (with shim in place). Test bearing fit by rocking flywheel by hand. Do not rock flywheel more than 1" in either direction or bearing may be damaged by shim. If crankshaft locks with shim in place and rotates freely with shim removed bearing size correct. If shaft moves with shim in place use .001" undersize bearing. **IMPORTANT**—Do not file main bearing caps. These caps are not furnished separately.

### 1939-48 SIX CYL. MODELS

**REAR MAIN BEARING OIL SEAL:** Seal consists of oil slinger on crankshaft to rear of rear main bearing operating in groove formed in block and cap (drain hole in cap returns oil to crankcase) with asbestos seal fitted in separate groove at rear.

**1939 Note**—One groove only with retainer fitted in front portion. Use retainer half with tangs in cap. **1946-48 Note**—Edges of seal groove in cylinder block and rear main bearing cap are chamfered to reduce pressure between seal and crankshaft and prevent pinching of the seal. One end of the groove in the bearing cap is recessed and a portion of the seal should be worked into this recess to prevent the seal turning in service.

**Installation**—With crankshaft out of engine and bearing shells removed, press packing in rear groove in block, seat packing using Tool J-1045 (large diameter to front of engine) by tapping tool with lead or rawhide hammer. With tool in place, cut each end of seal flush with bearing cap seat. Repeat operation for cap. Install crankshaft & bearings.

## VIBRATION DAMPENER

### 1936-48 MODELS

**HARMONIC BALANCER SERVICING:** No service operations are required and balancer should be serviced by replacement.

**Removal and Installation**—Remove front assembly (see Front Fender and Radiator Removal above). Retaining screw which secures balancer in place, can be removed by using  $\frac{13}{16}$ " (6), 1" (8) socket wrench and turning ff. Pull balancer with suitable puller (No. J-496). **NOTE**—1936-38 balancer is secured by crank nut. This nut can be removed by inserting  $\frac{3}{4}$ " hexagonal bar in nut and turning ff.

## CAMSHAFT & BEARINGS

### 1936-48 MODELS

**CAMSHAFT:** Removal. Remove Front Fender and Radiator Assembly (see above), remove fan belt, fan, and harmonic balancer (use Puller J-496). Support front end of engine with jack and remove front engine support, timing chain cover, chain, and sprockets. Remove cylinder head and valve covers, take out valves and lifters (lifters are barrel type and can be removed from above with valves out). Remove oil pump, fuel pump, and distributor. Take out screws and remove camshaft thrust plate, withdraw camshaft at front of engine. Re-install camshaft in same manner making certain that timing chain cover is properly centered (see Timing Chain Cover and Oil Seal data below). After camshaft installed, check Valve Timing, Ignition Timing, and Tappet Clearance.

**Bearing Servicing**—Use special tool J-550 to remove and install camshaft bearings (rear bearing on Eight must be pulled out toward front as expansion plug at rear prevents driving on bearing from rear). Use driver to install all bearings making certain that oil hole in bearings is lined up with hole in block (holes are at bottom of bearings). Then line ream all bearings to finished sizes as follows:

Bearing Finished Size:	Six	Eight
#1 (Front).....	1.9950-1.9955"	1.9950-1.9955"
#2 .....	1.9637-1.9642"	1.9637-1.9642"
#3 .....	1.9325-1.9330"	1.9325-1.9330"
#4 .....	1.9012-1.9017"	1.9012-1.9017"
#5 .....	1.8700-1.8705"	

### 1937-39 EIGHT CYL. MODELS

**CAMSHAFT SPROCKET REPLACEMENT:** On all 8 cylinder engines for 1937-38 & 1939 before No. 8-188892; a camshaft sprocket with a short hub and a spacer washer was used. New type camshaft sprocket, Part No. 503454, is furnished for service and when this new sprocket installed on above cars, spacer washer should be discarded.

### 1936-48 SIX CYL. MODELS

**CAMSHAFT SPROCKET IDENTIFICATION:** Two different camshaft sprockets furnished for replacement on these models. Sprockets can be identified by part no. cast on sprocket and by width of teeth:

Used On:	Part No.	Tooth Width
1935-38 Cars .....	497703	$\frac{5}{8}$ "
1937-48 Cars .....	507044	$\frac{3}{4}$ "

## TIMING CHAIN

### ALL MODELS

**TIMING CHAIN REPLACEMENT:** Timing chain must be installed "endless" with both sprockets off the engine as directed below. **CAUTION**—Any attempt to install the chain by removing only one sprocket will result in breaking of the chain.

**Timing Chain Removal**—Remove Front End Sheet Metal Assembly as a unit, remove fan belt and fan, remove Harmonic Balancer (see Vibration Dampener). Support front end of engine with support jack, remove front engine support (see Front Engine Insulator Removal), remove timing chain cover, timing chain and sprockets.

**Timing Chain Installation**—Mesh sprockets in chain with timing marks on both sprockets lined up for correct valve timing (see Camshaft Setting on car model pages), install both sprockets together being careful not to place any side strain on chain.

Re-install timing cover (see Timing Chain Cover Oil Seal data below), front engine support, harmonic balancer, fan and fan belt, and front end sheet metal assembly. **NOTE**—See Front End Sheet Metal Assembly data for alignment directions.

### 1936 & EARLIER 8 CYL. MODELS

**TIMING CHAIN & SPROCKET REPLACEMENT:** Due to exhaustion of stocks of original replacement parts for these models (P833 through 36), whenever any part of the camshaft drive is to be replaced (Crankshaft Sprocket, Camshaft Sprocket, and Timing Chain) the following parts must be installed as a unit:

Part	Replacement Part No.
Crankshaft Sprocket .....	497702
Camshaft Sprocket .....	497703
Timing Chain .....	497704

**CAUTION**—These parts are not interchangeable individually with parts originally used or furnished

### 1936-48 MODELS

**TIMING CHAIN COVER & OIL SEAL:** Consists of cork seal and spring assembled on the crankshaft in front of the chain sprocket so that the cork bears against the inner face of the timing chain cover. **Installing New Cork Seal**—Coat seal with graphite lubricant, rubbing lubricant well into the face of the cork, before installing seal in engine. This lubrication necessary to prevent noise at this point. **Installing Timing Chain Cover**—Use J-546 tool to center timing chain cover before screws tightened.

### 1939 MODELS

**TIMING CHAIN COVER OIL SEAL:** Squeak Correction. If seal becomes dry forming glazed surface, squeal may develop due to seal rubbing on chain cover. This may be corrected by squirting oil and graphite fluid on seal. If seal must be replaced, rub graphite into seal thoroughly. Also, seal may be drilled with four or five  $\frac{1}{8}$ " holes  $\frac{3}{16}$ " deep. These holes should then be packed with graphite.

### 1940 MODELS

**TIMING COVER NOSE:** Crankshaft balancer hub diameter reduced .006-.007" during production to eliminate noise between hub and timing cover oil seal due to insufficient clearance. Hubs on early cars can be turned down to diameter of 1.866-1.868".

## OIL PUMP

### 1936-48 MODELS

**OIL PUMP SERVICING: Pump Removal & Installation**—Turn crankshaft so that #1 piston on top dead center of compression stroke with distributor rotor at #1 firing position. Remove steering idler arm and right hand engine side pan. Take out pump mounting bolts and remove pump. When installing pump, see that prick punch mark on pump is down, install pump without disturbing distributor shaft position, recheck Ignition Timing.

**Pump Specifications**—Pump shaft bearing clearance .0005-.002". Shaft and body end clearance .002-.006". Idler gear bearing clearance .0005-.002". Driving gear backlash .003-.004". Driving gear and idler gear backlash .006-.008". Driving gear and idler gear clearance .002-.006".

**1941 Pressure Relief Valve**—New type. Consists of spring loaded disc valve located in the pump body beneath the idler gear. When pressure exceeds 40 lbs., disc is forced off its seat and oil is by-passed back to inlet side. Valve is not adjustable.

C N TINUED N NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**OILING SYSTEM****1941-48 MODELS**

**CRANKCASE OIL CLEANER:** Pontiac type 'Controlled flow' design consisting of settling chamber in oil inlet and filter screen housing in crankcase. NOTE—Beginning with 1942 engines, oil cleaner has greater capacity (1 pint 1941, 1 quart 1942 on).

**Servicing—**No servicing required but Oil Cleaner should be removed and settling chamber cleaned out when oil pan removed for other work, or if car has been upset or turned over.

**1941 Cleaner Removal & Installation.** To remove cleaner with oil pan off engine, disconnect oil suction pipe from crankcase as a unit. Take out attaching screws and remove cleaner from bracket and suction pipe. Remove snap ring on bottom of cleaner and remove oil screen. Take out ten screws which mount cleaner head in housing shell, remove settling chamber from housing shell. Wash all parts in gasoline and scrape sediment from settling chamber. When reassembling cleaner, see that all gaskets in good condition or use new gaskets, turn head and housing shell upside down, insert two screws and place gasket inside shell, then set settling chamber in place and start screw threads, turn assembly right side up and install remainder of screws, tighten all screws securely. Install strainer, snap ring, and suction pipe.

**1942-48 Removal & Installation.** To remove oil cleaner with oil pan off engine, disconnect oil suction pipe and remove oil cleaner assembly from engine. Remove screen assembly bottom cover by taking out 2 screws in bottom plate. Remove 12 screws which mount cleaner head in housing shell, remove settling chamber from housing shell. Wash all parts in gasoline and scrape sediment from settling chamber. When re-assembling cleaner, see that all gaskets in good condition or use new gaskets, turn head and housing shell upside down, insert 2 screws and place gasket inside shell, then set settling chamber in plate and start screw threads, turn assembly right side up and install remainder of screws, tighten all screws securely, assemble all other parts. Fill cleaner with fresh oil and install. CAUTION—Fill cleaner with oil before assembling to crankcase (avoids running bearings without oil when engine first started).

**1939-40 MODELS**

**CRANKCASE OIL CLEANER INSTALLATION ON PREVIOUS MODELS:** The 1941 type built-in permanent oil cleaner can be installed on 1939-40 Six Cylinder Models, and 1940 Eight Cylinder Models, NOTE—Parts for this installation are furnished in Oil Cleaner Package, Part No. 504192.

**1941-48 MODELS**

**OIL FILLER CAP & CRANKCASE VENTILATOR CLEANER:**—All oil filler caps (Std. & Heavy Duty type) serve as inlet for crankcase ventilating system and must be correctly installed on engine. Install cap with seam on side engaging groove in top of oil filler pipe and opening in cap toward fan. **Standard Filler Cap—**Inspect at 1000 mile intervals and clean when necessary. Wash copper gauze filter element in gasoline, re-oil by dipping in engine oil. **Heavy Duty Filler Cap—**Used on cars with heavy duty (oil bath) type carburetor air cleaner. Similar

to the standard cap except for greater cleaning capacity. Service in same manner as standard cap and always clean outlet pipe air cleaner at same time.

**Crankcase Ventilator Outlet Pipe Air Cleaner—**Consists of a copper gauze filtering element in an elbow on the crankcase outlet pipe. Clean in same manner as filler cap (above). NOTE—No outlet pipe cleaner used on cars with Standard Filler Cap.

**1940 MODELS**

**CRANKCASE VENTILATOR OUTLET PIPE CLEANER:** The small ventilator filter element installed in lower end of crankcase ventilator outlet pipe should be removed and discarded (this cleaner will restrict outlet and interfere with crankcase ventilation if not serviced regularly). NOTE—For cars operated in extremely dusty territory, manufacturer recommends that 1941 type Heavy Duty outlet pipe & filter be used (see 1941 data above).

**OIL PAN REMOVAL****1939-40 EIGHT CYL MODELS**

**OIL PAN REMOVAL:** 39-28 & 40-28. For access to front oil pan screws, remove Front Engine Insulator (see below) and rest front of engine on steel block (5¼" long, 1½" wide, 15/16" high).

**Front Engine Insulator Removal—**Remove hood side panels, disconnect exhaust pipe, take out 2 front engine to mounting bolts, raise engine with jack until insulator accessible, remove excess dirt from mounting, take out 2 mounting-to-frame screws, lift off mounting together with 'U' shaped shield. When reinstalling, tighten mounting bolts. **Torpedo Eight 40-29—**For access to front oil pan screws, take out Front Engine Insulator-to-Radiator Support Bracket screws, jack up engine and allow it to rest on 1" board.

**1941-48 EIGHT CYL. MODELS**

**OIL PAN REMOVAL:** All Eights. For access to attaching screws at front end of pan, remove radiator splash aprons as follows: Remove screws attaching aprons to front cross-member and radiator support, remove aprons from inside engine compartment by lifting aprons out with a circular motion (rotate right apron to right, and left apron to left, as they are being lifted out).

**RADIATOR****1939-48 MODELS**

**RADIATOR CORE REMOVAL:** Drain cooling system, disconnect radiator hoses, take out 3 capscrews at each side of radiator core and tip fan shroud back against front of engine. Lift radiator core up and out of shell, rotating fan to clear radiator outlet.

**Water Distributing Tube Servicing—**Consists of a metal tube installed in the engine block with closed end toward rear of engine which distributes cooling water through block. If engine overheats, check tube for corrosion or rust and replace tube. Install tube with closed end toward rear.

**1946-48 Note—**Water distributing tube beginning with 1946 engines is made of Brass to prevent corrosion.

**CLUTCH NOTES****1935-38 MODELS**

**REPLACEMENT CLUTCHES (1942 TYPE):** Car manufacturer has developed special Clutch Fork Ball Support Stud which makes it possible to install 1942 type Clutches on 1935-38 car models. All the parts listed below must be installed as an assembly.

**1935-36 Models**

Part	Part Number — 6 Cyl.	8 Cyl.
Clutch Assembly	753991	753991
Clutch-to-flywheel Bolt	500177	500177
Heavy Lockwasher (3/8)	108580	108580
Driven Plate Assembly	508403	505473
Flywheel Assembly	509018	509018
Clutch Fork Ball Support Stud	509017	509017
Starter-to-Housing Spacer	509019	509019

**1937-38 Models**

Clutch Cover Assembly	753991	753991
Driven Plate Assembly	505472	505473
Flywheel Assembly	①	503496
Clutch Fork Ball Support Stud	508990	508990
①—503496 (Up to Eng. No. 321922).		
503495 (After Eng. No. 321923).		

**1936-40 MODELS**

**CLUTCH PILOT BUSHING:** New type pilot bushing #412562 (oilless type) available for 1935 to 1940 cars. This can be used in place of regular production roller bearing where hole in crankshaft worn. Bushing can be driven into worn hole to give snug fit and provides a smooth running surface for shaft.

**Installation—**Soak bushing in light engine oil, place bushing on end of driver (Tool J-1329-P), insert tool through hole in flywheel housing and drive bushing in place making certain that it bottoms in hole. Manipulate driver out of bushing. NOTE—Use clutch pilot bushing remover (Tool J-1448-1).

**1946-47-48 MODELS**

**CLUTCH RELEASE BEARING & SUPPORT:** Release bearing is new factory lubricated and sealed ball bearing type. Bearing is piloted on tubular support mounted in clutch housing and entirely enclosing transmission main drive gear shaft. This tubular support is installed and removed through rear face of clutch housing (with transmission off car) and a paper gasket is used between the support flange and the face of the housing. An oil slinger is provided on the main drive shaft ahead of the bearing in the transmission and a felt oil seal is installed against shoulder ahead of oil slinger retaining ring (in 1946 seal originally installed in groove on shaft).

**Release Bearing Support Removal—**When removing support, do not pry on flange in clutch housing, tap support out of housing from inside (do not strike tubular portion of support, tap bell end of support at rear lightly with soft hammer).

**Bearing Servicing—**Do not wash bearing in solvent or attempt to remove grease (bearing is factory-lubricated and sealed). Check fit of bearing on tubular support. Bearing should not bind or have excessive clearance (see Release Bearing Noise Correction Note below).

**1946 MODELS**

**CLUTCH RELEASE BEARING NOISE CORRECTION:** May be caused by excessive clearance of release bearing on support tube allowing bearing to move on tube, or by excessive run-out of clutch release fingers. Correct these conditions as follows:

**Clutch Release Bearing Support—**On cars with first type Release Bearing Support, Part No. 1308585 with tubular section diameter of 1.355-1.357", replace this bearing support with new type, Part No. 509158 with tubular section diameter of 1.366-1.371". Increased diameter of later type support will reduce excessive clearance of bearing on support and prevent bearing moving on tube.

**Clutch Release Finger Runout**—Maximum permissible runout of fingers is .030" on a 1 15/16" diameter circle (check with a dial indicator). **NOTE**—Release fingers are integral part of the diaphragm.

#### 1937-46 MODELS

#### CLUTCH & BRAKE PEDAL MOUNTING CHANGE:

**To Correct Pedal Movement caused by Shaft Rotation.** On cars on which clutch and brake pedal shaft is retained by a straight grooved pin driven through the shaft into the bracket, this pin can be replaced by new type bolt and nut which will retain shaft more securely and prevent any movement of one pedal when the other pedal is depressed. Parts required for this installation are as follows:

1/4"-28 x 1 3/4" Hex. Head Bolt.....	123762
Bolt Nut .....	120367
Flat Washer .....	120392
Lock Washer .....	105109

Install head of bolt at bracket, place plain washer, lockwasher, and nut on bolt at shaft.

**NOTE**—This type shaft mounting used on 1946 models (after first cars).

#### 1938 MODELS

**CLUTCH HELPER SPRING:** Removal and Installation—To remove assembly, disconnect pedal-to-cross shaft rod (allowing pedal to rest on floorboard with spring extended) and remove strut from pedal. Disconnect opposite end and remove from car. To assemble unit off car, oil lubrication felt and place in spring, install cup on pedal side of spring, insert strut with lubrication felt on top side, install cup on opposite end, compress cup and spring until cotter pin can be inserted through hole in strut holding assembly together. Lubricate pedal end of strut with lubriplate and install assembly on car. Remove cotter pin from strut and assemble connector link to pedal.

#### 1939 MODELS

**CLUTCH CHATTER CORRECTION:** Clutch chatter may develop due to release bearing being off-center with release bearing plate in clutch assembly. This condition caused by too much clearance between clutch fork guide plate flanges and opening in clutch housing. To correct proceed as follows: With transmission off car, release bearing off-center condition can be checked by viewing through rear opening in housing. Remove clutch fork guide plate, center release bearing with bearing plate in clutch cover to align clutch fork, check fork clearance at guide plate, weld bar shims on outside of guide plate flanges until clutch fork alignment maintained. **NOTE**—On cars not equipped with flanged guide plate (Part No. 501871), replace part and make sure it does not move in housing.

#### 1940 EIGHT CYL MODELS

**CLUTCH SLIPPING CORRECTION:** Starting with engine number 8-217982 clutch cover spring tension has been increased from 1200 to 1400 lbs. to overcome clutch slippage and consequent damage to facings due to regularly starting car in second gear with excessive throttle opening. Car manufacturer recommends that new style clutch cover and pressure plate (Part No. 753615) be installed whenever clutch damage found due to this condition.

#### 1940 MODELS

**CLUTCH PEDAL RATTLE CORRECTION:** Due to endplay in countershaft lever as pedal depressed caused by shrinkage of felt at each end of shaft. To correct, leave felts on but install extra felt No.

502099 on frame end of shaft and soak all felts in engine oil. **IMPORTANT**—Oil felts regularly.

#### 1939 EIGHT CYL. MODELS

#### CLUTCH HOUSING REMOVAL & REPLACEMENT:

To remove clutch housing, the housing must be turned slightly and worked around until one end slides over frame cross member and clears toeboard. On some cars housing can be forced past toeboard if clearance insufficient.

#### PROPELLER SHAFT

##### 1937-38 MODELS

**FRONT PROPELLER SHAFT BEARING:** Mounted in rear end of front propeller shaft housing.

**Checking**—Overhaul assembly if oil leakage excessive or when shaft play exceeds .008" (measure by dial indicator mounted on housing, use 20-30 lbs. lifting force on shaft). With assembly dismantled, check for worn teeth on shaft and coupling, leaky oil seals. Replace worn parts.

**Disassembly**—Wire front universal joint trunnions together, disconnect rear propeller shaft at front universal joint, take out mounting screws in housing flange at rear of transmission case, pull shaft and housing assembly back to disengage coupling, remove from below at front. Take out universal joint flange capscrew, press shaft out of flange, remove snap ring on shaft, pull shaft out toward front. Press bearing and oil seals out toward rear (use tool made of 13/16" diameter pipe 18" long).

**Assembly**—Press new bearing in at rear end against shoulder in housing, install leather oil seal (lip toward bearing), offset washer (raised center portion to rear), and retainer (soak retainer felt in oil first) so that distance from retainer to end of housing is 1 9/16". Complete assembly by reversing disassembling directions above. **NOTE**—Manufacturer recommends use of tool J-693 to install bearing and oil seals, and J-1086 cap on end of shaft to prevent damage to oil seals when shaft installed.

**Installation**—When installing assembly on car, place oil filler plug on left side and slightly below center line, fill with trans. lubricant to plug level.

#### ACCELERATOR LINKAGE

##### 1940 MODELS

**ACCELERATOR PEDAL STICKING:** Causes engine to idle or run faster than normal. To correct this complaint, enlarge bolt holes in accelerator pedal cross-shaft mounting brackets with portable drill so brackets will align with shaft when reinstalled. Oil shaft at regular lubrication periods. Check to see that pedal rod has clearance at hole in toeboard and that rubber bellows on rod is not jammed in toeboard hole. On Torpedo 8, make certain that correct accelerator pedal #504294 (9 3/8" long) installed.

#### ELECTRICAL SYSTEM NOTES

##### 1942 MODELS

**ELECTRIC SYSTEM SHORT-CIRCUIT CORRECTIONS:**—Defroster Switch Shorting on Early 1942 Cars—On first 3000 cars with Underseat Heater Defrosters, stop built into heater control mechanism may be damaged by turning heater air button in clockwise direction with excessive force which will allow connecting link to contact heater panel light switch and cause short-circuit. Correct by installing new type positive stop lever No. 508118.

**Tail Light Wire Breakage on 1942 Station Wagons.** Wire is wedged in tail gate but is free to slide in hole

in body sill when tail gate is opened. Ice or other obstruction preventing wire movement in body sill hole will cause wire to break when tail gate is opened. Correct by enlarging groove in tail gate to 3/8"x3/8" to allow free movement of wire, draw wire through hole in body sill to allow sufficient slack and wedge wire in body sill hole with wooden plug coated with FS-655 sealer. Wire will slide in gate.

#### 1946 MODELS

#### CIGAR LIGHTER SHORT-CIRCUIT CORRECTION:

Caused by Cowl Ventilator handle cutting into cigar lighter feed wire. Check open position of cowl ventilator, make certain that stop on handle is sufficiently high to prevent handle moving beyond open position and cutting cigar lighter lead. Correct ineffective stops by drilling a #10 (.193") hole through the handle at the original stop point and installing fillister head machine screw (No. 100659), lockwasher (No. 138481), and nut (No. 120614) in hole.

#### 1946 MODELS

**CIGAR LIGHTER BINDING CORRECTION:** Streamliner Models. May be caused by misalignment of hole in instrument panel and hole in mounting bracket behind panel causing cigar lighter to stick in engaged position. Correct by installing special spacer, Part No. 509286, on mounting screw between instrument panel and bottom of bracket.

#### 1946 MODELS

**BACK-UP LIGHT SWITCH CORRECTIONS:** Faulty Operation. May be caused by bending of switch support by over-travel of gearshift lever on first cars with No. 5933752 switch support. Correct by installing new type flexible Switch Support, Part No. 509257, and Switch Actuating Stop, Part No. 509258. **NOTE**—New type Back-up Light Switch, Part No. 5936850 (with longer plunger) replaces No. 5933751.

**Short-circuits causing Blown Fuses**—May be caused by plastic tip of switch plunger cracking off on first type switches allowing plunger insert to short on switch stop. Install new switch No. 5936850.

#### 1942-46 MODELS

**FAULTY HORN OPERATION:** Cars with Deluxe Steering Wheel. Failure of horn to blow, or slight shock noticed when pressing horn ring, may be caused by fact that horn circuit not completed to ground through horn contacts in steering wheel hub (pilot hole in hub out of alignment with metal cup insert so that coil type ground spring does not contact cup). Correct by installing two special ground plates, No. 509553, under sponge rubber ring. **NOTE**—These ground plates installed on late 1946

**Horn Ring Rattles (Cars with Deluxe Steering Wheel)**—Caused by Sponge Rubber Separator, Part No. 507722, acquiring permanent set with 1/16-1/8" reduction in height. Correct by replacing separator.

#### 1948 MODELS

#### STARTER CLICKING NOISE CORRECTION ON

**HYDRA-MATIC DRIVE CARS:** If clicking noise heard when starter engaged on early Hydra-Matic Drive cars, it is due to ends of torus cover-to-flywheel bolts striking starter clutch cover (3/4" long bolts were used, also lock washers broke on some bolts). To correct, replace damaged starter clutch assembly (No. 1873789) and install set (30) of new shorter torus cover-to-flywheel bolts (No. 511849). Remove flywheel pan, replace bolts one at a time (tighten to 30 ft. lbs.) so as not to disturb cover to flywheel seal.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number (36-26A) 6BA-1001, (36-26B) 6BB-1001. On top of left frame siderail in front of steering gear under engine hood.

**ENGINE NUMBER:**—First number—6-84,001. Stamped on top left hand corner of block.

## TUNE-UP

**COMPRESSION:**—Ratio 6.2-1. Pressure 149 lbs. at 1000 R.P.M. or approx. 106 lbs. at cranking speed.

**VACUUM READING:**—Gauge should show steady reading of 18-20" of HG. with engine idling at 360 R.P.M.

**FIRING ORDER:** 1-5-3-6-2-4 See diagram.

**SPARK PLUGS:** AC Type K-7 (or No. 45). 14 mm. Metric. Gaps—.025" (.022" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—11° max. at 1900 RPM (distr.).

Vacuum Advance—7.5° distr. with 16-18" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC. First line of flywheel mark 'IGN.1-6/' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw  $\frac{1}{2}$ -1 $\frac{1}{4}$  turns open. Idle speed 6 MPH or 360 RPM.

Float Level— $\frac{3}{8}$ " from top of float to gasket seat with valve seated (invert to check).

Accelerating Pump—Center hole normal setting.

Fuel Pump Pressure: 3 $\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.009-.011" all valves hot. Use .009" and .011" feelers as 'go' and 'no go' gauges. Set exhaust at .011" for sustained high speeds. Remove hood sill for access to valve covers.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy Model 431-L. Switch and cable assembly. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton.

**COIL:** Delco-Remy Model 539-L. Mounted on dash.

Ignition Current—3.5 amperes at 6.2 volts.

**CONDENSER:** Delco-Remy Part No. 1858571.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 647-B. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Gaselector adjustment.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—Closed 35° Open 25° (distr.).

Breaker Arm Spring Tension—17-21 ozs.

Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	275	2	550
5.5	800	11	1600
11	1900	22	3800

**Vacuum Spark Control Delco-Remy Model 680-U.** Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port above throttle in carburetor) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	9-11"
7.5°	15°	16-18"

**Gaselector**—Consists of adjustment at distributor providing 10° advance or retard from center 'O' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting as shown. See Gaselector Setting below.

Flywheel Degrees	Piston Position
6° BTDC	.0133° BTDC.

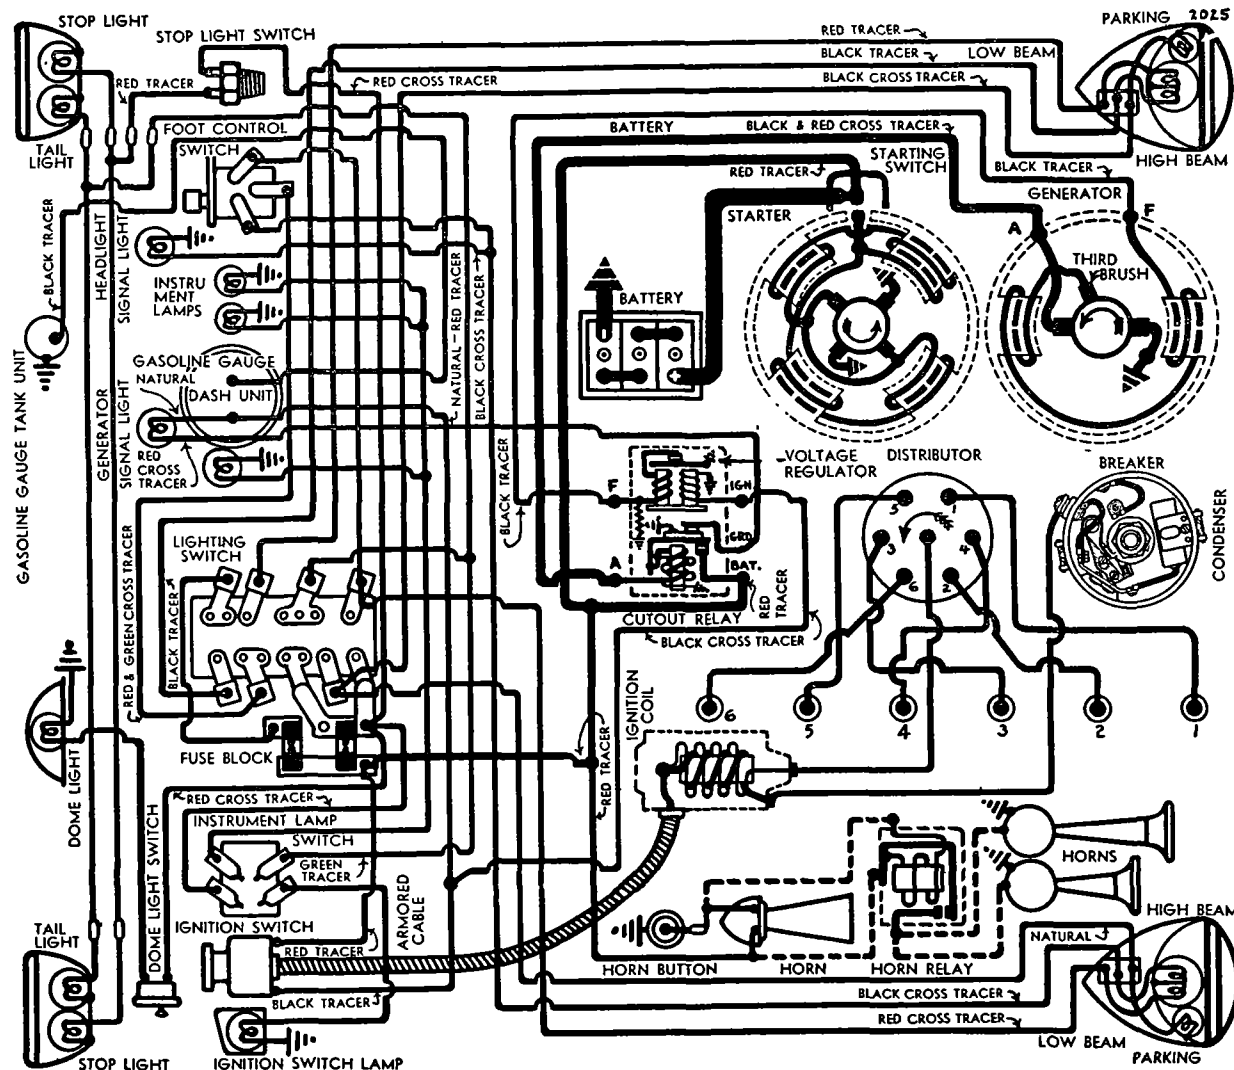

**NOTE:**—The two straight lines of the ignition mark 'IGN.1-6/' indicate allowable timing range of 4° on flywheel. Use first or 6° line in setting ignition.

**To Set Timing (Using Timing Light)**—Connect timing light between distributor terminal and ground,

turn on ignition. With #1 piston in compression, turn engine over until piston is 6° or .0133" before top dead center, stop when first line of ignition mark 'IGN.1-6/' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector thumbnut, center pointer on scale, tighten thumbnut, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

**Timing (Synchroscope)**—Connect Synchroscope between #1 spark plug cable and distributor cap, fill in first line of flywheel mark 'IGN.1-6/' with white paint or chalk, idle engine at 360 R.P.M., adjust distributor as directed above until line coincides with pointer on housing.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen thumbnut, move pointer clockwise to advance, or counter-clockwise to retard

## CARBURETOR

Carter 324S (Std.), 340S (Taxi). 1¼" downdraft type. For complete data, refer to Carburetor Index.

**Idle Adjustment**—Vacuum Gauge (Tool J-89) recommended. With engine hot, adjust idle adjusting screw to give steady vacuum reading of 18-20" of HG. at idling speed of 360 R.P.M. or 6 M.P.H. To adjust without gauge, set throttle stopscrew for correct idling speed, turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Setting should be ½-1¼ turn open of the screw from the inner seated position. Readjust throttle stopscrew for correct idling speed. **Accelerating Pump Setting**—Pump lever under dust cover at top of carburetor has three holes for pump link engagement. Change for seasonal requirement: Outer Hole—Ordinary temperatures, std. gasoline. Upper Hole (Max. stroke)—Extremely cold weather. Inner Hole (Min. stroke)—Extremely hot weather.

**Fast Idle**—Integral with carburetor. No adjustment. See article on Carter Fast Idle in Carburetion Sect. For complete data, refer to Carburetion Equip. Index.

**Accelerator Linkage Adjustment**—Must be maintained to provide correct 'throttle cracking' action for starting. To adjust, after setting carburetor idle speed at 6 M.P.H., loosen hand throttle wire lock-screw, pull button ½" out from instrument board, position hand throttle lever so that no clearance exists between lever and throttle cross shaft, tighten lock-screw. Turn throttle stopscrew in 3 turns, see that fast idle bar is up or in slow idle position and that stopscrew contacts carburetor casting, disconnect battery cable at starting motor to prevent cranking, fully depress starting pedal, adjust length of throttle cracking rod so that all clearance between cross shaft lever and accelerator pedal lever is taken up. Reset throttle stopscrew for correct idling speed.

**Automatic Choke**—Carter Climatic Control. For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1525996 oil-wetted type standard, #1525998 heavy duty oil-bath type optional.

**Fuel Pump**—AC. Type R #1522221. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—AC. Electric. #1515304 (dash unit), 1515258 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

Delco, Type 15-T. 6 volt type, 15 plate, 94 ampere hour capacity (20 hour capacity).

Starting Capacity—115 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.3 minutes.

Delco, Type 17-J (Special Equipment). 6 volt, 17 plate, 125 ampere hour capacity (20 hr. rate).

Grounded Terminal—Negative (—) terminal.

Location—Left hand side under front floor board.

## STARTER

STD.: Delco-Remy Model 727-Y. Armature 823881.

RHD.: Delco-Remy Model 737-C. Armature 1847432.

Drive—Overrunning clutch and manual pinion shift operated by starting pedal (727-Y), Bendix Drive (737-C).

Cranking Engine—200-225 amperes at 5 volts.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ounces each.

## Performance Data—727-Y

Torque	R.P.M.	Volts	Amperes
0 ft. lbs. ....	6000 .....	5.0 .....	.60
15 ft. lbs. ....	Lock .....	3 .....	.600

## Performance Data—737-C

Torque	R.P.M.	Volts	Amperes
0 ft. lbs. ....	6000 .....	5 .....	.65
15 ft. lbs. ....	Lock .....	3.15 .....	.570

**Removal**—Mounted on left front face of flywheel housing. To remove, take out capscrews.

**Starting Switch (727-Y)**: Delco-Remy No. 820052. On starter, operated by starter pedal (pinion shift). For complete data, refer to Electrical Equipment Index. (737-C) Delco-Remy Magnetic Switch Type 1528 used with Vacuum Switch 1588 (accelerator pedal starting).

For complete data, refer to Electrical Equipment Index.

## GENERATOR

### STANDARD

Delco-Remy Model 935-W, 936-R (Taxicab). Armature No. 1854856. Fixed third brush control type with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—19-21 amperes at 8.2 volts (cold), 16-18 amps, 7.6 volts (hot) at 40 MPH. **Generator Charge Indicator**—Red jewel light at bottom of right group of instruments on instrument board. Lights when ignition key is turned on and remains lighted until generator begins to charge.

### Performance Data

	Amperes	Volts	R.P.M.
Cold .....	23-27 .....	8.8-9.0 .....	3000
Hot .....	18-23 .....	8.2-8.7 .....	3200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ozs. (main), 16-20 ozs. (third).

**Field Current**—2.3-2.6 amperes at 6 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment**—Loosen pivot bolts and clamp bolt, move generator out or away from engine to take up stretch or slack in belt.

## GENERATOR

### SPECIAL EQUIPMENT

Delco-Remy Model 934-F (used for City and State Police), 961-N (Spec. Equip.). Two brush (shunt) types used with Voltage & Current Regulators Model 5599 (934-F), 5832 (961-N). Refer to 1937 Pontiac Eight page for data on these Generators.

## REGULATOR

Delco-Remy Model 5557. Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on dash. Cutout Relay has special 'ground' contacts for Generator Charge Signal control.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

Cuts In—6.9-7.6 volts, 830 R.P.M., 10 M.P.H.

Cuts Out—3 amperes maximum at 6.3 volts.

Contact Gap—.018-.025".

Air Gap—.018-.022" with contacts closed.

### Voltage Regulator

Setting—7.5-7.9 volts Cold (70°F), 7.4-7.6 volts Hot 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT'

terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit. **Contact Gap**—.015-.025".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING**—Headlamps—Guide Multi-beam, pre-focused, cross beam type (lenses not interchangeable). **Headlamp Beam Indicator**—Located at bottom of speedometer dial. Lighted whenever driving or upper headlamp beams are lighted.

### Switches

**Lighting**—Delco-Remy Model 479-S, 479-J Export. **Foot Beam Selector**—Delco-Remy Model 471-T.

**Instrument Lamp**—Delco-Remy Model 1406.

**Stop Lamp**—Hydraulic type on brake master cyl.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps .....	32-21 .....	2320-L
Parking .....	1½ .....	.55
Speedometer, Dash, Indicators 1 .....	1 .....	.51
Oil, Gas, Temp., Tail .....	3 .....	.63
Stop .....	15 .....	.87
Dome .....	6 .....	.81

## MISC. ELECTRICAL

**FUSES**: D-R Fuse Block No. 1050-Z. On lighting switch on back of instrument panel. Two 20 ampere capacity fuses, one spare fuse. Fuse toward rear protects left hand headlamp circuit. Fuse toward engine protects all other lighting circuits.

**HORNS**—Klaxon Model K-26-L Type 1601 Std., Model K-33-B, Type 1857 (low note), 1858 (high note) blended tone twin horns operated by horn relay Opt. All horns are vibrator type.

Horn Type	Current at 6 Volts	Air Gap
K-26-L, 1601 .....	6.5-8.5 .....	.025-.029"
K-33-B, 1857 .....	12-14 .....	.045-.050"
K-33-B, 1858 .....	11-13 .....	.036-.040"

**Horn Relay**: D-R No. 266-TK. Requires .25 amps. at 2 volts minimum to close contacts. Current draw .8 amperes.

**Contact Gap**—.015-.025". **Spring Tension**—6-8 ozs.

**Air Gap**—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS**—Type—6 cyl. 'L' head.

Bore—3⅞". Stroke—3⅞".

Displacement—208 cubic inches.

Rated Horsepower—27.4 (SAE).

Developed Horsepower—80 at 3600 R.P.M.

Compression Ratio—6.2-1 std. cast iron head.

**NOTE**—Special thick head gasket which reduces comp. ratio to 5.7-1 may be installed if desired.

**Compression & Vacuum Reading**—See Tune-up data.

See Pontiac Shop Notes for Radiator & Fender Removal.

**PISTONS**—Electro-plated cast-iron. Tin-plated to thickness of .00075-.00125" after finishing and cannot be ground. Use finished replacement pistons.

C NTINUED N NEXT PA E

**ENGINE**

C NTINUED FR M PRECEDIN PAGE

Length—3½".

Weight—Held to 1/16 oz. maximum variation.

Removal—Pistons and rods removed from above

Clearance—Top .022". Bottom .0015". See Fitting New Pistons.

**Replacement Pistons:**—Finished pistons furnished in three standard sizes (marked by letter stamped on head) as follows: 'A'—3.3720", 'B'—3.3730", 'C'—3.3740", and .005", .010", .015", .020", .030" oversize. Pistons up to .030" oversize held to same weight as standard.

**Fitting New Pistons:**—Check clearance by inserting .002" feeler ½" wide between piston and cylinder wall at right angles to pin hole. Pressure to withdraw feeler must be 10-25 lbs. Piston taper allowance .0005".

**PISTON RINGS:**—Two compression rings above pin, one oil control ring below pin per piston. Lower ring groove drilled radially with ten ⅛" oil drain holes. Piston also has two ⅛" drain holes drilled on each side above pin hole.

Ring	Width	End Gap	Side Clearance
Comp.	⅛"	.007-.017"	.001-.0025"
Oil Cont.	3/16"	.007-.017"	.001-.0025"

NOTE—Install compression rings with groove or step downward.

**PISTON PIN:**—Diameter 15/16". Length 3 1/16".

Pin is locked in piston by lock screw in one boss. Opposite end slotted to allow boss to slide freely on pin.

**Pin Fit in Piston:**—See Pontiac Shop Notes.

**Pin Fit in Rod Bushing:**—.0003-.0005" clearance. See Connecting Rod Upper Bearing.

**Fitting Pins:**—See Pontiac Shop Notes.

**CONNECTING ROD:**—Length—7 11/16" (center-to-center). Weight—Held to 1/16 oz. maximum variation. **Piston Pin Bushing (Upper Bearing):**—Split bushed type. See Pontiac Shop Notes for complete data. **Crankpin Journal Diameter:**—2".

**Lower Bearing:**—Interchangeable steel-backed, cadmium-silver alloy lined type. Bearings furnished .0005" undersize for service.

Clearance—.0005-.0015". Sideplay .005-.010".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Clearance must be kept below .0015".

**Installing Rods:**—Rods not offset. Install rods in same cylinders from which removed.

**CRANKSHAFT:**—Four bearing. Integral counterw'ts.

See Pontiac Shop Notes for Harmonic Balancer data.

**Journal Diameters:**—#1, 2¼"; #2, 2 9/32"; #3, 2 15/16"; #4, 2⅝".

**Bearing Type:**—Interchangeable steel-backed, cadmium-silver alloy lined type. Upper and lower bearing halves interchangeable. Bearings furnished standard and .001" undersize.

Clearance—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be removed without removing crankshaft by turning bearing out as crankshaft is rotated.

**End Thrust:**—Taken by #3 rear center bearing. Endplay .003-.008". Adjusted by replacing bearing.

**CAMSHAFT:**—Four bearing. Non-adjustable chain drive.

See Pontiac Shop Notes for Camshaft Removal and Camshaft Bearing finished sizes.

**Journal Diameters:**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32".

**Bearing Type:**—Steel-backed, babbit-lined.

Clearance—.0015-.0025". Endplay .002-.005".

**End Thrust:**—Taken by steel thrust plate assembled behind camshaft sprocket. Endplay .002-.005". Adjusted by replacing thrust plate.

**Timing Chain:**—Morse. Width 1". Pitch ¾". Length 56 links or 21".

**Camshaft Setting:**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.310-.311"	5.718"
Exhaust	1 15/32"	.310-.311"	5.718"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"
Exhaust	45°	19/64"	Free fit to .0006"

**Valve Guides:**—Removable, tapered guides (.001" taper to the inch, with greatest clearance at top). **IMPORTANT:**—Measure clearance at bottom end. Valve should just fall through of own weight when started in guide. **NOTE:**—When valves serviced, guides should be cleaned with wire brush or taper reamer (Tool P.R. 131).

**Valve Springs:**—Install with one closed coil at bottom two closed coils at top. Dampners installed on top of each spring. Use new dampner whenever dampner is removed.

	Spring Pressure	Spring Length
Valve Closed	52 lbs.	1 29/32"
Valve Open	82 lbs.	1 19/32"

**Valve Lifters:**—Single piece cast-iron. Furnished .005" oversize. Use special piloted reamer (J-551) when installing oversize lifter. Clearance .0005-.0015".

**VALVE TIMING**

**Tappet Clearance:**—.009-.011" all valves (hot). For sustained high speed driving .011" exhaust setting is recommended. Use .009" and .011" feelers as 'go' and 'no go' gauges. Hood sill must be removed to adjust clearance of front valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**To Check Valve Timing:**—Set tappet clearance on #6 intake valve at .0125". This valve should open with piston 5° (.0092") before top dead center and first straight line of ignition mark 'IGN. 1&6/' slightly past indicator (left front face of housing). Reset tappet clearance .010".

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump on right hand side of crankcase.

**NOTE:**—Whenever oil pump is to be removed turn engine over until #1 piston is at top dead center on compression stroke. On cars with conventional front springs, jack up frame until pump will clear spring. Dip pump gears in oil before installing. Prick punch mark on pump is down when gears are correctly meshed and distributor rotor in #1 position. After installing reset ignition timing.

**Normal Oil Pressure:**—35-45 lbs. with oil warm.

**Oil Pressure Regulator:**—In oil pump, non-adjustable.

**Crankcase Capacity:**—6 qts. (full).

**CLUTCH**

**CLUTCH:**—Own Make with Long 10CF-CS driven member. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions.

See Clutch Section for complete data.

**Facings:**—Moulded type, 2 required. Inside Diam. 6¼". Outside Diam. 9⅞". Thickness ⅛".

**Adjustment:**—Clearance between clutch pedal and underside of toeboard should be ⅝". Adjust by loosening locknut and turning stopscrew at lower end of pedal under shaft. Free movement or lash of pedal should be 1". Adjust by turning link screw at clutch fork end of link.

**Removal:**—Remove floor and toeboards and front seat, disconnect universal joint, support engine at rear and remove rear engine support cross member, block up support tube against body cross sill and slide universal joint yoke and ball back as far as possible with yoke horizontal, remove transmission lowering engine slightly at rear if necessary to clear support tube. Then remove clutch housing bottom cover, clutch control countershaft, unhook clutch pedal pull-back spring, remove clutch fork ball support, clutch fork and throwout bearing. Loosen capscrews mounting clutch cover on flywheel turning all screws out evenly to release springs. If clutch cover sticks in flywheel strike cover plate sharply on radius outside spring cups before removing screws completely. Remove clutch from below without taking off housing.

**FRONT SUSPENSION**

DELUXE MODEL 36-26A

**Front Suspension Model 36-26A:**—Independent 'Knee Action' type. See article in Steering Section.

See Front Suspension Section for complete data.

**Wheel Setting (Front Suspension Height)**—5 3/8" from bottom of cross tube to bottom of brake drum.

**Kingpin Inclination**—8¾° crosswise.

**Camber**—Minus ¼" to plus ¼". Not adjustable.

**Caster**—0°. Caster effect secured by trailing wheel behind suspension unit.

**Toe In**—0-1/16". To adjust change tie rod length.

**Steering Geometry**—Outer wheel 29°. Inner 38°.

**FRONT SUSPENSION**

MASTER MODEL 36-26B

**Front Suspension Model 36-26B:**—Conventional 'I' beam section front axle with reverse-elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7°10' crosswise.

**Caster**—1¼" plus or minus ¼". Adjustable by inserting wedge shims between axle and spring.

**Camber**—1½" plus 0" or minus 1". No adjustment. Bending of axle to correct camber not recommended.

**Toe In**—0-⅛" measured 9" above floor. Adjustable in usual manner by changing length of tie rod.

**Steering Geometry**—Inner wheel turned 38°, outer wheel 29°. Check tie rod ends and kingpin for looseness, replace steering arms.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Roller type.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, Duo-Servo, Single anchor type. Hand lever applies rear wheel brakes.

See Brake Section for complete data.

**Wheel Cylinders:**—(36-26A) 1" diameter on front wheels, 15/16" rear wheels, (36-26B) 15/16" diameter all wheels.

**Drum Diameter**—12".

**Lining:**—Woven & Moulded type. Width 1¾" Thickness 3/16". Length 23 1/16" per wheel.

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake:** See Service Brakes above.

**MODEL IDENTIFICATION**

**SERIAL NUMBER**—First number—8-BA-1001. On left hand frame side rail under front fender.  
**ENGINE NUMBER**—First number—8-44,001. Stamped on boss on left hand top corner of block.

**TUNE-UP**

**COMPRESSION**—Ratio 6.2-1. Pressure 144 lbs. at 1000 R.P.M. or approx. 108 lbs. at cranking speed.

**VACUUM READING**—Gauge should show steady reading of 18-20" of HG. with engine idling at 360 R.P.M.

**FIRING ORDER**: 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS**: AC Type K-7 (or No. 45). 14 mm. Metric. Gaps—.025" (.022" cars with radio).

**IGNITION**: See Coil, Condenser, and Distributor.

Breaker Gap—.018". Cam Angle—31° Closed.

Automatic Advance—11° max. at 1700 RPM (distr.).

Vacuum Advance—10° distr. with 16-21" vacuum.

**IGNITION TIMING**: See Ignition Timing.

Std. Setting—6° BTDC. First line of flywheel mark 'IGN.1-8' aligned with pointer in inspection hole on left side of housing.

**CARBURETION**: See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw ½-1¼ turns open. Idle speed 6 MPH or 360 RPM.

Float Level—¾" from top of float to gasket seat with valve seated (invert to check).

Accelerating Pump—Center hole normal setting.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES**: See Valve Timing.

Tappet Clearance—.009-.011" all valves hot. Use .009" and .011" feelers as 'go' and 'no go' gauges. Set exhaust at .011" for sustained high speeds. Remove hood sill for access to valve covers.

**STARTING**: See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch**—Delco-Remy Model 431-L. Switch and cable assembly. Connected to coil by armored cable.

**Ignition Lock**—Briggs & Stratton.

**COIL**: Delco-Remy Model 539-L. Mounted on dash.

Ignition Current—3.5 amperes at 6.2 volts.

**CONDENSER**: Delco-Remy Part No. 1855968.

Capacity—20-.25 microfarad.

**DISTRIBUTOR**: Delco-Remy Model 663-H. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and Gaselector adjustment.

Breaker Gap—Set at .018". Limits .015-.020".

Cam Angle or Dwell—31° (closed), 14° (open).

Breaker Arm Tension—19-23 ozs.

Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	3	600
5	600	10	1200
11	1700	22	3400

**Vacuum Spark Control Delco-Remy Model 680-K**. Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port above throttle in carburetor) except when engine accelerated or operated with wide open throttle when spark retarded by spring.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-6"
10°	20°	16-21"

**Gaselector**—Consists of adjustment at distributor

providing 10° advance or retard from center 'O' position. See Ignition Timing for setting.

**Distributor Removal**—Mounted on left side of crankcase. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING**—Standard setting as shown. See Gaselector Setting below.

Flywheel Degrees      Piston Position

All engines ..... 6° BTDC ..... .0117" BTDC.

**NOTE**—The two straight lines of the ignition mark 'IGN.1-8' indicate allowable timing range of 4° on flywheel. Use first or 6° line in setting ignition.

**To Set Timing (Using Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0117" before top dead center, stop when first line of ignition mark 'IGN.1-8' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector thumbnut, center pointer on scale, tight-

en thumbnut, loosen advance arm clamp bolt, rotate distributor until timing light lights (contacts opening), tighten clamp bolt.

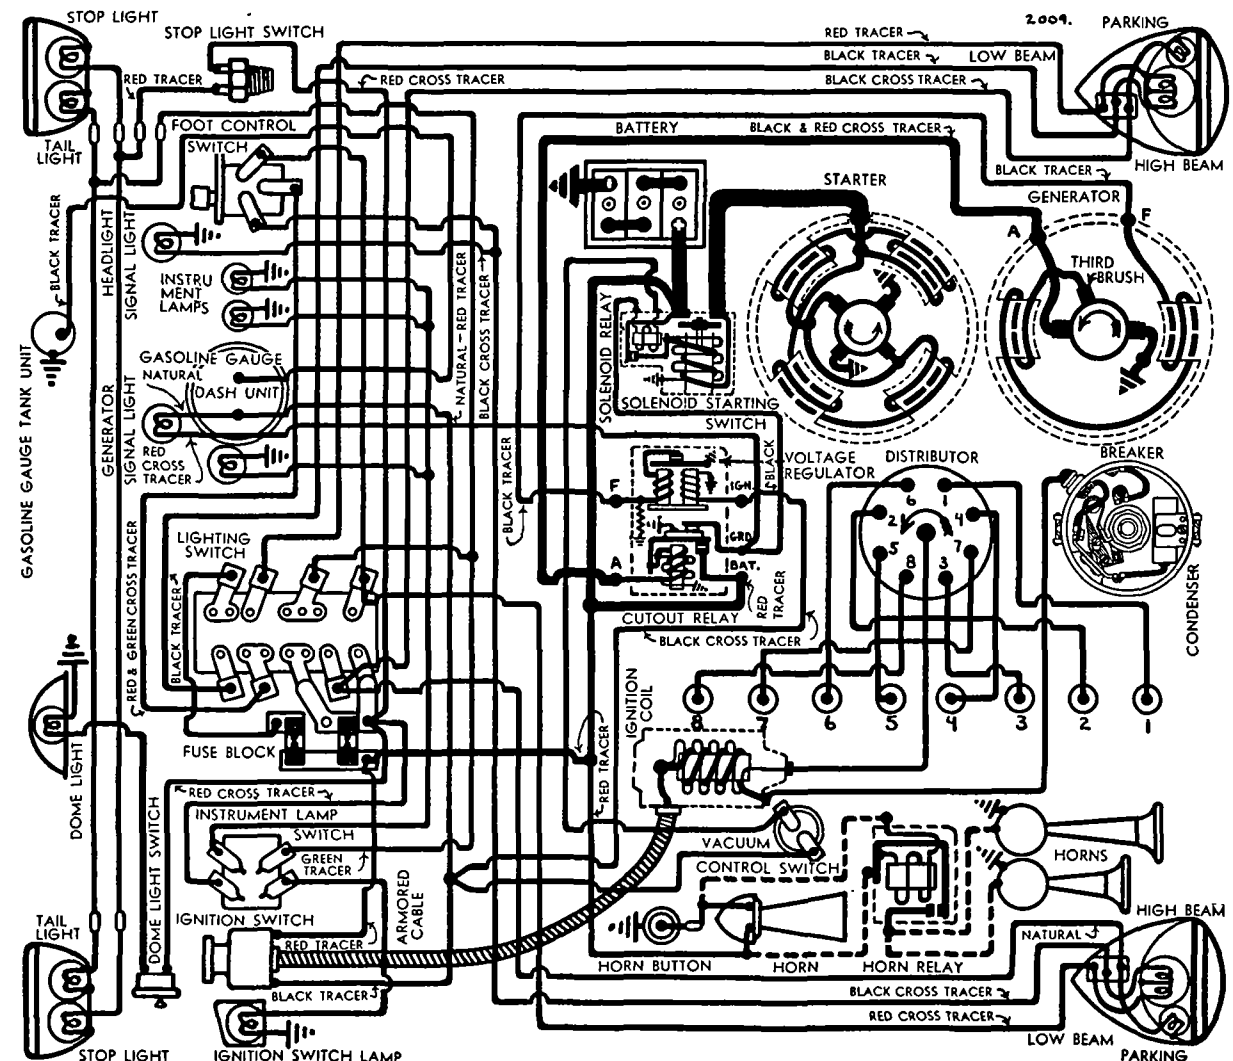

**Timing (Synchroscope)**—Connect Synchroscope between #1 spark plug cable and distributor cap, fill in first line of flywheel mark 'IGN.1-8' with white paint or chalk, idle engine at 360 R.P.M., adjust distributor as directed above until line coincides with pointer on housing.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen thumbnut, move pointer clockwise to advance, or counter-clockwise to retard spark.

**CARBURETOR**

Carter 322S (Std.), 340S (Taxi). 1¼" downdraft type. For complete data, refer to Carburetor Index.

**Idle Adjustment**—Vacuum Gauge (Tool J-89) recommended. With engine hot, adjust idle adjusting  
 CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

screw to give steady vacuum reading of 18-20" f HG. at idling speed of 360 R.P.M. or 6 M.P.H. To adjust without gauge, set throttle stopscrew for correct idling speed, turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Setting should be  $\frac{1}{2}$ - $\frac{1}{4}$  turn open of the screw from the inner seated position. Readjust throttle stopscrew for correct idling speed. Accelerating Pump Setting—Pump lever under dust cover at top of carburetor has three holes for pump link engagement. Change for seasonal requirement: Outer Hole—Ordinary temperatures, std. gasoline. Upper Hole (Max. stroke)—Extremely cold weather. Inner Hole (Min. stroke)—Extremely hot weather.

**Fast Idle:**—Integral with carburetor. No adjustment. See article on Carter Fast Idle in Carburetion Sect. For complete data, refer to Carburetion Equip. Index.

**Accelerator Linkage Adjustment:**—Adjust rod connecting bell cranks on side of manifold so that accelerator pedal just touches floor board with carburetor throttle valve wide open. Release accelerator pedal and with throttle valve in closed position, set adjusting screw in lever at forward end of this connecting rod so that clearance between this lever and lever which operates carburetor throttle valve rod is .235-.265" (use gauge #J-635-1). Disconnect vacuum switch operating rod at switch lever, turn switch lever so that pointer lines up with line on switch body, adjust length of rod by turning trunnion on rod until rod can be connected to switch lever without disturbing position of lever. See that hand throttle is fully closed, loosen set screw in throttle cable trunnion (at lower end of cable), adjust cable length so that clearance between lever at forward end of hand throttle operating rod and carburetor throttle valve rod lever is  $\frac{1}{16}$ " minimum (use gauge #J-635-2). Check setting after opening and closing hand throttle. These clearances are important.

**Automatic Choke:**—Carter Climatic Control. For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1525997 oil-wetted type standard, #1525998 heavy duty oil bath type optional.

**Fuel Pump:**—AC. Type R #1522221. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—AC. Electric. #1515304 (dash unit), #1515258 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Delco, Type 17-K.** 6 volt, 110 ampere hr. capacity. Starting Capacity—131 amperes for 20 minutes. Zero Capacity—300 amperes for 4.4 minutes. Grounded Terminal—Negative (—) terminal. Location—Left hand side under front floor boards.

**Delco, Type 17-J (Special Equipment).** 6 volt, 17 plate, 125 ampere hour capacity (20 hr. rate). Grounded Terminal & Location—Same as above.

## STARTER

**Delco-Remy Model 727-S.** Armature No. 823881.

**Drive:**—Overrunning clutch and manual pinion shift operated by solenoid switch.

**Cranking Engine:**—220-225 amperes at 5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—24-28 ounces each.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
15 ft. lbs.	Lock	3.0	600

**Removal:**—Mounted on left front face of flywheel housing. To remove, take out capscrews.

**Starting Switch:** Delco-Remy Solenoid 1516. Vacuum Switch Type 1588. Solenoid switch controlled thru relay by vacuum switch operated by accelerator. For complete data, refer to Electrical Equipment Index.

## GENERATOR

## STANDARD

**Delco-Remy Model 935-W, 936-R (Taxicab).** Armature No. 1854856. Fixed third brush control type with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE:**—Third brush is clamped in position for maximum safe output and must not be disturbed. Charging Rate Adjustment—None. See Regulator. Maximum Charging Rate—19-21 amperes at 8.2 volts (cold), 16-18 amps, 7.6 volts (hot) at 40 MPH. Generator Charge Indicator—Red jewel light at bottom of right group of instruments on instrument board. Lights when ignition key is turned on and remains lighted until generator begins to charge.

	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ozs. (main), 16-20 ozs. (third).

**Field Current:**—2.3-2.6 amperes at 6 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment:**—Loosen pivot bolts and clamp bolt, move generator out or away from engine to take up stretch or slack in belt.

## GENERATOR

## SPECIAL EQUIPMENT

**Delco-Remy Model 934-F** (used for City and State Police), 961-N (Spec. Equip.). Two brush (shunt) types used with Voltage & Current Regulators Model 5599 (934-F), 5832 (961-N). Refer to 1937 Pontiac Eight page for data on these Generators.

## REGULATOR

**Delco-Remy Model 5557.** Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on dash. Cutout Relay has special 'ground' contacts for Generator Charge Signal control.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay

**Cuts In:**—6.9-7.6 volts, 835 R.P.M., 10 M.P.H.

**Cuts Out:**—3 amperes maximum at 6.3 volts.

**Contact Gap:**—.018-.025".

**Air Gap:**—.018-.022" with contacts closed.

## Voltage Regulator

**Setting:**—7.5-7.9 volts Cold (70°F), 7.4-7.6 volts Hot 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment:**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bend-

ing spring hanger at lower end of spring slightly until setting is as given above.

**NOTE:**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit. Contact Gap—.015-.025".

**Contact Spring Tension:**—2.7-3.5 ounces.

**Air Gap:**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused, cross beam type (lenses not interchangeable). Headlamp Beam Indicator—Located at bottom of speedometer dial. Lighted whenever driving or upper headlamp beams are lighted.

## Switches

**Lighting:**—Delco-Remy Model 479-S, 479-J Export.

**Foot Beam Selector:**—Delco-Remy Model 471-T.

**Instrument Lamp:**—Delco-Remy Model 1406.

**Stop Lamp:**—Hydraulic type on brake master cyl.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320-L
Parking	1½	55
Speedometer, Dash, Indicators	1	51
Oil, Gas, Temp., Tail	3	63
Stop	15	87
Dome	6	81

**NOTE:**—Headlamps are Pre-focused 'Long-Life' type

## MISC. ELECTRICAL

**FUSES:** D-R Fuse Block No. 1050-Z. On lighting switch on back of instrument panel. Two 20 ampere capacity fuses, one spare fuse. Fuse toward rear protects left hand headlamp circuit. Fuse toward engine protects all other lighting circuits.

**HORNS:**—Klaxon Model K-26-L Type 1601 Std., Model K-33-B, Type 1857 (low note), 1858 (high note) blended tone twin horns operated by horn relay Opt. All horns are vibrator type.

Horn Type	Current at 6 Volts	Air Gap
K-26-L, 1601	6.5-8.5	.025-.029"
K-33-B, 1857	12-14	.045-.050"
K-33-B, 1858	11-13	.036-.040"

**NOTE:**—Twin horns are stamped 'L' (low note—long horn), 'S' (high note—short horn), on motor shell.

**Horn Relay:** D-R No. 266-TK. Requires .25 amps. at 2 volts minimum to close contacts. Current draw .8 amperes.

**Contact Gap:**—.015-.025". Spring Tension—6-8 ozs.

**Air Gap:**—.012-.017" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS:**—Type—8 cyl., 'L' head

**Bore:**—3¼". Stroke—3½".

**Displacement:**—232.3 cubic inches.

**Rated Horsepower:**—33.8 (SAE).

**Developed Horsepower:**—87 at 3800 R.P.M.

**Compression Ratio:**—6.2-1 std. cast iron head.

**NOTE:**—Special thick head gasket which reduces comp. ratio to 5.7-1 may be installed if desired.

**Compression & Vacuum Reading:**—See Tune-up data.

See Pontiac Shop Notes for Radiator & Fender Removal.

**PISTONS:**—Electro-plated cast-iron. Tin-plated to thickness of .00075-.00125" after finishing and cannot be ground. Use finished replacement pistons. Length—3 9/16".

**Weight:**—All pistons held to 1/16 oz. max. variation.

## ENGINE

### CONTINUED FR M PRECEDIN PAGE

**Removal**—Pistons and rods removed from above. Clearance—Top .022". Bottom .0015". See Fitting New Pistons.

**Replacement Pistons**—Finished pistons furnished in three standard sizes (marked by letter stamped on head) as follows: 'A'—3.247", 'B'—3.248", 'C'—3.249" and .005", .010", .015", .020", .030" oversize. Pistons up to .030" oversize held to same weight as standard.

**Fitting New Pistons**—Check clearance by inserting .002" feeler  $\frac{1}{2}$ " wide between piston and cylinder wall at right angles to pin hole. Pressure required to withdraw feeler must be 10-25 lbs. Piston taper allowance .0005".

**PISTON RINGS**—Two compression rings above pin, one oil control ring below pin per piston. Lower ring groove drilled radially with ten  $\frac{1}{8}$ " oil drain holes. Piston also has two  $\frac{1}{8}$ " drain holes drilled on each side above pin hole.

Ring	Width	End Gap	Side Clearance
Comp.	$\frac{1}{8}$ "	.007-.017"	.001-.0025"
Oil Cont.	$\frac{3}{16}$ "	.007-.017"	.001-.0025"

**NOTE**—Install compression rings with groove or step downward.

**PISTON PIN**—Diameter 15/16". Length 2 $\frac{7}{8}$ ".

Pin is locked in piston by lock screw. Opposite end slotted to allow boss to slide freely on pin.

**Pin Fit in Piston**—See Pontiac Shop Notes.

**Pin Fit in Rod Bushing**—.0003-.0005" clearance. See Connecting Rod Upper Bearing (below).

**Fitting Pins**—See Pontiac Shop Notes.

**CONNECTING ROD**—Length—7 $\frac{11}{16}$ " (center-to-center). Weight—Held to 1/16 oz. max. variation.

**Piston Pin Bushing (Upper Bearing)**—Split bushed type. See Pontiac Shop Notes for complete data.

**Crankpin Journal Diameter**—2".

**Lower Bearing**—Interchangeable steel-backed, cadmium-silver alloy lined type. Bearings furnished .0005" undersize for service.

**Clearance**—.0005-.0015". Sideplay .005-.010".

**Bearing Adjustment**—None (no shims) Replace bearings. Do not file bearing caps. Clearance must be kept below .0015".

**Installing Rods**—Connecting rod lower bearings are offset. Install rods with narrow half of bearing toward nearest main bearing (widest half of bearing toward front on #2, 4, 6, 8 or toward rear on #1, 3, 5, 7).

**CRANKSHAFT**—Five bearing. Integral counterweights. See Pontiac Shop Notes for Harmonic Balancer data.

**Journal Diameters**—#1, 2 $\frac{1}{4}$ "; #2, 2 $\frac{9}{32}$ "; #3, 2 $\frac{5}{16}$ "; #4, 2 $\frac{11}{32}$ "; #5 2 $\frac{3}{8}$ ".

**Bearing Type**—Interchangeable steel-backed, cadmium-silver lined type. Upper and lower bearing halves interchangeable. Bearings furnished standard and .001" undersize. Clearance—.001-.003".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file bearing caps. Bearing upper halves can be removed without removing crankshaft by turning bearing out as crankshaft is rotated.

**End Thrust**—Taken by #3 (center) bearing. Endplay .003-.008". Adjusted by replacing bearing.

**CAMSHAFT**—Five bearing. Non-adjustable chain drive. See Pontiac Shop Notes for Camshaft Removal and Camshaft Bearing finished sizes.

**Journal Diameters**—#1, 2"; #2, 1 $\frac{31}{32}$ "; #3, 1 $\frac{15}{16}$ "; #4, 1 $\frac{29}{32}$ "; #5, 1 $\frac{7}{8}$ ".

**Bearing Type**—Steel-backed babbit-lined.

**Clearance**—.0015-.0025". Endplay .002-.005".

**End Thrust**—Taken by a thrust plate assembled behind camshaft sprocket. Endplay .002-.005". Adjusted by replacing thrust plate.

**Timing Chain**—Morse. Width 25/32". Pitch  $\frac{3}{8}$ ". Length 56 links or 21".

**Camshaft Setting**—Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 $\frac{13}{32}$ "	.310-.311"	5.53"
Exhaust	1 $\frac{11}{32}$ "	.310-.311"	5.53"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"
Exhaust	45°	19/64"	Free fit to .0006"

**Valve Guides**—Removable, tapered guides (.001" taper to the inch, with greatest clearance at top). **IMPORTANT**—Measure clearance at bottom end. Valve should just fall through of own weight when started in guide. **NOTE**—When valves serviced, guides should be cleaned with wire brush or taper reamer (Tool P.R. 131).

**Valve Springs**—Install with one closed coil at bottom, two closed coils at top. Dampners installed on top of each spring. Use new dampner whenever dampner is removed. **Spring Pressure** **Spring Length**  
Valve closed ..... 52 lbs. .... 1 $\frac{29}{32}$ "  
Valve Open ..... 82 lbs. .... 1 $\frac{19}{32}$ "

**Valve Lifters**—Single piece cast-iron. Furnished .005" oversize. Use special piloted reamer (J-551) when installing oversize lifter. Clearance .0005-.0015".

## VALVE TIMING

**Tappet Clearance**—.009-.011" all valves (hot). For sustained high speed driving .011" exhaust setting recommended. Use .009" and .011" feelers as 'go' and 'no go' gauges. Hood sill must be removed to adjust clearance of front valves.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**To Check Valve Timing**—Set tappet clearance on #8 intake valve at .0125". This valve should open with piston 5° (.0082") before top dead center and first straight line of ignition mark 'IGN. 1&8/' slightly past indicator (left front face of housing). Reset tappet clearance .010".

## LUBRICATION

**LUBRICATION**—Pressure. Gear type oil pump on right hand side of crankcase.

**NOTE**—Whenever oil pump is to be removed, turn engine over until #1 piston at top dead center on compression stroke. On cars with conventional front springs jack up frame until pump will clear spring. Dip pump gears in oil before installing. Prick punch mark on pump is down when gears are correctly meshed and distributor rotor in #1 position. After installing reset ignition timing.

**Normal Oil Pressure**—35-45 lbs. with oil warm.

**Oil Pressure Regulator**—In oil pump, non-adjustable. **Crankcase Capacity**—7 qts. (full).

## CLUTCH

**CLUTCH**—Own make with Long 10CF-CS driven member. Single plate, dry disc type. See article in Clutch Section for relining and assembling directions. See Clutch Section for complete data.

**Facings**—Moulded type, 2 required. Inside Diam. 6 $\frac{1}{4}$ ". Outside Diam. 9 $\frac{7}{8}$ ". Thickness  $\frac{1}{8}$ ".

**Adjustment**—Clearance between clutch pedal and underside of toeboard should be  $\frac{5}{8}$ ". Adjust by loosening locknut and turning stopscrew at lower end of pedal under shaft. Free movement or lash of pedal should be 1". Adjust by turning link screw at clutch fork end of link.

**Removal**—Remove floor and toeboards and front seat, disconnect universal joint, support engine at rear and remove rear engine support cross member, block up support tube against body cross sill and slide universal joint yoke and ball back as far as possible with yoke horizontal, remove transmission lowering engine slightly at rear if necessary to clear support tube. Then remove clutch housing bottom cover, clutch control countershaft, unhook clutch pedal pull-back spring, remove clutch fork ball support, clutch fork and clutch throwout bearing. Loosen capscrews mounting clutch cover on flywheel turning all screws out evenly to release springs. If clutch cover sticks in flywheel strike cover plate sharply on radius outside spring cups before removing screws completely. Remove clutch from below without taking off housing.

## FRONT SUSPENSION

**Front Suspension**—Independent 'Knee Action' type.

See Front Suspension Section for complete data.

**Wheel Setting (Front Suspension Height)**—5 $\frac{3}{8}$ " from bottom of cross tube to bottom of brake drum.

**King Pin Inclination**—8 $\frac{3}{4}$ ° crosswise.

**Camber**—Minus  $\frac{1}{4}$ ° to plus  $\frac{1}{4}$ °. Not adjustable.

**Caster**—0°. Caster effect secured by trailing wheel behind suspension unit.

**Toe In**—0-1/16". Adjustable in usual manner by changing length of tie rod.

**Steering Geometry**—Inner wheel turned 38°, outer wheel 29°. Check tie rod ends and kingpin for looseness.

## STEERING GEAR

**Steering Gear**: Saginaw Worm-and-Roller type.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES**—Service—Bendix Hydraulic, Duo-Servo, Single anchor type. Hand lever applies rear wheel brakes.

See Brake Section for complete data.

**Wheel Cylinders**—1" diameter (front), 15/16" diameter (rear).

**Drum Diameter**—12".

**Lining**—Woven & Moulded type. Width 1 $\frac{3}{4}$ ". Thickness 3/16". Length 23 1/16" per wheel.

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment**—See Service Brake Adjustment.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 6CA-1001. Top left frame siderail under engine hood.

**ENGINE NUMBER:**—First number, 6-220001. Stamped on top left corner of engine block.

## TUNE-UP

**COMPRESSION:**—Ratio—8.2-1. Pressure—140-143 lbs. at 1000 R.P.M. or approx. 115 lbs. at cranking speed.

**VACUUM READING:**—Steady reading of 18-20" with engine idling at 376 R.P.M. or 7 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC Type K-7 (or No. 45) 14 mm. Metric. Gaps—.025" (.022" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.020". Cam Angle—35° Closed.  
Automatic Advance—14¼" max. at 2000 RPM (distr.).  
Vacuum Advance—7.5° distr. with 13-16" vacuum.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—6° BTDC. First line of flywheel mark 'IGN.1-6/' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Set idle adjusting screw ¾-1¼ turns open (¼-¾ '37 Taxi). Idle speed 376 RPM or 7MPH.  
Float Level—¾" from top of float to gasket seat with valve seated (invert to check).  
Accelerating Pump—Center hole normal setting.

**Fuel Pump Pressure:** 3¾ lbs. (AJ Comb.), 4 lbs. (AH).

**VALVES:** See Valve Timing.

**Tappet Clearance**—.011-.013" all valves (hot). For sustained high speed driving .013" exhaust setting is recommended. Use .011" and .013" feelers as 'go' and 'no go' gauges. Remove hood side panel by unfastening two wing nuts at rear and one at top front.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy Model 435-G. Switch and cable assembly. Connected to coil by armored cable.

See Article in Electrical Equipment Section.

**Ignition Lock**—Briggs & Stratton. #45792 (cylinder), #80203 (case). Key Series—8000-9499.

**COIL:** Delco-Remy Model 539-L. Mounted on dash.  
Ignition Current—2.0 amperes idling, 3.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1865972.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 647-D. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Gaselector adjustment.

Breaker Gap—.020". Limits .018-.024".  
Cam Angle or Dwell—Closed 35° Open 25° (distr.).  
Breaker Arm Spring Tension—17-21 ounces.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Start	400	4.0	800
8.0	1050	16.0	2100
8.5	1450	17.0	2900
14.25	2000	28.5	4000

**Vacuum Spark Contr 1 Delc -Remy Model 681-M.** Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port above throttle in carburetor) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
7.5°	15°	13-16"

**Gaselector**—Consists of adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing (below) for setting.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

## IGNITION TIMING

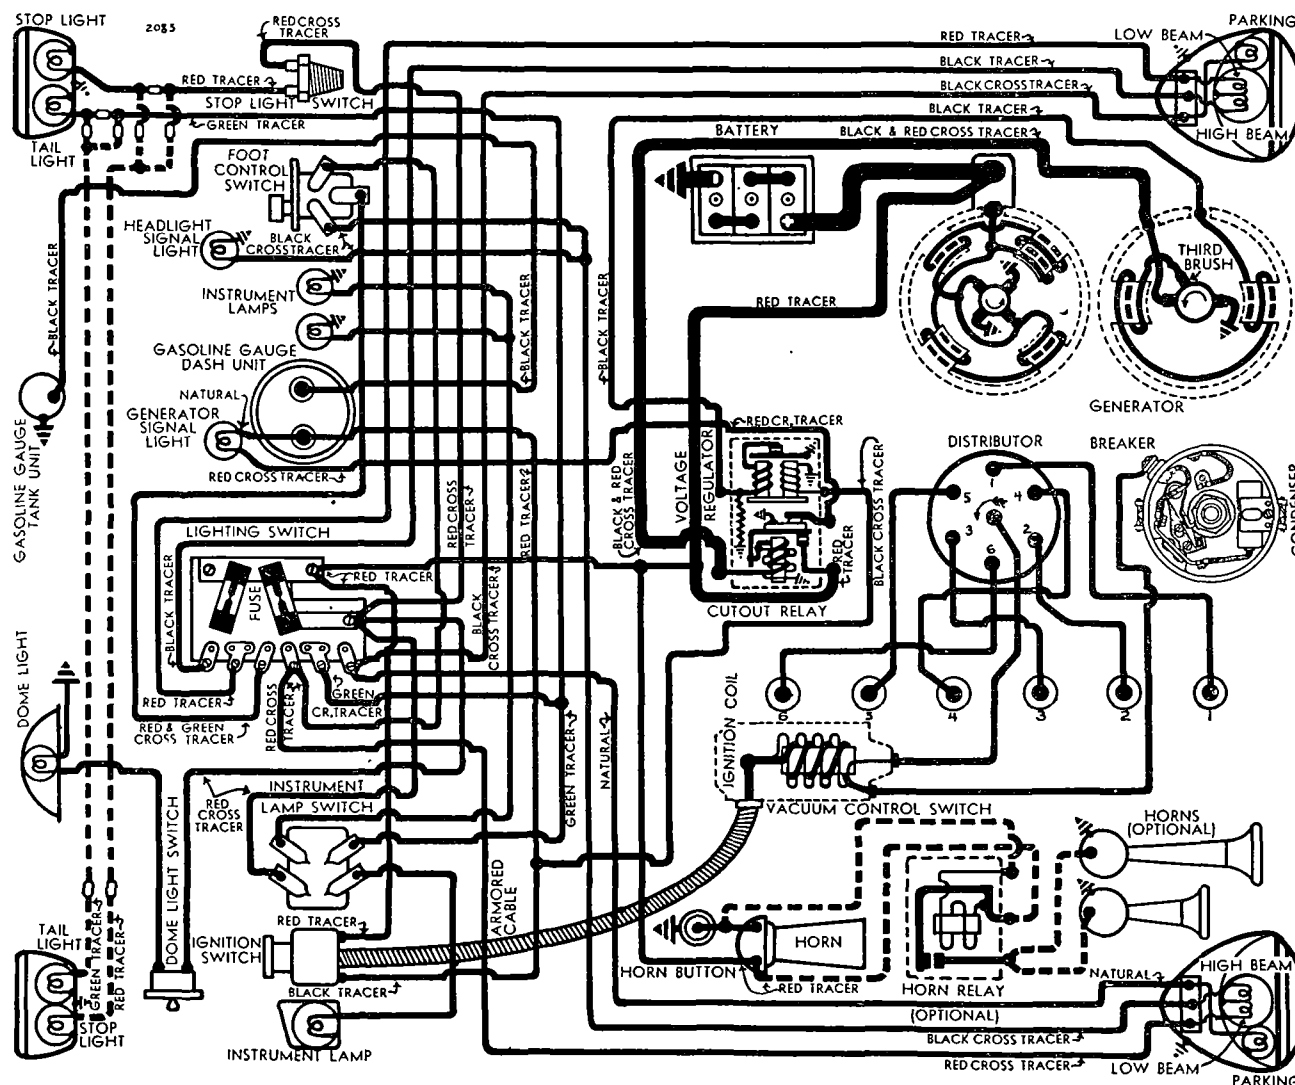

**IGNITION TIMING:**—Standard setting as shown. See Gaselector Setting below.

### Flywheel Degrees Piston Position

All engines .....6° BTDC.....0138° BTDC.

**NOTE**—The two straight lines of the ignition mark 'IGN.1-6/' indicate allowable timing range of 4° on flywheel. Use first or 6° line in setting ignition.

**To Set Timing (using Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0138° before top dead center, stop when first line of ignition mark 'IGN.1-6/' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector thumbnut, center pointer on scale, tighten thumbnut, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts open-

ing), tighten clamp bolt.

**Timing (Synchroscope)**—Connect Synchroscope between #1 spark plug cable and distributor cap, fill in first line of flywheel mark 'IGN.1-6/' with white paint or chalk, idle engine at 376 R.P.M. or 7 M.P.H. in high gear, adjust distributor as directed above until line coincides with pointer on housing.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen thumbnut, move pointer clockwise to advance, or counter-clockwise to retard spark.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Models 352-S, 364-S (Taxicab). 1½" downdraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at hot or slow idling speed.

**Idle Adjustment**—Vacuum Gauge (Tool J-89) recommended. With engine hot, adjust idle adjusting screw to give steady vacuum reading of 18-20" of HG. at idling speed of 376 R.P.M. or 7 M.P.H. To adjust without gauge, set throttle stopscrew for correct idling speed, turn idling adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Setting should be ¾-1¼ turns open of the screw from the inner seated position. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting**—Pump lever under dust cover at top of carburetor has three holes for pump link engagement. Change for seasonal requirement: Outer Hole (Max. stroke)—Extremely cold weather. Lower Hole (Ordinary temperatures, std. gasoline). Inner Hole (Min. Stroke)—Extremely hot weather.

**Fast Idle:**—Consists of fast idle cam linked to choke mechanism which acts as throttle lever stop. Should not require adjustment. See Carburetion article in Carburetion Section and special article in Carburetion Equipment Section for complete data.

*For complete data, refer to Carburetion Equip. Index.*

**Accelerator Linkage Adjustment:**—Must be maintained to provide correct 'throttle cracking' action for starting. To adjust, after setting carburetor idle speed at 6-7 M.P.H., loosen hand throttle wire lock-screw, pull button ⅛" out from instrument board, position hand throttle lever so that no clearance exists between lever and throttle cross shaft, tighten lock-screw. Turn throttle stopscrew in 2 turns (with throttle stopscrew on high point of cam or 'cold' position), disconnect battery cable at starting motor to prevent cranking, fully depress starting pedal, adjust throttle cracking pin so that all clearance between cross shaft lever and accelerator pedal lever is taken up. Connect starting motor cable, reset engine idle speed.

**Automatic Choke:**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—AC. #1528150 oil-wetted type standard, #1525998 (1st 1038 jobs), #1528304 (after 1038) heavy duty oil-bath type optional.

**Fuel Pump:**—AC. Type AH #1523109. Diaphragm type.

**AJ #1523110** (combination fuel and vacuum pump) optional.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—AC. Electric #1515325 (dash unit), #1515450 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Delco, Type 15-AA.** 6 volt type, 15 plate, 94 ampere hour capacity (20 hour rate).

**Starting Capacity**—115 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes.

**Grounded Terminal**—Negative (—) terminal.

**Location**—Left hand side under front floor board.

**Delco, Type 17-J (Special Equipment).** 6 volt, 17 plate, 125 ampere hour capacity (20 hour rate).

**Starting Capacity**—149 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.5 minutes.

**Grounded Terminal & Location**—Same as above.

## STARTER

**STD.: Delco-Remy Model 729-E.** Armature 823881.

**RHD.: Delco-Remy Model 737-C.** Armature 1847432.

**Drive**—Overrunning clutch and manual pinion shift operated by starting pedal (729-E), Bendix Drive (737-C).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—Approx. 200 amperes at 5.0 volts.

### Performance Data—729-E

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

### Performance Data—737-C

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	65
15 "	Lock	3.15	570

**Removal:**—Mounted on left front face of flywheel housing. To remove, take out capscrews.

**Starting Switch (729-E):** Delco-Remy No. 820052. On starter, operated by starter pedal (pinion shift). *For complete data, refer to Electrical Equipment Index.* (737-C) Delco-Remy Magnetic Switch Type 1528 used with Vacuum Switch 1605 (accelerator pedal starting).

*For complete data, refer to Electrical Equipment Index.*

### Magnetic Switch

Closes contacts with 7.5-8.5 amperes draw at 3 volts and holds contacts closed with .85-.95 amperes draw at 1.5 volts (hold-in coil only).

### Vacuum Switch

**Contacts Close**—10-14° rotation counter-clockwise from latch position.

**Unlatch Action**—3.4-4.6" of HG. approximately 30° from latch position.

## GENERATOR

### STANDARD

**Delco-Remy Model 948-S.** Armature No. 1854856. 948-Y (Taxicab). Armature No. 1854856. Fixed third brush control with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data. **Maximum Charging Rate**—22 amperes at 8.0 volts (cold), 18 amperes at 8.0 volts (hot). Reached at car speed of 30-35 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' and ground,

ground 'F' terminal to eliminate regulator action. **Generator Charge Indicator**—Red jewel light at lower left corner of instrument group. Lights when ignition key is turned 'on' and remains lighted until generator begins to charge, then it goes out. If lamp does not light when ignition key is turned 'on', ground 'GRD' terminal on Cutout Relay, if lamp still does not light replace bulb. See Bulb Specifications below.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third).

**Field Current**—2.3-2.6 amperes at 6 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment:**—Loosen pivot bolts and clamp bolt, move generator out or away from engine to take up stretch or slack in belt.

## GENERATOR

### SPECIAL EQUIPMENT

**Delco-Remy Model 934-F** (used for City and State Police), 961-N (Spec. Equip.). Two brush (shunt) types used with Voltage & Current Regulators Model 5599 (934-F), 5832 (961-N). *Refer to 1937 Pontiac Eight page for data on these Generators.*

## REGULATOR

**Delco-Remy Model 5808.** Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on dash. Cutout Relay has special 'ground' contacts for Generator Charge Signal control.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.9-7.6 volts.

**Cuts Out**—3 amperes maximum at 6.3 volts.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

### Voltage Regulator

**Setting**—7.5-7.9 volts Cold (70°F), 7.4-7.6 volts Hot 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit. **Contact Gap**—.015-.025".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

## LIGHTING

**LIGHTING:**—Headlamps—Guide Multi-beam, pre-focused, cross-beam type with special non-interchangeable lenses. Special asymmetrical 'Passing' beam (upper beam left hand headlamp, lower beam

C N TINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

right hand headlamp) controlled by foot selector switch with lighting switch in driving or third position.

**Headlamp Adjustment**—Headlamps must be adjusted with lenses in place (beam with lenses removed is approximately 4° to right). Aim left hand headlamp (by loosening bracket bolt nut) so that upper edge of hot spot is on horizontal line (at lamp center height) and left edge just touches vertical lamp center line (entire hot spot to right of this line). Aim right hand headlamp for same beam height but center hot spot on lamp vertical center line (hot spot right cut-off approximately 8" to right of this vertical line).

**Headlamp Beam Indicator**—Located to left of speedometer dial. Lighted whenever driving or upper headlamp beams are lighted.

## Switches

**Lighting**—Delco-Remy Model 480-V, T (Export).

**Foot Beam Selector**—Delco-Remy Model 471-T.

**Dash Lamp**—Delco-Remy Model 1406.

**Stop Lamp**—Hydraulic type on brake master cyl.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320-L
Parking, Instrument	1½	55
Dash, Indicators	1	51
Dome	6	81
Tail	3	63
Stop	15	87

## MISC. ELECTRICAL

**FUSES**—Fuse block mounted on lighting switch in back of instrument panel. Two 20 ampere capacity fuses and one spare. Fuse toward rear protects left hand headlamp circuit. Fuse toward engine protects all other lighting circuits.

**HORNS**—Klaxon Model K-26-L, Type 1601 std. eqipt. Model K-33-B, Type 1857 (low note), 1858 (high note) blended tone twin horns operated by horn relay optional equipment.

Horn Type	Current at 6 Volts	Air Gap
K-26-L, 1601	6.5-8.5	.025-.029"
K-33-B, 1857	12-14	.045-.050"
K-33-B, 1858	11-13	.036-.040"

NOTE—Twin horns are stamped 'L' (low note—long horn), 'S' (high note—short horn), on motor shell.

**Horn Relay**—Delco-Remy Model 271-C.

Points Close—2.7-4.0 volts.

Contact Gap—.015-.030".

Air Gap—.010-.025" with contacts closed.

## ENGINE

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head.

Bore—3 7/16". Stroke—4".

Displacement—222.7 cubic inches.

Rated Horsepower—28.3 (S.A.E.).

Developed Horsepower—85 at 3600 R.P.M.

Compression Ratio & Pressure—6.2-1 Std. cast-iron head. Pressure 140-143 lbs. @ 1000 R.P.M. or approx. 115 lbs. at cranking speed.

Vacuum Reading—18-20" steady at 7 M.P.H.

See Pontiac Shop Notes for Radiator & Fender Removal.

**PISTONS**—Electro-plated, chrome nickel alloy. Tin-plated .00075-.00125" thick after finishing and cannot be ground. Use finished replacement pistons.

Pistons fitted in following standard sizes (marked by letter on top of head and on top of cylinder block)—'A'—3.4355", 'B'—3.436", 'C'—3.4365", 'D'—3.437", 'E'—3.4375". See Replacement Pistons below.

Length—3 37/64".

Weight—Held to 1/16 oz. maximum variation.

Removal—Pistons and rods removed from above.

Clearance—Skirt .002". See Fitting New Pistons.

Original Bore Size:—See Pontiac Shop Notes.

Replacement Pistons:—See Pontiac Shop Notes.

**Fitting New Pistons**—Insert .002" feeler ½" wide between piston and cylinder wall at right angles to pin hole. Pressure to withdraw feeler must be 10-25 lbs. Piston taper allowance .0005".

**PISTON RINGS**—Two undercut compression rings above pin, one oil control ring below pin, per piston. Lower ring groove drilled radially with ten .1402" oil drain holes (2 in each boss for pin lub.).

Ring Width End Gap Side Clearance

Compression—⅞" .007-.012" .0015-.003"

Oil Control—3/16" .007-.012" .001-.0025"

NOTE—Install comp. rings with groove down.

**PISTON PIN**—Diameter—15/16". Length—3 1/16".

Pin is locked in piston by lock screw in one boss.

Opposite end slotted, slides freely in boss.

Pin Fit in Piston—See Pontiac Shop Notes.

Pin Fit in Rod Bushing—.0003-.0005". See Connecting Rod Upper Bearing below.

**Replacement Pins**—Three oversize pins furnished in service. Can be identified by daub of paint on end of pins as follows: .001" (red and brown), .003" (red), .005" (blue).

Fitting Pins—See Pontiac Shop Notes.

**CONNECTING ROD**—Length—7 9/16" (center-to-center). Weight—32 ozs. Held to 1/16 oz. variation.

Piston Pin Bushing (Upper Bearing)—Split bushed type. See Pontiac Shop Notes for complete data.

Crankpin Journal Diameter—2".

Lower Bearing—Removable steel-backed, babbit-lined type. Bearings furnished std. and .001" under. Clearance—.0005-.0015". Sideplay—.005-.010".

Bearing Adjustment:—None (no shims). See Pontiac Shop Notes for Fitting and Installing Bearings.

Installing Rods:—Rods not offset. Install rods in same cylinder from which removed.

**CRANKSHAFT**—4 bearing. Integral counterweights.

See Pontiac Shop Notes for Harmonic Balancer data.

Journal Diameters—#1, 2 ⅞"; #2, 2 13/32"; #3, 2 15/16"; #4, 2 ½".

Bearing Type—Interchangeable steel-backed, babbit-lined type. Upper and lower halves interchangeable. Bearings furnished std. and .001" undersize. Clearance—.001-.003".

Bearing Adjustment:—None (no shims). See Pontiac Shop Notes for Fitting and Installing Bearings.

End Thrust:—Taken by #3 (rear center) bearing.

Endplay .003-.008". No adjustment other than replacing bearing.

**CAMSHAFT**—4 bearing, non-adjustable, chain-drive. See Pontiac Shop Notes for Camshaft Removal and Camshaft Bearing finished sizes.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32".

Bearing Type—Removable steel-backed, babbit-lined type.

Clearance—.0015-.0025".

End Thrust:—Taken by steel thrust plate assembled

behind camshaft sprocket. Endplay .002-.005".

No adjustment. Replace plate.

**Timing Chain**—Morse. Width ¾" (nominal). Pitch ¾". Length 56 links or 21".

**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

VALVES:—	Head Diam.	Stem Diam.	Length
Intake	1 19/32"	.310-.311"	5.718"
Exhaust	1 15/32"	.310-.311"	5.718"
	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"
Exhaust	45°	19/64"	Free fit to .0006"

**Valve Guides**—Removable, tapered guides (.001" taper to the inch, with greatest clearance at top). **IMPORTANT**—Measure clearance at bottom end. Valve should just fall through of own weight when started in guide. NOTE—When valves serviced, guides should be cleaned with wire brush or taper reamer (Tool P.R. 131).

**Valve Springs**—Install with two close coils at top. Dampeners installed on top of each spring. Use new dampeners whenever removed from spring. Use care when removing split type spring keepers.

	Spring Pressure	Spring Length
Valve Closed	56 lbs.	1 29/32"
Valve Open	96 lbs.	1 39/64"

**Valve Lifters**—Single piece cast-iron. Furnished .005" oversize. Use special piloted reamer (J-551) when installing oversize lifter. Clearance—.0005-.0015".

## VALVE TIMING

**Tappet Clearance**—.011-.013" all valves (hot). For sustained high speed driving .013" exhaust setting is recommended. Use .011" and .013" feelers as 'go' and 'no go' gauges.

**Valve Timing**—See Camshaft Setting above.

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

**To Check Valve Timing**—Set tappet clearance #6 intake valve at .0125". This valve should open with piston 5° (.0096") before top dead center and first straight line of ignition mark 'IGN.1&8/' slightly past indicator (left front face of housing).

## LUBRICATION

**LUBRICATION**—Pressure. Gear type oil pump on right hand side of engine.

See Pontiac Shop Notes for Pump Clearances.

NOTE—Whenever oil pump is to be removed (remove right engine side pan) turn engine over until #1 piston is at top dead center on compression stroke. To assemble, dip gears in oil, place prick-punch mark on oil pump gear down, see that distributor rotor is in #1 position, mesh gears, reset ignition timing.

Normal Oil Pressure—35-45 lbs. with warm oil.

Oil Pressure Regulator:—In oil pump, non-adjust.

Crankcase Capacity:—6 quarts (refill).

## CLUTCH

**CLUTCH**—Own—Long 10CF-CS driven member. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven type, 2 required, I.D. 6", O.D. 10", .125" thick.

**Adjustment**—Clearance between pedal and underside of pedal felt retainer board should be  $\frac{1}{2}$ ". Adjust by loosening locknut and turning stopscrew at lower end of pedal. Free movement of pedal should be  $\frac{3}{4}$ ". Adjustable link provided.

**Removal**—Remove transmission (see Transmission Removal below), bottom housing cover, unlock pedal pull-back spring, remove fork ball support, fork, and throwout bearing. Loosen mounting screws evenly to release springs. Remove assembly from below.

### TRANSMISSION

**TRANSMISSION**—Pontiac—Synchro-mesh in second and high gears. All gears helical type.  
*See Transmission Section for complete data.*

**Removal**—Remove floor center panel, front seat, disconnect rear universal joint (wire trunnions), remove shaft housing to transmission capscrews, rear engine support bolts, jack up rear of engine, remove fastening bolts, pull unit straight back freeing main drive gear, then up and forward at front, removing transmission and coupling from front propeller shaft and housing. Remove assembly through floor opening.

### UNIVERSALS

**UNIVERSAL JOINTS**—Mechanics—Model 2C. Roller bearing type. Two used.  
*See Universals Section for complete data.*

**Front Propeller Shaft Bearing**—*See Pontiac Shop Notes for complete data.*

### REAR AXLE

**REAR AXLE**—Pontiac, semi-floating, spiral bevel gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—4.375-1 Std., 4.625-1 Mt., 4.125-1 Plains.

**Backlash**—.003-.010" new. Shim adjustment.

**Removal**—To remove axle shaft, remove wheel, brake drum, 4 nuts freeing backing plate, static collector, pull axle shaft bearing retainer away from backing plate (do not shift backing plate or brake line damage may result) and withdraw axle shaft and bearing assembly (Tool No. J-942). Replace one nut to hold backing plate in place. With axle shafts removed, differential assembly may be removed by disconnecting rear universal joint and removing housing capscrews.

**Wheel Bearing Adjustment**—None.

### SHOCK ABSORBERS

**SHOCK ABSORBERS**—Delco—Model 1947-A, B (front), 1174-U (rear). Double acting, piston type. Direct acting on rear.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**— $4\frac{1}{2}$ -5°.

**Caster**—Minus  $\frac{3}{4}$ ° to minus  $1\frac{1}{4}$ °. Adjustable.

**Camber**— $\frac{3}{4}$ ° to  $1\frac{1}{4}$ °. Adjustable ( $\frac{1}{2}$  turn max. adj.).

**Toe In**—0-1/16".

**Steering Geometry**—Inner wheel  $22\frac{1}{2}$ - $23\frac{1}{2}$ °. Outer wheel 20°.

### STEERING GEAR

**Steering Gear**: Saginaw Worm-and-Roller type with center steering.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES**—Service—Bendix Hydraulic, duo-servo, single anchor. Hand lever applies rear service brakes.  
*See Brake Section for complete data.*

**Wheel Cylinders**—Front wheel—1", rear 15/16".

**Drum Diameter**—12". Out-of-round—.004-.005".

**Lining**—Moulded type. Width  $1\frac{3}{4}$ ". Thickness 3/16".

**Length per wheel** 23 1/16".

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment**—*See Service Brakes.*

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 8-CA-1001. On left hand frame side rail under hood.

**ENGINE NUMBER:**—First number 8-83001. Stamped on boss on left hand top corner of block.

## TUNE-UP

**COMPRESSION:**—Ratio 6.2-1. Pressure 140-143 lbs. at 1000 R.P.M. or approx. 115 lbs. at cranking speed.

**VACUUM READING:**—Steady reading of 18-20" with engine idling at 376 R.P.M. or 7 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type K-7 (or No. 45), 14 mm. Metric. Gaps—.025" (.022" cars with radio).

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.015". Cam Angle—31° Closed. Automatic Advance—14° max. at 2100 RPM (distr.). Vacuum Advance—10° distr. with 16-21" vacuum.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—6° BTDC. First line of flywheel mark 'IGN.1-8/' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Set idle adjusting screw ½-1 turn open. Idle speed 7 MPH or 376 RPM. Float Level—¾" from top of float to gasket seat with valve seated (invert to check). Accelerating Pump—Lower hole standard setting. Fuel Pump Pressure: 4 lbs. (AH), 3½ lbs. (AJ Comb.).

**VALVES:** See Valve Timing. Tappet Clearance—.011-.013" all valves (hot). For sustained high speed set exhaust clearance at .013". Use .011" and .013" feelers at 'go' and 'no go' gauges. NOTE—Remove hood side panels by unfastening two wing nuts at rear, one at top front (inside).

**STARTING:** See Battery, Starter Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy Model 435-G. Switch and cable assembly. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton. #45792 (cylinder), #80203 (case). Key Series—8000-9499.

**COIL:** Delco-Remy Model 539-L. Mounted on dash. Ignition Current—3.5 amperes at 6.2 volts.

**CONDENSER:** Delco-Remy Part No. 1865972. Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 063-X. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and Gaselector adjustment. Breaker Gap—.0125-.0175" (limits), set at .015". Cam Angle or Dwell—31° (closed), 14° (open). Breaker Arm Spring Tension—19-23 ounces.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	4.0	800
7.0	1100	14.0	2200
8.5	1550	17.0	3100
14.0	2100	28.0	4200

**Vacuum Spark Control Delco-Remy Model 681-N.** Mounted on housing and linked directly to breaker

plate. Provides additional advance at speeds above idling (vacuum port above throttle in carburetor) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-6"
10°	20°	16-21"

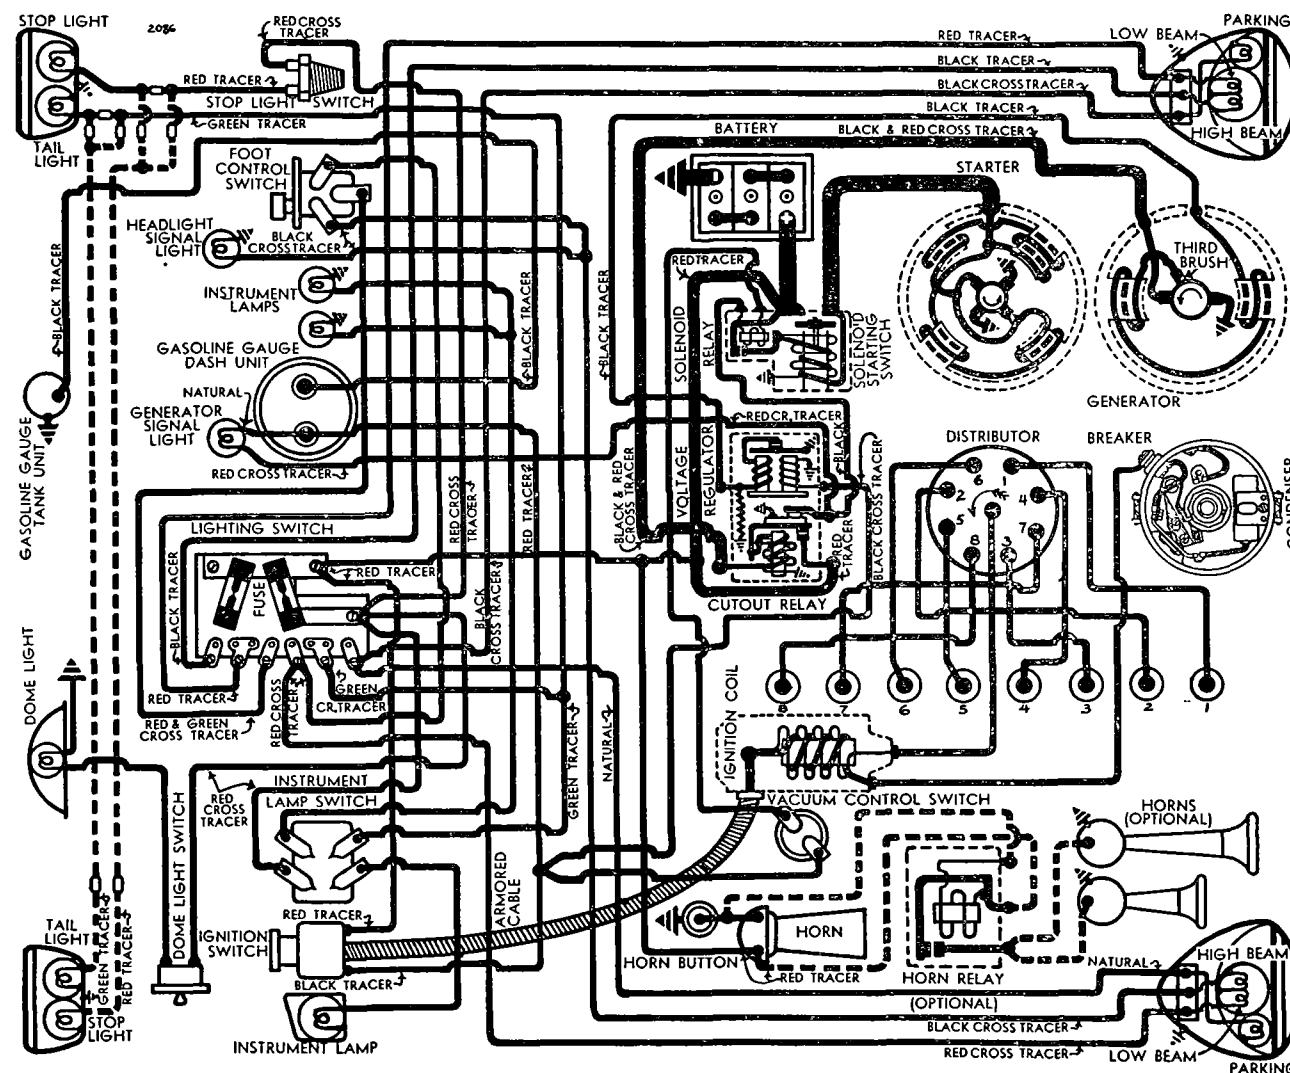

**Gaselector:**—Consists of adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing for setting.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting as shown. See Gaselector Setting below.

Flywheel Degrees	Piston Position
All engines	6° BTDC.....0.128" BTDC

**NOTE:**—The two straight lines of the Ignition mark 'IGN.1-8/' indicate allowable timing range of 4° on flywheel. Use first or 6° line in setting ignition.

**To Set Timing (using Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression turn engine over until piston is 6° or .0128" before top dead center, stop when first line of ignition mark 'IGN.1-8/' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector thumbnut, center pointer on scale, tighten thumbnut, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

**Timing (Synchroscope)**—Connect Synchroscope between #1 spark plug cable and distributor cap, fill in first line of flywheel mark 'IGN.1-8/' with white paint or chalk, idle engine at 376 R.P.M. or 7 M.P.H. (in high gear), adjust distributor as directed above until line coincides with pointer on housing.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen thumbnut, move pointer clockwise to advance or counter-clockwise to retard spark.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Model 350-S. 1¼" downdraft type with Carter Climatic Control. For complete data, refer to Carburetor Index.

**Idle Adjustment**—Vacuum Gauge (Tool J-89) recommended. With engine hot, choke valve wide open (fast idle inoperative), set throttle stopscrew to idle engine at 376 R.P.M. or 7 M.P.H., then adjust idle adjusting screw to give steady reading of 18-20" (at average altitudes). To adjust without gauge, proceed as above turning idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in until engine fires smoothly. Readjust throttle stopscrew for correct idling speed if necessary.

**Accelerating Pump Setting**—Pump lever under dust cover at top of carburetor has three holes for pump link adjustment. Change for seasonal requirements: Outer Hole (Max. stroke)—Extremely cold weather. Lower Hole (Med. stroke)—Standard setting. Inner Hole (Min. stroke)—Extremely hot weather.

**Fast Idle**—Consists of fast idle cam linked to choke mechanism which acts as throttle lever stop. Should not require adjustment. See Carburetor article in Carburetion Section and special article in Carburetor Equipment Section for complete data.

For complete data, refer to Carburetion Equip. Index.

**Accelerator Linkage Adjustment**—Adjust rod connecting bell cranks on side of manifold so that accelerator pedal just touches floor board with carburetor throttle valve wide open. Release accelerator pedal and with throttle valve in closed position (fast idle inoperative), set adjusting screw in lever at forward end of this connecting rod so that clearance between this lever and lever which operates the carburetor throttle valve rod is 5/32-3/16", secure the locknut. Disconnect vacuum switch operating rod at switch lever, turn switch lever so that pointer lines up with line on switch body, adjust length of rod by turning trunnion on rod until rod can be connected to switch lever without disturbing position of lever. See that hand throttle is fully closed, loosen set screw in throttle cable trunnion (at lower end of cable), adjust cable length so so that clearance between lever at forward end of hand throttle operating rod and carburetor throttle valve rod lever is 1/16" minimum. Check setting

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index.

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1528128 oil-wetted type standard. #1525998 (1st 1038 models), #1528304 (after 1038 models) heavy duty oil-bath type optional.

**Fuel Pump**—AC. Type AH #1523109. Diaphragm type. Type AL #1523110 fuel & vacuum pump Optl.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—AC. Electric. #1515325 (dash unit), #1515450 (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Delco, Type 17-K.** 6 volt, 110 ampere hr. capacity.

**Starting Capacity**—131 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.4 minutes.

**Grounded Terminal**—Negative (—) terminal.

**Location**—Left hand side under front floor boards.

**Delco, Type 17-J (Police).** 6 volt, 17 plate, 125 ampere hour capacity (20 hour rate).

**Grounded Terminal & Location**—Same as above.

## STARTER

**Delco-Remy Model 727-S.** Armature No. 823881.

**Drive**—Overrunning clutch and manual pinion shift operated by solenoid switch.

**Cranking Engine**—220-225 amperes at 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
15 ft. lbs.	Lock	3.0	600

**Removal**—Mounted on left front face of flywheel housing. To remove, take out capscrews.

**Starting Switch**: Delco-Remy Solenoid 1546. Vacuum Switch Type 1605. Solenoid switch controlled through relay by vacuum switch operated by accelerator pedal with ignition switch turned on.

For complete data, refer to Electrical Equipment Index.

### Solenoid Switch

Close against 70 lbs. with .5" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close**—1.9 volts. **Open**—1.0-1.2 volts  
**Contact Gap**—.035". **Air Gap**—.010" closed.

### Vacuum Switch

**Contacts Close**—10-14° rotation counter-clockwise from latch position.  
**Unlatch Action**—3.4-4.6" of HG. approximately 30° from latch position.

## GENERATOR

### STANDARD

**Delco-Remy Model 948-S.** Armature No. 1854856. **Model 948-Y (Taxicab).** Armature No. 1854856. Fixed third brush control with external vibrating voltage regulator. Ventilated by fan on drive pulley.

**NOTE**—Third brush is clamped in position for maximum safe output and must not be disturbed.

**Charging Rate Adjustment**—Adjusted by changing setting of voltage regulator. See Regulator data  
**NOTE**—Do not operate generator on open circuit.

**Maximum Charging Rate**—22 amperes at 8.0 volts (cold), 18 amperes at 8.0 volts (hot). Reached at car speed of 30-35 M.P.H. To check charging rate, connect test ammeter in line at 'BAT' terminal of regulator, voltmeter between 'GEN' and ground, ground 'F' terminal to eliminate regulator action.

**Generator Charge Indicator**—Red jewel light at lower left corner of instrument group. Lights when ignition key is turned 'on' and remains lighted until generator begins to charge, then goes out. If lamp does not light when ignition key is turned 'on', ground 'GRD' terminal on Cutout Relay, if lamp still does not light replace bulb. See Bulb Specifications below.

### Performance Data

	Amperes	Volts	R.P.M.
Cold	23-27	8.8-9.0	3000
Hot	18-23	8.2-8.7	3200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces (main), 16-20 ounces (third).

**Field Current**—2.3-2.6 amperes at 6 volts.

**Removal**—Pivot mounted at left front of engine. T remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment**—Loosen pivot bolts and clamp bolt, move generator out or away from engine to take up stretch or slack in belt.

## GENERATOR

### SPECIAL EQUIPMENT

**Delco-Remy Model 934-F** (used for City and State Police), 961-N (Spec. Equip.). Two brush (shunt) types used with voltage and current regulation.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—As follows:

### Performance Data—Cold

	Amperes	Volts	R.P.M.
934-F	26	8.1-8.3	1325
961-N	25	8.0	1650

①—Current Regulator setting. See Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.7-2.0 amperes (934-F), 2.0-2.2 amperes (961-N) at 6.0 volts.

**Removal & Belt Adjustment**—See Std. Gen. above.

## REGULATOR

### STANDARD

**Delco-Remy Model 5808.** Double Core Type Voltage Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage Regulator in case on dash. Cutout Relay has special 'ground' contacts for Generator Charge Signal control.

For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Cuts In**—6.9-7.6 volts.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

### Voltage Regulator

**Setting**—7.5-7.9 volts Cold (70°F), 7.4-7.6 volts Hot 150° F. Regulator is over-compensated for temperature and must be checked at these points.

**Adjustment**—Disconnect lead on 'IGN' terminal of regulator, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3000 R.P.M., adjust charging rate to 8-10 amperes, change regulator armature spring tension by bending spring hanger at lower end of spring slightly until setting is as given above.

**NOTE**—Regulator cover must be in place when tests are made. Do not operate generator on open-circuit.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—2.7-3.5 ounces.

**Air Gap**—.060-.070" between armature and center of core with armature down and fibre bumper touching stop; .008-.013" between fibre bumper and stop with armature up.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**REGULATOR****SPECIAL EQUIPMENT**

**Delco-Remy Model 5599 (for Spec. 934-F Generator), 5832 (961-N Gen.). Double Core Type Voltage and Current Regulator (with 'IGN' Terminal).** Same design as Std. Model 5808 (above) with additional Current Regulator unit.

For complete data, refer to *Electrical Equip. Index*.

**Cutout Relay & Voltage Regulator**

All specifications and Adjustment directions same as for Std. Model 5808 (above) except Voltage Regulator Setting on Model 5599 (5832 same as 5808).

**Voltage Regulator Setting (5599 Only)—7.0-7.4 volts Cold (70°), 6.95-7.15 volts Hot (150°).**

**Current Regulator**

**Setting—26-28 amperes (All Models).**

**Checking & Adjustment—**Connect test ammeter in charging line at regulator 'BAT' terminal, disconnect lead at regulator 'IGN' terminal (to eliminate Voltage Regulator operation). Operate generator at speed for maximum output, note ammeter reading with Current Regulator operating (should agree with Setting). Adjust by bending spring hanger at lower end of armature spring slightly.

**Contact Gap—.020". Contact Spring Tension 3.5 ozs.**

**Air Gap—.075" between armature and center of core with armature down so fibre bumper just touches the stop, .010" between fiber bumper and stop with armature up.**

**LIGHTING**

**LIGHTING:—Headlamps—**Guide Multi-beam, pre-focused, cross-beam type with special non-interchangeable lenses. Special asymmetrical 'Passing' beam (upper beam left headlamp, lower beam right headlamp) controlled by foot dimmer switch with lighting switch in driving or third position.

**Headlamp Adjustment—**Must be adjusted with lenses in place (beam 4° to right without lenses), upper beam lighted, car unloaded on level floor 25' from screen. Lamps adjusted by loosening bracket bolt nut beneath each headlamp. Aim left headlamp so that upper edge of bright spot is on horizontal line at lamp center height and left edge is at lamp vertical center-line (entire bright spot to right of vertical line). Aim right headlamp for same height but center bright spot on lamp vertical center-line (right cut-off approx. 8" to right of center-line).

**Headlamp Beam Indicator—**Located to left of speedometer dial. Lighted whenever driving or upper headlamp beams are lighted.

**Switches**

**Lighting—**Delco-Remy Model 480-V, T (Export).

**Foot Beam Selector—**Delco-Remy Model 471-T.

**Dash Lamp—**Delco-Remy Model 1406.

**Stop Lamp—**Hydraulic type on brake master cyl.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320-L
Parking, Instrument	1½	55
Dash, Indicators	1	51
Dome	6	81
Tail	3	63
Stop	15	87

**MISC. ELECTRICAL**

**FUSES:—**Fuse block mounted on lighting switch in back of instrument panel. Two 20 ampere capacity fuses and one spare. Fuse toward rear protects left hand headlamp circuit. Fuse toward engine protects all other lighting circuits.

**HORNS:—**Klaxon Model K-26-L, Type 1601 std. eqpt. Model K-33-B, Type 1857 (low note), 1858 (high note) blended tone twin horns operated by horn relay Optl. equipment.

Horn Type	Current at 6 Volts	Air Gap
K-26-L, 1601	6.5-8.5	.025-.028"
K-33-B, 1857	12-14	.045-.050"
K-33-B, 1858	11-13	.036-.040"

**NOTE—**Twin horns are stamped 'L' (low note—long horn), 'S' (high note—short horn), on motor shell.

**Horn Relay: Delco-Remy Model 271-C.**

**Points Close—2.7-4.0 volts.**

**Contact Gap—.015-.030".**

**Air Gap—.010-.025" with contacts closed.**

**ENGINE**

**ENGINE SPECIFICATIONS:—**8 cylinder, 'L' head.

**Bore—3¼". Stroke—3¾".**

**Displacement—248.9 cubic inches.**

**Rated Horsepower—33.8 (S.A.E.)**

**Developed Horsepower—100 at 3800 R.P.M.**

**Compression Ratio & Pressure—**6.2-1 std. cast-iron head. Pressure 140-143 lbs. @ 1000 R.P.M. or approx. 115 lbs. at cranking speed.

**Vacuum Reading—**Steady reading of 18-20" with engine idling at 376 R.P.M. or 7 M.P.H.

See *Pontiac Shop Notes for Radiator & Fender Removal*.

**PISTONS:—**Electro-plated, chrome nickel alloy. Tin-plated .00075-.00125" thick after finishing and cannot be ground. Use finished replacement pistons. Pistons fitted in following standard sizes (marked by letter on top of head and on top of cylinder block)—'A'—3.247", 'B'—3.2475", 'C'—3.248", 'D'—3.2485", 'E'—3.249". See Replacement Pistons below. Length—3 19/32".

**Weight—**Held to 1/16 oz. maximum variation.

**Removal—**Pistons and rods removed from above.

**Clearance—**Skirt .002". See Fitting New Pistons.

**Original Bore Size:—**See *Pontiac Shop Notes*.

**Replacement Pistons:—**See *Pontiac Shop Notes*.

**Fitting New Pistons:—**Insert .002" feeler ½" wide between piston and cylinder wall at right angles to pin hole. Pressure to withdraw feeler must be 10-25 lbs. Piston taper allowance .0005".

**PISTON RINGS:—**Two undercut compression rings, above pin, one oil control ring below pin, per piston. Lower ring groove drilled radially with ten .1402" oil drain holes. Also two drain holes in each boss for pin lubrication.

Ring	Width	End Gap	Side Clearance
Compression	.124"	.007-.012"	.0015-.003"
Oil Control	.186"	.007-.012"	.001-.0025"

**NOTE—**Install comp. rings with groove down.

**PISTON PIN:—**Diameter—15/16". Length 2 7/8".

Pin is locked in piston by lock screw in one boss.

Opposite end slotted, slides freely in boss.

Pin Fit in Piston—See *Pontiac Shop Notes*.

Pin Fit in Rod Bushing—.0003-.0005". See Connect-

ing Rod Upper Bearing below.

**Replacement Pins—**Three oversize pins furnished in service. Can be identified by daub of paint on end of pin as follows: .001" (red and brown), .003" (red), .005" (blue).

**Fitting Pins—**See *Pontiac Shop Notes*.

**CONNECTING ROD:—**Length—7 9/16" (center to center). Weight—29 7/8 oz. Held to 1/16 oz. max. var. Piston Pin Bushing (Upper Bearing)—Split bushed type. See *Pontiac Shop Notes for complete data*.

**Crankpin Journal Diameter—**2".

**Lower Bearing—**Removable steel-backed, babbit-lined type. Furnished standard and .001" undersize. Clearance—.0005-.0015". Sideplay—.005-.010".

**Bearing Adjustment:—**None (no shims). See *Pontiac Shop Notes for Fitting and Installing Bearings*.

**Installing Rods:—**Rods not offset. Install rods in same cylinder from which removed.

**CRANKSHAFT:—**5 bearing. Integral counterweights.

See *Pontiac Shop Notes for Harmonic Balancer data*.

**Journal Diameters—**#1, 2 3/8"; #2, 2 13/32"; #3, 2 7/16"; #4, 2 15/32"; #5, 2 1/2".

**Bearing Type—**Interchangeable steel-backed, babbit-lined type. Upper and lower halves interchangeable. Furnished std., .001" undersize.

**Clearance—.001-.003".**

**Bearing Adjustment:—**None (no shims). See *Pontiac Shop Notes for Fitting and Installing Bearings*.

**End Thrust:—**Taken by #4 (rear center) bearing. Endplay .003-.008". No adjustment other than replacing bearing.

**CAMSHAFT:—**5 bearing, non-adjustable chain drive.

See *Pontiac Shop Notes for Camshaft Removal, Bearing finished sizes and Replacement Camshaft Sprocket data*.

**Journal Diameters—**#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 7/8".

**Bearing Type—**Removable steel-backed, babbit-lined.

**Clearance—.0015-.0025".**

**End Thrust:—**Taken by steel thrust plate assembled behind camshaft sprocket. Endplay .002-.005". No adjustment. Replace plate.

**Timing Chain:—**Morse. Width 1". Pitch 3/8". Length 56 links or 21".

**Camshaft Setting:—**Sprockets are marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across the shaft centers.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.310-.311"	5.53"
Exhaust	1 11/32"	.310-.311"	5.53"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"
Exhaust	45°	19/64"	Free fit to .0006"

**Valve Guides:—**Removable, tapered guides (.001" taper to the inch, with greatest clearance at top).

**IMPORTANT—**Measure clearance at bottom end. Valve should just fall through of own weight when started in guide. **NOTE—**When valves serviced, guides should be cleaned with wire brush or taper reamer (Tool P.R. 131).

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Valve Springs:**—Install with two close coils at top. Dampeners installed on top of each spring. Use new dampeners whenever removed from spring. Use care when removing split type spring keepers.

	Spring Pressure	Spring Length
Valve Closed	56 lbs.	1 29/32"
Valve Open	96 lbs.	1 39/64"

**Valve Lifters:**—Single piece cast-iron. Furnished .005" oversize. Use special piloted reamer (J-551) when installing oversize lifter. Clearance—.0005-.0015".

**VALVE TIMING**

**Tappet Clearance:**—.011-.013" all valves (hot). For sustained high speed driving .013" exhaust setting is recommended. Use .011" and .013" feelers as 'go' and 'no go' gauges.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**To Check Valve Timing:**—Set tappet clearance #1 intake valve at .0125". This valve should open with piston 5° (.0089") before top dead center, and first straight line of ignition mark 'IGN. 1&8/' slightly past indicator (left front face of housing).

**LUBRICATION**

**LUBRICATION:**—Pressure. Gear type oil pump on right hand side of crankcase.

*See Pontiac Shop Notes for Pump Clearances.*

**NOTE:**—Whenever oil pump is to be removed (remove right engine side pan) turn engine over until #1 piston is at top dead center on compression stroke. To assemble, dip gears in oil, place prick-punch mark on oil pump gear down, see that distributor rotor is in #1 position, mesh gears, reset ignition timing.

**Normal Oil Pressure:**—35-45 lbs. with warm oil.

**Oil Pressure Regulator:**—In oil pump, non-adjust.

**Crankcase Capacity:**—7 quarts, refill.

**CLUTCH**

**CLUTCH:**—Own—Long 10 CF-CS driven member. Single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Woven type, 2 required, I.D. 6", O.D. 10", .125" thick.

**Adjustment:**—Clearance between pedal and underside of pedal felt retainer board should be 1/2". Adjust by loosening locknut and turning stopscrew at lower end of pedal. Free movement of pedal should be 3/4". Adjustable link provided.

**Removal:**—Remove transmission (see Transmission Removal below), bottom housing cover, unlock pedal pull-back spring, remove fork ball support, fork, and throwout bearing. Loosen mounting screws evenly to release springs. Lower assembly.

**TRANSMISSION**

**TRANSMISSION:**—Pontiac—Synchro-mesh on second and high gears. All gears helical type.

*See Transmission Section for complete data.*

**Removal:**—Remove floor center panel, front seat, disconnect rear universal joint (wire trunnions), remove shaft housing to transmission capscrews, rear engine support bolts, jack up rear of engine, remove fastening bolts, pull unit straight back freeing main drive gear, then up and forward at front removing transmission and coupling from front propeller shaft and housing. Remove assembly through floor opening.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics—Model 2C. Roller bearing type. 2 used.

*See Universals Section for complete data.*

**Front Propeller Shaft Bearing:**—*See Pontiac Shop Notes for complete data.*

**REAR AXLE**

**REAR AXLE:**—Pontiac, semi-floating, spiral bevel gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.375-1 Std., 4.625-1 Mt., 4.125-1 Plains.

**Backlash:**—.003-.010" new. Shim adjustment.

**Removal:**—To remove axle shaft, remove wheel, brake drum, 4 nuts freeing backing plate, static collector, pull axle shaft bearing retainer away from backing

plate (do not shift backing plate or brake line damage may result) and withdraw axle shaft and bearing assembly (Tool No. J-942). Replace one nut to hold backing plate in place. With axle shafts removed, differential assembly may be removed by disconnecting rear universal joint and removing housing capscrews.

**Wheel Bearing Adjustment:**—None.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco—Model 1947-A, B (front), 1174-U (rear). Double acting, piston type. Direct acting on rear.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—4 1/2°-5°.

**Caster:**—Minus 3/4° to minus 1 1/4°. Adjustable.

**Toe In:**—0-1/16".

**Steering Geometry:**—Inner wheel 22 1/2°-23 1/2°. Outer wheel 20°.

**STEERING GEAR**

**Steering Gear:** Saginaw Worm-and-Roller type with center steering.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, duo-servo, single anchor. Hand lever applies rear service brakes. *See Brake Section for complete data.*

**Wheel Cylinders:**—Front wheel—1", rear 15/16".

**Drum Diameter:**—12". Out-of-round—.004-.005".

**Lining:**—Moulded type. Width 1 3/4". Thickness 3/16". Length per wheel 23 1/16".

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake Adjustment:**—*See Service Brakes.*

**HOOD LOCK ADJUSTMENT, SIDE PANEL BUMPERS, FRONT FENDER & RADIATOR (UNIT) REMOVAL:**—See Pontiac Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** 1938 Models—First No. 6DA-1001. 1939 Models—First car number 6EA-1001 (Deluxe 115), 6EB-1001 (Deluxe 120) with prefixes as follows: P—Pontiac, Mich., C—South Gate, Calif., L—Linden, N. J. On plate on left end of frame front cross member under hood.

**ENGINE NUMBER:** Stamped on boss on top left front corner of block. First No. 6-399501 ('38), 6-486200 ('39)

### TUNE-UP

**COMPRESSION:**—Ratio—6.20-1 Std. cast-iron head. Pressure—140-143 lbs. at 1000 R.P.M. or approximately 115 lbs. at cranking speed.

**VACUUM READING:**—Steady reading of 18-20" with engine idling at 376 R.P.M. or 7 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** AC Type K-7 (or No. 45). 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—14¼° max. at 2000 RPM (distr.). Vacuum Advance—7.5° distr. with 16-18" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC. First line of flywheel mark 'IGN. ONE' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw ¾-1¼ turns open (1938), ½-1½ turns open (1939). Idle speed setting 376 RPM or 7 MPH.

Float Level ('38 401-S) ¾" from top of float to gasket seat with valve seated (invert to check).

('39 433-S) ½" from machined projection on cover to top of soldered seam on float (invert to check). Accelerating Pump—Lower hole normal setting.

Fuel Pump Pressure: 4 lbs. (AH), 3¾ lbs. (AJ Comb.).

**'38 MANIFOLD HEAT CONTROL:** Thermostatic coil. Counterweight must be tightly clamped to shaft and about vertical with valve closed (engine cold). Setting—Move lever at forward end of heat tube between 'Winter' and 'Summer' end positions for seasonal temperatures as follows: Up to 50°F.—'Winter' setting, 50° to 70°F.—Intermediate (half way between winter and summer), 70°F and above —'Summer' setting.

**'39 MANIFOLD HEAT CONTROL:** Thermostatic coil. Adjustment provided by shifting anchor pin for following settings: Normal temperatures (center hole). Extremely cold temperatures (inner hole). Extremely hot temperatures (outer hole). Counterweight must be tightly clamped to shaft and should be about vertical with valve closed (engine cold).

**VALVES:** See Valve Timing.

Tapet Clearance:—.011-.013" all valves (hot and running). Use .011" and .013" feelers as 'go' and 'no go' gauges. NOTE—.013" exhaust setting recommended by car manufacturer for sustained high speed.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Delco-Remy Model 1116253 (All 1938, 39-25), 1116265 (39-26). Switch and cable assembly. Connected to coil by armored cable.

Ignition Lock—Briggs & Stratton, B & S No. 45792. Key Series—8000-9499. Groove—#15.

**COIL:** Delco-Remy 539-L ('38), 1115023 ('39). On dash. Ignition Current—2.0 amperes idling, 3.5 stopped.

**CONDENSER:** Delco-Remy No. 1865972 (for 647-D distr.), #1869704 (for 1110202). Capacity—.18-.25 mfd.

**DISTRIBUTOR:** Delco-Remy 647-D (Std.), 1110202 (Taxi.) Single breaker, 6 lobe cam, full automatic advance with vacuum spark control and Gaselector adjustment (for fuel compensation) at distributor.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° (closed), 25° (open).

Breaker Arm Spring Tension—20 ounces.

Rotation—Counter-clockwise viewed from top.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start	400	4.0	800
8.0	1050	16.0	2100
8.5	1450	17.0	2900
14.25	2000	28.5	4000

**Vacuum Spark Control D-R No. 681-M.** Integral with distributor. Mounted on housing and linked directly to breaker plate. Provides additional advance at

speeds above idling (vacuum port in carburetor above throttle) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Total plunger travel 9/64".

**Vacuum Advance**  
Distr. Degrees Eng. Degrees Vacuum (" of HG)  
Start ..... 0° ..... 7-9"  
7.5° ..... 15° ..... 16-18\*\*\*

\*\* at .125" travel.

**Gaselector:** Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Gaselector Setting following.

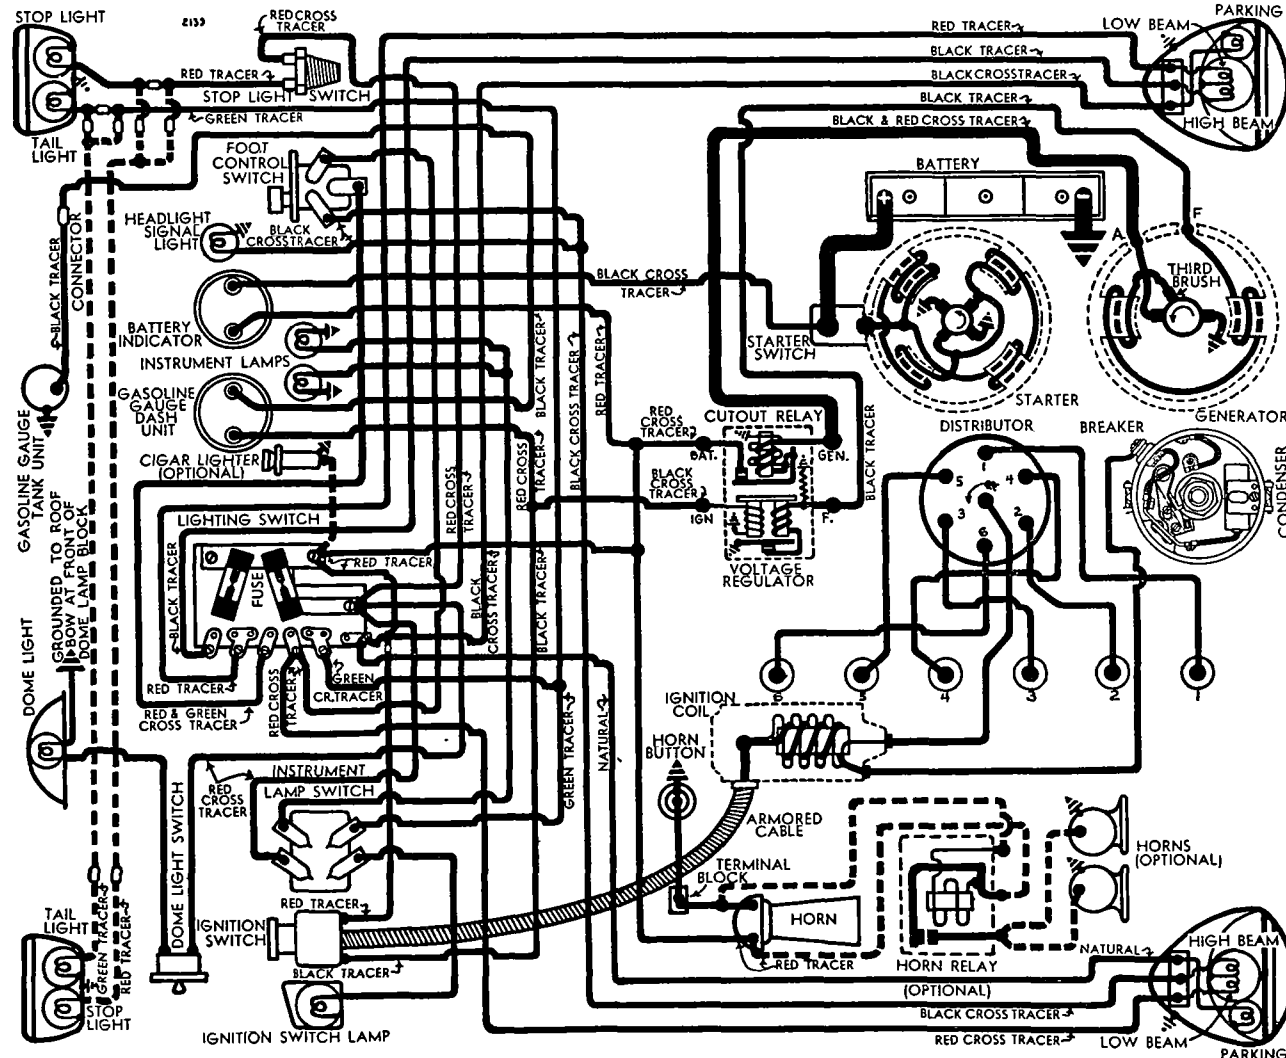

**Distributor Removal:** Mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm and lift out.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting given. See Gaselector Setting following for final setting.

Flywheel Degrees Piston Position

All engines ..... 6° BTDC ..... 0138° BTDC.

**NOTE**—The two straight lines of the ignition mark 'IGN.ONE/' indicates allowable timing range of 4° on flywheel. Use first or 6° line in setting ignition. Car manufacturer recommends use of Timing Light (Tool HM-494) or Synchroscope (HMO-161).

**T Set Timing (using Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0138" before top dead center, stop when first line of ignition mark 'IGN.ONE/' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector screw, center pointer on scale, tighten screw, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

**To Set Timing (using Synchroscope)**—Clip one synchroscope lead to #1 spark plug cable, insert other lead in distributor cap terminal from which #1 spark plug wire removed. Fill in first line of fly-

wheel mark 'IGN.ONE/' with white chalk or paint. Direct synchroscope on flywheel through inspection hole in left front face of flywheel housing. Idle engine at 376 R.P.M. or 7 M.P.H., adjust distributor (as directed for Timing Light above) until white line coincides with pointer on housing.

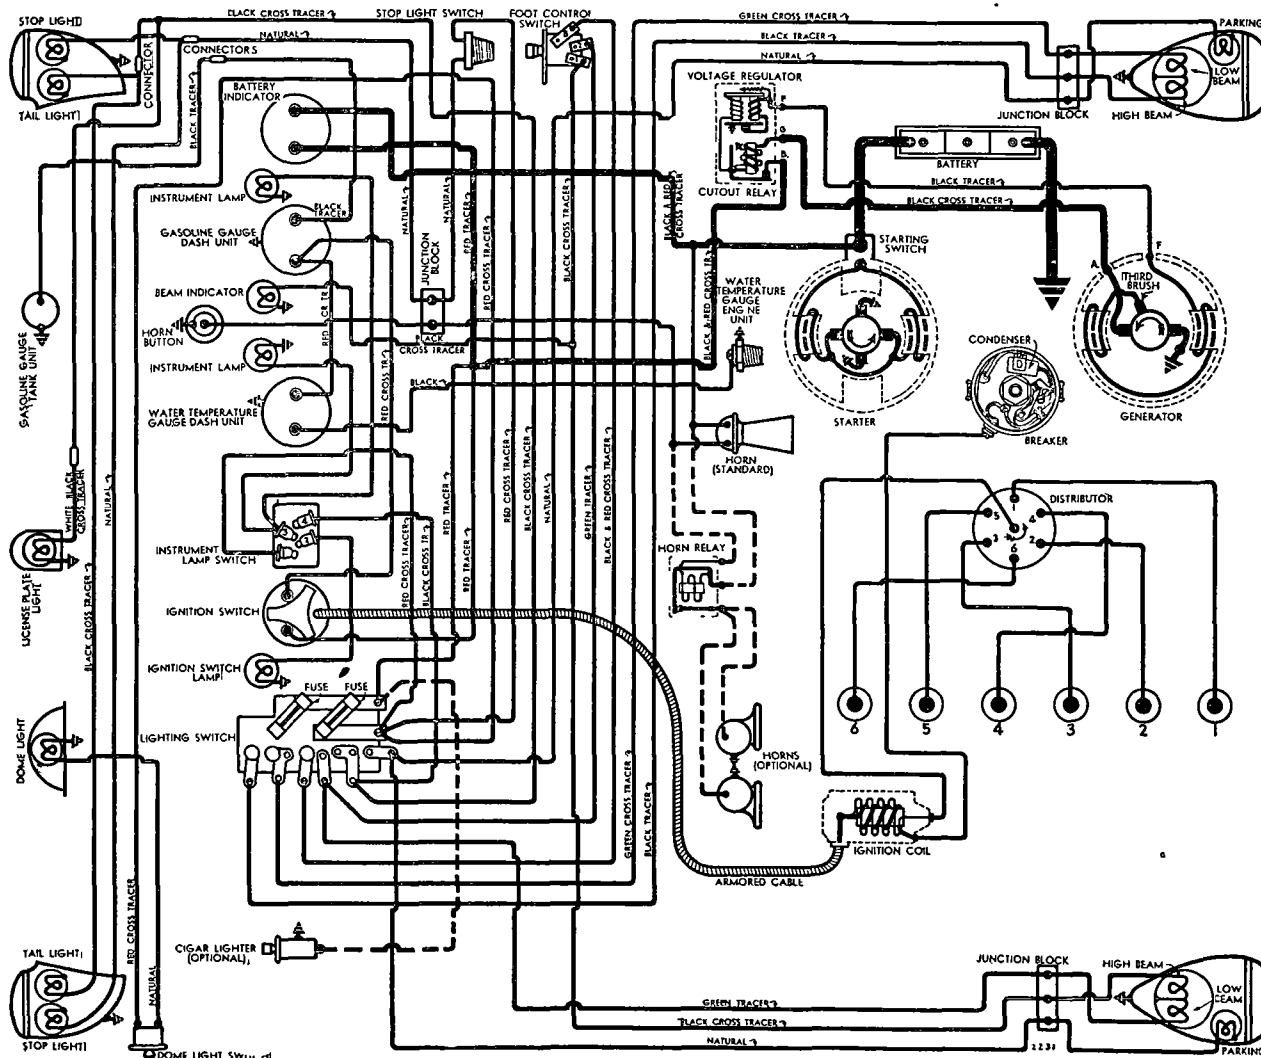

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen screw, move pointer clockwise to advance or counter-clockwise to retard

### CARBURETOR

1938—Carter Type W1 Vacuumer, Model 401-S. 1 1/4" single barrel downdraft type with Carter Climatic Control. Casting No. 344 on flange.

1939—Carter Type WA-1, Model 433-S. 1 1/4" single barrel downdraft type with Carter Climatic Control. Casting No. 154 on flange.

For complete data, refer to Carburetor Index.

1939 M DELS

**Idle Adjustment**—Engine must be warm with automatic choke and fast idle inoperative. Car manufacturer recommends use of vacuum gauge. Set throttle stop screw to idle engine at 7 M.P.H., adjust idle adjusting screw to give steady gauge reading of 18-20". To adjust without gauge, set throttle stop screw as above, turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 3/4-1 1/4 turns open (401-S), 1/2-1 1/2 turns open (433-S) of screw from inner seated position. Reset idle speed.

**Accelerating Pump Setting**—Pump lever under dust cover has 3 holes (401S), 2 (433S), for pump link: Lower Hole (med. stroke)—Normal setting. Inner Hole (min. stroke)—Extremely hot temperatures, high altitudes or hi-test fuels. Upper Hole (max. stroke)—Extremely cold temp.

**Fast Idle**—Integral type, built-in carburetor.

For complete data, refer to Carburetion Equip. Index. Setting—With throttle lever stop screw seated against (not on) first step of fast idle cam clearance between lower edge of choke valve and air horn should be 5/8" (gauge T108-85).

**Accelerator Linkage Adjustment**—Must be maintained to provide correct "Throttle cracking" action for starting. To adjust, after setting carburetor idle speed at 6-7 M.P.H., loosen hand throttle lockwire screw, pull button 1/8" out from instrument panel, position hand throttle lever so that no clearance exists between lever and throttle cross shaft, tighten lock screw. Turn throttle stop screw in 2 turns (with throttle stop screw on high point of cam or 'cold' position), disconnect battery cable at starting motor, to prevent cranking, fully depress starter pedal, adjust throttle cracking pin so that all clearance between cross shaft lever and accelerator pedal lever is taken up. Connect starting motor cable and reset engine idle speed.

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index. Setting—Coil housing 1 Point Rich (All 1938, Late 1939), 2 Points Rich (Early 1939).

### CARB. EQUIPMENT

**Air Cleaner**: AC oil-wetted type 1528150 (or 1528128) with crankcase inlet ventilator 498991 ('38), 502783 ('39). Oil bath optl. type 1528304 ('38), 1528944 ('39), with crankcase inlet ventilator 499327.

**Fuel Pump**: AC type AH standard #1523109 ('38), #1523844 ('39). Optl. comb. fuel-and-vacuum pump type AJ, #1523110 ('38), #1523825 ('39).

For complete data, refer to Carburetion Equip. Index. Gasoline Gauge: AC Electric type.

Dash Unit: #1515343 ('38), #1515362 ('39).

Tank Unit: #1515470 ('38), #1515481 ('39).

For complete data, refer to Carburetion Equip. Index.

### BATTERY

**Delco Type 15E-1**, 6 volt, 15 plate, 100 Amp. hour. Starting Capacity—115 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes. Five second voltage—4.25 volts.

**Grounded Terminal**—Negative (—) to engine.

**Dimensions**—Length 19 5/16". Width 4". Height 9". Location—Under engine hood on left side.

**Police Battery**:—Delco Type 19E-1, 6 volt, 19 plate, 125 A.H. capacity (20 hr. rate). End-to-end type.

**Starting Capacity**—150 amperes for 20 minutes.

**Grounded Ter. & Location**—Same as 15E-1 above.

C NTINUED FR M PRECEDIN PAGE

**STARTER****1938 MODELS**

STD.: Delco-Remy Model 729-E. Armature 823881.  
RHD.: Delco-Remy Model 737-C. Armature 1847432.  
Drive—(729-E) Overrunning clutch with manual pinion shift. (737-C)—Bendix drive.  
Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—24-28 ounces each.  
Cranking Engine—Approx. 200 amperes at 5 volts.

**Performance Data—729-E**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 " "	Lock	3.0	600

**Performance Data—737-C**

0 ft. lbs.	6000	5.0	65
15 " "	Lock	3.15	570

Removal:—Mounted on left front face of flywheel housing. To remove, take out capscrews.

Starting Switch (729-E): Delco-Remy No. 820052. On starter, operated by starter pedal (pinion shift). For complete data, refer to *Electrical Equipment Index*. (737-C) Delco-Remy Magnetic Switch Type 1528 used with Vacuum Switch 1605 (accelerator pedal starting). For data, refer to *Electrical Equip. Index*.

**STARTER****1939 MODELS**

STD.: Delco-Remy Model 1107008. Armature 1867897.  
RHD.: Delco-Remy Model 727-S. Armature 823881.  
Drive—Overrunning clutch with manual shift (1107008), solenoid pinion shift (727-S).  
Cranking Engine—200 amperes at 5 volts.  
Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—24-28 ounces each.

**Performance Data—1107008**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 " "	Lock	3.37	525

**Performance Data—727-S**

0 ft. lbs.	5500	5.0	65
15 " "	Lock	3.0	600

Removal:—Mounted on left front face of flywheel housing. To remove take out mounting screws.

Starting Switch (1107008): Delco-Remy No. 820052. On starter. Operated by starter pedal (pinion shift). (727-S)—Delco-Remy Solenoid Switch Type #1546 operated by pushbutton switch 1996004.

For complete data, refer to *Electrical Equipment Index*.

**GENERATOR****STANDARD**

Delco-Remy Model No. 1100003. Armature 1866789.  
Fixed third brush with vibrating voltage regulator.  
Charging Rate Adjustment—Adjusted by changing setting of voltage regulator. See Regulator data.  
Maximum Charging Rate—See table below. Reached at car speed of 30-35 MPH.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600

Rotation—Counter-clockwise at commutator end.  
Brush Spring Tension—25 oz. (main), 17 oz. (3rd).  
Field Current—2.3-2.6 amperes at 6.0 volts.

Removal:—Pivot mounted at left front of engine. To remove, take out clamp and pivot bolts.

Belt Adjustment:—Loosen pivot and clamp bolts, move generator out or away from engine to take up stretch or slack in belt. 1" belt play between pulleys when grasped with fingers.

**GENERATOR****SPECIAL EQUIPMENT****Delco-Remy Models**

Generator	Regulator	Used for:
① 934-F	5599	1939 Police
① 961-N	5832	1939 Spec. Equipm.
② 1105851	1118237	'39-40 Spec. Equipm.
② 1105856	1118237	'39-40 Spec. Equipm.

①—2 brush generator with Double Core Type Regulator with IGN Terminal. Refer to 1937 Pontiac Eight page for data on these Generators and Regulators.  
②—2 brush generator with Single Core Type Regulator. Refer to 1940 Pontiac car article for data.

**REGULATOR**

Delco-Remy Double Core Voltage Regulator with "IGN" terminal 5835 (1938), 5808 (RHD '39), No "IGN" terminal 5858 (1939). Cutout Relay and vibrating Voltage Regulator in case on dash.

For complete data, refer to *Electrical Equipment Index*.

**Cutout Relay.**

Cuts In—6.9-7.6 volts (5835, 5808), 6.3-6.9 volts (5858) at 70°F., 1340 RPM or 15 MPH.

Cuts Out—0-4.0 amps. discharge current at 6.3 v.  
Contact Gap—.020". Air Gap—.020" (closed).

**Voltage Regulator**

Setting—7.5-7.9 volts (70° F.), 7.4-7.8 volts (150° F.).  
Adjustment—For "IGN" types, disconnect lead on "IGN" terminal, connect jumper between "IGN" and "BAT" terminals, connect test ammeter in charging line at "BAT" terminal, connect voltmeter between "IGN" terminal and ground. For "NO IGN" types, connect ammeter in charging line at "BAT" terminal on regulator, voltmeter between "BAT" terminal and ground. Then check both types by operating generator at 2800-3000 RPM., adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set), adjust regulator by bending spring hanger at lower end of armature slightly.

Contact Gap—.020". Contact Spring—3.5 ozs.

Air Gap—.063" between armature and center of core with armature down, .010" between fibre bumper and stop with armature up.

Caution—Regulator cover must be in place when testing. Do not run generator on open-circuit.

**LIGHTING**

Headlamps and Headlamp Adjustment. All data same as for 1938-39 Pontiac Eight (following car article).

Beam Indicator—Red indicator light above center of speedometer. Lighted with upper beams "on".

**Switches**

Lighting ('38)—D-R No. 1995002, 1995004 (RHD).  
Lighting ('39)—D-R No. 1995006, 1995007 (RHD).  
Beam Selector—Delco-Remy Model 471-T ('38), 1997008 (1939), 465-V (RHD).  
Instrument Lamp—D-R Model 1406.  
Stop Light—D-R Model 476-U.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instrument	1½	55
Ign. Switch, Beam Indic.	1	51
Tail	3	63
Stop	15	87
Dome	6	81
License	3	63

**MISC. ELECTRICAL**

FUSES:—Fuse block mounted on lighting switch on back of instrument panel. Three 20 amp. fuses:  
Left Headlamp Circuit—Fuse to rear.  
Other Lighting Circuits—Fuse toward engine.  
Spare—To left of Left Headlamp fuse.

HORNS:—Single. Klaxon Model K-26-L, Type 1843 Std. Dual—Klaxon Model K-33-S, Type 2067 (low note), 2074 (high note) or K-33-H No. 505 (low note), 506 (high note) with horn relay Optional.

Horn Type	Current (at 6 volts)	Air Gap
K-26-L, 1843	6.5-8.5	.025-.029"
K-33-S, 2067	11-13	.042-.046"
K-33-S, 2074	10-12	.032-.036"
K-33-H, 505	10-12	
K-33-H, 506	9-11	

Horn Relay:—Delco-Remy Model 271-A or 1116775.

Contact Gap—.020". Air Gap—.015" (closed).

Contacts Close—2.3-3.5 volts.

**ENGINE**

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head.

Bore—3 7/16". Stroke—4".

Displacement—222.7 cu. ins. Rated HP.—28.3.

Developed Horsepower—85 at 3520 R.P.M.

Compression Ratio—6.20-1 standard cast-iron head.

Compression Pressure—140-143 lbs. at 1000 R.P.M.

or approximately 115 lbs. at cranking speed.

Vacuum Reading—18-20" steady at 7 M.P.H.

PISTONS:—Electro-plated, chrome nickel type with rib between bosses. Length—3 37/64".

Weight—Stripped 26.68 ozs ('38), 27 1/8 ozs. ('39).

Removal—Pistons and rods removed from above.

Clearance—Top .0175-.0295". Skirt .002".

Original Bore & Piston Sizes, Replacement Pistons:—  
See Pontiac Shop Notes for data.

Fitting New Pistons:—Insert .0015"x1/2" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-25 lbs. Piston taper .0005" max.

NOTE—Fit with .002" feeler for 1938 pistons.

PISTON RINGS:—Two compression rings above pin, one oil control ring below pin. Oil ring groove drilled radially with 10 oil drain holes.

See Pontiac Shop Notes for compression ring data.

**1938 Piston Rings**

Ring	Width	End Gap	Side Clearance
Compression	.1235-.1240"	.007-.017"	.0015-.003"
Oil Control	.1860-.1865"	.007-.017"	.001-.0025"

**1939 Piston Rings**

Compression	.0930-.0935"	.009-.014"	.0015-.003"
Oil Control	.1860-.1865"	.007-.017"	.001-.0025"

Replacement Rings:—.005", .010", .020", .030" oversize

PISTON PIN:—Diameter—15/16". Length—3 1/16".

Pin locked in one boss. Free end slotted.

Pin Fit in Piston—See Pontiac Shop Notes.

Pin Fit in Rod Bushing—.0003-.0005".

Replacement Pins:—.001", .003", .005" oversize.

Fitting Pins:—See Pontiac Shop Notes for data.

CONNECTING ROD: Length 7 9/16".

Weight—32 ozs. (1938), 2.18 lbs. (1939).

Piston Pin Bushing (Upper Bearing)—Split bushed type. See Pontiac Shop Notes for complete data.

Crankpin Journal Diameter—2" (1938), 2 1/8" (1939).

Lower Bearing—Removable steel-backed, babbit-lined type. Furnished std. & .001" undersize.

Clearance—.0005-.0015". Endplay—.005-.010".

Bearing Adjustment:—None (no shims). See Pontiac Shop Notes for Fitting and Installing Bearings.

## ENGINE

C CONTINUED FROM PRECEDING PAGE

**CRANKSHAFT:**—4 bearing type with integral counterweights. Balancer mounted on forward end. See Pontiac Shop Notes for Balancer Removal and Rear Main Bearing Oil Seal Renewal.

## Journal Diameters

	#1	#2	#3	#4
1938	2 3/8"	2 13/32"	2 15/32"	2 1/2"
1939	2 1/2"	2 17/32"	2 19/32"	2 5/8"

**Bearing Type**—Interchangeable steel-backed, babbit-lined type. Furnished Std. & .001" undersize. Clearance—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. See Pontiac Shop Notes. **End Thrust:** At #3 bearing. Endplay—.003-.008".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. See Pontiac Shop Notes for Camshaft Removal and Camshaft Bearing Finished Sizes.

**Journal Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32".

**Bearing Type**—Removable steel-backed, babbit-lined type. Clearance—.0015-.0025".

**End Thrust:**—Taken by steel thrust plate assembled behind camshaft sprocket. Endplay—.002-.005".

**Timing Chain:**—Morse. Width 1" (3/4" nominal). Pitch 3/8". Length 56 links or 21". See Pontiac Shop Notes for Timing Chain Cover Oil Seal Squeak Correction.

**Camshaft Setting:**—Sprockets are marked. Mesh chain with 'O' marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 19/32"	310-.311"	5.718"
Exhaust	1 15/32"	310-.311"	5.718"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"
Exhaust	45°	19/64"	Free fit to .0006"

**Valve Guides:**—Removable, tapered guides (.001" taper to the inch, with greatest clearance at top). **IMPORTANT**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. **NOTE**—Guides should be cleaned with wire brush or taper reamer Tool P.R.131 (also used for reaming replacement guides). **Valve Springs:**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. New dampeners should be used whenever removed. Spring Free Length—2 9/16".

	Spring Pressure	Spring Length
Valve Closed	54 1/2 lbs.	1 29/32"
Valve Open	96 lbs.	1 19/32"

**Valve Lifters:**—Single piece, cast-iron, cylindrical type. Furnished .005" oversize. Use pilot reamer J-706-P when installing oversize lifter. Clearance—Free fit. Lifter should just be free enough to move freely with finger touch.

## VALVE TIMING

**Tappet Clearance:**—.011-.013" all valves (hot and running). Use .011" and .013" feelers as 'go' and 'no go' gauges. **NOTE**—Car manufacturer recommends .013" exhaust clearance for high speed driving.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**To Check Timing:**—Set tappet clearance #6 intake valve at .0125". This valve should open with piston 5° or .0096" before top dead center with first straight line of flywheel mark 'IGN.ONE/' slightly past indicator in left front face of flywheel housing

## LUBRICATION

**LUBRICATION:**—Gear type pump (right of engine).

See Pontiac Shop Notes for Oil Pump data and installation of 1941 type Pontiac (built-in) Oil Cleaner.

**Normal Oil Pressure:**—35-45 lbs. with warm oil.

**Oil Pressure Regulator:**—In pump. Non-adjustable.

**Crankcase Capacity:**—8 quarts (refill).

## COOLING

**COOLING SYSTEM:** Capacity 16 qts. ('38), 17 qts. ('39).

See Pontiac Shop Notes for Radiator Core Removal.

**Water Pump:**—Packless, sealed ball-bearing shaft.

See Water Pump Section for complete data.

**Removal:**—Remove fan belt, pump mounting bolts and lower hose. Lift off pump and fan assembly.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Closed 140° F. Start 145°. Fully open 172°.

**Temperature Gauge ('39):** AC Electric type. Part No. 1510771 (Dash Unit), 1510772 (Engine Unit).

See Miscellaneous Section for complete data.

## CLUTCH

1938—Own Make. Long 10CF-CS driven member. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Woven Joined type, 2 required, I.D. 6", O.D. 10", thickness 1/8".

1939—Inland. 'Diaphragm' type. Long 9CF-CS driven member. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings:**—Moulded type, 2 required. Inside Diam. 5 3/4". Outside Diam. 9". Thickness .125".

**NOTE:**—Install plain facing toward flywheel, facing with cushioned segments on pressure plate side.

For 1938 Clutch Helper Spring data and 1939 Clutch Chatter Correction, refer to Pontiac Shop Notes.

**Pedal Adjustment:** Clearance between underside of felt retainer and pedal 1/2" ('38), 1" ('39). Adjust by loosening lock screw and turning adjusting screw. Free movement of pedal 1" ± 1/4" ('38), 1" ± 1/8" ('39). Adjustment on clutch fork connecting rod.

**Removal:**—Remove transmission (see below), take off bottom housing cover, unlock pedal pull-back spring, remove fork ball support, fork and throwout bearing. Remove cover screws (turn screws out a few turns at a time until tension relieved). Move clutch away from flywheel at bottom and remove.

## TRANSMISSION

**TRANSMISSION:**—Own. All helical gears, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift control.

See Transmission Section for complete data.

**Transmission Control:**—Pontiac 'Safety Shift' type. Optl. on 1938. See Transmission Section for data.

**Removal ('38):** Remove floor center panel, front seat assembly, and speedometer cable. (On cars with Safety Shift Gear Control disconnect control cable from selector plate hook and transmission case, withdraw cable and disconnect outer lever from cover shift shaft). Disconnect rear U-joint, remove shaft housing to transmission cap screws, rear engine support bolts, jack up rear of engine to have drain plug clear crossmember, remove fastening bolts. Pull unit straight back (use support at rear to keep in alignment) freeing clutch shaft, then up and forward at front, removing transmission with coupling from propeller shaft. Lift assembly out.

**Removal ('39):** Remove mat, floor center panel and front seat assembly. Disconnect speedometer cable and selector control cable at transmission. Remove

selector shaft outer lever (on left side). Remove propeller shaft by disconnecting rear U-joint and pulling to rear to disengage U-joint front yoke from transmission main shaft. Support transmission at rear and remove transmission mounting cap screws. Pull unit straight back freeing main drive gear, up and forward at front, and lift out.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics—Model 2C. Roller bearing. 2 used. See Universals Section for data.

**Front Propeller Shaft Bearing ('38):** See Pontiac Shop Notes for complete data.

## REAR AXLE

**REAR AXLE:**—Own. Semi-floating, hypoid gear type with Hotchkiss drive. See Rear Axle Section for data.

Ratios—	Std.	Mountain	Plains
1938	4.375-1	4.625-1	4.125-1
39-25	4.1-1	4.3-1	3.9-1
39-26	4.3-1	4.55-1	4.1-1

**Backlash:**—Not less than .003". Limits .003-.012".

**Removal:**—Disconnect rear universal and wire trunnions (do not disengage spline joint at front end of shaft), remove axle shafts (below), remove carrier flange cap screws, pull carrier assembly out.

**Axle Shaft Removal:**—Hoist rear of car, remove wheel, brake drum, 4 backing plate mounting bolt nuts and loosen bearing retainer (do not allow backing plate to shift to damage brake line). Pull shaft (Puller J-942) taking care not to drag shaft on oil seal. Wheel Bearing Adjustment—None.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:** Delco Hydraulic types as follows:

	1938	1939	'39 Exp.
Front	1947-A,B	1947-C,D	1947-C,D
Rear	P-1173-U	1116-V	1754-A,B

Double acting Front (and Rear on Export), Direct acting Rear. **NOTE**—3 different valve calibrations (front and rear) used during 1939 production. See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4 1/2°-5°.

**Caster Neg** 3/4° to Neg. 1 1/4° ('38). 0° to Neg. 3/4° ('39).

**Camber:**—Neg. 1/2° to pos. 1°. 1/2 turn max. adj'tmt.

**Toe In**—0-1/16". Adjust tie rod for each wheel.

**Steering Geometry:**—Inner wh 122 1/2-23 1/2°. Outer 20°.

## STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller with center steering ('38), idler on right frame rail ('39). See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Bendix hydraulic, duo-servo, single anchor. Hand lever applies rear wheel brakes. **IMPORTANT**—Eccentric adjustment on 1938 only. See Brake Section for complete data.

**Drum**—12" ('38), 11" ('39). Chrome nickel iron.

**Wheel Cylinder Bore**—Front wheel 1". Rear 15/16".

**Lining**—D-R Multibestos (primary), L-8 Multibestos (secondary). Width 1 3/4". Thickness 3/16".

**Length per wheel** 23 1/16" ('38), 21 5/16" ('39).

**Clearance (1938)** .010" at heel and toe of each shoe.

(1939) .015" at both ends of secondary shoe.

**Hand Brake:**—See Service Brakes above.

**HOOD LOCK ADJUSTMENT, SIDE PANEL BUMPERS, FRONT FENDER & RADIATOR (UNIT) REMOVAL, OIL PAN REMOVAL:**—See Pontiac Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** 1938 Models—First no. 8DA-1001. On top left frame siderail ahead of steering gear.  
1939 Models—First car number 8EA-1001 with prefixes as follows: P—Pontiac, Mich., C—South Gate, Calif., L—Linden, N. J. On plate on left end of frame front cross member under hood.  
**ENGINE NUMBER:** Stamped on boss on top left front corner of block. First No. 8-140001 ('38), 8-159601 ('39)

### TUNE-UP

**COMPRESSION:**—Ratio and Pressure as follows:

Ratio Pressure: @1000 RPM. @ Crank's Speed  
6.2-1 Standard.....140-143 lbs. Approx. 115 lbs.  
7.0-1 HC hd. '39..... 169 lbs. Approx. 137 lbs.  
**VACUUM READING:**—Steady reading of 18-20" with engine idling at 376 R.P.M. or 7 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type 45. 14 mm. Metric type.

Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Cam Angle—31° Closed.  
Automatic Advance—14° max. at 2100 RPM (distr.).  
Vacuum Advance—10° distr. with 16-21" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC. First line of flywheel mark 'IGN.ONE/' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw ½-1 turn open (1938), ½-1½ turns open (1939). Idle speed setting 376 RPM or 7 MPH.

Float Level ('38 400-S) ¾" from top of float to gasket seat with valve seated (invert to check).  
( '39 432-S) ½" from machined projection on cover to top of soldered seam on float (invert to check).

Accelerating Pump—Lower hole normal setting.

Fuel Pump Pressure: 4 lbs. (AH), 3¼ lbs. (AJ Comb.).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Counterweight must be tightly clamped to shaft and about vertical with valve closed (engine cold).

Setting—Move lever at forward end of heat tube between 'winter' and 'summer' end positions for seasonal temperatures as follows: Up to 50° F.—'Winter' setting. 50° to 70° F.—Intermediate (half-way between Winter and Summer). 70° F. and above—'Summer' setting.

**VALVES:** See Valve Timing.

Tappet Clearance:—.011-.013" all valves (warm). Use .011" and .013" feelers as 'go' and 'no go' gauges.

NOTE—.013" exhaust setting recommended by car manufacturer for sustained high speed driving.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Delco-Remy Model 1116253 (1938), 1116264 (1939). Switch and cable assembly. Connected to coil by armored cable.

Ignition Lock—Briggs & Stratton, B & S No. 45792. Key Series—8000-9499. Groove—#15.

**COIL:** Delco-Remy 539-L ('38-39), 1115129 ('39). On dash.

Ignition Current—2.0 amperes idling, 3.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1865972.

Capacity—18-25 microfarad.

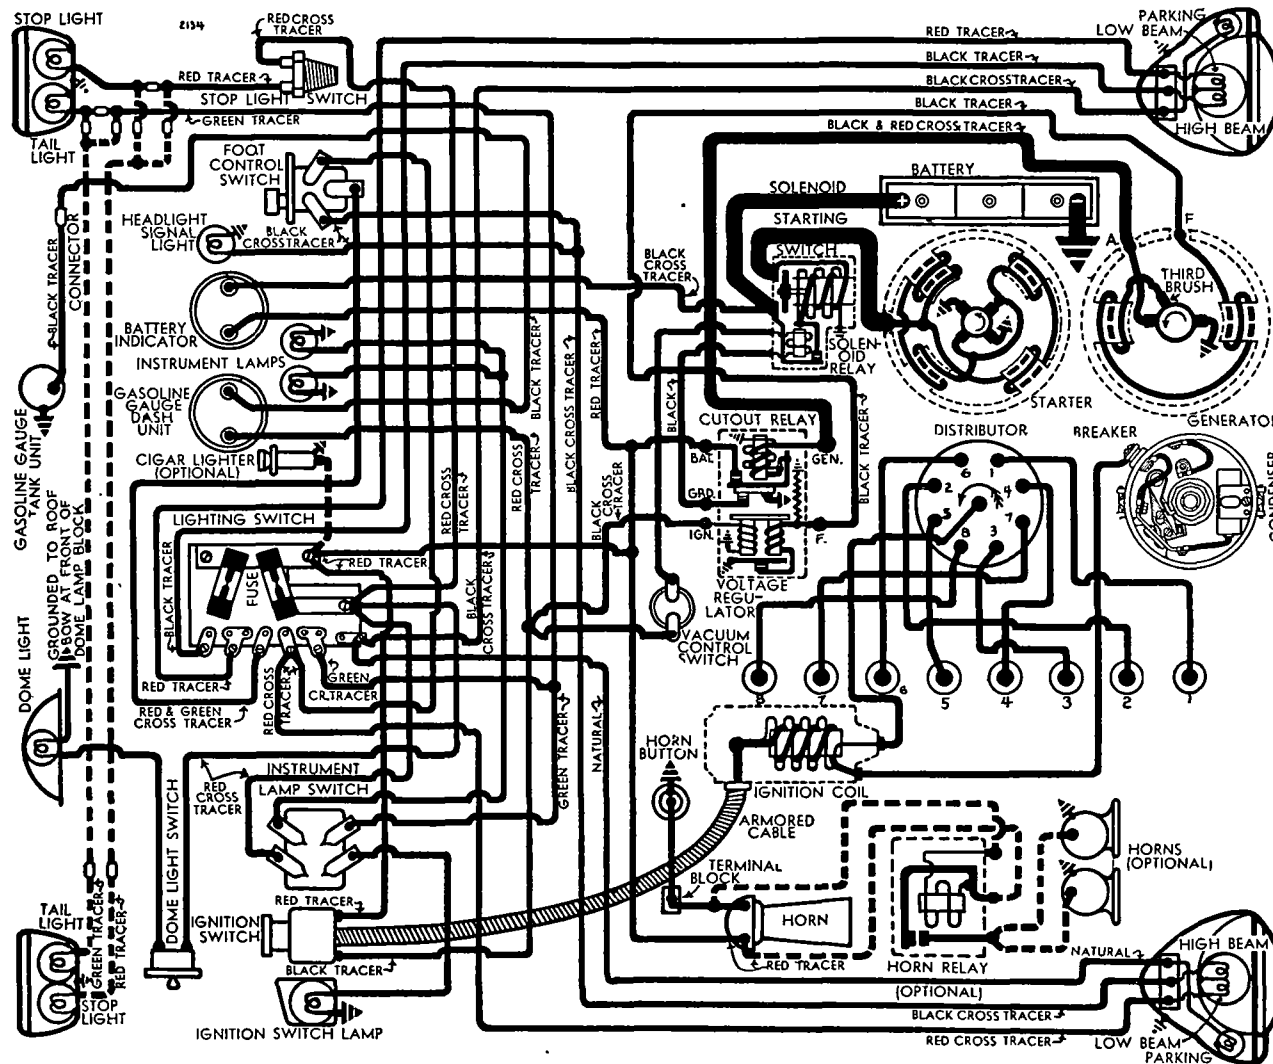

**DISTRIBUTOR:** Delco-Remy Model 663-X. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and Gaselector (octane selector).

Breaker Gap—Set at .015". Limits .0125-.0175".  
Cam Angle or Dwell—31° (closed), 14° (open).  
Breaker Arm Spring Tension—22 ounces.  
Rotation—Counter-clockwise viewed from top.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	4.0	800
7	1100	14	2200
8.5	1550	17	3100
14.0	2100	28.0	4200

**Vacuum Spark Control D-R No. 681-N.** Integral with distributor. Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Total plunger travel 7/32".

1938 MODELS

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-6"
10°	20°	16-21"

Gaselector—Manual adjustment at distributor provides 10° advance or retard from center '0' position. See Gaselector Setting following.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw on Gaselector and lift off.

### IGNITION TIMING

**IGNITION TIMING:**—Initial setting given below. See Gaselector Setting (following) for final setting.

### Flywheel Degrees Piston Position

For all heads .....6° BTDC.....0128° BTDC.  
NOTE—The two straight lines of the ignition mark 'IGN.ONE/' indicate timing range of 4° (1st line 6° BTDC, 2nd line 2° BTDC) on flywheel. Car manu-

facturer recommends use of Timing Light (HM-494) or Synchroscope (HMO-161).

**T Set Timing (using Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is  $6^{\circ}$  or  $.0128''$  before top dead center, stop when first line of ignition mark 'IGN.ONE/' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector screw, center scale on crankcase mark, tighten screw, loosen distributor clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt. See Gaselector Setting

**To Set Timing (using Synchroscope)**—Connect synchroscope in #1 spark plug lead. Fill in first line of flywheel mark 'IGN.ONE/' with white chalk or paint. Direct light on flywheel through inspection hole in left front face of flywheel housing. Idle engine at 376 R.P.M. or 7 M.P.H., adjust distributor

(as directed for Timing Light above) until white line coincides with pointer in h using.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen screw, move pointer clockwise to advance or counter-clockwise to retard spark

### CARBURETOR

1938—Carter Type W1 Vacuumer, Model 400-S.  $1\frac{1}{4}''$  single barrel downdraft type with Carter Climatic Control. Casting No. 343 on flange.

For complete data, refer to Carburetor Index.

1939—Carter Type WA-1, Model 432-S.  $1\frac{1}{4}''$  single barrel downdraft type with Carter Climatic Control. Casting No. 245 on flange.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—Engine must be warm with automatic choke and fast idle inoperative. Car manu-

facturer recommends use of Vacuum Gauge. Set throttle stopscrew to idle engine at 7 M.P.H., adjust idle adjusting screw to give steady gauge reading of 18-20". To adjust without gauge, set throttle stopscrew as above, turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting  $\frac{1}{2}$ -1 turn open (400-S),  $\frac{1}{2}$ - $1\frac{1}{2}$  turns open (432-S) of screw from inner seated position. Reset idle speed.

**Accelerating Pump Setting**—Pump lever under dust cover at top of carburetor has three holes for pump link engagement. Change for seasonal requirements Lower Hole (medium stroke)—Normal setting.

Inner Hole (minimum stroke)—Extremely hot temperatures, high altitudes or hi-test fuels.

Upper Hole (max. stroke)—Extremely cold temperatures.

**Fast Idle (1938)**: Fast idle cam linked to the choke mechanism which acts as throttle lever stop. Should not require adjustment. See Carter Cam Type Fast Idle in Carburetion Equipment Section.

For complete data, refer to Carburetion Equip. Index.

**Fast Idle (1939)**: Integral type, built-in carburetor. For complete data, refer to Carburetion Equip. Index. Setting—With throttle lever stopscrew seated against (not on) first step of fast idle cam clearance between lower edge of choke valve and air horn should be  $\frac{3}{16}''$  (gauge T108-85).

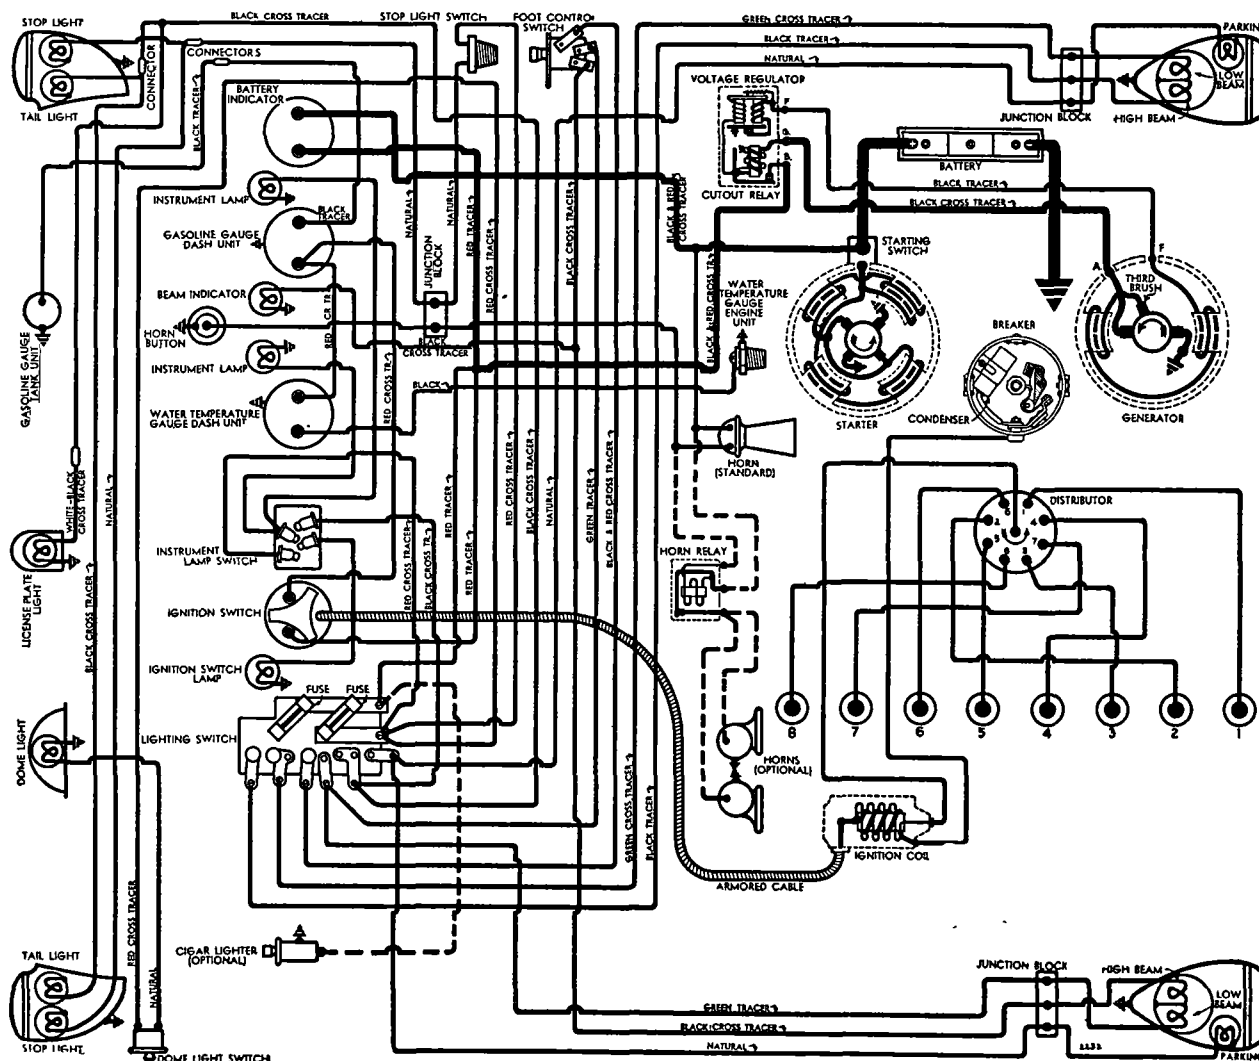

**Accelerator Linkage Setting ('38)**: Adjust rod connecting bell cranks on side of manifold so that accelerator pedal just touches floor board with carburetor throttle valve wide open. Release accelerator pedal and with throttle valve in closed position (fast idle inoperative), set adjusting screw in lever at forward end of this connecting rod so that clearance between this lever and lever which operates carburetor throttle valve rod is  $5/32$ - $3/16''$ , secure locknut. Disconnect vacuum switch operating rod at switch lever, turn switch lever so that pointer lines up with line on switch body, adjust length of rod by turning trunnion on rod until rod can be connected to switch lever without disturbing position of lever. See that hand throttle is fully closed, loosen set screw in throttle cable trunnion (at lower end of cable), adjust cable length so that clearance between lever at forward end of hand throttle operating rod and carburetor throttle valve rod lever is  $1/16''$  minimum. Check setting.

**Accelerator Linkage Setting ('39)**: Must be maintained to provide correct "Throttle cracking" action for starting. To adjust, set carburetor idle speed at 6-7 M.P.H., loosen hand throttle lockwire screw, pull button  $\frac{1}{8}''$  out from instrument panel, position hand throttle lever so that no clearance exists between lever and throttle cross shaft, tighten lock-screw. Turn throttle stopscrew in 2 turns (with throttle stopscrew on high point of cam or 'cold' position), disconnect battery cable at starting motor to prevent cranking, fully depress starting pedal, adjust throttle cracking pin so that all clearance between cross shaft lever and accelerator pedal lever is taken up. Connect starting motor cable and reset engine idle speed.

**Automatic Choke**:—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index. Setting—Coll housing 1 Point Rich (All 1938, Late 1939), 2 Points Rich (Early 1939).

C N T I N U E D N N E X T P A G E

1939 MODELS

## CONTINUED FROM PRECEDING PAGE

## CARB. EQUIPMENT

**Air Cleaner:** AC oil-wetted type 1528128 used with crankcase inlet ventilator 498991 ('38), 502783 ('39). Oil bath optl. type 1528304 ('38), 1528944 ('39) with crankcase inlet ventilator 499327 ('38-39).

**Fuel Pump:** AC type AH standard #1523109 ('38), #1523844 ('39). Optl. comb. fuel-and-vacuum pump type AJ, #1523110 ('38), #1523825 ('39).

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:** AC Electric type.

Dash Unit: #1515343 ('38), #1515362 ('39).

Tank Unit: #1515470 ('38), #1515481 ('39).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**1938 Cars—Delco Type 17E-1.** 6 volt, 17 plate, 115 ampere hour capacity (20 hour rate).

Starting Capacity—137 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.3 minutes. Five second voltage—4.4 volts.

**Grounded Terminal—Negative (—) terminal.** Dimensions—Length 19 5/16". Width 4". Height 9". Location—Under engine hood on left side.

**1939 Cars—Delco Type 15E-1.** 6 volt, 15 plate, 100 AH capacity (20 hr. rate). End-to-end type.

Starting Capacity—115 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.3 minutes. Five second voltage—4.25 volts.

**Police Battery—Delco Type 19E-1.** 6 volt, 19 plate, 125 A.H. capacity (20 hr. rate). End-to-end type.

Starting Capacity—150 amperes for 20 minutes.

Zero Capacity—300 amperes for 5.3 minutes. Five second voltage—4.55 volts.

## STARTER

## 1938 MODELS

**Delco-Remy Model 727-S.** Armature No. 823881.

Drive—Overrunning clutch and manual pinion shift operated by solenoid switch.

**Cranking Engine—220-225 amperes at 5 volts.**

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ounces each.

## Performance Data—727-S

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
15 ft. lbs.	Lock	3.0	600

**Removal:** Mounted on left front face of flywheel housing. To remove, take out capscrews.

**Starting Switch:** Delco-Remy Solenoid 1546. Vacuum Switch Type 1605. Solenoid switch controlled through relay by vacuum switch operated by accelerator pedal. For data, see Electrical Equip. Section.

## STARTER

## 1939 MODELS

**Delco-Remy Model 1107914.** Armature No. 1867897.

Drive—Manual shift and overrunning clutch.

Rotation—Counter-clockwise at commutator end.

**Cranking Engine—220-225 amperes at 5 volts.**

Brush Spring Tension—24-28 ounces.

## Performance Data—1107914

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 " "	Lock	3.0	600

**Removal:** Flange mounted on left front face of flywheel housing. To remove, take out capscrews.

**Starting Switch:** Delco-Remy No. 820052. On starter. Operated by starter pedal (pinion shift).

For complete data, refer to Electrical Equipment Index.

## GENERATOR

## STANDARD

**Delco-Remy Model No. 1100003.** Armature 1866789. Fixed third brush with vibrating voltage regulator. Charging Rate Adjustment—Adjusted by changing setting of voltage regulator. See Regulator data. Maximum Charging Rate—See table below. Reached at car speed of 30-35 MPH.

## Performance Data

	Amperes	Volts	R.P.M.
Cold	26-30	8.0	3400
Hot	25-28	8.0	3600
Rotation	Counter-clockwise at commutator end.		
Brush Spring Tension	25 ozs. (main), 17 ozs. (3rd).		
Field Current	2.3-2.6 amperes at 6.0 volts.		

**Removal:** Pivot mounted at left front of engine.

To remove, take out clamp and pivot bolts.

**Belt Adjustment:** Loosen pivot and clamp bolts, move generator out or away from engine to take up stretch or slack in belt. 1" belt play between pulleys when grasped with fingers.

## GENERATOR

## SPECIAL EQUIPMENT

## Delco-Remy Models

Generator	Regulator	Used for:
①934-F	5599	1939 Police
①961-N	5832	1939 Spec. Equipm.
②1105851	1118237	'39-40 Spec. Equipm.
②1105856	1118237	'39-40 Spec. Equipm.
①—2 brush generator with Double Core Type Regulator with IGN Terminal. Refer to 1937 Pontiac Eight page for data on these Generators and Regulators.		
②—2 brush generator with Single Core Type Regulator. Refer to 1940 Pontiac car article for data.		

## REGULATOR

**Delco-Remy Double Core Voltage Regulator with "IGN" terminal 5835 (1938), 5808 (RHD '39), No "IGN" terminal 5858 (1939).** Cutout Relay and vibrating Voltage Regulator in case on dash.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay

Cuts In—6.9-7.6 volts (5835, 5808), 6.3-6.9 volts (5858) at 70°F., 1340 RPM or 15 MPH.

Cuts Out—0-4.0 amps. discharge current at 6.3 v.

Contact Gap—.020". Air Gap—.020" (closed).

## Voltage Regulator

Setting—7.5-7.9 volts (70°F.), 7.4-7.6 volts (150°F.).

Adjustment—All data same as for 1938-39 Pontiac Six (preceding car article).

Contact Gap—.020". Contact Spring—3.5 ozs.

Air Gap—.063" between armature and center of core with armature down, .010" between fibre bumper and stop with armature up.

Caution—Regulator cover must be in place when testing. Do not run generator on open-circuit.

## LIGHTING

**LIGHTING:** Headlamps—Guide Multi-beam, pre-focused, cross-beam type with non-interchangeable lenses (marked 'Left' and 'Right' at top). Asymmetrical passing beam (upper beam left hand headlamp, lower beam right hand headlamp) controlled by beam control switch on toeboard with lighting switch in driving or third position.

**Headlamp Adjustment:** Adjust lamps with lenses in place (beam 4" to right with lenses off). Place car on level floor 25' from screen with upper beam lighted (lower filament in each bulb). Aim left

headlamp so that upper edge of bright spot is on horizontal line at lamp center height and left edge is at lamp vertical center-line (entire bright spot to right of vertical line). Aim right headlamp to same height but right cut-off of hot spot must be approx. 8" to right of lamp vertical center-line.

**Beam Indicator:** Red indicator light above center of speedometer dial. Lighted whenever upper beams in use.

## Switches

**Lighting ('38)—D-R No. 1995002, 1995004 (RHD).**

**Lighting ('39)—D-R No. 1995006, 1995007 (RHD).**

**Beam Selector—Delco-Remy Model 471-T ('38), 1997008 (1939), 465-V (RHD).**

**Instrument Panel—D-R Model 1406.**

**Stop Light—D-R Model 476-U.**

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking, Instrument	1 1/2	55
Ign. Switch, Beam Indic.	1	51
Tail	3	63
Stop	15	87
Dome	6	81
License	3	63

## MISC. ELECTRICAL

**FUSES:** Fuse block mounted on lighting switch on back of instrument panel. Three 20 amp. fuses:

Left Headlamp Circuit—Fuse to rear.

Other Lighting Circuits—Fuse toward engine.

Spare—To left of Left Headlamp fuse.

**HORNS:** Single. Klaxon Model K-26-L, Type 1643 Std.

Dual—Klaxon Model K-33-S, Type 2067 (low note), 2074 (high note) or K-33-H No. 505 (low note), 506 (high note) with horn relay Optional.

Horn Type	Current (at 6 volts)	Air Gap
K-26-L, 1643	6.5-8.5	.025-.029"
K-33-S, 2067	11-13	.042-.046"
K-33-S, 2074	10-12	.032-.036"
K-33-H, 505	10-12	
K-33-H, 506	9-11	

**Horn Relay:** Delco-Remy Model 271-A or 1116775.

Contact Gap—.020". Air Gap—.015" (closed).

Contacts Close—2.3-2.5 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

Bore—3 1/4". Stroke—3 3/4".

Displacement—248.9 cu. ins. Rated HP.—33.8.

Developed Horsepower—100 (6.2-1 Std. cast-iron hd.), 110 (7.0-1 HC '39 cast-iron hd.) at 3700 RPM.

Compression Ratios & Pressures—As follows:

Head	Pressure: at 1000 RPM at Crank'g Speed
6.2-1 Standard	140-143 lbs. Approx. 115 lbs.
7.0-1 HC hd. '39	169 lbs. Approx. 137 lbs.

Vacuum Reading—18-20" steady at 7 M.P.H.

**PISTONS:** Electro-plated, chrome nickel type with rib between bosses. Cannot be ground.

Length—3 19/32". Weight—24.25 ozs. (stripped).

Removal—Pistons and rods removed from above.

Clearance—Top .0175-.0295". Skirt .002".

**Original Bore & Piston Sizes, Replacement Pistons:**—See Pontiac Shop Notes for data.

**Fitting New Pistons:**—Insert .0015"x1/2" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-25 lbs. Piston taper .0005" max.

NOTE—Fit with .002" feeler for 1938 pistons.

**PISTON RINGS:**—Two compression rings above pin, one oil control ring below pin. Oil ring groove drilled radially with 10 oil drain holes.

See Pontiac Shop Notes for compression ring data.

**ENGINE**

CONTINUED FROM PRECEDING PA E

**1938 Piston Rings**  
 Ring Width End Gap Side Clearance  
 Compression .1235-.1240". .007-.017". .0015-.003"  
 Oil Control..... .1860-.1865". .007-.017". .001-.0025"

 Oil Control..... .1860-.1865". .007-.017". .001-.0025"  
 Replacement Rings:—.005", .010", .020", .030" oversize.

**PISTON PIN:**—Diameter—15/16". Length—2 7/8".  
 Pin locked in one boss. Free end slotted.  
 Pin Fit in Piston—See Pontiac Shop Notes.  
 Pin Fit in Rod Bushing—.0003-.0005".  
 Replacement Pins:—.001" (red & brown), .003" (red), .005" (blue) oversize. Painted on ends.  
 Fitting Pins:—See Pontiac Shop Notes.

**CONNECTING ROD:**—Length 7 9/16". Weight 29 7/8 ozs.  
 Piston Pin Bushing (Upper Bearing)—Split bushed type. See Pontiac Shop Notes for complete data.  
 Crankpin Journal Diameter—2".  
 Lower Bearing—Removable steel-backed, babbitt-lined type. Furnished std. & .001" undersize.  
 Clearance—.0005-.0015". Sideplay—.005-.010".  
 Bearing Adjustment:—None (no shims). See Pontiac Shop Notes for Fitting and Installing Bearings.

**CRANKSHAFT:**—5 bearing with integral count'weights. See Pontiac Shop Notes for Balancer Removal.  
 Journal Diameters—#1, 2 3/8"; #2, 2 13/32"; #3, 2 7/16"; #4, 2 15/32"; #5, 2 1/2".  
 Bearing Type—Interchangeable steel-backed, babbitt-lined type. Furnished Std. & .001" undersize.  
 Clearance—.001-.003".  
 Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. See Pontiac Shop Notes.  
 End Thrust:—Rear center (#4) bearing.  
 Endplay—.003-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive. See Pontiac Shop Notes for Camshaft Removal, Bearing finished sizes and Replacement Camshaft Sprocket data.  
 Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 7/8".  
 Bearing Type—Removable steel-backed, babbitt-lined type. Clearance—.0015-.0025".  
 End Thrust:—Thrust plate behind camshaft sprocket.  
 Endplay—.002-.005".  
 Timing Chain:—Morse. Width 1" (3/4" nominal). Pitch 3/8". Length 56 links or 21".  
 See Pontiac Shop Notes for Timing Chain Cover Oil Seal squeak correction data.  
 Camshaft Setting:—Sprockets are marked. Mesh chain with '0' marks on sprockets adjacent and in line with a straightedge across shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length  
 Intake .....1 15/32".....310-311".....5.53"  
 Exhaust .....1 11/32".....310-311".....5.53"

Seat Angle Lift Stem Clearance  
 Intake .....30".....19/64".....Free fit to .0006"  
 Exhaust .....45".....19/64".....Free fit to .0006"

Valve Guides:—Removable, tapered guides (.001" taper to the inch, with greatest clearance at top). IMPORTANT—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with wire brush or taper reamer Tool P.R. 131. Replacement guides straight cut, ream to fit valve after installing with reamer P.R. 131.  
 Valve Springs:—Intake and exhaust springs identical. Install with two closed coils at top and dampener on

top of each spring. New dampeners should be used whenever removed. Spring Free Length—2 9/16".

	Spring Pressure	Spring Length
Valve Closed .....	54 1/2 lbs.	1 29/32"
Valve Open .....	96 lbs.	1 19/32"

Valve Lifters:—Cast-iron, barrel type. Furnished .005" oversize. Use pilot reamer J-551 when installing oversize lifter to insure alignment of lifter hole and valve stem.  
 Clearance—Free fit. Lifter should move freely with finger touch.

**VALVE TIMING**

Tappet Clearance:—.011-.013" all valves (hot and running). Use .011" and .013" feelers as 'go' and 'no go' gauges. NOTE—Car manufacturer recommends .013" exhaust clearance for high speed driving.  
 Valve Timing:—See Camshaft Setting.  
 Intake Valves—Open 5° BTDC. Close 39° ALDC.  
 Exhaust Valves—Open 45° BLDC. Close 5° ATDC.  
 To Check Timing—Set tappet clearance #8 intake valve at .0125". This valve should open with piston 5° or .0089" before top dead center with first straight line of flywheel mark 'IGN.ONE/' slightly past pointer in left front face of flywheel housing.

**LUBRICATION**

LUBRICATION:—Pressure type (pump on right side of engine). See Pontiac Shop Notes for Oil Pump data.  
 Normal Oil Pressure:—35-45 lbs. with warm oil.  
 Oil Pressure Regulator—On pump. Not adjustable.  
 Crankcase Capacity:—7 quarts (refill).

**COOLING**

COOLING SYSTEM:—Capacity—19 quarts.  
 See Pontiac Shop Notes for Radiator Core Removal.  
 Water Pump:—Packless, sealed ball-bearing shaft.  
 Removal—Remove fan belt, lower hose and pump mounting bolts. Lift off pump and fan assembly.  
 Thermostat:—Harrison. In cylinder head outlet.  
 Setting—Closed 140° F. Start 145°. Fully open 172°.  
 Temperature Gauge ('39): AC Electric type. Part No. 1510771 (Dash Unit), 1510772 (Engine Unit).  
 See Miscellaneous Section for complete data.

**CLUTCH**

1938—Own Make. Long 10CF-CS driven member. Single plate, dry disc type.  
 See Clutch Section for complete data.  
 Facings—Woven Joined type, 2 required, I.D. 6", O.D. 10", thickness 1/8".  
 1939—Inland. 'Diaphragm' type. Long 9 1/4 CF-CS driven member. Single plate, dry disc type.  
 See Clutch Section for complete data.  
 Facings—Moulded type, 2 required. Inside Diam. 5 3/4". Outside Diam. 9 1/4". Thickness .125".  
 NOTE—Install plain facing toward flywheel, facing with cushioned segments on pressure plate side.  
 For 1938 Clutch Helper Spring data and 1939 Clutch Chatter Correction and Clutch Housing Removal Note refer to Pontiac Shop Notes.

Pedal Adjustment: Clearance between underside of felt retainer and pedal 1/2" ('38), 1" ('39). Adjust by loosening lock screw and turning adjusting screw. Free movement of pedal 1" ± 1/4" ('38), 1" ± 1/8" ('39). Adjustment on clutch fork connecting rod.  
 Removal:—Remove transmission (see Transmission Removal below), take off bottom housing cover, unlock pedal pull-back spring, remove fork ball support, fork and throwout bearing. Loosen cover screws a little at a time to relieve tension, then take screws out. Move clutch assembly away from flywheel at bottom and lower assembly out.

**TRANSMISSION**

TRANSMISSION:—Own. All helical gears, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift control.  
 See Transmission Section for complete data.  
 Transmission Control:—Pontiac 'Safety Shift' type. Optl. on 1938. See Transmission Section for data.  
 Removal: All data same as for the 1938-39 Pontiac Six (preceding car article).

**UNIVERSALS**

UNIVERSAL JOINTS:—Mechanics—Model 2C. Roller bearing. 2 used. See Universals Section for data.  
 Front Propeller Shaft Bearing ('38): See Pontiac Shop Notes for complete data.

**REAR AXLE**

REAR AXLE:—Own. Semi-floating, hypoid gear type with Hotchkiss drive.  
 See Rear Axle Section for complete data.

Ratios—	Std.	Mountain	Plains
1938 .....	4.375-1	4.625-1	4.125-1
1939 .....	4.1-1	4.3-1	3.9-1

Backlash—Not less than .003". Limits .003-.012".  
 Removal:—Disconnect rear universal and wire trunnions (do not disengage spline joint at front end of shaft), remove axle shafts (below), remove carrier flange capscrews, pull carrier assembly out.  
 Axle Shaft Removal:—Hoist rear of car, remove wheel, brake drum, 4 backing plate mounting bolt nuts and loosen bearing retainer (do not allow backing plate to shift to damage brake line). Pull shaft (Puller J-942) taking care not to drag shaft on oil seal. Wheel Bearing Adjustment—None.

**SHOCK ABSORBERS**

SHOCK ABSORBERS: Delco Hydraulic types as follows:  
 Front .....1947-A,B.....1947-C,D.....1947-C,D  
 Rear .....P-1173-U.....1116-V.....1754-A,B  
 Double acting Front (and Rear on Export), Direct acting Rear. NOTE—3 different valve calibrations (front and rear) used during 1939 production.  
 See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

Front Suspension:—Independent, linked parallelogram type with coil springs.  
 See Front Suspension Section for complete data.  
 Kingpin Inclination—4 1/2-5°.  
 Caster Neg 3/4° to Neg. 1 1/4° ('38). 0° to Neg 3/4° ('39).  
 Camber—Neg. 1/2° to pos. 1°. 1/2 turn max. adj't.  
 Toe In—0-1/16". Adjust tie rod for each wheel.  
 Steering Geometry—Inner wh' 122 1/2-23 1/2". Outer 20°.

**STEERING GEAR**

Steering Gear: Saginaw Worm-and-Roller with center steering ('38), Idler on right frame rail ('39).  
 See Steering Gear Section for complete data.

**BRAKES**

BRAKES:—Service—Bendix hydraulic, duo-servo, single anchor. Hand lever applies rear wheel brakes. IMPORTANT—Eccentric adjustment on 1938 only. See Brake Section for complete data.  
 Drum—12" ('38), 11" ('39). Chrome nickel iron.  
 Wheel Cylinder Bore—Front wheel 1". Rear 15/16".  
 Lining—D-R Multibestos (primary), L-8 Multibestos (secondary). Width 1 3/4". Thickness 3/16".  
 Length per wheel 23 1/16" ('38), 21 5/16" ('39).  
 Clearance (1938) .010" at heel and toe of each shoe. (1939) .015" at both ends of secondary shoe.  
 Hand Brake:—See Service Brakes above.

**HOOD FITTING, HOOD LOCK ADJUSTMENT, AND FRONT FENDER & RADIATOR (UNIT) REMOVAL:—See Pontiac Shop Notes for data.**

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 6HA-1001 (Special), 6HB-1001 (Deluxe) with prefixes indicating factory as follows: P—Pontiac, Mich., C—South Gate, Calif., L—Linden, N. J. On plate fastened to left end of frame front cross member.

**ENGINE NUMBER:**—First number 6-595801. Stamped on boss on top left front corner of engine block.

## TUNE-UP

**COMPRESSION:—Ratio—6.5-1 Std., 7.2-1 Optl.  
Pressure—155-158 lbs. at 1000 RPM, or approxi-  
mately 118-120 lbs. at cranking speed (Std. head).**

**VACUUM READING:—**Steady 18-20" idling at 7 MPH.

**FIRING ORDER: 1-5-3-6-2-4.** See diagram.

**SPARK PLUGS:** AC Type 45. 14 mm. Metric.  
Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.020". **Cam Angle**—35° Closed.  
**Automatic Advance**—14¼" max. at 2000 RPM (distr).  
**Vacuum Advance**—7.5" distr. with 16-18" vacuum.

**IGNITION TIMING:** See Ignition Timing.  
**Std. Setting**—6° BTDC. First line of flywheel mark 'IGN.ONE/' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Set idle screw  $\frac{3}{4}$ -1½ turns open. Idle speed 376 RPM or 7 MPH.

**Float Level**—7/16" from machined projection on cover to top of soldered seam on float (invert to check).

**Accelerating Pump**—Normal setting (minimum stroke, Inner Hole in Pump Arm and Upper Hole in Pump Plunger).

NOTE—On 463-S (Early '40) carburetors change pump setting to correct complaints on hesitation when starting in second gear to maximum stroke (Upper Hole in Pump Arm and Lower Hole in Pump Plunger).

**Fuel Pump Pressure:** 4 lbs. (AH), 3¾ lbs. (AJ Comb.).

**MANIFOLD HEAT CONTROL:—**Thermostatic coil type. Non-adjustable (anchor pin fixed). Counter-weights must be tightly clamped to shaft and should be about vertical with valve closed (engine cold).

**VALVES:** See Valve Timing.

Tappet Clearance—.011-.013" all valves (warm).  
.011 "go" and .013" "no go."

NOTE—.013" exhaust setting recommended by car manufacturer for sustained high speeds.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch**—Delco-Remy Model 1116284 (40-25), 1116294 (40-25 RHD), 1116285 (40-26). Switch and cable assembly. Connected to coil by armored cable.

**Ignition Lock**—Briggs & Stratton, B & S No. 45792.

**Key Series**—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115023. Mounted on dash.  
Ignition Current—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy No. 1865972 (for 647-D),  
1869704 (for 1110202). Capacity .18-.25 microfarad

**DISTRIBUTOR: Delco-Remy 647-D, 1110202 (Taxi).**  
Single breaker, 6 lobe cam, full automatic advance  
with vacuum spark control and Gaselector adjust-  
ment (for fuel compensation) at distributor.

**Breaker Gap—.020", Limits .018-.024".**

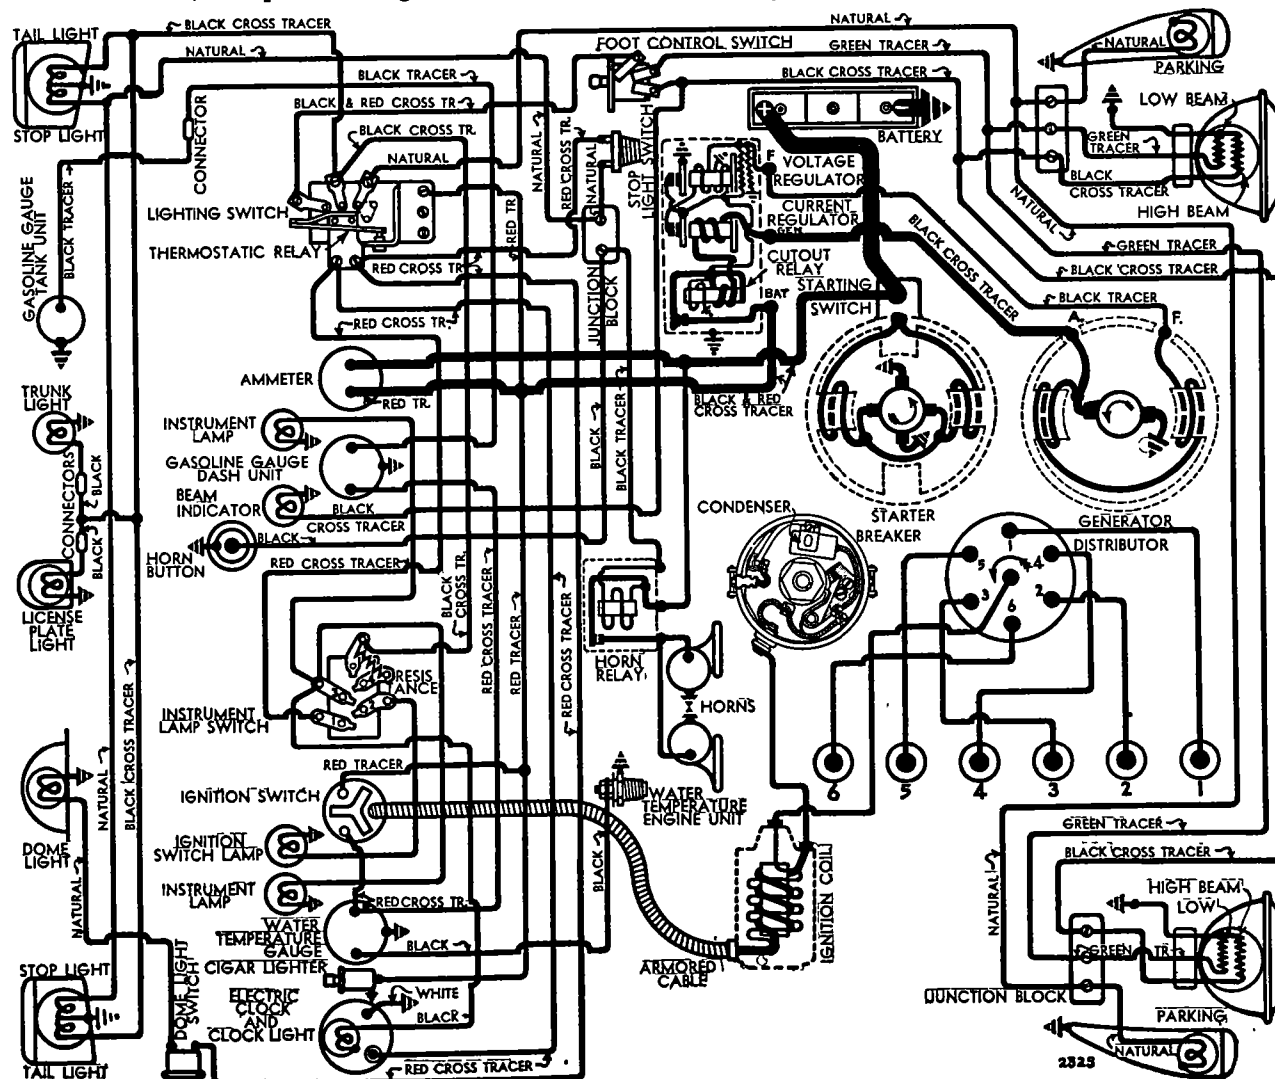

**Cam Angle or Dwell—**35° closed, 25° open (distr.).

**Breaker Arm Spring Tension—17-21 ounces.**

**Rotation**—Counter-clockwise viewed from top.

Automatic Advance			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	400	4.0 .....	800
8.0 .....	1050	16.0 .....	2100
8.5 .....	1450	17.0 .....	2900
14.25 .....	2000	28.5 .....	4000

**Vacuum Spark Control D-R No. 681-M.** Integral with distributor. Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine accelerated or

**NOTE**—The two straight lines of the Ignition mark '/IGN.ONE/' indicates allowable timing range of 4° on flywheel. Use first or 6° line in setting Ignition. Car manufacturer recommends use of Timing Light (Tool HM-494) or Synchroscope (HMO-161).

**To Set Timing (using Timing Light)**—Connect timing light between distributor terminal and ground, turn on Ignition. With #1 piston on compression, turn engine over until piston is 6° or .0138" before top dead center, stop when first line of Ignition mark '/IGN.ONE/' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector screw, center pointer on scale, tighten screw, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

**To Set Timing (using Synchroscope)**—Clip one synchroscope lead to #1 spark plug cable, insert other lead in distributor cap terminal from which #1 spark plug wire removed. Fill in first line of flywheel mark '/IGN.ONE/' with white chalk or paint. Direct synchroscope on flywheel through inspection hole in left front face of flywheel housing. Idle engine at 376 R.P.M. or 7 M.P.H., adjust distributor (as directed for Timing Light above) until white line coincides with pointer on housing.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen screw, move pointer clockwise to advance or counter-clockwise to retard

## CARBURETOR

**CARBURETION**—Carburetor—Carter Type WA-1, Model 463-S (first), 463-SP (later). 1¼" downdraft type with Carter Climatic Control.

*For complete data, refer to Carburetor Index.*

**Production Change**—To correct engine hesitating when starting in second gear, a new pump plunger 64-70S used on 463-SP. On 463-S, change pump link to lower hole in arm and plunger shaft.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (¾-1½ turns open—turn screw in for leaner mixture). Readjust idle speed.

*To correct faster than normal idling, See Accelerator Pedal Sticking correction in Pontiac Shop Notes.*

**Accelerator Pump Setting**—Pump arm and plunger under dust cover at top of carburetor have two holes for connector link engagement. Recommended settings as follows:

**Short Stroke**—Normal Setting (Inner Hole in Pump Arm, Upper Hole in Pump Plunger).

**Long Stroke**—Maximum Setting (Outer Hole in Pump Arm, Lower Hole in Pump Plunger).

**NOTE**—To correct hesitating when starting in second gear on 463-S (Early '40) carburetor, set Accelerating Pump for Long Stroke.

**Float Level**—7/16" from projection on cover to top of soldered seam at front end of float with needle valve seated (invert to check).

**Fast Idle**—Integral type, built-in carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust by bending connecting link offset for ⅝" choke valve opening with stop-screw against (not on) first step of fast idle cam.

**Accelerator Linkage Adjustment**—Must be maintained to provide correct 'Throttle cracking' action for starting. To adjust, after setting carburetor idle speed at 6-7 MPH, loosen hand throttle wire lock screw, pull button ⅝" out from instrument panel, position hand throttle lever so that no clearance exists between lever and throttle cross shaft, tighten lock screw. Turn throttle stopscrew in 2 turns (with throttle stopscrew on high point of cam or 'cold' position), disconnect battery cable at starting motor to prevent cranking, fully depress starter pedal, adjust throttle cracker lever to take up all clearance on pin. Connect starting motor and reset idle speed.

**Automatic Choke**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Choke Setting**—Set coil housing 1 notch Rich.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1523985 oil-wetted type Std., #1528944 oil-bath type Optl. with Crankcase Vent Cleaner #502783 Std., #1529288 Optl.

**Fuel Pump**—AC Type AH #1523985 standard. Type AJ #1523986 fuel-and-vacuum pump optional.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC Electric. #1515371 (dash unit), #1515481 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Delco Type 15E-1, 2. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.25 volts.

**Grounded Terminal**—Negative (—) grounded to lower left side of block. No separate engine ground.

**Dimensions**—Length 19 5/16". Width 4". Height 9".

**Location**—Under engine hood on left side.

**Police Battery**—Delco Type 19E-1. 6 volt, 19 plate, 130 A. H. capacity (20 hr. rate). End-to-end type.

All other data same as for 15E-1 above.

## STARTER

**STARTER**—Delco-Remy 1107022, 727-S (RHD).

**Armature No.**—810601 (1107022), 823881 (727-S).

*See Electrical Equipment Section for recommended correction for burning of starter commutators.*

**Drive**—Overrunning clutch (manual shift on 1107022, solenoid pinion shift on 727-S).

**Cranking Engine**—200 amperes at 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

### Performance Data—1107022

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 ft. lbs.	Lock	3.37	525

### Performance Data—727-S

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
15 " "	Lock	3.0	600

**Removal**—Mounted on left front face of flywheel housing. To remove take out mounting screws.

**Starting Switch (1107022)**—Delco-Remy Part #820052. Mounted on starter. Operated by starting pedal.

*For complete data, refer to Electrical Equipment Index.*

**Starting Switch (727-S)**: Delco-Remy Solenoid 1546 operated by pushbutton switch 1996007.

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**GENERATOR**—Delco-Remy 1102665, Armature 1879002 (Std.), 1106403 (City Police), 1105851 or 1105856 (State Police). Two brush (shunt) types with voltage and current regulation. Ventilated.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.

**Maximum Charging Rate**—Standard: 32 amperes min. (hot), 8.0 volts, 2450 RPM, 25 MPH; Police: 34 amperes Min. (hot), 8.0 volts, 1040 RPM, 19.0 MPH. with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data Cold

*Amperes	Volts	R.P.M.
1102665	30	8.0
1106403	35	8.0
1105851, 6	40	8.0

\*—Not maximum output—See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes (1102665), 1.77-2.0 amperes (1106403), 1.62-1.82 amperes (1105851, 6) at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out clamp and pivot bolts.

**Belt Adjustment**—Loosen pivot and clamp bolts, move generator out or away from engine to take up stretch or slack in belt. Belt play should be 1" between pulleys when belt grasped with fingers.

## REGULATOR

**REGULATOR**—Delco-Remy Model 1118201 (1102665 Gen.), 1118229 (1106403 Gen.), 1118237 (1105851 & 1105856 Gens.). Single Core Type. Vibrating type voltage and current regulators in a single case.

*For complete data, refer to Electrical Equipment Index.*

**CAUTION**—Check generator for grounded fields before changing regulator settings. If field coils defective, new field coil parts 1877893 and 1878427 should be installed. Also check regulator terminals for clearance at dash.

### Cutout Relay

**Cuts In**—6.2-6.7 volts (hot).

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with points just closed).

### Voltage Regulator

**Setting**—7.2-7.4 volts hot (1118201), 7.0-7.2 volts hot (1118229 & 1118237) at operating temperature.

CONTINUED ON NEXT PAGE

## CONTINUED FR M PRECEDING PAGE

**To Check**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at approx. 3000 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator at hot operating temperature, retard generator speed until cut-out relay points open, then increase generator speed to 3000 RPM and check hot voltage setting (above). Cover must be in place.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for Heavy (or other) Spring Adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closed.

## Current Regulator

**Setting**—34-36 amperes (1118201, 1118229), 38-40 amperes (1118237) hot (at operating temperature).

**To Check**—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Connect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at operating temperature.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for one spring. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for adjustment of Other Spring.

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING**—Headlamps—Guide 'Sealed Beam' type.

For complete data, refer to Electrical Equipment Index.

**Headlamp Adjustment**—Aim upper beam for each headlamp straight ahead with center of hot spot on horizontal line 3" below lamp center height.

**Beam Indicator**—Red light on speedometer dial. Lighted with upper beam in use.

## Switches

**Lighting**—Delco-Remy 1995009, 1995014.

**NOTE**—This new switch Delco-Remy Model 1995014 with 9 ampere fuse for Stop Light circuit used after Serial No. P6HA-40968 (Spec. 6), P6HB-34427 (Del. 6), P8HA-14188 (Del. 8), P8HB-15513 (Torpedo 8). This new switch furnished for service after first type stock exhausted.

**Beam Selector**—Delco-Remy 1997008, 465-V (RHD).

**Instrument Lamp**—Delco-Remy 1997719.

**Stop Light**—Delco-Remy 1997725.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Rear License	3	63
Instrument	1½	55
Ign. Switch, Beam Indic.	1	51
Stop & Tail	21-3	1154
Dome	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, but open in 3 minutes with load of 42 amperes at 70°F.

**FUSES**—Stop Light—9 ampere on lighting switch. Used on later cars only (see Light Switch Note above).

**HORNS**—Delco-Remy Model K-33-H, No. 1999501, 519 (low note), 1999502, 520 (high note). Vibrator type, blended tone, operated by horn relay. Horn set 1999501 & 502 used on early cars.

Type	Current (at 6 volts)	Air Gap
1999501 (Low)	16-18 amperes	.044-.049"
1999502 (High)	15-17 amperes	.034-.039"
1999519 (Low)	19-21 amperes	.044-.049"
1999520 (High)	18-20 amperes	.034-.039"

**Horn Relay**—Delco-Remy Model 1116775.

**Contact Gap**—.020". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head.

**Bore**—3 7/16". **Stroke**—4".

**Displacement**—222.7 cu. ins. **Rated HP**—28.3.

**Developed Horsepower**—87 at 3520 RPM (Std. hd.).

**Compression Ratio**—6.5-1 Std., 7.2-1 HC. Optl.

**Compression Pressure**—155-158 lbs. at 1000 RPM or approx. 118-120 lbs. at cranking speed (Std. head).

**Vacuum Reading**—Steady 18-20" idling at 7 MPH.

See Pontiac Shop Notes for Front Engine Insulator Removal and Engine Rear Support Reinforcement Plate.

**PISTONS**—Electro-plated, chrome nickel alloy type with rib under head. Cannot be ground.

**Length**—3 37/64". **Weight**—27½ ozs. (stripped).

**Piston and pin weight variation** 1/16 oz. max.

**Removal**—Pistons and rods removed from above.

**Clearance**—Top land .0175-.0295". Skirt .002".

**Original Bore & Piston Sizes, Replacement Pistons**—See Pontiac Shop Notes for complete data.

**Fitting New Pistons**—Insert .0015" x ¼" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-25 lbs. Taper and out-of-round limits — Piston .0005", Cylinder .0005" max. new.

**PISTON RINGS**—Two taper faced compression rings above pin, 1 oil control ring below pin. **NOTE**—Install compression rings with mark TOP up.

**Ring** **Width** **End Gap** **Side Clearance**

**Compression** .0930-.0935" .009-.014" .0015-.003"

**Oil Control** .1860-.1865" .007-.017" .001-.0025"

**Replacement Rings**—Oversizes .005", .010", .020", .030".

**PISTON PIN**—Diameter 15/16". Length 3 1/16". Pin locked in one piston boss. Free end slotted.

**Pin Fit in Piston**—See Pontiac Shop Notes.

**Pin Fit in Rod Bushing**—.0003-.0005".

**Replacement Pins**—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

**CONNECTING ROD**—Weight 2.31 lbs. Length 7 9/16". **Piston Pin Bushing (Upper Bearing)**—Split bronze bushings. See Pontiac Shop Notes for servicing.

**Crankpin Journal Diameter**—2½".

**Lower Bearing**—Removable steel-backed, babbitt-lined type. Furnished standard & .001" undersize.

**Clearance**—.0005-.0015". **Endplay**—.005-.010".

**Bearing Adjustment**—None (no shims). See Pontiac Shop Notes for Fitting and Installing Bearings.

**Installing Rods**—Not offset (install either way).

**NOTE**—Self-locking rod bolt nuts used.

**CRANKSHAFT**—4 bearing, integral counterweights. See Pontiac Shop Notes for Balancer Removal and Rear Main Bearing Oil Seal Renewal.

**Journal Diameters**—#1, 2½"; #2, 2 17/32"; #3, 2 19/32"; #4, 2⅝".

**Bearings**—Interchangeable (upper and lower) steel-backed, babbitt-lined type. Furnished std. & .001" undersize. **Clearance**—.001-.003".

**Bearing Adjustment**—None (no shims). Replace bearings. Do not file caps. See Pontiac Shop Notes.

**End Thrust**—At #3 bearing. **Endplay**—.003-.008".

**CAMSHAFT**—4 bearing. Non-adjustable chain drive. See Pontiac Shop Notes for Camshaft Removal, Bearing Finished Sizes and Timing Cover Oil Seal data.

**Journal Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32".

**Bearing Type**—Steel-backed, babbitt-lined.

**Clearance**—.0015-.0025".

**End Thrust**—Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay** .002-.005".

**Timing Chain**—Morse No. 1532, Type C-1882-K. Width 1". Pitch ⅜". Length 21" or 56 links.

**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 19/32"	.310-.311"	5.718"
Exhaust	1 15/32"	.310-.311"	5.718"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0008"
Exhaust	45°	19/64"	Free fit to .0006"

**Valve Guides**—Removable, tapered guides (.001" taper to the inch with greatest clearance at top). **IMPORTANT**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. **NOTE**—Guides should be cleaned with wire brush or taper reamer Tool P.R. 131. Replacement guides straight cut, ream to fit valve stem after installing with reamer P.R. 131.

**Valve Springs**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length** 2 9/16".

	Spring Pressure	Spring Length
Valve Closed	56-63 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

**Valve Lifters**—Barrel type, cast-iron. Guides holes reamed in block. Lifters furnished .005" oversize (use special pilot reamer J-706-P when installing to obtain proper alignment). **Clearance**—Free fit. Lifter should just move freely with finger touch.

## VALVE TIMING

**Tappet Clearance**—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'. **NOTE**—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**Valve Timing Check**—With .015" tappet clearance #6 intake valve should open with piston 5° or .0096"

before top dead center with first straight line of flywheel mark 'IGN.ONE/' slightly past indicator in left front face of flywheel housing.

### LUBRICATION

**LUBRICATION:**—Pressure type (gear type pump on right side. See *Pontiac Shop Notes for Oil Pump data, recommended Crankcase Ventilator Outlet Pipe Cleaner removal (to improve crankcase ventilation) and installation of 1941 type Pontiac (built-in) Oil Cleaner.*

Normal Oil Pressure:—35-40 lbs. above 40 MPH.

Oil Pressure Regulator:—On pump. Opens at 40 lbs. Non-adjustable type. Crankcase Capacity:—6 qts.

### COOLING

**COOLING SYSTEM:**—Capacity—17 quarts.

See *Pontiac Shop Notes for Radiator Core Removal.*

**Water Pump:**—Packless, sealed ball-bearing shaft. See *Water Pump Section for complete data.*

**Removal:**—Remove fan belt, pump mounting bolts and lower hose. Lift off pump and fan assembly.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Closed 140°F. Starts 145°. Fully open 172°.

**Temperature Gauge:**—AC #1510916 (dash), #1510772 (engine unit). Electric type.

See *Miscellaneous Section for complete data.*

### CLUTCH

**CLUTCH:**—Inland. 'Diaphragm' type, single plate, dry disc type with Long 9CF-CS, 10CF-CS (Taxi) driven member.

See *Clutch Section for complete data.*

**Facings:**—Moulded (Ammco), 2 used. Inside Diam. 5 $\frac{3}{4}$ ", 6" (Taxi). O.D. 9", 10" (Taxi). Thickness .125". See *Pontiac Shop Notes for Clutch Pedal Rattle Correction and Replacement Pilot Bushing data.*

**Pedal Adjustment:**—Free travel  $\frac{7}{8}$ -1 $\frac{1}{8}$ " (adjusting nut on link at clutch fork). Pedal height above toe board (engaged) 5 $\frac{1}{8}$ " (Special), 4 $\frac{3}{4}$ " (Deluxe), stop screw at lower end of pedal arm.

**Removal:**—Remove transmission (see below), take off bottom housing cover, unlock pedal pull-back

spring, remove fork ball support, fork and throwout bearing. Remove cover screws evenly until tension relieved. Move clutch away from flywheel at bottom to remove disc, then lower cover assembly out.

### TRANSMISSION

**TRANSMISSION:**—Own. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote steering col. shift.

See *Transmission Section for complete data.*

**Transmission Control:**—Pontiac 'Safety-Shift' type. See *Transmission Section for complete data.*

**Removal:**—Remove floor mat and center panel. Disconnect speedometer cable, gearshift selector and control rods at transmission. Disconnect rear universal (wire trunnions) and pull propeller shaft to rear to disengage U-joint front yoke from transmission main shaft at slip joint. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull unit to rear to free main drive gear, then up and forward at front.

### UNIVERSALS

**UNIVERSAL JOINTS:**—Mechanics 2C. Roller bearing. See *Universals Section for complete data.*

**NOTE:**—1 piece driveshaft used. Slip joint formed at rear of transmission mainshaft ahead of front universal (front yoke of universal splined directly to mainshaft—no front companion flange used).

### REAR AXLE

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

**Ratio:**—4.3-1 Std. (white), 4.55-1 Mount. (yellow), 4.1-1 Plains (green), 3.9-1 Economy (red). **NOTE:**—Color marked on end of right or left axle shaft.

**Backlash:**—.003-.012" (new).

**Removal:**—Disconnect rear universal and wire trunnions (do not disengage spline joint at front end of shaft), remove axle shafts (below), remove carrier flange capscrews, pull carrier assembly out.

**Axle Shaft Removal:**—Holst rear of car, remove wheel, brake drum, 4 backing plate mounting bolt

nuts and loosen bearing retainer (do not allow backing plate to shift to damage brake line). Pull shaft (Puller J-942) taking care not to drag shaft on oil seal. **Wheel Bearing Adjustment:**—None.

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco. Front—1947-C,D. Rear—1000-V (Domestic), 1754-E,F (Export 25), 1754-A,B (Export 26). Double acting, hydraulic (1000-V direct acting—Rear Shocks Domestic cars). See *Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data.*

**Kingpin Inclination:**—4 $\frac{5}{8}$ ° to 5 $\frac{1}{4}$ °.

**Caster:**—Negative  $\frac{3}{4}$ °. Limits Neg.  $\frac{1}{2}$ ° to Neg. 1°.

**Camber:**—Positive  $\frac{3}{8}$ °. Limits 0° to  $\frac{5}{8}$ ° positive.

**Toe In:**—0-1/16". Adjust tie rod tubes equally.

**Steering Geometry:**—Inner wh'l 23° ±  $\frac{1}{2}$ °. Outer 20°.

### STEERING GEAR

**Steering Gear:** Saginaw Worm-and-Roller type with steering idler arm on right frame rail.

See *Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service, Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear service brakes.

See *Brake Section for complete data.*

**Drums:**—Chrome nickel iron. Diameter—11".

**Wheel Cylinder Bore:**—Front wheel 1". Rear 15/16".

**Lining:**—Moulded. Width 1 $\frac{3}{4}$ ". Thickness 3/16".

**Length:** 9 11/32" (Primary—D-R Multibestos), 11 31/32" (Secondary—L-8 Multibestos).

**Clearance:**—.015" at both ends of secondary shoe (with primary shoe forced out against drum).

**Braking Power:**—53% front wheels, 47% rear.

**Hand Brake:**—See Service Brakes above.

### MISC. MECHANICAL

**Power Operated Convertible Top:** Vacuum Power type. See *Miscellaneous Section for complete data.*

**HOOD FITTING, HOOD LOCK ADJUSTMENT, AND FRONT FENDER & RADIATOR (UNIT) REMOVAL:**—See Pontiac Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 8HA-1001 (Deluxe), 8HB-1001 (Torpedo) with prefixes indicating factory as follows: P—Pontiac, Mich., C—South Gate, Calif., L—Linden, N. J. On plate fastened to left end of frame front cross member under hood.

**ENGINE NUMBER:**—First number 8-194401. Stamped on boss on top left front corner of engine block.

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 Std., 7.2-1 Optl.

Pressure—155-158 lbs. at 1000 RPM or approximately 118-120 lbs. at cranking speed (Std. head).

**VACUUM READING:**—Steady 18-20" idling at 7 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** AC Type 45. 14 mm. Metric type.

Gaps .025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015". **Cam Angle**—31° Closed.

**Automatic Advance**—Starts at 300 RPM. Maximum advance 13.5° at 2100 RPM. (Distr. degrees & RPM). **Vacuum Advance**—Starts with 7-9" vacuum. Maximum 7.5° (distr.) with 13-16" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—6° BTDC. First line of flywheel mark 'IGN. ONE' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screw (1 on 462-S Deluxe, 2 on 469-S Torpedo) ¾-1½ turns open (462-S), ¼-1¼ turns open (469-S). Idle speed 376 RPM or 7 MPH.

**Float Level (462-S)**—7/16" from machined projection on cover to top of soldered seam on float. (469-S) 5/16" from top of float to gasket seat on cover with needle valve seated (invert to check).

**Accelerating Pump (462-S)**—Normal setting (minimum stroke, Inner Hole in Pump Arm and Upper Hole in Pump Plunger). NOTE—On Early 462-S carburetors change pump setting to correct complaints on hesitation when starting in second gear to maximum stroke (Upper Hole in Arm, Lower Hole in Plunger).

**Accelerating Pump (469-S)**—Original carburetors not adjustable. Re-worked carburetors may be equipped with new pump arm which has two holes for link engagement. Set to long stroke (upper hole) to correct hesitation or stumbling on acceleration.

**Fuel Pump Pressure:** 4 lbs. (AH), 3¾ lbs. (AJ Comb.).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. Counterweight must be tightly clamped to shaft and about vertical with valve closed (engine cold). **Setting**—Adjustment provided by shifting anchor pin for following settings: Normal temperatures (center hole). Extremely cold temperatures (inner hole). Extremely hot temperatures (outer hole).

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.011-.013" all valves (warm). Use .011" and .013" feelers as 'go' and 'no go' gauges.

**NOTE**—.013" exhaust setting recommended by car manufacturer for sustained high speed driving.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy Model 1116286 (40-28), 1116285 (40-29). Switch and cable assembly. Connected to coil by armored cable.

**Ignition Lock**—Briggs & Stratton, B & S No. 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. Mounted on dash.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

**Capacity**—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110804. Single breaker, 8 lobe cam, full automatic advance with vacuum spark control and Gaselector adjustment (for fuel compensation) at distributor.

**Breaker Gap**—.015". **Limits** .0125-.0175".

**Cam Angle or Dwell**—31° closed, 14° open (distr.).

**Breaker Arm Spring Tension**—19-23 ounces.

**Rotation**—Counter-clockwise viewed from above.

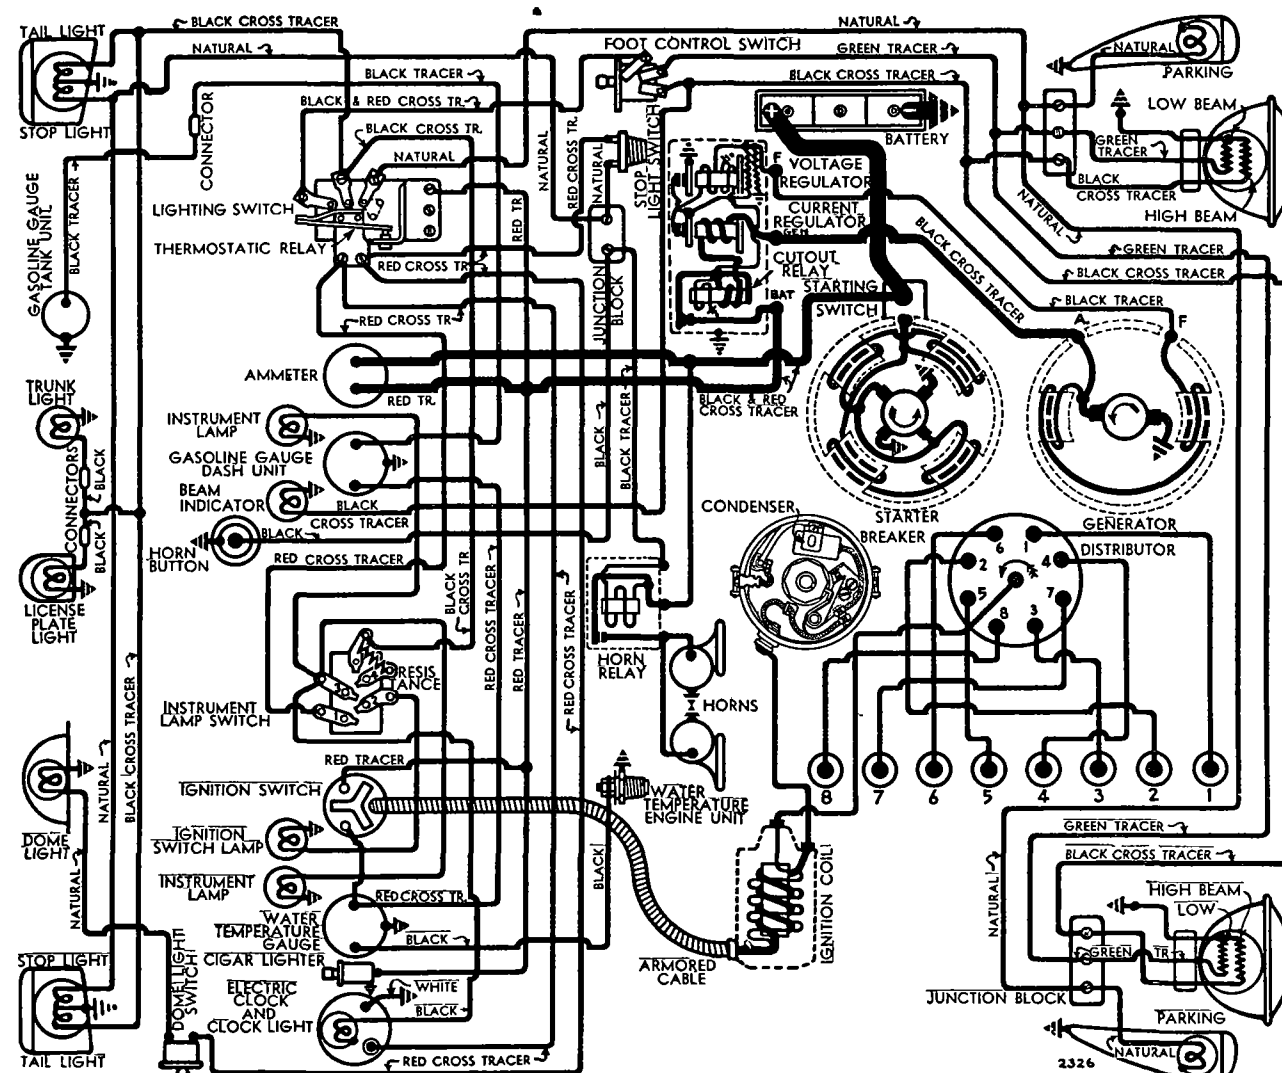

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	2	600
7	1100	14	2200
8.5	1500	17	3000
13.5	2100	27	4200

**Vac'm Spark Control D-R #1116021.** Integral with distributor. Mounted on housing and linked directly to breaker plate. Provides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Total plunger travel 7/32".

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
7.5°	15°	13-16"

**Gaselector**—Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Gaselector Setting following.

**Distributor Removal**—Mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in Gaselector and lift out.

## IGNITION TIMING

**IGNITION TIMING**—Standard setting given below (regular fuel Std. hd., Ethyl fuel HC hd.). See Gaselector following for final setting.

**Flywheel Degrees Piston Position**  
All engines ..... 6° BTDC ..... .0128" BTDC.

**NOTE**—The two straight lines of the ignition mark 'IGN.ONE/' indicates allowable timing range of 4° on flywheel. Use first or 6° line in setting ignition. Car manufacturer recommends use of Timing Light (Tool HM-494) or Synchroscope (HMO-161).

**To Set Timing (using Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0128" before top dead center, stop when first line of ignition mark 'IGN.ONE/' lines up with pointer in inspection hole in left front face of flywheel housing. Loosen Gaselector screw, center pointer on scale, tighten screw, loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts opening), tighten clamp bolt.

**To Set Timing (using Synchroscope)**—Clip one synchroscope lead to #1 spark plug cable, insert other lead in distributor cap terminal from which #1 spark plug wire removed. Fill in first line of flywheel mark 'IGN.ONE/' with white chalk or paint. Direct synchroscope on flywheel through inspection hole in left front face of flywheel housing. Idle engine at 376 R.P.M. or 7 M.P.H., adjust distributor (as directed for Timing Light above) until white line coincides with pointer on housing.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen screw, move pointer clockwise to advance or counter-clockwise to retard spark.

## CARBURETOR

### DELUXE 8 MODEL 40-28

**CARBURETION (DELUXE)**—Carburetor—Carter Type WA-1, Model 462-S (first), 462-SP (later). 1¼" downdraft type with Carter Climatic Control.

**Production Change**—To correct engine hesitating when starting in second gear, a new pump plunger 64-708 used on 462-SP. On 462-S, change pump link to lower hole in arm and plunger shaft to correct this condition.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (¾-1½ turns open—turn screw in for leaner mixture). Readjust idle speed.

**To correct faster than normal idling, See Accelerator Pedal Sticking correction in Pontiac Shop Notes.**

**Accelerator Pump Setting**—Pump arm and plunger under dust cover at top of carburetor have two holes for connector link engagement. Recommended settings as follows:

**Short Stroke**—Normal Setting (Inner Hole in Pump Arm, Upper Hole in Pump Plunger).

**Long Stroke**—Maximum Setting (Outer Hole in Pump Arm, Lower Hole in Pump Plunger).

**NOTE**—To correct hesitating when starting in second gear on 462-S (Early '40) carburetors, set Accelerating Pump for Long Stroke.

**Float Level**—7/16" from machined projection on cover to top of soldered seam on float (invert to check).

**Fast Idle**—Integral type, built-in carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust by bending connecting link offset for ⅝" choke valve opening with stopscrew against (not on) first step of fast idle cam.

**Accelerator Linkage Adjustment**—Must be maintained to provide correct 'Throttle cracking' action for starting. To adjust, set carburetor idle speed at 6-7 MPH, loosen hand throttle wire lock screw, pull button ⅛" out from instrument panel, position hand throttle lever so that no clearance exists between lever and throttle cross shaft, tighten lock-screw. Turn throttle stopscrew in 2 turns (with throttle stopscrew on high point of cam or 'cold' position), disconnect battery cable at starting motor, to prevent cranking, fully depress starting pedal, adjust throttle cracking pin so that all clearance between pin and cross shaft lever is taken up. Connect starting motor cable and reset idle speed.

**Automatic Choke**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Set coil housing one notch rich.

## CARBURETOR

### TORPEDO 8 MODEL 40-29

**CARBURETION (TORPEDO)**—Carburetor—Carter Type WDO, Model 469-S (first), 469-SM (later). 1 5/16" dual downdraft type with Carter Climatic Control. *For data, refer to Carburetor Index.*

**IMPORTANT**—Refer to Carburetor article in 'C' Section for recommended correction for Hesitation or Stumble when accelerating (pump change to provide adjustable stroke).

**Production Change**—New metering rods used on 469-SM. *For data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 7 MPH idle speed. Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly (setting ¼-1¼ turns open—turn screw in for leaner mixture). Readjust idle speed. Car manufacturer recommends use of vacuum gauge for this adjustment.

**Accelerator Pump Setting**—Not adjustable.

**IMPORTANT**—Refer to Carburetor article in 'C' Section for recommended correction for Hesitation or Stumble when accelerating (pump change to provide adjustable stroke).

**Float Level**—5/16" from top of float to gasket seat on cover with needle valve seated (invert to check).

**Fast Idle**—Integral type, built-in carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust fast idle screw for .010" throttle opening with choke valve fully closed.

**Accelerator Linkage Adjustment**—Same as for Deluxe Eight. See instructions listed above.

**Automatic Choke**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*  
**Choke Setting**—1½ Notches Rich (may be set 4 notches rich to correct poor starting or leanness after starting) for first type thermostat marked '170-G-16S' on choke housing. Later type thermostat marked '170-F-16S' is set 2 Notches Rich.

## CARB. EQUIPMENT

### DELUXE 8 MODEL 40-28

**Air Cleaner**—AC #1528128 oil wetted type with crankcase ventilator #502783 standard. #1529478 oil bath type with #499327 ventilator cleaner optl.

**Fuel Pump**—AC Type AH #1523985 standard. Type AJ #1523986 fuel-and-vacuum pump optional. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC Electric. #1515371 (dash unit), #1515481 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

### TORPEDO 8 MODEL 40-29

**Air Cleaner**—AC #1529478 heavy duty oil bath type standard.

**Fuel Pump**—AC Type AJ #1537087 diaphragm type combination fuel-and-vacuum pump standard. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—AC Electric. #1515371 (dash unit), #1515481 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—Delco Type 15E-1, 2, 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.25 volts.

**Grounded Terminal**—Negative (—) grounded to lower left side of block. No separate engine ground.

**Dimensions**—Length 19 5/16". Width 4". Height 9".

**Location**—Under engine hood on left side.

**Police Battery**—Delco Type 19E-1, 6 volt, 19 plate, 130 A. H. capacity (20 hr. rate). End-to-end type.

**Starting Capacity**—150 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.3 minutes. Five second voltage—4.55 volts.

**All other data same as for 15E-1 above.**

## STARTER

**STARTER**—Delco-Remy 1107914. Armature 1867897. *See Electrical Equipment Section for recommended correction for burning of starter commutators.*

**Drive**—Overrunning clutch (manual pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—220-225 amperes at 5 volts.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 " "	Lock	3.0	600

**Removal**—Flange mounted on left front face of flywheel housing. To remove, take out capscrews.

**Starting Switch**—Delco-Remy Part #820052. Mounted on starter. Operated by starting pedal.

*For complete data, refer to Electrical Equipment Index.*

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## GENERATOR

**GENERATOR:**—Delco-Remy 1102665, Armature 1879002 (Std.), 1106403 (City Police), 1105851 or 1105856 (State Police). Two brush (shunt) types with voltage and current regulation. Ventilated.

**Torpedo Note:**—On some early cars, generator to regulator wire (between generator and wiring harness clip at fender side apron) is tight and may be broken in normal service causing generator to operate on open-circuit. To correct, loosen wiring harness clips at fender side apron and move harness forward to provide slack in this wire.

**Charging Rate Adjustment:**—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.

**Maximum Charging Rate:**—Standard: 32 amperes min. (hot), 8.0 volts, 2450 RPM, 25 MPH; Police: 34 amperes Min. (hot), 8.0 volts, 1040 RPM, 19.0 MPH with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

## Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102665	30	8.0	1750
1106403	35	8.0	1040
1105851, 6	40	8.0	1850

①—Current Regulator Setting—See Regulator.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—25 ounces each.

**Field Current:**—1.75-1.9 amperes (1102665), 1.77-2.0 amperes (1106403), 1.62-1.82 amperes (1105851, 6) at 6.0 volts.

**Removal:**—Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Belt deflection or sideplay midway between generator & pump pulley should be 1½".

## REGULATOR

**REGULATOR:**—Delco-Remy 1118201 (1102665 Gen.), 1118229 (1106403 Gen.), 1118237 (1105851 and 1105856 Gens.). Single Core Type. Vibrating type Voltage & Current Regulators in a single case.

*For complete data, refer to Electrical Equipment Index.*

**CAUTION:**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In:**—6.2-6.7 volts hot.

**Cuts Out:**—0-4.0 ampere discharge current.

**Contact Gap:**—.020" (same for both sets).

**Air Gap:**—.020" (with contacts just closed).

## Voltage Regulator

**Setting:**—7.2-7.4 volts (1118201), 7.0-7.2 volts (1118229, 1118237) Hot (at operating temperature). **To Check:**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F.), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).

**To Adjust:**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring nly. If further adjustment required, see Single Core Regulator article in Electrical Equip-

ment Section for other (2nd.) spring adjustment. **Air Gap:**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting:**—34-36 amperes (1118201, 1118229), 38-40 amperes (1118237) hot (at operating temperature).

**To Check:**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F), current reading should agree with setting (above).

**To Adjust:**—Same as for Voltage Regulator (above). **Air Gap:**—.080" (check same as Voltage Regulator).

**CAUTION:**—Check generator for grounded fields before changing regulator settings. If field coils defective, new field coils parts 1877893 and 1878427 should be installed. Also check regulator terminals for clearance at dash.

## LIGHTING

**LIGHTING:**—Headlamps—Guide 'Sealed Beam' type. *For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment:**—Aim upper beam for each headlamp straight ahead with center of hot spot on horizontal line 3" below lamp center height.

**Beam Indicator:**—Red light on speedometer dial.

Lighted with upper beam in use.

## Switches

**Lighting:**—Delco-Remy 1995009, 1995014.

**NOTE:**—This new switch Delco-Remy Model 1995014 with 9 ampere fuse for Stop Light circuit used after Serial No. P6HA-40968 (Spec. 6), P6HB-34427 (Del. 6), P8HA-14188 (Del. 8), P8HB-15513 (Torpedo 8). This new switch furnished for service after first type stock exhausted.

**Beam Selector:**—Delco-Remy No. 1997008.

**Instrument Lamp:**—Delco-Remy 1997719.

**Stop Light:**—Delco-Remy 1997725.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Parking, Rear License	3	63
Instrument	1½	55
Ign. Switch, Beam Indlc.	1	51
Stop & Tail	21-3	1154
Dome	6	81

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, but open in 3 minutes with load of 42 amperes at 70°F. Non-adjustable.

**FUSES:**—Stop Light—9 ampere on lighting switch. Used on later cars only (see Light Switch Note above).

**HORNS:**—Delco-Remy Model K-33-H. No. 1999501, 519 (low note), 1999502, 520 (high note). Vibrator type, blended tone, operated by horn relay. Horn set 1999501 & 502 used on early cars.

Type	Current (at 6 volts)	Air Gap
1999501 (Low)	16-18 amperes	.044-.049"
1999502 (High)	15-17 amperes	.034-.039"
1999519 (Low)	19-21 amperes	.044-.049"
1999520 (High)	18-20 amperes	.034-.039"

**Horn Relay:**—Delco-Remy Model 1116775.

**Contact Gap:**—.020". **Air Gap:**—.015" (closed).

**Contacts Close:**—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

**Bore:**—3¼". **Stroke:**—3¾".

**Displacement:**—248.9 cu. ins. **Rated HP:**—33.8.

**Developed Horsepower:**—100 (Deluxe), 103 (Torpedo), 110 (Deluxe HC head) at 3700 RPM.

**Compression Ratio:**—6.5-1 Std., 7.2-1 HC. Optl.

**Compression Pressure:**—155-158 lbs. at 1000 RPM or approx. 118-120 lbs. at cranking speed (Std. head).

**Vacuum Reading:**—18-20" steady idling at 7 MPH.

*See Pontiac Shop Notes for Oil Pan Removal, Front Engine Insulator Removal, and Engine Rear Support Reinforcement Plate data.*

**PISTONS:**—Electro-plated, chrome nickel alloy type with rib under head. Cannot be ground.

**Length:**—3 19/32". **Weight:**—24½ ozs. (stripped).

**Piston & pin and rod weight variation:** 1/16 oz. max.

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top land .0175-.0295". Skirt .002".

**Original Bore & Piston Sizes, Replacement Pistons:**—*See Pontiac Shop Notes for complete data.*

**Fitting New Pistons:**—Insert .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-25 lbs. Taper and out-of-round limits—Piston .0005", Cylinder—.001" max. new.

**PISTON RINGS:**—Two taper faced compression rings above pin, 1 oil control ring below pin. **NOTE:**—Install compression rings with mark TOP up.

Ring	Width	End Gap	Side Clearance
Compression	.0930-.0935"	.009-.014"	.0015-.003"
Oil Control	.1860-.1865"	.007-.017"	.001-.0025"

**Replacement Rings:**—Oversizes .005", .010", .020", .030".

**PISTON PIN:**—Diameter—15/16". Length—2⅞". Pin locked in one piston boss. Free end slotted.

**Pin Fit in Piston:**—*See Pontiac Shop Notes.*

**Pin Fit in Rod Bushing:**—.0003-.0005".

**Replacement Pins:**—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

**CONNECTING ROD:**—Weight 1.98 lbs. Length 7 9/16". **Piston Pin Bushing (Upper Bearing):**—Split bronze bushings. *See Pontiac Shop Notes for servicing.*

**Crankpin Journal Diameter:**—2".

**Lower Bearing:**—Removable steel-backed, babbitt-lined type. Furnished standard & .001" undersize. Clearance—.0005-.0015". Endplay—.005-.010".

**Bearing Adjustment:**—None (no shims). *See Pontiac Shop Notes for Fitting and Installing Bearings.*

**Installing Rods:**—Not offset (install either way). **NOTE:**—Self-locking rod bolt nuts used.

**CRANKSHAFT:**—5 bearing, integral counterweights.

*See Pontiac Shop Notes for Balancer Removal.*

**Journal Diameters:**—#1, 2 3/8"; #2, 2 13/32"; #3, 2 7/16"; #4, 2 15/32"; #5, 2 ½".

**Bearings:**—Interchangeable (upper and lower) steel-backed, babbitt-lined type. Furnished std. & .001" undersize. Clearance—.001-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps. *See Pontiac Shop Notes.*

**End Thrust:**—At #4 bearing. Endplay—.003-.008".

**CAMSHAFT:**—5 bearing. Non-adjustable chain drive. *See Pontiac Shop Notes for Camshaft Removal, Bearing Finished Sizes and Timing Cover Oil Seal data.*

**ENGINE**

CONTINUED FR M PRECEDIN PA E

**Journal Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 7/8".

**Bearing Type**—Steel-backed, babbitt-lined.

**Clearance**—.0015-.0025".

**End Thrust**—Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.002-.005".

**Timing Chain**—Morse No. 2660, Type 766-T. Width 7/8". Pitch 3/8". Length 21" or 56 links.

**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES**—

	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.310-.311"	5.53"
Exhaust	1 11/32"	.310-.311"	5.53"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"
Exhaust	45°	19/64"	Free fit to .0006"

**Valve Guides**—Removable, tapered guides (.001" taper to the inch with greatest clearance at top).

**IMPORTANT**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. **NOTE**—Guides should be cleaned with wire brush or taper reamer Tool P.R. 131. Replacement guides straight cut, ream to fit valve stem after installing with reamer P.R. 131.

**Valve Springs**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length** 2 9/16".

	Spring Pressure	Spring Length
Valve Closed	56-63 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

**Valve Lifters**—Barrel type, cast-iron. Guides holes reamed in block. Lifters furnished .005" oversize (use special pilot reamer J-706-P when installing to obtain proper alignment). **Clearance**—Free fit. Lifter should just move freely with finger touch.

**VALVE TIMING**

**Tappet Clearance**—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'. **NOTE**—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**Valve Timing Check**—With .015" tappet clearance #8 intake valve should open with piston 5° or .0089" before top dead center with first straight line of flywheel mark 'IGN.ONE/' slightly past indicator in left front face of flywheel housing.

**LUBRICATION**

**LUBRICATION**—Pressure type (gear type pump on right side. See Pontiac Shop Notes for Oil Pump data, recommended Crankcase Ventilator Outlet Pipe Cleaner removal (to improve crankcase ventilation) and installation of 1941 type Pontiac (built-in) Oil Cleaner.

**Normal Oil Pressure**—35-40 lbs. above 40 MPH.

**Oil Pressure Regulator**—On pump. Opens at 40 lbs. Non-adjustable type. **Crankcase Capacity**—6 qts.

**COOLING**

**COOLING SYSTEM**—Capacity—19 quarts.

See Pontiac Shop Notes for Radiator Core Removal.

**Water Pump**—Packless, sealed ball-bearing shaft. See Water Pump Section for complete data.

**Removal**—Remove fan belt, pump mounting bolts and lower hose. Lift off pump and fan assembly.

**Thermostat**—Harrison. In cylinder head outlet. **Setting**—Closed 140°F. Starts 145°. Fully open 172°.

**Temperature Gauge**—AC #1510916 (dash), #1510772 (engine unit). Electric type. See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH**—Inland. 'Diaphragm' type, single plate, dry disc type with Long 9 1/4 CF-CS driven member. See Clutch Section for complete data.

**Facings**—Moulded (Ammco), 2 used. Inside Diam. 5 3/4". Outside Diam. 9 1/4". Thickness .125".

See Pontiac Shop Notes for Clutch Changes, Pedal Ratle correction, and Replacement Pilot Bushing data.

**Pedal Adjustment**—Pedal free travel 7/8-1 1/8" (adjusting nut and locknut on link at clutch fork). Pedal height above toeboard (engaged) 4 3/4" (Deluxe), 5" (Torpedo). Adjusting screw on pedal.

**Removal**—Remove transmission (see below), take off bottom housing cover, unlock pedal pull-back spring, remove fork ball support, fork and throwout bearing. Remove cover screws evenly until tension relieved. Move clutch away from flywheel at bottom to remove disc, then lower cover assembly out.

**TRANSMISSION**

**TRANSMISSION**—Own. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote steering col. shift.

See Transmission Section for complete data.

**Transmission Control**—Pontiac 'Safety-Shift' type. See Transmission Section for complete data.

**Removal**—Remove floor mat and center panel. Disconnect speedometer cable, gearshift selector and control rods at transmission. Disconnect rear universal (wire trunnions) and pull propeller shaft to rear to disengage U-joint front yoke from transmission main shaft at slip joint. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull unit to rear to free main drive gear, then up and forward at front,

**UNIVERSALS**

**UNIVERSAL JOINTS**—Mechanics 2C. Roller bearing. See Universals Section for complete data.

**NOTE**—1 piece driveshaft used. Slip joint formed at rear of transmission ahead of front universal.

**REAR AXLE**

**REAR AXLE**—Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio**—4.3-1 Std. (white), 4.55-1 Mount. (yellow), 4.1-1 Plains (green), 3.9-1 Economy (red). **NOTE**—Color marks on end of right or left axle shaft (Torpedo carries additional blue mark on end of shaft). **Backlash**—.003-.012" (new).

**Removal**—Disconnect rear universal and wire trunnions (do not disengage spline joint at front end of shaft), remove axle shafts (below), remove carrier flange capscrews, pull carrier assembly out.

**Axle Shaft Removal**—Hoist rear of car, remove wheel, brake drum, 4 backing plate mounting bolt nuts and loosen bearing retainer (do not allow backing plate to shift to damage brake line). Pull shaft (Puller J-942) taking care not to drag shaft on oil seal. **Wheel Bearing Adjustment**—None.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS**—Delco. Front—1947-C, D. Rear—1000-V (Domestic), 1754-A, B (Deluxe Export), 1754-G, H (Torpedo Export). Double acting, hydraulic (Model 1000-V is direct acting type). See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension**—Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

**Kingpin Inclination**—4 1/2° to 5 1/4°.

**Caster**—Negative 3/4°. Limits Neg. 1/2° to Neg. 1°.

**Camber**—Positive 3/8°. Limits 0° to 5/8° positive.

**Toe In**—0-1/16". Adjust tie rod tubes equally.

**Steering Geometry**—Inner whl 23° ± 1/2°. Outer 20°.

**STEERING GEAR**

**Steering Gear**: Saginaw Worm-and-Roller type with steering idler arm on right frame rail.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES**—Service, Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear service brakes.

See Brake Section for complete data.

**Drums**—Chrome nickel iron. Diameter—11".

**Wheel Cylinder Bore**—Front wheel 1". Rear 15/16".

**Lining**—Moulded. Width 1 3/4". Thickness 3/16".

**Length** 9 11/32" (Primary—D-R Multibestos 40-28 all wheels, 40-29 front wheels, 1236A Multibestos 40-29 rear wheels). 11 31/32" (Secondary—L-8 Multibestos 40-28, 2320K Hycoc 40-29).

**Clearance**—.015" at both ends of secondary shoe (with primary shoe forced out against drum).

**Hand Brake**—See Service Brakes above.

**MISC. MECHANICAL**

**Power Operated Convertible Top**: Vacuum Power type. See Miscellaneous Section for complete data.

**FRONT SHEET METAL ASSEMBLY REMOVAL, HOOD FITTING, HOOD LOCK ADJUSTMENT, 1942 FRONT FENDER REMOVAL & FENDER CAP ALIGNMENT:**  
Refer to Pontiac Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. 1001 (all models) with Model & Plant prefix as shown below. Stamped on plate on left side of dash under engine hood.

	Pontiac	California	Linden
Deluxe 41-25	P6JA-1001	C6JA-1001	L6JA-1001
Streamliner 41-26	P6JB-1001	C6JB-1001	L6JB-1001
Custom 41-24	P6JC-1001	C6JC-1001	L6JC-1001
Torpedo 42-25	P6KA-1001	C6KA-1001	L6KA-1001
Streamliner 42-26	P6KB-1001	C6KB-1001	L6KB-1001

**ENGINE NUMBER:** First number 6-761501 (for 1941), same as Serial Number for 1942 (no separate motor number used). Stamped on small pad at the upper left front corner of the motor block.

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 Std., 7.5-1 Optl. HC. (HC head requires Ethyl fuel at low altitudes).  
**Pressure:**—155 lbs. at 1000 RPM or approximately 118-120 lbs. at cranking speed (for Std. head).

**VACUUM READING:**—18-20" steady idling at 7-8 MPH.

**FIRING ORDER:**—1-5-3-6-2-4. See diagram.

**SPARK PLUGS:**—AC No. 45. 14 MM. Metric.

Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—14 1/4" max. at 2000 RPM (dist.).

Vacuum Advance—7 1/2-8 1/2" distr. with 16-18" vac.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—6° BTDC. First line of flywheel mark 'IGN. ONE' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Set idle adjusting screw 3/4-1 1/4 turns open (WA-1 494-S), 1/2-1 1/2 turns open (W-1 545-S, 521-S). Idle speed 450-475 RPM or 7-8 MPH.

**Float Level:**—(494-S) 1/2" from machined projection on cover to top of soldered seam (valve seated). (545-S, 521-S) 11/16" from top of float to gasket seat on cover (remove cover, invert to check).

**Accelerating Pump:**—Normal setting for 494-S (minimum stroke—Inner Hole in Pump Arm and Upper Hole in Pump Plunger). Normal Setting for 545-S & 521-S, medium stroke—Lower Hole.

**Fuel Pump Pressure:** 4 lbs. (AH), 3 3/4 lbs. (AJ Comb.).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in approximately vertical position with valve closed (cold).

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.011-.013" all valves Hot (.011" gauge 'Go', .013" 'No Go'). NOTE—.013" exhaust clearance recommended for sustained high speed.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy No. 1116306 (LHD), 1116312 (RHD). Connected to coil by armored cable. Ignition Lock Cylinder—Briggs & Stratton 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115023. Mounted on dash.

Ignition Current—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Mod 647-D. Single breaker 6 lobe cam, full automatic advance type with aux-

iliary vacuum control and Gaselector adjustment.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ounces.

Rotation—Counter-clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	400	4.....	800
8.....	1050	16.....	2100
8.5.....	1450	17.....	2900
14.25.....	2000	28.5.....	4000

**Vacuum Spark Control D-R No. 681-M.** On distrib'r (integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Plunger Travel—9/64" total.

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7-9"
6.5°.....	13°	13-16"
7.5-8.5°.....	15-17°	16-18"

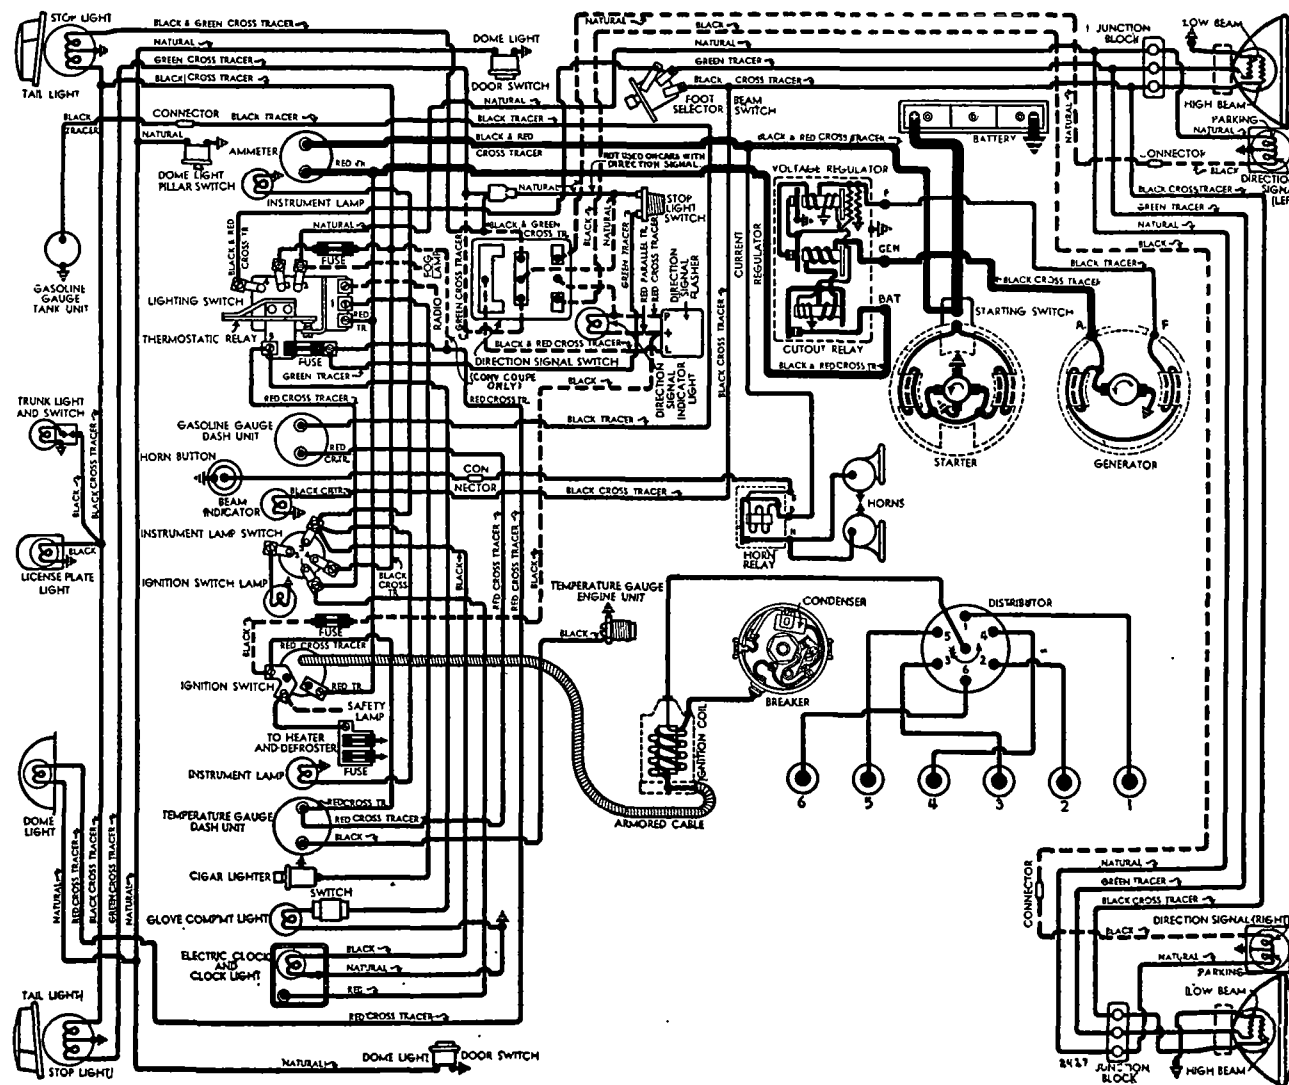

Gaselector—Manual adjustment for 10° advance or retard from center '0' position. See Ign. Timing.

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out screw in Gaselector arm, lift distributor out.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting given below (regular fuel Std. Head, Ethyl fuel HC Head). See Gaselector Setting (following) for correction and final setting. Flywheel Degrees Piston Position All Engines .....6° BTDC.....0138° BTDC

Timing Mark Note—Two straight lines of ignition

**To Set Timing (With Synchroscope)**—Connect synchroscope in series with #1 spark plug, fill in first line of ignition mark '/IGN.ONE/' with chalk or

**Gaselector Setting**—Set for barely audible ping at 20-30 MPH. on level road with wide open throttle to obtain best performance for particular operating conditions and octane rating of fuel used. To adjust, loosen Gaselector arm screw, move arm clockwise (toward "ADV" end of scale) to advance spark, counter-clockwise (to "RET" end) to retard spark.

**All 1941, Early 1942 (U.S.)**

**For complete data, refer to Carburetor Index.**

**Late 1942 (U.S.), All 1942 Canadian  
Carter Type W-1 (Cast-iron), Model 545-S (U. S.),  
521-S (Canada). 1 1/4" single barrel downdraft type**

**Air Cleaner:**—AC No. 1529871 oil-wetted type Std. #1542322 heavy duty oil-bath type optl. Use Replacement Filter Element Assembly: Type #1 (for #1529871), #1542245 (for 1542322). Copper gauze type cleaner installed on oil filler and crankcase ventilator cap (also on ventilator outlet pipe on cars with heavy-duty oil-bath air cleaner).

1316

## CONTINUED FROM PRECEDING PAGE

► **CAUTION**—Filler cap must be installed with air opening in cap to front (groove and seam aligned). Excessive oil consumption may result if installed in any other position.

**Fuel Pump**:—AC 'AH' No. 1523985—Exch. No. 496 Std. Type 'AJ' combination fuel-&-vacuum pump Optl. For complete data, refer to *Carburetion Equip. Index*. Pressure—4¾ lbs. (4-5).

**Gasoline Gauge**: AC Electric type. Part Nos. as follows: Dash Unit: #1516295 (1941), #1516391 (1942). Tank Unit: #1516316 ('41-42), #1516326 ('42 St. Wag.). For complete data, refer to *Carburetion Equip. Index*.

**BATTERY**

**Delco Type 15E-2-W**. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes. **Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage 4.25 volts.

**Grounded Terminal**—Negative (—) to engine. **Dimensions**—Length 19 5/16". Width 4". Height 9". **Location**—On left side in engine compartment.

**Police Battery**—Delco Type 19E-1. 6 volt, 19 plate, 130 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes. **Zero Capacity**—300 amperes for 5.3 minutes. Five second voltage—4.55 volts.

All Other data same as for 15E Battery above.

**STARTER**

**STD.**: Delco-Remy 1107032. Armature No. 1867897.

**RHD '41**: Delco-Remy 727-S. Armature No. 823881.

**RHD '42**: Delco-Remy 1107934. Armature 1867897.

**Drive**—Overrunning clutch with manual pinion shift (1107032), solenoid pinion shift ('41-42 RHD).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—200 amps. @ 5 volts (for 1107032).

**Performance Data—1107032**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Performance Data—727-S & 1107934**

0 ft. lbs.	5500	5.0	65
15 "	Lock	3.0	600

**Removal**:—Flange mounted on left front face of fly-wheel housing. To remove, take out mounting screws.

**Starting Switch (1107032)**: Delco-Remy No. 820052.

Mounted on starter and operated by starting pedal.

**Starting Switch (727-S & 1107934)**: Delco-Remy Solenoid 1546 ('41), 1118102 ('42) on starter, operated by pushbutton 1996012 ('41), 1996013 or 1996015 ('42).

For complete data, refer to *Electrical Equipment Index*.

**GENERATOR**

**Delco-Remy Model 1102665**. Armature No. 1879002.

(Std.), 1106403 (City Police), 1105856 (State Police).

Two brush types with voltage & current regulation.

► **NOTE**—Some 1941 State Police Cars equipped with 1105851 Generator. All data given below (including Regulator) for 1105856 Generator also applies to this 1105851 Generator.

**Charging Rate Adjustment**—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.

**Maximum Charging Rate**—30 amperes, 8.0 volts 1700 RPM (1102665 Gen.), 1040 RPM (1106403 Gen.) and above (Current Regulator Setting) with load or discharged battery. Actual charging rate controlled by Regulator according to battery condition.

**Performance Data—Cold**

	Amperes①	Volts	R.P.M.
1102665	30	8.0	1750
1106403	35	8.0	1040
1105856	40	8.0	1850

① Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes (1102665), 1.77-2.0 amperes (1106403), 1.62-1.82 amps. (1105856) at 6.0 volts.

**Removal**:—Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**:—Belt deflection or sideplay midway between generator & pump pulley should be 1½".

**REGULATOR**

**Delco-Remy Model 1118242 or 1118201** (for 1102665 Gen.), 1118229 (1106403 Gen.), 1118237 (1105856 Gen.). Single Core Type. Vibrating Voltage & Current Regulator.

For complete data, refer to *Electrical Equipment Index*.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts (1118242, 1118201), 7.0-7.2 volts (All Others) at operating temperature (Hot)

**To Check**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in *Electrical Equipment Section* for other (2nd) spring adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting**—34-36 amperes (1118201, 1118229, 1118242), 38-40 amperes (1118237) hot (at operating temp.).

**To Check**—Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F), reading should agree with setting (above).

**To Adjust**—Same as for Voltage Regulator (above).

**Air Gap**—.080" (check same as Voltage Regulator).

**LIGHTING**

**Headlamps, Switches, Bulb Specifications**—All data same as for 1941-42 Pontiac Eight (following article).

**1942 Models**—For Defroster Switch Short Circuit Correction on early Cars and Tail Light Wire Breakage Correction on Station Wagons, refer to Pontiac Shop Notes.

**MISC. ELECTRICAL**

**THERMOSTATIC RELAY**:—On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amps. @ 70°. Not adjustable.

**FUSES**:—Tail & Instrument Lights—9 ampere. In line fuse holder clipped to panel above lighting switch.

**Stop & Dome Light**—9 ampere. On lighting switch.

**Direction Signal**—9 ampere. In fuse holder on panel brace at steering col. (bet. ign. switch & flasher).

**Convertible Top**—9 ampere. In switch feed line.

**HORNS & HORN RELAY**: All data same as for 1941-42

Pontiac Eight (following car article).

**ENGINE**

**ENGINE SPECIFICATIONS**:—6 cylinder, 'L' head type.

**Bore**—3 9/16". **Stroke**—4".

**Displacement**—239.2 cubic ins. **Rated HP**—30.4.

**Developed Horsepower**—90 at 3200 RPM (Std. hd.).

**Compression Ratio**—6.5-1 Std., 7.5-1 Optl. Iron hds.

**Compression & Vacuum Reading**—See *Tune-Up*.

Refer to Pontiac Shop Notes for Power Plant Assembly and Front Engine Insulator Removal.

**PISTONS**: Chrome nickel alloy iron, electro (tin) plat'd.

**1941 Type**—Can be identified by two ½" holes in wall above piston pin relief on each side of piston and 10 oil drain holes in oil ring groove.

**1942 Type**—Twenty oil drain holes in oil ring groove (no hole in wall above piston pin relief). These pistons used with new type piston pin and piston rings.

► **CAUTION**—Use only 1942 Type Pistons with '42 Type Piston Pin and Piston Rings in 1942 Engines. If 1942 Type Pistons used in 1941 Engines, 1942 Type Piston Pin and Piston Rings must also be installed.

**Weight**—27 ozs. (1941). **Length**—3 9/32".

**Removal**—Pistons and rods removed from above.

**Clearance**—Top land .0175-.0315". Skirt .002".

**Original Bore & Piston Sizes, Replacement Pistons**:—Refer to Pontiac Shop Notes for sizes and markings.

**Fitting New Pistons**:—Use .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler 10-20 lbs. Taper & out-of-round limits .0005" max.

**PISTON RINGS**: Two taper faced compression rings above pin, one slotted oil control ring below pin.

**1941 Type**—Ring NOT tin-plated. Oil ring face has slight radius on each side of slot.

**1942 Type**—Rings ARE tin-plated. Oil ring face now straight-cut.

► **CAUTION**—Use only 1942 type Piston Rings in 1942 Engines (ring scuffing may result if other types used).

**NOTE**—Install compress'n rings with mark TOP up.

**Ring Width End Gap Side Clearance**

Compression .0930-.0935" .007-.012" .0015-.003"

Oil Control .1860-.1865" .007-.012" .001-.0025"

**NOTE**—1941 Compression Ring End Gap .009-.014".

**Replacement Rings**: Oversizes .005", .010", .020", .030".

**PISTON PIN**:—Diameter—15/16". Length—3 1/16". Pin locked in one piston boss by self-locking lock screw.

No lockwasher used with this new type screw. Free end of pin now slotted at side with shorter slot in 1942 (concealed by pin boss when installed).

► **CAUTION**—Do not use 1941 Pins in 1942 Engines.

**Pin Fit in Piston**—See Pontiac Shop Notes for data.

**Pin Fit in Rod Bushing**—.0004-.0008" clearance.

**Replacement Pins**:—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

**CONNECTING ROD**:—Weight 2.31 lbs. Length 7 9/16".

**Piston Pin Bushing (Upper Bearing)**—Split aluminum bronze bushings. See Pontiac Shop Notes for data.

**Lower Bearing Diameter**—2½".

**Lower Bearing**—Thin type, interchangeable steel-backed, white bearing metal alloy. Furnished std.

**ENGINE****CONTINUED FROM PRECEDING PAGE**

and .001" undersize. Rod bolt nuts self-locking.

Clearance—.0005-.0015" (new). Endplay—.005-.010".

Bearing Adjustment:—None (no shims). Refer to Pontiac Shop Notes for Connecting Rod Lower Bearing.

Installing Rods: No offset (can be installed either way).

**CRANKSHAFT:**—4 bearing, integral counterweights.

Refer to Pontiac Shop Notes for Harmonic Balancer Removal and Rear Main Bearing Oil Seal Renewal.

Bearing Diameters—#1, 2½"; #2, 2 17/32"; #3, 2 19/32"; #4, 2⅝".

Bearings—Thin type, steel-backed, white bearing metal alloy. Upper and lower halves alike. Furnished Std. and .001" undersize. Clearance .001-.003".

Bearing Adjustment:—None (no shims). Refer to Pontiac Shop Notes for Bearing Removal & Fitting.

End Thrust:—At #3 bearing. Endplay—.003-.008".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

Refer to Pontiac Shop Notes for Camshaft Removal, Bearing Servicing and Timing Cover Oil Seal data.

Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32".

Bearings—Steel-backed, babbitt-lined bushings.

Clearance—.0015-.0025" (new).

End Thrust:—Steel thrust plate behind camshaft sprocket. Replace if worn. Endplay—.002-.005".

Timing Chain: Morse Type C-1882-K (for 1941). Type C-1897-K (for 1942). Morse No. 1532 (all). Width 1". Pitch ⅜". Length 21" or 56 links.

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:**—Head Diameter Stem Diameter Length

Intake ..... 1 19/32" ..... 310-.311" ..... 5.718"

Exhaust ..... 1 15/32" ..... 310-.311" ..... 5.718"

Seat Angle Lift Stem Clearance

Intake ..... 30° ..... 19/64" ..... Free fit to .0006"①

Exhaust ..... 45° ..... 19/64" ..... Free fit to .0006"①

①Guides tapered (.0006" max. clearance at bottom).

Valve Guides:—Removable, tapered guides (.001" taper to the inch with greatest clearance at top).

IMPORTANT—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides not tapered (install and ream to fit valve stems with Reamer P.R.131).

Valve Springs:—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. Free Length—2 9/16".

Spring Pressure Spring Length

Valve Closed ..... 56-63 lbs. .... 1 29/32"

Valve Open ..... 97-105 lbs. .... 1 19/32"

Valve Lifters:—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment). Clearance—Free fit. Lifter should just move freely with finger touch.

**VALVE TIMING**

Tappet Clearance:—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'. NOTE—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .015" tappet clearance #1 intake valve should open with #1 piston 5° or .0096" before top dead center with first straight line of flywheel mark 'IGN.ONE/' slightly past indicator in left front face of flywheel housing. Reset tappet clearance .011-.013" (warm).

**LUBRICATION**

**LUBRICATION:**—Pressure (pump on right of engine).

Refer to Pontiac Shop Notes for Oil Pump Servicing and Crankcase Oil Cleaner Servicing data.

Normal Oil Pressure:—35-45 lbs. with warm oil.

Oil Pressure Regulator: New spring-loaded disc type in pump. Not adjustable. Opens at 40 lbs.

Crankcase Capacity:—5 qts. (refill), 6 qts. (dry).

**COOLING**

**COOLING SYSTEM:**—Capacity—18 quarts.

See Pontiac Shop Notes for Radiator Core Removal.

Pressure Valve—In filler cap. Opens at 3¼ lbs.

Water Pump:—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

Thermostat:—Harrison. In cylinder head outlet.

Setting—Starts to open 151° F. Fully open 173° F.

Temperature Gauge: AC Electric. Nos. Dash Unit:

1511053 ('41), 1511190 ('42). Engine Unit: 1510772.

See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Inland. 'Diaphragm' type, single plate, dry disc type. Driven Member Long 9CF-CS (10CF-CS Taxi). See Clutch Section for complete data.

Facings—Moulded, two used. Inside Diam. 6" (all), Outside Diam. 9¼", 10" (Taxi). Thickness .125".

Pedal Adjustment:—Free travel ⅞-1⅞" (adjusting nut on link at clutch fork). Pedal height to lower face of pedal should be 4¾" (on 25), 5 3/16" (others). Adjust stopscrew at lower end of pedal arm.

Removal:—Remove transmission (see below), take off housing bottom cover and control shaft inner bracket. Disconnect pedal pull-back spring. Remove fork ball support, fork, and throwout bearing. Paint mark cover and flywheel (align marks when reassembling to maintain balance). Remove cover bolts (loosen bolts evenly until tension relieved). Move clutch to rear, take out clutch plate, remove clutch.

**TRANSMISSION**

**TRANSMISSION:**—Own Make. All helical gear type, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote type shift. See Transmission Section for complete data.

Transmission Control:—Pontiac 'Safety-Shift' type.

▶NOTE—Single shifter rod (replacing 2 rods and idler) used on late 41-24, 41-26 and for replacement. See Transmission Section for complete data.

Removal:—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnion) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear and lower out of car.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Mechanics 2C or 2CR. Roller bearing. Two used. NOTE—1 piece driveshaft used. See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE:**—Own Make. Semi-floating, hypoid gear with Hotchkiss drive. See Rear Axle Section for data. Ratio—Standard: Model 25, 4.1-1; Others, 4.3-1. Optional: Economy 3.9-1, Heavy Duty 4.55-1. Color

marked on end of right axle shaft as follows:

3.9 Red, 4.1 Green, 4.3 White, 4.55 Yellow.

Backlash—.003-.012" (new), slightly over .012" (worn). Removal:—Disconnect rear universal (wire trunnions, do not disengage spline joint at transmission), remove axle shafts, carrier screws and carrier.

Axle Shaft Removal:—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 (do not drag axle shaft on oil seal).

Wheel Bearing Adjustment—None.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Delco. FRONT—Model 1947-C (right), 1947-D (left). REAR—1024-V. Double acting type Front, Direct acting Rear.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

Front Suspension:—Independent, linked parallelogram type with coil springs and center steering.

See Front Suspension Section for complete data.

Kingpin Inclination—5½-6°.

Caster—Negative ¾°. Limits Neg. ½° to Neg. 1°.

Camber—0° preferred. Limits Neg. ¼° to Pos. ¼°.

Toe In—0-1/16". Adjust tie rod tubes equally.

Steering Geometry—Inner wheel 23° ± ½°. Outer 20°.

**STEERING GEAR**

Steering Gear: Saginaw Worm-and-Roller type with steering idler arm on right frame rail.

See Steering Gear Section for complete data.

**BRAKES****1941 MODELS**

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinder Bore—Front wheel 1". Rear 15/16".

Drums—Steel (nickel alloy iron liner). Diameter 11".

Lining—Moulded. Width 1¼". Thickness 3/16".

Length 9 11/32" (Primary shoe—D-R Multibestos),

11 31/32" (Secondary shoe—L-8 Multibestos).

Clearance—.015" at both ends of secondary shoe

with primary shoe forced out against drum.

Braking Power—53% front wheels, 47% rear.

Hand Brake:—See Service Brakes above.

**BRAKES****1942 M DELS**

**BRAKES:**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment (not used in '41). Hand lever applies rear wheel service brakes.

NOTE—Braking power increased 3% on front wheels by use of wider lining and larger wheel cylinder. See Brake Section for complete data.

Wheel Cylinder Bore—Front 1 1/16". Rear 15/16".

Drums—Pressed steel (alloy iron liner). Diam. 11".

Lining—Moulded. Width 2" (front), 1¾" (rear).

Thickness 3/16". Length 9 11/32" (primary), 11 31/32"

(secondary).

Clearance—.010" at heel and toe of each shoe.

Braking Power—56% front wheels, 44% rear.

Hand Brake:—See Service Brakes above.

**MISC. MECHANICAL**

Power Operated Conv. Top: (1941) Vacuum Power. (1942)—Electric type.

See Miscellaneous Section for complete data.

**FRONT SHEET METAL ASSEMBLY REMOVAL, HOOD FITTING, HOOD LOCK ADJUSTMENT, 1942 FRONT FENDER REMOVAL & FENDER CAP ALIGNMENT:**  
Refer to Pontiac Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. 1001 (all models) with Model & Plant prefix as shown below. Stamped on plate on left side of dash under engine hood.

	Pontiac	California	Linden
Deluxe 41-27	P8JA-1001	C8JA-1001	L8JA-1001
Str'mlnr. 41-28	P8JB-1001	C8JB-1001	L8JB-1001
Custom 41-29	P8JC-1001	C8JC-1001	L8JC-1001
Torpedo 42-27	P8KA-1001	C8KA-1001	L8KA-1001
Str'mlnr. 42-28	P8KB-1001	C8KB-1001	L8KB-1001

**ENGINE NUMBER:** First number 8-246501 (for 1941), same as Serial Number for 1942 (no separate motor number used). Stamped on small pad at the upper left front corner of the motor block.

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 Std., 7.5-1 Optl. HC. (HC head requires Ethyl fuel at low altitudes).

**Pressure**—155 lbs. at 1000 RPM or approximately 118-120 lbs. at cranking speed (for Std. head).

**VACUUM READING:**—18-20" steady idling at 7-8 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:**—AC No. 45. 14 MM Metric.

Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap**—.015". Cam Angle—31° Closed.

**Automatic Advance**—Starts at 300 RPM. Maximum advance 13.5° at 2100 RPM. (Distr. degrees & RPM).

**Vacuum Advance**—9-10° distr. with 16-21" vacuum.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—6° BTDC. First line of flywheel mark 'IGN.ONE/' aligned with pointer in inspection hole on left side of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Set idle adjusting screws 1/4-1 1/4 turns open. Idle speed 450-475 RPM or 7-8 MPH.

**Float Level**—5/16" from top of float to machined surface of cover (remove gasket, invert to check).  
**Accelerating Pump Setting**—Normal setting, Lower hole—minimum stroke.

**Fuel Pump Pressure:** 3 3/4 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in approximately vertical position with valve closed (cold).

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.011-.013" all valves Hot (.011" gauge 'Go', .013" 'No Go'). NOTE—.013" exhaust clearance recommended for sustained high speed.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Delco-Remy No. 1116306 (LHD), 1116312 (RHD). Connected to coil by armored cable.

**Ignition Lock Cylinder**—Briggs & Stratton 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy Model 1115129. Mounted on dash.

**Ignition Current**—2.5 amperes idling, 45 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

**Capacity**—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110804. Single breaker

8 lobe cam, full automatic advance type with aux-

iliary vacuum control and Gaselector adjustment.

**Breaker Gap**—.015". Limits .0125-.0175".

**Cam Angle or Dwell**—31° closed, 14° open.

**Breaker Arm Spring Tension**—19-23 ozs.

**Rotation**—Counter-clockwise viewed from above.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees Start	300	Degrees	600
7	1100	14	2200
8.5	1500	17	3000
13.5	2100	27	4200

**Vacuum Spark Control D-R No. 1116021.** On distributor (integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Plunger Travel—7/32".

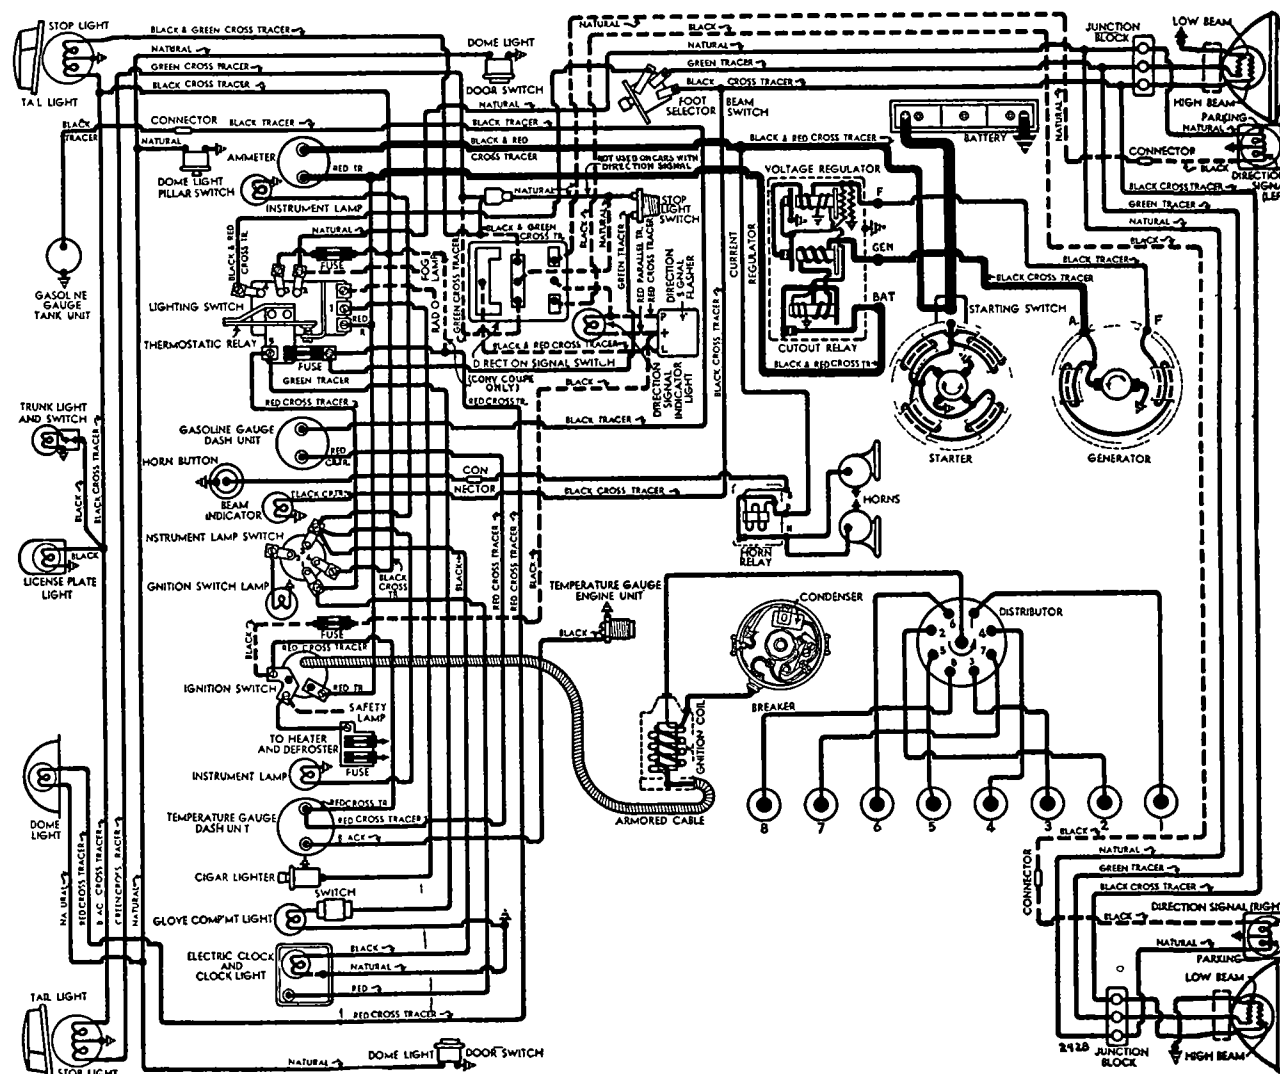

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
7.5	15°	14.5-17.5"
9-10°	18-20°	16-21"

**Gaselector**—Manual adjustment for 10° advance or

retard from center '0' position. See Ign. Timing.  
**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out screw in Gaselector arm, lift distributor out.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting given below (regular fuel Std. Head, Ethyl fuel HC. Head). See Gaselector Setting (following) for correction and final setting. **Flywheel Degrees Piston Position**  
All Engines ..... 6° BTDC ..... .0128" BTDC  
**Timing Mark Note**—Two straight lines of ignition mark 'IGN.ONE/' indicate allowable timing range of 4° on flywheel. Use first (6°) line for setting ignition (second line is 2° before top dead center mark).  
**NOTE**—Manufacturer recommends use of HM-494 Timing Light or J-578 Synchroscope for Timing.  
**To Set Timing (With Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression,

turn engine over until piston is 6° or .0128" before top dead center with first line of ignition mark 'IGN.ONE/' lined up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen Gaselector screw, center pointer scale ('0' mark at reference line), tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts just opening), tighten clamp bolt. Check Gaselector setting.

**To Set Timing (With Synchroscope)**—Connect synchroscope in series with #1 spark plug, fill in first line of ignition mark 'IGN.ONE/' with chalk or white paint, direct synchroscope light on flywheel (inspection hole on left side), idle engine at 6 MPH, adjust distributor as directed above.

**Gaselector Setting**—Set for barely audible ping at 20-30 MPH. on level road with wide open throttle to obtain best performance for particular operating conditions and octane rating of fuel used. To adjust, loosen Gaselector arm screw, move arm clockwise

(toward 'ADV' end of scale) to advance spark, counter-clockwise (toward 'RET' end of scale) to retard spark, tighten locking screw.

## CARBURETOR

### 1941 Models

**Carter Type WDO, Model 469-SM.** 1½" dual, down-draft type with Carter Climatic Control. Casting No. 306 on flange.

For complete data and recommended corrections for: (1) Hesitation & Stumbling on Acceleration, (2) Throttle Sticking Correction, refer to Carburetor Index for Carter WDO article.

### 1942 Models

**Carter Type WDO, Models 540-S (Early), 548-S (Later).** 1½" dual, down-draft type with Carter Climatic Control. Casting No. 306 on flange.

For complete data, refer to Carburetor Index.

'42 Note—Accelerator cross shaft spacing washer (Part No. 502306) should be installed on left end of

shaft on early cars (if washer missing) to avoid any binding in accelerator assembly.

**Idle Adjustment**—With engine warm so that choke valve wide open and fast idle inoperative, set throttle stop screw for idle speed of 7-8 MPH (450-475 RPM). Adjust idle adjusting screw so that engine fires smoothly (one screw for each barrel, adjust both screws alike). Final setting for each screw should be ¼-1¼ turns open from inner seated position (turn screws in for leaner mixture). Recheck idle speed. NOTE—Vacuum gauge recommended for this adjustment (see Vacuum Reading above).

**Accelerating Pump Setting**—Pump arm under dust cover (integral with air horn) has two holes for pump link engagement. Set as follows: Lower Hole (min. stroke)—Normal all-year setting. Upper Hole (max.)—If greater charge required.

NOTE—'41 469-SM carburetors not originally equipped with adjustable pump stroke. Replacement Pump Arm and Collar with adjustment provision available. See Recommended Correction for Hesitation and Stumbling on Acceleration in Carter WDO Carburetor article in the Carburetor Section.

**Float Level**—5/16" from top of float to machined surface of cover (remove gasket, invert to check). Metering Rods & Jets—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

**Accelerator Linkage Adjustment**—Must be set to provide correct 'throttle cracking' action for starting. To adjust, after carburetor set for correct 7-8 MPH hot or slow idle speed, disconnect battery cable at starting motor (to prevent starter cranking engine), fully depress starting pedal, adjust adjusting screw on accelerator cross-shaft lug at idler lever so that clearance between throttle stop screw and stop is .115" (use flat steel stock .115" as gauge) with fast idle cam in hot or slow idle position.

NOTE—For 1941 cars, this adjustment made by means of eccentric throttle cracker pin on starter motor lever.

**Fast Idle**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index. **Setting**—With throttle stop screw set for correct 7-8 MPH hot or slow idle speed, hold choke valve tightly closed, turn fast idle adjusting screw in until clearance between throttle lever stop screw and stop on carburetor casting is .032" (1941), .073" (1942).

NOTE—This adjustment can also be made by holding choke valve tightly closed and adjusting fast idle screw for .010" ('41), .026" ('42) throttle opening.

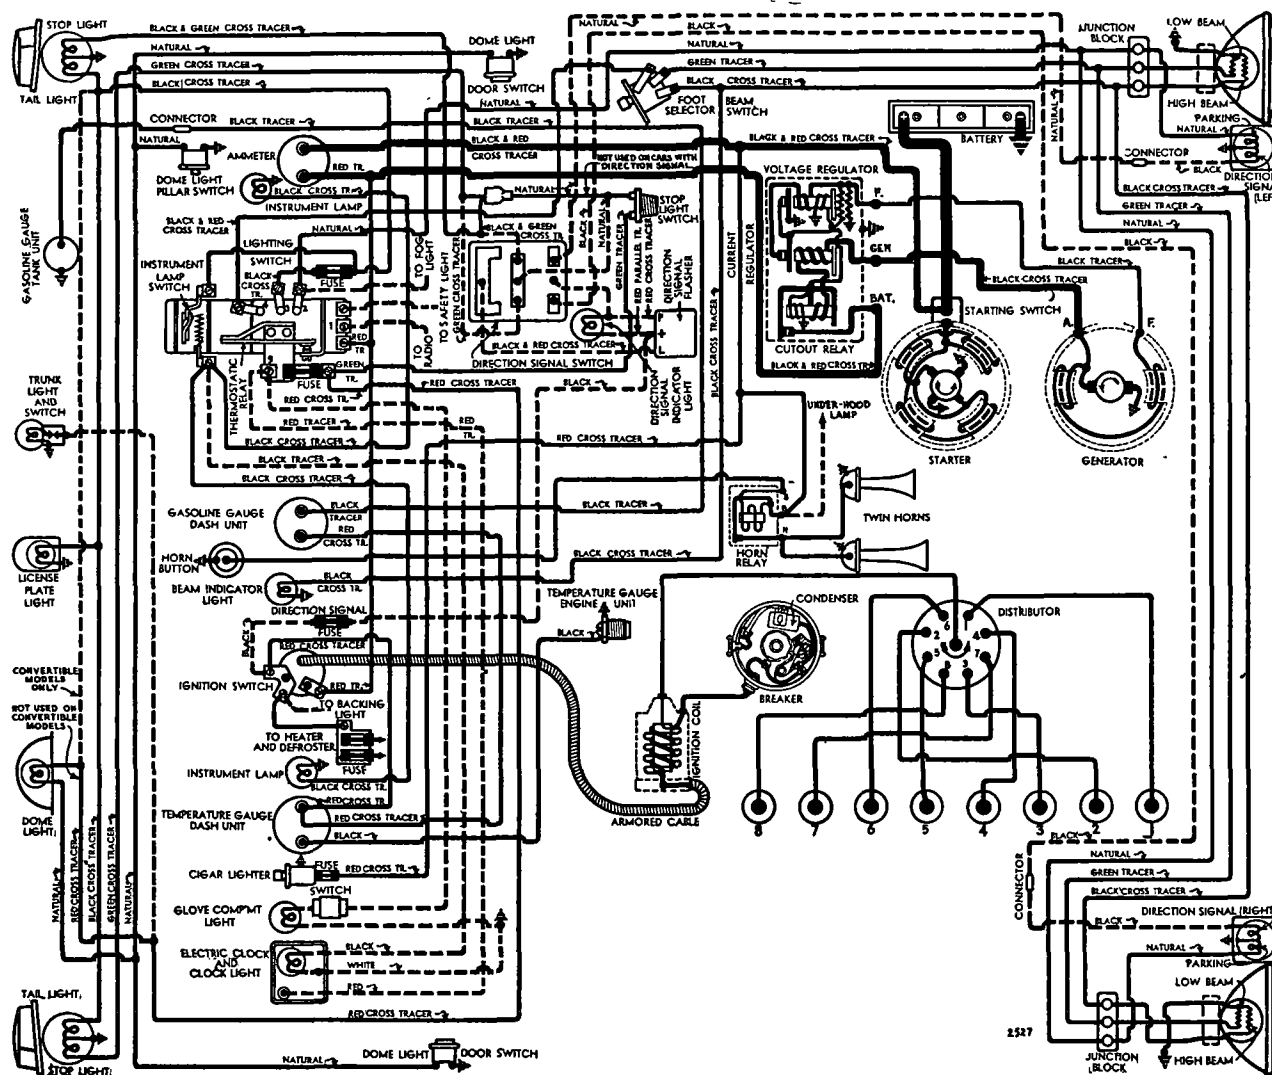

**Automatic Choke**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index. **Setting (469-SM)**—1½ Notches Rich (may be set 4 Notches Rich to correct poor starting or leanness after starting) for first type thermostat marked '170-G-16S' on choke housing. Later type thermostat marked '170-F-16S' is set 2 Notches Rich. Setting (540-S, 548-S)—2 Notches Rich.

## CARB. EQUIPMENT

**Air Cleaner**—AC No. 1529473 oil-wetted type Std. #1529474 heavy duty oil-bath type Optl. Use Replacement Filter Element Assembly: Type #3 (for #1529473), #1528691 (for 1529474). Copper gauze type cleaner installed in oil filler and crankcase ventilator cap (also on ventilator outlet pipe on cars with heavy duty oil-bath air cleaner). CAUTION—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backwards).

CONTINUED N NEXT PA E

1942 M DELS

## C NTINUED FR M PRECEDING PAGE

**Fuel Pump:**—AC 'AJ' No. 1537317—Exch. No. 539 fuel & vacuum pump Std. Pressure—4¾ lbs. (4-5).  
For complete data, refer to Carburetion Equip. Index.  
**Gasoline Gauge:** AC Electric type. Part Nos. as follows:  
Dash Unit: #1516295 (1941), #1516391 (1942).  
Tank Unit: #1516316 ('41-42), #1516326 ('42 St.Wag.).  
For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Delco Type 15E-2-W.** 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).  
**Dimensions—**Length 19 5/16". Width 4". Height 9".  
**Starting Capacity—**120 amperes for 20 minutes.  
**Zero Capacity—**300 amperes for 3.5 minutes. Five second voltage 4.25 volts.  
**Grounded Terminal—**Negative (—) on left side of engine block. Engine Ground (Cars with Radio)—strap from cylinder head to starter pedal bracket.  
**Location—**On left side in engine compartment.  
**Police Battery Delco Model 19E-3.** 6 volt, 19 plate, 130 ampere hour capacity (20 hour rate).  
**Starting Capacity—**150 amperes for 20 minutes.  
**Zero Capacity—**300 amperes for 5.3 minutes. Five second voltage 4.55 volts.  
All Other data same as for 15E Battery above.

## STARTER

**STD:** Delco-Remy 1107921. Armature No. 1867897.  
**RHD '41:** Delco-Remy 727-S. Armature No. 823881.  
**RHD '42:** Delco-Remy 1107934. Armature 1867897.  
**Drive—**Overrunning clutch with manual pinion shift (1107921), solenoid pinion shift (RHD '41-42).  
**Rotation—**Counter-clockwise at commutator end.  
**Brush Spring Tension—**24-28 ounces each  
**Cranking Engine—**220-225 amps. @ 5 volts (1107921).

## Performance Data—1107921

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

## Performance Data—727-S &amp; 1107934

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
15 "	Lock	3.0	600

**Starting Switch (1107921):** Delco-Remy No. 820052. Mounted on starter and operated by starting pedal.  
**Starting Switch (727-S & 1107934):** Delco-Remy Solenoid 1546 ('41), 1118102 ('42) on starter, operated by pushbutton 1996012 ('41), 1996013 or 1996015 ('42).  
For complete data, refer to Electrical Equipment Index.

## GENERATOR

**Delco-Remy Model 1102665.** Armature No. 1879002. (Std.), 1106403 (City Police), 1105856 (State Police). Two brush types with voltage & current regulation.  
►NOTE—Some 1941 State Police Cars equipped with 1105851 Generator. All data given below (including Regulator) for 1105856 Generator also applies to this 1105851 Generator.  
**Charging Rate Adjustment—**None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.  
**Maximum Charging Rate—**30 amperes, 8.0 volts, 1700 RPM (1102665 Gen.), 1040 RPM (1106403 Gen.) and above (Current Regulator Setting) with load or discharged battery. Actual charging rate controlled by Regulator according to battery condition.

## Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102665	30	8.0	1750
1106403	35	8.0	1040
1105856	40	8.0	1850

①Not maximum output. See Current Regulator.

**Rotation—**Counter-clockwise at commutator end.  
**Brush Spring Tension—**25 ounces each.  
**Field Current—**1.75-1.9 amperes (1102665), 1.77-2.0 amperes (1106403), 1.62-1.82 amps. (1105856) at 6.0 volts.  
**Removal:**—Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.  
**Belt Adjustment:**—Belt deflection or sideplay midway between generator & pump pulley should be 1½".

## REGULATOR

**Delco-Remy Model 1118242 or 1118201** (for 1102665 Gen.), 1118229 (1106403 Gen.), 1118237 (1105856 Gen.). Single Core Type. Vibrating Voltage & Current Regulator.

For complete data, refer to Electrical Equipment Index.  
**CAUTION—**Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In—**6.2-6.7 volts hot.  
**Cuts Out—**0-4.0 ampere discharge current.  
**Contact Gap—**.020" (same for both sets).  
**Air Gap—**.020" (with contacts just closed).

## Voltage Regulator

**Setting—**7.2-7.4 volts (1118242, 1118201), 7.0-7.2 volts (All Others) at operating temperature (Hot)  
**To Check—**Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). With regulator hot (150°F), decrease generator speed until cutout relay contacts open, then increase speed to 2800 RPM. and check hot voltage setting (above).  
**To Adjust—**Change regulator armature spring tension slightly by bending hanger at lower end of one spring only. If further adjustment required, see Single Core Regulator article in Electrical Equipment Section for other (2nd) spring adjustment.  
**Air Gap—**.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting—**34-36 amperes (1118201, 1118229, 1118242), 38-40 amperes (1118237) hot (at operating temp.).  
**To Check—**Remove regulator cover, connect short jumper between Voltage Regulator frame and upper contact support bracket (to short out Voltage Regulator), connect ammeter in charging line at regulator 'BAT' terminal, turn on car lights and accessories. Operate generator and increase speed until output remains constant. With regulator hot (150°F), reading should agree with setting (above).  
**To Adjust—**Same as for Voltage Regulator (above).  
**Air Gap—**.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING:—Headlamps—**Guide 'Sealed Beam' type. For complete data, refer to Electrical Equipment Index.  
**Headlamp Adjustment—**Alm upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator—**Pontiac emblem on face of speedometer dial. Lighted when upper beams in use.  
**Direction Signal—**Refer to Electrical Equip. Index.

## Switches

**Lighting—**Delco-Remy 1995018 ('41), 1995024 ('42).  
**Beam Selector—**Delco-Remy 1997008, 465-V (RHD).  
**Instrument (1941)—**Delco-Remy 1997740.  
**Stop Light—**Delco-Remy 1997725, 1997901 (Canada).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Front Dir. Signal & Park	21-3	1154
Park (without Dir. Signal)	3	63
Instrument, Ign. Lock	1½	55
Clock, Glove Comp't., Trunk	1½	55
Beam & Dir. Signal Indic	1	51
Stop & Tail	21-3	1154
Rear License	3	63
Dome (exc. Conv. Coupe)	6	82
Dome (Convertible Coupe)	1½	55

1942 Models—For Defroster Switch Short Circuit Correction on early Cars and Tail Light Wire Breakage Correction on Station Wagons, refer to Pontiac Shop Notes.

## MISC. ELECTRICAL

**THERMOSTATIC RELAY:**—On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amps. @ 70°. Not adjustable.  
**FUSES:**—Tail & Instrument Lights—9 ampere. In line fuse holder clipped to panel above lighting switch.  
**Stop & Dome Light—**9 ampere. On lighting switch.  
**Direction Signal—**9 ampere. In fuse holder on panel brace at steering col. (bet. ign. switch & flasher).  
**Convertible Top—**9 ampere. In switch feed line.  
**HORNS:** Delco-Remy. Low Note: 1999519 ('41), 1999571 ('42). High Note: 1999520 ('41), 1999521 ('42). Vibrator type, blended tone, twin horns operated by relay.  
**Type**      **Current (at 6 volts)**      **Air Gap**  
1999519 (low note).....19-21 amperes.....045-.049"  
1999520 (high note).....17-19 amperes.....035-.039"  
1999571 (low note).....19-21 amperes.....047-.052"  
1999572 (high note).....18-20 amperes.....039-.044"  
**Horn Relay:**—Delco-Remy No. 1116775.  
**Contact Gap—**.025". **Air Gap—**.015" (closed).  
**Contacts Close—**2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type.  
**Bore—**3¼". **Stroke—**3¾".  
**Displacement—**248.9 cu. ins. **Rated HP—**33.8.  
**Developed Horsepower—**103 at 3500 RPM (Std. hd.).  
**Compression Ratio—**6.5-1 Std., 7.5-1 HC Optl.  
**Compression Pressure—**155 lb. (Std.), 175 (HC hd.) @ 1000 RPM (approx. 118-120 lbs. cranking spd. Std. hd.).  
**Vacuum Reading—**Steady 18-20" idling at 7-8 MPH.  
See Pontiac Shop Notes for Power Plant Assembly, Front Engine Insulator and Oil Pan Removal.  
**PISTONS:**—Electro-plated, chrome nickel alloy iron. Cannot be ground. Length 3 19/32". Weight 24½ ozs. Piston & pin and rod weight variation 1/16 oz. max.  
**Removal—**Pistons and rods removed from above.  
**Clearance—**Top land .0175-.0295". Skirt .002".  
**Original Bore & Piston Sizes, Replacement Pistons:**—See Pontiac Shop Notes for sizes and markings.  
**Fitting New Pistons:**—Insert .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005", Cylinder .0005" max. new.  
**PISTON RINGS:**—Two taper faced compression rings above pin, one slotted oil control ring below pin. These piston rings are NOT tin plated.  
**NOTE—**Install compression rings with mark TOP up.  

Ring	Width	End Gap	Side Clearance
Compression	.0930-.0935"	.009-.014"	.0015-.003"
Oil Control	.1860-.1865"	.007-.017"	.001-.0025"

  
**Replacement Rings:**—Oversizes .005", .010", .020", .030".  
**PISTON PIN:**—Diameter—15/16". Length—2¾". Pin locked in one piston boss (new self-locking lock-screw used). Free end slotted (slot on side rather than bottom as on preceding models).  
**Pin Fit in Piston—**See Pontiac Shop Notes for data.

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**Pin Fit in Rod Bushing**—.0004-.0008" clearance.  
**Replacement Pins**—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.  
**CONNECTING ROD**—Weight 1.98 lbs. Length 7 9/16".  
**Piston Pin Bushing (Upper Bearing)**—Split aluminum bronze bushings. See Pontiac Shop Notes for data.  
**Lower Bearing Diameter**—2".  
**Lower Bearing**—New thin type, interchangeable, steel-backed, white bearing metal alloy. Furnished standard size and .001" undersize.  
**Clearance**—.0005-.0015" (new). Endplay—.005-.010".  
**Bearing Adjustment**—None (no shims). See Pontiac Shop Notes for Fitting and Installing Bearings.  
**Installing Rods**—Not offset (install either way).  
**NOTE**—Self-locking rod bolt nuts used.  
**CRANKSHAFT**—5 bearing, integral counterweights. See Pontiac Shop Notes for Harmonic Balancer Removal.  
**Bearing Diameters**—#1, 2 3/8"; #2, 2 13/32"; #3, 2 7/16"; #4, 2 15/32"; #5, 2 1/2".  
**Bearings**—New thin type, steel-backed, white bearing metal alloy. Upper & lower halves alike. Furnished Std. & .001" undersize. Clearance .001-.003".  
**Bearing Adjustment**—None (no shims). See Pontiac Shop Notes for Removal and Fitting of Bearings.  
**End Thrust**—At #4 bearing. Endplay—.003-.008".  
**CAMSHAFT**—5 bearing. Non-adjustable chain drive. See Pontiac Shop Notes for Camshaft Removal, Bearing Finished Sizes and Timing Cover Oil Seal data.  
**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 7/8".  
**Bearings**—Steel-backed, babbit-lined bushings.  
**Clearance**—.0015-.0025" (new).  
**End Thrust**—Steel thrust plate behind camshaft sprocket. Replace if worn. Endplay—.002-.005".  
**Timing Chain**—Morse Type 766-T (No. 2660). Width 3/4". Pitch 3/8". Length 21" or 56 links.  
**Camshaft Setting**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.  
**VALVES**—Head Diameter Stem Diameter Length  
 Intake ..... 1 15/32" ..... 310-311" ..... 5.53"  
 Exhaust ..... 1 11/32" ..... 310-311" ..... 5.53"  
 Seat Angle Lift Stem Clearance  
 Intake ..... 30° ..... 19/64" ..... Free fit to .0006" ①  
 Exhaust ..... 45° ..... 19/64" ..... Free fit to .0006" ①  
 ① Guides tapered (.0006" max. clearance at bottom).  
**Valve Guides**—Removable, tapered guides (.001" taper to the inch with greatest clearance at top).  
**IMPORTANT**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides straight cut, install guides (ream to fit valve stems with reamer P.R.131).  
**Valve Springs**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. Free Length—2 9/16".  
 Spring Pressure Spring Length  
 Valve Closed ..... 56-63 lbs. .... 1 29/32"  
 Valve Open ..... 97-105 lbs. .... 1 19/32"  
**Valve Lifters**—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment). Clearance—Free fit. Lifter should just move freely with finger touch.

## VALVE TIMING

**Tappet Clearance**—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'.

**NOTE**—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.  
**Valve Timing**—See Camshaft Setting above.  
**Intake Valves**—Open 5° BTDC. Close 39° ALDC.  
**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.  
**Valve Timing Check**—With .015" tappet clearance #8 intake valve should open with #8 piston 5° or .0089" before top dead center with first straight line of flywheel mark 'IGN.ONE/' slightly past indicator in left front face of flywheel housing. Reset tappet clearance .011-.013" (warm).

## LUBRICATION

**LUBRICATION**—Pressure (pump on right of engine). Refer to Pontiac Shop Notes for Oil Pump Servicing and Crankcase Oil Cleaner Servicing data.  
**Normal Oil Pressure**: 35-45 lbs. with warm oil.  
**Oil Pressure Regulator**: New spring-loaded disc type in pump. Not adjustable. Opens at 40 lbs.  
**Crankcase Capacity**: 5 qts. (refill), 6 qts. (dry).

## COOLING

**COOLING SYSTEM**—Capacity 19 1/2 qts. See Pontiac Shop Notes Radiator Core Removal & Water Distr. Tube data.  
**Pressure Valve**—In filler cap. Opens at 3 3/4 lbs.  
**Water Pump**—Packless, sealed ball-bearing type. See Water Pump Section for complete data.  
**Thermostat**—Harrison. In cylinder head outlet.  
**Setting**—Starts to open 151° F. Fully open 173° F.  
**Temperature Gauge**: AC Electric. Nos. Dash Unit: 1511053 ('41), 1511190 ('42). Engine Unit: 1510772.  
 See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH**—Inland. 'Diaphragm' type, single plate, dry member. See Clutch Section for complete data.  
**Facings Moulded**, 2 used. Inside Diameter 8". Outside Diameter 9 1/2". Thickness .125" (1/8").  
**Pedal Adjustment**—Free travel 7/8-1 1/8" (adjusting nut on link at clutch fork). Pedal height to lower face of pedal should be 4 3/4" (on 27), 5 3/16" (others). Adjust stopscrew at lower end of pedal arm.  
**Removal**—Remove transmission (see below), take off bottom housing cover and control shaft inner bracket. Disconnect pedal pull-back spring. Remove fork ball support, fork, and throwout bearing. Paint mark cover and flywheel (locating pin in flywheel discontinued) and reassemble to these marks to maintain balance. Remove cover bolts evenly until tension relieved. Move clutch away from flywheel at bottom to remove disc, lower assembly out of car.

## TRANSMISSION

**TRANSMISSION**—Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse) with remote shift. See Transmission Section for complete data.  
**Transmission Control**—Pontiac 'Safety-Shift' type. ▶NOTE—Single shifter rod (replacing 2 rods and idler) used on late 41-28, 41-29 and for replacement. See Transmission Section for complete data.  
**Removal**—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear and lower out of car.

## UNIVERSALS

**Mechanics 2C or 2CR**. Roller bearing type. One piece drive shaft used (slip joint ahead of front U-joint). See Universals Section for complete data.

## REAR AXLE

**REAR AXLE**—Own Make. Semi-floating, Hypoid gear with Hotchkiss drive. See Rear Axle Section for data.  
**Ratio**—Standard: Model 27, 4.1-1; Others 4.3-1. Optional: Economy 3.9-1, Heavy Duty 4.55-1. Color marked on end of right axle shaft as follows: 3.9 Red, 4.1 Green, 4.3 White, 4.55 Yellow.  
**Backlash**—.003-.012" (new), slightly over .012" (worn).  
**Removal**—Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts (see below), remove carrier flange capscrews, pull carrier assembly out.  
**Axle Shaft Removal**—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 (do not drag axle shaft on oil seal).  
**Wheel Bearing Adjustment**—None.

## SHOCK ABSORBERS

**SHOCK ABSORBERS**—Delco. FRONT—Model 1947-C (right), D (left). REAR—1024-V (Domestic). Double acting, hydraulic (1024-V direct acting). See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension**—Independent, linked parallelogram type with coil springs. See Front Suspension Section for complete data.  
**Kingpin Inclination**—5 1/2-6°.  
**Caster**—Negative 3/4°. Limits Neg. 1/2° to Neg. 1°.  
**Camber**—0° preferred. Limits Neg. 1/4° to Pos. 1/4°.  
**Toe In**—0-1/16". Adjust tie rod tubes equally.  
**Steering Geometry**—Inner wheel 23° ± 1/2°. Outer 20°.

## STEERING GEAR

Saginaw Worm-and-Roller, idler arm on right side. See Steering Gear Section for complete data.

## BRAKES

## 1941 MODELS

**BRAKES**—Service. Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes. See Brake Section for complete data.  
**Wheel Cylinder Bore**—Front wheel 1". Rear 15/16".  
**Drums**—Steel (nickel alloy iron liner). Diameter 11".  
**Lining**—Moulded. Width 1 3/4". Thickness 3/16". Length 9 11/32" (Primary shoe—D-R Multibestos), 11 31/32" (Secondary shoe—L-8 Multibestos).  
**Clearance**—.015" at both ends of secondary shoe with primary shoe forced out against drum.  
**Braking Power**—53% front wheels, 47% rear.  
**Hand Brake**—See Service Brakes above.

## BRAKES

## 1942 M DELS

**BRAKES**—Service. Bendix hydraulic, duo-servo, single anchor type with eccentric adjustment (not used in '41). Hand lever applies rear wheel service brakes. See Brake Section for complete data.  
**Wheel Cylinder Bore**—Front 1 1/16". Rear 15/16".  
**Drums**—Pressed steel (alloy iron liner). Diam. 11".  
**Lining**—Moulded. Width 2" (front), 1 3/4" (rear). Thickness 3/16". Length 9 11/32" (primary), 11 31/32" (secondary).  
**Clearance**—.010" at heel and toe of each shoe.  
**Braking Power**—56% front wheels, 44% rear.  
**Hand Brake**—See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Conv. Top**: (1941) Vacuum Power. (1942)—Electric type. See Miscellaneous Section for complete data.

**HOOD LOCK:** Hood Alligator type with instrument panel lock. To raise hood, pull the control knob on instrument panel (hood will raise slightly), push up on Safety Catch tab under front edge of hood to release safety catch, lift hood up.

**Hood Lock Adjustment—See Pontiac Shop Notes.**

**FRONT SHEET METAL ASSEMBLY REMOVAL, HOOD ADJUSTMENT, FRONT FENDER, FENDER CAP, & REAR FENDER REMOVAL & ALIGNMENT:** See Pontiac Shop Notes.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** First number 1001 (All Models) with Model & Plant prefix as shown below. Stamped on plate on left side of dash under hood.

Serial No. Prefix	Torpedo	Streamliner
Plant	46-25 47-25 46-26 47-26	
Pontiac, Mich.	P6LA P6MA P6LB P6MB	
South Gate, Calif.	C6LA C6MA C6LB C6MB	
Linden, N. J.	L6LA L6MA L6LB L6MB	
Wilmington, Del.	W6LA W6MA W6LB W6MB	
Kansas City, Kans.	K6LA K6MA K6LB K6MB	
Atlanta, Ga.	A6LA A6MA A6LB A6MB	
Frammingham, Mas.	F6LA F6MA F6LB F6MB	

Serial No. Prefix	Torpedo	Streamliner
Plant	48-25 48-26	
Pontiac, Mich.	P6PA P6PB	
South Gate, Calif.	C6PA C6PB	
Linden, N. J.	L6PA L6PB	
Wilmington, Del.	W6PA W6PB	
Kansas City, Kans.	K6PA K6PB	
Atlanta, Ga.	A6PA A6PB	
Frammingham, Mass.	F6PA F6PB	

**ENGINE NUMBER:** Same as Serial Number. Stamped on boss on left upper front corner of engine block.

### TUNE-UP

**COMPRESSION:** Pressure—160 lbs. at 1000 RPM or 118-120 lbs. at cranking speed (Std. 6.5-1 Head), 191 lbs. at 1000 RPM. (Optl. 7.5-1 Head). NOTE—7.5-1 Head requires use of Ethyl fuel at low altitudes.

**VACUUM READING:** 18-20" steady idling at 7-8 MPH. (365-385 RPM. on Hydra-Matic cars).

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025". Limits .023-.028".

Plug Type—AC No. 45. 14 mm. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—35° closed, 25° open.

Breaker Arm Spring Tension—17-21 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** 6° BTDC.

Timing Procedure—See Ignition Timing.

**Timing Mark—**First line of flywheel mark "IGN ONE/" at pointer in inspection hole in left front face of flywheel housing above starter.

**Gaselector Setting—**Set for barely audible ping when accelerating between 20-30 MPH. with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting—**Set idle adjusting screw 1-1 3/4 turns open. Turn screw out for richer mixture.

**Idle Speed (standard)—**450-475 RPM. or 7-8 MPH.

**Idle Speed (Hydra-Matic)—**365-385 RPM.

**Float Level—**7/16" from machined projection on cover to top of soldered seam at free end (invert to check).

**Accelerating Pump—**Lower hole Normal Setting, Upper hole for greater charge, Inner hole less Fuel Pump Pressure: 4 lbs. (AH), 3 3/4 lbs. (AJ Comb.).

**MANIFOLD HEAT CONTROL:** Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in approximately vertical position with valve closed (cold).

NOTE—Valve shaft bushings are Stainless Steel.

**VALVE TAPPET CLEARANCE:** .011-.013" Hot All Valves. (.011" gauge "Go", .013" gauge "No Go." NOTE—013" Exhaust tappet clearance recommended for sustained high speed.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

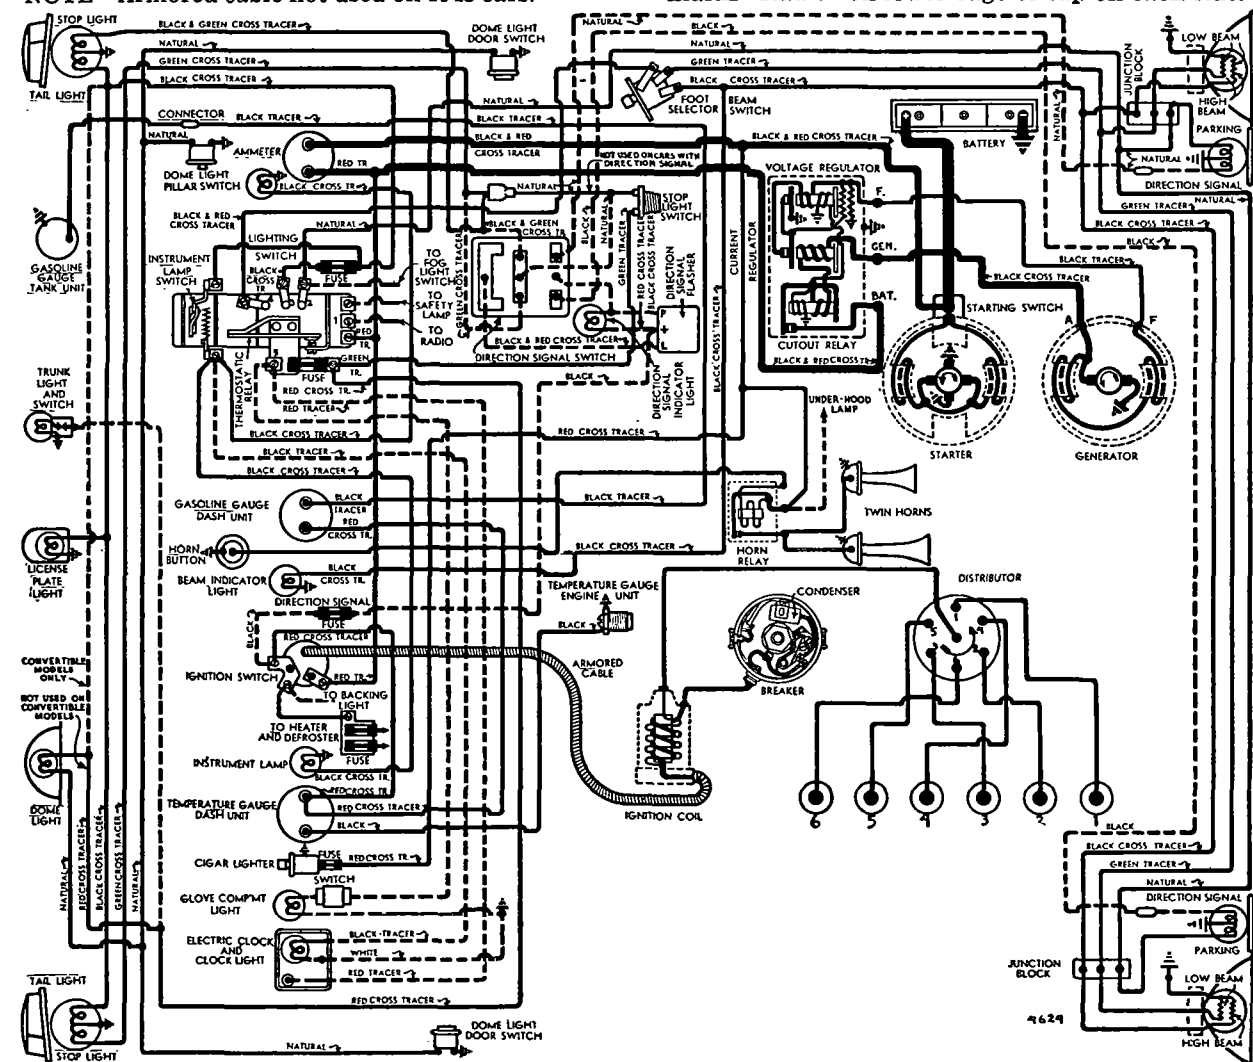

### IGNITION

**IGNITION SWITCH:** Delco-Remy Nos. as follows:

1946-47—1116306 (LHD), 1116312 (RHD cars).

1948—1116455 (All cars).

NOTE—Armored cable not used on 1948 cars.

1946-47 PONTIAC SIX

► EARLY 1946 WIRE COLORS N T UNIFORM—SEE LIGHTING

**Ignition Lock Cylinder—**Briggs & Stratton 45792. Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy 1115126 ('46-47), 1115380 ('48). 1946 NOTE—Primary terminal on 6 Cyl. coils located on right side (toward front on 8 Cyl. cars). Some 6 Cyl. coils have primary terminal at front (as on 8 Cyl. coils), later coils of this type have figure "6" stenciled in red on coil. CAUTION—These coils should be used on 6 Cyl. cars only (coils must not be interchanged).

**Ignition Current—**2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy No. 1869704.

Capacity—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy #647-D. Single breaker 6 lobe cam, full automatic advance type with auxiliary vacuum control and Gaselector adjustment.

► Late 1948 Distributor Cap—Has built-in radio suppression. Can be identified by high wire towers and marks "Radio" on lower edge of cap on each side.

**CONTINUED N NEXT PAGE**

## CONTINUED FROM PRECEDING PAGE

**Fast Idle:** Carter Single Barrel Carburetor type.

*See Carburetion Equipment Section for data.*

**Setting**—With fast idle cam in hot or slow idle position, close choke valve until throttle stopscrew is against (not on) first step of fast idle cam, adjust by bending connector rod offset so that choke valve opening is  $\frac{3}{8}$ " (check opening with gauge T109-85).

**Automatic Choke:** Carter Climatic Control (single carburetor type).

*See Carburetion Equipment Section for data.*

**Setting**—3 Notches Rich.

## CARB. EQUIPMENT

**Fuel Pump (std.):** AC Type AH, No. 1523985.

**Optl. (Fuel-& Vacuum)**—AC Type AJ, No. 1523986.

**Replacement Pump**—AC No. 496 (for AH), 515 (AJ).

**Pressure**—4 lbs. (AH),  $3\frac{3}{4}$  lbs. (AJ).

*See Carburetion Equipment Section for data.*

**Gasoline Gauge:** AC Electric type.

**Dash Unit**—(1946) AC No. 1516818, (1947) 1516946, (1948) 1517065.

**Tank Unit**—AC No. 1516316 (All).

*See Carburetion Equipment Section for data.*

**Air Cleaner (std.—oil-wetted):** AC No. 1529871.

**Optl. (oil-bath)**—AC No. 1542070.

**Servicing (Oil-wetted Type)**—Wash and re-oil filter element at 10000 mile intervals (twice yearly) or more often if required by operating conditions.

**Servicing (Oil-bath Type)**—Wash filter element, drain and refill lower oil base with 1 pint SAE No. 50 engine oil (SAE 20W for temperatures below freezing) at 10000 mile intervals or more often if required by operating conditions.

## BATTERY

**Delco Type 15E-2W.** 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage 4.25 volts.

**Grounded Terminal**—Negative (—) to engine.

**Engine Ground (Conv. Coupe & Cars with Radio)**—Strap from left rear corner of cylinder head to upper left starter pedal bracket-to-dash screw.

**Location**—On left side in engine compartment

**Police Battery Delco Type 19E-3.** 6 Volt, 19 Plate, 130 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes

**Grounded Ter. & Location**—Same as 15E-2 above.

## STARTER

1946-47 ..... Delco-Remy 1107032

1948..... Delco-Remy 1107070

RHD Cars ..... Delco-Remy 1107934

**Armature No.**—Delco-Remy No. 1867897.

**EARLY 1946 NOTE**—Starters on these cars have oller at commutator end, later starters have graphite-impregnated bronze bearing at this point (no lubrication required).

► **Starter Pedal Sticking Correction:** Lubricate starter pedal plunger with engine oil whenever car serviced (lack of lubrication will cause wear, noise, and faulty operation—may result in damage to starter). **NOTE**—Check all new cars (plunger not lubricated on some cars).

► **Hydra-Matic Starter Interlock Adjustment:** *See the Hydra-Matic Drive article in Transmission Section.*

► **Clicking Noise Correction at Starter (Hydra-Matic):**

*See "Electrical System Notes" in Pontiac Shop Notes.*

**Drive**—Overrunning clutch and pinion shift. Manual type (1107032, 70), solenoid pinion shift (1107934).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Cranking Engine**—200 amperes at 5 volts.

**Performance Data—1107032, 70**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

**Performance Data—1107934**

0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch (1107032, 70):** No. 820052. On top of starter and operated by starting pedal.

(1107934)—Delco-Remy Solenoid No. 1118102.

Mounted on starter and controlled by Relay No. 269-G and pushbutton Switch No. 1996031 on instrument panel.

*See Electrical Equipment Section for complete data.*

## GENERATOR

1946-47 ..... Delco-Remy 1102665

1948 ..... Delco-Remy 1102701

Police Cars ..... Delco-Remy 1106403

**Armature No.**—Delco-Remy 1879002 (1102665 & 701).

Two brush (shunt) types with voltage and current regulation. Ventilated by drive pulley fan.

**Charging Rate Adjustment**—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.

**Maximum Charging Rate**—30 amperes, 8.0 volts, 1170 RPM. (1102665, 701), 1040 RPM. (1106403 Gen.), 25 MPH. and above (Current Regulator Setting) with load or discharged battery. Actual charging rate controlled by Voltage Regulator and dependent on battery.

**Performance Data—1102665 & 701**

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

**Performance Data—1106403**

Cold	35①	8.0	1040
------	-----	-----	------

①Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes (1102665 & 1102701), 1.77-2.0 amperes (1106403) at 6.0 volts.

**Removal:** Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Belt deflection or sideplay midway between generator & pump pulley should be  $1\frac{1}{2}$ ".

## REGULATOR

Delco-Remy 1118242 .....for 1102665 & 1102701 Gen.

Delco-Remy 1118229 .....for 1106403 Generator

**Single Core Type.** Vibrating type Voltage and Current Regulators in a single case with Cutout Relay.

*See Electrical Equipment Section for complete data.*

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 amperage discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.2-7.4 volts (1118242), 7.0-7.2 volts (1118229) hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

**Checking & Adjustment**—*See Electrical Equip. Section.*

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

**Current Regulator**

**Setting**—34-36 amperes hot (at operating temperature) for all models.

**Checking & Adjustment**—*See Electrical Equip. Section.*

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

## 1946-47 LIGHTING SYSTEM SERVICE NOTES

► **Wiring Harness Wire Colors (1946)**—Some harnesses were used in which wires were incorrectly color-coded (tracers not as shown in wiring diagram). All such wires were marked by typed identification on paper sleeve attached to the wire. **CAUTION**—If these identification are removed from wires, it will be necessary to trace circuits for continuity.

► **Chafing of Wiring Harness (causing a short in hot lead from starter terminal)**—Clearance between harness containing this lead and moving parts (Starter pedal lever, Accelerator pedal lever, Accelerator cross-shaft) must be  $\frac{3}{8}$ - $\frac{1}{2}$ ". Make certain that harness is correctly installed (should pass down between starter and engine and then under starter), and that lower clamp-on clip on starter pedal bracket is closed tight so that harness cannot bend forward and rub on accelerator cross-shaft.

► **Back-up Light Faulty Operation and Blown Fuses**—*See Pontiac Shop Notes for directions on installation of new type switch parts to correct this trouble.*

► **Cigar Lighter Faulty Operation and Short-circuits**—*See Pontiac Shop Notes for re-working of Cowl Ventilator Hand Lever Stop (to prevent lever shorting cigar lighter lead), and installation of spacer (to prevent lighter binding on first cars).*

## 1948 LIGHTING SYSTEM SERVICE NOTES

► **Inoperative Stop Light (with Direction Signal):** On some early 1948 cars, 1 stop lamp (usually left) would not operate with brakes on and Direction Signal Switch in neutral due to misalignment at Direction Signal Switch. Correct by replacing direction signal base and wire assembly, part #5937832

► **Underhood Light not turning off:** On some early 1948 cars, Underhood Light Switch improperly mounted resulting in light remaining on when hood closed. To correct, install lock washer between mounting nut and radiator baffle (was incorrectly assembled between switch and underside of radiator baffle which resulted in switch being set too low).

**Headlamps:** Guide "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

*See Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).  
**Beam Indicator**—Pontiac emblem on face of speedometer dial. Lighted when upper beams in use.

**Direction Signal:** See *Electrical Equipment Section*.  
**Direction Signal Indicator**—Pilot bulb in Direction Signal Switch. Lighted whenever Right or Left Direction Signal operating.

#### Switches

**Lighting**—D-R Nos. ('46-47) 1995024, ('48) 1995035.  
**Instrument**—Part of Lighting Switch. Rheostat operated by turning lighting switch knob.  
**Beam Selector**—Delco-Remy No. 1997008.  
**Stop Light**—Delco-Remy No. 1997725.

#### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Park & Frt. Direc. Signal	21-3	1154
Park (Without Signal)	3	63
Instrument, Ign. Lock	1½	55
Beam & Direc. Signal Ind.	1	51
Stop & Tail	21-3	1154
Rear License Plate	3	63
Dome	15	88
Dome (Convertible)	1½	55

### MISC. ELECTRICAL

**THERMOSTATIC RELAY:** Lighting. On switch. Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adj.  
**Convertible Top**—On rear of dash on right side. 30 ampere maximum capacity.

**FUSES:** Tail & Instrument Light. (1946-47) 9 ampere, (1948) SFE 14 ampere. In holder clipped to panel above lighting switch.

**Stop & Dome Light**—('46-47) 9 amp., ('48) SFE 14 ampere. On lighting switch.

**Heater & Defroster**—SFE 9 amp. each. In clip on instrument panel brace at steering column.

**Direction Signal**—SFE 9 amp. In connector in feed wire from ignition switch at panel brace.

**HORNS:** Delco-Remy No. 199519 (Low Note), 199520 (High Note). Vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
199519 (Low Note)	19-21 amperes	.044-.049"
199520 (High Note)	18-20 amperes	.034-.039"

►'46 Horn Ring Rattle & Failure of Horn to Blow (Deluxe Models) Correction—See *Pontiac Shop Notes*.

►'46 Horn Lead Wear Correction—Blowing of horns when turning corners or when car is jarred may be caused by steering column shaft wearing through insulation of horn button lead at point where it enters steering column jacket. To correct this trouble (on first cars with rubber grommet in horn lead hole), remove and discard rubber grommet, install new horn button lead, No. 266918, which has 4-inch piece of protecting loom at point where wire enters jacket.

**Horn Relay:**—Delco-Remy No. 1116775.

**Contact Gap**—.025". **Air Gap**—.015" (closed).  
**Contacts Close**—2.75-4.0 volts.

### ENGINE

**ENGINE SPECIFICATIONS:** Own. Six Cylinder, "L"  
 Head type,  
 Bore—3 9/16". Stroke—4".  
 Displacement—239.2 cu. ins. **Rated HP**—30.4.  
 Developed Horsepower—93½ at 3400 RPM.

**Compression Ratio**—6.5-1 Std., 7.5-1 Optl. iron hds.  
**Compression & Vacuum Reading**—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Pontiac Shop Notes*.  
**POWER PLANT ASSEMBLY REMOVAL & FRONT INSULATOR REMOVAL:** See *Pontiac Shop Notes*.

**TIGHTENING TORQUES:** See *Pontiac Shop Notes*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Pontiac Shop Notes*.

**PISTONS:** Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove (same as 1942 type). NOTE—Pistons are plated with lead-tin alloy or pure tin (lead-tin alloy darker color) and cannot be ground. Use finished replacement pistons.

**Length** 3 19/32". **Weight**—27.1 ozs. (stripped).

**Removal**—Pistons and rods removed from above.

**Clearance**—Top Land .0175-.0295". Skirt .002".

**Fitting New Pistons:**—Insert .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005", Cylinder .0005" max. new.

**Replacement Pistons:** See *Pontiac Shop Notes*.

**PISTON RINGS:** Two tapered-face compression rings above pin, one slotted oil control ring below pin. Oil ring groove has 20 oil drain holes.

NOTE—Rings are cadmium-plated or tin-plated.

**Ring** **Width** **End Gap** **Side Clearance**

Compr. (#1,2) 3/32" .006-.013" .0015-.003"

Oil (#3) 3/16" .007-.017" .001-.0025"

**Installing Rings**—Install compression rings with mark "TOP" upward.

**Replacement Rings:** Furnished in Oversizes of .005", .010", .020", .030".

**PISTON PIN:** Diameter 15/16". Length 3 1/16".

Pin is shot-peened type (shot-peened before final grinding and lapping). Pin is locked in one piston boss by self-locking lock screw and opposite boss is slotted to permit pin movement.

**Pin Fit in Piston**—See *Pontiac Shop Notes* for data.

**Pin Fit in Rod Bushing**—.0004-.0006" clearance.

**Pin Removal & Installation:** See *Pontiac Shop Notes*.

**Replacement Pins:**—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

**CONNECTING ROD:** Weight 37 ozs. Length 7 9/16".

**Piston Pin Bushing (Upper Bearing)**—Split aluminum bronze bushings. See *Pontiac Shop Notes* for data.

**Lower Bearing Diameter**—2½".

**Lower Bearing**—New thin type, interchangeable, steel-backed, babbitt-lined type.

**Clearance**—.0001-.0021". **Sideplay** .007-.030".

**Bearing Adjustment:** None (no shims). See *Pontiac Shop Notes* for *Fitting and Installing Bearings*.

**Replacement Bearings:** Standard size & .001" Under-size. NOTE—Bearings have small tongue which must engage groove in rod and cap.

**Installing Rods:** Not offset (install either way).

NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used.  
**CAUTION**—Keep each connecting rod and its bearing cap together.

**CRANKSHAFT:** Four bearing type with integral counterweights and vibration dampener on forward end.

►Flywheel to Crankshaft Bolts (on Synchro-Mesh Transmission)—¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. Either type can be used for replacement but head sizes must be

alike on all bolts or engine balance will be destroyed.

►Vibration Dampener (Harmonic Balancer) Removal—See *Pontiac Shop Notes*.

**Bearing Diameters**—#1, 2½"; #2, 2 17/32"; #3, 2 19/32"; #4, 2⅝".

**Bearings**—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike. **Clearance**—.0003-.0023".

**Bearing Adjustment:**—None (no shims). See *Pontiac Shop Notes* for *Removal and Fitting of Bearings*.

►Rear Main Bearing Oil Seal Renewal—See *Pontiac Shop Notes*.

**Replacement Bearings:** Standard size & .001" Under-size.

**End Thrust:** Taken by #3 (rear intermediate) bearing. **Endplay**—.003-.007".

**CAMSHAFT:** Four bearing type with non-adjustable (two sprocket) chain drive.

**Camshaft Removal & Timing Cover Oil Seal Servicing**—See *Pontiac Shop Notes*.

**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32".

**Bearings**—Steel-backed, babbitt-lined bushings.

See *Pontiac Shop Notes* for *bearing finished sizes*.

**Clearance**—.0015-.0025" (new).

**End Thrust:**—Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.002-.005".

**Timing Chain:** Morse. Width 1". Pitch ¾". Length 21" or 56 links.

**Timing Chain Installation**—See *Pontiac Shop Notes*.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 19/32"	.310-.311"	5.718"
Exhaust	1 15/32"	.310-.311"	5.718"

**Seat Angle** **Lift** **Stem Clearance**

Intake ..... 30° ..... 19/64" ..... Free fit to .0006"①

Exhaust ..... 45° ..... 19/64" ..... Free fit to .0006"①

① Guides tapered (.0006" max. clearance at bottom).

**Valve Guides:**—Removable, tapered guides (.001" taper to the inch with greatest clearance at top). Use Tool J-2542 for removing valve guides.

**Exhaust Guide Counterbore**—Exhaust guides are counterbored to a depth of ¾". Use Tool Number J-2122 to clean out counterbore when servicing valves. This tool can be used to increase counterbore (from ½") if earlier type guides having this shallower counterbore are used.

►NOTE—On 1946 cars before Eng. No. 6-39209, exhaust guide counterbore was 31/32" deep. Any stocks of this type guide, Part No. 509041 (with 31/32" counterbore), are satisfactory for service. New exhaust guides will have the shallower (¾" plus 1/32", minus 0") counterbore depth.

**IMPORTANT**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides straight cut, install guides and ream to provide proper stem clearance with P.R. 131 Reamer.

**Valve Springs:**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 9/16".

C NTINUED ON NEXT PA E

## ENGINE

CONTINUED FROM PRECEDING PAGE

	Spring Pressure	Spring Length
Valved Closed	59½ lbs.	1 29/32"
Valve Open	101 lbs.	1 19/32"

**Valve Lifters:**—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

**Clearance:**—Free fit. Lifter should just move freely with finger touch.

## VALVE TIMING

**Tappet Clearance:**—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'.  
**NOTE:**—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**Valve Timing Check:**—With .015" tappet clearance #6 intake valve should open with #6 piston 5° or .0096" before top dead center with first straight line of flywheel mark 'IGN.ONE/' slightly past indicator in left front face of flywheel housing. Reset tappet clearance .011-.013" (warm).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and timing chain. Oil pump mounted externally on right side of crankcase.

**Crankcase Capacity:**—5 qts. (refill), 6 qts. (dry).

**Normal Oil Pressure:**—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

**Oil Pressure Regulator:**—On oil pump. Opens at 40 lbs. Non-adjustable. **NOTE:**—Replace regulator spring if free length less than 2 5/16".

**Oil Pump:** Gear type. On right side of crankcase.

**Oil Pump Servicing:**—See Pontiac Shop Notes.

**Oil Cleaner:** Pontiac precipitation type (in crankcase). Servicing—See Pontiac Shop Notes.

**Oil Pressure Gauge:** AC ('46) 1506803, ('47) 1507056, ('48) 1507221. Bourden Tube (not electric).

**Crankcase Ventilation:** Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner equipped with 3-piece outlet pipe containing filter element).

**Oil Filler (Crankcase Ventilator) Cap Servicing:**—Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

**CAUTION:**—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

**Crankcase Ventilator Outlet Pipe:**—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in radiator filler cap. Positive circulation with water pump on front of engine and water distributing tube in cylinder block.

**Capacity:**—18 qts. (19¾ with Underseat Heater).

**Pressure Valve** AC No. 846740 (Radiator Filler Cap). Opens at 4 lbs. (3¼-4¼ lbs.).

**Water Pump:** Packless type with sealed ball bearing shaft. See Water Pump Section for complete data.

**Removal:**—Drain cooling system, remove hose connection at pump, loosen belt adjustment and remove belt, take out water pump mounting bolts and lift pump out.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Starts to open 151° F. Fully open 173° F.

**Temperature Gauge:** AC Electric type.

**Dash Unit:**—('46) 1511661, ('47) 1511874, ('48) 1512027.

**Engine Unit:**—('46-47) 1511734, ('48) 1512015.

See Miscellaneous Section for complete data.

## CLUTCH

**Inland. Single Plate, "Diaphragm," dry disc type with Long Driven Member Model 9½CF-TS (except Taxicab), Model 10CF-CS (Taxicab).**

See Clutch Section for complete data.

**NOTE:**—Driven Members on 6 Cyl. and 8 Cyl. cars are same size but must not be interchanged. May be identified by stenciled notation on facings and color marking of torsional springs in hub as follows:

	Facing Mark	Spring Color
6 Cyl. Models.....	41-42 6 Cyl.....	Orange & Dark Blue
8 Cyl. Models.....	41-42 8 Cyl.....	Brown & Blue
<b>Facings:</b> —Moulded type, 2 required. I. D. 6" (All Models); O. D. 9½" (except Taxicab), 10" (Taxicab); Thickness ⅛".		

**Pedal Adjustment:**—Free travel ⅞-1½" (adjusting nut on link at clutch fork). Pedal height to lower face of pedal should be 4¾" (Torpedo), 5 3/16" (Streamliner). Adjust by means of stopscrew at lower end of pedal arm.

►1946 Clutch Pedal Shaft Installation Change—See Pontiac Shop Notes for new type mounting (used on later 1946 cars) to correct movement of clutch or brake pedal when other pedal is depressed.

**Removal:** Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (CAUTION—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw Driven Member, lower cover assembly and withdraw it through bottom of housing.

►Removal of Excess Release Bearing Lubricant to correct clutch sticking—If recess in bore on release bearing over-lubricated when clutch assembly installed, excess lubricant may be found causing clutch sticking. Clean out excess lubricant found at

the following points: transmission drive gear, driven plate hub, clutch facings, pressure plate and cover assembly, release bearing support tube, fulcrum points of release fork, and recess in bore on release bearing (do not wash bearing, bearing is "sealed" type). Lubricate clutch parts exactly as described under Installation Note following to avoid above condition.

**Clutch Installation Note:**—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). This supersedes original position (on 1946 cars) where seal fitted in recess on Drive Gear. Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

**CAUTION:**—Make certain that correct type Driven Member is used (see Note above).

**Clutch Release Bearing & Support:** See Pontiac Shop Notes for description.

►1946 Release Bearing Noise Correction—See Pontiac Shop Notes for new type Support Tube to correct noise due to movement of bearing on early 1946 support tube.

## TRANSMISSION

### STANDARD

**Own Make.** All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

**Transmission Control:** Pontiac "Safety-shift" remote control type with gearshift lever on steering column. See Transmission Section for complete data.

**Removal:**—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear and lower out of car.

**Installation Note:**—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support).

**NOTE:**—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to 4¼".

## HYDRA-MATIC DRIVE

### OPTIONAL EQUIPMENT

**Own Make.** Consists of fluid coupling and 4 speed automatic transmission.

See Transmission Section for complete data.

**Lubrication:**—Check fluid level in transmission every 2000 miles (lubrication period). Drain and refill every 15000 miles. Use only GM Hydra-Matic Drive Fluid.

**Capacity:**—11 qts. (drain oil pan and torus cover and refill). 12 qts. (drain, disassemble, assemble transmission and refill).

**Checking Fluid Level**—Roll back floor mat, remove cover on floor board, set hand brake and start engine, set control lever in "DR" position, allow to run about 2 minutes. Remove indicator, wipe dry, then return and check level of fluid with indicator. Add fluid until level is at "FULL" mark.

► **CAUTION**—Always check oil level when oil is hot, engine idling, hand brake tightly set and control lever in "DR" position.

► **Oil Level Indicator Change**—A new indicator, Part No. 8605800 (stamped on blade—earlier type not marked) reduces capacity approx. 1 pint providing slightly lower fluid operating level to reduce fluid foaming when oil is hot.

**Hydra-Matic Linkage Adjustment**—See *Hydra-Matic Drive* article in *Transmission Section*.

**Removal:** See *Hydra-Matic Drive* article in *Transmission Section*.

## UNIVERSALS

**Mechanics Model 2CR.** Roller bearing type, 2 used. See *Universal Section* for complete data.

► **1947-48 CAUTION**—Rear universal nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See *Pontiac Rear Axle* article in *Rear Axle Section* for complete data.  
**NOTE**—Driveshaft is one-piece type (slip joint on transmission mainshaft, ahead of front universal).

## REAR AXLE

**1946 Type**—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.  
See *Rear Axle Section* for complete data.

**1947-48**—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and companion flange nut controls pinion bearing "pre-load." No setscrews are used.

► **CAUTION**—Rear universal companion nut controls pinion bearing "pre-load".  
See *Rear Axle Section* for complete data.

**Ratios**—As shown. Axles may be identified by paint mark on end of right hand axle shaft.

Model	Ratio	Ident. Paint Mark
Torpedo Std.	4.1-1	Green
Streamliner Std.	4.3-1	White
Hydra-Matic (All)	3.63-1	Violet
All (Econ.)	3.9-1	Red
All (Heavy Duty)	4.55-1	Yellow
<b>Backlash</b> —.003-.012" (new), slightly over .012" (worn).		

**Removal:**—Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange cap screws. Withdraw carrier assembly from housing.

► **1947-48 CAUTION**—Rear U-joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal:**—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 (do not drag axle shaft on oil seal).

**Wheel Bearing Adjustment**—None.

## SHOCK ABSORBERS

**Delco Model 1947-C,D** (front), **Model 1044-V** (rear). Hydraulic, double acting (front), direct (rear).

See *Shock Absorber Section* for complete data.

**Adjustment:** None (except by changing valve calibration).

**Refilling:** Requires dismantling of unit. See *Shock Absorber* article in *Shock Absorber Section* for directions.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5½-6° crosswise.

**Caster**—Negative ¾°. Limits Neg. ½° to Neg. 1°.

**Camber**—0° preferred. Limits Neg. ¼° to Pos. ¼°.

**Toe In**—0-1/16". Adjust tie rod tubes equally.

**Steering Geometry**—Inner wheel 23° ± ½°. Outer 20°.

## STEERING GEAR

**Saginaw.** Worm-and-Roller type.

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type with eccentric adjustment. Hand lever applies rear service brakes.

See *Brake Section* for complete data.

► **IMPORTANT SERVICE NOTE**—**Brake Drums**—Two different makes are used: 1) Kelsey-Hayes type can be identified by one-piece stamping and flange having a sharp edge; 2) Motor Wheel type consisting of two-stampings and rolled flange. Each pair of drums (on opposite sides of car) front or rear must be the same type.

### Brake Drum Part Numbers

	Front Wheel		Rear
	Left	Right	Wheel

Kelsey-Hayes ..... 507371 ..... 507370 ..... 505300

Motor Wheel ..... 509221 ..... 509220 ..... 409176

**Drums**—Pressed steel with alloy iron liner, Diameter 11".

**Clearance**—.010" at heel and toe of each shoe.

**Lining**—Moulded. Width per wheel: 2" (front), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).

**Braking Power**—56% Front, 44% Rear.

**Master Cylinder Filling Note**—New cars shipped from the factory have master cylinder filled to level ⅞" below top of filler neck and this level is satisfactory for service (cylinders were filled to ½" below top).

**Hand Brake:** See *Service Brakes* above.

**NoRol:** Optional. See *Brake Section* for complete data.

## MISC. MECHANICAL

**Convertible Top Control:** Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See *Miscellaneous Section* for complete data.

**HOOD LOCK:** Hood is alligator type with instrument panel lock. To raise hood, pull out control knob on left side of instrument panel (hood will raise slightly), push up on safety catch tab under front edge of hood to release safety catch, raise hood.

**Hood Lock Adjustment—See Pontiac Shop Notes.**

**FRONT SHEET METAL ASSEMBLY REMOVAL, HOOD ADJUSTMENT, FRONT FENDER, FENDER CAP, & REAR FENDER REMOVAL & ALIGNMENT:** See Pontiac Shop Notes.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** First number 1001 (All Models) with Model & Plant prefix as shown below. Stamped on plate on left side of dash under engine hood.

Serial No. Prefix	Torpedo	Streamliner
Plant	46-27 47-27 46-28 47-28	
Pontiac, Mich.	P8LA P8MA P8LB P8MB	
South Gate, Calif.	C8LA C8MA C8LB C8MB	
Linden, N. J.	L8LA L8MA L8LB L8MB	
Wilmington, Del.	W8LA W8MA W8LB W8MB	
Kansas City, Kans.	K8LA K8MA K8LB K8MB	
Atlanta, Ga.	A8LA A8MA A8LB A8MB	
Framingham, Mass.	F8LA F8MA F8LB F8MB	
Serial No. Prefix	Torpedo	Streamliner
Plant	48-27 48-28	
Pontiac, Mich.	P8PA P8PB	
South Gate, Calif.	C8PA C8PB	
Linden, N. J.	L8PA L8PB	
Wilmington, Del.	W8PA W8PB	
Kansas City, Kans.	K8PA K8PB	
Atlanta, Ga.	A8PA A8PB	
Framingham, Mass.	F8PA F8PB	

**ENGINE NUMBER:** Same as Serial Number. Stamped on boss on left upper front corner of engine block.

## TUNE-UP

**COMPRESSION:** Pressure—158 lbs. at 1000 RPM. or 118-120 lbs. at cranking speed (Std. 6.5-1 Head), 189 lbs. at 1000 RPM. (Opt. 7.5-1 Head). NOTE—7.5-1 Head requires use of Ethyl fuel at low altitudes.

**VACUUM READING:** 18-20" steady idling at 7-8 MPH. (365-385 RPM. on Hydra-Matic Cars).

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAPS:** .025". Limits .023-.028".

Plug Type—AC No. 45. 14 mm. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° closed, 14° open.

Breaker Arm Spring Tension—19-23 ozs.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** 6° BTDC.

Timing Procedure—See Ignition Timing.

Timing Mark—First line of flywheel mark "/IGN. ONE/" at pointer in inspection hole in left front face of flywheel housing above starter.

Gaselector Setting—Set for barely audible ping when accelerating between 20-30 MPH. with wide open throttle.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—(1946 WDO Carb.) ¼-1¼ turns open, (1947-48 WCD Carb.) ¾-1¾ turns open, 2 screws, turning screws out gives richer mixture.

Idle Speed (standard)—450-475 RPM. or 7-8 MPH.

Idle Speed (Hydra-Matic)—365-385 RPM.

Float Level (1946 "WDO" Carb.)—5/16" from top of float to gasket seat on cover (invert to check).

Float Level (1947-48 "WCD")—3/16" from top of the float to gasket seat on bowl cover (Gauge T109-162).

Sides of floats should barely touch vertical uprights on gauge (so float won't bind on sides of bowl).

**Accelerating Pump—Lower Hole (min. stroke) Normal. Upper Hole (max. stroke)—if greater charge required.**

**Fuel Pump Pressure:** 4¾ lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in approximately vertical position with valve closed (cold).

NOTE—Valve shaft bushings are Stainless Steel.

**VALVE TAPPET CLEARANCE:** .011-.013" Hot All Valves. (.011" gauge "Go", .013" gauge "No Go". NOTE—.013" Exhaust tappet clearance recommended for sustained high speed.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Delco-Remy Nos. as follows:

1946-47—1116306 (LHD), 1116312 (RHD cars).

1948—1116455 (All cars).

NOTE—Armored cable not used on 1948 cars.

**Ignition Lock Cylinder—Briggs & Stratton 45792.** Key Series—8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy 1115126 ('46-47), 1115380 ('48).

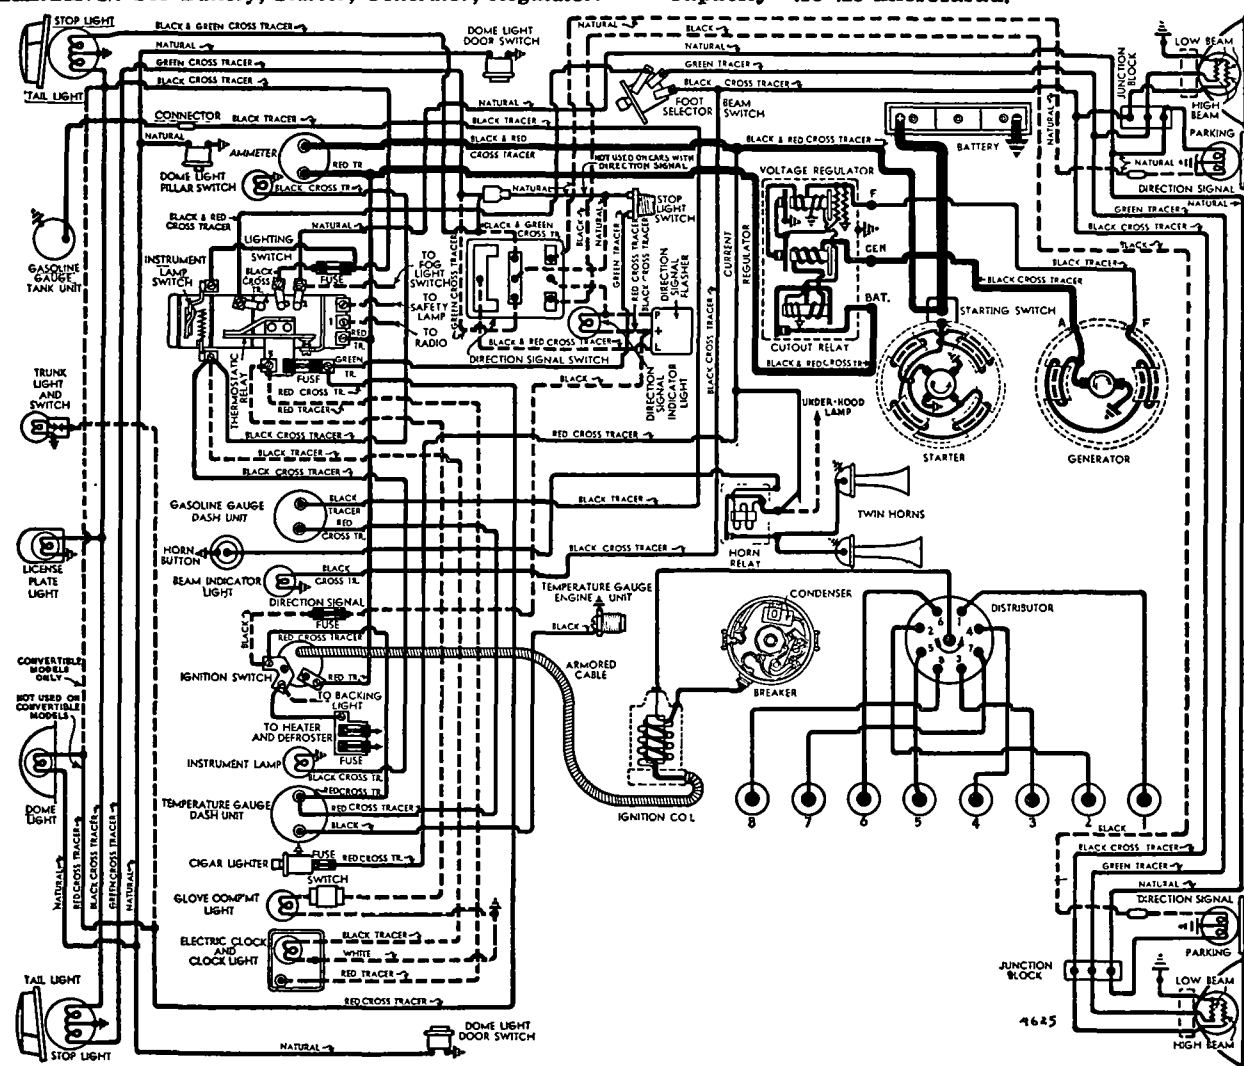

1946 NOTE—Primary terminal on 8 Cylinder is toward front. Some coils for 6 Cyl. cars have primary terminal located in same position but these coils are now marked by figure "6" stenciled in red.

CAUTION—Do not use coils marked "6" or coils with primary terminal on right side on 8 Cyl. cars.

**Ignition Current—2.5 amperes idling, 4.5 stopped.**

**CONDENSER:** Delco-Remy No. 1869704.

Capacity—18-.25 microfarad.

1946-47 PONTIAC EIGHT

►EARLY 1946 WIRE COLORS NOT UNIFORM—SEE LIGHTING

**DISTRIBUTOR: Delco-Remy 1110804.** Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum control and Gaselector adjustment.

- **Late 1948 Distributor Cap**—Has built-in radio suppression. Can be identified by high wire towers and marks "Radio" on lower edge of cap on each side.
- Breaker Gap**—.015". Limits .0125-.0175".
- Cam Angle or Dwell**—31° closed, 14° open.
- Breaker Arm Spring Tension**—19-23 ozs.
- Rotation**—Counter-clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	2.....	600
7.....	1100	14.....	2200
8½.....	1500	17.....	3000
13½.....	2100	27.....	4200

**Gaselector**—Manual adjustment providing 10° advance or retard from center '0' position. See Ignition Timing for Gaselector adjustment.

**Vacuum Spark Control, Delco-Remy Model No. 1116-021.** (Integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—7/32".

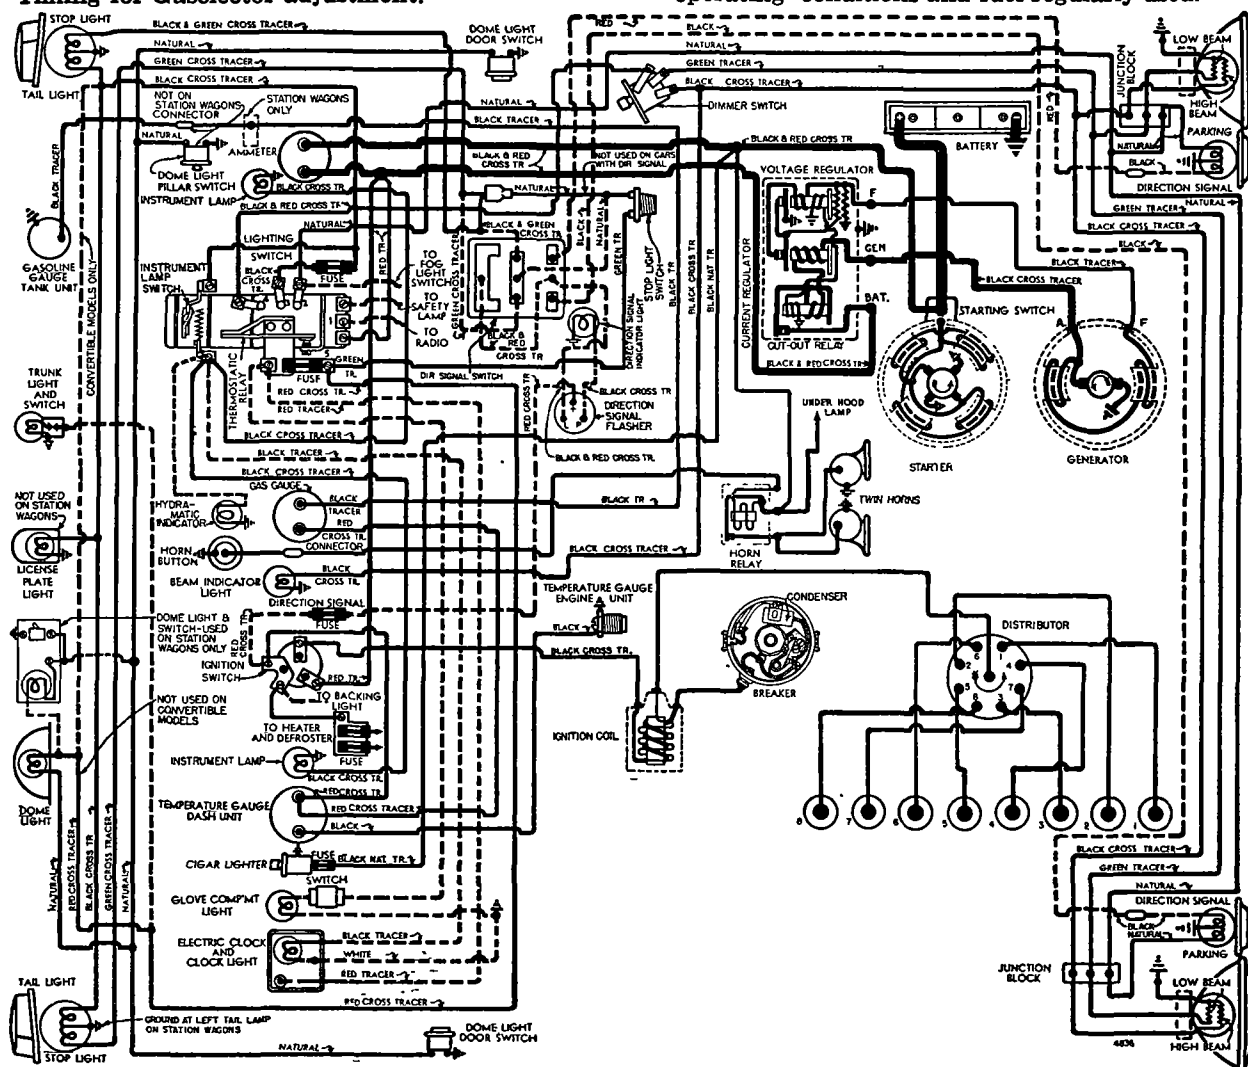

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7-9"
7½°.....	15°	13-16"
9-10°.....	18-20°	16-21"

**Removal:**—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in Gaselector arm, lift distributor out.

### IGNITION TIMING

**Std. Setting**—As given below for Regular Fuel (Std. 6.5-1 Head), Ethyl Fuel (Optl. 7.5-1 Head). See Gaselector Setting (following) for correction for operating conditions and fuel regularly used.

1948 PONTIAC EIGHT

**Flywheel Degrees** Piston Position  
All Engines ..... 6° BTDC ..... 0128° BTDC.

**Timing Mark Note**—Two straight lines of ignition mark 'IGN.ONE/' indicate allowable timing range of 4° on flywheel. Use first (6°) line for setting ignition (second line is 2° before top dead center mark).

**To Set Timing (With Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0128° before top dead center with first line of ignition mark 'IGN.ONE/' lined up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen Gaselector screw, center pointer scale ('0' mark at reference line), tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts just opening), tighten clamp bolt. Check Gaselector setting.

**To Set Timing (With Synchroscope)**—Connect synchroscope in series with #1 spark plug, fill in first line of ignition mark 'IGN.ONE/' with chalk or white paint, direct synchroscope light on flywheel (inspection hole on left side), idle engine at 6 MPH., adjust distributor as directed above.

**Gaselector Setting**—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen Gaselector arm screw, move arm clockwise (toward 'ADV' end of scale) to advance spark, counter-clockwise (toward 'RET' end of scale) to retard spark, tighten locking screw.

### CARBURETOR

#### 1946 TYPE "WDO"

**Carter Type WDO, Model 548S.** 1¼" Dual (double barrel), Downdraft type with Carter Climatic Control.

**Casting No. on Flange**—306.

**See Carburetor Section for complete data.**

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up.

**Metering Rods Jets**—See Carter Jet Table in Carburetor Section for complete data.

**Accelerator Linkage Adjustment:** See 1947-48 information listed below.

**Fast Idle:** Carter Dual (WDO) Carburetor type.

**See Carburetion Equipment Section for complete data.**  
**Setting**—With the carburetor set for correct 7-8 MPH hot or slow idle speed, hold choke valve tightly closed, turn fast idle adjusting screw in until clearance between throttle lever stopscrew and stop on carburetor casting is .073". **NOTE**—This adjustment can also be made by backing off throttle stopscrew so that throttle valves tightly closed, then hold choke valve closed, turn fast idle screw in until it contacts high point of fast idle cam, then turn screw in until throttle opening is exactly .026".

**Automatic Choke:** Carter Climatic Control (dual carburetor type).

**See Carburetion Equipment Section for complete data.**  
**Setting**—Coil housing 2 Notches Rich.

### CARBURETOR

#### 1947-48 TYPE "WCD"

**Carter WCD, No. 630S, SA, or SB (Standard).**  
**Carter WCD, No. 653S (Hydra-Matic Drive Cars).**  
1¼" dual barrel downdraft types with Carter Climatic Control.

## CONTINUED FR M PRECEDING PA E

Castings No. on Flange—373 (630S), 550 (630SA & SB), 558 (653S).

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Rods & Jets—See Carter Jet Table in Carburetor Section for complete data.

**Accelerator Pedal Service Note:** On new cars shipped from the factory, accelerator pedal hinge lock screw is tightened only finger tight (pedal must be removed for floor mat installation). This screw must be securely tightened (place screwdriver alongside locknut to hold nut while turning screw in to lock hinge pin).

**Accelerator Linkage Adjustment:**—Must be set to provide correct 'throttle-cracking' action for starting. To adjust, set idle speed at 450-475 RPM. (365-385 RPM on Hydra-Matic), disconnect battery cable at starting motor (to prevent starter cranking engine), insert .115" flat gauge between throttle stop screw and stop on carburetor, fully depress starting pedal, adjust the adjusting screw on the accelerator cross-shaft lug at idler lever (on Hydra-Matic adjust throttle cracker lever mounted on throttle control lever—pin on starter lever must not strike throttle control lever) until gauge between the throttle stop screw and stop just falls out with fast idle cam in slow idle position. NOTE—Before making adjustment, check for full throttle opening with accelerator pedal fully depressed (adjust accelerator rod if required).

**Hydra-Matic Throttle Adjustment:** See Hydra-Matic Drive article in Transmission Section.

**Fast Idle:** Carter Dual (WCD) Carburetor type.

See Carburetion Equipment Section for data.

**Setting:**—With the choke valve tightly closed and fast idle adjusting screw on highest step of fast idle cam, adjust fast idle screw until throttle opening is exactly .026" (use Gauge T109-189 between edge of throttle valve and carburetor wall on side opposite idle ports).

**Automatic Choke:** Carter Climatic Control (dual carburetor type).

See Carburetion Equipment Section for complete data.

**Setting** (630S, SA, SB)—Centered at index (for 6-547S air horn), One Point Lean (for 6-576S air horn—latest).

**Setting** (653S)—Centered at index.

## CARB. EQUIPMENT

**Fuel Pump (Fuel & Vacuum):** AC Type AJ. No. 153717.

Replacement Pump—AC No. 539.

Pressure— $\frac{3}{4}$  lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge:** AC Electric type.

**Dash Unit**—(1946) AC No. 1516818, (1947) 1516946, (1948) 1517065.

**Tank Unit**—AC No. 1516316 (All).

See Carburetion Equipment Section for data.

**Air Cleaner (std.—oil-wetted):** AC No. 1529473.

**Optl. (oil bath)**—AC No. 1529474.

**Servicing (Oil-wetted Type)**—Wash and re-oil filter element at 10000 mile intervals (twice yearly) or more often if required by operating conditions.

**Servicing (Oil-bath Type)**—Wash filter element, drain and refill lower oil base with 1 pint SAE No.

50 engine oil (SAE 20W for temperatures below freezing) at 10000 mile intervals or more often if required by operating conditions.

## BATTERY

1946

**Delco Type 17E-2W.** 6 volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—140 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.5 minutes. Five second voltage 4.4 volts.

**Grounded Terminal & Location**—As given below.

## BATTERY

1947-48

**Delco Type 15E-2W.** 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage 4.25 volts

**Grounded Terminal**—Negative (—) to engine.

**Engine Ground (Conv. Coupe & Cars with Radio)**—Strap from left rear corner of cylinder head to upper left hand starter pedal bracket-to-dash screw. **Location**—On left side in engine compartment.

**Police Battery: Delco Type 19E-3.** 6 Volt, 19 Plate, 130 ampere hour capacity (20 hour rate).

**Starting Capacity**—150 amperes for 20 minutes.

**Grounded Ter. & Location**—Same as 15E-2 above.

## STARTER

1946-47

Delco-Remy 1107921

1948

Delco-Remy 1107947

RHD Cars

Delco-Remy 1107934

**Armature No.**—Delco-Remy No. 1867897.

1946 NOTE—Starters on early cars have oiler at commutator end, later starters have graphite-impregnated bronze bearing at this point (no lubrication required).

► **Starter Pedal Sticking Correction:** Lubricate starter pedal plunger with engine oil whenever car serviced (lack of lubrication will cause wear, noise, and faulty operation—may result in damage to starter). NOTE—Check all new cars (plunger not lubricated on some cars).

► **Hydra-Matic Starter Interlock Adjustment:** See the Hydra-Matic Drive article in Transmission Section.

► **Clicking Noise Correction at Starter (Hydra-Matic):** See "Electrical System Notes" in Pontiac Shop Notes.

**Drive**—Overrunning clutch and pinion shift. Manual (1107921, 47), solenoid pinion shift (1107934).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Cranking Engine**—220-225 amperes at 5 volts.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
16 "	Lock	3.0	600

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch** (1107921, 47): No. 820052. On top of starter and operated by starting pedal (1107934)—Delco-Remy Solenoid No. 1118102. Mounted on starter and controlled by Relay No. 269-G and pushbutton switch No. 1996031 on instrument panel.

See Electrical Equipment Section for complete data.

## GENERATOR

1946-47 ..... Delco-Remy 1102665

1948 ..... Delco-Remy 1102701

Police Cars ..... Delco-Remy 1106403

**Armature No.**—Delco-Remy 1879002 (1102665 & 701).

Two brush (shunt) types with voltage and current regulation. Ventilated by drive pulley fan.

**Charging Rate Adjustment**—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.

**Maximum Charging Rate**—30 amperes, 8.0 volts, 1170 RPM. (1102665, 701), 1040 RPM. (1106403 Gen.), and above (Current Regulator Setting) with load or discharged battery. Actual charging rate controlled by Regulator according to battery condition.

## Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102665, 1102701	30	8.0	1750
1106403	35	8.0	1040

①—Current Regulator Setting—See Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes (1102665 & 1102701), 1.77-2.0 amperes (1106403) at 6.0 volts.

**Removal:**—Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Belt deflection or sideplay midway between generator & pump pulley should be  $\frac{1}{2}$ ".

## REGULATOR

Delco-Remy 1118242 ..... for 1102665 & 1102701 Gen.

Delco-Remy 1118229 ..... for 1106403 Generator

Single Core Type. Vibrating type Voltage and Current Regulators in a single case with Cutout Relay. See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

## Cutout Relay

**Cuts In**—6.2-6.7 volts hot.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

## Voltage Regulator

**Setting**—7.2-7.4 volts (1118242), 7.0-7.2 volts (1118-229) Hot (at operating temperature).

**Checking & Adjustment**—See Electrical Equip. Section.

**Air Gap**—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

## Current Regulator

**Setting**—34-36 amperes Hot (at operating temperature) for all models.

**Checking & Adjustment**—See Electrical Equip. Section.

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

## 1946-47 LIGHTING SYSTEM SERVICE NOTES

► **Wiring Harness Wire Colors** (1946)—Some harnesses were used in which wires were incorrectly color-coded (tracers not as shown in wiring diagram). All such wires were marked by typed identification on paper sleeve attached to the wire. CAUTION—If these identification are removed from wires, it will be necessary to trace circuits for continuity.

► **Chafing of Wiring Harness** (causing a short in hot lead from starter terminal)—Clearance between harness containing this lead and moving parts (Starter pedal lever, Accelerator pedal lever, Accelerator cross-shaft) must be  $\frac{3}{8}$ – $\frac{1}{2}$ ". Make certain that harness is correctly installed (should pass down between starter and engine and then under starter), and that lower clamp-on clip on starter pedal bracket is closed tight so that harness cannot bend forward and rub on accelerator cross-shaft.

► **Back-up Light Faulty Operation and Blown Fuses**—See *Pontiac Shop Notes* for directions on installation of new type switch parts to correct this trouble.

► **Cigar Lighter Faulty Operation and Short-circuits**—See *Pontiac Shop Notes* for re-working of Cowl Ventilator Hand Lever Stop (to prevent lever shorting cigar lighter lead), and installation of spacer (to prevent lighter binding on first cars).

#### 1948 LIGHTING SYSTEM SERVICE NOTES

► **Inoperative Stop Light (with Direction Signal)**: On some early 1948 cars, 1 stop lamp (usually left) would not operate with brakes on and Direction Signal Switch in neutral due to misalignment at Direction Signal Switch. Correct by replacing direction signal base and wire assembly, part #5937832.

► **Underhood Light not turning off**: On some early 1948 cars, Underhood Light Switch improperly mounted resulting in light remaining on when hood closed. To correct, install lock washer between mounting nut and radiator baffle (was incorrectly assembled between switch and underside of radiator baffle which resulted in switch being set too low).

**Headlamps**: Guide "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See *Electrical Equipment Section* for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Pontiac emblem on face of speedometer dial. Lighted when upper beams in use.

**Direction Signal**: See *Electrical Equipment Section*.

**Direction Signal Indicator**—Pilot bulb in Direction Signal Switch. Lighted whenever Right or Left Direction Signal operating.

#### Switches

**Lighting**—D-R Nos ('46-47) 1995024, ('48) 1995035

**Instrument**—Part of Lighting Switch. Rheostat operated by turning lighting switch knob.

**Beam Selector**—Delco-Remy No. 1997008.

**Stop Light**—Delco-Remy No. 1997725.

#### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Park & Frt. Direc. Signal	21-3	1154
Park (Without Signal)	3	63
Instrument, Ign. Lock	1½	55
Beam & Direc. Signal Ind.	1	51
Stop & Tail	21-3	1154
Rear License Plate	3	63
Dome	15	88
Dome (Convertible)	1½	55

## MISC. ELECTRICAL

**THERMOSTATIC RELAY**: Lighting. On switch. Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adj. Convertible Top—On rear of dash on right side. 30 ampere maximum capacity.

**FUSES**: Tail & Instrument Light. (1946-47) 9 ampere, (1948) SFE 14 ampere. In holder clipped to panel above lighting switch.

**Stop & Dome Light**—('46-47) 9 amp, ('48) SFE 14 ampere. On lighting switch.

**Heater & Defroster**—SFE 9 amp. each. In clip on instrument panel brace at steering column.

**Direction Signal**—SFE 9 amp. In connector in feed wire from ignition switch at panel brace.

**HORNS**: Delco-Remy No. 1999519 (Low Note), 1999520 (High Note). Vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999519 (Low Note)	19-21 amperes	.044-.049"
1999520 (High Note)	18-20 amperes	.034-.039"

► '46 Horn Ring Rattle & Failure of Horn to Blow (Deluxe Models) Correction—See *Pontiac Shop Notes*.

► '46 Horn Lead Wear Correction—Blowing of horns when turning corners or when car is jarred may be caused by steering column shaft wearing through insulation of horn button lead at point where it enters steering column jacket. To correct this trouble (on first cars with rubber grommet in horn lead hole), remove and discard rubber grommet, install new horn button lead, No. 266918, which has 4-inch piece of protecting loom at point where wire enters jacket.

**Horn Relay**: Delco-Remy No. 1116775.

Contact Gap—.025". Air Gap—.015" (closed).

## ENGINE

**ENGINE SPECIFICATIONS**: Own. Eight Cylinder, "L" Head type.

Bore—3¼". Stroke—3¾".

Displacement—248.9 cubic ins. Rated HP—33.8.

Developed Horsepower—107½ at 3700 RPM.

Compression Ratio—6.5-1 Std. 7.5-1 Optl.

Compression & Vacuum Reading—See *Tune-up data*.

**ORIGINAL BORE & PISTONS**: See *Pontiac Shop Notes*.

**POWER PLANT ASSEMBLY REMOVAL & FRONT INSULATOR REMOVAL**: See *Pontiac Shop Notes*.

**TIGHTENING TORQUES**: See *Pontiac Shop Notes*.

**CYLINDER HEAD**: Tightening Torque & Cylinder Head Diagram—See *Pontiac Shop Notes*.

**PISTONS**: Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove (same as 1942 type). NOTE—Pistons are plated with lead-tin alloy or pure tin (lead-tin alloy darker color) and cannot be ground. Use finished replacement pistons.

Length—3 19/32". Weight—24.7 ozs. (stripped).

Removal—Pistons and rods removed from above.

Clearance—Top Land .0165-.0285". Skirt .002"

**Fitting New Pistons**:—Use .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler 10-20 lbs. Taper & out-of-round limits .0005" max.

**Replacement Pistons**: See *Pontiac Shop Notes*.

**PISTON RINGS**: Two tapered-face compression rings above pin, one slotted oil control ring below pin. Oil ring groove has 20 oil drain holes.

NOTE—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"	.008-.015"	.0015-.003"
Oil (#3)	3/16"	.006-.013"	.001-.0025"

**Installing Rings**—Install compression rings with mark "TOP" upward.

**Replacement Rings**: Furnished in Oversizes of .005", .010", .020", .030".

**PISTON PIN**: Diameter 15/16". Length 2 7/8".

Pin is shot-peened type (shot-peened before final grinding and lapping). Pin is locked in one piston boss by self-locking lock screw and opposite boss is slotted to permit pin movement.

**Pin Fit in Piston**—See *Pontiac Shop Notes* for data.

**Pin Fit in Rod Bushing**—.0004-.0006" clearance.

**Pin Removal & Installation**: See *Pontiac Shop Notes*.

**Replacement Pins**:—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

**CONNECTING ROD**: Weight 31.7 ozs. Length 7 9/16".

**Piston Pin Bushing (Upper Bearing)**—Split aluminum bronze bushings. See *Pontiac Shop Notes* for data.

**Lower Bearing Diameter**—2"

**Lower Bearing**—Thin type, interchangeable steel-backed, babbitt-lined type.

Clearance—.0001-.0021". Sideplay—.007-.012".

**Bearing Adjustment**:—None (no shims). Refer to *Pontiac Shop Notes* for Connecting Rod Lower Bearing.

**Installing Rods**: No offset (can be installed either way).

NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used.

CAUTION—Keep each connecting rod and its bearing cap together.

**CRANKSHAFT**: Five bearing type with integral counterweights and vibration dampener on forward end.

► Flywheel to Crankshaft Bolts (on Synchro-Mesh Transmission)—¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. Either type can be used for replacement but head sizes must be alike on all bolts or engine balance will be destroyed.

► **Vibration Dampener (Harmonic Balancer) Removal**—See *Pontiac Shop Notes*.

**Bearing Diameters**—#1, 2 3/8"; #2, 2 13/32"; #3, 2 7/16"; #4, 2 15/32"; #5, 2 1/2".

**Bearings**—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike. Clearance—.0003-.0023".

► **Rear Main Bearing Oil Seal Renewal**—See *Pontiac Shop Notes*.

**Bearing Adjustment**:—None (no shims). Refer to *Pontiac Shop Notes* for Bearing Removal & Fitting.

**Replacement Bearings**: Standard size & .001" Under-size.

**End Thrust**: Taken by #4 (rear intermediate) bearing. Endplay—.003-.008".

**CAMSHAFT**: Five bearing type with non-adjustable (two sprocket) chain drive.

**Camshaft Removal & Timing Cover Oil Seal Servicing**—See *Pontiac Shop Notes*.

**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 1/8".

**Bearings**—Steel-backed, babbitt-lined bushings.

See *Pontiac Shop Notes* for bearing finished sizes.

Clearance—.0015-.0025" (new).

CONTINUED ON NEXT PAGE

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**End Thrust:**—Steel thrust plate behind camshaft sprocket. Replace if worn. Endplay—.002-.005".

**Timing Chain:** Morse. Width  $\frac{3}{4}$ ". Pitch  $\frac{3}{8}$ ". Length 21" or 56 links.

**Timing Chain Installation:**—See Pontiac Shop Notes.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that 0° marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:** Head Diameter Stem Diameter Length  
Intake ..... 1 15/32" ..... 310-.311" ..... 5.53"  
Exhaust ..... 1 11/32" ..... 310-.311" ..... 5.53"

Seat Angle Lift Stem Clearance  
Intake ..... 30° ..... 19/64" ..... Free fit to .0006"①  
Exhaust ..... 45° ..... 19/64" ..... Free fit to .0006"①  
① Guides tapered (.0006" max. clearance at bottom).

**Valve Guides:**—Removable, tapered guides (.001" taper to the inch with greatest clearance at top). Use Tool J-2542 for removing valve guides.

**Exhaust Guide Counterbore:**—Exhaust guides are counterbored to a depth of  $\frac{3}{4}$ ". Use Tool Number J-2122 to clean out counterbore when servicing valves. This tool can be used to increase counterbore (from  $\frac{1}{2}$ ") if earlier type guides having this shallower counterbore are used.

►NOTE—On 1946 cars before Eng. No. 8-36900, exhaust guide counterbore was 31/32" deep. Any stocks of this type guide, Part No. 509041 (with 31/32" counterbore), are satisfactory for service. New exhaust guides will have the shallower ( $\frac{3}{4}$ " plus 1/32" minus 0") counterbore depth.

**IMPORTANT:**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides not tapered (install and ream to fit valve stems with Reamer P.R.131).

**Valve Springs:**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. Free Length—2 9/16".

Spring Pressure Spring Length

Valved Closed ..... 59½ lbs. .... 1 29/32"  
Valve Open ..... 101 lbs. .... 1 19/32"

**Valve Lifters:**—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

**Clearance:**—Free fit. Lifter should just move freely with finger touch.

## VALVE TIMING

**Tappet Clearance:**—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'. NOTE—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**Valve Timing Check:**—With .015" tappet clearance #1 intake valve should open with #1 piston 5° or .0089" before top dead center with first straight line flywheel mark 'IGN. ONE/' slightly past indicator in left front face of flywheel housing. Reset tappet clearance .011-.013" (warm).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and timing chain. Oil pump mounted externally on right side of crankcase.

**Crankcase Capacity:**—5 qts. (refill), 6 qts. (dry).

**Normal Oil Pressure:**—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

**Oil Pressure Regulator:**—On oil pump. Opens at 40 lbs. Non-adjustable. NOTE—Replace regulator spring if free length less than 2 5/16".

**Oil Pump:** Gear type. On right side of crankcase.

**Oil Pump Servicing:**—See Pontiac Shop Notes.

**Oil Cleaner:** Pontiac precipitation type (in crankcase). Servicing—See Pontiac Shop Notes.

**Oil Pressure Gauge:** AC ('46) 1506803, ('47) 1507056, ('48) 1507221. Bourden Tube (not electric).

**Crankcase Ventilation:** Filter element in oil filler cap (inlet). Outlet pipe at valve comp. cover on right rear side of engine (cars with oil bath air cleaner equipped with 3-piece outlet pipe containing filter element).

**Oil Filler (Crankcase Ventilator) Cap Servicing:**—Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

**Crankcase Ventilator Outlet Pipe:**—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in radiator filler cap. Positive circulation with water pump on front of engine and water distributing tube in cylinder block.

**Capacity:**—19½ qts. (21¼ with Underseat Heater).

**Pressure Valve:** AC No. 846740 (Radiator Filler Cap). Opens at 4 lbs. (3¼-4¼ lbs.).

**Water Pump:** Packless type with sealed ball bearing shaft. See Water Pump Section for complete data.

**Removal:**—Drain cooling system, remove hose connection at pump, loosen belt adjustment and remove belt, take out water pump mounting bolts and lift pump out.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Starts to open 151° F. Fully open 173° F.

**Temperature Gauge:** AC Electric type.

**Dash Unit:**—('46) 1511661, ('47) 1511874, ('48) 1512027.

**Engine Unit:**—('46-'47) 1511734, ('48) 1512015.

See Miscellaneous Section for complete data.

## CLUTCH

**Inland. Single Plate, "Diaphragm," dry disc type with Long Driven Member Model 9½CF-TS (except Taxicab), Model 10CF-CS (Taxicab).**

See Clutch Section for complete data.

NOTE—Driven Members on 6 Cyl. and 8 Cyl. cars are same size but must not be interchanged. May be

identified by stenciled notation on facings and color marking of torsional springs in hub as follows:

Facing Mark Spring Color

6 Cyl. Models.....41-42 6 Cyl.....Orange & Dark Blue  
8 Cyl. Models.....41-42 8 Cyl.....Brown & Blue  
Facings—Moulded type, 2 required. I. D. 6" (All Models); O. D. 9½" (except Taxicab), 10" (Taxicab); Thickness ½".

**Pedal Adjustment:**—Free travel ⅞-1⅛" (adjusting nut on link at clutch fork). Pedal height to lower face of pedal should be 4¾" (Torpedo), 5 3/16" (Streamliner). Adjust by means of stop screw at lower end of pedal arm.

►1946 Clutch Pedal Shaft Installation Change—See Pontiac Shop Notes for new type mounting (used on later 1946 cars) to correct movement of clutch or brake pedal when other pedal is depressed.

**Removal:** Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (CAUTION—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw Driven Member, lower cover assembly and withdraw it through bottom of housing.

►Removal of Excess Release Bearing Lubricant to correct clutch sticking—If recess in bore on release bearing over-lubricated when clutch assembly installed, excess lubricant may be found causing clutch sticking. Clean out excess lubricant found at the following points: transmission drive gear, driven plate hub, clutch facings, pressure plate and and cover assembly, release bearing support tube, fulcrum points of release fork, and recess in bore on release bearing (do not wash bearing, bearing is "sealed" type). Lubricate clutch parts exactly as described under Installation Note following to avoid above condition.

**Clutch Installation Note:**—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). This supersedes original position (on 1946 cars) where seal fitted in recess on Drive Gear. Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

CAUTION—Make certain that correct type Driven Member is used (see Note above).

**Clutch Release Bearing & Support:** See Pontiac Shop Notes for description.

►1946 Release Bearing Noise Correction—See Pontiac Shop Notes for new type Support Tube to correct noise due to movement of bearing on early 1946 support tube.

## TRANSMISSION

**Own Make.** All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*

**Transmission Control:** Pontiac "Safety-shift" remote control type with gearshift lever on steering column. *See Transmission Section for complete data.*

**Removal:**—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnion) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear and lower out of car.

**Installation Note:**—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing support). **NOTE:**—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to 4¼".

## HYDRA-MATIC DRIVE OPTIONAL EQUIPMENT

**Own Make.** Consists of fluid coupling and 4 speed automatic transmission. *See Transmission Section for complete data.*

**Lubrication:**—Check fluid level in transmission every 2000 miles (lubrication period). Drain and refill every 15000 miles. Use only GM Hydra-Matic Drive Fluid.

**Capacity:**—11 qts. (drain oil pan and torus cover and refill). 12 qts. (drain, disassemble, assemble transmission and refill).

**Checking Fluid Level:**—Roll back floor mat, remove cover on floor board, set hand brake and start engine, set control lever in "DR" position, allow to run about 2 minutes. Remove indicator, wipe dry, then return and check level of fluid with indicator. Add fluid until level is at "FULL" mark.

► **CAUTION:**—Always check oil level when oil is hot, engine idling, hand brake tightly set and control lever in "DR" position.

► **Oil Level Indicator Change:**—A new indicator, Part No. 8605800 (stamped on blade—earlier type not marked) reduces capacity approx. 1 pint providing slightly lower fluid operating level to reduce fluid foaming when oil is hot.

**Hydra-Matic Linkage Adjustment:**—*See Hydra-Matic Drive article in Transmission Section.*

**Removal:** *See Hydra-Matic Drive article in Transmission Section.*

## UNIVERSALS

**Mechanics Model 2CR.** Roller bearing type, 2 used. *See Universal Section for complete data.*

► **1947-48 CAUTION:**—Rear universal nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Pontiac Rear Axle article in Rear Axle Section for complete data.*

**NOTE:**—Driveshaft is one-piece type (slip joint on transmission mainshaft, ahead of front universal).

## REAR AXLE

**1946 Type:**—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.

*See Rear Axle Section for complete data.*

**1947-48:**—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and companion flange nut controls pinion bearing "pre-load." No setscrews are used.

► **CAUTION:**—Rear universal companion nut controls pinion bearing "pre-load".

*See Rear Axle Section for complete data.*

**Ratios:**—As shown. Axles may be identified by paint mark on end of right hand axle shaft.

Model	Ratio	Ident. Paint Mark
Torpedo Std.	4.1-1	Green
Streamliner Std.	4.3-1	White
Hydra-Matic (All)	3.63-1	Violet
All (Econ.)	3.9-1	Red
All (Heavy Duty)	4.55-1	Yellow

**Backlash:**—.003-.012" (new), slightly over .012" (worn).

**Removal:**—Disconnect rear universal (wire trunnions, do not disengage spline joint at transmission), remove axle shafts, carrier flange mounting screws and carrier.

► **1947-48 CAUTION:**—Rear U-joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal:**—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 (do not drag axle shaft on oil seal).

**Wheel Bearing Adjustment:**—None.

## SHOCK ABSORBERS

**Delco Model 1947-C,D (front), Model 1944-V (rear).** Hydraulic, double acting (front), direct (rear). *See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5½-6° crosswise.

**Caster:**—Negative ¾°. Limits Neg. ½° to Neg. 1°.

**Camber:**—0° preferred. Limits Neg. ¼° to Pos. ¼°.

**Toe In:**—0-1/16". Adjust tie rod tubes equally.

**Steering Geometry:**—Inner wheel 23° ± ½°. Outer 20°.

## STEERING GEAR

**Saginaw.** Worm-and-Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type with eccentric adjustment. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

► **IMPORTANT SERVICE NOTE:**—Brake Drums—Two different makes are used: 1) Kelsey-Hayes type can be identified by one-piece stamping and flange having a sharp edge; 2) Motor Wheel type consisting of two stampings and rolled flange. Each pair of drums (on opposite sides of car) front or rear must be of the same type.

Brake Drum	Front Wheel		Rear
Part Numbers	Left	Right	Wheel
Kelsey-Hayes	507371	507370	505300
Motor Wheel	509221	509220	409176

**Drums:**—Pressed steel with alloy iron liner. Diameter 11".

**Clearance:**—.010" at heel and toe of each shoe.

**Lining:**—Moulded. Width per wheel 2" (front), 1¾" (rear). Thickness 3/16". Length per shoe 9 11/32" (primary), 11 31/32" (secondary).

**Braking Power:**—56% Front, 44% Rear.

**Master Cylinder Filling Note:**—New cars shipped from the factory have master cylinder filled to level ⅞" below top of filler neck and this level is satisfactory for service (cylinders were filled to ½" below top).

**Hand Brake:** *See Service Brakes above.*

**NoRol:** Optional. *See Brake Section for complete data.*

## MISC. MECHANICAL

**Convertible Top Control:** Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

*See Miscellaneous Section for complete data.*

**HOOD ASSEMBLY****1940-48 MODELS**

**HOOD LOCK:** Alligator type hood with lock handle ('40), release button ('41-48) on instrument panel. To release hood, push down on lock handle and press back safety catch on 1940, or pull out on release knob and pull forward on safety catch on 1941-48 cars.

**Lock Adjustment (1941-48)**—Lockstud should be positioned so that hood locks securely with firm pressure on top of hood (if stud adjusted too high, hood will not lock securely; if stud adjusted too low, hood will rattle). To adjust lock, loosen locknut on upper end of stud, turn stud counter-clockwise to lower stud, clockwise to raise stud, tighten locknut after completing adjustment. Lubricate latch on underside of grille top baffle and control wire in conduit.

**1947-48 MODELS**

**HOOD ALIGNMENT:** Raise hood, unhook hinge spring on each side of cowl, loosen three hinge plate to cowl bolts slightly at each plate, loosen four hood latch plate capscrews at front. Close hood, then position hood until aligned properly. Raise hood without disturbing hinge plates on cowl and tighten plate bolts. Hook hinge springs in place, lower hood to permit lock stud to center hood latch plate, raise hood, tighten plate capscrews. If further adjustment required, fenders and grille assembly can be shifted.

**1939-42 MODELS**

**HOOD SIDE PANEL REMOVAL:** Separate removable hood side panels used. To remove, take out attaching bolts and screws on upper and lower edges.

**FRONT END SHEET METAL****CHAMPION (1939-40)**

**ENGINE PAN INSTALLATION:** Champion 1939-40. To prevent mud and water splashing up on engine from road, special service pans, Front Engine Pan Part No. 199059, and Engine Side Pan Part No. 197183, may be installed as follows:

**Engine Front Pan**—Place pan in position between two front cross-members with notched edge clearing fuel line, mark mounting hole locations. Drill five mounting holes with 13/64" drill, bolt pan in position.

**Engine Side Pan**—Place pan in position on left side of engine so that it clears steering gear and clutch housing (pan attaches to upper edge of frame siderail and re-inforcing brace to lower edge), mark mounting hole locations. Drill three 13/64" mounting holes in top edge of frame for pan bolts, one 13/64" hole in lower edge of frame for re-inforcing brace, bolt pan and brace in position.

**1939-40 MODELS**

**FRONT FENDER APRONS & BAFFLES:** To correct Complaints of Ignition cutting out due to water splashing from road—Baffles should be installed on Champion cars and aprons should be checked on other models as follows:

**Champion Models (1939-40):**—Install baffles at front face of frame body brackets under each front fender to seal opening at rear edge of fender aprons. On late 1940 cars, holes are drilled in body bracket for baffle installation. On 1939 and early 1940 cars, drill hole 1" from top face of bracket and 1 7/16" from frame using 7/32" drill. Use special self-tapping screws to attach baffles.

**Commander & President (1939-40):**—Check shield at rear end of front fender aprons and bend apron so that anti-squeak strip riveted on lower edge of shield contacts forward face of front frame body bracket tightly. This will prevent water being deflected from bracket onto engine.

**IMPORTANT SERVICE CAUTION**—On cars before Serial No. 4157417 (Comm. 10A), 7134832 (Pres. 6C), check apron on both sides of car for interference with brake tubes located below lower edge of apron and bend apron in so that clearance is at least 1/4".

**ENGINE REMOVAL****CHAMPION (1947-48)**

**ENGINE REMOVAL:** For Oil Pan Removal & Engine Servicing. Drain cooling system, position car under chain hoist, disconnect and remove parts as follows:

1. Remove hood (disconnect at hinge arms).
  2. Remove center cylinder head capscrew and install lifting eyebolt (cylinder head must be in place on block). Attach chain hoist to eyebolt and take up slack in hoist chain.
  3. Remove two clutch housing to engine rear plate dowel bolts and nuts, and 4 housing to engine plate bolts and nuts on lower edge. Remove 3 capscrews at top of housing by working through opening in front floor (housing will be secured by one bolt and nut at oil pressure pipe).
  4. Disconnect battery ground at battery.
  5. Remove 3 radiator core-to-core support screws on left side and free headlamp wiring harness from clips on radiator and fender.
  6. Remove 2 water outlet-to-cylinder head capscrews.
  7. Disconnect wires at generator and primary lead at ignition coil.
  8. Disconnect accelerator cross shaft from push rod and heat indicator from cylinder head.
  9. Take off starter (not necessary to disconnect wires) and place to left of hand brake cable.
  10. Remove water pump inlet hose and 3 radiator core-to-core support screws on right side.
  11. Take out radiator core, rotate fan and move headlamp wiring harness to clear radiator inlet and outlet.
  12. Remove 4 fan capscrews, remove fan and pulley. Lay headlamp harness on top of core support.
  13. Disconnect flexible fuel pump connection from front gasoline line, and exhaust pipe from manifold, lower pipe off manifold studs.
  14. Loosen engine breather pipe capscrew. Disconnect windshield wiper hose at manifold and flexible line from upper oil pressure gauge pipe.
  15. Remove one bolt and nut on clutch housing at oil pressure pipe.
  16. Remove front engine support from front frame cross-member and front engine insulator.
  17. Push car to rear to free engine from clutch housing, slowly raise engine while moving forward, tilting engine until clutch clears transmission main drive gear shaft, and engine rear plate clears center tie rod, then push engine to rear, turning engine 45° to right, finally hoist engine slowly from chassis.
- NOTE**—Engine should be placed on an engine stand for ease in performing service work.

**Engine Installation Note:** When installing engine, align clutch driven plate with pilot bearing and lubricate bearing with wheel bearing grease. Place car in high gear so that transmission main drive gear can be rotated by moving car for engaging clutch driven member. Use two 1/4" x 8" tapered drifts to align clutch housing and engine rear plate, coat two clutch housing dowel bolts with white lead, install these bolts and tighten in place with nuts.

**CAUTION**—Do not drive these dowel bolts into place.

**Engine Rear Mounting Note**—See same note for Commander model (below) for rear engine mounting installation directions.

**COMMANDER (1947-48)**

**ENGINE REMOVAL:** For Oil Pan Removal & Engine Servicing. Drain cooling system, position car under chain hoist, disconnect and remove parts as follows:

1. Remove hood (disconnect at hinge arms).
2. Disconnect battery ground from cylinder head.
3. Remove exhaust pipe hanger ahead of muffler and bracket and clamp from pipe at clutch housing. Disconnect exhaust pipe at manifold.
4. Remove transmission (see Transmission Removal on car model page).
5. Disconnect clutch operating shaft from throw-out shaft by taking out cotter pin and inner clevis pin from sleeve next to clutch housing and pulling shaft and sleeve toward frame.
6. Take out mounting bolts and remove rear engine mounting lower cushions and spacers and front engine mounting insulator-to-support bolts.
7. Remove center cylinder head capscrew and install lifting eyebolt (cylinder head must be in place on block). Attach chain hoist to eyebolt and take up weight of engine.
8. Remove right horn from cowl (not necessary to disconnect horn wires) and place on wiper motor.
9. Remove engine breather pipe. Disconnect windshield wiper hose at manifold and flexible line from upper oil pressure gauge pipe. Disconnect flexible fuel line coupling at fuel pump.
10. Disconnect radiator inlet and outlet hoses. Remove 6 radiator core-to-core support screws and free headlamp wiring harness from clips on radiator and fender.
11. Take out radiator core, rotate fan to clear radiator inlet and outlet. Remove fan and pulley.
12. Disconnect wires at generator and primary lead at ignition coil. Remove magnetic switch from starter without disconnecting wires and place switch to left of hand brake cable.
13. Disconnect accelerator cross shaft at push rod and heat indicator from cylinder head.
14. Push car to rear slowly, raise front of engine and maneuver front end into core support opening, then push engine to rear (swing rear end to right), finally hoist engine slowly from chassis.

**NOTE**—Engine should be placed on an engine stand for ease in performing service work.

**Engine Installation Note:** When installing engine, align clutch driven plate with pilot bearing and lubricate pilot bearing with wheel bearing grease.

**Engine Rear Mounting Note**—When installing rear mountings, make certain that spacer tube in place in biscuit type rubber mountings and tighten these mounting bolts with torque of 25-30 ft. lbs.

**CAUTION**—Spacer tube regulates compression of the rubber biscuits and must not be shortened or omitted. Excessive tightening of the bolts will damage spacer tubes.

## CYLINDER HEAD

## ALL MODELS

**CYLINDER HEAD GASKET:** Coat lower face of gasket and face of cylinder head with Perfect Seal Gasket cement before installing (use sparingly and see that it does not enter screw holes and water passage openings).

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagrams. Tighten heads as follows:

**Cast Iron Heads**—With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts (additional tightening may be necessary for correct tension).

**Aluminum Heads**—With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## PISTON PINS

## CHAMPION (1939-48)

## COMMANDER (1947-48)

**PISTON PIN REMOVAL & INSTALLATION:** Champion—Tapered pin and nut secures pin in rod. To remove pin, place rod and piston on assembling fixture No. J1293, take nut off and install on opposite end of pin and turn nut down pulling pin out. To install, place pin on fixture, slip piston and rod on pin, tighten pin nut (rock rod to insure lock pin seats properly). One nut only used on lock pin.

CONTINUED ON NEXT PAGE

C NTINUED FR M PRECEDING PAGE

**CONNECTING ROD & BEARINGS**

1939-48 MODELS

**CONNECTING ROD PALNUT INSTALLATION:** Used in all models. Consists of a special patented lock-nut installed on top of regular nut instead of cotter-pin. To install Palnut, tighten regular nut properly (see Torque table), install Palnut with open face out (away from regular nut), tighten Palnut until it just contacts regular nut, then tighten Palnut 1/2 turn additional to lock it in place.

**VIBRATION DAMPENER**

PRESIDENT (1936-42)

**VIBRATION DAMPENER:** President. Consists of a spring-loaded flywheel mounted on four tapered rubber cushions between a friction facing on the fan pulley and a damper plate on the front end of the crankshaft. The flywheel oscillation is controlled by the friction of the friction facing and the compression of the rubber cushions. Flywheel radial movement is controlled by a fibre ring on the fan pulley hub. Spring tension is adjusted by shims under spring in flywheel, compression of rubber cushions adjusted by shims on bolt sleeve between cushion and damper plate.

**Removal & Installation:**—Dampener can be removed as an assembly (without disturbing adjustment) by removing two of the four retaining screws in the damper plate (do not disturb other two screws). Use Puller HM-925 to remove dampener assembly by installing two puller screws in holes from which dampener retaining screws removed.

**NOTE:**—When installing crankshaft nut, make certain that copper-asbestos gasket in place under nut (necessary to prevent oil leaks at this point).

**Servicing:**—If dampener disassembled for replacement of rubber cones or springs, these parts must be adjusted when re-installed as follows:

**Rubber Cones:**—Assemble friction facing, damper flywheel, bolt sleeves, and rubber cones on top of fan pulley. Install one heavy washer on top of each cone. Press cones and spacer sleeves firmly down in position, measure amount spacer projects above face of heavy washer on cone by using feeler gauge (build up feeler gauge thickness until top surface of feeler even with top edge of spacer sleeve). Measure total thickness of feeler gauge and heavy washer with micrometer, select two heavy washers and shims (as required) equal to the micrometer reading plus .015" (to insure correct cone compression of .015"), install this shim and washer pack on top of the rubber cone when installing the damper plate and retaining screws, tighten screws securely (sleeves limit cone compression to correct figure).

**Damper Springs:**—Shims are installed in flywheel under each tension spring so that spring pressure is 50 lbs. each or 200 lbs. total. If new springs installed, use shim pack used under old spring.

CHAMPION (1942-48)

COMANDER (1938-48)

**VIBRATION DAMPENER:** Dampener consists of a flywheel mounted on two rubber discs (discs have insulating buttons at pilot rivet holes) mounted on the crankshaft pulley hub at the forward end of the crankshaft and retained by a large nut on the end of the crankshaft. Compression of rubber discs is

limited by length of crankshaft pulley hub (when retaining nut drawn up securely) and no adjustment required. If dampener does not operate correctly, replace rubber discs.

CHAMPION (1939-40)

**OIL LEAKS AT FAN DRIVE PULLEY (CHAMPION):** To correct oil leakage at this point on 1939 and 1940 cars, install special copper asbestos gasket No. 199108 on front face of fan drive pulley, install new heavier plain washer No. 189959 on gasket, and use new star type lockwasher on retaining screw. These parts are installed at factory on later 1940 cars.

**CAMSHAFT & BEARINGS**

CHAMPION (1939-46)

**CAMSHAFT REMOVAL:** Champion. To remove camshaft, use Puller HM-925 to remove vibration dampener, take out screws and remove timing gear cover. Remove oil pump and drive shaft, take off valve tappet cover plates, remove cylinder head. Install special valve lifter supports (see Note below) on each valve lifter (lifter is mushroom type and must be blocked up so as to clear cam lobes). Remove two capscrews retaining camshaft thrust plate (insert socket wrench between camshaft gear spokes), pull camshaft gear and camshaft out as an assembly. When installing camshaft, do not tighten timing gear cover screws until after crankshaft pulley has been installed so as to secure correct alignment of pulley hub and oil seal washer in gear cover.

**NOTE:**—Valve lifter supports should be made of hardened strip steel in inverted "U" shape .750" high and 2 1/32" wide (inside). A 3/8" slot, 9/16" deep, with rounded end and 1/16" radius corners, should be cut in top of support and front corners should be beveled 1/8" for distance 3/8" back from front edge. This will allow supports to be tipped down to engage lifters and will raise lifters sufficiently to clear cams when supports pushed in place.

COMMANDER (1939-42)

**CAMSHAFT REMOVAL:** Same as Champion except that valves, springs, and lifters are removed. Lifters are barrel type and can be removed from above after adjusting screw has been taken out.

PRESIDENT (1939-42)

**CAMSHAFT REMOVAL:** Same as Champion except that valve tappet and guide assemblies are removed by taking out screws in each assembly. When re-installing assemblies, make certain that gaskets in place and oil holes in gaskets and block are aligned.

1947-48 MODELS

**CAMSHAFT REMOVAL (With Engine out of Car):** Remove vibration dampener (Puller HM-925), remove timing gear cover, pull crankshaft gear (Puller HM-925). Remove cylinder head, valves, valve springs, and oil pump. Invert engine so that valve lifters will not interfere with camshaft removal. Remove two capscrews and lockwashers in timing gear thrust plate, pull camshaft straight out through front of engine.

1947-48 MODELS

**CAMSHAFT BUSHING INSTALLATION:** Use Tool J-2036-A to remove old bushings and to install new bushings.

1947-48 MODELS

**CAMSHAFT ENDPLAY:** Endplay regulated by thickness of spacer installed on camshaft directly behind timing gear and is equal to amount by which thickness of spacer exceeds thickness of thrust plate bolted on cylinder block. When installing new parts, measure both thrust plate and spacer with a micrometer, select parts so that endplay is .004-.006" (spacer must be .004-.006" thicker than thrust plate).

**TIMING GEARS**

1936-48 MODELS

**TIMING GEARS:** Camshaft Gears (All Models). Holes provided in gears (on Champion and Commander), gear hub recess threaded (President) for gear puller to remove gears. Use tool HM-925 (Champ.&Comm.), HM-865 (President). See Replacement Camshaft Gear Sizes (below) for size selection when replacing gears. Use gear pusher tool HM-861Y (all models) to install gears. **CAUTION:**—Do not drive gears on with a hammer which will loosen gear at hub.

**Replacement Camshaft Gear Sizes:**—Furnished in three sizes: 'S'—Standard, 'H'—High Limit, 'L'—Low Limit. When replacing gear on engine with considerable service, install next largest camshaft gear size. For reconditioned engine with new camshaft and main bearings use same size gear. Crankshaft gear furnished in standard size only.

**Crankshaft Gear (All Models):**—Tapped holes provided in all gears for puller. Use Puller HM-925 to remove gear, Pusher HM-861Y to install gear.

**VALVE SYSTEM**

1936-48 MODELS

**VALVE SPRING INSTALLATION:** Springs should be installed with closed-coil end of spring upward.

**Valve Lifter Tension Spring:** Consists of "U" shaped flat spring installed so as to engage lower end of valve stem and upper end of lifter (spring tension keeps lifter on cam lobe). Make certain that tension springs in place when valves and springs installed.

**Spring Dampers (Commander & President):**—Consist of open-sided cages installed on upper (closed coil) end of each valve spring. Make certain that dampers in place when springs installed.

**SELF-LOCKING TAPPETS:** Champion—Tappet screws slotted on lower end and require no lock-nuts. When tappet screws replaced, car manufacturer recommends that screws must check as follows: Pull required to move tappet screw must be 25 in. lbs. minimum (4 lbs. pull on 8" wrench).

**OIL PUMP**

CHAMPION (1939-48)

**OIL PUMP REMOVAL:** Oil pump must be disassembled as follows for removal from engine: Remove 4 cover screws and washers, take off cover, gasket, idler gear, and drive gear. Remove woodruff key and "C" washer from driveshaft which allows pump body to be taken off engine (driveshaft stays in engine). Oil pan must be removed in order to take out oil pump driveshaft.

**Oil Pump Re-Assembly and Installation:** Turn engine over until #1 piston at TDC entering power stroke, "UDC 1-6" flywheel mark (1939-46), vibration dampener mark ('47-48) aligned with pointer. Engage pump shaft with key-way in end of shaft pointing down (key way will rotate to rear when

gears meshed). Install new body gasket and pump body over shaft, insert "C" washer and woodruff key on shaft, install pump drive gear and idler gear. Install cover using a new cover gasket and tighten screws securely. Prime pump with engine oil by disconnecting oil pressure gauge line fitting at pump.

#### COMMANDER (1947-48)

**OIL PUMP REMOVAL:** Car manufacturer recommends following procedure for oil pump removal (and vacuum booster pump on 1947 models) with engine in chassis:

1. Drain radiator. Remove hood (disconnect at hinge arms). Position car under chain hoist with hook slightly to left of engine and turn front wheels to extreme right. Disconnect front engine insulator from engine support (take out bolts and nuts).
2. Remove center cylinder head capscrew and install lifting eyebolt. Attach chain hoist hook to eyebolt.

**IMPORTANT**—Upper end of chain hoist should be approx. 15° to left of engine.

3. Take off starter (not necessary to disconnect wires) and place to left of hand brake cable.
4. Disconnect clutch operating shaft from throw-out shaft by taking out cotter pin and inner clevis pin from sleeve next to clutch housing and pulling shaft and sleeve toward frame.
5. Take out mounting bolts and remove rear engine mounting lower cushions and spacers.
6. Remove radiator inlet and outlet hoses.
7. Disconnect oil gauge pipe at pump. Loosen opposite end at flexible coupling and move pipe for clearance (do not bend pipe). On 1947 models with booster pump, remove pipe between vacuum booster (on outer end of oil pump) and manifold tee.
8. Hoist engine until bottom of right side of front engine support insulator is 1 5/8" above support. With engine in this position, right front corner of cylinder head should be 1 1/4" from closest point on right fender skirt (if necessary engine can be levered and blocked into position for this clearance).

9. On 1947 models, remove booster body, gasket, and vane, by taking out 8 mounting screws (use 5/32" Allen wrench). Pull rotor off shaft using 3/16" drift punch inserted in hole on side of rotor. Take off booster base plate and gasket. Remove 4 screws in booster adapter plate (use 7/32" Allen wrench), take off plate, gasket and idler gear. On 1948 models, remove 4 oil pump cover plate screws, take off plate, gasket, and idler gear.

10. Pull pump out of engine with twisting action, keeping pump toward front of engine as far as possible (outer end of shaft will pass between ends of steering knuckle upper control arm-to-frame rear bracket bolts).

11. Remove pin from driveshaft gear, press shaft out of gear and pump body. Pump gear can then be removed from shaft by pressing on outer end of shaft.

**Oil Pump Re-Assembly and Installation Note:** To re-assemble pump, install "C" washer in groove on shaft and woodruff key in slot adjacent to "C" washer groove, press oil pump drive gear on shaft. Install shaft with gear in pump body. Press driveshaft gear on opposite end of shaft with pin hole in

shaft and gear in alignment. Use new 3/16" pin to lock gear to shaft (peen pin securely). If new driveshaft and driveshaft gear installed, proper endplay secured by pressing shaft on gear with .003" feeler inserted between gear and upper end of pump body, drill hole in shaft using hole in gear as a guide, ream hole to 3/16", use new 3/16" pin to lock gear (peen pin securely). Use new gaskets throughout. Install pump on engine in same manner as described for 1942 Commander. Prime pump with engine oil by disconnecting oil gauge line fitting at pump.

#### COMMANDER (1938-48)

**OIL PUMP INSTALLATION:** Commander. To insure correct rotor position of distributor when pump installed, install pump as follows: Remove distributor, crank engine over (with piston #1 on compression) until vibration damper mark "UDC/1-8" lines up with pointer on gear case, sight down distributor shaft hole and mesh oil pump drive gear so that drive tongue on shaft is 30° from the horizontal (upper end pointing toward rear of engine) with offset toward the top. Distributor shaft slot should engage drive tongue with rotor turned to #1 segment in distributor cap.

#### PRESIDENT (1938-42)

**OIL PUMP INSTALLATION:** President. Turn engine over until piston #1 is on TDC entering power stroke with vibration damper mark "UDC/1-8" lined up with pointer on gear case, turn pump shaft so that distributor drive tongue is approximately 45° from the vertical (upper end pointing toward rear of engine) with offset toward the top (right side of car when installed). Install pump which will rotate gear so that tongue should be approximately parallel with camshaft and offset away from shaft. Install distributor drive shaft, meshing slot at lower end with oil pump shaft tongue. Slot at upper end of shaft should be at right angles to camshaft and offset toward rear of engine. Distributor shaft tongue should engage with this slot with rotor turned to #1 segment in distributor cap.

### OIL PAN REMOVAL

#### COMMANDER (1939-42)

**OIL PAN REMOVAL:** Set #2 piston at Top Dead Center for oil pan removal and installation.

#### 1947-48 MODELS

**OIL PAN REMOVAL:** Car manufacturer recommends that engine be removed from chassis. See ENGINE REMOVAL (preceding).

#### CHAMPION (1939-48)

**OIL PAN INSTALLATION:** Check engine front plate gasket and replace if required. Install side pan gaskets with tight fit against front plate gasket. Next install oil pan filler block gasket (use only iron filler block on 1947-48 cars). Do not tighten timing cover to block screws. Install rear oil pan gasket and guide oil pan into place using pilot screws. Tighten oil pan screws. Finally tighten oil pan filler block screws on timing gear cover.

### RADIATOR

#### 1939-40 MODELS

**RADIATOR REMOVAL:** To remove radiator, remove brace rods, uncouple hose connections, free radiator from shell and lift straight up.

### CLUTCH NOTES

#### 1939-40 MODELS

**CLUTCH RELEASE SHAFT LUBRICATION:** Champion 1939-40 Models—To prevent clutch slipping or sticking due to seizing of release shaft, shaft should be oiled at regular intervals as directed for 1941 model (below) and new type bushings can be installed as directed below. To correct squeaks or other noise at frame end of clutch release cross-shaft, felt oiler and cover should be installed on frame at outer end of shaft as directed below.

**Champion Release Shaft Bushings (1939-40)**—New type porous, oil-impregnated bushings available for service (Part No. 199918—bushing, 196080—bushing and retainer assembly) to correct sticking of shaft. The new bushings should be oiled regularly in same manner as other types as directed above.

**Clutch Release Cross-shaft Oiler:**—Consists of felt oiler, spring and cover similar to type used on all 1941 models. To install this assembly on 1939-40 cars, clean outer face of left frame siderail around end of clutch release cross-shaft and shaft, install felt on end of shaft, place cover over felt with attaching bolt holes along line of frame, mark bolt holes for drilling, remove cover and felt, drill holes for attaching bolts with 7/32" drill. Saturate felt (Part No. 199621) with #30 engine oil and install felt on end of shaft, install felt retainer washer, retainer spring (Part No. 631893), and cover (Part No. 199619) in order and tighten cover bolts securely. Cover should be removed and felt lubricated with SAE #30 engine oil every 5000 miles.

#### 1941-47 MODELS

**CLUTCH RELEASE SHAFT LUBRICATION:** On all Studebaker models the clutch release cross-shaft bushing at each end of clutch release cross-shaft should be oiled with lubricating oil at regular chassis lubricating periods. **CAUTION**—If bushings not oiled, clutch may stick or slip due to seizing of shaft. **Clutch Release Shaft**—Lubricate shaft at each side of clutch housing with SAE #30 engine oil every 1000 miles.

**1941-46 Cross Shaft**—Remove cover on outside of frame siderail at left end of clutch cross-shaft and lubricate shaft at this point with SAE #30 engine oil every 5000 miles. **CAUTION**—When installing cover, make certain that felt, felt retainer, and spring are correctly installed within cover.

### TRANSMISSION NOTES

#### COMMANDER (1936-40)

#### PRESIDENT (1936-42)

**OVERDRIVE TRANSMISSION REAR SUPPORT INSTALLATION:** On cars with Overdrive, rear support (must be removed to remove transmission) should be installed with original shims in same location in order to maintain alignment. These shims located between support and frame at each end. If shims lost or readjustment necessary, install support as follows: Hold support in place under transmission case, install sufficient shims at each end to take up all except 1/16" clearance between support and frame, install frame bolts, tighten bolts securely with shims in place. This clearance will provide correct compression of the support rubber cushions.

C NTINUED N NEXT PA E

CONTINUED FROM PRECEDING PAGE

**PROPELLER SHAFT**

1947-48 MODELS

**PROPELLER SHAFT & SUPPORT BEARING ASSEMBLY:** New type two-unit propeller shaft (separate Front and Rear Propeller Shafts) with intermediate Universal Joint in Support Bearing Assembly on cross-member.

**Front Propeller Shaft**—One piece type (no slip joint) with intermediate universal joint yoke splined on rear end and retained by capscrew in end of shaft. See Support Bearing Assembly.

**Rear Propeller Shaft**—Conventional type with slip joint at forward end.

**Universal Joints**—Spicer needle bearing type. Bearing cups are retained on yokes by "U" bolts and universals are dismantled by removing nuts from these bolts. See *Universals Section for complete Universal Joint data.*

**Propeller Shaft & Support Bearing Removal:** Disconnect rear propeller shaft by taking out "U" bolts mounting intermediate universal joint on rear flange of front shaft (behind support bearing assembly) and sliding universal joint and stub shaft back on slip-joint. Remove capscrew and washers retaining universal joint flange on rear of front shaft, punchmark flange and shaft to insure correct re-installation, remove flange using Puller J-2046. Remove nuts and washers on forward end of studs mounting support assembly on frame cross-member, pull assembly off splines of front propeller shaft. To dismantle support cushions, remove nuts and washers on rear end of frame mounting studs. Studs have shoulder at each end to position rubber cushion and prevent excessive compression of the cushion when stud nuts are tightened.

**Installation**—Re-install support bearing assembly and propeller shafts by reversing removal instruction.

**Support Bearing Servicing:** Bearing is sealed type (pre-packed with lubricant) and must never be washed in gasoline or other solvents.

**CAUTION**—Do not re-install support bearing which has been washed in gasoline or other liquids which will remove lubricant.

**Bearing Removal & Installation**—To remove bearing from support bracket, press bearing out using a piece of tubing of sufficient size to engage outer bearing race. Install new bearing in same manner and press bearing in until outer bearing race is just flush with front edge of support bracket. With front propeller shaft in place in car, install spacer (some Commander cars—see Note below) and dust shield on shaft, then install support bearing assembly, secure support to cross-member with lockwashers and nuts on forward ends of studs, make certain that plain washer and lockwasher installed on rear end of studs. Tighten nuts securely.

**Spacer Note (Commander Models)**—This spacer used on 1947 Commander cars without Overdrive before Serial Nos. 4,292,468 (South Bend), 4,818,501 (Los Angeles). Spacer not used on later Commander cars and other models.

**FRONT SUSPENSION NOTES**

LATE 1947 COMMANDER

**CASTER CHANGE (Late 1947 Commander Model):** Caster change (0° to +½° changed to -2° to -3°) went into effect beginning with the following serial numbers (see additional car numbers following):

Caster Change		
Serial Number	South Bend	Los Angeles
Comm. 14A .....	4,276,243.....	4,819,208
Comm. 14A Convertible .....	4,276,102.....	
Land Cruiser 14AY .....	4,276,053.....	4,819,188

**Serial Nos. (Other Cars)**—Following cars also have this changed Caster specification: 4819196, 4819200, 4819201, 4819177, 4819180, 4819185.

**Suspension Parts Change:** Following parts were changed with change in Caster specification as listed above (these parts not interchangeable with similar parts used previously): Steering Knuckle (Right & Left), Steering Knuckle Shims, Steering Knuckle Arm (Right & Left), Steering Knuckle Upper Bushing (first) and Bearing Rollers (Later), Steering Knuckle Upper Control Arm Support (Right & Left), King Pin (Right & Left), and King Pin Thrust Bearing.

See *Front Suspension Section for complete data.*

**BRAKE NOTES**

ALL MODELS

**HILL-HOLDER ADJUSTMENT:** On cars with Hill-Holder (optional equipment), check action whenever clutch adjusted to make certain that brakes release just before clutch engages.

**Adjustment**—Loosen locknut on end of Hill-holder control rod, shorten rod for earlier brake release, lengthen rod for later release, tighten locknut.

COMMANDER &amp; PRESIDENT (1941)

**PARKING BRAKE CABLE (1941 Comm. & Pres.):** To correct hand brake cable and conduit assembly being twisted or looped out of line when hand brake applied with hard pull, clip conduit to left front fender apron as follows: Use sheet metal screw Part No. 618x10, clip Part No. 172654, and washer Part No. 41x509. Punch hole in fender apron (opposite rear upper control arm frame bracket) approx. ⅛" diameter, install clip and screw.

**MODEL IDENTIFICATION**

**NOTE:**—These models are similar except that Model 3A fitted with conventional front axle, Model 4A with Planar type independent springing. All other data below applies to both models. Startix optional on all models.

**SERIAL NUMBER:**—On plate on left frame side member under front fender. First numbers as follows:

Factory	Model 3A	Model 4A
South Bend	5,512,001	5,235,001
Pacific Coast	5,850,001	5,800,001
Canada	5,960,801	5,965,801

**ENGINE NUMBER:**—First number—D-63,001. Stamped on left center of engine block.

**TUNE-UP**

**COMPRESSION:**—Ratio—6.3-1. Pressure—105 lbs. at cranking speed of 150 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" of HG. with engine idling at 450 R.P.M. or 8 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type 8-S. 18 mm. Metric. Gaps—Set at .025".

**NOTE:**—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—10° max. at 1400 RPM (distr.).

Vacuum Advance—3° distr. with 6" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—9/64" BTDC. Vibration dampener mark (9/64" ahead of 'UDC/1-6') aligned with pointer on timing gear cover at front of engine.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Set idle adjusting screw midway between "miss" and "roll" points. Idle speed 450 RPM or 8 MPH.

Float Level—Fuel level 5/8" below top edge of bowl.

Accelerating Pump—Normal setting, Center Hole.

Fuel Pump Pressure—3 1/2 lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

**IGNITION**

**Ignition Switch:**—Delco-Remy Model 430-R (switch & cable assembly). Connected to coil by armored cable. See article in Equipment Section for complete data.

**COIL:** Auto-Lite Model IG-4634. Mounted on dash.

Ignition Current—1/2-1 1/2 amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4001 or IGW-4004 (with Special Tachometer Drive). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

Breaker Gap—Set at .020". Limits .018-.020".

Cam Angle or Dwell—35° closed, 25° open (distr.).

Breaker Arm Spring Tension—18-20 ounces.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
2	600	4	1200
4	800	8	1600
6	1000	12	2000
8	1200	16	2400
10	1400	20	2800

**Vacuum Spark Control A-L No. VC-4001.** Mounted below distributor and linked to advance arm. Provides additional advance except when engine is operated at wide open throttle when spark is retarded by return spring within unit. Maximum vacuum advance—6° (engine).

**Vacuum Advance**

Distr Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3"
3°	6°	6"

**Distributor Removal:**—Mounted on left side of crankcase. To remove, loosen advance arm clamp bolt (not necessary to disconnect vacuum connection).

**IGNITION TIMING**

**IGNITION TIMING:**—Setting for all engines as follows:

Degrees	Piston Position
9/64" BTDC	.0016" BTDC

To Set Timing—Crank engine by engaging gears and rolling car on floor. On cars with Startix use

left hand 'on' position of key to avoid automatic cranking if ignition turned on to check timing. With #1 piston on compression, turn engine over until straight line 'IGN' mark on vibration dampener at front of engine lines up with pointer on timing gear cover. This line is 9/64" before top dead center mark 'UDC/1-6'. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EX-23, 1 1/4" downdraft type. See Carburetion Section for complete adjustment, overhaul, and jet specifications.

For complete data, refer to Carburetor Index.

**NOTE:**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Idle Adjustment**—Adjust throttle stop screw so that engine idles at 450 R.P.M. or 8 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump Setting**—Three holes provided in throttle lever for pump link engagement. Change setting for seasonal requirements as follows:

Center Hole—Normal operating conditions.

Inner Hole (Min. stroke)—Extreme warm weather.

Outer Hole (Max. stroke)—Extreme cold weather.

**NOTE**—A .056" or one size smaller main metering jet may be installed to secure greater fuel economy with a slight loss in performance. The .054" two size smaller jet should only be used for high altitudes. See Jet Specification table in Carburetion Section.

**Fast Idle Control & Automatic Choke**—Integral with Carburetor. No adjustment required. See special article in Carburetion Section.

For complete data, refer to Carburetion Equip. Index.

**CARB. EQUIPMENT**

**Air Cleaner**—Burgess oil-wetted type standard. AC. #1526824 oil-bath type optional.

**Fuel Pump**—AC. Type W #1522227. Diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Motometer Electric. No. NG-7732-D (dash unit), NG-7679-T (tank unit).

For complete data, refer to Carburetion Equip. Index.

**BATTERY**

**BATTERY**—Willard, Type WH-1-13, RH-1-13 (Export). 6 volt, 13 plate, 102 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side under front floor boards.

**STARTER**

**STD.**: Auto-Lite MAX-4019. Armature MAW-2091. **STARTIX**: Auto-Lite MAX-4018. Armature MAW-2091.

**Drive**—Outboard Bendix (barrel) Type A-1729.

**Cranking Engine**—110 R.P.M., 205 amps., at 5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1830	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal**—Flange mounted on left front face of fly-wheel housing. To remove, take out two flange cap-screws.

**Starting Switch (MAX-4019)**: Auto-Lite SW-3737A. Mounted on starter and operated through flexible cable by button on instrument panel. Pull required to close switch should be 2.3 lbs. minimum at end of switch lever.

**Startix (MAX-4018)**—Type 'D' automatic starting. For complete data, refer to Electrical Equipment Index.

**GENERATOR****STANDARD**

**Auto-Lite Model GBM-4604A-2**. Armature GBM-2006B. Third brush type used with CB-4021 Cutout Relay.

**Charging Rate Adjustment**—Take off commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate. Third brush held in position by friction.

**Maximum Charging Rate**—17.2 amperes at 8.3 volts (cold), 14.6 amperes at 8.05 volts (hot). Do not exceed.

**Performance Data**

Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	820
4	6.8	920	4	6.8	1000
8	7.3	1080	8	7.3	1200
12	7.75	1300	12	7.75	1500
16	8.2	1640	14.6	8.05	2300
17.2	8.3	2050			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—50-60 ozs. (new brushes).

**Field Current**—3.80-4.20 amperes at 6.0 volts.

**Motoring Current**—5.7-6.3 amperes at 6.0 volts.

**Field Fuse**—5 ampere under cover on generator field frame.

**Removal**—Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment**—Loosen pivot bolts and clamp bolt, swing generator away from engine until fan can just be turned with belt held stationary.

**GENERATOR****SPECIAL EQUIPMENT**

**Radio**: Auto-Lite Model GAR-4609A-4. Armature No. GAR-2116-B. Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Use test meters. Connect jumper between fuse cup on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging rate. Third brush held in position by friction. Remove jumper.

**Maximum Charging Rate**—24.8 amperes (cold), 21 amperes (hot), at 8.5 volts. Do not exceed.

**Performance Data**

Cold — Regulator Inoperative — Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	750	0	6.5	840
4	6.75	900	4	6.85	980
8	7.1	1025	8	7.25	1160
12	7.4	1200	12	7.6	1400
16	7.7	1380	16	8.0	1720
20	8.1	1675	21	8.5	2680
24.8	8.5	2400			

**Field Current**—3.75-4.15 amperes at 6.0 volts.

**Motoring Current**—4.75-5.25 amperes at 6.0 volts.

**Brush Spring Tension**—50-60 ozs. maximum.

**Field Fuse**—5 ampere in knurled cup on regulator case. All other data same as for standard generator. See above.

**CUTOUT RELAY****STANDARD**

**Auto-Lite Model CB-4021** (for GBM-4604A-2 Gen.). Mounted on generator. Special terminal connected to main brush lead for Startix connection.

For complete data, refer to Electrical Equipment Index. Cuts In—6.5-7.25 volts.

Cuts Out—5-2.5 amperes discharge current.

Contact Gap—.015-.045".

Air Gap—.010-.030" with contacts closed.

**REGULATOR****SPECIAL EQUIPMENT**

**Auto-Lite Model TC-4302A** (for GAR-4609A-4 Gen.). Two-Charge Type. On generator. Cutout Relay and Current-Regulator (two-rate charging control).

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**—Data same as for CB-4021 above.

**Current Regulator**

Contacts Open—8.25-8.75 volts at 70° F.

Contacts Close—1.2-1.4 volts below opening point.

Contact Gap—.005" minimum.

Air Gap—.045" with contacts closed.

**LIGHTING**

**LIGHTING**:—Headlamps—Corcoran-Brown, Pre-focused type. Headlamps aimed straight ahead (upper beam with lenses in place). Upper and lower beams controlled by foot selector switch (lower beam deflected slightly to right).

**Headlamp Beam Indicator**—Green dot on speedometer face. Lighted when headlamp upper beams in use.

**Switches**

Lighting—Douglas.

Foot Selector—R.B.M. Model 1085.

Trunk Light—R.B.M. Model 2350.

**Stop Light**—Hydraulic type mounted on brake master cylinder.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Ign. Key	1½	55
Stop and Tail	21-3	1158
Instruments	1	51
Dome and Trunk	6	81

**MISC. ELECTRICAL**

**FUSES**:—Lighting—30 amperes on back of lighting switch.

**Generator Field**—5 amperes. Located on generator field frame under cover (standard gen.), on Current Regulator case under knurled cup (radio gen.).

**HORNS**:—Klaxon Model K-26L-1622. Vibrator type. Current draw 6.5-8.5 amperes at 6 volts. Air Gap .025-.029". See 1936 President Model (next page) for twin horns and horn relay.

**ENGINE**

**ENGINE SPECIFICATIONS**:—Type—6 cyl., 'L' head.

Bore—3¼". Stroke—4¾".

Displacement—217.8 cubic inches.

Rated Horsepower—25.4 (NACC).

Developed Horsepower—90 at 3400 R.P.M.

Compression Ratio & Pressure—6.3-1 Std. cast-iron head. Pressure 105 lbs. at cranking speed of 150 R.P.M.

**Vacuum Reading**—Gauge should show steady reading of 18" with engine idling at 450 R.P.M. or 8 M.P.H.

**PISTONS**:—Lynite, aluminum alloy, "T" slot, Cam Ground type with .00825-.01075" greater diameter at right angles to piston pin bosses.

Weight—15.2 ozs. Length—3¾".

**Removal**—Pistons and rods removed from above.

**Clearance**—.0005" as measured ¼" up on skirt at right angles to pin bosses for new pistons. See Fitting New Pistons.

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**Original Bore Sizes:**—See *Studebaker Shop Notes*.

**Replacement Pistons:**—Finished pistons with fitted pins furnished .002", .004", .010", .015", .020", .030" oversize. Exact size of all new pistons as measured 1/4" up on skirt at right angles to pin bosses is stamped on head.

**Fitting New Pistons:**—Check clearance by inserting .002" hardened feeler 1" wide between piston and cylinder wall on pressure or camshaft side at right angles to pin bosses. Piston should be inserted in inverted position with slot away from camshaft. Pressure required to withdraw feeler must be between 7-15 lbs.

**Installing Pistons:**—Slot should be on minimum pressure side or away from camshaft.

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Lower ring groove drilled with ten 5/32" oil drain holes.

**NOTE:**—Narrow heat deflector groove located above top ring groove. No ring fitted in this groove.

Ring	Width	End Gap	Wall Thickness
Comp.	1/8"	.013-.018"	.135"
Oil Cont.	3/16"	.013-.018"	.145"

**NOTE:**—Compression rings are undercut. Install these rings with step or groove down.

**PISTON PIN:**—Diameter 1/8". Length 2 7/8".

Pin is locked in connecting rod.

Pin fit in Piston—.0002" clearance or light push fit.

**NOTE:**—New pins fitted and furnished with all new replacement pistons.

**CONNECTING ROD:**—Weight 33.2 ozs. Length 8 1/8".

Crankpin Journal Diameter—2.18675-2.18775".

Lower Bearing—Integral spun-babbitt lined type.

Clearance—.0005-.002". Sideplay .005-.009".

**Bearing Adjustment:**—None (no shims). Replace rods on exchange basis. Do not file rods or caps. Rods furnished with bearings standard and .010", .020" undersize.

**Installing Rods:**—Lower bearings are offset. Install rods with narrow half of bearing toward front in cylinders #1, 3, 5 and toward rear in #2, 4, 6. Marks on rods and caps must be together and oil escape hole in upper half of rod lower bearing must be toward right or camshaft side of engine on all rods.

**CRANKSHAFT:**—Four bearing. Integral counterweights.

Journal Diameters—2 1/2" all bearings.

Bearings—Interchangeable steel-backed, babbitt-lined type. No shims.

Clearance—.0005-.0025".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. No fitting or line reaming necessary for new bearings.

**End Thrust:**—Taken by thrust plate assembled between front main bearing and crankshaft gear. Adjusted by adding or removing shims between thrust plate and bearing. Endplay should be .003-.006".

**CAMSHAFT:**—Four bearing. Helical gear drive.

Bearings—Split, steel-backed, babbitt-lined type.

Clearance—.00075-.00225" (front), .002-.00375" (all others).

**NOTE:**—When bushings installed see that oil holes in bushing and block line up.

**End Thrust:**—Taken by steel thrust washer and spacer between gear hub and front bearing. Endplay .006" maximum.

**Timing Gears:**—Cast-iron (crankshaft), Celoron Fabric (camshaft). Camshaft gears furnished in three

sizes marked 'S'—standard, 'H'—high limit, 'L'—low limit. Use next largest size to take up backlash when replacing gears.

**NOTE:**—Screw thread for gear puller and pusher formed in camshaft gear hub recess. Gear must not be driven on or off of shaft.

**Camshaft Setting:**—Gears are marked. Mesh marked tooth on crankshaft gear between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"
	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.001-.003"
Exhaust	45°	11/32"	.001-.003"

**Valve Guides:**—Pressed in block from upper end.

**Valve Springs:**—No damper used. Install springs with closed-coil end at top. Replace springs if more than 10% weaker than specifications given below.

	Spring Pressure	Spring Length
Valve Open	13 1/4"	125-135 lbs.

**NOTE:**—Valve spring will not clear tappet adjusting screw when extended. To install spring, place spring seat in position on spring, compress spring slightly with compressor so that it clears tappet adjusting screw, insert valve, compress spring fully and install valve spring seat locks.

**Valve Lifters:**—Barrel type operating directly in cylinder block (no separate guides). Lifters are same diameter throughout and can be removed from top or bottom.

## VALVE TIMING

**Tappet Clearance:**—.016" all valves, cold.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open at 15° BTDC. Close 49° ALDC.

**Exhaust Valves:**—Open 54° BLDC. Close 10° ATDC.

**To Check Valve Timing:**—Set tappet clearance #1 intake valve at .020". This valve should open with piston 15° or .0942" before top dead center when mark 'IN.OP/1-6' on vibration dampener at front of engine line up with pointer on gear case cover. Reset tappet clearance at .016".

## LUBRICATION

**LUBRICATION:**—Pressure type. Gear type oil pump located on right side of crankcase.

Normal Oil Pressure—40 lbs. min. at 40 M.P.H.

**Oil Pressure Regulator:**—Located at right front corner of engine. Operates at 40 lbs. Not adjustable. Timing gears lubricated by overflow from regulator. Crankcase Capacity—6 qts.

**NOTE:**—Whenever oil pump is taken off engine, drive gear must be properly remeshed when pump is replaced so that distributor rotor position will be correct. To install pump, remove distributor, turn engine over until mark 'UDC/1-6' on vibration dampener lines up with pointer on chain case cover, sight down distributor shaft hole, mesh oil pump gear so that distributor drive slot is horizontal and offset toward top.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6. Single plate dry disc type. See article in Clutch Section for relining and assembling instructions.

See Clutch Section for complete data.

**Facings:**—Woven (pressure plate side), molded (flywheel side), 2 required. Inside Diam. 5 5/8". Outside Diam. 9 1/4". Thickness .133".

**Adjustment:**—Free movement of clutch pedal must

be 1" minimum. To adjust, loosen locknut and turn adjustment lever setscrew on left side of clutch housing. Check Hill-Holder after adjusting clutch.

**Hill-Holder Adjustment:**—On cars with Hill-Holder, check action after adjusting clutch to see that brakes release just before clutch engages. Adjust by loosening locknut and turning adjusting nut at end of hill holder control rod. Shorten rod for earlier brake release or lengthen rod for later release.

**Clutch Removal:**—Disconnect drive shaft at front universal, support engine at rear end, remove transmission and clutch cover, take out screws mounting clutch on flywheel turning all screws out evenly to release clutch spring tension.

## FRONT SUSPENSION

## MODEL 3-A

**Front Suspension Model 3A:**—Conventional 'I' beam section front axle with semi-elliptic springs.

**King Pin Inclination:**—9 1/2° crosswise.

**Caster:**—1-1 1/2°. Adjusted by inserting wedge shims between spring and spring pad on axle. Spring pad should incline 1 1/2° toward rear (see Spring Camber) Camber—1-1 1/2°. No adjustment. Axle may be bent cold for minor camber adjustments.

**Toe In:**—1/16-1/8". Adjust in usual manner by changing length of tie rod.

**Spring Camber:**—1/8" minimum. Measure by stretching cord between spring eye centers and noting distance from cord to top of spring main plate at center. Camber must be positive (cord above spring) between each spring and bearing) is 1 3/8".

## FRONT SUSPENSION

## MODEL 4-A

**Front Suspension Model 4-A:** Planar type front suspension with transverse spring.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—9 1/2° crosswise.

**Caster:**—Minus 1/4° to plus 3/4°. Not adjustable.

**Camber:**—1-1 1/2°. Check with tires properly inflated, car on level floor, after bouncing car up and down several times so wheels in normal running position. **Toe In:**—3/16" (1/8-7/32"). Adjustable.

## STEERING GEAR

**Steering Gear:** Ross Cam-and-Lever types as follows: Model 140—first cars, Model T-14—later cars beginning with following serial numbers—3A 5526354 (South Bend), 5851980 (Pacific Coast) except 5526359-5526376 inc., 4A 5246240 (South Bend), 5801504 (Pacific Coast) except 5801547, 5801655, and 5801657. See article in Steering Section.

See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service—Lockhead Hydraulic, four wheel type. Hand lever applies rear wheel brakes.

See Brake Section for complete data.

**Wheel Cylinders:**—Stepped or two-stage bore type:

Front Wheels—Front Shoe Cyl. 1 3/8". Rear—1".

Rear Wheels—Front Shoe Cyl. 1 1/4". Rear—1".

**NOTE:**—Wheel cylinder bore size marked on casting. Cylinders not interchangeable.

**Brake Drum Diameter:**—11 1/8".

**Lining:**—Moulded type. Width 1 3/4". Thickness 1/4". Length per wheel 23".

**Clearance:**—.010" toe, .005" heel on each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

**Hill-Holder:**—Optional on all models. See article in Brake Section and also Clutch data above.

See Brake Section for complete data.

## MODEL IDENTIFICATION

**SERIAL NUMBERS:**—On plate on left frame side member under front fender. First numbers as follows:

Factory	Serial Number
South Bend .....	7,104,001
Pacific Coast .....	7,800,001
Canada .....	7,951,001

**ENGINE NUMBER:**—First number—B-7901. Stamped on left center of engine block.

## TUNE-UP

**COMPRESSION:**—Ratio—6.5-1. Pressure—105-115 lbs. at cranking speed of 150 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling at 450 R.P.M. or 8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See digram.

**SPARK PLUGS:** Champion Type 8-S. 18 mm. Metric. Gaps—Set at .025".

NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—33° Closed.

Synchronization—Set movable contacts to open 45° after stationary set.

Automatic Advance—14½° max. at 1800 RPM (distr.). Vacuum Advance—3° distr. with 6" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Flywheel mark 'UDC/1-8' aligned with indicator in flywheel housing inspection hole for stationary contacts. Flywheel mark 'UDC3-6' for movable contacts (¼ revolution from 'UDC/1-8' mark).

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 450 RPM or 8 MPH.

Float Level—Fuel level 15/32" below top of bowl.

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Delco-Remy Model 430-R (switch and cable). Connected to coil by armored cable. Key has two 'on' positions (cars with Startix). Turned right Startix operative, turned left if Startix (automatic cranking) not wanted.

Ignition Lock—Yale and Towne.

**COIL:** Delco-Remy Model 537-B. Mounted on dash.

Ignition Current—½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Delco-Remy—Part No. 1838163.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 662-M. Double breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control. NOTE—Movable contacts must be synchronized. Open 45° after stationary set.

Breaker Gap—Set at .020". Limits .018-.024".

Cam Angle or Dwell—Closed 33° Open 12° (distr.). Both sets together when correctly synchronized.

Breaker Arm Spring Tension—19-23 ozs.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	2½ .....	600
14½ .....	1800	29 .....	3600

**Vacuum Spark Control D-R No. 680-J.** Mounted under distributor and linked to advance arm. Provides additional advance except when engine is operated with wide open throttle when spark is retarded by return spring within unit.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3" Min.
3°	6°	6" Max.

**Distributor Removal:**—Mounted on cylinder head. To remove, loosen advance arm clamp bolt (not necessary to disconnect vacuum connection).

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

Flywheel Degrees	Piston Position
0° or TDC	.000" TDC

**Timing (Stationary Contacts)**—Crank engine by engaging gears and rolling car on floor. On cars

with Startix use left hand 'on' position of key to avoid automatic cranking if ignition turned on to check timing. With #1 piston on compression, turn engine over until piston reaches top dead center, stop when flywheel mark 'UDC/1-8' lines up with pointer in inspection hole in right top edge of housing. Loosen advance arm clamp bolt, rotate distributor until stationary contacts begin to open, tighten clamp bolt, then synchronize movable contacts.

**Synchronization (On Engine)**—Turn engine over 90° to #6 firing position, stop when flywheel mark 'UDC/3-8' lines up with indicator. Loosen lock-screws on movable sub-plate carrying second set of contacts, turn eccentric adjusting screw until contacts begin to open, tighten lock-screws.

**Synchronization (Using Tool)**—Use Delco-Remy tool #1838182 and follow complete directions in Equipment Section. Distributor intervals regular 45-45-45°.

**CARBURETOR**

**CARBURETION:**—Carburetor—Stromberg Model EE-1, 1" dual, downdraft type. See Carburetion Section for complete adjustment, overhaul, and jet specifications.

*For complete data, refer to Carburetor Index.*

**NOTE:**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

**Idle Adjustment:**—Set throttle stopscrew so that engine idles at 450 R.P.M. or 8 M.P.H. Turn inner idling adjusting screw in until engine begins to lag or miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with outer idling adjusting screw. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump:**—Not adjustable.

**NOTE:**—A .045" or one size smaller main metering jet may be installed to secure greater fuel economy with slight loss in performance. The .043" two size smaller jet should be used only for high altitudes. See Jet Specification table in Carburetion Section.

**Fast Idle:**—Stromberg type. No adjustment required.

**Automatic Choke:**—Stromberg Type C. See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**CARB. EQUIPMENT**

**Air Cleaner:**—Burgess oil-wetted type standard, AC. #1526864 oil-bath type optional.

**Fuel Pump:**—AC. Type P #1521829 standard. Combination fuel-and-vacuum pumps Type J #1521797 or Type AD #1522228 optional. See articles in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Motometer Electric No. NG-7815-D (dash unit), No. NG-7679-T (tank unit). See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:**—Willard, Type WH-1-13, RH-1-13 (Export). 6 volt, 13 plate, 102 ampere hour capacity (20 hour rate).

**Starting Capacity:**—120 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.1 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—Left hand side under front floor boards.

**STARTER**

**STD.:** Delco-Remy 737-J. Armature No. 1863128.

**STARTIX:** Delco-Remy 737-K. Armature 1863128.

**Drive:**—Outboard Bendix (barrel) Type A-1729.

**Cranking Engine:**—110 R.P.M., 200 amperes at 5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—32-36 ounces.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5	65
15 "	Lock	3.15	570

**Removal:**—Flange mounted on left hand front face of flywheel housing. Take out two capscrews.

**Starting Switch (737-J):**—Magnetic switch mounted on starter controlled by push button (R.B.M. Model 1865), on left side of instrument panel.

**Startix (737-K):**—Type 'D' automatic starting switch and Startix circuit controller (anti-backfire unit), controlled by ignition switch. See Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

**GENERATOR**

**Delco-Remy Model 936-X.** Armature No. 1856072. Third brush control with Voltage Control Relay (step voltage control). Ventilated by fan on drive pulley.

**Charging Rate Adjustment:**—Connect test ammeter in charging line at 'BAT' terminal, ground generator field 'F' terminal to frame. Loosen lock screw on commutator end plate, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate, tighten lock screw, remove generator field ground.

**Maximum Charging Rate:**—21 amperes (cold), 17 amperes (hot), 8.5 volts, 2800 R.P.M., 37 M.P.H.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	22-25	8.7-9.1	3000
Hot	17-20	8.1-8.5	3200

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—22-26 ozs. (main), 16-20 ozs. (third).

**Field Current:**—2.3-2.6 amperes at 6 volts.

**Field Fuse:**—6 ampere capacity in control unit.

**Removal:**—Cradle mounted at left front of engine. To remove, slack off belt, disconnect water pump drive coupling, loosen mounting clamp band.

**Belt Adjustment:**—To take up slack in generator drive belt, loosen nut back of fan bracket, lift up fan assembly until fan can just be turned with belt held stationary, tighten bracket nut.

**REGULATOR**

**Delco-Remy Model 5546.** Voltage Control Relay. Cut-out Relay and non-vibrating type Voltage Regulator in case on generator field frame.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In:**—6.4-6.8 volts, 8.1 M.P.H.

**Cuts Out:**—3 amperes maximum discharge current.

**Contact Gap:**—.015-.025".

**Air Gap:**—.012-.017" contacts closed.

**Voltage Control Relay**

**Contacts Open:**—8.35-8.65 volts at 70° F.

**Contacts Close:**—7.3-7.7 volts at 70° F.

**Contact Gap:**—.008-.013".

**Contact Spring Tension:**—.7-9 ounces.

**Air Gap:**—.028-.040" between armature and core (armature down against lower stop), .028-.040" armature travel (between armature and lower stop).

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown, Pre-focused type. Headlamps aimed straight ahead (upper beam with lenses in place. Upper and lower beams controlled by foot selector switch (lower beam deflected slightly to right)).

**Headlamp Beam Indicator:**—Green dot on speedometer face. Lighted when upper driving beam in use.

**Switches**

**Lighting:**—Douglas. Studebaker Part No. 188006.

**Foot Selector:**—R.B.M. Model 1085.

**Stop Lamp:**—Hydraulic type mounted on brake master cylinder.

**Trunk Lamp:**—R.B.M. Model 2350.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Ign. Key	1½	55
Stop and Tail	21-3	1158
Instruments	1	51
Dome and Trunk	6	81

**MISC. ELECTRICAL**

**CURRENT LIMIT RELAY:** D-R No. 410-R. Vibrating circuit breaker in lighting circuits. Starts to operate with load of 30-35 amperes limiting load to 5-18 amperes.

**Contact Gap:**—.012-.030".

**Air Gap:**—.015-.030" with contacts closed.

**Spring Tension:**—5 ozs. min. at brass button.

**FUSES:**—Cigar Lighter—7½ amperes. In connector in lead from starter.

**Generator Field:**—6 ampere in Control Unit.

**HORNS:**—Klaxon Model K-33-S, Types 2059, 2060. Vibrator type, blended tone, twin horns operated by horn relay.

Horn Type	Current at 6 volts	Air Gap
2059 Low Note	11-13	.042-.046"
2060 High Note	10-12	.032-.036"

**Horn Relay:**—Model 269-E. Requires .25 amperes at 2 volts minimum to close contacts. Current draw .8 amperes.

**Contact Gap:**—.015-.025". **Spring Tension:**—6-8 ozs.

**Air Gap:**—.012-.017" with contacts closed.

**ENGINE**

**ENGINE SPECIFICATIONS:**—Type—8 cyl., 'L' head.

**Bore:**—3 1/16". **Stroke:**—4¼".

**Displacement:**—250.4 cubic inches.

**Rated Horsepower:**—30 (NACC).

**Developed Horsepower:**—115 at 3600 R.P.M.

**Compression Ratio:**—6.5-1 Std. aluminum head.

**Compression Pressure:**—105-115 lbs. at cranking speed of 150 R.P.M.

**Vacuum Reading:**—Gauge should show steady reading of 18" with engine idling at 450 R.P.M. or 8 M.P.H.

**NOTE:**—Tighten aluminum cylinder heads only when engine is cold.

**PISTONS:**—Lynite, aluminum alloy, "T" slot, Cam Ground type with elliptical skirt .00825-.01075" greater in diameter at right angles to pin bosses. Recondition cylinders to take finished replacement pistons.

**Weight:**—13.6 ozs. **Length:**—3¾".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—.0015" as measured ¼" upon skirt at right angles to pin bosses for new pistons. See Fitting New Pistons.

**Original Bore Size:**—See Studebaker Shop Notes.

**Replacement Pistons:**—Finished pistons with fitted pins furnished .002", .004", .010", .015", .020", .030" oversize. Exact size of all new pistons as measured ¼" up on skirt at right angles to pin bosses is stamped on head.

**Fitting New Pistons:**—Check clearance by inserting .003" hardened feeler 1" wide between piston and cylinder wall on pressure or camshaft side at right

CONTINUED N NEXT PAGE

## ENGINE

C CONTINUED FROM PRECEDING PAGE

angles to pin bosses. Piston should be inserted in inverted position with slot away from camshaft. Pressure required to withdraw feeler must be between 7-13 lbs.

**Installing Pistons:**—Slot should be on minimum pressure side or away from camshaft.

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin. Lower ring groove drilled radially with ten 5/32" oil drain holes. Do not increase size or number of holes.

**NOTE:**—A narrow heat deflector groove is located above the top compression ring. No ring is fitted in this groove.

## Piston Ring Specifications.

Ring.	Width.	End Gap.	Wall Thickness.
Comp.	1/8"	.013-.018"	.135"
Oil Cont.	3/16"	.013-.018"	.145"

**NOTE:**—Compression rings are undercut or stepped and must be installed with this step downward. Inner rings used behind oil ring on all engines.

**PISTON PIN:**—Diameter 7/8". Length 2 3/8".

Pin is locked in connecting rod.

**Clearance in Piston:**—.0002" or light push fit.

**NOTE:**—New pins are fitted and furnished with all new replacement pistons.

**CONNECTING ROD:**—Weight 32 ozs. Length 8".

**Crankpin Journal Diameter:**—1.87425-1.87525".

**Lower Bearing:**—Removable steel-backed, lead-bronze lined type.

**Clearance:**—.00075-.00275". Sideplay .005-.010".

**Bearing Adjustment:**—None. Replace bearings. Do not file caps. New bearings should be pressed in place in rod and cap (upper and lower halves interchangeable) so that tongues on bearings engage grooves in rod and cap and oil holes line up. Bearings cannot be reamed, and crankpins must be turned down to size giving correct clearance. Bearings furnished .005", .010", .020" undersize and standard.

**Installing Rods:**—Oil escape hole in upper half of rod lower bearing must be toward right or camshaft side of engine on all rods.

**CRANKSHAFT:**—Nine bearings with bolted-on counterweights.

*See Studebaker Shop Notes for Damper data.*

**Journal Diameters:**—2 11/32" all bearings.

**Bearings:**—Interchangeable steel-backed, babbit lined type. No shims.

**Clearance:**—.001"-.003".

**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file bearing caps. No fitting or line reaming necessary for new bearings.

**End Thrust:**—Taken by thrust plate assembled between front main bearing and crankshaft gear. Adjusted by adding or removing shims between thrust plate and bearing. Endplay should be .003-.006".

**CAMSHAFT:**—Six bearing. Helical gear drive.

**Bearings:**—Split, steel-backed, babbit-lined type.

**Clearance:**—.00075-.00225" (front), .002-.00375" (all others).

**NOTE:**—When new bearing installed, see that oil holes in bearings and block line up.

**End Thrust:**—Taken by steel thrust washer and spacer assembled between gear hub and front bearing. Endplay .006" maximum.

**Timing Gears:**—Cast-iron (crankshaft), Celoron Fabric (camshaft). Camshaft gears furnished in three sizes marked 'S'—standard, 'H'—high limit, 'L'—low limit. Use next largest size to take up backlash when replacing gears.

**NOTE:**—Screw thread for gear puller and pusher formed in camshaft gear hub recess. Gears must not be driven on or off of shaft.

**Camshaft Setting:**—Gears are marked. Mesh marked tooth of crankshaft gear between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 13/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.001-.003"
Exhaust	45°	11/32"	.001-.003"

**Valve Guides:**—Pressed in block from upper end.

**Valve Springs:**—Springs installed with closed coils at top. Damper (cup type valve cage) used on all springs at top. Replace springs if more than 10% weaker than specifications below.

	Spring Length	Spring Pressure
Valve Open	1 3/4"	125-135 lbs.

**Valve Lifters:**—Mushroom type with separate guides. Guide assemblies (groups of four) bolted to crankcase and removable from above.

## VALVE TIMING

**Tappet Clearance:**—.016" all valves (cold).

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves:**—Open 54° BLDC. Close 10° ATDC.

**To Check Valve Timing:**—With tappet clearance of .020", #1 intake valve should open with piston 15° or .0915" before top dead center when mark 'IN/OP/1-8' on flywheel lines up with pointer in inspection hole in right top surface of housing.

## LUBRICATION

**LUBRICATION:**—Force-feed by oil pump to main bearings, connecting rod bearings, camshaft bearings, and valve lifters. Splash from connecting rod bearing escape hole to cylinder walls and piston pins. Timing gears lubricated by oil by-passed by oil pressure regulator relief valve.

**Normal Oil Pressure:**—40 lbs. minimum at 40 M.P.H.

**Oil Pressure Relief Valve:**—Operates at 40 lbs. Located at right front cor. of engine. Not adjustable.

**Crankcase Capacity:**—8 qts.

**Oil Pump:**—Gear type located in the oil pan. Driven by vertical shaft from camshaft (drive gear on oil pump shaft—distributor driven through tongue-and-slot coupling above gear).

**NOTE:**—Whenever oil pump is taken off engine, drive gear must be properly meshed with camshaft

so that distributor rotor position will be correct. To install pump, turn engine over until #1 piston is on top dead center entering power stroke with flywheel mark 'UDC/1-8' at indicator on clutch housing. Turn pump shaft so that distributor drive slot is two teeth clockwise (viewed from below) from correct installed position with slot parallel to camshaft and wide half of coupling toward camshaft. Shaft will be rotated to this position as gears are meshed. Check by sighting down distributor drive shaft hole (distributor off engine) or see that rotor is opposite #1 segment in distributor cap (see wiring diagram).

## CLUTCH

**CLUTCH:**—Long Model 9AB-10CI. Single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings:**—Moulded type, 2 required. Inside Diam. 6". Outside Diam. 10". Thickness .137".

**Adjustment:**—Free movement of clutch pedal must be 1" minimum. To adjust, loosen locknut and turn adjustment lever setscrew on left side of clutch housing. Check Hill-Holder setting.

**Hill-Holder Adjustment:**—On cars with Hill-Holder, check action after adjusting clutch. Brakes should be released just before clutch engages. Adjust by loosening locknut and turning adjusting nut at end of hill-holder control rod. Shorten rod for earlier brake release or lengthen rod for later release.

**Clutch Removal:**—Disconnect clutch pedal linkage, disconnect drive shaft at front universal, remove transmission, take off clutch pan under clutch housing, take out clutch mounting screws turning all screws out evenly to release clutch spring tension, remove clutch from below.

## FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—9 1/2° crosswise.

**Caster:**—Minus 1/4 to plus 3/4°. Not adjustable.

**Camber:**—1 1/2°. Check with tires properly inflated, car on level floor, after bouncing car up and down several times so that wheels are in normal running position.

**Toe In:**—3/16" (1/8-7/32"). Adjustable.

## STEERING GEAR

**Steering Gear:**—Ross Model 620 Cam-and-Lever type.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Lockheed Hydraulic, four wheel type. Hand lever applies rear wheel brakes.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type:

**Front Wheels:**—Front Shoe Cyl. 1 3/8". Rear 1".

**Rear Wheels:**—Front Shoe Cyl. 1 1/4". Rear 1".

**NOTE:**—Wheel cylinder bore size marked on casting. Not interchangeable.

**Drum Diameter:**—12 1/8".

**Lining:**—Moulded type. Width 1 3/4". Thickness 1/4".

**Length per wheel:** 25".

**Clearance:**—.010" toe, .005" heel on each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

**Hill-Holder:**—Optional on all models.

*See Brake Section for complete data.*

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—On plate on left frame side member under front fender. First numbers as follows:

Factory	Model 5A	Model 6-A
South Bend	5,536,001	5,255,001
Pacific Coast	5,852,001	5,802,001

**ENGINE NUMBER:**—First number D-112,601. Stamped on left center of engine block.

**TUNE-UP**

**COMPRESSION:** Pressure—105 lbs. at 150 RPM.

**VACUUM READING:** 18" steady idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type 8-A. 18 mm. Metric. Gaps—Set at .025".

**NOTE:**—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap:** .020". **Cam Angle:** 35° Closed.

**Automatic & Vacuum Advance:**—See tables below.

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting:**—2° BTDC. Vibration dampener ignition mark (straight line 9/64" ahead of 'UDC/1-6') aligned with pointer on timing gear cover. Use .016" feeler between advance arm and hold-down plate when tightening distributor clamp bolt (avoids binding vacuum control).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting:**—Set idle adjusting screw midway between "miss" and "roll" points (1/2-1 1/4 turns open Carter). Idle speed 450 RPM or 8 MPH.

**Float Level (Stromberg):**—Fuel level 5/8" below top edge of bowl.

**Float Level (Carter):**—3/8" from bowl cover to top of float (needle valve seated, gasket removed).

**Accelerating Pump:**—Normal setting, Center Hole.

**Fuel Pump Pressure:** 3 1/2 lbs. maximum.

**VALVES:** See Valve Timing.

**Tappet Clearance:** .016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

**IGNITION**

**Ignition Switch:**—Mitchellock Model 24-R, Type 7071.

Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne.

**COIL:** Auto-Lite Model IG-4634. Mounted on dash.

**Ignition Current:** 1/2-1 1/2 amps. Idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

**Capacity:** .20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4001 or IGW-4026 (with Special Tachometer Drive). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell:**—35° closed, 25° open (distr.).

**Breaker Arm Spring Tension:**—16-20 ounces.

Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
2	600	4	1200
4	800	8	1600
6	1000	12	2000
8	1200	16	2400
10	1400	20	2800

**Vacuum Spark Control A-L N . VC-4004.** Mounted below distributor and linked to advance arm. Pro-

vides additional advance at speeds above idling (vacuum port in carburetor above throttle) except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

**Vacuum Advance VC-4004—See Note**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3"
2°	4°	5"
3°	6°	6"
5°	10°	10"
6°	12°	12"

**NOTE:**—If VC-4001 Vacuum Spark Control Unit used, advance starts with 3" of HG., and reaches maximum advance of 6" (engine) with 6" of HG.

**Distributor Removal:**—Mounted on left side of crankcase. To remove, loosen advance arm clamp bolt (not necessary to disconnect vacuum connection).

**NOTE:**—When installing distributor place .016" feeler between hold-down plate (with hold-down

screw tight) and advance plate, tighten clamp bolt (on advance plate), then remove gauge. This insures free movement of advance plate.

**IGNITION TIMING**

**IGNITION TIMING:**—Setting for all engines as follows:

Degrees	Piston Position
2° BTDC	.0018" BTDC

**To Set Timing:**—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until straight line 'IGN' mark on vibration dampener at front of engine lines up with pointer on timing gear cover. This line is 9/64" before top dead center mark 'UDC/1-6.' Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, insert .016" feeler between advance arm plate and hold-down plate (insuring free movement of advance plate), tighten clamp bolt, remove feeler gauge.

CONTINUED FROM PRECEDING PAGE

**CARBURETOR**

**CARBURETION:**—Carburetors—Stromberg Model EX-23, Carter Model 371-S (Motor #D-143675 and up), 1½" downdraft types with automatic choke.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm, choke valve wide open and idling at hot or slow idling speed, adjust throttle stopscrew so that engine idles at 450 R.P.M. or 8 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stopscrew for correct idling speed.

**Accelerating Pump Setting:**—Three holes provided Center Hole—Normal operating conditions.

Inner Hole (Min. stroke)—Extreme warm weather.

Outer Hole (Max. stroke)—Extreme cold weather.

**Fast Idle Control & Automatic Choke:**—Integral with carburetor. No adjustment required. See separate article for Stromberg and Carter Climatic Control. *For complete data, refer to Carburetion Equip. Index.*

**CARB. EQUIPMENT**

**Air Cleaner:**—AC. #1528097 oil-wetted type standard, #1526923 oil-bath type optional.

**Fuel Pump:**—AC. Type W #1522227. Diaphragm type. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Motometer Electric. No. NG-8199D (dash unit). No. NG-8165T (tank unit). *For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:**—Willard, Type WHT-2-105. 105 ampere hour capacity (20 hour rate).

**Starting Capacity:**—133 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.9 minutes.

**Grounded Terminal:**—Positive (+) terminal.

**Location:**—On left side under front seat.

**STARTER**

FIRST 15,000 CARS

Auto-Lite Model MAX-4028. Armature MAW-2030.

AFTER SERIAL NOS. 5A-5,542,738; 6A-5,260,534

Auto-Lite Model MAX-4019. Armature MAW-2091.

**Drive:**—(MAX-4028) Positive shift with overrunning clutch. (MAX-4019) Outboard Bendix A-1729.

**Cranking Engine:**—110 R.P.M., 150-200 amps., at 5.0-5.5 volts.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
.65 "	3300	5.5	100
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	800	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out two flange capscrews.

**Starting Switch (MAX-4028):** Auto-Lite SW-2677-B. On starter field frame and operated by pinion shift (starting pedal). (MAX-4019) Auto-Lite SW-3737-S on starter and operated through flexible cable by button on instrument panel. Pull required to close switch should be 2.3 lbs. min. at end of switch lever.

**GENERATOR****STANDARD**

Auto-Lite Model GBM-4607A-2. Armature GBM-2065B. Third brush type with CB-4021 Cutout Relay. **Charging Rate Adjustment:**—Take off commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease **Maximum Charging Rate**—17.2 amperes at 8.3 volts (cold), 14.6 amperes at 8.05 volts (hot). Do not exceed.

Cold			Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	820	0	6.4	820
4	6.8	920	4	6.8	1000	4	6.8	1000
8	7.3	1080	8	7.3	1200	8	7.3	1200

16	8.2	1640	16	8.05	2300	16	8.05	2300
17.2	8.3	2050						

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—50-60 ozs. (new brushes).

**Field Current:**—3.80-4.20 amperes at 6.0 volts.

**Motoring Current:**—5.7-6.3 amperes at 6.0 volts.

**Field Fuse:**—5 ampere under cover on generator field frame.

**Removal:**—Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment:**—Loosen pivot bolts and clamp bolt, swing generator away from engine until fan can just be turned with belt held stationary.

**GENERATOR****SPECIAL EQUIPMENT**

**Radio:** Auto-Lite Model GCM-4802A-4. Armature GCJ-2006B. Third brush control in conjunction with Current Regulator (two-rate charging control). **Charging Rate Adjustment:**—Use test meters. Connect jumper between fuse cap on regulator and ground. Shift third brush by hand counter-clockwise to increase or clockwise to decrease charging **NOTE:**—Third brush setting 2½ to 2¾ commutator bars from insulated main brush.

**Maximum Charging Rate:**—22 amperes (cold), 18 amperes (hot), at 8.0 volts. Do not exceed.

Cold			Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	830	0	6.4	830

22	8.0	2680						

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—3.50-3.89 amperes at 6.0 volts.

**Motoring Current:**—5.75-6.25 amperes at 6.0 volts.

**Field Fuse:**—5 ampere in knurled cup on regulator

**Removal and Belt Adjustment** same as for standard

**CUTOUT RELAY****STANDARD**

Auto-Lite Model CB-4021 (for GBM-4607A-2 Gen.).

**NOTE:**—Special terminal for Startix connection

*For complete data, refer to Electrical Equipment Index.*

**Cuts In:**—6.5-7.25 volts.

**Cuts Out:**—5-2.5 amperes discharge current.

**Contact Gap:**—.015-.045".

**Air Gap:**—.010-.030" with contacts closed.

**REGULATOR****SPECIAL EQUIPMENT**

Auto-Lite Model TC-4302A (for GCM-4802A-4 Gen.). **Two-Charge Type.** On generator. Cutout Relay and Current Regulator (two rate charging control). *For complete data, refer to Electrical Equipment Index.*

**Cutout Relay:**—Data same as for CB-4021 above.

**Current Regulator**

**Contacts Open:**—8.25-8.75 volts at 70° F.

**Contacts Close:**—1.2-1.4 below opening point.

**Contact Gap:**—.005" minimum.

**Air Gap:**—.045" with contacts closed.

**LIGHTING**

**Headlamps:**—Corcoran-Brown, pre-focused type. Aim straight ahead (upper beam with lenses in place).

**Headlamp Beam Indicator:**—Green dot on speedometer face. Lighted with Upper Beam "on".

**Switches**

**Lighting:**—Douglas. Studebaker Part No. 188036.

**Foot Selector:**—R.B.M. Model 1085.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Ign. Key	1½	55
Stop and Tail	21-3	1158
Instruments	½	51
Dome	6	81

**MISC. ELECTRICAL**

**FUSES:** Lighting—30 ampere. On lighting switch.

**Generator Field:**—5 amperes. Located on generator (standard generator), on regulator (radio gen.).

**HORNS:**—Klaxon Model K-26-L Type 1638 Std. Model K-33-S Types 2059, 2060 twin horns with relay optl.

**Horn Type** **Current at 6 volts** **Air Gap**

1638 Single (Low) ..... 6.5-8.5 ..... .025-.029"

2059 Low Note ..... 11-13 ..... .042-.046"

2060 High Note ..... 10-12 ..... .032-.036"

**Horn Relay:**—Mod. 271-A. Points close at 2.7-4.0 volts.

**Contact Gap:**—.015-.030". **Air Gap:**—.010-.025".

**ENGINE**

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

**Bore:**—3¼". **Stroke:**—4¾".

**Displacement:**—217.8 cu. ins. **Rated H.P.**—25.4.

**Developed Horsepower:**—90 at 3400 R.P.M.

**Compression Ratio:**—6.0-1 std. cast iron head.

**Compression & Vacuum Reading:**—See Tune-up data.

**NOTE:**—Optl. 7.0-1 aluminum head (devel. 94 HP. at 3400 R.P.M.) used at altitudes of 5000 ft. and over.

**Compression press.** 111-118 lbs. at cranking speed.

**Ign. and valve timing** same as std. head.

**PISTONS:**—Lynite, aluminum alloy, T-slot, cam ground (.00825-.01075" larger diam. 90° from pin bosses).

**Weight:**—15.2 ozs. **Length:**—3¾".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—.0005" new. Measure ¼" up on skirt 90° from pin bosses. See Fitting New Pistons.

**Original Bore Sizes:**—See Studebaker Shop Notes.

**Replacement Pistons:**—Finished pistons (pins fitted) furnished .002", .004", .010", .015", .020", .030", oversize. Exact size stamped on piston head.

**Fitting New Pistons:**—Insert .002"x1" hardened feeler between piston and wall on camshaft side (T-slot away from camshaft, piston inverted). 7-15 lbs. to withdraw feeler.

**Installing Pistons:**—T-slot away from camshaft.

## ENGINE

CONTINUED FROM PRECEDING PAGE

**PISTON RINGS:**—2 compression, 1 oil control, all above pin. Ten 5/32" oil drain holes in lower ring groove. Ring oversizes: .010", .020", .030". Heat deflector groove above top ring groove.

Ring	Width	End Gap	Wall Thickness
Compression	1/8"	.013-.018"	.145"
Oil Control	3/16"	.013-.018"	.135"

NOTE—Install comp. rings with step down.

**PISTON PIN:**—Diameter—7/8". Length—2 7/8".

Pin locked in connecting rod.

Pin Fit in Piston—.0002" clearance or light push fit.

NOTE—Replacement pistons have pins fitted.

**CONNECTING ROD:**—Weight—33.2 ozs. Length—8 1/2".

Crankpin Journal Diameter—2.18675-2.18775".

Lower Bearing—Integral spun-babbitt lined type.

Clearance—.0005-.002". Sideplay—.005-.009".

Bearing Adjustment:—None. Replace rods. Rods furnished std. and .010", .020" undersize on exchange.

Installing Rods:—Install rods with narrow half of bearing toward front in cylinders #1, 3, 5, toward rear in #2, 4, 6. Marks on caps and rods must be together and oil hole toward camshaft.

**CRANKSHAFT:**—4 bearing, integral counterweights.

Journal Diameters—2 1/2" all bearings.

Bearing Type—Removable steel-backed, babbitt-lined. Clearance—.0005-.0025".

Bearing Adjustment:—None. (No shims). Replace bearings (no fitting or line reaming required). Furnished std., .010", .020" undersize.

End Thrust:—Thrust plate between front main bearing and crankshaft gear. Shim adjustment.

Endplay—.003-.006".

**CAMSHAFT:**—Four bearing. Helical gear drive.

Bearings—Split, steel-backed, babbitt-lined type. Clearance—.00075-.00225" (#1), .002-.00375" (others).

NOTE—Oil holes in bushing and block must match.

End Thrust:—Steel thrust washer and spacer between gear hub and front bearing. Endplay—.003-.006".

Timing Gears:—Cast-iron (crankshaft), Celeron Fabric (camshaft). Camshaft gears furnished in 3 sizes. See Studebaker Shop Notes for Replacement Timing Gears.

Camshaft Setting:—Mesh gears so that marked tooth on camshaft gear meshes with two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"
	Seat Angle	Lift	Stem Clearance
All valves	45°	11/32"	.001-.003"

Valve Guides—Pressed in block from above (1 5/32" below upper rim of valve seat) with stepped end down. Ream inside diameter to .3430-.3445".

Valve Springs—Install with closed-coil at top. Damper used on top of spring. Replace springs if 10% weaker than specifications listed below.

Valve Open	Spring Pressure	Spring Length
125-135 lbs.	1 3/4"	

NOTE—Spring will not clear tappet adjusting screw when extended. To install spring, place spring seat in position on spring, compress spring slightly with compressor so that it clears tappet adjusting screw, insert valve, compress spring fully and install valve spring seat locks.

Valve Lifters:—Barrel type (no separate guides). Can be removed from top. Furnished .0005", .001" ov'size.

## VALVE TIMING

Tappet Clearance—.016" all valves (cold). Remove right hood side panel for work on valves.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

To Check Valve Timing:—Set tappet clearance #1 intake valve at .020". This valve should open with piston 15° or .0942" before top dead center when mark 'IN.OP/1-8' on vibration dampener at front of engine lines up with pointer on gear case cover. Reset tappet clearance at .016" (cold—70° F.).

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump.

Normal Oil Pressure—40 lbs. min. at 40 M.P.H.

Oil Pressure Regulator—Located at right front corner of engine. Operates at 40 lbs. Not adjustable. Timing gears lubricated by overflow from regulator. Crankcase Capacity—5 1/2 quarts (dry).

NOTE—Install oil pump as follows (to insure correct rotor position on distributor): remove distributor, turn engine over until mark 'UDC/1-6' on vibration dampener lines up with pointer on gear case cover, sight down distributor shaft hole, mesh oil pump gear so that distributor drive slot is horizontal and offset toward top.

## CLUTCH

**CLUTCH:**—Borg & Beck Model 9A6. Mod. #869 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Moulded (flywheel side) and woven (pressure plate side), 2 required. I.D. 5 5/8", O.D. 9 1/4", .133" thick.

Adjustment—Free movement of clutch pedal must be 1" minimum. To adjust, loosen locknut and turn adjustment lever setscrew on left side of clutch housing. Check Hill-Holder after adjusting clutch.

Hill-Holder Adjustment: See Studebaker Shop Notes.

Removal:—Remove transmission (see Transmission Removal below), support engine at rear, remove clutch housing, turn mounting screws out evenly to release spring tension, remove clutch assembly.

## TRANSMISSION

**TRANSMISSION:**—Warner—Model AS23-T86 (std.), AS29-T86 (with overdrive). All helical gear type. See Transmission Section for complete data.

Removal:—Disconnect front and rear universal joints at companion flanges, remove capscrews at clutch housing, pull transmission back and up.

## OVERDRIVE

Warner Type R6. Warner Transmission No. AS29-T86. See Transmission Section for complete data.

Removal: Same as for Standard Transmission above after removing Overdrive Support. See Overdrive Transmission Rear Support Installation data in Studebaker Shop Notes.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Thompson Products—Rubber bushing type, two used.

NOTE—Single punch mark at front and double punch marks at rear must be aligned with respective marks at each coupling.

See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Spicer—Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—Std. 4.55-1. Optl. 4.82-1.

Backlash—.005-.007". Shim adjustment.

Removal:—Disconnect brake cables and fluid tube, rear universal joint, remove spring U-bolts, and disconnect springs. Axle assembly can then be removed.

Wheel Bearing Adjustment—Controlled by shims between brake backing plates and flanges on housing. Endplay .001-.005". Difference in shim thickness on either side must not exceed .005".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco—Early: Models 1173-L (5A—front), 1171-S (6A—front), 1172-U (rear—all models). Late: Models 1180-L (5A—front), 1181-S (6A—front), 1182-U (rear—all models). Direct acting hydraulic types. Late type is adjustable.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

MODEL 5-A

Front Suspension Model 5A:—'I' beam axle with Reverse-Elliott ends and semi-elliptic springs. Specifications below apply with car unloaded on level floor. King Pin Inclination—9 1/2° crosswise.

Caster—1-1 1/2°. Adjusted by inserting wedge shims between spring and spring pad on axle. Spring pad should incline 1 1/2° toward rear (see Spring Camber). Camber—1-1 1/2°. No adjustment. Axle may be bent cold for minor camber adjustments.

Toe In—1/16-1/8". Adjust by changing length of tie rod.

## FRONT SUSPENSION

MODEL 6-A

Front Suspension Model 6A: Planar type front suspension with transverse spring.

See Front Suspension Section for complete data.

Kingpin Inclination—Two settings as follows:

9 1/2°.....South Bend Serial No. 5,258,246 and before  
9 1/2°.....Pacific Coast Serial No. 5,803,288 and before  
5 1/2°.....After Serial Numbers given above

Caster—Minus 1/4° to plus 3/4°. Not adjustable.

Camber—1-1 1/2°. Adjustable.

Toe In—1/8-7/32". To adjust, turn right (long) rod.

## STEERING GEAR

Steering Gear: Ross T-14 Cam-&-Twin Lever type. See Steering Gear Section for complete data.

## BRAKES

**BRAKES:**—Service. Lockheed Hydraulic, double anchor type. Hand lever applies rear service brakes.

See Brake Section for complete data.

Wheel Cylinders—Stepped or two-stage bore type:

Front Wheels—Front shoe cyl. 1 3/8". Rear 1".

Rear Wheels—Front shoe cyl. 1 1/4". Rear 1".

NOTE—Wheel cylinder bore size marked on casting.

Drum Diameter—11".

Lining—Front shoe—woven. Rear shoe—moulded. Width 1 3/4". Thickness 3/16". Length per wheel 9 11/16".

Clearance—.010" toe, .005" heel, for each shoe.

Braking Power—45% rear.

Hand Brake Adjustment:—See Service Brakes.

Hill-Holder: Optional on all models.

See Brake Section for complete data.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—On plate on left frame side member under front fender. First number as follows:

Factory	Serial Number
South Bend	7,111,001
Pacific Coast	7,800,801

**ENGINE NUMBER:**—Stamped on left side of engine  
First number B-15501.

## TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 Pressure—105-115 lbs. at cranking speed at 150 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-20" with engine idling at 450 R.P.M. or 8 M.P.H.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type 8-A. 18 mm. Metric. Gaps—Set at .025".

NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—33° Closed.

Synchronization—Set movable contacts to open 45° after stationary set.

Automatic Advance—14½° max. at 1800 RPM (distr). Vacuum Advance—6° distr. with 11-14" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Flywheel mark 'UDC/1-8' aligned with indicator in flywheel housing inspection hole for stationary contacts. Flywheel mark 'UDC3-6' for movable contacts (¼ revolution from 'UDC/1-8' mark).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between "miss" and "roll" points. Idle speed 450 RPM or 8 MPH.

Float Level—Fuel level 15/32" below top of bowl.

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, Type 7073. Delco-Remy Model No. 1868783. Connect to coil by armored cable.

**Ignition Lock:**—Yale and Towne.

**COIL:** Delco-Remy Model 537-B. Mounted on dash.

Ignition Current—½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Delco-Remy—Part No. 1838163.

Capacity—18-25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 662-M. Double breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control. NOTE—Mov-

able contacts must be synchronized. Open 45° after stationary set.

**Breaker Gap:**—Set at .020". Limits—.018-.024".

**Cam Angle or Dwell:**—Closed 33° Open 12° (distr.). Both sets together when correctly synchronized.

**Breaker Arm Spring Tension:**—19-23 ozs.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	2.5.....	600
14.5.....	1800	29.0.....	3600

**Vac'm Spark Control D-R No. 681-S.** Mounted under distributor and linked to advance arm. Provides additional advance except when engine is operated with wide open throttle when spark is retarded by return spring within unit. Plunger travel ¼" max.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
6°	12°	11-14"

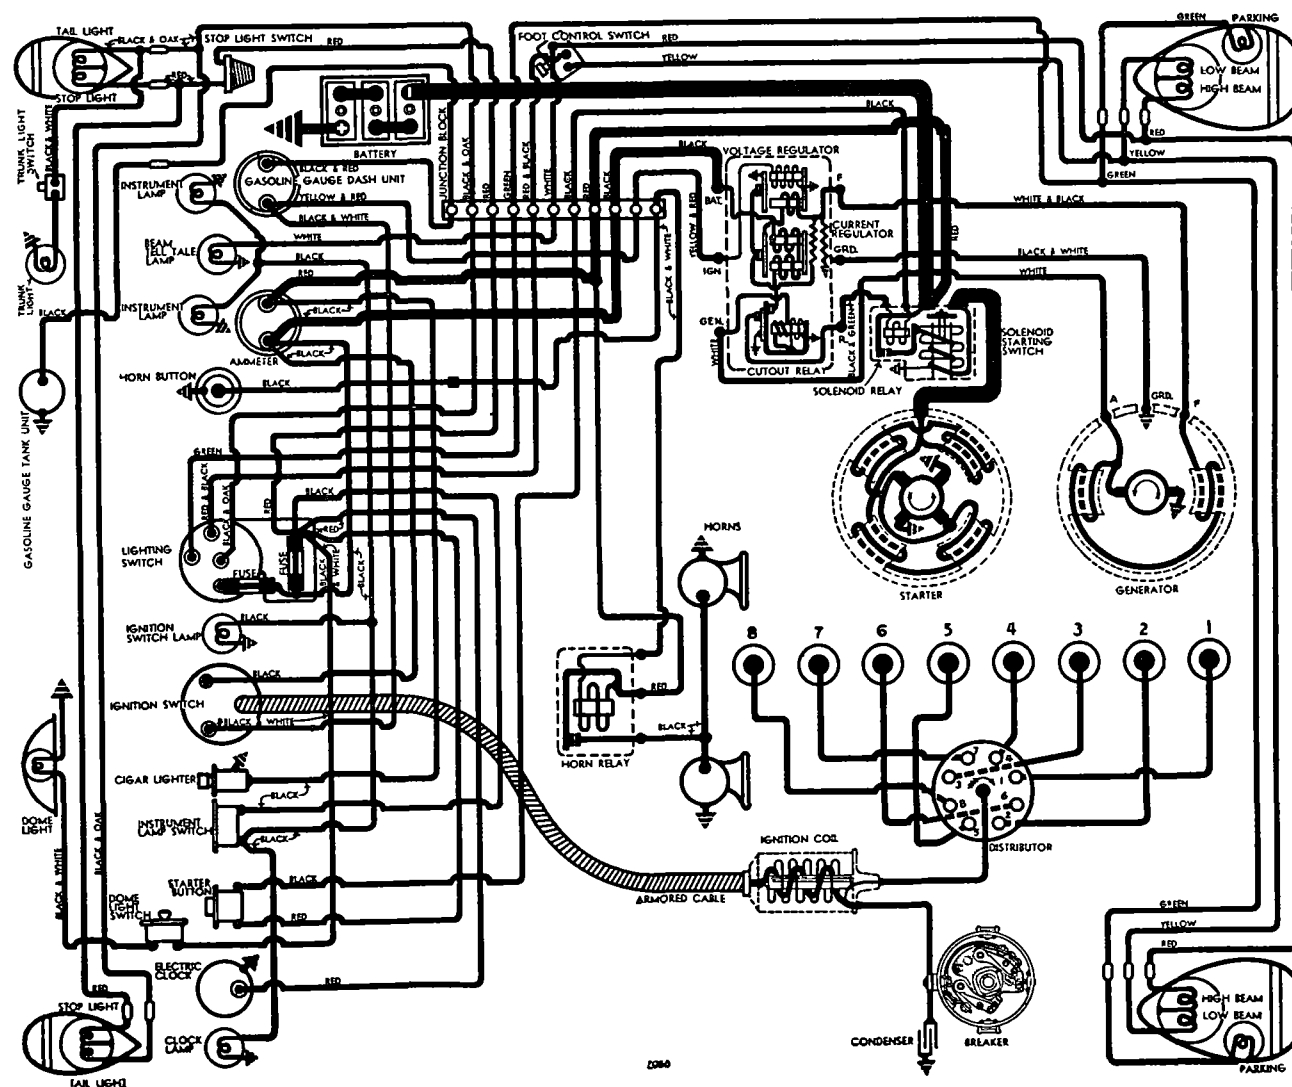

**Distributor Removal:**—Mounted on cylinder head. To remove, loosen advance arm clamp bolt (not necessary to disconnect vacuum connection).

## IGNITION TIMING

**IGNITION TIMING:**—Setting for all engines as follows:

Flywheel Degrees	Piston Position
0° or TDC.	000° TDC

**Timing (Stationary Contacts)**—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until piston reaches top dead center, stop when flywheel mark 'UDC/1-8' lines up with pointer in inspection hole in right top edge of housing. Loosen advance arm clamp bolt, rotate distributor until stationary con-

tacts begin to open, tighten clamp bolt, then synchronize movable contacts.

**Synchronization (On Engine)**—Turn engine over 90° to #6 firing position, stop when flywheel mark 'UDC/3-6' lines up with indicator. Loosen lock-screws on movable sub-plate carrying second set of contacts, turn eccentric adjusting screw until contacts begin to open, tighten lock-screws.

**Synchronization (Using Tool)**—Use Delco-Remy tool #1838182 and follow complete directions in Electrical Equipment Section. Distributor intervals regular 45-45-45°.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model EE-1, 1" dual downdraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—A .045" or one size smaller main metering jet may be installed to secure greater fuel economy with slight loss in performance. The .043" two size smaller jet should be used only for high altitudes. See Jet Specification Table in Carburetion Section.

**Idling Adjustment**—Adjust throttle stop-screw so that engine idles (hot or slow idling speed) at 450 R.P.M. or 8 M.P.H. Turn inner idling adjusting screw in until engine begins to roll, finally turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Repeat with outer idling adjusting screw. Readjust throttle stop-screw for correct idling speed.

**Accelerating Pump**—Not adjustable.

**Fast Idle:**—Stromberg type. See article in Carburetion Section for complete data.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke:**—Stromberg Type C.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner:**—Burgess oil-wetted type standard, AC. #1528258 oil-bath optional.

**Fuel Pump:**—AC. Type P #1521829 standard. Combination fuel-and-vacuum Type J #1521797 or Type AD #1522228 optional.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Auto-Lite (Motometer) Electric. No. NG-8205D (dash unit), NG-8165T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Willard, Type WHT-2-105. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.9 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side under drivers seat.

## STARTER

**Delco-Remy Model 729-G.** Armature No. 820158.

**Drive**—Solenoid pinion shift and overrunning clutch.

**Cranking Engine**—110 R.P.M., 150-200 amperes at 5.0-5.5 volts.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 ft. lbs.	Lock	8.0	600

**Rem val:**—Flange mounted on left front face of fly-wheel housing. Take out cap-screws to remove.

**Starting Switch:** Delco-Remy Solenoid 1548. R.B.M. push button switch #1875. Solenoid switch controlled through relay by push button on instrument board.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch

Closes against 70 lb. pull with ½" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay

Contacts Close—1.9 volts Max. Open 1.0-1.2 volts. Contact Gap—.035". Air Gap—.010" closed.

## GENERATOR

**Delco-Remy Model 961-H.** Armature No. 1866171. Straight shunt (two brush) type with external voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Control Unit Section below.

**Maximum Charging Rate**—25 amperes (cold) with discharged battery as indicated on test ammeter connected in charging line at 'BAT' terminal on control unit. Decreases as battery comes up on charge. Generator output constant at all speeds above 1650 R.P.M. or 25 M.P.H.

### Performance Data—Generator Cold

Amperes	Volts	R.P.M.
25	8.0	1650

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces.

**Field Current**—2.0-2.2 amperes at 6 volts.

**Removal:**—Cradle mounted at left front of engine. To remove, slack off belt, disconnect water pump drive coupling, loosen mounting clamp band.

**Belt Adjustment:**—To take up slack in generator drive belt, loosen nut back of fan bracket, lift up fan assembly until fan can just be turned with belt held stationary, tighten bracket nut.

## REGULATOR

**Delco-Remy Model 5818.** Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Cut-out Relay and vibrating type Voltage & Current Regulators in case on dash. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Cover of case sealed and units are serviced on an exchange basis if seals are unbroken. Unit can be checked without breaking seal, but cannot be adjusted.

### Cutout Relay

**Cuts In**—6.7-7.6 volts, 9¼ M.P.H.

**Cuts Out**—3 amperes maximum discharge.

**Contact Gap**—.018-.025".

**Air Gap**—.018-.022" with contacts closed.

### Voltage Regulator

**Setting**—7.5-7.95 volts at 70°F., 7.4-7.6 at 150°F. Regulator is over-compensated for temperature and must be checked at these points.

**Checking**—To check without breaking seal, disconnect lead at 'IGN' terminal on regulator case, connect jumper between 'IGN' and 'BAT' terminals, connect test ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3400 R.P.M. Check with setting as given above (with 8-10 amps. charging rate).

**To Adjust**—This requires breaking seal in order to remove cover. Proceed as outlined under 'Checking' (above) and set regulator by bending spring hanger at lower end of armature spring until performance is as shown above. Remove jumper and restore original connections.

**NOTE**—Voltage Regulator readings must be taken with cover on unit and setting should be checked by decreasing speed until Cutout Relay contacts open, and then increasing speed to original point.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5-ozs. minimum.

**Air Gap**—.060-.070" between armature and core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

### Current Regulator

**Setting**—24-26 amperes.

**Checking**—To check without breaking seal, disconnect 'IGN' and 'BAT' leads, connect ammeter with one lead to 'BAT' terminal and other to 'BAT' lead. Operate generator and check with setting given above.

**To Adjust**—This requires breaking of seal in order to remove cover. Proceed as outlined under 'Checking' (above) and set regulator by bending spring hanger at lower end of armature spring until maximum output is as given.

**NOTE**—Generator voltage must not be allowed to exceed 8.5 volts with Voltage Regulator shorted out.

**Contact Gap**—.015-.025".

**Contact Spring Tension**—3.5-ozs. minimum.

**Air Gap**—.070-.080" between armature and core with armature down so that fibre bumper just touches stop, .008-.013" between fibre bumper and stop with armature up.

**NOTE**—To repolarize generator whenever Control Unit is disconnected or removed, connect jumper between 'GEN' and 'BAT' terminals (after all leads connected) momentarily. Do not run engine.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown, Pre-focused type. Headlamps aimed straight ahead (upper beam) with lenses in place. Upper and lower beams controlled by foot selector switch (lower beam deflected slightly to right).

**Headlamp Beam Indicator**—Green dot on speed-meter face. Lighted when upper driving beam in use.

### Switches

**Lighting**—Douglas. Studebaker Part No. 190015.

**Foot Selector**—R.B.M. Model 1085.

**Stop Lamp**—Hydraulic type mounted on brake master cylinder.

**Trunk Lamp**—R.B.M. Model 2350.

CONTINUED ON NEXT PAGE

## CONTINUED FR M PRECEDING PAGE

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Ign. Key	1½	55
Stop and Tail	21-3	1158
Instruments	½	51
Dome and Trunk	6	81

## MISC. ELECTRICAL

**FUSES:**—Lighting—30 ampere on lighting switch.  
Auxiliary—30 ampere on lighting switch carries stop light and accessories.

**HORNS:**—Klaxon Model K-26-L Type 1638 std. Model K-33-S Types 2059, 2060 twin horns with horn relay optional.

Horn Type	Current at 6 volts	Air Gap
1638 Single (low)	6.5-8.5	.025-.029"
2059 Low Note	11-13	.042-.046"
2060 High Note	10-12	.032-.036"

Horn Relay:—Mod. 271-A. Points close at 2.7-4.0 volts.  
Contact Gap—.015-.030". Air Gap—.010-.025".

## ENGINE

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head.

Bore—3 1/16". Stroke 4¼".  
Displacement—250.4 cu. ins. Rated HP.—30.  
Developed Horsepower—115 at 3600 R.P.M.  
Compression Ratio—6.5-1 Al. head Std.  
Compression Pressure—105-115 lbs. @ 150 R.P.M.  
Vacuum Reading—18" idling at 450 RPM. or 8 MPH.

**PISTONS:**—Lynite, aluminum alloy, T-slot, tin-plated, cam ground type.

Weight—13.6 ozs. Length—3¾".  
Removal—Pistons and rods removed from above.  
Clearance—.0015" (¼" up on skirt 90° from pin).

Original Bore Sizes:—See Studebaker Shop Notes.

**Replacement Pistons:**—Finished pistons (pins fitted) furnished .002", .004", .010", .015", .020", .030" over-size. Exact size stamped on piston head.

**Fitting New Pistons:**—Insert .003"x1" hardened feeler between piston and wall on camshaft side (T-slot away from camshaft, pin bosses parallel with crank shaft). Pull to withdraw feeler 7-15 lbs.

**Installing Pistons:**—T-slot away from camshaft.

**PISTON RINGS:**—2 compression, 1 oil control, all above pin. Ten 5/32" oil drain holes in lower ring groove. Oversize rings furnished .010", .020", .030". Heat deflector groove above top ring groove.

Ring	Width	End Gap	Side Clearance
Compression	½"	.013-.018"	.0015-.002"
Oil Control	3/16"	.013-.018"	.0015-.002"

**NOTE:**—Install comp. rings with step down. Inner ring used behind oil control ring.

**PISTON PIN:**—Diameter—¾". Length—2¾".

Pin is locked in rod.

Pin Fit in Piston—.0001-.0003" clearance or light push fit.

**NOTE:**—Replacement pistons have pins fitted.

**CONNECTING ROD:**—Weight—32 ozs. Length—8".

Crankpin Journal Diameter—1.87425-1.87525".

Lower Bearing—Removable steel-backed, lead-bronze lined type.

Clearance—.00075-.00275". Sideplay—.005-.010".

**Bearing Adjustment:**—None. Replace bearings. Press in new bearings so that tongues engage in slots and oil holes line up. Crankpins must be turned down to size. Bearings furnished .005", .010", .020" undersize and standard. Bearing halves identical.

**Installing Rods:**—Oil hole in rod toward camshaft.

**CRANKSHAFT:**—9 bearing, bolted counterweights. Rubber and friction disc vibration damper mounted on forward end. See Studebaker Shop Notes for vibration damper data.

Journal Diameters—2 11/32" all bearings.

Bearing Type—Interchangeable steel-backed, bab-bitt-lined. No shims. Clearance—.001-.003".

**Bearing Adjustment:**—None. Replace bearings. (No line reaming or fitting necessary). Furnished .010", .015" undersize.

**End Thrust:**—Thrust plate between front main bearing and crankshaft gear. Shim adjustment.  
Endplay—.003-.006".

**CAMSHAFT:**—Six bearing. Helical gear drive.

Bearings—Split, steel-backed, bab-bitt-lined.

Clearance—.00075-.00225" (#1), .002-.00375" (others)

**NOTE:**—Oil holes in bushing and block must match.  
**End Thrust:**—Steel thrust washer and spacer between gear hub and front bearing. Endplay—.003-.006".

**Timing Gears:**—Cast-iron (crankshaft), Celeron Fabric (camshaft). See Studebaker Shop Notes for Gear Sizes and Gear Removal Instructions.

**Camshaft Setting:**—Mesh gears so that marked tooth on camshaft gear meshes with two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 13/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All valves	45°	11/32"	.001-.003"

**Valve Guides:**—Pressed in block from above (1 5/16" below top of block) with stepped end down. Ream inside diameter to .343-.344".

**Valve Springs:**—Install with closed-coil at top. Damper used on top of spring. Replace springs if 10% weaker than specifications listed below.

See Studebaker Shop Notes for Valve Spring Installation instructions.

	Spring Length	Spring Pressure
Valve Open	1¾"	125-135 lbs.

**Valve Lifters:**—Mushroom type with bolted-on guides (in clusters of four). Can be removed from side.

## VALVE TIMING

**Tappet Clearance:**—.016" all valves, cold.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 64° BLDC. Close 10° ATDC.

**To Check Valve Timing:**—With tappet clearance of .020", #1 intake valve should open with piston 15°

or .0915" before top dead center when mark 'IN.O.P./1-8' on flywheel lines up with pointer in inspection hole on right top side of flywheel housing. Reset tappet clearance at .016" cold.

## LUBRICATION

**LUBRICATION:**—Pressure. Gear type oil pump.

See Studebaker Shop Notes for Oil Pump Installation directions.

Normal Oil Pressure—40 lbs. min. at 40 M.P.H.

Oil Pressure Regulator—Located at right front corner of engine. Operates at 40 lbs. Not adjustable.

Crankcase Capacity—8 quarts (dry).

## COOLING

**COOLING SYSTEM:**—Water Pump—Centrifugal, belt driven, with adjustable type packing.

See Water Pump Section for complete data.

**Removal:**—With all water drained and fan belt removed, disconnect pump inlet hose, take out pump mounting bolts, lift fan and pump assembly off.

**Thermostat:**—Bishop & Babcock or Fulton. In upper radiator hose.

Setting—Start to open 148-153°F.

Water Capacity—16 quarts.

## CLUTCH

**CLUTCH:**—Long Model 9AB-10CI. Single plate, dry disc type.

See Clutch Section for complete data.

Facings(3C)—Molded type, 2 required. Inside diam. 6". Outside Diam. 10". Thickness .137".

**Adjustment:**—Free movement of clutch pedal must be 1" min. Adjustment lever setscrew at housing. Check Hill-Holder after adjusting clutch.

**Hill-Holder Adj.:**—See Studebaker Shop Notes.

**Removal:**—Disconnect clutch pedal linkage, remove transmission (see Transmission Removal below), support engine at rear, remove clutch bell housing, clutch mounting screws, pull assembly out.

## TRANSMISSION

**TRANSMISSION:** Warner—Model AS16-T85 (standard). All helical gear type (synchro-mesh second & high).

See Transmission Section for complete data.

**Removal:** Disconnect front and rear universal joints at companion flanges, remove capscrews at clutch housing. Pull transmission back and up.

## OVERDRIVE

**OVERDRIVE:** Warner Automatic or Warner Type R-6. Complete assembly model number (transmission with Automatic type Overdrive) Warner No. AS14-T85. **IMPORTANT:**—This Automatic Type Overdrive used only on 1937 Studebaker President.

See Transmission Section for complete data.

**Removal:** Same as for Standard Transmission above after removing Overdrive Support. See Overdrive Transmission Rear Support Installation data in Studebaker Shop Notes.

## UNIVERSALS

**UNIVERSAL JOINTS:** Spicer. Model 1311 (frt.), 1318 (rear). Needle bearing type.

See Universals Section for complete data.

**NOTE**—Arrows on front universal yoke and propeller shaft must be in alignment.

### REAR AXLE

**REAR AXLE:** Spicer. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio (3C)**—4.55-1 Standard, 4.73-1 Optional.

**Backlash**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear of car, disconnect propeller shaft at rear universal, brake line, and shock absorbers, remove spring U-bolts, disconnect rear spring shackles, pull axle assembly out.

**NOTE**—Bleed brake lines when axle reinstalled.

**Wheel Bearing Adjustment**—Shims provided between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub, drum, and backing plate (retained by 6 nuts). Remove shims to decrease endplay, add shims to increase. Shim thickness at both wheels must be equal within .005".

**Endplay**—.001-.005". Measure with dial indicator.

### SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Delco (3C)—Early: Models 1171S (front), 1172X (rear). Late: 1181S (front), 1182X (rear). Direct acting type. Late type adjustable.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring. Specifications below apply with car unloaded on level floor.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—Two settings as follows:

9½°.....Serial Number 7,111,836 & before

5½°.....After above Serial Number

**Caster**—Minus ¼° to plus ¾°. Not adjustable.

**Camber**—1-1½°. Adjustable.

**Toe In**—⅛-7/32". To adjust, turn right (long) rod.

### STEERING GEAR

**Steering Gear:** Ross Model T-21. Cam & Twin Lever type.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Lockheed Hydraulic, double anchor type.

Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders**—Stepped or two-stage bore type:

**Front Wheels**—Front shoe cyl. 1⅜". Rear 1".

**Rear Wheels**—Front shoe cyl. 1¼". Rear 1".

**NOTE**—Wheel cylinder bore size marked on casting.

**Drum**—Budd composite. Diameter—11".

**Lining**—Front shoe—woven. Rear shoe—moulded.

**3C**—Width 1¾". Thick. ¼". Length per wheel 21½".

**Clearance**—.010" toe, .005" heel, for each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

**Hill-Holder:**—Optional equipment.

*See Brake Section for complete data.*

## MODEL IDENTIFICATION

**NOTE:—First Model 7A cars called Studebaker Six, later cars Commander. First Model 8A cars called Commander, later cars State Commander.**

**SERIAL NUMBER:—**Stamped on plate on left frame side member under left front fender. First numbers as follows:

	South Bend	Los Angeles
7A (Six, Commander) .....	5582001.....	5857501
8A (Comm., State Comm).....	4090001.....	4800001

**ENGINE NUMBER:**—Stamped on left side of engine block at rear. First number—H-101.

## TUNE-UP

**COMPRESSION:—Ratio—6.0-1 Std. 7.0-1 (high altitude).  
Pressure—105 lbs. (Std. 6-1 hd.), 110 lbs. (Optl. 7-1  
hd.) at cranking speed of 150 R.P.M.**

**VACUUM READING:—**18" steady reading with engine idling at 450 RPM. or 8 MPH.

**FIRING ORDER: 1-5-3-6-2-4.** See diagram.

**SPARK PLUGS:** Champion Type 8-A. 18 mm. Metric.  
Gaps—Set at .025".

NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.  
**Breaker Gap**—.020". **Cam Angle**—35° Closed.  
**Automatic Advance**—10° max. at 1400 RPM (distr.).  
**Vacuum Advance**—6° distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—2° BTDC. Vibration dampener mark "IGN/" aligned with pointer on timing gear cover. Use .016" feeler between advance arm and hold-down plate when tightening distributor clamp bolt (avoids binding vacuum control).

**CARBURETION:** See Carburetor & Carb. Equipment.  
**Idle Setting**—Set idle adjusting screw midway between “miss” and “roll” points. Idle speed 450 RPM or 8 MPH.

**Float Level**—Fuel level  $\frac{5}{8}$ " below top edge of bowl.  
**Accelerating Pump**—Normal setting, Center Hole.

**Fuel Pump Pressure:** 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:—**Thermostatic coil type. To check valve, unlatch thermostatic coil by freeing outer end from bracket on manifold, operate valve by hand and see that valve is free (shaft can be cleaned with emery if necessary). Make certain that coil is properly latched on bracket and that tension spring (from shaft to clip on manifold flange) is in place.

**VALVES:** See Valve Timing.

**Tappet Clearance—.016" for all valves, Cold.**

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Type 24-R. No. 7652 (Mahogany finish), 7654 (Burl Tan), 7658 (Silver Beige), 7697 (Gunmetal Gray). Connected to coil by armored cable.

**Ignition Lock—Yale & Towne. Mitchell No. 6770.**

**COIL:** Auto-Lite Model IG-4649 (8A), IG-4649A (7A), IG-4649C (7A or 8A). Service Coil (less switch and cable) IG-3033ZS. Mounted on dash.

**Ignition Current**— $\frac{1}{2}$ -1 $\frac{1}{2}$  amps. idling, 4-5 stopped.

**CONDENSER: Auto-Lite Part No. IGB-1025.**

**Capacity—.20-.25 microfarad.**

**DISTRIBUTOR:** Auto-Lite Model IGW-4101 or IGW-4111 (with Special Tachometer Drive). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**Breaker Gap—Set at .020".**

**Cam Angle or Dwell—**35° (closed), 25° (open).

**Breaker Arm Spring Tension—16-20 ozs.**

**Rotation—Counter-clockwise viewed from top.**

### Automatic Advance

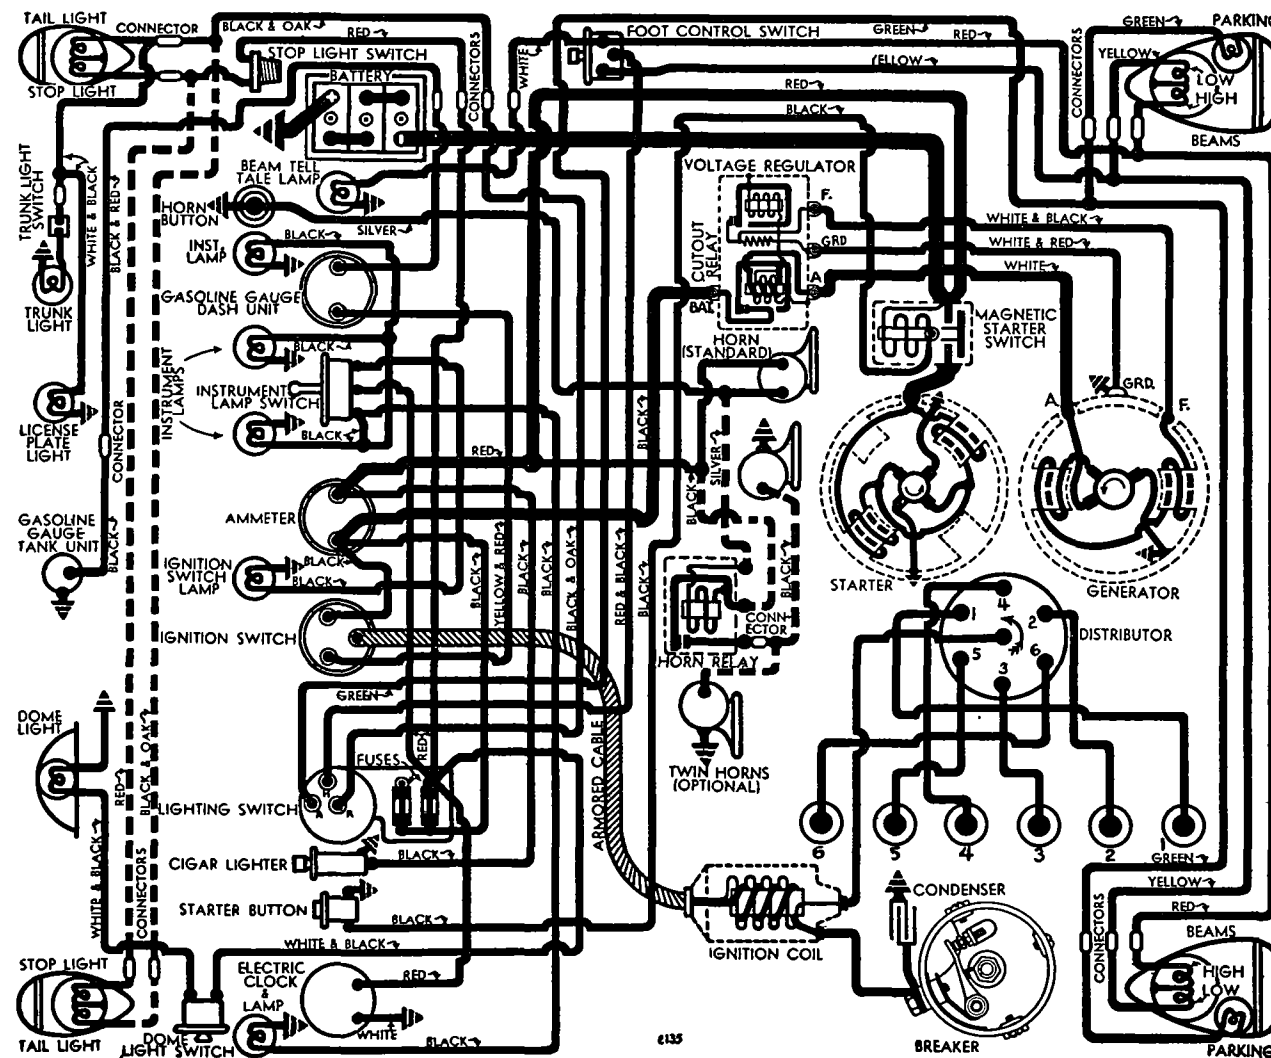

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
3	700	6	1400
6	1000	12	2000
10	1400	20	2800

**Vacuum Spark Control A-L No. VC-4004.** Mounted below distributor and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Distr. Degrees		Vacuum Advance	
	Eng. Degrees		Vacuum (" of HG)
Start.....	0°		3"
2° .....	4°		5"
3° .....	6°		6"
5° .....	10°		10"
6° .....	12°		12"

**Distributor Removal:**—Mounted on left side of engine. To remove, loosen advance arm clamp bolt (not necessary to disturb vacuum unit connection).

**NOTE**—When installing distributor, insert .016" feeler between hold-down plate and advance plate while tightening advance plate clamp bolt to prevent binding and allow free advance plate motion.

**IGNITION TIMING****IGNITION TIMING:**—For all engines as follows:

Flywheel Degrees    Piston Position  
7A, 8A ..... 2° BTDC ..... 0016° BTDC.
